(c) In the interest of fair and uniform administration of the law, to do away with the confusion and complications now existing and to enable those engaged in this business to know just what duties they should count on, the rate on these articles should be a fixed and uniform ad valorem one, no matter what the materials of which they are composed.

According to the tables prepared by the Bureau of Statistics of the Department of Commerce and Labor, showing imported merchandise entered for consumption in the fiscal years 1910 to 1912, laces, embroideries, and allied articles paid substantially 10 per cent of the total duties collected by our Government. In other words, 10 per cent of the total revenues collected from import duties in 1910-1912 was collected from these articles. Surely they are sufficiently important to justify those engaged in importing them in making the reasonable request that the duties be so fixed as to be uniform, certain, and free from confusion or unnecessary complication, and that they should be put in a separate schedule by themselves.

Under the present law, laces and embroideries pay the following rates, so far as depends on the materials of which they are composed: If composed wholly or in chief values of cotton, flax, or other vegetable fiber, etc., 60 per cent (paragraph 349); if composed of silk as the component material of chief value, 60 per cent (paragraph 402); if having artificial or imitation silk or artificial or imitation horsehair, 45 cents per pound and 60 per cent (paragraph 405); if having metal threads, 15 cents per

PARAGRAPH 349—LACES, EMBROIDERIES, ETC.

pound and 60 per cent (paragraph 179); if having wool, 50 cents per pound and 60 per cent (paragraph 383).¹

Now, there is always the possibility of difference of opinion as to what is the component material of chief value. The same lace or embroidery may contain metal threads, cotton silk, imitation silk, or horsehair. Endless confusion results, and the importer frequently can not know definitely under what classification the particular article he is bringing in is going to be put until it has actually arrived and been appraised. This is as unjust as it is unnecessary. Again, according to the method of administration of the act, where the article contains, for example, a metal thread, the duty imposed is not on the basis of the weight of the metal thread, but on the weight of the entire article, which thus pays 15 cents per pound, plus 60 per cent ad valorem, though the metal thread may be the least important single component. (Shoninger case, T. D. No. 31661). What we earnestly urge is that a uniform, single, ad valorem rate be imposed, and we submit that in the interest of fair administration this suggestion should be adopted.

(d) A provision on the above lines would be clear and absolutely free from difficulty in administration, and it would do away with the existing evils which have been pointed out above. Of course, this provision, if made a separate schedule, as we suggest, would require that the other articles now mentioned in paragraph 349, hereinbefore enumerated, other than embroideries and laces proper, should be placed in a separate paragraph by themselves, with provision for appropriate rates of duty.

All of which is respectfully submitted in behalf of the Association of Importers of Laces, Embroideries, Veilings, Nettings, and Kindred Articles.

January 23, 1913.

Mr. HARRISON. As I understand your argument, Mr. Weingart, you believe that all those present rates of 60 and 70 per cent which now are great revenue producers, will, as the American industry improves, certainly as to the Lever and Gothrough laces and the Nottingham laces, prove more and more prohibitive and the revenues will dwindle?

Mr. WEINGART. Yes, sir; that is our contention.

Mr. HARRISON. So you are recommending a rate, or rather that the rate be reduced in order to continue the importations coming in?

Mr. WEINGART. That is our position. Our position is, the rate ought to be a competitive one.

Mr. HARRISON. Of course you recognize it is highly competitive now?

Mr. WEINGART. We recognize that it is highly competitive at the present time, but that the present American domestic production is not yet getting the share it will get within a very short time. In other words, it is only within the recent years that the domestic article has begun to be a factor in any way.

¹ We do not refer here to the 70 per cent rate imposed if made on the Lever or Gothrough machine, as that has been already pointed out.

PARAGRAPH 349—LACES, EMBROIDERIES, ETC.

Mr. PAYNE. I suppose you have noticed the imports have increased under paragraph 350 from year to year?

Mr. WEINGART. Mr. Payne, we have no statistics going back prior to the enactment of the last bill.

Mr. PAYNE. The statistics are right here [indicating].

Mr. WEINGART. These articles were embraced in the same schedule as embroideries and laces, which paid 60 per cent.

Mr. PAYNE. There are statistics under paragraph 350, right here [indicating]. There is no mystery about them.

Mr. WEINGART. We have the facts that——

Mr. PAYNE (interposing). Let me tell you that in 1910 there was a trifle over \$7,000,000; in all, 1911, \$6,793,000; in 1912, \$8,382,000.

Mr. WEINGART. The reason why they have increased in the past year is not on account of their not being made cheaper in this country, but because fashion has favored this class of laces made on the Lever or Gothrough machine as against laces made on embroidery machines.

Mr. PAYNE. The fact is the revenue has been large and is increasing.

Mr. WEINGART. No; that is not a correct statement. The revenue has increased this year——

Mr. PAYNE (interposing). I have read you the statistics.

Mr. HARRISON. The witness is perfectly correct in saying we have not any separate statistics back of the Payne law, because we have not.

Mr. PAYNE. That is all true. I did not pretend we had. I only gave three years to show they are increasing under the 70 per cent duty. I will admit there were a good many before we imported these machines free of duty. Undoubtedly the imports were important before that time.

The CHAIRMAN. Mr. Weingart, there is one thing I would like to ask you before you are excused. What do you say in reference to the amount of the American production of these laces that are made on the Lever and Gothrough machine?

Mr. WEINGART. It was stated here yesterday that the American production was in the neighborhood of \$2,500,000, and the gentleman making that statement made it on the strength of a statement made by a previous gentleman.

The CHAIRMAN. What do you say?

Mr. WEINGART. According to the statements of the prior gentleman, there are 527 Lever machines. These machines run in two shifts. The operatives or the twist hands on these machines, according to the statements made here, receive \$30 to \$35 per week, or equivalent to about \$1,600 per year, and if those machines are only operated, as we believe, about three-quarters capacity or even two-thirds capacity, it would employ 700 of these experts at a salary of \$1,600 per year, which is \$1,120,000. They said there are 5,000 girls employed in this industry. Let us say there are only 4,000. Those girls get an average salary or wage of \$8 a week, or \$400 a year, making \$1,600,000. So the amount of salaries paid is \$2,720,000. They state the entire production, finish and all, is only \$2,500,000. They have stated that the labor is 40 per cent of the cost of the finished article. We claim it is not; but assuming their arguments, if their labor is \$2,700,000, their production must be \$6,700,000, which

PARAGRAPH 349—LACES, EMBROIDERIES, ETC.

is in conformity with the facts, because the Lever machine is capable of producing at its full capacity \$20,000 per year, and 527 machines are capable of producing \$10,000,000, and if they are operated on the basis of three-quarters of their capacity they produce \$7,500,000.

According to the best information we have been able to gather, and according to these very figures, the domestic production of the Lever goods to-day is \$7,500,000, compared with an importation of \$7,500,000 from abroad, plus a duty of \$5,000,000 or \$12,500,000. Consequently to-day the Lever goods are furnishing in the neighborhood of one-third of the domestic consumption. This has all been brought about in the very short period of three and one-half to four years, in an article which it is very difficult to establish in a short time, and we maintain that if the duty be retained as it is it will only be a question of a few years when the foreign article will be shut out, the same as the Nottingham lace curtains are to-day, where, as has been testified yesterday, the consumption of American-made goods is \$8,000,000, as against an imported value of something like \$40,000 or \$50,000 or \$60,000. That is my statement so far as the Lever goods are concerned.

Mr. HILL. You recognize the fact, however, that there is a heavy duty on the yarns and that the yarns are almost entirely imported?

Mr. WEINGART. In a measure, they are imported.

Mr. HILL. And the larger the industry gets the greater will be the importations of yarns; so your statement in regard to revenue falling off should be modified to that extent.

Mr. WEINGART. I understand it is the purpose of this committee to reduce the duty on yarns, which will in a measure enable the domestic people to further compete with the foreign articles; but I want to call attention to the fact that it is a fallacy to believe that these domestic industries receive only a protection of 70 per cent on the foreign cost of production. Actually we are paying a duty of from 90 to 125 per cent on the foreign cost of production. The foreign manufacturer sells his goods at a minimum profit of 20 per cent on his cost of production, and in some cases it runs as high as 50 per cent; and he sells a \$1 article for \$1.25, for instance. We are compelled, under the tariff law, to pay duty, not on the foreign cost of production, but on the foreign market price, so we pay a duty of 87½ per cent on the foreign cost of manufacture. Added to that, Mr. Chairman, are the expenditures for freight, insurance, etc. Thus, you see, the domestic article has a protection of about 90 per cent, as against the foreign cost of production.

As I stated before, the articles that I am appearing for are divided into two classes, primarily, those made on the embroidery machines representing about \$25,000,000 to \$26,000,000 importations, and those made on the Lever machine representing but \$7,500,000. The larger interests are those made on the embroidery machines, and that industry has so increased in this country that there are to-day some \$16,000,000 of it produced here, as against \$24,000,000 imported, plus a duty of \$14,000,000, or \$38,000,000, about 30 per cent.

But conditions in this line are going to be changed very quickly. In the last few years there has been invented an automatic embroidering machine which does away with the skilled embroiderer. It

PARAGRAPH 349—LACES, EMBROIDERIES, ETC.

operates on the same principle as a pianola. The skilled workman makes an original design of the article, punches a card, and all that is necessary is to put this card on a machine and produce any quantity of the goods. One of the chief difficulties we have had and one of the items going into the cost of the manufacture of this article is the skilled laborer who leads the machine. By means of this automatic attachment this skilled labor is largely done away with, and one skilled laborer can produce a card or he can produce sufficient cards to make \$225,000 worth of these articles, every dollar of which will be of equal quality. He, being an expert man, will be able to produce \$225,000 of his own skill by means of these cards, and in that way will eliminate the high-priced labor which we have had.

Mr. FORDNEY. Where is that machine made?

Mr. WEINGART. Two thousand of those machines are now in operation in Europe, and notwithstanding that fact, there are only 188 in operation in this country.

Mr. FORDNEY. Where are they made?

Mr. WEINGART. They are made in Switzerland.

Mr. FORDNEY. They are foreign machines?

Mr. WEINGART. They are foreign machines.

Mr. HILL. Are they patented?

Mr. WEINGART. Yes; they are patented.

Mr. HILL. Is there a limitation made by the foreign patentee of the number that shall be used in the United States?

Mr. WEINGART. That is the question I am coming to right now. Those machines are owned by certain parties, and those people that own the patents in this country have not introduced them largely into this country, but have kept them to themselves for the reason that they have not yet arrived at a working basis.

Mr. HILL. What is the working basis they want to get at?

Mr. WEINGART. I do not know. They have not yet reached a basis where they have opened them to the American public.

Mr. HILL. Do you know who the firm is?

Mr. WEINGART. Yes, sir.

Mr. HILL. Please state the name of the concern that owns the patent for the United States and refuses to allow anybody else to use it but themselves.

Mr. WEINGART. Loeb & Schoenfeld.

Mr. HILL. They are in Europe, are they not?

Mr. WEINGART. They are here in the United States, in Matteawan.

Mr. HILL. Is there any other concern involved?

Mr. WEINGART. They also manufacture abroad.

Mr. HILL. But there is one concern manufacturing in the United States and owning the patent rights for 100 machines, and refusing to allow anybody else to use them?

Mr. WEINGART. No; that is not correct. I will explain it.

Mr. HILL. I think it needs some explanation.

Mr. WEINGART. There is one concern that owns the original patent rights on the automatic machine in this country, and there has been an improved machine which has been introduced, and of which there are eight in this country.

Mr. HILL. As against 2,300 in Europe?

PARAGRAPH 349—LACES, EMBROIDERIES, ETC.

Mr. WEINGART. Two thousand in Europe. There is at present a controversy as to the privilege or the right of operating those machines in this country. It is only a question of getting together which will enable these houses or owners of these patents to establish these machines in this country.

Mr. HILL. Let me ask this question: Do you think it would tend to "get together," as you call it, to lower the rate of duty to the foreign manufacturer? Would it not be wiser to wait until they get together?

Mr. WEINGART. If you will permit me, I will answer the question directly. The proposition is this: If the duty remains as it is, it will place in the hands of the owners of this patent the privilege of establishing in this country a virtual monopoly of this article. Notwithstanding the fact—

Mr. HILL (interposing). Haven't they got it now?

Mr. WEINGART. One moment. Let me finish, please.

Notwithstanding the fact that these machines are in common use abroad by everyone in the industry, and that these 2,000 machines have been in operation for the past two to three years, the domestic manufacturer, not making use of this wonderful cost-saving invention, has been enabled to undersell the imported article made on these automatic machines.

Mr. HILL. It seems to me a wise business proposition for this committee to know about the terms of the use of these machines, and the absolute monopoly, before they lower the rate of duty—whatever they may do afterwards—and turn over the consumption of 90,000,000 people to one concern in Europe.

Mr. WEINGART. It is not one concern in Europe, I beg your pardon.

Mr. HILL. But these are acting under license.

Mr. WEINGART. No, sir; they are not. The machines are not sold with any royalty. They are sold outright. The machines are owned by everybody who manufactures goods abroad. There is no monopoly there. There is no concerted action there.

But the point I make is that, notwithstanding the fact the foreign manufacturers have been using these 2,000 machines for the past two years and saving this great cost of labor, they have not been able to compete with the domestic manufacturer who has not made use of these machines.

When this machine is introduced into this country (and the principal cost of producing goods is skilled labor), the article will be manufactured in this country at such a low price that the foreign article will be shut out almost entirely, and the \$24,000,000 revenue which the United States is getting now at the present time will dwindle from \$24,000,000 to \$18,000,000 and from \$18,000,000 to \$12,000,000 until we will have a repetition of the condition brought about by the Nottingham schedule.

Mr. FORDNEY. May I ask a question right there?

Mr. WEINGART. Yes, sir.

Mr. FORDNEY. You say as soon as that machine gets well established in this country the prices will be so low, as I understood you, that foreign competition can not survive?

PARAGRAPH 349—LACES, EMBROIDERIES, ETC.

Mr. WEINGART. That is correct.

Mr. FORDNEY. That machine is in use in the old country?

Mr. WEINGART. Yes, sir.

Mr. FORDNEY. Then why, in the name of common sense, do they not produce cheaper, if we can produce cheaper?

Mr. WEINGART. I am stating that they are producing cheaper today, but notwithstanding the fact that they are making use of this cost-saving invention, the domestic manufacturers, not making use of it, are able to undersell them.

Mr. FORDNEY. What you are afraid of is that when we get into the use of these machines, we will make it so low we can give it to the consumer?

Mr. WEINGART. I did not say that; no, sir.

Mr. FORDNEY. The foreigner can not compete with us then?

Mr. WEINGART. There is a difference between reducing the price and giving it away. They are two different things.

Mr. FORDNEY. Reduce it so the foreigner, with his cheap labor and some machine owned in Europe and made in Europe, can not compete with us at all?

Mr. WEINGART. That is correct.

Mr. FORDNEY. Do you think that is quite correct?

Mr. WEINGART. I do not think it; I know it.

I am making this statement on behalf of a number of concerns interested—

Mr. FORDNEY (interposing). You know it? Let me find out how you know it.

Mr. WEINGART. Because I am a manufacturer of embroideries myself.

Mr. FORDNEY. Where?

Mr. WEINGART. Abroad.

Mr. FORDNEY. Oh, ho. [Laughter.]

Mr. WEINGART. I will go a little further, because I represent concerns that manufacture in this country.

Mr. FORDNEY. You represent an association of what?

Mr. WEINGART. An association of importers and domestic manufacturers of embroideries, of laces, nets, and nettings, veils and veilings.

Mr. FORDNEY. They always ask for lower rates of duty?

Mr. WEINGART. No, sir; I want to state this much for the embroiderers in our line, that we have always made a profit, whatever the duties imposed. We have never in a measure objected to it, because it has been to our advantage—

Mr. FORDNEY. Mr. Weingart—

Mr. WEINGART (interposing). Please permit me to finish my statement?

Mr. FORDNEY. Oh, yes.

Mr. WEINGART. We would not appear here asking for a reduction of duty, because we are only the losers if our stocks should depreciate and if our volume of business may be reduced through a reduction of tariff.

Mr. FORDNEY. At the same time you are interested in manufacturing abroad and you would not be the loser, of course.

PARAGRAPH 349—LACES, EMBROIDERIES, ETC.

Mr. WEINGART. No; we are both manufacturers in this country and manufacturers abroad, or some of the houses we represent are.

I want to make this statement, that I, for my firm and the other firms that I represent, have plans made and are preparing, if the duty is reduced or if it is left as it is, to open an establishment and factories in this country as soon as we are able to make use of this automatic embroidery machine.

Mr. FORDNEY. Bless my soul, tell me under oath—and you are under oath—

Mr. WEINGART (interposing). I know I am, sir.

Mr. FORDNEY. Tell me how, in the name of God, you can transfer your factory from Europe to the United States and begin the manufacture of an article under free trade or lower rates of duty that you can not manufacture here now.

Mr. WEINGART. You ask me “under free trade.” We will eliminate that, because we are not asking for free trade. We are asking for a 45 per cent ad valorem duty.

As to the second question, we do not propose to transfer our factories to this country, because we do business with the rest of the world, and, as I have stated to you, the United States is only to-day taking 32 per cent of this production. We supply Australia, England, France, Germany, Ireland, Canada, and the world with embroideries.

Mr. FORDNEY. How could you do business here under a lower rate of duty when you can not do it under a high rate of duty?

Mr. WEINGART. We can do it under a high rate of duty.

Mr. FORDNEY. Why do you not transfer that foreign industry here now?

Mr. WEINGART. That is the very point—

Mr. FORDNEY (interposing). Yes; that is the very point, and it is a mighty pointed one, too.

Mr. WEINGART. Because it would be a poor business proposition for us to put up machines which within the course of a few months, possibly, would be obsolete, when we are waiting for the opening of a machine which can produce goods in this country at a less cost. In other words, we have ourselves ready—

Mr. FORDNEY (interposing). You have made a lot of statements here—

Mr. WEINGART (interposing). And I have made them under oath, too.

Mr. FORDNEY. I know you have. I want to ask a question. I do not want to be discourteous under any circumstances. You say this machine will be obsolete—

Mr. WEINGART (interposing). I did not say “obsolete.”

Mr. FORDNEY. Oh, yes; you did.

Mr. WEINGART. I correct myself, if I did so. It would not be up to date, I will say. It would not be able to compete in manufacturing the goods because of the competition of the newer machines.

Mr. FORDNEY. It is made under a patent owned by one concern in Europe—

Mr. WEINGART (interposing). Which one are you referring to?

Mr. FORDNEY. I am referring to the one you are talking about.

PARAGRAPH 349—LACES, EMBROIDERIES, ETC.

Mr. WEINGART. The reason we have not put a factory up in this country is that we want to wait until we can set up an Automat in this country.

Mr. FORDNEY. Where is that machine made?

Mr. WEINGART. That Automat machine is being made in Germany, and one is being made now in Switzerland.

Mr. FORDNEY. You are just waiting to put up this factory in this country until you can get that later improved machine?

Mr. WEINGART. Yes, sir.

Mr. FORDNEY. You are operating under a high rate of duty, and it would not pay to operate now, even though you had the machines, as well as it would if you had a lower rate of duty?

Mr. WEINGART. Then it would pay—

Mr. FORDNEY (interposing). You are asking for a 25 per cent reduction?

Mr. WEINGART. Yes, sir; from 60 to 45.

Mr. FORDNEY. Do you think you will ever come back and ask for 25 per cent more, if you get 25 per cent now?

Mr. WEINGART. I would not know what the conditions are that might develop. It might be so we could manufacture goods here without any duty.

Mr. FORDNEY. But you would know, as an importer located in this country, importing foreign goods and manufacturing foreign goods in a foreign country, that you would always ask for a low rate of duty on foreign-made goods of your own production, would you not?

Mr. WEINGART. No.

Mr. FORDNEY. You would not?

Mr. WEINGART. No. It is not to our interest, as we do not pay the duties. It is the consumer who pays the duties. When you raised the duty from 60 to 75 per cent on Lever goods last year, every one of the houses I represent, and every house importing that class of goods charged $6\frac{1}{2}$ per cent more to the consumer than they did under the old 60 per cent tariff.

Mr. HILL. Don't you know these laces have fallen in price greatly since that time?

Mr. FORDNEY. With exceedingly keen—

Mr. WEINGART. I am very glad you asked that question.

The CHAIRMAN. Gentlemen, I must insist that only one of you ask questions at a time. It is impossible for the witness to answer two of you at a time. You are both endeavoring to talk to him at once.

Mr. FORDNEY. I was not through, Mr. Chairman.

Mr. HILL. I thought you were.

Mr. FORDNEY. Mr. Weingart, with exceedingly keen competition at home in domestic production of these goods, do you believe that the consumer will pay the duty? Does he do it generally?

Mr. WEINGART. Yes, sir; every time. He pays it along—

Mr. FORDNEY (interposing). Wait a moment. Mr. Chase, of Massachusetts, the other day made a statement under oath that they sold certain cotton goods at $8\frac{1}{2}$ cents, where the merchant beat him down a quarter of a cent a yard and said he could not pay $8\frac{3}{4}$. He accordingly reduced his price to $8\frac{1}{2}$ cents, and a few days later Mr.

PARAGRAPH 349—LACES, EMBROIDERIES, ETC.

Chase stepped into this man's store and found him retailing these goods at 25 cents a yard.

Mr. WEINGART. I believe it. I believe it. We have the same thing in our industry.

Mr. FORDNEY. So far as the consumer is concerned, what figure did that tariff cut?

Mr. WEINGART. It cut this figure: It has been testified here yesterday, and has been brought up in letters of the domestic underwear manufacturers, that they were able to buy laces made in this country for less money, since the enactment of the tariff law raising the duty to 70 per cent, than they had been able to buy the laces for under the 60 per cent duty, and that—

Mr. FORDNEY (interposing). Home competition lowered the prices?

Mr. WEINGART. Just a moment, please.

The CHAIRMAN. Mr. Fordney, the balance of us would like to have the witness answer your question.

Mr. FORDNEY. I thought he did.

The CHAIRMAN. You ask him a question and before he has opportunity to answer you interrupt him with another question.

Mr. FORDNEY. I do not mean to do so, Mr. Chairman.

I want to see, if it is true that under this Payne tariff law the value of these goods to the consumer has been lowered, if it was not due to the home or domestic competition.

Mr. WEINGART. That would have resulted, whether the duty had been raised or not. If the duty had been 60 per cent, the same condition would have existed.

Mr. FORDNEY. Then what are you worrying about a duty now for?

Mr. WEINGART. You said that that refers only to that portion of these goods that were made in this country, but as the statistics show here, last year these goods were imported considerably, and on those imported goods, on the \$7,500,000 worth of lever goods imported, the consumer was compelled to pay 6¼ per cent more than under the—

Mr. FORDNEY (interposing). Only on the imported article?

Mr. WEINGART. Yes, sir; only on the imported article.

Mr. FORDNEY. Why not eliminate it altogether and make all we want here at home?

Mr. WEINGART. I believe the policy of the gentlemen on the other side is not to eliminate the foreign article, but to put it on such basis as to be competitive.

Mr. FORDNEY. Will you not admit it would be better if by eliminating that altogether and encouraging domestic production the cost is going to be lowered and that that is a pretty good plan?

Mr. WEINGART. No; for this reason: That you can not reduce the price to the consumer here by raising his duty. Take the duty off entirely and you will wipe out the domestic interests, but will also reduce the price to the consumer.

Mr. FORDNEY. You have admitted the price to the consumer has been lowered by the raising of the duty in the past?

Mr. WEINGART. I beg your pardon; not by raising the duty. I did not say that.

Mr. FORDNEY. It has gone down to the consumer?

PARAGRAPH 349—LACES, EMBROIDERIES, ETC.

Mr. WEINGART. That is not as a result of raising the duty. That is as a result of the article being manufactured in this country, and that is the very statement I was——

Mr. FORDNEY (interposing). Did not the whole——

The CHAIRMAN (interposing). I hope our friend Mr. Fordney will be courteous enough to allow the gentleman to answer the question.

Mr. FORDNEY. But he has answered it.

The CHAIRMAN. The difficulty is you are both talking at the same time, and it is absolutely unintelligible to the committee.

Mr. FORDNEY. That is true, but the gentleman makes one statement, and then launches off into another branch before I get a chance at him.

The CHAIRMAN. If the gentleman from Michigan [Mr. Fordney] will allow me, he has asked whether if this cost was reduced it would reduce the price to the consumer, and the witness has started several times to answer the question and has been interrupted.

Mr. FORDNEY. He said it was reduced.

Mr. WEINGART. If you will permit, I will answer the question.

The CHAIRMAN. I really would like to have the witness given an opportunity to answer the question.

Mr. FORDNEY. I want to be fair with the gentleman and the other members of the committee. I would not be unfair to any man intentionally.

The CHAIRMAN. Will the gentleman from Michigan kindly allow the witness to answer the question. We are as interested in it as the gentleman from Michigan is. The question is, Since the raising of this duty has the cost to the consumer been reduced or raised?

Mr. WEINGART. It has been raised through the duty. What I am saying is this, that on every dollar's worth imported of the \$7,500,000 of imports the consumer has been compelled to pay $6\frac{1}{4}$ per cent more than under the 50 per cent duty, because we have laid that out; and not only has he paid the $6\frac{1}{4}$ per cent on the importations, but he has paid us a profit also.

Mr. FORDNEY. A few moments ago you said the price to the consumer on the imported article had been raised and the price on the domestic article had been lowered.

Mr. WEINGART. I will come to that.

Mr. FORDNEY. I want you to come to it at this point.

Mr. WEINGART. Will you please permit me——

Mr. FORDNEY. Yes.

Mr. WEINGART. It has been testified that certain grades of laces have been sold since the enactment of the tariff bill for less money than they were sold under the 60 per cent duty, which goes to show that the manufacturers of this country were able to manufacture these goods at a lesser cost than they were able to import them under the 60 per cent duty, and to show that they did not need the 70 per cent duty.

Mr. HILL. I think you are wrong.

Mr. WEINGART. I will repeat the statement.

Mr. HILL. I did not mean that your statement was wrong, but your conclusion is wrong.

PARAGRAPH 349—LACES, EMBROIDERIES, ETC.

Mr. WEINGART. I do not think my conclusion is wrong. If the domestic manufacturer was able to sell laces in this country for less than he pays for them under the 60 per cent duty, he must be able to manufacture them for less.

Mr. HILL. You say the consumer in this country is paid 6½ per cent more duty by reason of a raise in the Payne bill. Do you add to that the conclusion that the laces have cost them more by reason of that?

Mr. WEINGART. Yes.

Mr. HILL. Do you not know as a matter of fact that the foreign prices have been greatly reduced since the Payne bill went into effect, with free machinery?

Mr. WEINGART. Please let me answer.

Mr. HILL. Wait a moment.

Mr. WEINGART. If you will let me answer it in a proper way, I want to show that the prices were not reduced because the duty was reduced.

Mr. HILL. They have been reduced, have they not?

Mr. WEINGART. Please let me state that the prices would have been reduced if the duty had remained the same, and the consumer would have gotten the benefit of the reduction of price.

Mr. HILL. Don't you know that the reduction immediately followed the transfer of the Gothrough machine to this country?

Mr. WEINGART. No, sir; it was not as a result of that; it was as a result of different conditions existing. I want to state this much, that the reduction was not as a result of the domestic production, but it was a result of conditions existing in the trade. Just before the enactment of the Payne bill there were new machines, and improved machines brought out, and 1,200 of them were put up in Nottingham, and it was on account of the increased production and increased competition that the cost was reduced and not as a result of the 70 per cent.

Mr. KITCHIN. Were the prices reduced the world over as well as here.

Mr. WEINGART. Yes, sir.

Mr. KITCHIN. You do not think that the raising of the tariff here made the prices fall all over the whole world, do you?

Mr. WEINGART. Certainly not.

Mr. KITCHIN. If the tariff had not been increased——

Mr. WEINGART. The American consumer would have gotten the benefit——

Mr. KITCHIN. It would have been that much lower here?

Mr. WEINGART. That is correct.

Mr. HILL. As a matter of fact, whether it is from that cause or some other cause, the withdrawal of the American demand from the European market, especially from Nottingham and from other German factories, and the supplying of that demand in this country was concurrent with the reduction in the price.

Mr. WEINGART. Yes; they were concurrent.

Mr. HILL. There were other things that entered into it. Cotton had declined at that time?

Mr. WEINGART. Yes.

PARAGRAPH 349—LACES, EMBROIDERIES, ETC.

Mr. HILL. Cotton has gone up since that time.

Mr. WEINGART. I beg your pardon. We are not mentioning the present time. We are mentioning a matter of four years ago.

Mr. HILL. Has not the reduction in price in Europe been far more than $6\frac{1}{2}$ per cent of the additional duty which you say the American consumer has paid?

Mr. WEINGART. No, sir; on certain goods it has not.

Mr. HILL. On certain goods. Then it has on some of the goods?

Mr. WEINGART. Yes, sir.

Mr. HILL. I think you will find by a careful examination that it has on all of them.

Mr. WEINGART. Oh, no.

Mr. HILL. One moment. Would not this $6\frac{1}{2}$ per cent additional duty on the present price of lace be much less than the old price with a 60 per cent duty, and has not the American consumer gotten the foreign lace at an actual net cost—not figuring the percentages of duty—less than he paid for them, and do you not get a commission on a lower principle than you did at the time the Payne tariff law was passed and new machines were introduced into this country?

Mr. WEINGART. I do not understand the last part of your question.

Mr. HILL. You still get your commission?

Mr. WEINGART. No, sir; we import. I told you that the houses which I represent carry a stock of \$20,000,000 which they import at their own risk.

Mr. HILL. And some of them run their own factories, do they not?

Mr. WEINGART. No, sir. You are talking now of the Lever goods. Not one of the houses that I represent has a factory abroad, nor have any of the importers factories abroad.

Mr. HILL. Do you sell Lever goods?

Mr. WEINGART. Yes, sir.

Mr. HILL. Are not the net prices to the consumer lower than they were before 1909, as stated by these gentlemen yesterday?

Mr. WEINGART. I must say, as one of the domestic gentlemen stated here yesterday, laces are an article of fashion. If there is a demand for them the prices go up, and if there is not a demand for them prices will go down. On some goods the prices may be cheaper, but in the majority of cases the prices are not cheaper than they were under the 60 per cent ad valorem duty.

Mr. HILL. Each factory has its own design and specialty?

Mr. WEINGART. Yes, sir.

Mr. HILL. Laces are largely sold upon the taste of the buyer as to design. But speaking of staple articles of laces—such as are used to trim corsets and to trim the bottom of ladies' skirts, and such articles as that as are staple articles and not sold so much for the fancy design—are not those staple goods sold to a very marked degree lower than they were before 1909, notwithstanding the advance in cotton?

Mr. WEINGART. I will state that they are in a measure sold cheaper. But that is not the result of the 70 per cent. The consumer would have bought them still cheaper if the duty had remained less.

Mr. PAYNE. Other people can judge as to the result. We did not ask you about that.

PARAGRAPH 349—LACES, EMBROIDERIES. ETC.

Mr. WEINGART. I would like to dwell a few moments on another article as this article is not the principal article we import, as it is only 7,500,000 as compared with some 46,000,000 of articles made on the embroidery machines.

Mr. FORDNEY. The fact is you, as a foreign manufacturer, appear here before the American House of Representatives and ask for a lower rate of duty on foreign-made goods.

Mr. WEINGART. Please permit me to say that you must separate your question. If you address me as to goods made on the Lever machines, of the 50 firms that I represent not one of them is a foreign manufacturer; they are nothing more than jobbers. They buy their goods from the foreign manufacturer and they pay him a profit. They import the goods and resell them to the retailer. They are just as willing to buy them from the domestic manufacturer and do the same thing. We are not foreign manufacturers.

Mr. FORDNEY. You are a foreign manufacturer?

Mr. WEINGART. I am not a foreign manufacturer on the goods that you have questioned me about.

Mr. FORDNEY. Well, on any goods.

Mr. WEINGART. I am a foreign manufacturer of embroideries.

Mr. FORDNEY. And you are asking for a lower rate of duty on your class of goods?

Mr. WEINGART. I am, because I believe if the duty is not reduced the importation of these articles will be so materially reduced as to do away with the revenue.

Mr. FORDNEY. I want you to answer this question yes or no, because you have admitted it. As a foreign manufacturer, you are here asking an American House of Representatives to lower the duty on an article which you are producing abroad which you want to bring into this country?

Mr. WEINGART. As a foreign manufacturer interested at this end in a different class of business, virtually as an importer and not as a manufacturer.

Mr. FORDNEY. It does not matter what you are interested in. You are a foreign manufacturer, are you not?

Mr. WEINGART. You can not separate it. I have not a dual personality. I am appearing here as an importer and I want to say I will be a domestic manufacturer whether or not the duty on this article is reduced, as soon as I am in a position to know that I can get the improved machines. I want to say that I have offered to purchase some of these machines for this country and have not been able to do so. I am speaking for other houses——

Mr. FORDNEY (interposing). There are a good many ifs in your proposition.

Mr. WEINGART. There is no if in that fact.

The CHAIRMAN. These questions are not pertinent to the inquiry, and in view of the number of witnesses here I will have to call the next witness.

PARAGRAPH 349—LACES, EMBROIDERIES, ETC.

The witness filed the following brief:

MEMORANDUM ON BEHALF OF THE ASSOCIATION OF IMPORTERS OF LACES, EMBROIDERIES, VEILINGS, NETTINGS, AND KINDRED ARTICLES.

This memorandum is submitted on behalf of the Association of Importers of Laces, Embroideries, Veilings, Nettings, and Kindred Articles, of New York, a trade organization embracing in its membership over 50 firms and companies engaged in the lace and embroidery business, and including concerns which have both importing and domestic manufacturing interests. The firms and companies belonging to this association have an aggregate average stock on hand of \$25,000,000 of embroideries and laces in this country, but conditions in their business have become such, that they strongly urge a reduction of the tariff on embroideries and laces to 45 per cent, notwithstanding the fact that it would mean a loss of approximately two and one-half million dollars on their stock on hand, which they are ready to bear, by reason of the urgent necessity of making the reduction in the tariff that they urge. The object of the submission of this memorandum is twofold:

First. To urge the reduction of the duties imposed at present on embroideries and laces to 45 per cent ad valorem.

Second. To point out the desirability of placing in a separate schedule, and, if possible, in a single paragraph, with a fixed and uniform ad valorem rate, the several provisions imposing tariff duties on laces and embroideries, which, in the tariff act of 1909, are scattered through four different schedules, to wit, (a) paragraphs 349 and 350 of Schedule J, flax, hemp, and jute, and manufactures of, levying a duty of 60 and 70 per cent, respectively; (b) paragraph 179 of Schedule C, metals, levying a duty of 15 cents per pound and 60 per cent ad valorem; (c) paragraph 383 of Schedule K, wool, levying a duty of 50 cents per pound and 60 per cent ad valorem; and (d) paragraphs 402 and 405 of Schedule L, silks, levying a duty of respectively 60 per cent ad valorem and 45 to 60 cents per pound, plus 60 per cent ad valorem in some instances. The great majority of importations of embroideries and laces are embraced by paragraphs 349 and 350, first cited, because made of cotton. The total foreign value of importations of all kinds of laces and embroideries falling under these two paragraphs for the year 1912 was \$32,664,243, of which \$7,620,749 paid 70 per cent duty under paragraph 350. The total importations of laces and embroideries for the year 1912, falling under all the paragraphs specified, aggregated \$39,309,229 foreign value, and paid about \$24,411,689 duties to the United States, exclusive of artificial silk laces and wearing apparel.

This association recommends that a new schedule be adopted, to read substantially as follows, the language of Paragraph 349 being substantially retained, except that certain articles hereinafter referred to, which do not belong in the class of embroideries and laces, are taken out of the same:

"Lace window curtains and all other lace articles, handkerchiefs and all other articles made wholly or partly of lace or laces, or in imitation of lace; nets, nettings, veils, veilings, quillings, trimmings, ornaments, handkerchiefs, and other articles or fabrics embroidered in any manner by hand or machinery, whether in a plain or fancy letter, initial, or monogram, or otherwise, or tamboured, appliquéd, or scalloped by hand or machinery for any purpose, of from which threads have been drawn, cut, or punched to produce openwork, ornamented or embroidered in any manner herein described, in any part thereof, however small; hemstitched, tucked, flouncings or skirting; laces and embroideries in all widths, edgings, insertions, galloons, flouncings, bands, bandings, or in any other form, forty-five per centum ad valorem: *Provided*, That all said articles shall be thus dutiable, whether composed of cotton, silk, artificial silk, tinsel or metal thread, India rubber, vegetable fiber, or any material or materials whatsoever, for whatsoever purpose used and by whatever process manufactured, or on whatever machine, if any, made."

This would require separate treatment for articles with which this association has no particular concern, but which now figure in paragraph 349 in the tariff act as follows:

"Napkins and wearing apparel made wholly or in part of lace or laces, or in imitation of laces; neck ruffings, ruchings, tuckings, flutings, braids, featherstitch braids, gorings, bands, bandings, belts, beltings, bindings, cords, ribbons, tapes, webs and webbings, and wearing apparel embroidered in any manner by hand or machinery."

This would then supersede paragraph 350 of the present law (besides the other sections cited), as far as applicable to laces and embroideries, which reads:

"Laces, embroideries, edgings, insertings, galloons, flouncings, nets, nettings, trimmings, and veils, composed of cotton, silk, artificial silk, or other material (except

PARAGRAPH 349—LACES, EMBROIDERIES, ETC.

wool), made on the Lever or Gothrough machine, seventy per centum ad valorem: *Provided*, That no wearing apparel, handkerchiefs, or articles of any description, composed wholly or in chief value of any of the foregoing, shall pay a less rate of duty than that imposed upon the articles or the materials of which the same are composed.”

I.

It is respectfully submitted that the fair and adequate rate of duty to be imposed on laces and embroideries in the proposed revision of the tariff act, and to be stated in the separate paragraph dealing with laces and embroideries as proposed by us, should be not over 45 per cent ad valorem. That rate will yield adequate revenue to the Government, and materially more than the maintenance of the present provisions would, and will be fair also to the domestic industry. The present rates of duty, if continued, will in most cases prove prohibitory, thus resulting in a greatly diminished revenue—the very thing to be avoided. As we shall show, the present rates are in actual effect considerably higher even than they appear to be in terms. The domestic article in the field that is now being exploited in this country, can be and is made for less than it costs to land the imported article in the United States at present rates. And the conditions which we shall point out will continue to favor the domestic industry, even if the duty be made 45 per cent or less.

These articles are staples, not luxuries; are used by all classes of the population and should be kept fairly in reach of all.

(1) The matter of revenue.

We are within the facts in saying that if the present rates of duty are continued, the revenue from imports of laces and embroideries will very soon diminish very greatly and before long will be practically extinguished entirely, and any fair-minded person acquainted with the conditions in the trade will substantiate this statement. This is due to the heavy and ever-growing increase in the domestic manufacturing of these articles during the past few years, resulting largely from the introduction of labor saving machinery, and the very great and uncalled-for and unnecessary protection now enjoyed by the domestic manufacturer. There has been a large and increasing diminution of importations of laces and embroideries during the past few years, and particularly since the tariff act of 1909 has been in force, despite the large increase in our population, and, on the other hand, a large absolute and relative increase in the manufacture and consumption of domestic laces and embroideries. While the aggregate value of laces and embroideries of all kinds imported in 1907 into the United States was \$46,403,404 (including wearing apparel and other articles covered by the paragraph enumerated), in 1912 the aggregate of such importations was only \$44,949,058, instead of a normal increase of at least 10 per cent, in accord with the increase of population since 1907. We import from England and France chiefly lever goods, so called because made on machines of that name, yet our importations from those countries of laces and embroideries shrank from \$19,344,824 in 1907 to \$13,230,234 in 1911, the intermediate years 1908, 1909, and 1910, showing an intermediate decline, as witness the figures \$15,204,000, \$15,950,000, and \$14,645,597. The decrease of importations from St. Gall to the United States during the year 1912 was over 9,000,000 francs, though production there has increased, the United States to-day taking only 32 per cent of St. Gall's output, as against 45 per cent in 1907. Importations of embroidered handkerchiefs from St. Gall to the United States have fallen from \$900,000 in 1910 to \$600,000 in 1912. At the end of 1908, when the present tariff bill was being drafted, there were only 700 embroidery machines in the United States. To-day there are double that number, the official records showing that there were 1,390 in October, 1912. The “embroidery machines,” so-called, set up in the United States to-day have a capacity for manufacturing \$16,000,000 of goods per annum—more than three times that of the fiscal year 1908—while the total importations of goods made on such machines during the fiscal year 1912 were only about \$37,000,000, duty paid. The Lever machines in the United States have a capacity for manufacturing about \$10,000,000 worth of goods to-day, there being about 500 such machines to-day in the United States, of which about 400 were imported duty free since 1909, compared with a capacity in 1908 of less than one-third, as against about \$12,500,000 of such goods now imported, duty paid. Accordingly, while the American manufactured laces and embroideries amounted to only about 10 to 20 per cent of the total consumption of laces and embroideries in 1908, they now amount to about 30 per cent. Impetus was given to American manufacture by the provision of the present act, under which such machinery could be imported free of duty for about 16 months after the new tariff act went into effect, instead of paying 45 per cent duty, but

PARAGRAPH 349—LACES, EMBROIDERIES, ETC.

this home manufacturing business has become so profitable that the importation of such machinery continues, despite the reestablishment of the duty on the machinery. The threatened introduction of patented automatic embroidery machines in the industry in this country, hereafter referred to, which two concerns in this country use here already, would still further revolutionize the industry here, by eliminating the difference of cost of labor almost entirely, without regard even to the duty.

The rates of duty on these articles in late years have been abnormally high, beginning with the McKinley Act, the purpose having been to stimulate an infant industry, which, through the protection of the tariff and the introduction of labor-saving machinery, no longer needs such protection. Laces and embroideries in all the history of the country never paid a higher duty than 40 per cent until the McKinley tariff. They have paid 60 per cent duty under the McKinley tariff and under the Dingley tariff. They paid 50 per cent under the Wilson tariff, and thereafter the duty of 60 per cent was restored, and was even raised to 70 per cent on certain articles, to wit, those made on the Lever or Gothrough machine, by paragraph 350 of the act of 1909. Only about \$1,000,000 worth of real laces (hand-made laces), as distinguished from machine-made laces and embroideries, were imported in 1912, and as to these there is no competition in this country, and they alone are true articles of luxury; yet the duty on these hand-made laces was not raised by the act of 1909, while paragraph 350, as seen, raised the rate to 70 per cent even. The history of section 350 is so recent as to be within the memory of all who took any interest in the enactment of the act of 1909. The act ostensibly lowered duties, but here heavily raised them on the very class of goods which included laces of the cheapest grade, and this paragraph was notoriously framed to favor special interests. Though the real laces are luxuries, their volume is comparatively insignificant, and for convenience of classification and in order to avoid the danger of their being smuggled into the United States, we favor including them in the proposed new general schedule of laces and embroideries, instead of segregating them. On the other hand, artificial silk laces and embroideries, under paragraph 405, now pay a duty of 45 cents per pound, in addition to the 60 per cent ad valorem rate, the total of \$972,000 worth imported in 1912 having paid an ad valorem duty of as high a rate as 68.85 per cent on the average.

The present duties, if continued, will soon prove to be practically prohibitory in many branches of the business, particularly in the grades of the articles which are made in this country. There is no possibility of the continuance of fairly competitive conditions between the domestic and foreign manufacturers under the existing rates; indeed, in certain grades, competition is practically nearing an end already. The revenue will naturally feel the effect, unless conditions are changed, and we are convinced that, otherwise, instead of being one of the most important producers of revenue to the Government, this class of articles will soon substantially disappear as a revenue producer.

The fate that is likely to be encountered by the industry of importing embroideries and laces generally, is well illustrated by the experience had with Nottingham lace curtains. These were very extensively imported into the United States formerly, but have fallen off so much that, as was noted by Mills & Gibb of New York, the importations of Nottingham lace curtains and curtain nets fell off according to the figures collated by the American consul at Nottingham, to a total of \$236,171 in value in 1903 and to \$78,104 in 1907, and \$46,887 during the first 11 months of 1908. To-day there are practically no importations whatever of Nottingham lace curtains, because the tariff has for years been absolutely prohibitory, and home industries were built up which made importation impossible.

The new proposed duties would not decrease the volume of importations of laces and embroideries into the United States over the aggregate of the past year, but the more serious problem is to meet the necessity of doing something to meet the large and still greater impending falling off of importations, in order to enable the Government to continue to realize substantial revenue from its collections of customs duties on these articles, and permit the importing business to continue, and in order to prevent a deterioration in the quality and character of the articles used in the United States. The proposed new provisions would tend greatly to protect the United States Government in continuing to realize revenue from this important class of articles.

In connection with the probable effect of the proposed reductions upon the volume of importations, it should be remembered that the reduction is likely to permit of bringing in grades of imported goods at prices at which they can be sold here, which are at present not imported at all. Moreover, lace and embroideries are bought by the consumer of the completed article largely in accordance with the pecuniary condition of the women purchasing the same, and only in part in accordance with the

PARAGRAPH 349—LACES, EMBROIDERIES, ETC.

design. Under the proposed reduction the consumer will get better value for his money, and a better class of goods is likely to be imported for our own market.

(2) The existing rates of duty, while apparently running from 60 per cent up, are really much higher.

The present rates hereinbefore pointed out are respectively 60 per cent, 70 per cent, 15 cents a pound and 60 per cent, and 45 cents a pound and 60 per cent, according to the constituent materials, etc. But in actual effect they run much higher, and for the following reasons: The duty is imposed not on the basis of foreign cost of production, but on the basis of foreign market price. In other words, the ad valorem duty is applied on the foreign manufacturer's profits as well as on the foreign cost of production. An example will show what this means. Suppose a manufacturer's profit on an article made on the lever machine, costing \$1 to produce, is 20 per cent on his selling price, then the foreign-market price is \$1.25. 70 per cent of this \$1.25 is 87½ cents, which is 87½ per cent of the foreign cost of production. Add to this the duty on boxes and coverings, the ocean freight, marine insurance, totaling at least another 3½ per cent, and we have a total of 91 per cent protection enjoyed by the domestic manufacturer over the imported article—that is to say, measuring the actual cost of production abroad against the actual cost of production in the United States, the ad valorem rates now imposed are considerably more than they appear to be in the words of the tariff act. Taking the same illustration used above, a 45 per cent rate, which is the maximum we suggest, would really amount to 60 per cent protection, if the foreign cost of production be compared with domestic cost of production—the only fair comparison. And 60 per cent protection is ample for every fair and suitable consideration to the domestic industry.

(3) The conditions will continue to favor the domestic industry, with a 45 per cent duty or less.

This industry is now, more than ever, on a machinery basis. Indeed, with the most recent inventions and improvements, the item of labor in the total cost of production is comparatively negligible. Therefore, in so far as labor is concerned, the domestic industry is not at a disadvantage that amounts to anything in the fields which it is exploiting, and will continue to exploit. Nor is there any great disadvantage to it in the other items going to make up cost of production. Hence a duty of 45 per cent (which, in effect, really amounts to 60 per cent protection and more, as we have shown), will still leave the domestic manufacturing industry a considerable advantage—what we should call a fairly competitive one, that will grow greater as time goes on.

During the last few years there have developed here and abroad a number of auxiliary improvements in connection with embroidery machines which tended to require appreciably less manual labor, and thereby proportionately decreased the cost of production. The most important of these is the automatic attachment to the embroidery machine. This invention has revolutionized the manufacturing of embroideries and laces abroad, and if extensively made use of in this country will eventually enable the cheaper and medium grades of these articles to be made in this country, to the total exclusion of the imported article, irrespective of the fact whether or not the rate of duty of 45 per cent be granted. The Automat greatly reduces the amount of skilled labor necessary, and thereby enormously decreases the cost of production of the article. The reduction in the cost of production, however, is not the only thing accomplished by the Automat. By its use the workmanship of a skilled stitcher (called a puncher) can be duplicated without limit. One puncher can keep 15 automatic machines supplied with work, and inasmuch as one of these machines can produce \$15,000 worth of merchandise in a year's time, one puncher can make sufficient cards to produce \$225,000 per year, every dollar of which will be of equal quality of workmanship, while without the automatic attachment, machines now in general use in this country would require 25 skilled men to produce a like amount.

Aside from this there would be nothing which would prevent the punching of these cards abroad and importing them for use in this country, in this way doing away, in a large measure, with the need of any skilled punchers over here.

There are to-day over 2,000 of these Automats in use in Europe, and although this machine has been in use for two years there, there are but 188 in use in this country to-day, which are being operated, however, only by two firms.

The reason that these machines have not been put to greater use in this country is because these machines are patented and because at present there is a deadlock between the various interests controlling them. There is nothing, however, to prevent these interests from getting together, and when they do, they will be in possession, through their control of the Automat, of a weapon that will enable them to control, in the United States, the manufacturing of embroideries and laces of this class so effectually as to establish for themselves an absolute monopoly.

PARAGRAPH 349—LACES, EMBROIDERIES, ETC.

Yet to-day, in spite of the fact that Europe is making use of this wonderful cost-saving invention and that the industry in this country is not making great use of the same, the American manufacturers were able to successfully drive the total consumption in the United States of imported laces and embroideries down from 90 per cent (value of the imported article against the domestic in 1908) to 70 per cent of the value of the entire consumption of the laces and embroideries in the United States for 1912.

What, then, will be the result, when the great saving in cost is brought about by the general introduction in this country of the Automat!

Certainly, conditions under which the domestic article can be sold at a profit for less than the foreign article costs to land before any profit is made on it at all are neither fairly competitive nor equitable to the great mass of consumers of all classes, within whose reach on fair terms these articles ought to be kept.

It is wrong to class these articles as luxuries. They are used by all classes of people. While not necessities—in the sense that articles of food and some other things are—they are certainly not luxuries under present standards of life in this country, the only difference being that the richer persons use finer goods and the poorer persons use cheaper goods, and it is unfair to make them luxuries by placing them out of the reach of those in moderate circumstances, who would otherwise use them. There is practically no woman in this country whose station is so low that she does not wear some kind of lace and embroidery. Therefore, they should not, in our opinion, be treated as luxuries and placed in the same class that diamonds and precious stones are.

It is also important to remember that laces and embroideries are used very largely as raw material for the manufacture of a vast variety and number of completed articles of manufacture made and sold here, and they should, therefore, be regarded as raw material, which should be supplied at reasonable prices to the manufacturers of such completed articles, in order to enable them to turn out completed manufactured articles at lower prices.

(4) There will be an additional argument for the reduction asked for if the duties on cotton yarns and on other raw material—which are used in making these articles—are also to be reduced.

The cotton yarn used both in the United States and abroad in making most of these articles is of Egyptian cotton. If any reduction in the yarns is to be made, an additional reason exists for the reduction on the articles in question. So, also, as to other articles which are raw material in the manufacture of embroideries and laces here.

II.

Under this head we respectfully submit that the tariff duties imposed on laces and embroideries should be at a fixed and uniform ad valorem rate, irrespective of the particular machines on which they were made, and no matter what the constituent materials are. A single separate schedule should be made to cover them.

In the tariff act of 1909 laces and embroideries are included in Schedule C: Metals, paragraph 179; Schedule J: Flax, hemp, and jute, paragraphs 349 and 350; Schedule K: Wool, paragraph 383; Schedule L: Silks, paragraphs 402 and 405.

(b) There is no reason or justification for making differences, in the rates of duty imposed, between laces and embroideries made on a particular kind of machine and those made on other machines.

We scarcely think any argument is necessary on this point. Paragraph 350 of the present law, which imposes a higher rate of duty if the articles are made on the Lever or Gotherough machine than if on any other machine, is, in our judgment, indefensible on any theory of tariff framing.

It should be remembered that the method of fixing duties in accordance with the particular machine upon which the article was made, was first inserted in the tariff of 1909, and is unprecedented, unjust, and most confusing. It raises all sorts of troublesome questions as to the character of the machine involved, and discriminates for or against particular machines without the slightest justification. Moreover, it opens the door to colorable changes in the names and characters of the machines, in order to bring the product under more favorable paragraphs of the law than contemplated by the lawmakers. On whatever machine the article is made, the product remains lace or embroidery, and they are used for essentially the same purposes. We respectfully submit that this discriminatory provision should be eliminated.

(c) In the interest of fair and uniform administration of the law, to do away with the confusion and complications now existing, and to enable those engaged in this business to know just what duties they should count on, the rate on these articles

PARAGRAPH 349—LACES, EMBROIDERIES, ETC.

should be a fixed and uniform ad valorem one, no matter what the materials of which they are composed.

According to the tables prepared by the Bureau of Statistics of the Department of Commerce and Labor, showing imported merchandise entered for consumption in the fiscal years 1910 to 1912, laces, embroideries, and allied articles paid substantially 10 per cent of the total duties collected by our Government. In other words, 10 per cent of the total revenues collected from import duties in 1910-1912 was collected from these articles. Surely they are sufficiently important to justify those engaged in importing them in making the reasonable request that the duties be so fixed as to be uniform, certain, and free from confusion or unnecessary complication, and that they should be put in a separate schedule by themselves.

Under the present law laces and embroideries pay the following rates, so far as depends on the materials of which they are composed: If composed wholly or in chief values of cotton, flax, or other vegetable fiber, etc., 60 per cent (par. 349);¹ if composed of silk as the component material of chief value, 60 per cent (par. 402); if having artificial or imitation silk or artificial or imitation horsehair, 45 cents per pound and 60 per cent (par. 405); if having metal threads, 15 cents per pound and 60 per cent (par. 179); if having wool, 50 cents per pound and 60 per cent (par. 383).¹

Now, there is always the possibility of difference of opinion as to what is the component material of chief value. The same lace or embroidery may contain metal threads, cotton silk, imitation silk, or horsehair. Endless confusion results, and the importer frequently can not know definitely under what classification the particular article he is bringing in is going to be put, until it has actually arrived and been appraised. This is as unjust as it is unnecessary. Again, according to the method of administration of the act, where the article contains, for example, a metal thread, the duty imposed is not on the basis of the weight of the metal thread, but on the weight of the entire article, which thus pays 15 cents per pound plus 60 per cent ad valorem, though the metal thread may be the least important single component. (Shoninger case, Treas. Dec. No. 31661.) What we earnestly urge is that a uniform, single, ad valorem rate be imposed, and we submit that in the interest of fair administration this suggestion should be adopted.

(d) A provision on the above lines would be clear and absolutely free from difficulty in administration, and it would do away with the existing evils which have been pointed out above. Of course, this provision, if made a separate schedule as we suggest, would require that the other articles now mentioned in paragraph 349, hereinbefore enumerated, other than embroideries and laces proper, should be placed in a separate paragraph by themselves, with provision for appropriate rates of duty.

All of which is respectfully submitted in behalf of the Association of Importers of Laces, Embroideries, Veilings, Nettings, and Kindred Articles.

JANUARY 23, 1913.

I. WEINGART,
Chairman of Tariff Committee.

STATEMENT OF A. H. KURSHEEDT, OF NEW YORK CITY.

The witness was duly sworn by the chairman.

Mr. KURSHEEDT. Mr. Chairman and gentlemen, I wish to speak upon paragraph 349, which covers embroideries and embroidered laces under various designations. These are luxuries which serve no purpose of utility whatsoever. A woman can dress well and fashionably for any occasion without their use.

Mr. HARRISON. Are you testifying as to paragraph 349, laces?

Mr. KURSHEEDT. I am.

Mr. HARRISON. As to any subdivision of that paragraph?

Mr. KURSHEEDT. I am just speaking of embroidery and embroidered laces, without mentioning all the different articles, because, for instance, the word "laces" will comprehend also laces made on other machines, and I mean the embroideries and embroidered laces.

¹ We do not refer here to the 70 per cent rate imposed if made on the Lever or Gotherough machine, as that has been already pointed out.

PARAGRAPH 349—LACES, EMBROIDERIES, ETC.

Mr. HARRISON. You are not talking about Lever or Nottingham?

Mr. KURSHEEDT. No, sir.

We desire an advance of the duty to 70 per cent for the following reasons:

It will give a certain uplift to our industry. It will also benefit the consumer, and increase the revenue.

This industry was started many years ago, principally to manufacture specialties for this country, because in those days it was impossible to compete, and there is quite a large business done in specialties.

There has also been in the last 10 years some manufacturing of goods in competition with Europe. The classes of goods we can manufacture in cotton goods and bleached goods are those where we use coarse yarn and coarse materials, and, as there are more than 300 manufacturers in this country, those goods are sold in very close competition without any regard at all to the tariff rate, and the cheap goods are purchased by the poorer people in many cases, I suppose, as low as on a basis of 30 per cent duty.

The advance in duty we ask for will not affect any of the goods used by the poorer people, but only the better classes of goods.

I would like to show you a few samples just to give you an idea of what we are talking about. These are all products of the embroidery machines. As you may notice, there are some laces there made on bobbinet, which pays a very high duty, and the fine yarns must naturally pay a high duty, so that our materials cost considerably more than they would cost in manufacturing ordinary articles.

Mr. HARRISON. None of this bobbinet machinery is made in the United States at all, is it?

Mr. KURSHEEDT. There is no bobbinet machinery made in the United States. The bobbinet machinery is all imported. Bobbinets are made in the United States, but not of the quality, so far as I know, that we use. They manufacture here, I think, more of the commoner qualities. There are very few of the fine bobbinet machines here.

Mr. HARRISON. What proportion of all the bobbinets you use in this country are made here?

Mr. KURSHEEDT. That I do not know, because we do not manufacture bobbinets.

Mr. HARRISON. Is there a considerable amount of it?

Mr. KURSHEEDT. I think in the coarser grades there is a considerable quantity made here.

Mr. HARRISON. What effect would it have upon your industry if we were to lower the duty upon bobbinet machinery or if we were to put them on the free list?

Mr. KURSHEEDT. It would not affect us materially except at times. A fashion might arise for bobbinet lace, such as we embroider, and then we would use very large quantities. Then four or five years might pass and we would use hardly any at all. In the meantime you would be losing revenue, because the bobbinet is an excellent article to collect revenue on. It is not an article used on anything that is really a necessity.

PARAGRAPH 349—LACES, EMBROIDERIES, ETC.

Mr. HARRISON. You already have all the bobbinet machinery you need in your factory, have you not?

Mr. KURSHEEDT. How do you mean?

Mr. HARRISON. Have you not already in your factory the machinery for making bobbinet laces?

Mr. KURSHEEDT. No, sir; we never had any.

Mr. HARRISON. You do not make any yourselves?

Mr. KURSHEEDT. Never. I think there are not more than three or four manufacturers in this country who make them, so far as I know.

Mr. HARRISON. If we were to take the duty off of the machinery, would not that create a new industry here?

Mr. KURSHEEDT. I do not know. I know I would not engage in the business.

In relation to the comparative cost, I will make this statement: A gentleman mentioned something about automats. The largest manufacturers of embroideries in the world use Automats in Europe. About five or six years ago they secured the American rights, and a little while before that secured the European rights. The Automat is an American invention entirely. It was secured by this firm or corporation, who developed a very large business in Europe, established large plants, and imported practically the entire production to this country. They began about the same time the industry was started in this country, and several of them became millionaires. There is not a single rich manufacturer—that is, those who have become rich in this industry—in this country. That firm has had the American rights since January 8, 1908. They engaged in the manufacture in this country previously with a machine such as the others had in 1894. They have to-day eighty-nine 10-yard machines in this country, and they have equivalent to four hundred and thirty-two 10-yard machines in Switzerland, and those 432 machines work entirely for this market, so far as I know, and I have good reason to feel that I know the truth about it.

That gives a very good idea as to whether or not we can compete, because if they possess every possible advantage in machinery and only manufacture a small portion here, that is the very best and most conclusive evidence regarding the relative cost.

At the time of the last revision certain importers who manufactured embroideries and laces in Europe claimed that the goods could be made cheaper in this country. They were principally citizens of the United States who had large plants in Switzerland. Nevertheless, importers, who were American citizens, actually erected in Switzerland during the time that free entry was allowed into this country more machines than were imported altogether during that period. This is further proof that we are not even incidentally protected.

The CHAIRMAN. Your time has expired, but if you want a moment more, you may proceed.

Mr. KURSHEEDT. The increase of duty would, in my opinion, give you an increased revenue, while any reduction in duty would cause you to lose revenue.

I think that is all, Mr. Chairman. Thank you.

PARAGRAPH 349—LACES, EMBROIDERIES, ETC.

BRIEF OF THE ASSOCIATION OF AMERICAN EMBROIDERY AND LACE MANUFACTURERS (INC.).

Paragraph 349: Embroideries and Embroidered Laces under Various Designations.

EMBROIDERIES AND EMBROIDERED LACES ARE PURE LUXURIES.

Classification of necessities and luxuries: To make clear our conception of the real necessities of life and the luxuries, we suggest the following classification: Essential necessities—Plain food, shelter, and clothing. Seminecessities—The more varied food and such shelter as is commonly enjoyed by civilized nations. Semiluxuries—Articles used or worn because of the rigid customs of a community, which also serve purposes of utility, such, for instance, as kid gloves. Pure luxuries.—Articles of adornment which serve no purpose of utility, such as embroideries and laces. Any woman may be well and fashionably dressed for any occasion without the use of embroideries or embroidered laces as a decoration.

We advocate an increase in duty from 60 to 70 per cent ad valorem on embroideries and embroidered laces and kindred articles, the product of the shuttle and hand embroidery machines, as contained in paragraph 349, Schedule J, under various designations, for the following reasons:

In order to establish a proper measure of competition between the foreign and domestic manufacturers for the benefit of the consumer: The competition among the domestic manufacturers has already caused the foreign manufacturers to lower their prices materially on the very limited line of competitive goods which the present low rate of tariff permits to manufacture in this country.

More competition will hold in check such enormous advances as obtained in 1906, when the importers demanded and received prices in many cases 50 per cent higher than those of to-day.

A higher duty will cause further progress to be made by the American manufacturer and cheapen the cost of production for the benefit of the consumer. All the important inventions within the past 20 years to improve the embroidery machine have originated in the United States and have been developed by American capital in this country. The foreign manufacturers have profited by these inventions to undersell us in our own market on four-fifths of the competitive goods.

To uplift the industry: It will prove a great uplift to the industry in providing a better class of goods to be made, thus furnishing opportunity to the work people to perfect their skill, earn better wages, and obtain more regular employment. There are 350 domestic shuttle machine embroidery manufacturers. Any pecuniary advantage to the manufacturers will, because of the keen competition, revert to the consumer.

To provide more revenue: During the period prior to 1891, when the duties imposed were only 35 and 45 per cent, competition with foreign countries was impossible. Almost the entire industry depended upon what is known in the trade as "job work" or "special order work"—that is, when certain colors were suddenly wanted the domestic manufacturers would be called upon to supply the immediate demand. Manufacturers and retailers would send their own materials, also, to be embroidered. American inventions have since changed this condition of affairs to a very limited extent, and we are able to make some of the coarser grades of embroideries requiring a minimum amount of labor. The labor cost here is about three times what it is in Europe. In the event of an advance in duty amounting to 10 per cent, the foreign manufacturers can easily reduce their prices 5 per cent or more, and as the domestic goods of a better quality would require finer yarns and finer cloths, upon which a higher duty or an equivalent higher price must be paid, there would remain only a net advantage of about 4 per cent.

The net advantage of 4 per cent remaining would enable us to manufacture \$2,000,000 more goods, foreign value. This would reduce the imports to \$16,000,000, foreign value. The Government would gain 10 per cent on the \$16,000,000 remaining, or \$1,600,000. Subtracting the loss in revenue, \$1,200,000, from this amount, the total net gain in revenue would be \$400,000: Eliminating embroidered handkerchiefs as an article of manufacture, there is about \$14,000,000 total production in this country, of which \$5,000,000 is "job work" and "special delivery work," or articles that are provided for in the silk, metal, and wool schedules. Three million dollars worth is embroideries sold on a basis of less than 45 per cent duty, because the material is the chief part of the cost, and the labor is insignificant. Of the same class of goods, there is about \$18,000,000 worth imported. This \$18,000,000, plus 60 per cent duty, equals

PARAGRAPH 349—LACES, EMBROIDERIES, ETC.

\$28,800,000, and plus the domestic production, \$6,000,000, makes a total production of practically \$35,000,000. Thus we should be making a trifle more than one-sixth of these competitive goods, while nearly five-sixths would be imported.

[Appendix.]

We have omitted embroidered handkerchiefs, wearing apparel, and hand-made embroideries, which would properly bear the same rates as our product and yield additional revenue.

There are more than 500 embroidery and embroidered lace manufacturers using the shuttle-embroidery machine or the hand embroidery machine, with manufactories in the following States: Connecticut, Illinois, Maine, Maryland, Massachusetts, Missouri, New Jersey, New York, Ohio, Pennsylvania, Rhode Island, Tennessee, California.

Suppose the tariff on all luxuries was reduced so that four-fifths were imported and that nine-tenths of the semiluxuries were also imported at duties averaging one-half the rates of the former, and all the seminecessities and necessities were admitted free, such a catastrophe would be precipitated and misery caused as has never been known in this country. Tariff revision stands for justice for all industries, and if the interests of any one have been slighted in the past, would it not be most proper if this error were corrected?

Respectfully submitted.

ASSOCIATION OF AMERICAN EMBROIDERY
AND LACE MANUFACTURERS (INC.).
A. H. KURSHEEDT, *President*.

Taking the figures submitted by Mr. Weingart for the Importers' Association, namely, \$24,000,000 foreign and \$16,000,000 domestic, the loss in revenue on the increased domestic production is \$1,200,000. The gain of 10 per cent on the remaining \$22,000,000 worth of imports is \$2,200,000. Subtracting the loss of \$1,200,000 from this gain in revenue and the net gain is \$1,000,000: The figures submitted by Mr. Weingart of the Importers' Association are: \$24,000,000 foreign production; \$16,000,000 domestic production. Deducting the \$5,000,000 of job goods made and specified under the silk, metal, and wool schedules, and the \$3,000,000 worth of goods sold under the 45 per cent rate, we have \$8,000,000 domestic production of competitive goods. The \$24,000,000 plus 60 per cent equals \$38,400,000, and adding to this the \$8,000,000 domestic production makes a total production of \$46,400,000. This indicates a domestic production of practically one-fifth of the total production for the domestic trade.

Confirmation of estimates as to amount of embroideries and embroidered laces imported in comparison with the quantity produced in this country: These figures are confirmed more conclusively by considering the following facts: A 50,000,000 franc corporation (equal to \$10,000,000 capital) has in Switzerland the largest plant in the world, and also has the largest plant in the United States. The product of both plants is practically all for our home consumption. This concern has owned the patent rights on the automatic embroidery machine in Europe and in the United States for over five years, yet it has 83 per cent of its machines in Europe and only 17 per cent in this country. The next largest house imports more than four-fifths of its product and buys or manufactures here less than one-fifth. The importations of these two concerns collectively are fully one-third the total imports of these articles.

Citizens of the United States who have built up the embroidery industry in Switzerland have become millionaires; citizens of the United States who have battled to establish the domestic industry have not become rich: Further confirmation of the fact that embroideries and embroidered laces can not, under present conditions, be made in our country to compete with foreign-made goods is that, whereas several American citizens who are engaged in the industry in Europe and have erected large plants to furnish employment to foreign labor have become millionaires, to our knowledge no one of the many people who have endeavored to build up the industry under our flag has become rich. Is it wise that the legislation of our country should be directed toward the expatriation of citizens of ability?

"Whoever grows two blades of grass on the same plot of ground where one has grown before is deserving of reward from his country." The development of inventions in this country has cost the American manufacturers many hundreds of thousands of dollars. The total return from these inventions has been much less than the cost. The foreign manufacturers have reaped the benefit and have undersold us in our own

PARAGRAPH 349—LACES, EMBROIDERIES, ETC.

market to the extent of at least four-fifths of the total consumption of competitive goods.

All the essential and important inventions to improve the embroidery machine have been made by American citizens. The modern shuttle embroidery machine is a 10-yard multiple-needle sewing machine, carrying 684 needles. Since the days of Elias Howe, Isaac M. Singer, Wilson, and Willcox this country has been preeminent in everything connected with the manufacture of sewing machines.

We do not always realize how rich we are in genius and ability. We have some of the best workmen in the world; we possess the mechanical skill, but for lack of opportunity the country's industrial progress is retarded. The 10 per cent increase of tariff that we advocate will not only help the domestic industry, but it will benefit the consumer and bring to the Government an additional revenue.

It is of great importance that the provisos in paragraph 349 be retained.

Respectfully submitted.

ASSOCIATION OF AMERICAN EMBROIDERY
AND LACE MANUFACTURERS (INC.).
A. H. KURSHEEDT, *President*.

**BRIEF OF THE ASSOCIATION OF NEW YORK IMPORTERS
AND MANUFACTURERS OF MILLINERY GOODS.**

NEW YORK, *January 16, 1913.*

HON. OSCAR UNDERWOOD,

Chairman of the Ways and Means Committee, Washington, D. C.

DEAR SIR: Schedule J, for laces we ask for the following schedule:

Laces, lace curtains and all lace articles, lace handkerchiefs, napkins, lace wearing apparel, and all other articles made wholly or in part of laces, or imitation lace, and such laces made of cotton silk, artificial silk, wool, metal, or any other material entirely of one or several materials combined, and made by hand, machinery, crochet or any other processes, 50 per cent ad valorem. We ask that paragraphs of the present tariff 350 and 351 be entirely suppressed.

Brief.—Because no discrimination should be made against one kind of machine lace in favor of another, nor against any particular process in favor of another as prescribed in the present tariff. An equal and uniform rate should be applied to all laces and lace articles, as the nature and purpose of the article remain the same. We believe a 50 per cent rate ad valorem to be adequate for protection of home industry, and would yield more revenue to the treasury than curtailed importations under a 60 per cent and a discriminating 70 per cent ad valorem rate.

Yours, very truly,

SIDNEY B. VEIT, *Secretary*.

**BRIEF OF THE BRAID MANUFACTURERS ASSOCIATION OF
UNITED STATES.**

NEW YORK, N. Y., *January 13, 1913.*

In relation to Schedule J, paragraph 349, covering cotton trimmings, braids, etc.

The present rate of duty assessed on these goods is 60 per cent ad valorem, and we request that said rate of duty be maintained.

We make the above request on the ground that the goods covered by this paragraph are luxuries and that the above rate of duty will produce the highest rate of revenue and at the same time enable the domestic manufacturers to compete with similar goods manufactured in Europe.

As stated in our brief in connection with other schedules, the labor and expenses in manufacturing this class of goods in Europe are about one-third of what they are in this country. Our cost of materials is about 40 per cent of our total cost. Therefore, the foreign cost of labor and expenses would be only one-third of 60 per cent of our total cost, which equals 20 per cent of our cost, thus making their total cost, including material, equal to 60 per cent of our cost.

Their total cost landed, with 60 per cent duty added, would equal about 96 per cent of our cost, which puts us in a position to compete without said rate of duty being prohibitive.

PARAGRAPH 349—LACES, EMBROIDERIES, ETC.

For above reasons we respectfully ask the maintenance of the existing rate on above goods.

Respectfully submitted.

BRAID MANUFACTURERS ASSOCIATION OF UNITED STATES,
Per ALBERT S. WAITZFELDER,
HENRY W. SCHLOSS,
Committee.

NEW YORK, *January 31, 1913.*

HON. OSCAR W. UNDERWOOD,

Chairman Committee on Ways and Means, Washington, D. C.

DEAR SIR: In relation to Schedule C, paragraph 179; Schedule J, paragraph 349; Schedule K, paragraph 383; Schedule L, paragraphs 402, 405. Above paragraphs cover laces and embroideries; also braids, trimmings, etc.

We have already submitted briefs in relation to each of above paragraphs, containing our recommendations as to rates of duty on braids, trimmings, etc., and our reasons for such recommendations.

Since submitting those briefs we have noticed in the hearings before your committee on Schedule J that certain witnesses suggested taking laces and embroideries out of above paragraphs and making separate paragraphs for same.

In view of the fact that there is no line of demarcation between laces and lace braids, the division of above paragraphs would lead to needless difficulty and confusion in assessing, besides giving the opportunity for importers to claim them under whichever might be the lowest rate, as well as other complications at the customhouse.

These facts can be substantiated by the general appraisers.

For your information we inclose a few samples, some of which are made on the torchon lace machine, others made on the regular braid machine, and all of which are commercially known either as laces or as lace braids.

For these reasons we recommend the maintaining of all of these articles in the same paragraphs as at present.

Respectfully submitted.

THE BRAID MANUFACTURERS ASSOCIATION,
Per ALBERT S. WAITZFELDER,
HENRY W. SCHLOSS,
Committee.

BRIEF OF THOMAS H. WATSON ON BEHALF OF MILLS & GIBB, NEW YORK, N. Y.

NEW YORK, *January 24, 1913.*

HON. OSCAR W. UNDERWOOD,

*Chairman Committee on Ways and Means,
House of Representatives, Washington, D. C.*

SIR: We inclose, for your information, suggestions prepared by Mr. Thomas H. Watson, manager of our curtain and drapery department, relative to rates of duties on certain goods imported by us.

We think you will find that the recommendations of Mr. Watson, based on long experience in handling both domestic and imported merchandise, are worthy of consideration, having in view necessary Government revenue, with reasonable incidental protection to the American manufacturer and with due regard to the interests of distributors as well as consumers, based on the commendable principle of fair competition.

Respectfully,

MILLS & GIBB,
WM. T. EVANS, *Treasurer.*

NEW YORK, *January 22, 1913.*

Mr. H. E. GIBB,

*President Mills & Gibb,
Fourth Avenue and Twenty-second Street, New York City.*

DEAR SIR: In reply to your request for a report on the various articles imported for this department, to be sent to Hon. Oscar W. Underwood, chairman of the Ways and Means Committee of the House of Representatives, beg to say at the present

PARAGRAPH 349—LACES, EMBROIDERIES, ETC.

time the duty on all kinds of laces, embroideries, etc., is very conflicting, being 70 per cent on levers laces, 60 per cent on Barmen laces, etc., and 60 per cent on all real laces made of linen, cotton, jute, silk, etc.

The only kind of lace to which a purely specific duty could be applied would be the goods made on the lace-curtain machine. I made this schedule in 1897, and it was a very fair and just one, being a purely specific duty on all kinds of lace curtains, nets, bedspreads, shams, etc., made on the Nottingham curtain machine or the Nottingham warp machine. Afterwards the domestic manufacturers induced the committee to put on an additional 20 per cent ad valorem, which has proved to be prohibitive, there being practically nothing imported to-day. The industry in this country is monopoly and practically controlled by one man.

It is to be hoped in the revision of the tariff that all the Payne-Aldrich jokers will be left out, so that when we receive an invoice for foreign goods there will be no question about classification, as it is an unfortunate thing to have to put each importation (more or less) in the hands of customhouse lawyers, on which excessive charges are made for protesting. The following is a list of the various articles imported for this department and the duties they pay:

Paragraph 351 (specific duty suggested):

Nottingham curtains, nets, bedspreads, shams, etc., made on the Nottingham curtain machine or the Nottingham warp machine—

- 5 point, 1 cent square yard and 20 per cent ad valorem.
- 6 point, 1½ cents square yard and 20 per cent ad valorem.
- 7 point, 2 cents square yard and 20 per cent ad valorem.
- 8 point, 2½ cents square yard and 20 per cent ad valorem.
- 9 point, 3 cents square yard and 20 per cent ad valorem.
- 10 point, 3½ cents square yard and 20 per cent ad valorem.
- 11 point, 4 cents square yard and 20 per cent ad valorem.
- 12 point, 4½ cents square yard and 20 per cent ad valorem.
- 13 point, 5 cents square yard and 20 per cent ad valorem.
- 14 point, 5½ cents square yard and 20 per cent ad valorem.
- 15 point, 6 cents square yard and 20 per cent ad valorem.
- 16 point, 6½ cents square yard and 20 per cent ad valorem.
- 17 point, 7 cents square yard and 20 per cent ad valorem.
- 18 point, 7½ cents square yard and 20 per cent ad valorem.
- 19 point, 8 cents square yard and 20 per cent ad valorem.
- 20 point, 8½ cents square yard and 20 per cent ad valorem.
- Minimum, 50 per cent.

Paragraph 349 (50 per cent duty suggested):

- French lace curtains, 60 per cent.
- French bobbinets, 60 per cent.
- French and English laces, Barmen laces, lace ornaments, etc., 60 per cent.
- Hand drawn-work covers, 60 per cent.
- Lace covers, embroidered covers, etc., 60 per cent.
- Swiss curtains and yard goods (Irish point, Brussels, muslin and tamboured), 60 per cent.
- English bobbinets, 60 per cent.

Paragraph 350 (50 per cent duty suggested):

- French and English laces made on the Lever or Gothrough machines, 70 per cent.

Paragraph 325 (40 per cent duty suggested):

- French and German velour curtains and covers, 35 per cent and 12 cents square yard, minimum, 47½ per cent.

Paragraph 358 (40 per cent duty suggested):

- Manufactures of jute or linen not specially provided for, 45 per cent.

Paragraph 326 (40 per cent duty suggested):

- French tapestry covers (cotton), 50 per cent.

Paragraph 179 (40 per cent duty suggested):

- French tapestry covers containing tinsel, 60 per cent and 15 cents per pound.
- French tapestry covers, chief value silk (according to weight per square yard and percentage of weight of silk), 70 cents to \$1 per pound.

Paragraph 399 (40 per cent duty suggested):

- Artificial silk piece goods and covers, minimum, 45 per cent.

Paragraph 403 (40 per cent duty suggested):

- All manufactures of which silk is the component material of chief value, not specially provided for, 50 per cent.

PARAGRAPH 349—LACES, EMBROIDERIES, ETC.

Paragraphs 315-320, cotton schedule. (See "Cotton.")

Plain and fancy etamines.

Cretonnes.

Madras piece goods.

Dotted swiss.

Coin spots, lappets, etc.

Paragraph 323. (See "Cotton.")

Cotton cloth,¹ mercerized, 1 cent per square yard extra.

Paragraph 323. (See "Cotton.")

Cotton cloth,¹ extra threads—

Under 7 cents, 1 cent per square yard.

Over 7 cents, 2 cents per square yard.

Paragraph 332. (See "Cotton.")

Madras curtains, 45 per cent.

A duty of 50 per cent on all kinds of laces and embroideries and lace curtains (except curtains made on the Nottingham curtain machine), whether made of cotton, linen, jute, silk, or ramie, would probably be a fair duty to all concerned. For it is a well-known fact among all lace people that the actual duty necessary to protect the American manufacturer on laces and lace curtains is about 20 to 25 per cent.

I would suggest a uniform duty of 40 per cent on all tapestry fabrics, whether they contain cotton, silk, tinsel, jute, etc. Would also suggest a uniform duty of 40 per cent on all French and German embroidered table covers, whether made of plush, tapestry, or felt.

Cotton.—With regard to the cotton schedule, they should remove the jokers, such as extra 1 cent for mercerizing and extra 1 and 2 cents for extra threads, which was a great hardship to the importer and absolutely unnecessary for the domestic manufacturer, as the biggest percentage of cotton goods used for the general trade is made of American cotton, and the foreign manufacturer must import the American cotton and return it manufactured, which puts him at a certain disadvantage. It is a well-known fact that all the lower grades of cotton goods, such as coin spots or harness spots, etc., under the present tariff can not be imported.

The cost of a 36-inch Scotch muslin made of American cotton in Scotland is from 3d. to 3½d. per yard net. The same goods are produced in America in large quantities and sold at a profit by the manufacturer in this country for 7½ to 8 cents per yard. There are none of these goods being imported any more.

In regard to the cost of production, difference in labor, etc., the best argument on this point is covered by the fact that the importations from England, Scotland, and Switzerland and other markets producing machine-made goods of the above class have fallen off to such an extent that the present revenue collected by the Government is practically nothing compared to what it was 10 years ago.

I regard this tariff revision as a very important matter, especially since you have such large interests at stake, and sincerely hope that either you or Mr. Evans would go personally to Washington to safeguard your interests.

Very faithfully, yours,

THOMAS H. WATSON.

BRIEF OF BERNHARD GILMAIN & CO. ET AL., NEW YORK, N. Y.

NEW YORK, *January 17, 1913.*

HON. OSCAR W. UNDERWOOD,

Chairman Committee on Ways and Means, Washington, D. C.

SIR: The undersigned manufacturers, importers, and dealers in decorative art linens have been in consultation in regard to the rates of duty on our class of merchandise and herewith respectfully submit the following information and recommendations:

The merchandise consists of cotton, union, and linen doilies, scarfs, centerpieces, pillow shams, table covers, etc., which are used for purposes of decoration of the home and which are usually embellished with lace, embroidery, or drawnwork. These are provided for in Schedule J of the present tariff, paragraph 349.

The rate of duty heretofore assessed on all such articles containing lace (not made on the Lever machine) or embroidery has been 60 per cent ad valorem, the same as on laces and embroideries by themselves.

¹ American bleachers and finishers charge for mercerizing 40-inch single yarn, one-half cent; 40-inch 2-ply yarn, 1 cent.

PARAGRAPH 349—LACES, EMBROIDERIES, ETC.

While we recognize the fact that a lowering of the duties on these might somewhat increase the amount of importations, we must also admit that this class of goods, as luxuries purely, are not in our opinion entitled to a reduction of duty.

Regarding plain machine scalloped and spoked goods, as represented by the sample attached hereto and marked "Exhibit A":

These goods, which are a staple article and not to be classed as a luxury, the custom-house originally passed as "embroideries," which classification under the Dingley tariff was successfully defeated by the importers, the Supreme Court ruling that these goods were entitled to a rate of 35 per cent on woven fabrics of flax, hemp, or ramie, weighing less than $4\frac{1}{2}$ ounces per square yard and containing more than 100 threads to the square inch, counting the warp and filling, 35 per cent ad valorem. On woven fabrics not so specified the rate was held to be 50 per cent.

The Payne-Aldrich bill restored the duty on this article to 60 per cent, by a special provision for scalloped goods, in paragraph 349.

We would respectfully suggest that this being a very simple article, with very little work, being in general use by consumers of small means and having really none of the characteristics of embroidery, a lower duty would be in order, which, in our opinion, should not exceed 45 per cent.

Another article handled by the undersigned consists of drawnwork, which is exemplified by two specimens attached hereto and marked "Exhibits B and C." Owing to the imperfect definition of this article, variously continued through the McKinley, Dingley, and Payne-Aldrich tariff bills, paragraph 349, this merchandise has been the subject of a long-continued and costly litigation between the importers and the Government. The contention of the Government's attorneys that it should be considered as lace, imitation of lace, or as embroidery has been repeatedly defeated in the courts by the importers. The present interpretation by the customs authorities, of section 349, as applied to these articles, has been that patterns similar to Exhibit B should be dutiable at 60 per cent, and others, similar to Exhibit C, at 45 per cent. The distinction is a very difficult one to make and in many instances gives rise to differences of opinion.

We would respectfully suggest that this class of articles, "Drawnwork," should be separately provided for in the new law and be subject to one rate of duty only. We recommend as reasonable a rate of 50 per cent, which will be productive of a large amount of revenue.

We furthermore would refer to Exhibits D and E, as attached hereto.

These goods are made of cotton, union, or linen, in all sizes; they are called plain hemstitched goods, Exhibit D, or plain spokestitched goods, Exhibit E. They have heretofore been treated as goods not specially provided for, and, if made of cotton, fell under paragraph 332, if linen, under paragraph 358, both at 45 per cent.

The stitching of the hem, as shown, is produced by first drawing threads so as to create the open space and by thereafter sewing the hem, either by hand or machine. The result is an article not very far advanced in value above that of the cloth itself and which can not be classified as a luxury, but rather as a necessity.

We suggest that the present rate of these articles is too high and should in a new and lower tariff not exceed 35 per cent.

We would in view of the above considerations suggest the following paragraph to be embodied in the new tariff law:

"Plain hemstitched or spokestitched articles, not containing any ornamentation, 35 per cent.

"Machine scalloped or machine scalloped and spokestitched articles containing no other ornamentation whatsoever, 45 per cent.

"Articles ornamented with drawnwork, 50 per cent.

"Articles hand scalloped or ornamented with lace or with embroidery of any kind, 60 per cent.

"*Provided, however,* That none of the articles mentioned in this paragraph shall in any case pay a lower rate of duty than that applying to the cloth whereof same are constructed."

We would further recommend the following two amendments to the customs administrative act:

"Pending the adjudication of any difference in valuation between an importer and the appraiser, the importer shall be permitted to add to subsequent invoices under duress, to make market value as held by the appraiser, and if the final decision is in favor of the importer the amount so paid under duress is to be refunded.

"In all cases where the Government has collected an excessive amount of duty interest shall be allowed the importer, at the rate of 6 per cent per annum, on this excessive amount of duty when refunded to the importer."

PARAGRAPH 349—LACES, EMBROIDERIES, ETC.

As long as ad valorem duties are in force, there will be in many cases differences of opinion about the correct market value of merchandise. Under the present law the Government exacts from the importer a fine equal to the amount of the advance. The determination of the correct market value, after the importer has protested against an advance, is apt to take a long time, since very frequently delays are caused through the necessity of procuring evidence, etc. Under the present law, if the importer receives further invoices, he is put before the choice of risking on these invoices additional penalties if he enters the goods at what he considers the correct value, or if he advances values to those previously claimed as correct by the Government he has no remedy for receiving back the duty on such advances, even if subsequently it is ruled by the Government that his original values were correct. This condition results in a great hardship to the importer, which the provisions suggested above will overcome.

Respectfully submitted.

BRIEF OF THE CHARTERED SOCIETY OF AMALGAMATED LACE OPERATIVES OF AMERICA.

WILKES-BARRE, PA., *February 1, 1913.*

Mr. JOHN J. CASEY,
United States Congressman-elect.

DEAR SIR: Assuming that tariff on cotton and cotton goods as it applies to lace curtains will be revised during your term of office, we, the lace makers of Branch No. 2, Wilkes-Barre, take the privilege of laying before you the conditions existing in the lace curtain trade in this vicinity during the past few years.

In February, 1910, the branch membership was 179; to-day it is 153; this decrease, notwithstanding the fact that the number of machines has been greatly increased during that period. To-day, in Wilkes-Barre and vicinity there are 23 competent lace weavers who are following some other occupation, waiting for the trade to take a turn for the better. Two years ago it was deemed advisable to create a fund to assist unemployed members. This fund is only participated in by members who earn nothing between Sunday and Saturday; that means that a man who made a few hours' work during any week was not beneficial therefrom. This fund became operative in July, 1911; and at time of writing with an average membership of 160. Our officials have honored blank pay checks 704 times at an expense of \$3,980. These figures—which can be verified at any time—don't begin to show the number of men who, unfortunately for them, had a few hours' work in one week, which barred them from this out-of-work benefit.

Yet, taking general conditions of our trade in America, we, of No. 2 Branch, Wilkes-Barre, have fared better than our brother craftsmen. Therefore, we think that the condition of trade alone, regardless of the vast difference in wages paid for the same class of goods in Europe, should command whatever influence you may possess in advising that the tariff on this class of goods can stand no reduction. We feel sure you will use your habitual honest endeavor in securing a square deal.

With best wishes for your success.

Fraternally, yours,

HERBERT WEBSTER,
MICHAEL HALPEN,
JAMES WALKER,
Committee.
DAVID WILSON, *Secretary.*

PARAGRAPH 349—LACES, EMBROIDERIES, ETC.

To the Hon. John Casey, Congressman:

We beg to submit to you for consideration the following comparison of wages paid in the production of lace curtains in Nottingham, England, and in the United States. (Nottingham prices are the highest. Wages are lower in Scotland and elsewhere in Europe.)

Standard machine 324 inches wide.

DOUBLE-ACTION 4-GAIT CURTAINS.

Gauge.	American price.	English price.
6-point.....	\$8.96	\$6.10
8-point.....	9.40	6.16
10-point.....	9.82	6.92
12-point.....	10.42	7.20
16-point.....	11.61	8.25

COMBINATION.

6-point.....	\$11.17	\$7.60
8-point.....	11.55	7.75
10-point.....	11.91	7.80
14-point.....	13.04	8.44

3-GAIT MADRAS.

6-point.....	\$9.57	\$6.75
8-point.....	10.00	6.87
10-point.....	10.42	6.94
12-point.....	11.10	7.08
14-point.....	11.61	7.60
16-point.....	12.20	8.25

In addition we are paid for all alterations at the rate of 30 cents per hour. Also all main warps are paid for entering machine at the rate of \$2.07 standard (this is not paid for at all in Nottingham.)

Auxiliary help is paid as follows: Threading, 22 cents per thousand (English price, 12 cents); mending, 2½ cents per rack (English price, 2 cents); slip winding, approximately, 100 per cent more here.

Respectfully submitted by

HERBERT WEBSTER,
MICHAEL HALPEN,
JAMES WALKER,

Committee.

FACTS ON EMBROIDERIES.

At present the importation of laces and embroideries produces a yearly revenue second to that of only one commodity. It is safe to say that of all the cotton embroideries and embroidered laces now sold in the United States 80 per cent are imported and only 20 per cent are manufactured in this country.

While, generally speaking, a reduction in the tariff causes an increase in the importation of that article, and therefore a probable increase in the revenue, it is nevertheless a fact that the importation of embroideries is not affected by a higher or a lower rate of duty, but being a luxury, the demand for it is governed by the fashion of the day. This is proven by the fact that during the last 14 years with the duty at 60 per cent ad valorem the imports of embroideries and embroidered laces were far heavier than they were previous to that time when a lower rate of duty prevailed.

PARAGRAPH 349—LACES, EMBROIDERIES, ETC.

LABOR.

To show the difference existing in the cost of labor between Europe and the United States in the embroidery and embroidered lace industry, we submit herewith figures to show the wages earned per week by the various hands working 10 hours per day:

	Europe.	United States.
Stitcher.....	\$8.00	\$25.00
Washer.....	4.00	9.50
Shuttler.....	2.75	5.50
Mender.....	4.00	12.00
Total per week.....	18.75	52.00

If you consider that the cost of labor on the average amounts to approximately two-thirds of the cost of the finished article of embroidery or embroidered lace you can readily see that a domestic manufacturer has a hard struggle to keep his machines going, paying nearly three times as much for labor as does the foreign manufacturer. The figures given above are based on an equal production by both the American and foreign workmen. It is obvious that a further reduction in the tariff would deprive the American workingman of a standard American wage or, worse yet, throw him out of work entirely.

It is only by specializing on such articles on which the cost of the material used is greater than the cost of the labor that the American manufacturer has succeeded in developing the domestic industry to its present limited extent; but these articles form a very small percentage of the total amount of embroidery used.

We further call your attention to an improved embroidery machine known as the Automat. This machine is coming into general use in Europe. It eliminates the stitcher or skilled operator, not only saving his wages, but it also increases the output enormously, thereby further reducing the cost of production at least 15 per cent.

The patents for this machine are controlled by one firm, and they refuse to allow it to be sold to the United States.

MACHINERY.

Two years ago the duty on embroidery machines was temporarily removed, and the domestic manufacturers thus encouraged by the Government took advantage of this chance to develop their industry and imported a large number of embroidery machines into the United States. But in spite of this great opportunity to bring their plants free of duty into the United States hardly any American firms manufacturing in Europe brought over embroidery machines. On the contrary, during the time embroidery machines were allowed to enter free of duty American firms operating embroidery factories in Europe installed in their foreign factories more than twice the number of machines brought over by domestic manufacturers during the same period. Inclosed chart shows how much more rapidly the European embroidery industry develops.

About \$1,000,000 was invested by domestic manufacturers in new machines during the period of free entry of embroidery machines, many making sacrifices to take advantage to what they deemed a great opportunity to increase their plant.

The failure to employ these machines would spell ruin for more than one manufacturer.

In conclusion, permit us to say that the American embroidery industry is absolutely free from any monopolistic tendency; that, in fact, competition among the domestic manufacturers is extremely severe, and that the very nature of the industry makes utterly impossible any combination to control prices even were such a thing contemplated. In fact, no article subject to fashion was ever successfully monopolized.

PARAGRAPH 349—LACES, EMBROIDERIES, ETC.

BRIEF OF GALLAND, WECHMAR & CO., NEW YORK CITY.

NEW YORK, N. Y., *January 28, 1913.*

THE WAYS AND MEANS COMMITTEE,
House of Representatives, Washington, D. C.

We desire to call your attention to a condition existing under the tariff act of 1909, covered by paragraphs 349-350 of Schedule J, which affects 75 per cent of the entire population of the United States.

A very large part of wearing apparel for children, especially hats, caps, dresses, and as well neckwear and handkerchiefs for older persons, all of which are absolute necessities, are in our present stage of civilization trimmed or ornamented with lace, which may be regarded as equally necessary to the composition of the article as are buttons and a lapel upon a coat or a band upon a hat.

In other words, no baby's cap or dress from the child of the poorest laborer to the child of the millionaire but that some lace of some value is used for trimming, and the trade in these goods has grown enormously during the past quarter of a century.

A very large part of the cheaper laces are manufactured upon what is known as the Lever or Gothrough machine, and, until the enactment of the present tariff act, such goods were dutiable at 60 per cent ad valorem.

For some reason not in the record—but which may be speculated upon by carefully reading paragraph 197, and remembering that certain powerful interests connected with the Congress which enacted the act of 1909 were understood to be largely interested in the importation of Lever and Gothrough lace machines—paragraph 350 specifically advanced the ad valorem duty from 60 to 70 per cent upon all laces made upon the Lever and Gothrough machines.

When it is remembered that paragraph 349 contains the following, "that no article composed wholly or in chief value of one or more of the materials or goods specified in this paragraph shall pay a less rate of duty than the highest rate imposed by this section upon any of the materials or goods of which the same is composed," it becomes apparent that the baby's dress or little cap made of cotton or linen dutiable at 30 per cent may have attached to it 10 or 15 cents worth of lace made on a Lever or Gothrough machine, and thus be advanced in duty rate upon the entire garment to the exorbitant rate of 70 per cent ad valorem.

We desire to submit two examples setting forth the inequity and injustice of the present law.

Example 1:

- A hat costing entire 75 cents trimmed with Lever or Gothrough lace; value of lace, 10 cents.
- A dress costing entire \$2 trimmed with Lever or Gothrough lace; value of lace, 30 cents.
- A handkerchief costing entire 15 cents trimmed with Lever or Gothrough lace; value of lace, 3 cents.

The above articles are dutiable at a 70 per cent rate.

Example 2:

- A hat costing entire \$20 trimmed with hand made lace; value of the lace, \$10.
- A dress costing entire \$50 trimmed with hand made lace; value of the lace, \$25.
- A handkerchief costing entire \$3.50 trimmed with hand-made lace; value of the lace, \$2.50.

The above articles are dutiable at a 60 per cent rate.

From the above examples, which might be multiplied indefinitely, it is apparent that the very cheapest hats, dresses, and handkerchiefs are those customarily trimmed with Lever or Gothrough lace of low value, and are the goods used by the great mass of the American people, whereas the finer and more expensive goods trimmed with a far more expensive lace, sold only to the richer classes, appear in the second example.

Notwithstanding these conditions, the present inequitable law imposes a duty of 70 per cent upon the cheaper goods trimmed with the Lever and Gothrough lace, while the more expensive goods pay only 60 per cent.

As a result the American manufacturer, having brought in his Lever and Gothrough machines free of duty, is able to benefit by the 10 per cent advance over the previous law, and by the exorbitant present rate of 70 per cent duty on all articles containing even 3 cents worth of Lever or Gothrough lace in his sales to the American public.

These conditions are most unjust and certainly demand correction at your hands.

PARAGRAPH 349—FEATHERSTITCH BRAID.

A reduction from the 70 per cent rate under this paragraph to 50 per cent could in nowise affect the general industry in this country, and even then the American manufacturer will be most amply protected; but it would place the goods manufactured here more nearly upon a competitive protective basis, and would result in a largely increased importation and a correspondingly increased revenue to the Government.

We respectfully refer to Treasury Decision No. 31672 of February 1, 1912, which covers this entire question, and we quote two paragraphs from the court's decision as clearly exemplifying the injustice of present conditions:

"As the handkerchiefs put in controversy by this appeal are not composed wholly or in chief value of lace made on Lever or Gothrough machines, they do not come within the provisions of paragraph 350 and are not subject to the rate therein prescribed unless there be some other provision of law which makes that rate applicable to the importation. The question in the case is, therefore, reduced to this: Is there any statutory mandate which imposes a duty of 70 per cent ad valorem on goods composed in part, although not in chief value, of Lever or Gothrough laces? Counsel for the importers claim, in effect, that there is not, and their claim in that particular would be unanswerable if paragraph 339 of the tariff act of 1897 had been reenacted in the tariff act of 1909." * * *

"As already stated, the handkerchiefs are composed in chief value either of cotton embroidered linen handkerchiefs or of Gratley lace insertion. All the handkerchiefs are, therefore, articles composed in chief value of one or more of the materials or goods specified in paragraph 349, and under the express terms of the first proviso thereof such articles are required to pay a rate of duty not less than the highest rate imposed by the first section of the act on any of the materials or goods of which the merchandise is composed. Paragraph 350 of the first section of the act of 1909 imposes a duty of 70 per cent ad valorem on laces made on the Lever or Gothrough machine, which is a higher rate than that carried by cotton embroidered linen handkerchiefs or by cotton laces made on the Gratley machine, and the highest rate imposed upon any of the component materials. From all of which it follows that the goods are dutiable at 70 per cent ad valorem under and by virtue of the first proviso of paragraph 349 of the tariff act of 1909."

We therefore request a reduction of the present rate under paragraphs 349-350 to 50 per cent ad valorem.

All of which is respectfully submitted.

GALLAND, WECHMAR & Co.,
New York, N. Y.

By Francis E. Hamilton, counsel, 32 Broadway, New York City. Temporary address in Washington, Hotel New Willard.
NEW YORK, N. Y., January 28, 1913.

FEATHERSTITCH BRAID.**TESTIMONY OF CHARLES SISSON, OF THE HOPE WEBBING CO., PROVIDENCE, R. I.**

The witness was duly affirmed by the chairman.

Mr. Sisson. Mr. Chairman, I represent, as general manager, the Hope Webbing Co., of Providence, R. I., a corporation largely engaged in the manufacture of narrow woven fabrics.

The capitalization of our company is \$1,000,000 and the actual investment is somewhat in excess of that amount. We have never been able to earn any excessive dividends except during the period from 1895 to 1907, when there was a large demand for a particular class of narrow fabrics which we happened to have the machinery to produce, and we manufactured those goods very extensively, both for domestic and foreign consumption, and were able to make a considerable profit, which was divided in the way of stock dividends. Since 1907 our dividends have not averaged 6 per cent, and in paying those dividends the surplus of the company has been reduced to the extent of about \$56,000.

PARAGRAPH 349—FEATHERSTITCH BRAID.

I make that statement as indicating there are no immediate nor prospective prospects of large profits in the manufacture of the line of narrow fabrics in which we are interested.

The goods we manufacture are enumerated in paragraph 349, Schedule J, and includes such items as braids, featherstitch braids, edgings, insertings, flouncings, galloons, gorings, bands, bandings, belts, beltings, bindings, ribbons, tapes, webs, and webbings. All those are woven fabrics, although some of them are commercially denominated as braids.

I would like to refer particularly to featherstitch braids, which are illustrated by the catalogue I have here and which I will hand to the committee at this time.

Speaking particularly with reference to featherstitch braids, in the year 1897 we began to manufacture this line of goods, which had been previously exclusively imported. The business which we undertook has been followed by others in the same line, and there are now 8 or 10 American manufacturers who are making this particular line of featherstitch braids. The price of the goods since 1897 has not been advanced on account of the 60 per cent rated duty which went into effect at that time, but we have been compelled to abandon the manufacture of some of these goods in the finer grades which we took up at that time, on account of the keen foreign competition.

At the present time, although we are protected to the extent of 60 per cent, we are not able to manufacture profitably many of the finer lines of these goods. In a brief which we have filed with your committee I have prepared a comparison of foreign and domestic costs on some of the finer goods, which indicates a present advantage to the foreign manufacturer of from 10 to 17 per cent after paying a duty of 60 per cent.

During the period from 1897 the importation of these goods has largely continued, and the competition at the present time is quite as keen as it has been at any time during that period. We believe that a continuance of the present rate of duty on this particular line of braids will enable us to develop a reasonably profitable line of manufactures, and at the same time supply the American market without any increase in cost.

The CHAIRMAN. Will you refer me to the paragraph with reference to which you are speaking?

Mr. SISSON. Paragraph 349, Schedule J.

Mr. HARRISON. Would it interrupt you right here if I were to ask you to inform the committee what proportion of the imports covered by this very extensive phraseology refers to featherstitch braids, about which you are now addressing the committee?

The reason I ask that is because we have been under considerable embarrassment several times in trying to determine from the Treasury figures of the articles stated, the bulk of the imports under a basket clause of this sort. Here are probably 15 or 20 different kinds of lace materials, and the imports are lumped covering the whole thing. A 60 per cent rate might be a very competitive rate on certain of these articles, and upon others it might be absolutely prohibitive; so that it becomes of interest, as each manufacturer appears before the committee, for us to ascertain if he can tell whether his rate is a competitive one or not.

PARAGRAPH 349—FEATHERSTITCH BRAID.

Mr. SISSON. I have not been able to obtain any definite statistics as to the amount of this particular article which is imported; but from the best information I have I would suppose that the present consumption is perhaps in value \$600,000 per annum, of which probably 40 per cent is imported.

Mr. HARRISON. So that a very undue proportion of your product is imported as compared to other articles in this basket clause? The figures are only given for laces, lace curtains, and mosquito netting, \$140,000,000, and there are about \$35,000,000 of imports under this whole clause, which is about one-fourth, or 25 per cent, of the imports to production, so far as our figures go; but you think 40 per cent of yours are imported, do you?

Mr. SISSON. To the best of my knowledge it would be approximately that, about 40 per cent on this particular line of feather-stitched braid.

Mr. PETERS. In this connection can you also tell us whether the amount of importations have shown a tendency to increase or decrease in the last few years?

Mr. SISSON. I think there has been no material change in the last year.

Mr. PETERS. Would you say that the proportion of imported products to total consumption has remained about the same?

Mr. SISSON. Substantially the same. The statement I have made in regard to the relative foreign and domestic cost of feather-stitched braids applies substantially to other articles that we manufacture with the exception of the plain tapes and webs and webbing. The duty of 60 per cent upon these plain goods is not demanded in order to give the American manufacturers a fair proportion of the business, but the difficulty arises with regard to classification. The names applied to the articles in this paragraph and the names under which these goods are commercially known is so varied, promiscuous, and complex that I do not know of any method of classification which can be adopted which will differentiate one from the other. It appears to me that the comprehension of all these articles in one paragraph is almost inevitable if proper consideration is given as well to revenue as to a fair protection to the American industries.

The CHAIRMAN. I think this paragraph seems to be quite competitive.

Mr. SISSON. For instance, I have in my hand an article the cheapest of anything that I manufacture, and of which we sold 144 yards for about 25 cents. That article is known commercially as bed lace, and is not any more akin to other laces mentioned in this paragraph than wine is to water; but that illustrates the difficulty of classification.

I have also here two samples of beltings, one of which is a luxury and the other is an article of necessity. Both of them are commercially known as beltings, and there is no way that I know of of properly designating them and separating them.

Mr. LONGWORTH. Do you sell directly to the retailer?

Mr. SISSON. We sell for the most part directly to the manufacturers who consume our goods in other industries.

PARAGRAPH 349—FEATHERSTITCH BRAID.

Mr. LONGWORTH. Who consume your goods in manufacturing other products?

Mr. SISSON. Yes; with the exception of the feather-stitched braids to which I have alluded quite at length, and those are sold to jobbers and through them to the general consuming public.

Mr. LONGWORTH. None of the products that you manufacture are sold at retail?

Mr. SISSON. Not by our company.

Mr. LONGWORTH. I thought you said they were almost altogether used by manufacturers in making something else; that they were used as a part of another produce.

Mr. SISSON. That is true of a large proportion of our product.

Mr. LONGWORTH. What I wanted to get at if I could was the difference between the factory price of these goods and the retail price to the consumer. Can you give that in any of those cases?

Mr. SISSON. In the brief which I have filed with the committee on the finer lines of goods, including feather stitched braids, I have incorporated a statement, an affidavit taken under oath by our New York selling agent, by which it appears that the retail price of these goods to the consumer is about three times what the manufacturer receives for them.

Mr. LONGWORTH. About three times?

Mr. SISSON. About three times; yes, sir.

Mr. HILL. Do you make elastic fabrics?

Mr. SISSON. We make elastic fabrics to some extent.

Mr. HILL. Taking the ordinary elastic fabric which is used in gorings in shoes, what is the relative proportion of the value of rubber and fiber?

Mr. SISSON. We do not manufacture that kind of elastic fabric.

Mr. HILL. Do you know what the relative proportion is?

Mr. SISSON. Not in that kind of goods.

Mr. HILL. Which has the greater value, the cotton or the rubber?

Mr. SISSON. Usually the rubber.

Mr. HILL. In most elastic fabrics rubber is of the greater value?

Mr. SISSON. In most of those fabrics rubber is the largest item of cost.

Mr. HILL. That is true of suspender material, is it not?

Mr. SISSON. I think it is; yes, sir.

Mr. HILL. Then that would be a safe proposition with regard to the terms "elastic webs and webbing"?

Mr. SISSON. I think it would.

Mr. HILL. That the rubber would be the article of the greatest value?

Mr. SISSON. Yes, sir; I believe that would be a correct statement.

The CHAIRMAN. Your time has expired.

Mr. SISSON. I thank you.

AFFIDAVIT OF CHARLES SISSON.

I, Charles Sisson, of the city of Providence and State of Rhode Island, on affirmation depose and say: I represent the Hope Webbing Co., of which I am general manager, of said city and State, in relation to the tariff act of 1909, Schedule J, paragraph 349. I have been interested in the manufacture of narrow woven fabrics since 1866. Following other business associations in this line in 1883, with a partner, I established the

PARAGRAPH 349—FEATHERSTITCH BRAID.

aforementioned company, commencing operations with 10 looms. The business was incorporated in 1889, when 65 looms were operated, and has increased from year to year, with occasional interruptions, until at the present time the factories of this company, located at Pawtucket, R. I., have 964 looms and auxiliary machinery, employ about 1,200 persons, and constitute probably the largest plant in the world for the manufacture of narrow woven fabrics.

Since the passage of the tariff act of 1897 the capacity and output of the works has been more than doubled. The value of the plant considerably exceeds the capital—\$1,000,000.

The corporation is not a trust; has no monopoly of the business, and is not allied with any other organization or individuals to maintain prices or regulate production. The average rate of cash dividends has been less than 6 per cent. In the year 1907, and earlier, stock dividends were made from earnings which had accrued chiefly because of large demands, both domestic and foreign, for a line of goods which were profitably manufactured because of special machinery invented by persons in our employ. No patents were taken out on this machinery, and other manufacturers in this line now have equally productive equipment. For the years 1907, 1908, 1909, 1910, and 1911 dividends averaging less than 6 per cent, aggregating \$225,000, were paid, and the net earnings for the same time were \$168,142.05, showing a reduction in surplus of \$56,857.95. The present outlook for our business presents no prospect for unusual returns, and moderate earnings only can be maintained by careful management. Tariff reductions or other important changes in general conditions would be likely to result in restricted and unprofitable business. Of the articles enumerated in Schedule J, paragraph 349, our company manufactures featherstitch braids, edgings, insertings, galloons, bands, banding, belts, belting, bindings, ribbons, tapes, webs, and webbing. In 1897 our company began the manufacture of a line of narrow fabrics commercially known as featherstitch braids, which had previously been produced exclusively by foreign manufacturers. These goods are illustrated by Exhibits A, B, C, and D, hereto attached and made a part of this affidavit. On account of the large item of labor cost in the manufacture of these goods, even under a 60 per cent duty, competition with foreign makers is difficult, and in the finer fabrics in this line is impossible.

The accompanying deposition of Ferdinand Zecha and others sets forth what is believed to be a correct and conservative statement of the relative labor cost of manufacturing featherstitch braids in the United States and Germany. The computations, with exhibits above mentioned, show advantages to foreign manufacturers, viz, A, 15 per cent; B, 15.5 per cent; C, 10.7 per cent; D, 17.2 per cent.

The comparative estimate of the costs of manufacturing cotton yarns required in these goods is based on present market prices, foreign and domestic, which show a nearly uniform advantage of about 33 per cent in labor in favor of the foreign consumer. This estimate seems to be supported by report of the Tariff Board on Schedule I, table 132, on page 424.

Any reduction in the rate of duty on this line of goods must result in a corresponding curtailment of domestic production. Since our company commenced making featherstitch braid, other manufacturers in the United States have taken up this line, and domestic competition has enabled purchasers of these goods to secure their supplies of such goods as can be profitably made in the United States, quickly and at reasonable prices.

Competition with foreign manufacturers has been keen, and large quantities of these goods are still imported for reasons above stated.

If this industry, which is comparatively a new one, can remain undisturbed by adverse legislation, it can be largely developed. In this connection, as showing the apparently excessive cost of distributing manufactured goods to consumers in the United States, attention is invited to the accompanying deposition of Mr. Percy Gardner, of New York City, our selling agent for featherstitch braids.

It appears from this statement in some instances the cost to the consumer is about three times the amount received by the manufacturers. The excessive cost of distributing manufactured goods in the United States is a factor demanding more consideration than it has generally received.

The other articles manufactured by our company as above enumerated, edgings, insertings, galloons, etc., are in large measure subject to the same general conditions and statements as have been applied to the special line of featherstitch braids. Plain tape, webs, and webbings are not imported in any considerable quantity, and might not suffer from a moderate reduction of duty, but for the fact that classification seems

PARAGRAPH 349—FEATHERSTITCH BRAID.

impossible, and any attempt to discriminate as to the articles of manufacture enumerated in this paragraph, with which I am familiar, must lead in the future, as in the past, to endless controversy and litigation. (See paragraph vol. 1, Rept. of the Tariff Board on Schedule I, p. 157.)

"*Featherstitch braids.*—A comparison of paragraph 349 of the present law with paragraph 339 of the preceding act discloses the fact that there is now besides the provision for 'braids' in general, a provision for a special kind of braid—featherstitch braids. This was for the purpose of putting an end to litigation begun under the act of 1890 and continued under both the succeeding acts, so that at times besides the thousands of protests which the Board of General Appraisers was called upon to consider, there were more than 100 appeals pending before various United States courts, all claiming that featherstitch braids are not in fact braids, but bindings or tapes. The Government was uniformly successful in establishing the fact that although these goods have many subsidiary names, they are in fact braids and dutiable as such. Nevertheless the litigation continued, as may be seen from the principal decisions cited in note 86 to Table III, Appendix C, until the Supreme Court, by a decision rendered on February 19, 1912 (T. D. 32300), put an end to the discussion and upheld the contention of the Government. (T. D. 28579.)"

Except for a change in classification as above indicated, the tariff act of 1909 did not impose any higher duties on narrow woven fabrics than had prevailed under the act of 1897.

For reasons above stated, in behalf of our company, I earnestly protest against any change of classification or reduction of the 60 per cent rate.

Referring to paragraph 349 as a whole, it may be suggested that official statistics show annual importations of goods enumerated to the value of more than \$40,000,000, producing an annual revenue exceeding \$24,000,000.

It may be further suggested that nearly all the items enumerated in this paragraph are in the nature of luxuries, and the resulting revenue does not impose any serious burden on the people of the United States.

CHARLES SISSON.

[SEAL.]

ROYAL H. GLADDING,
Notary Public.

AFFIDAVIT OF PERCY GARDNER.

I, Percy Gardner, of the city and State of New York, on oath depose and say that I represent the Hope Webbing Co., a corporation doing business in the city of Pawtucket and State of Rhode Island: that as representative of said company, I offer the following exhibits: A, B, C, D, E, F, G, H, I, J, K, L, M, N, O, P, R, S, T, and W (on file) to show the similarity between the imported cost of the product commercially known as featherstitch braid, and the selling price of a comparative product made in the United States by the Hope Webbing Co., and also to show the vast differences between the selling price of our product and the selling price of the product produced at retail, which will illustrate that the consumer is obliged to pay double the amount received by the manufacturer for this product. (Exhibits on file.)

Exhibit A: Sample of 6-yard piece wound on cardboard, labeled "of foreign manufacture" and purchased by me at retail for 10 cents per piece.

Exhibit K: Same pattern as Exhibit A, made by Hope Webbing Co. in the United States, offered for sale and sold by said company in the United States in 6-yard pieces, at 44 cents per dozen pieces.

Exhibit B: Sample of 6-yard piece wound on cardboard, labeled "of foreign manufacture" and purchased by me at retail for 10 cents per piece.

Exhibit L: Same pattern as Exhibit B, made by Hope Webbing Co. in the United States, offered for sale and sold by said company in the United States in 6-yard pieces, at 43 cents per dozen pieces.

Exhibit C: Sample of 4-yard piece wound on cardboard, labeled "of foreign manufacture" and purchased by me at retail at 10 cents per piece.

Exhibit M: Same pattern as Exhibit C, made by the Hope Webbing Co. in the United States, offered for sale and sold by said company in the United States in 4-yard pieces, at 35 cents per dozen pieces.

Exhibit D: Sample of 6-yard piece wound on cardboard, labeled "of foreign manufacture" and purchased by me at retail at 10 cents per piece.

PARAGRAPH 349—FEATHERSTITCH BRAID.

Exhibit N: Same pattern as Exhibit D, made by Hope Webbing Co. in the United States, offered for sale and sold by said company in the United States in 6-yard pieces, at 32 cents per dozen pieces.

Exhibit E: Sample of 4-yard piece wound on cardboard, labeled "of foreign manufacture" and purchased by me at retail at 10 cents per piece.

Exhibit O: Same pattern as Exhibit E, made by Hope Webbing Co. in the United States, offered for sale and sold by said company in the United States in 6 yard pieces, at 39 cents per dozen pieces.

Exhibit F: Sample of 6-yard piece wound on cardboard, labeled "of foreign manufacture" and purchased by me at retail at 10 cents per piece.

Exhibit P: Same pattern as Exhibit F, made by Hope Webbing Co. in the United States, offered for sale and sold by said company in the United States in 6-yard pieces, at 46 cents per dozen pieces.

Exhibit G: Sample of 4-yard piece wound on cardboard, labeled "of foreign manufacture" and purchased by me at retail at 10 cents per piece.

Exhibit R: Same pattern as Exhibit G, made by Hope Webbing Co. in the United States, offered for sale and sold by said company in the United States in 4-yard pieces, at 37 cents per dozen pieces.

Exhibit H: Sample of 6 yard piece wound on cardboard, labeled "of foreign manufacture" and purchased by me at retail at 10 cents per piece.

Exhibit S: Same pattern as Exhibit H, made by Hope Webbing Co. in the United States, offered for sale and sold by said company in the United States in 6-yard pieces, at 46 cents per dozen pieces.

Exhibit I: Sample of 6-yard piece wound on cardboard, labeled "of foreign manufacture" and purchased by me at retail at 10 cents per piece.

Exhibit T: Same pattern as Exhibit I, made by Hope Webbing Co. in the United States, offered for sale and sold by said company in the United States in 6-yard pieces, at 33 cents per dozen pieces.

Exhibit J: Sample of 4-yard piece wound on cardboard, labeled "of foreign manufacture," purchased by me at wholesale, governed by the present tariff and landed f. o. b. New York, at 22½ cents per dozen pieces.

Exhibit W: Same pattern as Exhibit J, made by Hope Webbing Co. in the United States, offered for sale and sold by said company in the United States in 4-yard pieces, at 22 cents per dozen pieces.

PERCY GARDNER.

Subscribed and sworn to at Providence, in the State of Rhode Island, this 15th day of January, A. D. 1913, before me.

ROYAL H. GLADDING, *Notary Public.*

 AFFIDAVIT OF FERDINAND ZECHA.

I, Ferdinand Zecha, of the town of Barnstead, State of New Hampshire, on oath depose and say, that I was born in Austria in 1859 and came to America in 1882. In 1904 I started in the manufacture of narrow fabrics, commercially known as featherstitch braids, in Barnstead, N. H., using both American and German looms, and employing for the most part weavers who had previously worked in Germany. In 1907 the business was incorporated and has been continued to date under the name of New Hampshire Artistic Web Co. I am familiar with the processes and costs of manufacture of these goods, both in America and Germany. I visited Germany in 1904 and 1909 to purchase machinery and investigate conditions in the line of manufacture in which I am engaged. During these visits I learned that cost of buildings, machinery, and equipments of a factory in Germany was about 50 per cent of American costs, and that German manufacturers were purchasing their raw material—cotton yarns—at 15 to 25 per cent less than the costs of the same yarns at our factory. I also learned that German manufacturers of featherstitch braids in Barmen and other centers of this industry were paying wages 60 to 70 per cent less than I was paying in New Hampshire for making the same kind of work on machinery of identically the same construction as we were operating.

I further depose and say that the manufacture of featherstitch braids was first established in the United States in 1897; that under the tariff rates which have been enforced since that date the business has greatly increased, and if the present rate of duty is continued the domestic manufacture of these goods can be steadily developed through the skill and experience of American operatives, but that even under the

PARAGRAPH 349—FEATHERSTITCH BRAID.

present rate of duty, on account of the higher costs of equipment and labor, we can not compete with many of the lines of featherstitch braids now imported from German manufacturers.

FERDINAND ZECHA.

Subscribed and sworn to at said Barnstead this 9th day of January, A. D. 1913, before me.

PROVIDENCE, R. I., January 22, 1913.

LADIES' WEAR.

TESTIMONY OF NATHAN KRAUSKOPF.

Mr. Krauskopf was duly sworn by the chairman.

The CHAIRMAN. Proceed, Mr. Krauskopf.

Mr. KRAUSKOPF. Mr. Chairman and members of the committee, I represent the National Cotton Garment Manufacturers' Association, which association manufactures ladies' muslin underwear and infants' wear, which seem to come under Schedule J, section 349, of the tariff act of 1909.

We have filed a brief with your committee, and I will touch upon that brief as rapidly as I can.

We are not an association for profit. Each manufacturer operates individually. There is no pooling of issues; there is no general salesman; there is nothing of that sort. The association was formed when the Underwood bill was first introduced, because it was believed that that was dangerous to our interests. We have about 80 members, and we represent from 75 to 80 per cent of the production of the country, we believe. The articles manufactured by us are, as I have said, ladies' muslin underwear, "muslin" being a generic term for all underwear made of cotton and linen goods, and infants' outer and inner garments; also the same goods embellished by embroid-

PARAGRAPH 349—LADIES' WEAR.

eries, laces, and various kinds of fancy stitchings and braid. There is only a very small and negligible quantity of muslin underwear and infants' wear made that is entirely unadorned and unembellished.

I suppose it is generally known that about 95 per cent of the employees of this industry are women, being seamstresses performing various parts of the work. Men can not do this part of the work. Men are only employed in preparing it and shipping it and so forth, and they only form about 5 per cent of the people employed.

This industry is unique in that a combination seems absolutely impossible. We believe that there are over 400 manufacturers. We have on our list that we are trying to get into the association some 420 manufacturers, and the reason that there are such a large number is because it is so easy to go into this line of business with a very small capital, with credit enough for a few pieces of embroideries and laces and cotton goods, a kitchen table, and a few sewing machines. That is all that it is necessary for a competitor to have. You gentlemen can readily see that under those circumstances combinations of all kinds are impossible, and, as a matter of fact, have never existed, and in the 30 years of the existence of this trade this is the first association that has ever been formed.

We have also a very peculiar condition of affairs in regard to the labor question. At home there is a general tendency by legislation to force the manufacturers in this line of business to manufacture in factories, and to eliminate almost entirely the home work. In New York State, where the greater part of this product is manufactured, this is almost accomplished, and very little material or very few garments of this kind, relatively speaking, are manufactured in homes. Abroad, the conditions are totally different. Abroad, until very recently, the manufacture of these goods was almost entirely a home industry, and was confined to regions where labor was very cheap, in the northern part of France and in the Alsace-Lorraine district of Germany, as well as in parts of Belgium, and some in Italy, Austria, and Germany. At the present time, Austria, Italy, and principally Germany, are looming up as very serious competitors.

About 15 years ago the Germans commenced to manufacture with sewing machines, and they are rapidly getting to the point where they can supply their own needs, and are reaching out to other countries. Since the election of Mr. Wilson to the presidency I have personal knowledge of two German firms who have established an office in New York, and are beginning to make preparations to capture the trade that they think will come from a possible lowering of the duty which they expect you gentlemen will enact, but which we hope you will not.

We also have a fearsome competitor in Japan. In 1900 there were practically no goods at all imported from Japan along this line. Now there is a considerable amount of it. Quoting from memory, I believe it is \$12,000. This is to be feared because both the German manufacturers and the Singer Sewing Machine Co., through their foreign offices, have sent thousands of machines to Japan within the last two or three years, and teachers are being sent over there to teach the Japanese, who get a very small remuneration, to compete with us. The same applies to the Chinese

PARAGRAPH 349—LADIES' WEAR.

who have not yet appeared upon the scene, but who are great copyists. Garments are being sent over to Japan and China to be copied, and that is done successfully.

Mr. HULL. What kind of machine did you say they are sending to Japan?

Mr. KRAUSKOPF. Sewing machines. All of these things are made with various kinds of sewing machines.

There is considerable difference here and abroad in the hours of labor. The growing tendency is to limit us to 8 hours of labor in this country, while the hours of labor abroad, as you will see by the statistics in our brief, with which I will not weary you, are about 10.

Despite these facts, in the last 10 years the prices of our goods have fallen in this country and are steadily falling, on account of the tremendously fierce competition we have, especially with the class of people whom I have indicated. Operators, who 10 or 11 years ago were content with \$7 to \$7.50 a week, now demand \$9 and \$10, and we have in our workshop operators who make \$12, \$15, and \$18 a week. That is also the case in any of the well-conducted, well-organized shops. The hours of labor have become shorter.

With the permission of your chairman, I would like to show you, gentlemen of the committee, two garments. Have I your permission, Mr. Chairman, to show you these two garments?

The CHAIRMAN. Yes; we would be very glad to see them.

Mr. KRAUSKOPF. I have two garments here to illustrate my point.

This garment [indicating] was bought on Monday at B. Altman's, and the person who bought it was instructed to go out and buy a foreign yoke dress. \$1.50 was paid for that in B. Altman's store. I will take this garment up again in a moment, with your permission.

This garment [indicating another garment] is a garment the concern of which I am president imports. This was made in the Lorraine district. I asked our estimate clerks, and I have verified those estimates, to make a careful and conservative estimate, where these garments are made in the largest number possible, and we find that these garments which we can sell for \$1.50 would cost us to put them on the shelf \$13.17 a dozen. We find that to put them in boxes—

Mr. HAMMOND. How much?

Mr. KRAUSKOPF. \$13.17.

Mr. HAMMOND. A dozen?

Mr. KRAUSKOPF. A dozen.

Mr. HAMMOND. It was bought for how much?

Mr. KRAUSKOPF. \$1.50. We estimate that the cost of packing and delivering that garment, because these garments have to be handled in a way to preserve their good appearance, otherwise the retail concern can not sell them, would be at least \$1; and I want to say to you gentlemen that I believe this estimate is under the actual amount that we could produce that garment for, or that anybody in this country could produce it for, as we are the largest makers of that class of garments in this country, and have the largest organization on that particular class of goods.

Mr. HAMMOND. Where was that made?

Mr. KRAUSKOPF. This was made, I think, in the Lorraine district.

Mr. HAMMOND. And the other was made in the Lorraine district, too?

PARAGRAPH 349—LADIES' WEAR.

Mr. KRAUSKOPF. Yes; I think so; but this may not have been made in the Lorraine district. It is very difficult to tell, because a yoke or embroidery is made in one part and the rest of the garment is made in another section, and whether it was made there or not I could not tell.

You will understand that \$14.70 represents the cost to us when we give it to the express company. There is nothing figured there for overhead charges, nothing in regard to office supervision, nothing in regard to selling, nothing in regard to leakage or maintenance.

This garment consists of a material called nainsook, and we have figured in the nainsook, the hand embroidering, the yokes, the buttons, the ironing, etc., the cutting, the examining, the factory supervision, etc., making the shelf cost \$13.17.

This [indicating] is not what the French call a classical garment. The style of that garment will change slightly from year to year or every two or three years. This other garment [indicating] is a classical garment. Probably since the beginning of time in France they have been making this garment for children.

This garment [indicating] costs us 32 francs 80 centimes in Paris. That is, after we have paid the Paris agent his profit, it costs us 32 francs 80 centimes. For the sake of easy reckoning, I have figured 33½ cents as a franc, landed here—it actually costs nearer 36 cents—making the actual cost of this garment \$10.95 a dozen. We can not put that garment on the shelf for less than \$12.44. We can not put it in the express wagon for less than \$12.94.

Mr. PALMER. What do you say it costs you a dozen imported?

Mr. KRAUSKOPF. \$10.95. I am figuring these goods without profit. When I say "put upon the shelf," I mean the actual price to us to put it on the shelf in our factory.

We can not put this thing on the express wagon at less than \$12.94, and I confidently believe, and I am willing as an expert to say, that there is very great doubt as to whether either of these garments can be made at this price.

Mr. PALMER. Your 60 per cent duty takes care of it pretty well, then? You have a 60 per cent duty, I believe?

Mr. KRAUSKOPF. We have a 60 per cent duty on that article, and we can not make it here. I import them by the hundred dozen.

Mr. PALMER. They are made in this country, are they not?

Mr. KRAUSKOPF. They can not be made in this country. They absolutely are not made in this country. Anything we make in this country will be so inferior in appearance that it can not be sold.

The CHAIRMAN. In your class of goods covered by this paragraph 349, what is the American production?

Mr. KRAUSKOPF. As nearly as I can estimate it, it is about between \$30,000,000 and \$40,000,000, somewhere.

The CHAIRMAN. \$30,000,000 or \$40,000,000 worth of these garments are produced in the United States?

Mr. KRAUSKOPF. Yes.

The CHAIRMAN. What are the importations?

Mr. KRAUSKOPF. The importations, including the duty—that is, putting it on the same basis—are about \$3,000,000; and the consul general's office in Paris told me they believed fully an equal amount

PARAGRAPH 349—LADIES' WEAR.

was brought in by the ladies returning from France, under the exemption law giving them \$100 exemption.

The CHAIRMAN. The total amount of this particular paragraph 349 seems to be quite competitive, but is mostly made up of laces, but if your industry is between \$30,000,000 and \$40,000,000 production, and you say the total importation—we have not had it segregated, you understand—amounts to about 10 per cent—

Mr. KRAUSKOPF (interposing). That is as nearly as we can get at it.

The CHAIRMAN. Does that 10 per cent run all along the line?

Mr. KRAUSKOPF. Practically speaking, yes.

The CHAIRMAN. Is there any block in it?

Mr. KRAUSKOPF. Not as far as I know, not any serious block. It is general. They make goods on the other side which are very high-class goods, and they make these classics, and they make other goods between.

There is another fact in this connection which will perhaps help on this question. I have before me a report of the French Government in the inquiry into this matter, and to show you the condition of labor and how quickly it must respond to any possible chance of raising the price of the workmen or the workwomen in this industry, I should like to give you a translation—the book is here with the original in French, but I have translated it—from “*Enquete Sur le Travail à Domicile Dans L'Industrie de la Lingerie,*” with reference to the situation in the northern district of France.

Pas de Calais (Saint Omer):

Prices very low and workers find it very difficult to make a living. Misery shown in the establishment of the welfare bureau, in the development of prostitution, and general unhealthy conditions.

Rhone (Lyon):

The factory owners recognize the bad conditions here, which is upheld by a letter to the mayor of Lyon in 1904 sent by the united workers.

Sarthe (14 places):

Many here declare that it is impossible for a worker in lingerie to make a living, and most of them live by prostitution.

I have a number of other extracts of the same general tenor, which I will be glad to file with you if you wish; or I will file the entire book.

You can readily see how, with the least encouragement, prices of labor will rise there, and these workers will get more, because many of these extracts say it is impossible now to get more workers on account of the extreme low condition of prices, that the working girls can not live without outside assistance, that the working girls have to have assistance on the farms, and all that sort of thing.

I want to say right here that we ourselves have an embroidery factory in Switzerland; a hand-embroidery factory—not a factory in our sense, because the work is not handled in that way. The highest price hand labor is employed in that factory. They are the most expert workers, the finest needlewomen in the world, and they get paid on the basis of 3 francs a day for the very finest workers among the finest needleworkers in the world.

Mr. FORDNEY. Three francs a day is about 60 cents a day?

Mr. KRAUSKOPF. Sixty cents a day for the finest needlewomen in the finest district in Europe. That I know of my own knowledge.

PARAGRAPH 349—LADIES' WEAR.

None of this is hearsay. I have just returned from Europe. I go there very frequently in our interest.

Mr. PALMER. Were you giving us the foreign price or the price at which you put them on the shelf?

Mr. KRAUSKOPF. In the one that I could I gave the foreign price; that is, on the garment that I import.

Mr. PALMER. When you talk about the price at which you could put it on your shelf, do you mean the price at which you could make it in this country?

Mr. KRAUSKOPF. I could make it in this country under certain conditions.

Mr. PALMER. What do you say is the foreign price?

Mr. KRAUSKOPF. Of the petticoats?

Mr. PALMER. Yes.

Mr. KRAUSKOPF. \$10.95 a dozen. That is something in favor of the foreigner, which really costs more. We can produce it possibly at \$12.44 on the shelf or \$12.94 in the express wagon.

Mr. PALMER. On that article is a 60 per cent duty?

Mr. KRAUSKOPF. Yes, sir.

Mr. PALMER. So the \$10.95, when it comes into this country stands the importer at about \$16 or \$17?

Mr. KRAUSKOPF. No, sir; it is landed here for \$10.95.

Mr. PALMER. That is what I am trying to get at.

Mr. KRAUSKOPF. It is landed in this country duty paid at \$10.95.

Mr. PALMER. Duty paid?

Mr. KRAUSKOPF. Yes, sir.

Mr. PALMER. The present 60 per cent duty?

Mr. KRAUSKOPF. Yes, sir.

Mr. PALMER. You did not say that before, or if you did, that is what I missed.

Mr. KRAUSKOPF. We do a large business in these articles. I have, I venture to say, 50 articles which will figure out within 5 per cent, one way or the other, of this. Some of these articles, on which there is no hand embroidery as there is on this one [indicating], at certain times of the year, if a sufficiently large order is given so they can be made in large quantities, can be bought at unbelievable prices.

Mr. PALMER. What does that sell for over there?

Mr. KRAUSKOPF. I have no knowledge of that. I have no knowledge of the retail conditions over there.

Mr. PALMER. What does it sell for at wholesale over there?

Mr. KRAUSKOPF. It sells for 32 francs 80 centimes.

Mr. PALMER. How much is that in dollars and cents.

Mr. KRAUSKOPF. Roughly, \$10.95. It is really a little more than that.

Mr. PALMER. But that is including the duty on the imported article?

Mr. KRAUSKOPF. Figuring 20 cents to the franc, that is \$6.56.

Mr. PALMER. Is that the foreign price at which it is sold in the foreign market?

Mr. KRAUSKOPF. Yes, sir.

Mr. PALMER. Or the price to the exporter when brought into this market?

Mr. KRAUSKOPF. It is the price I have to pay for it here.

PARAGRAPH 349—LADIES' WEAR.

Mr. PALMER. Do you know whether they sell it to home merchants any cheaper?

Mr. KRAUSKOPF. I believe they sell at exactly the same price. The French merchant gets every cent he can for his garment under existing conditions at the moment.

Mr. PALMER. That is the retailer, but I am talking about the manufacturer.

Mr. KRAUSKOPF. No; he is not the retailer. I pay this to the manufacturer.

Mr. PALMER. But you said the French merchant.

Mr. KRAUSKOPF. I say French merchant; I mean French manufacturer. I assume he is a merchant, too.

Mr. PALMER. There is no such thing as dumping these things into this market, where they are made in such enormous quantities abroad, by selling them here under the home price?

Mr. KRAUSKOPF. No; because you have to wait from three to six months to have a commission executed. You can get them made slightly cheaper in the winter than you can in the summer, because in the winter the girls have nothing else to do. In the summer they find more profitable employment in the fields.

Mr. PALMER. Evidently that is a condition that does not obtain all through the line of goods in which you are interested.

Mr. KRAUSKOPF. It obtains all through the line of what is called the classical goods. I brought these two garments, because you will see they are entirely different, compared to the domestic labor.

Mr. PALMER. I understood you to say the imports amount to about 10 per cent?

Mr. KRAUSKOPF. The official imports amount to 10 per cent.

Mr. PALMER. And, of course, that indicates that, with the present duty, and 90 per cent of the consumption here being produced by you, you can beat the foreigner?

Mr. KRAUSKOPF. We do not beat the foreigner. Wherever he imports stuff, we have to retire. We make a different kind of stuff, but they are coming now to use machines which, until four or five years ago, they did not use, and they are coming in here and copying our styles, and as soon as they begin the manufacture of anything we make we will have to retire. We can not compete with them. That is so absolutely fixed in my mind that I will say to the committee we are personally making arrangements at this moment to open a factory in Germany.

Mr. PALMER. You are going to move out of the country?

Mr. KRAUSKOPF. No, we are not going to move out of the country, but we are going to be ready if necessary to move out of the country, because we have to live.

Mr. PALMER. You said two Germans were coming to New York to take your place?

The CHAIRMAN. Your time has expired, Mr. Krauskopf.

Mr. KRAUSKOPF. May I have five minutes more?

The CHAIRMAN. I think you have made your case very clear. We have a very large number of other witnesses here.

Mr. KRAUSKOPF. I would like just a moment, then, to run over my headings.

PARAGRAPH 349—LADIES' WEAR.

Prices of goods have fallen; wages have risen; hours of labor have become shorter; housing conditions are better; the tendency to abolish home labor in this country and have factory conditions better is noticeable.

Private importations of these goods are estimated by our consul general in Paris to be as large as the regular importation, which would increase the amount to 20 per cent.

I have already dwelt on the Japanese, Austrians, and Italians entering the field in competition.

One of our manufacturers, I want to say here, has already abandoned this market and has gone to Germany.

If the duties are reduced, the experience has been that the prices will fall off for a time, but the foreign manufacturer will have to raise his labor item, and then they will rise very rapidly.

We ask for the segregation of the thing in order that accurate facts and statistics may be found, because there is no segregation now. Under our present schedule part of our goods pay 60 per cent and part of them pay 70 per cent duty. We are asking for segregation of this thing on the basis of 70 per cent duty, because that will bring an increased revenue to the Government. All these goods will be imported just the same, and the country will get a slightly increased revenue, and we will be able in a few years to know just how the situation stands. There are now other articles included with this, and we do not know how the thing stands.

I want to call your attention to some other facts. In America the styles change frequently; in Europe they do not. In America we have abuses in the way of cancellation of goods and others which I am sorry I can not enter into at this time. In many States we have the employers' liability law and taxation, all of which make a discrimination against us as compared with the foreign manufacturer.

We have not a rich man in our trade. Our average profits for the last 10 years have been 7.25 per cent.

We would respectfully ask permission to print six pages from the Daily Consular and Trade Report of July 1, 1912, and some consular letters which, through the activity of Mr. Ryerson, one of our vendors, we have been able to obtain from our consuls abroad, bearing on this question.

The CHAIRMAN. You may file those.

Mr. FORDNEY. This 60-cent labor you have abroad compares in what way with that class of labor here? What does that class of labor get in this country?

Mr. KRAUSKOPF. Our laboring people here average about \$9 a week.

Mr. FORDNEY. \$1.70 a day as against 60 cents a day?

Mr. KRAUSKOPF. 60 cents is the maximum.

Mr. FORDNEY. What portion of the cost of production in your class of goods is labor?

Mr. KRAUSKOPF. About 40 per cent.

The CHAIRMAN. That is all, Mr. Krauskopf; you may be excused.

PARAGRAPH 349—LADIES' WEAR.

BRIEF OF NATIONAL COTTON GARMENT MANUFACTURERS ASSOCIATION RELATING TO THE TARIFF UPON WOMEN'S UNDERWEAR AND INFANTS' WEAR.

Section 349, Schedule J, tariff act of 1909.

I. THE STATUS OF THE NATIONAL COTTON GARMENT MANUFACTURERS ASSOCIATION.

The National Cotton Garment Manufacturers Association is a corporation organized under the membership corporation law of the State of New York. It was organized in the year 1911 and has for its object the bringing about of a closer association and intercourse between its members engaged in the same line of manufacture. It is in no sense a business corporation. On the contrary, the purposes for which it is organized involve merely a desire to bring about that degree of cooperation between the members of the same trade as will be conducive to a better understanding of the conditions surrounding that trade.

The character of the business carried on by the members of this association is somewhat unique. While the title appears to be quite generic, yet the character of the manufacture is confined to the manufacturing of women's cotton underwear and infants' garments made of cotton cloth, embellished with machine embroidery, machine laces, hand-made embroidery, hand-made laces; or embellished with fancy stitches produced by machine and by hand; and furthermore embellished and completed with ribbons and buttons. Within the scope of the manufacturing conducted there is included women's underwear without any embellishment whatsoever. It should be said at the outset, however, that the production of unembellished infants' wear and women's underwear is so slight that it may be considered as negligible. In other words, the association in question represents purely and simply the manufacturers of women's cotton underwear and infants' outer garments and underwear embellished in the manner above described.

So far as concerns the nomenclature of the underwear thus manufactured it is commonly described as "lingerie." It has been estimated that there are about four hundred factories of women's underwear and infants' wear, embellished as aforesaid, in this country. The membership of the National Cotton Garment Manufacturers Association represents very nearly 80 per cent of the entire volume of business done in this trade. There are quite a number of small manufacturers who do their work at home. It does not take any capital worth considering for any one to set himself up in business as a manufacturer of this kind of underwear. He need but have a few sewing machines, some muslin and some embroidery. With the help of a few seamstresses he can at once set to work and enter the competitive field. As a matter of fact, the competition in our trade is intensely keen, this being primarily due to the fact that such a large percentage of the cost of production consists purely of labor. There is not the slightest possibility of any combination or trust in this line. The industry is about 30 years old. For the first 20 years of its life it had a hard struggle—for the past 10 years it has been progressive.

From the statistics that we have gathered from the members of the association we find that the industry does between thirty and forty millions of dollars of business a year. It is further estimated that about \$15,000,000 have been actually invested. By reason of the keen competition that exists it is a well-known fact that no one has ever become wealthy through the production of this work. In fact, it is well known among the trade that but one single manufacturer has ever grown rich enough to retire and that he is only moderately wealthy, as we consider things of this kind in the present day, he having accumulated about \$300,000. It may thus be confidently asserted that, although our trade manufactures what possibly might be termed "comparative luxuries," yet none of us has, as yet, entered the millionaire class. We represent a small but growing industry, and we are men who are hard and earnest workers, building up our reputation and commerce in this country.

So far as concerns the number of laborers employed in the industry, our investigation shows that there are about 20,000 wage earners engaged in our direct trade.

The attention of the committee is here called to a most unique phase of the labor thus employed. Statistics that have been compiled show that 95 per cent of this labor is furnished by women. This is readily understood, in view of the fact that the main work is performed by seamstresses. It is therefore evident that this industry will at once compel a comparison between the wages paid to the women seamstresses of Europe and the women seamstresses of America. This point will be touched upon hereafter.

PARAGRAPH 349—LADIES' WEAR.

II. THE APPLICATION OF THE PRESENT TARIFF ACT TO THE WOMEN'S UNDERWEAR AND INFANTS' WEAR INDUSTRY.

At first sight one would be of the opinion that, in view of the fact that our trade is engaged in the manufacture of cotton garments, the provisions of the tariff law affecting the industry would be found under Schedule I, known as the "Cotton schedule". This however, is not the fact.

Paragraph 324 of Schedule I does provide that clothing ready made and articles of wearing apparel of every description composed of cotton or other vegetable fiber made up or manufactured wholly or in part by the tailor, seamstress, or manufacturer, should pay a duty of 50 per cent ad valorem.

Paragraph 329 of Schedule I refers to shirts, drawers, vests, union suits, etc., made wholly or in part on knitting machines.

Neither one of these sections takes up the subject of cotton underwear or infants' wear embellished in the manner heretofore described, and, indeed, the cotton schedule is entirely silent upon this character of goods.

For the purpose of finding the provision that is applicable we must turn to section 349, which comes under Schedule J, known as the flax, hemp, and jute schedule. This section provides that laces and all other lace articles, wearing apparel, and all other articles made wholly or in part of lace or laces or in imitation of lace, nettings, ruchings, embroideries, etc., wearing apparel and other articles or fabrics embroidered in any manner by hand or machinery, whether a plain or fancy letter, initial or monogram, or otherwise, or tamboured, appliqued, or scalloped by hand or machinery for any purpose, or from which threads have been drawn, cut, or punched to produce open work, ornamented or embroidered in any manner, etc., all of the foregoing composed wholly or in chief value of cotton, flax, or other vegetable fiber, etc., and not elsewhere specially provided for in this section, shall pay a tariff of 60 per cent ad valorem.

It will therefore be readily seen that the section just referred to applies directly to our trade, and that under the present law, imports of women's embellished underwear and infants' wear, must pay a duty of 60 per cent ad valorem.

The entire subject of laces, embroideries, and wearing apparel, including underwear, is treated in the message from the President of the United States, dated March 26, 1912, transmitting a report of the Tariff Board on Schedule I of the tariff law, which message was printed and is known as Document No. 643, Sixty-second Congress, second session.

The matters relating to laces, wearing apparel, etc., are found in Volume I, between pages 113 and 163.

So far as concerns section 324 of the cotton schedule above referred to, and which includes articles of apparel, we should again repeat that this section does not affect our trade, in view of the fact that the quantity of unembellished underwear and infants' wear thus manufactured by members of our association is inconsequential, and it is therefore useless to take up the time of the committee in discussing the importations of the products referred to in this section.

With regard to the imports for the year 1911 of cotton wearing apparel coming under section 349 of Schedule J we find that such importations amounted in value to the sum of \$1,862,489.94, the duties amounting to \$1,117,493.97, calculated on a basis of 60 per cent ad valorem. (Vol. 1 of Tariff Board Report, p. 116.) In this connection it is not amiss to note that it is a well-known fact that our women European tourists bring thousands of dollars of foreign lingerie to America year after year, upon which no duty is paid under the exemption provisions of the law.

Of course it must be remembered that under the above appellation of embellished cotton wearing apparel there is included such articles as corsets ornamented with lace or embroidery.

So far as we have been able to ascertain, there is no table that has ever been published, which shows the importation or the exportation of embellished women's underwear or infants' wear. In other words, by reason of the generic language in section 349 it is absolutely impossible to assert, with any degree of definiteness, what the imports of products in our trade are. In this connection, however, it is interesting to note that Japan, with its frightfully unremunerative labor compensation, exported to the United States ready-made cotton clothing and other wearing apparel of cotton in the year 1911 amounting in value to \$46,928. In the year 1900 Japan only exported \$1,854 of this class of goods.

The significance of this statement can not be too strongly emphasized. It must be evident to every one that Japan is coming to the front as a manufacturing country. Her potentialities are enormous. Our trade knows that she is already commencing to export some lingerie to this country. With a laboring day of 9½ hours, and with

PARAGRAPH 349—LADIES' WEAR.

seamstresses paid from 7½ to 13½ cents a day, it must be evident that with a low duty the future competition in this country in our trade and in kindred trades is greatly to be feared (see 154 Consular Reports, July 1, 1912, p. 6).

III. COST OF PRODUCTION AND PROFITS OF OUR INDUSTRY.

The counsel of the National Cotton Garment Manufacturers' Association requested the various members to send to him information regarding various items that enter into the cost of production and expense account of their business. The information thus furnished was regarded by him as confidential for the reason that the competition in the trade is so emphatic, that it was deemed improper that any one member of the association should be given all of the details of the business of any other member. Among the questions asked of all of the members were inquiries regarding the amount of capital invested; the amount of such capital representing machinery, lands, and buildings; the amount representing materials, unfinished and finished products; the amount representing cash plus operating accounts and bills receivable, the number of salaried officers or superintendents, the number of clerks, stenographers, salesmen, and other salaried employees; the number of wage earners, the average number of wage earners employed per day; the amounts paid to salaried officers, superintendents, stenographers, clerks, salesmen, and other employees; the amount of salaries paid to wage earners; total cost of all materials and supplies, including cost of fuel and rent; the amount of miscellaneous expenses, including taxes, insurance, traveling expenses, advertising, etc.; the volume of products manufactured during the past year, and the approximate net profits made upon the amount of business done.

From the tabulations that were made with these statistics furnished as a basis, the following conclusions will be of interest:

The average factory engages hands during 292 days of the year. It has an average capital of \$150,500. The average number of superintendents and managers that work in a factory amount to 2; the average number of clerks, 4; the average number of stenographers, 2; the average number of salesmen, 6; other salaried employees, 10; making a total number of average employees, 24. The average number of wage earners employed in a factory is 205, of which 194 are women and 11 are men. The average salary paid to the wage earners is \$9 per week; the average net profit made upon the volume of business done is 7¼ per cent; the highest profit shown by any given factory is 12 per cent.

With regard to the nature of the material that goes to make up the finished product known as lingerie, or embellished infants' wear, it consists principally of trimmings, buttons, boxes, thread, and ribbons. It is to be remembered that 85 per cent of the laces and embroideries used by our trade for the embellishments of our product is purchased from manufacturers abroad and that but a small percentage of our product is embellished by our own hand embroidery or by embroidery made by machines in imitation of hand embroidery. Furthermore, the cost of the domestic material that enters into the cost of production is substantially equal to the cost of foreign material with import duty, landing charges, etc, added.

Bearing this in mind, the association caused its members to furnish to it statements showing the comparative value of foreign and domestic cost of the constituent elements that go to make up the finished product. For the purpose of getting this information statements were sent out calling for answers on the items as follows:

Statement.

Percentage of trimmings used:	
Domestic value.....
Foreign value.....
Percentage of buttons used:	
Domestic value.....
Foreign value.....
Percentage of boxes used:	
Domestic value.....
Foreign value.....
Percentage of thread used:	
Domestic value.....
Foreign value.....
Percentage of ribbons used:	
Domestic value.....
Foreign value.....

PARAGRAPH 349—LADIES' WEAR.

Other materials used:	
Domestic value.....
Foreign value.....
Direct labor:	
Domestic value.....
Foreign value.....

These tabulations were made upon the basis that the total domestic values, as above, were figured at 100 per cent. In converting the percentages under the column of domestic values to percentages under the column of foreign values the present tariff rates were applied, with a small amount figured for landing charges and charges of commissionaire. Thus, for the purpose of converting the percentage of trimmings from domestic value to foreign value such trimmings were figured at 70 per cent. Duties on laces and embroideries pay between 60 and 70 per cent. Most of the laces used by us do pay 70 per cent, laces being now used much more than embroideries. When it is considered that the importer must pay a commission, freight, and landing charge, the estimate of 70 per cent is manifestly fair.

The same course has been followed in converting the domestic values into foreign values on the other articles used in the above statement, with the exception of boxes and "other materials used," which were figured the same in both values.

A typical illustration of the answers received calling for the above information is found in the statement furnished by the Standard Manufacturing Co., of Jackson, Mich., which is set forth with the permission of this company. It is as follows:

Statement.

Percentage of trimmings used:	
Domestic value.....	0.23
Foreign value.....	.1314
Percentage of buttons used:	
Domestic value.....	.085
Foreign value.....	.055
Percentage of boxes used:	
Domestic value.....	.03
Foreign value.....	.03
Percentage of thread used:	
Domestic value.....	.02
Foreign value.....	.011
Percentage of ribbons used:	
Domestic value.....	\$0.03
Foreign value.....	.018
Other materials used:	
Domestic value.....	.235
Foreign value.....	.235
Direct labor:	
Domestic value.....	.37
Foreign value.....	.1233
Total:	
Domestic value.....	per cent. .100
Foreign value.....	do .6037

Subtracting 0.6037 from 1 we have 0.3963, and dividing the last figure by 0.6037 we obtain 0.656, meaning that the percentage of domestic value is 65.6 per cent more than the foreign value.

From the above statement, as a fair sample, it will be seen that in order to arrive at a basis of mere equality with the foreign product, the minimum tariff should be 65.6 per cent ad valorem. As a matter of fact, when all the statements thus furnished were averaged, we found the following to be the result:

Statement as averaged.

Percentage of trimmings used:	
Domestic value.....	0.24
Foreign value.....	.141
Percentage of buttons used:	
Domestic value.....	.052
Foreign value.....	.0346

PARAGRAPH 349—LADIES' WEAR.

Percentage of boxes used:	
Domestic value.....	0.019
Foreign value.....	.019
Percentage of thread used:	
Domestic value.....	.023
Foreign value.....	.012
Percentage of ribbons used:	
Domestic value.....	.034
Foreign value.....	.0206
Other materials used:	
Domestic value.....	.242
Foreign value.....	.242
Direct labor:	
Domestic value.....	.39
Foreign value.....	.13

The above domestic values add up to 100. The foreign values add up to 0.5992. Subtracting the latter from the former, we have 0.4008. Dividing this last sum by 0.5992, we have 0.6689, showing that for the purposes of mere technical equality, without considering the factors hereinafter set forth, the minimum tariff should be 66.89 per cent ad valorem.

From the foregoing it will be seen that 39 per cent of the cost of production is direct labor. In computing the foreign value of labor as compared with domestic value we have taken the domestic value at an average of \$9 per week and the foreign value at an average of \$3 per week.

We have already set forth above that our statistics show that we do pay our seamstresses \$9 per week. For the purpose of ascertaining the exact value of woman labor engaged in our trade in Europe we have caused, through our committee, headed by the Standard Manufacturing Co., inquiries to be made of many American consulates throughout various cities in Europe for the purpose of ascertaining the value of this character of labor in various localities. A blank form was sent to these American consuls calling for information, not only in our trade, but also in the waist, embroidery, and lace trade. We believed that this information would be interesting as bearing upon kindred matters.

The following is a copy of the form which we requested the said consuls to fill out and return to us:

STANDARD MANUFACTURING CO.,
Jackson, Mich.

GENTLEMEN: The hours of labor per day, also average wages per day (quoted in United States money) for women working at the following trades in this district are:

	Wages.	Hours of labor.
Lingerie underwear, handwork, seamstresses.....		
Machine work.....		
Lingerie waists, handwork, seamstresses.....		
Machine work.....		
Embroidery, handwork, seamstresses.....		
Machine work.....		
Lace, handwork, seamstresses.....		
Machine work.....		

UNITED STATES CONSUL.

Many responses were received from various parts of the world in answer to this request, and we herewith beg to file with this committee such original responses, and, if the committee deem it proper, we request that such responses be printed with this brief as an appendix thereto. We believe that this would be manifestly proper for the reason that said responses furnish very interesting statistics in connection with woman labor in Europe.

As the committee will readily see, it is the absolute fact that the average wage paid a seamstress in our line of industry in Europe is about \$3 per week. It is true that some expert women workers in some of the countries obtain slightly more, so that the wage of some of the women runs as high as \$5 per week.

PARAGRAPH 349—LADIES' WEAR.

It is also to be observed that the average working day in Europe is 10 hours. The average working day in this country is less than nine hours, and in this connection it is to be observed that various States of the Union are gradually, through legislation, reducing this day to eight hours. This fact can not be too strongly dwelt upon for the purpose of making an accurate comparison between the woman workers of America and those of Europe. In this connection the bureau of labor of the French Government in the year 1911 published the result of an inquiry made in regard to the conditions of labor in the lingerie industry. From a perusal of this interesting volume it will be found that in many of the districts of France seamstresses are paid only 1½ francs, or 30 cents per day. The bureau of labor states that by reason of the frightful conditions that exist, due to a great extent to these small wages, many of the girls are perforce driven to prostitution. A copy of the fifth volume of this investigation containing all of the statistics will be filed with this brief.

As a matter of further interesting information and for the purpose of making a little deeper analysis of these consular reports the following conclusions have been drawn from a study of the figures presented:

Taking Europe as a whole seamstresses are paid 4.2 cents per hour for handwork on underwear and 5.3 cents per hour for machine work.

On embroidery the machine workers are paid 5.5 cents per hour on the average, and on lacework the machine operator is paid 6.1 cents per hour.

An accurate tabulation of the European working day for women shows that it consists of 10 hours and a few minutes.

Referring to various of the prominent countries, we find that in England the average working day is nine hours, and the seamstress on hand underwear is paid 6.5 cents per hour and on machine underwear 7.1 cents per hour.

In Russia the average working day is 11 hours, and the seamstress is paid 4 cents an hour for handwork on underwear and 5.7 cents an hour for machine work on underwear.

In France the average working day is nine and one-half hours, and the seamstress is paid 6.3 cents an hour for handwork on underwear and 5 cents an hour for machine work on underwear.

In Germany the average working day is 10 hours, and the seamstress is paid 4.5 cents an hour for handwork on underwear and 6.5 cents an hour for machine work on underwear.

In Italy the average working day is 10 hours, and the seamstress is paid 3.9 cents an hour for handwork on underwear and 3.6 cents an hour for machine work on underwear.

It must be evident from the statistics herein furnished that by reason of the frightfully underpaid condition of the woman labor in Europe the American manufacturer is entitled to receive fair and adequate protection in this line of industry so as to prevent foreign goods, wherein labor forms a most substantial fraction of the cost of production, to be imported into this country, where the same character of labor is paid for on a basis of three times as much as such foreign labor.

Up to within a few years ago the American manufacturer has been able to compete with foreign goods on our present duty by reason of the fact that foreign lingerie was produced up to that time by hand sewing and was of a very high class and could be used, as a rule, only by people of wealth. Recently, however, European manufacturers, especially in Germany, have introduced machines to manufacture lingerie along the lines developed by the American manufacturer and in addition have copied American ideas of styles, thus becoming active competitors in the American trade. In considering this competition it must be borne in mind that, aside from the fact that the European seamstress receives but one-third of the wage that we pay, the laces and embroideries used in Europe are purchased on the basis of the foreign value, and that, aside from real laces, we use to the extent of 85 per cent these very same laces upon our goods, paying a duty of 70 per cent, plus a buying commission, landing charges, and freight. We also in the same degree use the same embroideries that the foreign manufacturer uses, upon which we pay not only the nominal duty of 60 per cent, but also the arbitrary charge fixed by the United States regulations for overhead expenses of over 13 per cent on said duty, which makes the real duty about 68 per cent aside from landing charges, etc.

In conjunction with the subject of the lingerie industry as carried on in foreign countries the attention of the Committee on Ways and Means is earnestly called to No. 154 of the fifteenth year of the Daily Consular and Trade Reports, issued by the Bureau of Manufactures, Department of Commerce and Labor, on July 1, 1912. This report shows the wages paid to women engaged in this industry in Italy, France, Germany,

PARAGRAPH 349—LADIES' WEAR.

Russia, Spain, Turkey, China, Japan, Belgium, Greece, Hungary, Holland, and Norway. The figures therein set forth absolutely accord with those we have above set forth, demonstrating that the foreign seamstress works more than 10 hours a day for about \$3 per week. The said report is made part hereof, and permission is asked to have the first seven pages thereof printed as part of the record of the committee. Attention is called to the fact that it appears from said report that in China expert seamstresses receive \$5.75 per month. It is a well-known fact that a campaign is now being successfully conducted popularizing the sewing machine in China.

IV. OTHER FACTS TO BE TAKEN INTO CONSIDERATION IN THE FORMULATING OF THE TARIFF ON OUR INDUSTRY.

Aside from the facts hereinabove set forth, we earnestly beg to call attention to the following matters which have a material bearing upon our industry and kindred industries:

1. *Taxation at home and abroad.*—In regard to this matter it is to be noted that in England, for example, an income tax is paid dependent upon the actual gains of business, whereas here we have a flat tax assessed on all kinds of property independently of the proposition of whether or not the taxpayer is engaged in a profitable business. Furthermore, we have corporation taxes to pay not only to the Federal Government but to the State government.

2. *Hours of labor at home and abroad.*—We have already called attention to this vital matter. While the average hours of labor in America are nine per day, yet the time will not be long before the working day for women will unquestionably be reduced, in most States of the Union, to eight hours. The percentage of loss of labor compared with the European working day will, therefore, be a substantial one. Nor should it be forgotten that the trend of modern legislation is to establish a minimum wage for women.

3. *Expense occasioned by change of styles.*—In the lingerie business there is a constant shifting of styles. This is demanded by the women who purchase from us in this country. Of course, we refer now to the particular line that we are engaged in manufacturing, namely, lingerie embellished with laces and embroideries. There is always a serious loss incurred whenever the styles shift, by reason of the fact that there remains on hand large quantities of goods of the old style which can not be disposed of.

4. *The abuses of American merchants in canceling orders and returning goods.*—There has grown up in this country a custom among a large number of merchants to cancel orders and return goods thus ordered. There is infinite difficulty in meeting this abuse for the reason that we are all in sharp competition with each other, and the merchants, knowing this, hold this competition over our heads as a club. If we do not accept cancellations and a return of the goods, we are very apt to lose a customer. The loss occasioned by this custom is most substantial for the reason that we must close out these goods at a decreased sales price.

5. *Selling and other expenses.*—It is unquestionably true that the selling expenses incurred by us are infinitely larger than those incurred in by the foreign manufacturer. The commercial traveler's field in Europe is most circumscribed. The lingerie manufacturer, as a rule, has his home in the same place that he manufactures. Usually his wife is his superintendent. People come to him for the purpose of purchasing goods. He does not have to send out men as salesmen. It is, of course, needless to dwell upon the patent fact that our charges for rent, real estate, power, salaries of employees, and overhead charges are larger than in Europe.

6. *Undervaluations.*—It can be safely asserted from our observation that the undervaluation of imported lingerie articles into this country amounts to about 15 per cent. By reason of the excessive embellishment in this class of goods, it is difficult, even for one experienced in this kind of manufacture, to appraise the value of production of lingerie imported within 10 per cent or 15 per cent. This is also due to the fact of the great variation in the cost of labor and materials in the different geographical divisions abroad.

7. *Employers' liability laws.*—The trend of the times shows that we are rapidly approaching the enactment of laws relating to the liability of employers in far more drastic fashion than they exist in any European countries. This will also be a factor to be taken into consideration in the cost of manufacture.

8. *Abolition of household work.*—There is a decided tendency to compel labor of our kind to perform its functions solely in our factories. Indeed, the attacks on labor abuses, so far as concerns the seamstress, are due entirely to the fact that contract work performed at home exists. The manufacturer is blamed for this, and yet the

PARAGRAPH 349—LADIES' WEAR.

women agitators who bemoan the conditions of many seamstresses eagerly buy the product of these very laboring women, never dreaming of inquiring how and where the purchased product is made. Indeed, many large stores prohibit manufacturers from indicating by labels that their goods are really factory made. Legislation along these lines will naturally add to the cost of production.

V. CONCLUSION.

Taking all of the matters hereinabove set forth into consideration, we earnestly and fully believe that the present tariff of 60 per cent ad valorem is inadequate, particularly when we look to the future and to the rapidly shifting conditions of labor in this country, and that, in point of fact, the duty should be raised to 70 per cent.

It is further suggested that in order that our industry, by reason of its unique character, may have a standing of its own in the tariff laws to be enacted, a separate section should be inserted having reference solely to our product. The following is suggested as such an amendment:

"All women's underwear and infants' under and outer garments made wholly or in chief value of cotton, flax or other vegetable fiber, or of cotton, linen, flax or other vegetable fiber, and india rubber, when embellished with laces or imitations of laces, nets, ruchings, tuckings, flutings, embroideries, braids, featherstitch braids, edgings, ribbons, tapes, and other articles or fabrics embroidered in any manner by hand or machine with a plain or fancy letter, initial, monogram, or otherwise, or tamboured, appliquéd, scalloped by hand or machine, or from which threads have been cut out or punctured to produce open work, ornamented or embroidered in any manner herein described in any part thereof however small; hemstitched or tucked flouncings or skirtings, shall pay a duty of 70 per cent ad valorem."

Respectfully submitted,

NATIONAL COTTON GARMENT MANUFACTURERS ASSOCIATION.

By JOSEPH L. HOLLANDER, *Chairman*.

E. J. RYERSON,

NATHAN KRAUSKOPF,

A. B. MEYER, *Committee*.

(Charles O. Maas, counsel, 87 Nassau Street, New York.)

LETTERS FROM UNITED STATES CONSULAR OFFICERS, WRITTEN IN JANUARY AND FEBRUARY, 1912, SUBMITTED BY THE NATIONAL COTTON GARMENT MANUFACTURERS' ASSOCIATION.

BERLIN, GERMANY.

In the Berlin consular district most of the ladies' underwear and blouse work is done by home workers, who supply it generally in lots of a dozen garments to the dealers. The work is essentially piecework, and payment for it varies according to the degree of its elaborateness. Thus a blousemaker receives anywhere from 3 to 30 marks (\$0.714 to \$7.14) per dozen blouses.

Seamstresses working on linen average 15 marks (\$3.57) a week. The nominal wage is 18 marks (\$4.28), but 3 marks (\$0.714) is deducted for needles, thread, and other findings. A working day consists of 9½ hours.

Where wages are paid by the day they vary from 2 marks to 3.50 marks (\$0.476 to \$0.833), according to the kind of work. Some work is done on an hourly basis, when the wage is 40 pfennigs (\$0.095), having been raised recently from one-half that amount.

Wages paid for embroidery work are as follows:

Male machine workers, 70 pfennigs (16.6 cents) per hour, 6 marks (\$1.43) per day, 36 marks (\$8.58) per week. This is the average. The extremes are 30 marks (\$7.14) and 40 marks (\$9.52) a week.

Female assistants to male machine workers, between 30 and 40 pfennigs (7.14 and 9.52 cents) an hour. The average daily wage is 2.50 marks (59.5 cents) and the average weekly wage 15 marks (\$3.57).

Female workers on sewing machines making so-called Singer embroidery earn about 24 marks (\$5.71) a week.

For hand embroidery female workers only are employed. Most of this work is done by contract, and yields to the worker between 14 marks and 23 marks (\$3.33 and \$5.47) a week, the average being about 18 marks (\$4.28).

A. M. THACKARA,
American Consul General.

PARAGRAPH 349—LADIES' WEAR.

PLAUEN, GERMANY.

In the textile factories here girls earn from 11 marks (\$2.61) to 22 marks (\$5.23) a week, with the average wage falling about 14 marks (\$3.33) per week. Seamstresses are, in general, paid by the piece and average about 12 marks (\$2.85) per week. Factory hours are from 8 a. m. to 8 in the evening in winter and begin and close an hour earlier in summer. The working day is 10 hours long. Many women and girls work for the factories at home.

R. B. MOSHER, *American Consul.*

LEIPZIG, GERMANY.

The hours of labor per day, also average wages per day (quoted in United States money), for women working at the following trades in this district are:

Lingerie underwear:

Handwork.....	36 to 48 cents, 10 hours.
Machine work.....	48 to 60 cents, 10 hours.

Lingerie waists:

Handwork.....	36 to 48 cents, 10 hours.
Machine work.....	48 to 60 cents, 10 hours.

Laces and embroidery by hand and machine are made as a specialty in the districts of the Saxon Erzgebirge, at the cities of Plauen, Adorf, Aue, Annaberg, Eibenstock, Schneeberg, etc.

Leipzig has two lace factories. The wages are 18 to 20 marks a week (71 to 79 cents per day).

RUDOLPH FRICKE, *Vice Consul.*

FRANKFORT ON THE MAIN, GERMANY.

Women's muslin underwear of ordinary grades is made in factories, chiefly in Berlin. Average wages for female labor in these as well as in other kinds of factories range from 2.20 to 3 marks (52.4 to 71.4 cents) per day of nine working hours.

Finer grades of muslin underwear are made by home labor and paid for by the piece. This office is advised that a skillful worker can earn 2, 2.50, and 3 marks a day or even more (47.6, 59.5, and 71.4 cents).

FRANK D. HILL, *Consul General.*

BREMEN, GERMANY.

I have made inquiry at the trades chamber (Gewerbekammer) of Bremen in regard to wages paid to girls in women's muslin underwear factories with the following result: Apprentices (two to three years) receive from 80 pfennigs to 1.25 marks per day; later on good hands earn up to 3.50 marks per day, while the average wages are 1.25 to 1.50 marks per day.

For embroidery work 50 to 60 marks per month are paid.

FR. HOYERMANN, *Vice Consul.*

AIX LA CHAPELLE, GERMANY.

The wages earned per day by working girls are from 2 marks to 3.50 marks without board.

PENDLETON KING, *American Consul.*

NUREMBERG, GERMANY.

Women's muslin and linen underwear, lingerie waists, etc., is chiefly made in Berlin and suburbs. Several firms here, the larger of which are J. Erlenbach, Kaiserstr. 5, and Sigmund Levinger & Co., Kaiserstr. 15, deal especially in all kinds of goods of this kind and employ from 15 to 25 girls and women on their premises, especially for making up this sort of article. These girls work 10½ hours in summer and 10 hours in winter and are paid from \$2 to \$4 per week, according to experience and skill. The manufacturing end of these businesses is, however, only incidental, as the ready-made or partly finished goods are mostly purchased from Berlin factories.

GEORGE NICOLAS IFFT, *American Consul.*

PARAGRAPH 349—LADIES' WEAR.

CHEMNITZ, SAXONY.

Male operators obtain from 20 to 28 marks per week.

Female operators, from 12 to 18 marks per week.

Menders and sewers under 16 years of age obtain from 6 to 8 marks per week. Wages paid weekly, every Saturday.

The hours in winter are from 7 a. m. to 7 p. m., and in summer from 6 a. m. to 6 p. m. In the morning 20 minutes is allowed for lunch; at noon, 1½ hours for dinner; in the afternoon, 25 minutes for coffee. On Saturdays the factory generally closes at 5 p. m.

WM. WASHINGTON BRUNSWICK,
American Vice Consul in Charge.

MOSCOW, RUSSIA.

H. CUSTIS VEZEY,
United States Vice Consul.

ODESSA, RUSSIA.

Seamstresses doing hand embroidery are paid as much as \$12.87 per month, including food, and often as high as 51 cents per day. Those working by machine earn from \$6.13 to \$9.27 per month, the amount depending upon the shop or class of work. A great deal of embroidery is done by piecework at home. Lace in this district is nearly all made at home. Machine-made lace nearly all comes from abroad. Handwork labor on lingerie waists is paid according to piecework rates, while machine lingerie underwear and waists are paid for at from 37½ to 64 cents per day.

JAMES VERNER LONG, *United States Consul.*

GENOA, ITALY.

As to wages paid women who work in muslin-underwear and lingerie-waist factories, the consulate general is informed by the principal dealer, also a manufacturer here, that the women employed by him in his factory at Perugia are paid about 2.50 lire per day. Girls from 1.25 to 2.00 lire. Considerable piecework is done at home and the earnings average about the same as the wages. The usual hours of labor a day are 10.

JAS. W. SMITH, *Consul General.*

PARAGRAPH 349—LADIES' WEAR.

TURIN, ITALY.

The daily wages for women and girls working in dressmaking factories, establishments, or workshops of this city are as follows per day of from 10½ to 11 hours:

Tailors (women).

Corset makers.....	\$0.522
Helpers.....	.225
Skirt makers.....	.495
Helpers.....	.225
Finishers.....	.575
Helpers.....	.280
Apprentices.....	.067

Women and girls working as spinners or weavers in local cotton mills receive from \$0.340 to \$0.390 as spinners and from \$0.360 to \$0.460 as weavers per day of from 10½ to 11 hours.

ALBERT H. MICHELSON, *Consul.*

PALERMO, ITALY.

One of the leading manufacturers in Palermo of ladies' muslin garments estimates the total number of girls employed in the various factories in this city at from 800 to 1,000. The principal factories are 10 in number, each employing 70 to 80 girls. The population of this city is 350,000.

The wages paid for an 8 to 9 hour day's work are from 0.60 to 1.25 lire (12 to 25 cents) and from 1.50 to 3 lire (30 to 60 cents) for skilled labor.

While the workers in the factories in Palermo are almost exclusively young girls, the home labor is generally performed by women. This class of labor, it is stated, costs about the same as in factories. For example, the workmanship of a woman's plain shirt selling at from 5 to 6 lire (\$1 to \$1.20), requiring fully a whole day's work, is paid 1 to 1.25 lire (20 to 25 cents).

During 1910 \$80,576 worth of sewing machines were imported in Palermo, which city practically supplies the above-named Provinces with this article. The sales in the Province of Palermo average 300 machines per month, and in the Provinces of Trapani and Girgenti 100 each. Prices for the machines vary from \$29 to \$96. The type largely sold is the small domestic size, at \$29.

HERNANDO DE SOTO, *Consul.*

FLORENCE, ITALY.

The scale of wages is given below:

	Wages.	Hours of labor.
Lingerie-underwear seamstress:		
Handwork.....	\$0.40-\$0.50	10

J. B. MILNER, *United States Consul.*

HAVRE, FRANCE.

In the Havre consular district the sewing of underwear and lingerie for ladies' wear is mainly carried on in the workers' own homes. Large shops supply the material and pay the workers by the piece when brought back at the end of each week.

Factories, in the true sense of the word, are unknown, although there are one or two establishments where the women and girls work on the premises.

Of these establishments all but one are managed by Sisters of Charity of the well-known order of St. Vincent de Paul. In addition to taking work to be performed on the premises of the establishment, the sisters teach the younger girls how to sew, embroider, etc., and most of the home workers have passed through the schools of sewing above mentioned.

Capable women and girls in these establishments receive up to a maximum of 2 francs per day, the working hours being generally from 8 a. m. to midday, and from 1.30 to 7.30 p. m. They are not fed.

Most girls, however, when they have learned all that the sisters can teach them prefer obtaining work from the shops which they can do at home, as not only by increasing their hours can they earn more money, but in addition they are freer. The consulate is informed that a girl working at home can earn as much as 3 francs per day, whereas the sisters only pay 2 francs.

The only establishment outside those managed by the sisters and where the workers are at all numerous is that of the Maison Meriel, 23 Rue Jacques Louer, Havre, and we are informed that there are seldom more than a dozen women employed there. The work performed is not of an ordinary nature, consisting chiefly of embroidery and the making of trousseaux for brides.

With the exception of the establishments mentioned, all the sewing of underwear and lingerie is done by the workers in their own homes, and not for the account of a factory but for the shops themselves.

JAMES E. DUNNING, *Consul.*

PARAGRAPH 349—LADIES' WEAR.

LYON, FRANCE.

CARL BAILEY HURST, *United States Consul.*

BORDEAUX, FRANCE.

The lingerie work of Bordeaux is done mostly in the homes of the workers themselves, or in small workshops, but not in factories.

Prices vary from 1.50 francs to 2 francs for a day's work of 9 to 10 hours.

J. D. WISE, *Vice Consul.*

NICE, FRANCE.

In regard to the wages paid to women engaged in the manufacture of muslin underwear and lingerie waists in this consular district, I have to state that I learn upon inquiry that women earn for hand needlework and lace insertion 3.50 francs per diem; for fine machine work, 2.50 francs to 3 francs; for ordinary machine work, from 2 francs to 2.50 francs; and for very common and cheap work, 1.75 francs, which represents the minimum wages paid here. The home labor is paid for by the piece, and the prices vary according to the work on each article and to its quality. A woman working at home earns about the same as one working in a factory.

C. P. H. NASON, *United States Consul.*

ROUBAIX, FRANCE.

The three adjoining cities of Lille, Roubaix, and Tourcoing are the center of the textile industry, to which industry this Department is mainly devoted. Hand labor is therefore easy to obtain.

Women's underwear and lingerie is manufactured to a considerable extent by both factory and hand labor. The price of labor differs naturally in accordance with the quality of the work. I am informed that women employed in factories earn from 1.25 francs to 3 francs per day, while those working at home are paid by the piece, each firm establishing its own wage scale.

Those engaged on piecework at home must supply the thread, needles, machine, etc., and call for and deliver the work. They earn from 2.50 francs to 3 francs per day, the average prices received being: Aprons, 10 centimes; chemise, 20 to 25 centimes; drawers, 20 to 25 centimes; waist bodices, 40 to 50 centimes. For finer work, embroidery, etc., the prices are arranged by special agreement.

PARAGRAPH 349—LADIES' WEAR.

The 10-hour day is the rule in the local factories, but the more experienced employees are allowed to take work home with them, for which extra work they are paid at the end of the week.

JOSEPH EMERSON HAVEN,
American Consul.

GENEVA, SWITZERLAND.

Relative to the average wages earned per day by seamstresses in Geneva, I beg to say that 3 francs (\$0.579) is considered to be the average price paid to girls working on fine lingerie.

There are no factories, in the American sense of the word, of such garments and manufactures in my consular district, but there are several shops where women's underwear and lingerie waists are made chiefly on order.

The secretary of the *Chambre du Travail* told me yesterday that the wages paid to seamstresses for 10 and 11 hours' work per day vary between 2 francs and 3.50 francs (\$0.386 and \$0.675) for lingerie work, whereas women working on women's garments of cloth receive between 3 and 5 francs (\$0.579 and \$0.965) a day for the same number of hours' work.

FRANCIS R. KEENE,
American Consul.

BASEL, SWITZERLAND.

Underwear and waists are made for the local trade by seamstresses employed by the manufacturers and sellers of those articles in their own shops. They are known as "Weissnäherinnen," work from 10 to 10½ hours a day, and earn, according to their experience and capacity, from 50 cents to \$1 a day. The women earning the latter sum are only a few persons of exceptional skill, capable of directing the business. The average wages of girls who have made their apprenticeship and have been for a year or two in regular employment is not more than 60 cents a day.

CHAS. L. HOOVER, *United States Consul.*

PARAGRAPH 349—LADIES' WEAR.

BARCELONA, SPAIN.

The goods are manufactured by machine largely in the factories in and around Barcelona, while the hand work is mostly done in so-called "ateliers" or workshops. The girls working in the factories earn from \$0.36 to \$0.41 per day of 10½ hours, working from 7 a. m. till 12 noon, and from 1.30 p. m. till 7 p. m. The girls in the workshops earn on the average \$0.36 to \$0.54 per day for 10 hours' work, from 8 to 1 p. m. and from 3 till 8 p. m. Overseers in these workshops get an average salary of \$3.60 to \$4.50 per week.

HENRY H. MORGAN, *Consul General.*

SEVILLE, SPAIN.

Seamstresses who do this class of work in private families are paid about 35 cents a day, with food, whether they sew by hand or machine. Embroidering is usually done at home by workers who are paid at the rate of about 50 cents per day.

CHARLES S. WINANS, *American Consul.*

MALAGA, SPAIN.

The labor hours are from 7 o'clock in the morning to 7 o'clock in the evening in summer, and from 8 to 6 in winter. The wages are from 75 centimes to 2 pesetas per day (peseta=\$0.17).

THOMAS R. GEARY, *American Vice Consul.*

JEREZ DE LA FRONTERA, SPAIN.

While there are no factories of that kind in Jerez, one dry-goods firm employs 6 or 8 women and girls who work together in a room under the charge of a forewoman or maestra. Their hours of labor are from 8 a. m. to dusk, about 10 hours, with an hour off in the middle of the day. Wages are, with food, maestra, 1 peseta (18 cents) per day; girls, 50 centimos (9 cents). Without food, maestra, 2 pesetas (36 cents) per day; girls, 1 peseta; apprentices, 1 peseta per week.

The last as a rule get no salary at all until they are able to do some work.

With this exception, all work of this kind here is done by the piece, by home labor, prices for which are:

Chemises, ordinary, 1.25 to 1.50 pesetas (22 to 27 cents), with higher price according to delicacy of the work.

Drawers, from 1 to 1.25 pesetas (18 to 22 cents).

Waists, 1.25 pesetas (22 cents).

Underwaists, from 50 to 70 centimos (9 to 13 cents).

It should be stated that a great deal of fine work of this kind is done by nuns in the convents here. They have no fixed price for their work, but leave that to the generosity of the person employing them, and in that way usually get more than they otherwise would.

PERCIVAL GASSETT, *American Consul.*

B. M. RASMUSEN,
United States Consul.

BRUSSELS, BELGIUM.

It is very difficult to give the cost of labor in the making of these articles by hand, as the housewife frequently does this work in connection with her domestic duties; but, generally speaking, good seamstresses receive in the Provinces, where the cost of living is not so high as in the large cities, from 2 to 2½ francs per day (1 franc=19.3 cents) and in the larger cities about 3 francs per day. From another source I learn that laborers making embroideries and lace by machine receive from 3 to 5 francs per day of about 11 hours, or 63 hours per week (Sundays excluded).

ETHELBERT WATTS, *Consul General.*

VIENNA, AUSTRIA.

The most reliable figures available indicate that the hours of labor in Vienna for women in such industries as you indicate are 6 days per week, 10 hours per day, with wages of \$2.64 to \$2.90 per week, this including all gratuities. A large proportion of this character of work is piecework done at home. In such cases the wages differ with the character of the work, the time of delivery, and the locality, city or country, where done.

Accurate statistics as to wages of labor are hard to obtain in this country. You may form some idea, however, from the printed report of the Austrian Tobacco Monopoly, which employs 33,296 employees, of whom six-sevenths are women, at an average wage of \$70 per annum. Much of this labor, however, is employed in factories in rural districts.

CHAS. DENBY, *Consul General.*

TRIESTE, AUSTRIA.

There seem to be very few establishments for the manufacture of lingerie and ladies' wear in this city. Most work of this kind is done by women in their homes, but I am led to believe that abundant labor could be had at from 40 to 60 cents per day. This means the labor of women fairly skilled in the different branches of needle work, machine sewing, embroidery and lace making of the simpler kinds.

RALPH J. TOTTEN, *American Consul.*

PARAGRAPH 349—LADIES' WEAR.

PRAGUE, BOHEMIA, AUSTRIA.

Seamstresses making ladies' underclothing, cotton, and some wool, are paid \$1.62 to \$3.24 a week. The cutter is paid about \$6.09 a week. Girls are apprenticed for two years, and are paid the first year 41 cents a week, and in some instances more. Much of the work is done at home as piecework. Working time is 9½ hours a day. Blouse makers get \$2.44 to \$4.06 a week, and in some cases less. These also make skirts and morning gowns.

J. I. BRITAIN, *Consul*.

REICHENBERG, AUSTRIA.

I am giving you herewith the pertinent parts of a letter just received from the Reichenberg Chamber of Commerce, relative to the matter:

"The wages in this territory are for women and girls in this line, at a 10 hours daily labor, generally between 1.60 crs. (33 cents) to 2.40 crs. (49 cents) per day.

"In cases of the specially skilled the wages reach 20 crs. (\$4.06) a week. The production of the goods under consideration is done only by home workers."

WILLIAM J. PIKE, *American Consul*.

FIUME, HUNGARY.

Hours of labor per day, average wages per day (in crowns and dollars), paid to women working at the following trades in this district are:

	Average wages per day.	Hours of labor.
Lingerie underwear:		
Handwork (seamstress).....	C. 2 (\$0.41) to C. 2.50 (\$0.52).....	10
Machine work (seamstress).....	C. 2 (\$0.41) to C. 2.50 (\$0.52).....	10
Lingerie waists:

CLARENCE RICE SLOCUM, *Consul*.

AMSTERDAM, NETHERLANDS.

The hours of labor in the industries in question average 9½ per day. Wages vary from 3 to 7 florins per week. The work is principally done in large factories employing from 300 to 400 girls. There is only a little of such work performed by home labor.

FRANK W. MAHIN, *American Consul*.

ROTTERDAM, NETHERLANDS.

Women's muslin underwear is produced partly in factories and partly by home labor.

The ordinary cheaper kind is made in factories, where wages for the employees range from 5 florins (\$2) to 8 florins (\$3.20) per week, the hours of labor being from 8 to 12 and from 1.30 to 7 o'clock.

The better class of work is done mostly by girls at their homes; these work by the piece and are, as a rule, capable of earning a somewhat higher income than the factory hands.

S. LISTOE,
American Consul General.

ANTWERP, BELGIUM.

Lingerie, embroidery, and lace are made by the piece and the seamstress, embroideress, and lace maker work at home.

Seamstresses employed by the day by stores and private individuals are paid from 2 to 3 francs (39 to 58 cents) per diem, and the average hours would be 10 to 11 each day, with allowances for meals.

HENRY A. DIEDERICH, *Consul General*.

PARAGRAPH 349—LADIES' WEAR.

EDINBURGH, SCOTLAND.

Lingerie underwear and waists are not produced in factories in this district. To a limited extent they are machine-made in the leading dry goods stores. Neither embroidery nor lace is manufactured here.

The wages of seamstresses (machine) are from 2s. (48 cents) to 2s. 6d. (60 cents) a day, according to experience; the hours are from 8.30 a. m. to 7 p. m., with one and one-half hours for dinner (1 to 2.30). On Saturday the hours are 8.30 to 1.30.

RUFUS FLEMING, *Consul*.

GLASGOW, SCOTLAND.

The hours of labor per day, also average wages per day, for women working at the following trades, in this district, are as follows:

	Wages.	Hours of labor.
Lingerie underwear:		
Hand work (seamstress).....	\$0.30 to \$1.05	8.30 a. m. to 6.30 p. m.
Machine (seamstress).....	.30 to 1.05	8.30 a. m. to 6.30 p. m.
Lingerie waists:		
Hand work (seamstress).....	.60 to 1.05	8.30 a. m. to 6.00 p. m.
Machine (seamstress).....	.30 to 1.05	8.30 a. m. to 6.30 p. m.

Embroidery made by hand: Irish cottage industry, 24 cents per day of 10 hours.

Embroidery made by machine: Swiss, 44 cents to 56 cents per day of from 9 to 10 hours.

Lace made by hand: Belgium, 24 cents to 30 cents per day of 10 hours.

Lace made by machine: Nottingham, 60 cents; Plauen, 72 cents; St. Gaul, 60 cents; all per day of 10 hours.

JOHN N. McCUNN, *American Consul*.

DUNDEE, SCOTLAND.

In regard to wages, etc., girls engaged in work of this kind would probably earn from \$2.50 to \$3.50 per week. In the jute mills an adult female worker earns about \$5 a week. Hours of labor are from 6 a. m. to 6 p. m., with an hour's intermission from 9 to 10 and another from 2 to 3. Work of the nature you are inquiring about would be paid for by the piece and not by the day; that is, when performed at home.

HALDERMAN DENNISON, *Consul*.

MANCHESTER, ENGLAND.

I have pleasure in giving you below representative prices paid for making the various garments mentioned:

Machining: Ladies' chemise, 1s. 2d. to 1s. 6d. per dozen; children's chemise, about 9d. per dozen.

Ladies' knickers, from 1s. 2d. to 1s. 6d. per dozen; children's knickers, 9d. per dozen.

Ladies' skirts, from 1s. 4d. to 1s. 9d. per dozen.

Ladies' white skirts: Machining, 12 rows for 1d.; pressing, about 4d. per dozen.

The majority of the above-named work is done inside the factories, and the average weekly earnings would be in the region of 15s.

CHURCH HOWE, *Consul*.

LEEDS, ENGLAND.

Wages for beginners are from 8s. to 10s. (\$2 to \$2.45) per week and for skilled workers 15s. to 22s. (\$3.65 to \$5.36) per week. All labor has to be trained. Hours, 52 per week. The factory act limits hours for women's work to 55½ hours a week.

BENJAMIN F. CHASE, *American Consul*.

BRISTOL, ENGLAND.

Wages to be paid here would be: Beginners, 4s. to 5s. per week; experienced hands, 10s. to 12s. per week; and forewomen, 20s. to 25s. per week.

HOMER M. BYINGTON, *American Consul*.

PARAGRAPH 349—TYPEWRITER RIBBONS.

HANKOW, CHINA.

In general, Chinese seamstresses here are paid by the piece and earn the equivalent of about 10 cents gold per day. The hours of actual labor depend on the ambition and needs of the worker and are probably from 8 to 10 hours a day. Seamstresses employed in foreign families sometimes make 20 cents gold per day. The women are engaged mostly in handwork at present.

Lace is all handmade and the greater part is produced in schools and convents. As for the rest of the lace making and the embroidery they are practically all home industries, for which it is almost impossible to calculate hours of labor and wages, as it is all piecework. The women make a few cents more on embroidery than on ordinary sewing. The use of machines for embroidery is being slowly introduced through schools opened by sewing-machine dealers, but has not yet influenced commercial production.

ROGER S. GREENE, *Consul General.*

KOBE, JAPAN.

The Japanese generally do not wear foreign style clothes, and the foreign population of this district (outside of Chinese) is only some 1,500, of whom much the larger proportion is men. Ladies have their dresses, underclothing, etc., made at their houses with sewing machines, by seamstresses, who go from one house to another and earn about 37½ to 40 cents (United States) a day, with their meals. The ladies furnish the patterns.

There are a few shops in Kobe that do embroidery, employing their own hands, but nearly all the work is given out by the large stores, mostly in Kyoto, to be done by the work people at their own homes by hand.

Their earnings vary a great deal, according to skill and the difficulty of the work. Women earn from 8½ cents (United States) to 40 or 45 cents per day and men from 40 cents to 75 or 80 cents. The usual hours of work in stores are 8 or 9.

GEO. N. WEST, *American Consul.*

TYPEWRITER RIBBONS.

BRIEF OF MANUFACTURERS OF TYPEWRITER RIBBONS
AND CARBON PAPERS.

NEIDICH PROCESS Co.,
Burlington, N. J., January 10, 1913.

The WAYS AND MEANS COMMITTEE,
Washington, D. C.

GENTLEMEN: At a meeting of the manufacturers of typewriter ribbons and carbon papers, representing a large majority of the industry in the United States, it was decided that a protest be made against the present rate of duty on cotton tapes imported for the manufacture of typewriter ribbons. A committee was appointed to lay the facts before you, and we beg to do so as follows:

The cotton tapes used in the manufacture of typewriter ribbons are at present classified as tape or ribbon under Schedule J, paragraph 349, and pay 60 per cent duty. This schedule compels American manufacturers of typewriter ribbons to pay 60 per cent duty on raw material, while foreign manufacturers of typewriter ribbons can send their goods into the United States as manufactures of cotton, not specially provided for, under Schedule I, paragraph 332 (T. D. 18149), paying only 45 per cent duty on the finished product. Considering a shipment of typewriter ribbons which contains \$100 worth of tape material, the American manufacturer will pay \$60 duty on the raw material, while the foreign manufacturers will pay only \$45. This enables the English or German manufacturer of typewriter ribbons to compete with us in the United States, with the advantage of 33½ per cent in duty on tape material, to say nothing of color and other raw materials, on which we pay a separate duty.

We further call your attention to the fact that typewriter ribbon tape is neither bleached nor dyed, and that there is no possibility of its being imported for use as an ordinary tape or ribbon owing to its high price. It is essentially a raw material necessary for the production of high-grade typewriter ribbons, and we would appreciate its being placed in a class by itself at as low a rate of duty as possible.

PARAGRAPH 350—LEVER OR GOTHROUGH LACES.

If consistent with your policy, we would appreciate an opportunity to be represented when you consider Schedule J on Friday, January 24.

Hoping you will give this your attention and make the necessary changes to adjust this inequality, we are

Yours, respectfully,

S. A. NEIDICH,
H. B. VANNOTE,
E. A. BRECKER,
Committee.

PARAGRAPH 350.

Laces, embroideries, edgings, insertings, galloons, flouncings, nets, nettings, trimmings, and veils, composed of cotton, silk, artificial silk, or other material (except wool), made on the Lever or Gothrough machine, seventy per centum ad valorem: Provided, That no wearing apparel, handkerchiefs, or articles of any description, composed wholly or in chief value of any of the foregoing, shall pay a less rate of duty than that imposed upon the articles or the materials of which the same are composed.

LEVER OR GOTHROUGH LACES.

TESTIMONY OF HON. WILLIAM S. BENNET.

The witness was duly sworn by the chairman.

Mr. BENNET. Mr. Chairman and gentlemen of the committee, I appear to speak exclusively in connection with paragraph 350, which relates to laces made on the Lever and Gothrough machines, and inasmuch as while I was still in Congress the Lever and Gothrough machine was an absolute stranger to me, I am going to assume that you gentlemen are still as much a stranger to the machine as I was then; but I want to ask the members of the committee to look at a picture of what the machine really is. You will see from the photograph the complicated nature of the machine, which will, I think, assist in the apprehension of why the industry depends so largely on the machine.

These machines, prior to the machinery reduction under paragraph 197 of the Payne bill, cost, landed in this country, somewhere around \$10,000. I want right at the outset to say that the manufacturers in the lace business did not ask for that reduction on machinery and did not know it was coming, and it was in the nature of a Christmas present to them. They were to some extent unprepared. Nevertheless, inasmuch as the opportunity was given them, they imported in the period between the 5th of August, 1909, and the 1st of January, 1911, machinery of the entered value of \$2,946,919. There is a little difference of opinion as to exactly how many machines were imported. The Government is unable to give us the figures, as of course the only thing they were interested in was the entered values in the manifests, and they did not keep track of the number of machines for statistical purposes, but I rather think, as near as we can figure it out, there is an agreement on the number of machines in this country. It does not exceed 527. Some experts say there are 525. There is only a difference of two.

The experts who come from the State of Rhode Island say that the number of machines in this country at the time of the reduction, and machinery was put on the free list, was 83. That was the figure that Mr. Richmond gave day before yesterday, as I understand. But the increase in machinery would be the difference between whatever was here, which, as previously stated, was from 83 to, I think, 134, as was

PARAGRAPH 350—LEVER OR GOTHROUGH LACES.

stated this morning, and 527. At any rate, there is a substantial agreement that the result, the immediate result, of that putting these machines on the free list was to increase the machines in this country from either 83 to 527 or 134 to 527, and the manufacturers in that very small line, nettings and beading industries, have invested in that industry about \$7,000,000.

Mr. PETERS. If I understand you right, there have been no machines imported since January 1, 1911?

Mr. BENNET. I have not been informed of any. I see the gentleman from the Richmond works said he guessed there might be 20. My own best information I can get is that the importations practically ceased when the duty automatically went on again on the 1st of January, 1911. At any rate, I can see no reason why there should have been, because the condition of the industry is such that the skilled labor having all to be imported from either France or England the manufacturers of this country have not as yet gotten enough labor in this country to run the 527 machines that there are here.

I do not want to be unfair or misunderstood. The lace manufacturers, while they did not ask for the free-list machinery, did ask for the increase, as the chairman will doubtless recollect, from 60 per cent to 70 per cent, and it was the chairman, then a member of the committee, who asked them when they asked for the increase from 60 per cent to 70 per cent if they got that increase could they establish an industry in the United States, and it was to him that the reply was made that if they got the increase to 70 per cent the endeavor would be made. They have very faithfully kept that part of the contract, and there has been a result which can not fail to be of interest to the committee, and that is this:

I will not go into the disputed question as to whether or not laces are luxuries; that they are all articles worn by women, therefore that is the best criterion as to whether they are luxuries or not; they are all luxuries. But I think that all of us will have an absolute sympathy with the poorer among us, who have just as much a desire for finery as the richer among us, and much less money with which to purchase it, and so I am going to divide my argument as to what has happened in connection with this industry into two parts.

The higher-priced laces are certainly luxuries, and under the rule of this committee, as repeatedly announced as the Democratic policy, the article being a luxury, this paragraph being a highly competitive paragraph, and the duties collected being large—they being in 1912, \$5,830,508.26—there would seem to be no use of presenting any additional argument relative to the higher-priced laces.

As to the lower-priced laces, it is evident that prior to the commencement of this American industry through the increase in the tariff and the taking of the duty off of machinery, the foreign manufacturer had what I call a territorial, geographical monopoly, made up largely because they had had nearly 100 years of training, and because the basis of the industry was these very high-priced machines, none of which were made in the United States, and it is very evident that they used that advantage in connection with the cheaper grades of lace to compel the American public to pay a higher price for those laces than they really ought. I can perhaps absolutely prove that by reading a few letters. I will not read all that I

PARAGRAPH 350—LEVER OR GOTHROUGH LACES.

have, which have been sent to some of the gentlemen whom I represent by the consumers of the cheaper grades of laces, and by that I do not mean the women on whose underwear they are used, because we can not get at that any more than the importer.

Mr. HAMMOND. I would like to ask you whether these machines produce the higher priced or cheaper grades of laces?

Mr. BENNET. Both.

Mr. HAMMOND. Which in the larger quantity?

Mr. BENNET. That depends entirely on the demand in relation to the particular style.

Mr. HAMMOND. Suppose there is only a small portion of it made by these machines. Would it come under this 70 per cent clause?

Mr. BENNET. It would not. This only relates to the product of the Lever and Gothrough machines.

Mr. HAMMOND. You mean based entirely on the machine products?

Mr. BENNET. No, sir. They are based entirely on the Lever and Gothrough machine, all these articles of which the largest value was of the Lever and Gothrough products. Say, for instance, if you turn to the linen schedule you will find that there are some handkerchiefs that come under the 70 per cent duty, because the larger amount of value is the net or netting, whatever they call it, in connection with the handkerchiefs.

Mr. HAMMOND. The provision does not state that. It says all those articles or other material made on the Lever or Gothrough machines.

Mr. BENNET. As a matter of fact, in the interpretation of the tariff law the canon of interpretation is this: Take, for instance, a dress, a silk dress, which would come in under a lower rate of duty, and it would have on it some Lever and Gothrough lace; that article being the most valuable article, it would come in under the lower rate of duty; so that the real importations of Lever and Gothrough laces which come into this country are larger than the figures before you, because there are Lever and Gothrough articles which come on in articles the principal value of which is something else.

For instance, silk Lever and Gothrough articles come in at a lower rate of duty than this—60 or less.

Mr. HAMMOND. Do you think this duty should be higher on this lace than it should be on hand lace, or other high-priced laces?

Mr. BENNET. I do not think there is any necessary relation between the two. I think that there are a great many reasons why at the moment the exact rate should continue. In the first place, we are endeavoring to construct our business in relation to that rate. We know, also, speaking frankly now, that the party which is to come into power after the 4th of March is absolutely pledged against upward revision. As I said here before, it would be almost an insult to your committee for us to argue anything else than the policy which the people put before us.

I shall in a moment return to some of these other reasons, but for the moment I want to address myself to the effect that the commencement of this new industry has had upon the cheaper grades of laces.

I read a sample letter from a gentleman who heads his letterhead—and I understand that they are—"The largest producers of muslin

PARAGRAPH 350—LEVER OR GOTHROUGH LACES.

underwear in the world, established 1872. D. E. Sicher & Co., 45, 47, 49, 51 West Twenty-first Street, New York, January 9, 1913”:

VARI LACE MANUFACTURING CO.,
149 Fifth Avenue.

GENTLEMEN: We have your inquiry of recent date, and in reply would say that the prices of laces have been reduced to a considerable extent since the inauguration of lace manufacturing in this country. The quality of lace made by the American manufacturers is constantly improving and has a natural influence toward the reduction in price of the imported article with which our American manufacturers compete. There is no doubt that the ultimate consumer derives a benefit of a very considerable amount through the development of this industry.

Very truly, yours,

D. E. SICHER & Co.

That is from the largest manufacturer of muslin underwear, in this country, at least.

In a brief which I shall ask to have printed a part of my remarks I have printed two tables showing as between Calais, France, which is the principal competitor of the American manufacturer, a marked difference in labor cost, something over 100 per cent. The first table which appears in my brief is one prepared by Mr. William H. Smith, the leading expert in the line; and the second table is one prepared by Mr. Ozanne, also an expert.

Mr. Ozanne's figures are a trifle higher than Mr. Smith's, I presume, for the reason that his are based upon the wages paid in New York, which, on account of reasons with which your New York City member is familiar, are somewhat higher than wages paid outside of that city on account of rent and other considerations. Naturally it would seem that the committee would ask anyone making a statement like that, that the difference in labor cost was over 100 per cent, how it is with 70 per cent tariff we could exist at all, and I think in all fairness I ought to give the reasons. In the first place, the American manufacturer is nearer to his market, probably knows more about his market. In the second place, he takes advantage of specialties which he thinks would appeal to the American market. He can make larger deliveries, and also, to fill out a line, he can make smaller deliveries; and those reasons come along the whole line, and to some extent make up for the lack of protection which would equal the difference between his cost of production and the foreign cost of production.

Then, I think that the committee ought to bear in mind that on cotton laces made on the Lever and Gothrough machine the manufacturer is not now getting 70 per cent, because he has to pay the duty on cotton yarns, and all the manufacturers agree that under the prevailing styles, which fix the demand, that the demand now is largest for cotton laces.

I do not like to have to admit it, but this very sudden increase in the business imposed on these manufacturers caused them to lay out an amount of capital which perhaps was more than they were warranted in laying out, and the result of that has been that they are not yet in a position where they are making any profit. I have already alluded to the fact that our paragraph produces an extremely large revenue, and that there is great competition and no American monopoly.

PARAGRAPH 350—LEVER OR GOTHROUGH LACES.

I shall ask leave to put into the printed record, without going into it at length, unless the committee desires me to, what the effect of our increased production has been on the French industry. I can indicate it in two or three sentences, and that is this, that in order to meet the new American competition the French manufacturers have put their prices down to a price below what they ever were before.

The French industry in Calais is divided into two classes, one the wealthier class of manufacturers, who control all the different kinds of production within their line, and one the smaller manufacturers, who possibly own one machine and which the man who owns the machine works himself.

Those in control of the French industry, by the American competition which has driven their prices down, have had to drive the prices of the smaller people down, not being able to drive the larger ones have driven the prices of the smaller people down until the smaller people of Calais have formed an association which they call a combination for the purpose of keeping the prices paid to labor from going any lower than they are now.

I desire also to read, in connection with that, and as a part of the proof under the head of the benefit that they have been to the industry, to the consumer in this country owing to the lower prices of the cheaper laces, a statement from an importer. Mr. Harrison will know, of course, the wholesale firm of Frederick Vietor & Achelis and recognize them instantly as one of the largest importing firms of New York City. Mr. E. A. Freeman was head of the lace department of that firm and went over and was interviewed as to what the result of this 70 per cent had been and the effect of the importation of machinery, and he told what I think was approximately the exact truth. He was reported in a paper known as *Le Phare de Calais*, under date of January 1, 1911, and he said:

The manufacturers of Calais, Caudry, and Nottingham, in order to stand their ground, need important orders from us. They have therefore lowered their prices to an extent unprecedented in years. Hence, so long as these tariffs shall be maintained the American industry, even with the added protection of the present duty, will be unable to compete with them.

To substantiate this statement, I will mention the recent visit to the United States of a Calais manufacturer who wished to transfer there his entire plant. To carry out this plan he had begun negotiations with an American firm and the transaction was to be concluded, of course, before the new year, the last date for the free transportation of machines.

After having studied the question on the ground, however, he changed his mind. He found here former operatives of his own mills who earned in France 20 francs weekly, while here they made \$20.

I want to say that that is an exceptional instance, and when he says he found the operatives who in his own mills had made 20 francs a week what he probably referred to was operatives who owned their own machines and who under the competition which was induced by this new American industry had been driven down to a point where they actually were and are to-day earning only \$4 and \$5 a week, while here they made \$20.

Being in more comfortable circumstances, operatives work less assiduously than in their own country. Moreover, cottons of good quality have to be imported, and cost 12½ to 15 per cent more than in France. Further, all general expenses are higher in the United States. Consequently, the prices of lace are increased.

PARAGRAPH 350—LEVER OR GOTHROUGH LACES.

The result is that with all these drawbacks the 70 per cent duty does not make up for the advantages of foreign manufacture, especially since the price of cotton is higher than ever. It should also be remembered that the American market prefers imported goods.

Therefore I think that we have an absolute condition in our industry which requires the maintenance of the present tariff. A reduction of the tariff would drive several mills out of business. They are doing business on about the smallest margin that they can, and if enough of the mills were driven out so that the American industry ceased to be a regulating, competing industry, the foreigner would put back his prices on the cheaper laces especially, not only to the point where they were before the tariff, but to a point higher, in fact, so that he could recoup himself for the lean years that he has had.

Our industry does not control very much of the market. The best estimate that I have been able to get is that it controls about 15 per cent of these lever and gothrough goods; and that is borne out by the statistics about machines. There are about 3,500 lever and go-through machines abroad that are making goods for the American market. We have 527 machines in this country, and that is about 15 per cent of the machines, and therefore it seems to me that a calculation of 15 per cent ought to be about right.

Mr. Harrison asked, the other day, if there are any machines that came into New York State under this. There are a few. They are the Liberty Lace & Netting Works, in the Bronx; the Vari Works, in the Bronx; there are E. & Z. Van Ralty, who have a large store at Fifteenth Street and Fifth Avenue, whose works are in Paterson, N. J.

The machines have been distributed all over the United States. I know there was that newspaper article that these machines had only gone to Rhode Island. That was not correct.

The CHAIRMAN. Your time has now expired, Mr. Bennet.

Mr. HAMMOND. I have looked at the picture you gave us. That is representative of a Goththrough machine?

Mr. BENNET. A Goththrough machine—a Lever and Goththrough machine.

Mr. HAMMOND. The word "lever" is not given.

Mr. BENNET. I beg pardon.

Mr. HAMMOND. I notice in the tariff law it is "Lever or Goththrough machine." I want to get that clear in my own mind. There is just one machine, called the Lever and Goththrough machine?

Mr. BENNET. One machine.

Mr. HAMMOND. It is a Lever and Goththrough?

Mr. BENNET. Yes, sir. The original lever machine was invented by a man named Heatchcote in England nearly a hundred years ago. It was kept in England for many years, and finally some Englishman surreptitiously got some over in France. Of course the machine had been improved. The words "Lever and Goththrough," although capitalized, indicate the operations of the machine. They are operated on the lever principle and the gothrough indicates something in the operation of the machine. Mr. Hughes, who started in life as a silk weaver, went out and looked at some of these machines which were in his district, and with all his expert knowledge he said they did not mean anything more to him than a grand piano.

PARAGRAPH 350—LEVER OR GOTHROUGH LACES.

Mr. HAMMOND. I notice in this paragraph 350 it speaks of it as "Lever or Gothrough." That should be "Lever and Gothrough"?

Mr. BENNET. There is no necessity for changing it because it is a well-recognized description and nobody is complaining in relation to that.

I am glad you have reminded me. As long as you have the tariff here before you, there is one change that ought to be made. I would have forgotten it, although I have it in my brief. Whoever drew this paragraph failed to make the very important distinction between "veils" and "veiling." A veil is a few yards of veiling either with embroidery on both ends or hemstitched on both ends, while veiling is a very different article, and the consequence is that the industry has not been given the protection the people who drew this paragraph really intended, because while veils, of which there are not many imported, come in under the 70 per cent duty, veilings come in under either the silk or cotton or fiber, or whatever schedule the product is in, and we do suggest to the committee, in connection with this absolutely new industry, that the word "veilings" be inserted, so that that particular clause will read "veils and veilings," and therefore carry out the intentions of the persons who drew this bill.

Mr. HAMMOND. Just to recapitulate, the Lever machine and Gothrough machine and Lever and Gothrough machine are all one?

Mr. BENNET. I understand that those three descriptions cover the one machine. I never heard anything different.

Mr. Chairman and gentlemen, in answering Mr. James's question, I answered it correctly enough from the machinery standpoint; but I overlooked the real reason why the words "Levers or Gothrough" are in that paragraph, and that is this: As I explained, the Levers are the old original machines and the Gothrough part is an improvement. Now, there are still in Nottingham and Coudry and Calais a lot of machines which are Levers and not Gothrough. The product of the two machines is identical. They can be made a little better on the machines which have the Gothrough attachment; so that the paragraph has to read, "Lever or Gothrough," because the paragraph has to do with the production and not the machine. We had been talking just previously to that about the machine, and I did transfer my thought rapidly enough from the machine to the product.

NEW YORK, *January 29, 1913.*

HON. CORDELL HULL,
House of Representatives, Washington, D. C.

MY DEAR HULL: I find on investigation that I gave an incorrect answer to the question which you asked me, and which on page 3405 of the hearings is attributed to Mr. Hammond, the question being: "Suppose there is only a small portion of it made by these machines, would it come under this 70 per cent clause?" to which I answered, "It would not." This only related to the product of the Lever and Gothrough machines. My clients are all manufacturers, and that was the information they had given me.

I find, however, that under the decision of the United States Court of Customs Appeals, February 1, 1912 (*Stein & Co. v. U. S.*, T. D. 32250), it was held that where goods were imported under paragraph 349, which contained Lever-machine product, the entire article was dutiable at 70 per cent, because of this provision under paragraph 349—

"*Provided*, That no article composed wholly or in chief value of one or more of the materials or goods specified in this paragraph shall pay a less rate of duty than the

PARAGRAPH 350—LEVER OR GOTHROUGH LACES.

highest rate imposed by this section upon any of the materials or goods of which the same is composed."

The court held that the phrase "materials or goods" embraced products of the Lever or Gothrough machine, and therefore assessed the duty at 70 per cent.

I have consulted my clients and they advise me that they have no interest in the limitation inserted in paragraph 349. It does not affect them materially as the great bulk of the foreign product of the Lever and Gothrough machines is imported into this country as the product of such machines, and the amount of Lever product which would be affected by the omission or retention of the provision is inconsiderable. In the reports of imports entered for consumption during the year ending June 30, 1912, it would seem that the following were all that had been affected by the decision: Handkerchiefs or mufflers composed of cotton in the piece or otherwise, finished or unfinished, \$425; possibly some of the wearing apparel item on page 21, value \$3,532.72; the similar item on page 25, value \$132; silk handkerchiefs, page 50, value \$223; and the wearing apparel item on page 53, value \$12,842.50.

Some of these may be affected by the Treasury decision and some portion of the larger items which are headed "laces," but it is not a considerable question so far as value goes, and from that standpoint we take no interest in it one way or the other. Doubtless the provision was intended to prevent undervaluation.

I felt that I owed a duty to you and to the committee to rectify this error in my testimony at the earliest opportunity. I am sending a copy of the letter to all the members of the committee.

Yours, very truly,

WILLIAM S. BENNET.

LEVER AND GOTHROUGH MACHINE PRODUCTION.

Brief on behalf of the Hall Lace Co., E. & Z. Van Raalte, Vari Lace Manufacturing Co., Liberty Lace & Netting Works, American Textile Co., Taylor Textile Manufacturing Co., Sekonk Lace Co., Redfern Lace Works, Leighton Lace Co., J. A. Dunham, Dresden Lace Works, Phoenix Lace Mills, and Cadoza Lace Co.

The attitude of the foregoing is that in their opinion the rate ought to be at least 80 per cent, but as they can to some extent compete with the foreign manufacturer under the present rate they will be content, recognizing that this Congress is pledged against upward revision, if the rate remains unchanged.

Recent importations and duties under paragraph 350 have been as follows:

	1910	1911	1912
Imports:			
Value.....	\$7,019,285.02	\$6,793,464.97	\$8,332,806.22
Duties.....	4,913,499.34	4,685,495.12	5,830,508.26

A suggestion as to a change in the phraseology of the present tariff law is to insert the word "veilings," so that that particular phrase will read "veils and veilings." The omission of the word "veilings" from the paragraph was evidently an inadvertence. A veil is a completed length of veiling, either embroidered at the ends or hemstitched. Veiling is the material by the yard, from which veils are made. The result of the omission of the word "veilings" from this paragraph has been that veilings made on the lever and gothrough machines came in, not under 70 per cent, but under the rates imposed by the paragraph relating to flax, fiber, hemp, cotton, and silk. This is extremely unjust to the manufacturer as, though his labor rate is the same and the same machine is used, the product on that machine by that labor meets competition coming under various rates, most of which are lower, and as veiling is certainly a luxury the Government loses the difference in duty between the lower rate and 70 per cent.

It is believed that this omission has but to be called to the attention of the committee to be corrected.

FOREWORD.

The situation in relation to paragraph 350 is unusual. The paragraph should be read in connection with paragraph 197, under which all embroidery machines and lever and gothrough lace-making machines were admitted free of duty if imported prior to January 1, 1931. This free importation of machinery was not asked for by the

PARAGRAPH 350—LEVER OR GOTHROUGH LACES.

few manufacturers of lace who at that time were doing business in the United States. It forced upon them expenditure for which they had made no preparation and a competition, both amongst themselves and with the foreign manufacturer, for which they were not prepared. Nevertheless they strained every nerve to meet the new conditions which arose under the bill and prior to January 1, 1911, had imported lace machines of the value of \$2,946,919. (Bureau of Foreign and Domestic Commerce.)

In addition they erected new buildings and otherwise expended money until the total outlay of this small industry had arisen, as nearly as can be estimated, to somewhere in the neighborhood of \$7,000,000. The result has been that not one single manufacturer of the entire 25 or 26 who has so imported machinery has as yet made one single dollar upon this branch of his business. The result to the consumer, however, has been that the valiant effort of the American manufacturer to introduce competition with the foreign manufacturer has reduced the price of the product to the consumer, and this largely on the cheaper grades of goods. At the outset, therefore, the manufacturers feel that a new element having been introduced into their business without their request, but intended for their benefit and which they have complied with by an enormous proportionate expansion of their industry, they are entitled, under present conditions, to retain the 70 per cent duty which they did ask and which they did need for the purpose of permitting them to continue their industry; certainly until it has reached a point where there is at least a trifling profit, particularly as while this is being done the rigorous competition to which they are being subjected will keep down the price of this product to the American consumer. If the rate is reduced it will result, so bad are conditions in the industry, in the almost immediate closing of several of the plants and the cessation of the existence of the American industry as a competing or regulating industry.

THE FOREIGN INDUSTRY.

The chief competitor of the United States under this paragraph is the city of Calais, a city of about 67,000 people, of whom approximately 50 per cent are engaged in the lace-making industry and which, until the recent increase in the American manufacturing industry, following the Payne law, had what might be termed a territorial monopoly; that is, the city had 7,000 lace machines; it had, in the most complete fashion, all the necessary plants for the doing of the accessory and auxiliary work, and as it had control of the American market, which was a constant one, it was under no duty to reduce its prices, and consequently maintained them at a high rate against the United States, particularly on the cheaper grades of laces which are used by the poorer people. The difference in labor cost was so great that when the American manufacturer had in addition to pay a 45 per cent duty on his lace machines it was impossible for him to institute regulative competition, and the old competition prior to the Payne bill was a competition confined to specialties, in which the American manufacturer could compete because of the superiority of design and closeness to the market. The sudden rise of the American industry, although now it produces not to exceed 15 per cent of the total product under this paragraph consumed in the United States, has broken up to some extent the French territorial monopoly, with the result that the Frenchmen are now selling their laces in this country much cheaper than they did prior to the act of August 5, 1909, and the American consumer is getting the benefit of that competition.

REASONS FOR MAINTAINING THE PRESENT RATE OF DUTY.

First. Because the American manufacturer is still so close to his time of tremendous expenditure, compelled by the change in the condition of the industry through the importation of foreign machinery, that he is still entitled to the existing rate.

Second. Because the products under this paragraph are all articles of voluntary consumption and, therefore, luxuries, and the manufacturers represented on this brief understand it to be the purpose of the Democratic Party to continue the tariff on luxuries where it now exists, and to remove it from necessities.

Third. Because the present rate produces a large revenue.

Fourth. Because, under the present rate, there is great competition and no American monopoly.

Fifth. Because the result of the beginning of an American industry, made possible only by the increased rate and the free importation of machinery, has been to reduce the price of the product to the American consumer.

PARAGRAPH 350—LEVER OR GOTHROUGH LACES.

Sixth. Because the decrease of the rate to a point which would eliminate the domestic manufacturer as a competitor would enable the French territorial monopoly of Calais to reestablish prices at the old higher figure and at a figure higher enough than that to recoup them for their lost profits during the last two or three years.

Seventh. The enormous difference in the cost of production.

Taking up these reasons in order, we find:

First. In addition to what has already been said as to expenditures, the manufacturers have had to import all the skilled labor of this new industry because there was none of a like character unemployed in this country, but the employment of every skilled French or English skilled laborer has given employment, in connection with the same machine, to seven Americans. Naturally, however, the imported laborer and American laborer, the former working under new conditions and environments and at greatly higher wages, have not as yet come to the highest degree of efficiency in connection with production, and thus the American manufacturer is working under an additional handicap of a force which, as compared with the French manufacturer's force, is not of the same high degree of shop efficiency. It is hoped, and indeed the indications are, that in the course of a few years this particular handicap will disappear; but at the present it exists.

Second. Under this head no further argument is needed except the statement of the proposition and to call the attention of the committee to the fact that no part of the product under paragraph 350 is necessary for the health, comfort, or cleanliness of anyone, and that a woman can be perfectly, comfortably, and even beautifully clothed without the utilization of a single yard of lace. Therefore this entire product is one of voluntary consumption and, therefore, a luxury.

Third. The figures speak for themselves. The duties collected under this paragraph in 1912 were \$5,830,508.26. The great bulk of this was paid by the wealthier and better-to-do people among us.

Fourth. The fact that the imports under this paragraph amounted in 1912 to \$8,332,806.22 indicates the extent of the foreign competition, and no one claims that the American production exceeds 15 per cent of the value of American consumption.

Fifth. This fact we prove in three ways: First, by the admissions of an American importer; second, by the admissions of the foreign industry as found in the Calais papers; and, third, by the testimony of American consumers of the cheaper grades of laces, which are inserted in this brief.

The American importer was Mr. E. A. Freeman, head of the lace department of the wholesale firm of Frederick Viator & Achelis, who, as reported in *Le Phare de Calais* of January 21, 1911, said:

"The manufacturers of Calais, Caudry, and Nottingham, in order to stand their ground, need important orders from us. They have therefore lowered their prices to an extent unprecedented in years. Hence, so long as these tariffs shall be maintained, the American industry, even with the added protection of the present duty, will be unable to compete with them.

"To substantiate this statement I will mention the recent visit to the United States of a Calais manufacturer, who wished to transfer there his entire plant. To carry out this plan he had begun negotiations with an American firm, and the transaction was to be concluded, of course, before the new year, the last date for the free transportation of machines.

"After having studied the question on the ground, however, he changed his mind. He found here former operatives of his own mills, who earned in France 20 francs weekly, while here they made \$20. Being in more comfortable circumstances, operatives work less assiduously than in their own country. Moreover, cottons of good quality have to be imported, and cost 12½ to 15 per cent more than in France. Further, all general expenses are higher in the United States. Consequently the prices of lace are increased.

"The result is that, with all these drawbacks, the 70 per cent duty does not make up for the advantages of foreign manufacture, especially since the price of cotton is higher than ever. It should also be remembered that the American market prefers imported goods."

As to the third point, the obvious method of proof is to present the testimony of the American consumer. We insert seven letters from large manufacturers of underwear, who are the American consumers, to whom both French and American manufacturers of lever and gothrough laces sell their cheaper product, which is used by these manufacturers almost exclusively in the manufacture of knit goods and muslin underwear.

PARAGRAPH 350—LEVER OR GOTHROUGH LACES.

NEW YORK, *January 9, 1913.*

VARI LACE MANUFACTURING Co.,
149 Fifth Avenue, City.

GENTLEMEN: We have your inquiry of recent date and in reply would say that the prices of laces have been reduced to a considerable extent since the inauguration of lace manufacturing in this country. The quality of lace made by the American manufacturers is constantly improving and has a natural influence toward the reduction in price of the imported article with which our American manufacturers compete. There is no doubt that the ultimate consumer derives a benefit of a very considerable amount through the development of this industry.

Very truly, yours,

D. E. SICHER & Co.

NEW YORK, *January 6, 1913.*

VARI LACE MANUFACTURING Co.,
149 Fifth Avenue, New York City.

GENTLEMEN: In answer to your inquiry we are glad to give expression to our opinion that in the coming revision of tariff on laces it is highly desirable that the duties should not be reduced beyond the point at which the domestic manufacturer can successfully keep up the competition with the foreign products. This competition has been useful to the manufacturer and certainly beneficial to the ultimate consumer inasmuch as, in many instances, the prices of laces of like qualities have been lowered by the domestic industry.

Yours, very truly,

BRILL & KRIEGSMAN.

NEW YORK, *January 3, 1913.*

VARI LACE MANUFACTURING Co.,
149 Fifth Avenue, City.

GENTLEMEN: In reply to your inquiry, we beg to state that since the introduction of American-made laces and nets we have been able to buy these articles for the same grades cheaper than before their introduction.

Yours, very truly,

M. STERN & Co.

NEW YORK, *January 3, 1913.*

VARI LACE MANUFACTURING Co.,
149 Fifth Avenue, City.

GENTLEMEN: In answer to your inquiry regarding whether the cost of lace has been materially decreased since the development of the domestic industry, we beg to state that we have been able to purchase lace considerably cheaper during the past few years, and ascribe the cause to the development of this industry by the American manufacturer, who has forced the importer to lower his prices; and the bringing down of prices has naturally been of great direct benefit to the consumer.

We are only too glad to confirm this, and beg to remain,

Yours, very truly,

S. FLOERSHEIMER.

NEW YORK, *January 14, 1913.*

LIBERTY LACE AND NETTING WORKS,
79 Fifth Avenue, New York City.

GENTLEMEN: Referring to the inquiry of recent date, we can cheerfully say that since we have been buying American made laces the price level on goods of this character has come down from 15 to 25 per cent. We find that the importers have reduced and are still reducing their prices in order to meet the American competition and we certainly feel that the establishment of the lace manufacturing industries in this country has had the effect of establishing lower prices to the consumer on goods of this character.

Yours, very truly,

ENGEL & KRAUS,
Per KRAUS

PARAGRAPH 350—LEVER OR GOTHROUGH LACES.

LIBERTY LACE AND NETTING Co.,
79 Fifth Avenue, City.

NEW YORK, *January 13, 1913.*

GENTLEMEN: In reference to your communication of recent date we can heartily say the prices we have paid for laces since the American manufacturers have come into the market have been 15 to 25 per cent less than before that time. We find that the importers have materially reduced their prices to meet the competition and there is every evidence that they seem further inclined to do so this season. This would certainly not have been the case in former years when the importers were competing merely against each other. We trust that your attitude in this matter will be as broad in the future as it has been in the past, and that your success in overcoming the foreign competition will continue, as it has certainly given the American manufacturers a much broader, more equitable, and cheaper market. Trusting that our relations will continue as in the past, we remain,

Very truly, yours,

SYDNEY M. SCHWARTZ & Co.

LIBERTY LACE AND NETTING WORKS,
79 Fifth Avenue, City.

NEW YORK, *January 21, 1913.*

GENTLEMEN: In answer to your inquiry of the 18th instant, we will say that by comparing the price paid by us for laces to-day and the price paid for similar goods two years ago, we find that the price is now from 15 per cent to 25 per cent lower than prices paid for these similar goods then. This we will attribute to the fact that we buy these goods from the domestic manufacturer on a large scale, whereas formerly we were compelled to buy all this merchandise from the importers only.

In connection with this, we will say that the importers in order to hold the business, which is drifting into the hands of the domestic manufacturers, are offering the goods at a much lower price than they did before they had this competition.

Yours, very truly,

OFFENHEIM & BARUCH.

It will doubtless be gratifying to the committee to learn that the establishment of the American industry has resulted in lower prices on that part of the product which goes to those who, desiring luxuries as much as any one, have the least means with which to purchase them.

Sixth. This is, of course, simply a prophecy, but it is in line with all human experience on the subject and there is this much of proof, the letters already published show that the foreign manufacturer could have made his prices to the American consumer much lower than he actually did during the time that he dominated competition. If he kept his prices unnecessarily high when we could not prevent him from doing so, is it not reasonable to conclude that if we permit him to destroy American competition he will again increase his price to a point high enough, not only to re-establish his old-time profit, but to recoup him for the lost profits of these lean years.

Seventh. Fortunately there is very little dispute as to the figures as to the difference in labor cost. A conservative table is the following.

PARAGRAPH 350—LEVER OR GOTHROUGH LACES.

Wages in American and foreign lace factories.

Occupation.	American weekly wages.	Foreign weekly wages.

PARAGRAPH 350—LEVER OR GOTHROUGH LACES.

It would be possible to multiply these illustrations of difference in labor cost, but it is thought that these two will suffice. There has been deposited with the clerk of the committee, for the use of the committee during the preparation of the bill, the foreign documents upon which are based the figures from which these tables as to the foreign wages are made up.

THE REAL REASON WHY, IN SPITE OF ALL HIS HANDICAPS, THE AMERICAN MANUFACTURER STILL EXISTS.

The question naturally occurs, why the American manufacturer can even exist if he has to pay at least 100 per cent more for his labor and draws his skilled labor from the same source and finds it not yet as efficient, because of lack of coordination between it and the American unskilled labor, and his tariff protection only 70 per cent?

The answer is that the mere existence of the American manufacturer, which is all that he can claim, continues for the following reasons: To some extent he gets a market for specialties; he has the advantage of a closeness to his market and possibly a better understanding of it; he can make quicker deliveries, which is important in an industry which to some extent is a seasonal one and one which depends absolutely upon changing fashions and styles; he can both deliver larger quantities more quickly when desired and smaller quantities to fill out a line at the end of a season.

These advantages which any manufacturer possesses in his own country enable the American manufacturer to cling to his 15 per cent of the value of the American consumption of his product. His existence, while not a very great pecuniary benefit to himself, shields the whole American consuming market from the evils of the French territorial monopoly unrestrained by American competition.

THE RATE IS NOT 70 PER CENT ON ALL OF THE PRODUCT.

Just at present the popular demand is for cotton laces. This does not at all mean that it is for cheap laces, as many of the machine-made cotton laces are expensive. The cotton-warp yarn is imported and in the higher grades the duties rise as high as 37½ per cent; in such grades the protection of a 70 per cent rate is but 32½ per cent, but the revenue produced from the competing laces in these higher grades remains at the full 70 per cent.

For all these reasons, which it has been the endeavor to state briefly and succinctly, it is the hope of the American manufacturer that the present rate of 70 per cent on these articles of luxury may be permitted to continue.

Drawn and submitted by William S. Bennet, 60 Wall Street, New York City.

THE LACE INDUSTRY OF THE NOTTINGHAM DISTRICT.

[From report of Henry Studniczka, special agent of the Department of Commerce and Labor.]

The prominent industries of Nottingham are lace and hosiery knitting.

EMPLOYEES OF VARIOUS INDUSTRIES.

The most striking feature of the industrial life of Nottingham is the large number of women and children employed in its industries. The streets at noon hour give a striking illustration of this when the women and girls go to their noon meals from lace warehouses, factories, and hosiery plants. Some 18,000 of these are employed in all the branches of the lace industry, and no less than 10,000 in the hosiery mills, while skirt factories, tobacco factories, laundries, and dressmaking and millinery establishments employ several thousand more. Statistics show that Nottingham employs 115 females to every 100 men, while the proportion in England and Wales is only 107 women to each 100 men.

DEPRESSED CONDITION OF THE LACE INDUSTRY.

The lace manufacturers of Nottingham are apparently losing ground as exporters, and France, Switzerland, Germany, and the United States are gaining. This may be partly due to the fact that some of the older manufacturers are conservative and do not install modern machinery, and these no doubt will be replaced by more progressive

PARAGRAPH 350—LEVER OR GOTHROUGH LACES.

firms. According to the statement of Consul Frank W. Mahin, the total exports of lace from Nottingham for 1909 amounted to some \$25,000,000, and of this the United States received only \$6,000,000.

Such of the lace manufacturers as I conferred with seem dissatisfied with the late change in the American tariff, claiming that the free importation of lace-making machinery into the United States will in time prove detrimental to the lace industry of this city. A great deal of this machinery has been shipped to the United States during the last six months. While it is expected that some of these new ventures will prove a failure, the British manufacturers feel that those conducted on a successful basis will develop serious competition.

WAGES OF NOTTINGHAM LACE WORKERS.

The Amalgamated Society of Operative Lace Makers is a prosperous and strong organization. The lace workers are all working under a piece contract agreement which was awarded by a representative of the board of trade, in 1905, for the levers and curtain-machine branches. The board of conciliation fixed, in April, 1907, the price list on piece contracts for net curtains and for plain net branch.

There is great diversity in the earning capacity of the workers in the lace industry, depending principally upon the skill of the operatives and the class of work upon which they are engaged. The actual minimum and maximum weekly wages that the different lace operatives can earn at steady work are shown in the following statements, based on conferences with the secretaries of the different trade societies.

The levers branch of the trade employs men only, including curtain and silk work. These operatives can earn from 35s. (\$8.52) to 40s. (\$9.73) per week working on the scale adopted. An exceptionally skilled operative can make higher wages. The male operatives on curtain work and plain net earn the same as those in the levers branch.

The female workers in the lace factories have no union, and their wages were ascertained partially from manufacturers and superintendents and partially from the foreladies. The brass bobbin winders earn 20s. (\$4.86) to 25s. (\$6.08) weekly; lace menders 13s. (\$3.16) to 15s. (\$3.65) per week; slip winders, 9s. (\$2.19) to 10s. (\$2.43) per week. In the other branches of the factories, such as drawing the threads and scalloping with scissors, the last two named schedules will apply. Much of this work is done by girls who do not seem to be over 12 years of age, while the law provides a school limit of 13 years. In the warehouses the pattern girls receive 20s. (\$4.86) to 30s. (\$7.30) per week, and some exceptional women in this branch can earn higher wages. The balance of the work done around the warehouses by the girls can be safely placed at an average of 10s. (\$2.43) to 16s. (\$3.89) per week. The following statistics, published by the board of trade, show the earning capacity of male and female lace workers for one week's full time, also the percentage of employees out of each 100 that are capable of earning these wages:

Earning capacity.	Per cent.	Earning capacity.	Per cent.
MALE.		FEMALE.	
60s. (\$14.59).....	13.2	25s. (\$6.08) to 30s. (\$7.30).....	1.8
50s. (\$12.16) and under 60s.....	11.9	20s. (\$4.86) and under 25s.....	5.7
40s. (\$9.73) and under 50s.....	19.0	15s. (\$3.65) and under 20s.....	25.1
30s. (\$7.30) and under 40s.....	24.4	10s. (\$2.43) and under 15s.....	49.3
20s. (\$4.86) and under 30s.....	25.3	Under 10s.....	18.1
Under 20s.....	6.2		

The average weekly earning capacity of male lace operatives is \$8.62 and of female lace workers \$3.26. The average weekly earning capacity of girls under 18 years and boys under 20 years in the lace industry is \$3.08 for boys and \$1.72 for girls. The average annual earning capacity for all classes of employees in the lace industry in 1906 was £54 10s. (\$265.22).

PARAGRAPH 350—LEVER OR GOTHROUGH LACES.

[Extract from the French newspaper entitled "La Vie Calaisienne" (The Life of Calais), dated Sunday, Nov. 10, 1912.]

SYNDICATE OF THE SMALL MANUFACTURERS AND CONTRACTORS—THE END OF A NIGHTMARE.

To all small manufacturers and contractors of Calais:

For a long time the syndicate chamber of the manufacturers has devoted itself to its rôle of expansion of our industry growing further and further.

Later has come the associations of manufacturers in its exclusive mission of social cooperation.

At no time had it been possible so far to succeed to organize in the defense of the wages for manufacturing.

But before the great audacity of the exploiters without scruples, the great fore-runners of famine commissions, one was momentarily powerless; one was forced to lower one's head and to wait. New elements having joined the old committee and valuable help having been offered spontaneously, the devoted and persisting comrades who took the initiative of the present convocation are in a position to guarantee during all the time that such will be necessary a moral support and, better yet, pecuniary aid to all those who may have to suffer by the rapacity of the exploiters of this place.

The object of such a solidarity is to safeguard your bread and the tranquillity of your old days. All that is lacking now is your unanimous adhesion.

That is the reason why you are asked to the gathering which will take place Monday next, the 11th of this month, at 8 o'clock precisely, at Omer Hall, 15 Rue de Vic.

It will be in your interest to respond in masses so as to give the syndicate the authority which it must have to lead to a successful end its work in the defense of our city in the taking care of our splendid industry.

THE COMMITTEE.

But it remains to safeguard the price of manufacturing. That is the rôle that the syndicate of small manufacturers and contractors will assume.

Large manufacturers, the houses which make the reputation throughout the lace world of Calais, always paid the wages prescribed by the tariff. Being sufficiently rich to be able to impose their selling price upon their customers, too powerful and too proud to obtain or solicit any concession in regard to the price of manufacturing, they have never gone back on the engagements which they have agreed to.

There remained the modest ones, the small ones, among whom the exploiters carefully kept up an unfortunate suspicion of the one against the other. For these it was inevitable enslavement or the road toward ruin. Here was the end of the intelligent initiative which had hatched for two centuries under the blue Calaisian shirt, which resulted in making out of the once humble workingman the creator and chief of powerful concerns.

The syndicate of small manufacturers and contractors does not desire this, and it means to preserve the tradition which alone has made of Calais the queen of manufactured lace, the tradition which alone can preserve to Calais this supremacy.

It will be objected that the manufacturers are too numerous, that the crisis is inevitable, that it will have to be stood, with its unfortunate consequences for those who lack foresight and whom competition forces to create price reduction.

These arguments have real value when they are expressed only for one personality. But let us come to this syndicate. Do not expect to get to the syndicate when there will be no more remedy open to us. You will learn there that if really sacrifices have to be made in order to retain customers, in order to battle against foreign rivals greatly favored, such matters should not be decided by individuals under suspicion, but by a society of professional men who know how to appreciate what had better be done in the interest of all.

Let small manufacturers and contractors not labor under any illusion.

The present situation, with the increasing number of exploiters, spells ruin for the isolated; it means safeguarding of the existence of syndicates.

AN OLD SMALL MANUFACTURER.

PARAGRAPH 350—LEVER OR GOTHROUGH LACES.

[Extract from the *La Vie Calaisienne* (The Calais Life) of Sunday, November 24, 1912.]

SYNDICATE OF THE SMALL MANUFACTURERS AND CONTRACTORS OF CALAIS, MONDAY, THE 25TH OF NOVEMBER, 1912—GENERAL MEETING—ORDER OF THE DAY—REPORT AS TO THE WORK OF THE COMMITTEE—NOMINATIONS FOR THE COMMITTEE—MODIFICATION OF THE STATUTES—VARIOUS QUESTIONS.

We count upon the presence not only of all the small manufacturers and contractors who desire to put an end to the ridiculous prices of manufacturing but also upon the presence of all manufacturers who suffer through cheap goods and depressed prices.

This question is of the greatest interest to all the elements who work and sacrifice themselves to preserve for Calais its supremacy on the market for tulle and manufactured laces. By coming in great numbers to listen to and approve of the committee of small manufacturers and contractors who will give a first account of their work and their projects one will give the committee a moral support which is indispensable and furthermore vest the committee with the authority which it needs to continue its work to raise the actual prices of manufacturing by mutual assistance and solidarity. The committee is an employer to be incriminated on account of insufficient remuneration. Does not commercial liberty allow to profit by the stupidity of others?

Manufacturers have often told us, We gladly pay the tariff. If we at any time have not observed it, the reason is that the contractor of his own free will has proposed to us a lower price.

Are we to reject that which he gives up to us or are we to force him to take what seems to him unnecessary? And the contractor, in his turn, when he considers that he has worked as much as two of his workmen, that he has used his own material, that he must pay all his expenses, all this only to be able to give his family on Saturday evening the salary of an ordinary workman, 1 louis or 2 (the equivalent of a louis is \$4)—the contractor, realizing all this, commences to hate himself, to curse his employer, the boss, the rich manufacturer who enriches himself by his sweat and at his expense.

How can one fail to admit in the midst of such a recession in prices and so deep an antagonism between the two categories of producers of laces, the great increase of the contractors of cheap merchandise of the so-called manufacturers who run to distinct business without risk and without outlay, contracting at the lowest price and the selling of the material at a good price.

As the contractor can not obtain work without purchasing the material from the merchant-manufacturer who gives him the orders, as he becomes at the same time creditor and debtor, the operation creates for him a situation more and more oppressing and complicated.

It is thus that we now have circumstances brought home to us at the meeting of the syndicate that are really harrowing.

Whatever one may say, it is certainly mortifying for a small employer of yesterday, who by strict economy has succeeded in elevating himself a little in the industrial scale, to see the fruits of his vigils and of his long privations disappear into the pocket of a trader who has nothing remarkable but his low cunning and his trickery.

Are we to see the development in Calais under the guidance and with the support of the large houses, of a class of selling manufacturers exploiting without scruples the very much more interesting class of producing manufacturers? That will rest with the last-named ones.

The syndicate offers them a real and appreciable support; they can count on it to stand up for them in the settlement of their differences and arrears. Let them come to the syndicate without hesitation and with frankness. Let them raise, without waiting any longer, the tariff beyond what is now paid them.

Considering it impossible to apply the full integral tariff, the committee thinks that it would serve best the interests of all, to demand a partial increase only, by instance, on the basis of a loom of 146 inches, 9 points, 1 franc for the rack, instead of franc 0.70 or at 0.80 paid now. Let all contractors apply it at once; the extra money which they will receive will permit them to pay their arrears, and they will put the means into the hands of the manufacturer to dispose of their articles without being copied or undersold.

AN OLD SMALL MANUFACTURER.

PARAGRAPH 350—LEVER OR GOTHROUGH LACES.

THE ACTION OF THE SYNDICATE.

Numerous manufacturers confound often the actions of the association of manufacturers with that of the syndicate of small manufacturers and contractors. Useless, they say, for this latter to look for funds; we have gathered a cash fund of 300,000 francs, which can not remain without effect.

It seems necessary to come back to this question and to fix the action of the association and the syndicate.

The association, if our information is correct, has been founded to raise a cash fund for the purpose of assistance between all the associated manufacturers in case of a strike of the tulle workers.

The association is to prevent a strike by all means by trying to solve amicably the differences which arise between the associated employers and their men and in demanding of all their members the full integral application of the tariff of 1890.

What penalty has it for those of its members (and they are numerous and conspicuous) who do not observe the tariff? None. What indemnities has it at its disposal to sustain a movement in favor of a raise of the tariff? None, since its cash fund must remain as a reserve.

It has seemed to a few devoted ones under such circumstances that a syndicate of small manufacturers and contractors, composed of those who suffer first by depression of prices, might attempt a movement.

At this stage of the crisis it was impossible to demand the integral application of the tariff without causing immediately a sudden stop of transactions and a profound disturbance in the relations between producers and buyers.

The actual tariff is so much below the official tariff that the jump that must take place, while it has been rapidly effected in the direction of lower prices, offers unheard-of difficulties in the direction of higher rates.

The possible movement is to ask of all contractors who work at a loss to stop work immediately, or to continue only if granted an increase between the price they now receive and the full price of the tariff, the increase to permit them not to make money, but to come out even.

Several contractors have already consented to treat with the committee of the syndicate on this basis, the committee having guaranteed a stipulated sum per week and per loom during a fixed period for the time they do not work, on the condition that they will never again go below a price established by common accord.

This movement will only be really efficient if the action includes a certain number of contractors. Toward this end all our efforts tend. At any rate, solidarity and mutual assistance will create for the syndicate more cohesion and affection between its members and more sympathy amongst corporations of manufacturing circles of Calais than if it had advocated violent means, a boycott, or a strike.

The committee has already resources, but they are limited in view of immense needs. Whatever some manufacturers may say, it is neither the business of the syndicate chamber nor of the association taken collectively to cooperate in our work, but it is the business of each member individually. Our aim is very different from that of these two groups.

Each industrial individuality is interested in not having prices slashed. Each manufacturer who assumes courageously his many responsibilities should help through a personal effort to stop the development of the merchant-manufacturer who exploits the place by accepting orders at senseless prices to have them executed at a loss by unfortunate starving contractors.

How many are there of these latter who, induced through stress to accept such work to fill up a hole, find with terror that they have only opened a larger one?

How many of these unfortunates have we seen this week who not only worked for 0.75 or 0.80 centimes for the rack for 15 racks on 9 points, 146 inches, but have been obliged, in order to obtain famine work, to buy exclusively from their contractors (their vultures) material at a loss?

And what is to be done?

The good graces of buyers and often of certain commission merchants are naturally reserved to those producers of articles copied and sold at cut rates, who consent, in order to obtain larger orders, to an enormous reduction.

An honorable manufacturer has related to us this week the case of one of these industrial robbers who, called before a buyer one day, was asked to give his price for 200 boxes.

This order was evidently not sufficient to obtain the very lowest terms in use for orders of several thousand boxes. Nevertheless, he asked time to think it over and returned home.

PARAGRAPH 350—LEVER OR GOTHROUGH LACES.

Which unfortunate contractor did he select in advance for the execution of the pending order?

No one knows.

It is certain, however, that, returning to see the buyer, the conditions he made were so unexpectedly low that the other, who was staggered for a moment, recovering from his surprise, said to him, "Oh, well, at that price I can take the responsibility upon myself to pass you an order for 500 boxes."

We must not be told that it is commercial adroitness to consent (without risk) to such a sacrifice to make a customer.

On one hand the buyer carries away the very clear impression that he has up till now been exploited by the manufacturers of Calais and that the sale price can be changed to suit. The contractor, on the other hand, who has executed the order at the price fixed, finds himself in a bad way.

The trafficker congratulates himself and can divide profits with his low companions, as follows: I. 0.25 or 0.50 per piece. II. He has sold his material at a large profit.

Before such facts one can not remain indifferent. All articles will be affected. One does not limit oneself to the classic articles; one has gone into the metal articles and into silk; they will certainly try to pull down novelties and other important articles.

For this reason the initiative of the syndicate of small manufacturers and contractors who receive ridiculous prices will be more effective and more general. And the result will be prompt from the moment that adhesion to the movement is unanimous.

The committee is very grateful to those who spontaneously have enabled it to commence its work. It expects that honest and serious manufacturers will not fail to support it.

[Extract from *La Vie Calaisienne* (The Calais Life) Nov. 17, 1912.]

The competition of manufacturers as to the prices at which they manufacture, together with the competition in selling, plunges us into misery.

A good many of us see before them within a short time financial difficulties and dishonor and accept work at incredibly low prices in order to delay the catastrophe as long as possible. Are they the ones to whom we shall extol the remedy, tender good advice, lead them out to revolt? They will answer very quickly: We must have work at any price for our looms, because we need bread for our families.

It is here, gentlemen, that our action should really come into play. Let us give to those among us who receive the least pay the normal week's pay which they should receive when they work, at stipulated tariff rates, and let us make haste to get them work so that they do not longer burden our budget.

You may object that to do this money is necessary. Calm yourselves; the committee has found funds; it will find more; have entire confidence in us. All we ask of you is to show to us by your vote whether you like our proposition of mutual assistance.

Do we have to state that those present approved unanimously of these propositions?

As stated by other members of the committee who had attentive listeners in the manufacturers present at the meeting, such action, even if carried on in a modest way, but a way beyond criticism, can not but have the most happy and comforting results.

JULIUS A. HAUER.

Sworn to before me this 20th January, 1913.

[SEAL.]

J. P. GANNON,

Notary Public No. 93, County of New York.

[Extracts from *La Vie Calaisienne* (The Calais Life) Sunday, Dec. 1, 1912.]

SYNDICATE OF SMALL MANUFACTURERS AND CONTRACTORS—GENERAL MEETING OF NOVEMBER 25, 1912—THE HEAVENS DO NOT FAVOR THE SYNDICATE.

Not satisfied with the many obstacles which its distressed adversaries put in its ascending path, the heavens did reserve for Monday night's meeting (which a great many members of manufacturing circles of Calais intended to attend) the most frightful tempest which the Channel has ever brought to Calais in this month of November.

PARAGRAPH 350—LEVER OR GOTHROUGH LACES.

Nevertheless an important group of manufacturers, contractors, as well as some notables in Calaisian lace circles, came to listen with the greatest attention to the information which was given about the work of the committee during 15 days.

They approved unanimously of the work accomplished in so short a time, and which exemplifies a perfect cohesion and understanding contrasting with former meetings, where recriminations of all kinds were exchanged without restraint. Those at the meeting signified their well-considered intention to follow the committee in its program, having for object the raising of the prices of manufacturing.

As one of the largest manufacturers, a man of standing, stated to us when the meeting came to an end, "It is not only the interest of the small manufacturers and contractors which is involved, but the interest of all manufacturers who have at heart not to contribute toward degrading Calaisian lace to the rank of cheap, worthless merchandise."

And yet these are people who consider themselves very intelligent in producing this trash, and in depreciating prices systematically, because they apply all their intelligence toward filling their own pockets.

"We become rich, we make money, the others lose, we are consequently very able."

Thus runs their reasoning.

Was this not also the way the stupid peasant reasoned who opened the bellies of his chickens to find there golden eggs?

These great brains will certainly not hinder the syndicate of small manufacturers and contractors from continuing its work.

During the course of the meeting the president moved to name four more members to complete the committee and at 10.15 the meeting dissolved, those attending being convinced of the utility of the syndicate above all where it has the aim of mutual help during a crisis or during a difficult situation.

EXPLOITATION OF THE CONTRACTORS BY THOSE WHO FURNISH THE RAW MATERIAL.

One of the sores that have been revealed to the syndicate since it started to operate is the exploitation of the small manufacturers and contractors in reference to the compulsory furnishing of the raw material by certain finishers.

While the decent manufacturer who gives out contract work furnishes raw material to his contractor strictly at cost and pays the normal rate for the manufactured merchandise as well as for the raw material that is left over, the exploiter, to whom the raw material costs less as he buys it as a merchant and not as a manufacturer, bills, when the manufactured goods are ready, the raw material which he has to take back at a lower figure than the price he sold it at, and inevitably puts the unfortunate contractor before the alternative to either work at a loss or to be left without resources to subsist from week to week.

Our object to-day is to show to those who have no clear conception of it how precarious the lot of the contractor becomes when he deals with one of these unscrupulous traders.

Let us take, for instance, a piece of ordinary Valenciennes, loom 9 points, weighing finished 2 kilo 100, into which would enter 700 spools of cotton and 400 rollers of cotton—value of the material at the price billed by the employer:

0 K. 700, at 14 francs.....	9.80
1 K. 400, at 9 francs.....	12.60
5 per cent waste.....	1.10

Total of the material.....	23.50
The piece has 15 racks, at 0.80 (the price agreed to by the furnisher after many difficulties).....	12.00

Cost price to the contractor..... 35.50

On this price the contractor has to pay:

I. To the laborer, 15 racks, at 0.40 plus 3 fractions of the yield.....	8.75
II. Winding, wapage, wheelage.....	2.00
III. General expense, depreciation, rent, insurance, etc., 25 per cent.....	9.00

19.75

Net remains 35.50 - 19.75 = 15.75 francs.

PARAGRAPH 350—LEVER OR GOTHROUGH LACES.

At the settlement of the account of the material furnished by the employer he receives for the manufactured article 8.50 francs for the kilo and reasons are not lacking to justify such a contempt for the laws of honesty.

I made you work to help you out of a difficulty. I had no need of this lace; it will remain on my hands. I will be obliged to dispose of it at a loss, etc. To make a long story short, I can not pay you more than 8.50 francs per kilo; that is, 20.35 francs in all.

As there remains to the contractor, after paying the cost of manufacturing and all other expense, only the sum above mentioned, 15.75 francs, the difference between the price of the material on 20.35 francs, the manufactured goods, and the sum which is left over net to the contractor is 15.75 francs.

$20.35 - 15.75 = 4.60$ francs.

The contractor has thus a deficit of 4.60 francs per piece which he owes his employer, or on six pieces, about 27.60 a week.

There is nothing like figures to draw conclusions from; and this reasoning explains clearly how many contractors are tied hand and foot to their exploiters, and what serious efforts the manufacturing circles of Calais will be called upon to make to draw them from their predicament.

To systematically throw stones at the needy, at the disinherited of the community of Calais, for whom chance has never had any of her enchanting smiles, means to ignore the solidarity which should unite the whole manufacturing industries of Calais in its relation to the markets of the world.

We will say more. It is the duty of every responsible and honest manufacturer to rid Calais as soon as possible of those greedy individuals who wish to enslave this community to some international aspirations which we do not clearly comprehend.

AN OLD SMALL MANUFACTURER.

SOUTH NORWALK, CONN., *January 9, 1913.*

KARL NEUHOFF,

30-32 East Twenty-first Street, New York City.

DEAR SIR: Answering your favor of the 8th, we beg to say that since you have established your domestic mill, we have been able to purchase our laces at a lower price in every instance than you formerly sold us the imported laces for, and the laces themselves are much more satisfactory, and, as we stated before, in every instance cheaper than the same article imported, and we should dislike very much to return to the old method.

Yours truly,

R. & G. CORSET CO.

BRIDGEPORT, CONN., *January 9, 1913.*

KARL NEUHOFF,

30-32 East Twenty-first Street, New York City.

DEAR SIR: We find in going over our records since we have been buying laces through your domestic mill, that we have bought them at a much lower price than we bought when they were imported.

We also find that in domestic manufacturing, we get the goods two or three weeks sooner than if these same goods were placed on import.

We simply would like to call the above matter to your attention, as we thought it might be of interest to you.

We inclose you order 193/28 which we would ask you to ship as soon as possible.

Yours truly,

BIRDSEY SOMERS CO.
H. W. CLARK.

SPRINGFIELD, MASS., *January 9, 1913.*

Mr. KARL NEUHOFF,

30 East Twenty-first Street, New York City.

DEAR SIR: We wish to take this opportunity of stating to you that the laces which we bought from you, manufactured by your domestic mill, the Dresden Lace Works, have been very satisfactory indeed, being fully equal in quality to the laces we have imported in the past.

We also wish to state that one of the most satisfactory points in connection with your domestic manufacture is that we have purchased these laces in every case at a considerably lower price than we have been able to import them.

PARAGRAPH 350—LEVER OR GOTHROUGH LACES.

We trust that nothing will occur to prevent the continuance of the good work you are doing.

Yours, very truly,

BAY STATE CORSET CO.,
WILLIAM M. TITUS, *President.*

AURORA, ILL., *January 10, 1913.*

KARL NEUHOFF,

30 East Twenty-first Street, New York City.

DEAR SIR: We have just finished our inventory and find we are rather low on some lace numbers. We do not use a very large quantity of lace at the present time, but might be interested in a few attractive numbers at about \$6 to \$8 a gross, width 3 inches to 3½ inches.

In reviewing the price of lace for the last year or two we note an improvement in prices since you have been furnishing us lace from your domestic mill. This is rather encouraging, and we are frank to state that the lace appears to be fully an equal.

We hope you have finished a very satisfactory year, and with best wishes for the new year, beg to remain,

Very truly, yours,

AURORA CORSET CO.,
F. A. HOLLISTER, *Superintendent.*

JACKSON, MICH., *January 10, 1913.*

Mr. KARL NEUHOFF,

30-32 East Twenty-first Street, New York City.

DEAR SIR: We expect to be in New York the week of the 19th, and at that time will be looking up the lace question.

We would say that the domestic lace which you have been furnishing us from the Dresden Lace Works (Inc.) we have found to be entirely satisfactory from every point of view, particularly so in the matter of prices. As you know, we have found it to our interest to place domestic orders with you as against the imported goods.

We merely mention this in view of our contemplating placing an order at the time we are in New York, and we hope that you will be able to successfully compete with other quotations, as you have in the past, and remain,

Yours, respectfully,

JACKSON CORSET CO.
C. H. TOMPKINS, *Manager.*

KALAMAZOO CORSET CO.,
Kalamazoo, Mich., January 10, 1913.

Mr. KARL NEUHOFF,

30 East Twenty-first Street, New York City.

DEAR MR. NEUHOFF: Replying to your favor 8th:

As you certainly must be aware, from our long dealings each with the other, we are among the large users of medium and low-priced lace and trimmings in the United States, and, in common with all other users of such goods, we consider that we are largely concerned in connection with tariff affecting these matters.

Since it became possible to manufacture within the borders of the United States lace of the character we use, we find—to our great satisfaction—that we have been able to purchase our requirements from domestic mills at prices substantially lower than for which we were formerly able to obtain the same identical goods by import. Furthermore, these goods manufactured in this country have been of a more uniform quality and more satisfactory to use in every way. Medium-priced and cheap laces constitute an article of merchandise which is more largely used by the lines of manufacture in this country who are in absolute competition, one with the other, than any other one article formerly imported which we have in mind; consequently the ability of the various interests using such goods to purchase them at a reduced price over formerly stimulates such competition for the benefit of the consuming public. We believe that any action on the part of the Government tending to operate against the present condition as it affects the manufacturers of these laces and trimmings within the United States would seriously affect the best interests of all manufacturing interests buying these laces for their products, and consequently, without question, affect the best interests and operate against the public who buy the goods of which said referred-to laces comprise a part.

Consequently you may count on us in whatever way we are able to be of assistance in properly bringing before the attention of the Ways and Means Committee of Congress

PARAGRAPH 350—LEVER OR GOTHROUGH LACES.

the facts shown by our previous experiences relating to the subject of tariff on goods of this class. If any data is desired, and you will let us know, we will proceed promptly to furnish same in whatever way seems to be desired.

Joining you in the hope that Congress will see fit in its wisdom to do no act or thing which will in any way interfere with the legitimate, growing industry, viz, the manufacture of machine-made laces in this country, and conveying our kindest regards, we are,

Yours, very truly,

J. C. HATFIELD, *Treasurer.*

WORCESTER, MASS., *January 11, 1913.*

KARL NEUHOFF, Esq.,

30 East Twenty-first Street, New York City, N. Y.

DEAR SIR: Up to the time of the installation in this country of lace-manufacturing establishments we were purchasing all laces abroad.

Shortly after laces began to be manufactured in this country we found that we were able to purchase many patterns of laces, in the majority of the qualities required in corset manufacturing, at prices better than the prices of importers.

The domestic manufacturers have continued to grow in efficiency, until at the present time we are buying tens of thousands of dollars' worth of domestic laces each year. In addition to the economy of it there is the immense advantage of having American factories that can deliver goods in a few weeks, instead of having to wait two or three months for foreign deliveries.

Very respectfully, yours,

ROYAL WORCESTER CORSET CO.

CHICAGO, *January 10, 1913.*

Mr. KARL NEUHOFF,

30 East Twenty-first Street, New York, N. Y.

DEAR SIR: Your letter of the 8th instant at hand, and I take pleasure in answering it.

You ask me what my impression is of the domestic laces produced by your mill, the Dresden Lace Works, as compared with foreign. They have been very satisfactory, and we have been unable thus far to note any great difference between the domestic lace and the imported lace of the same character.

My impression is that the prices of the domestic lace generally have been lower than the imported lace. We feel that to be able to place our orders in this country and get the service which we do is a great advantage over the importing from foreign countries, a saving usually of from two to four weeks in time. So far as we have been able to judge there is no choice between the domestic and the foreign on the grades of lace which we have purchased, and I think that, generally speaking, the domestic laces have been cheaper.

Very truly, yours,

KABO CORSET CO.
By A. V. BROWN.

**TESTIMONY OF CLINTON ROGERS WOODRUFF, ON BEHALF OF
AMALGAMATED ASSOCIATION OF LACE OPERATIVES, NORTH
AMERICAN BUILDING, PHILADELPHIA.**

The witness was duly sworn by the chairman.

Mr. WOODRUFF. Mr. Chairman, I appear on behalf of the Amalgamated Association of Lace Curtain Operatives. I think I am the first man to appear before your committee to-day in behalf of the employees of an industry affected by this schedule.

The particular union or association for which I have been the attorney for some 20 years includes in its membership practically all the skilled workmen, but upon the work of these skilled workmen depends the work of from 8,000 to 10,000 men and women. In other words, the work that these skilled workmen are doing upon the machines which Mr. Bennet has described represents an industry employing between 8,000 and 10,000, and I am here at their request to say that they hope that the present rates of duty for the Nottingham lace curtains and for the Lever or Goththrough machine products

PARAGRAPH 350—LEVER OR GOTHROUGH LACES.

will not be changed; and I might say in this connection that the briefs which they themselves have prepared and filed—I did not prepare them—run parallel with the briefs which Mr. Turner and others, on behalf of these particular schedules, have already filed or presented to you. In other words, upon this particular point there is no difference between the employers and the employees. At this rather late hour I do not know that I need take much of your time, further than to call attention to the fact that these men and women who are interested in this industry and who are at work at it are of the highest type of workmen. They are the sort of men that we think of when we think of the sturdy American workmen who are making a good, fair, living wage; who are sending their children to the schools and educating them; who are getting up the average of wages to that level which social workers tell us is essential.

In other words, taking the skilled men with the unskilled and the comparatively unskilled, taking those who run the machines, which is the hard and difficult part, with those who attend to the various portions of the work that are incident to it—the average wage is at present between \$9 and \$10, and taking into consideration the fact that the industry is not now employing all its resources in the way of machinery and plant, if all the plants are being utilized the rate would be in excess of that, you will recognize, sir, that \$9 and over is a reasonably high rate. Social workers, I believe, make \$10 the average to which they think it is right and proper that the laboring men should look, and toward which legislation should be directed.

These men have come from abroad and brought with them that skill which they acquired there; and I want to say this, that if the rates with regard to these two classes of manufactures—the Nottingham lace curtains and the products of the Lever or Gothrough machine—should be jeopardized by a change which would increase the foreign importation, these men would be thrown out of a position and unable to go back to the old country from which they came first, because they are now naturalized American citizens, and, secondly, because of the prejudice which exists there against them; therefore they would be obliged to stay here, either at a very greatly reduced rate or would have to go into other lines of industry and compete with other lines of labor and so reduce the wage. The throwing out of employment of these men who run the machines would of course carry with it the throwing out of all the attendants and others.

I want to emphasize this fact, that these men who are interested with us are sufficiently interested, first, to prepare briefs, and, secondly, to ask me to come here and say to you that they sincerely hope that you will continue this industry upon its present basis, for the reasons that have already been pointed out by the manufacturers and for the reasons which they have themselves pointed out.

Let me point out also this fact, that the briefs which have been filed here show that the standard of wages in these two lines of industry has materially increased to the extent of from 62 per cent to 75 per cent at the same time that the hours of labor have been reduced until they are now at a very reasonable number of hours per day and per

PARAGRAPH 350—LEVER OR GOTHROUGH LACES.

week, both for those who work by day and for those who work by night; the night shift working a less number of hours than those who work by day.

Mr. RAINEY. How many hours?

Mr. WOODRUFF. I can tell you in just a moment.

In addition to this increase in money, working hours have been reduced from 58 to 51 hours per week on the day shift, and from 50 to 45 hours on the night shift. I happen to have in my hand the brief presented by the employers, but the same facts are set out in the brief which the Amalgamated Association filed.

Mr. HILL. Is that in the State of Pennsylvania?

Mr. WOODRUFF. Yes, sir; and in the four states in which this industry happens to be, including your own State of New York.

Mr. HILL. I was referring to the Nottingham industry.

Mr. WOODRUFF. Those are the Nottingham figures.

Mr. HILL. It is a great deal higher than in the Gothrough machines.

Mr. WOODRUFF. It is a still more complicated machine and requires a still higher degree of skill. I may say that the Lever or Gothrough men are affiliated with the lace curtain men as a general affiliation rather than because they are doing precisely the same kind of work.

Mr. KITCHIN. How many factories are using this machine all over the United States?

Mr. WOODRUFF. Of the Nottingham lace curtains, there are in Philadelphia the Bromley Manufacturing Co., 77 machines; in Chester, Pa., the Chester Lace Mills, 17 machines; Columbia, Pa., the Columbia Lace Mills, 14 machines; the North American Lace Co., Philadelphia, 58 machines; the Quaker Lace Co., Philadelphia, 116 machines; Scranton Lace Curtain Co., Scranton, Pa., 29 machines; Wilkes-Barre Lace Co., Wilkes-Barre, Pa., 71 machines; Wyoming Valley Lace Mills, Wilkes-Barre, Pa., 23 machines; International Lace Co., Gouverneur, N. Y., 15 machines; United States Lace Co., Kingston, N. Y., 10 machines; Patchogue Lace Manufacturing Co., Patchogue, Long Island, 41 machines; Zion Lace Industries, Zion City, Ill., 15 machines.

Mr. KITCHIN. Are they the companies that use the Lever and Gothrough machines?

Mr. WOODRUFF. No, sir; the Nottingham. I was just going to give you the Lever and Gothrough. The Lever or Gothrough, Rhode Island, 192; Pennsylvania, 136; New York, 65; New Jersey, 47; Illinois, 30; Connecticut, 26; Ohio, 24; Iowa, 7.

Mr. KITCHIN. You mean that many machines, not factories?

Mr. WOODRUFF. I beg pardon?

Mr. KITCHIN. I asked for the number of factories.

Mr. WOODRUFF. Twenty-six, Mr. Bennet says.

Mr. KITCHIN. This industry has grown up very largely since 1909?

Mr. WOODRUFF. Yes; as Mr. Bennet pointed out this morning, it has precisely doubled. That is, the Lever or Gothrough industry.

Mr. KITCHIN. The tariff was reduced temporarily for a period of time on these machines?

Mr. WOODRUFF. Yes.

Mr. KITCHIN. Do you think it would be a good idea to extend that for, say, a period of a year or two years?

PARAGRAPH 350—LEVER OR GOTHROUGH LACES.

Mr. WOODRUFF. If it has worked well in the past, there is nothing to indicate that it would not work equally well in the future. If it is the policy of the committee to continue the experiment of thoroughly establishing Lever or Gothrough machines in the lace industry, it would seem to be a wise provision to continue it.

Mr. KITCHIN. You think other factories would spring up?

Mr. WOODRUFF. Yes. Of course you must remember that I speak as a lawyer, and not as a practical man in this matter; but I have represented these people for 20 years, and seen them through their various stages of development, and it has been a steady one—a steady one in the way of improving their conditions, a steady one in the improvement of their citizenship in all that that means. It has been a most interesting thing to see how these men have realized their duties as American citizens, and it has been one, I think, of the most striking instances of its kind.

I just want, not unduly to take your time, to say that notwithstanding these improvements in the conditions, it has been a generally known fact that the prices of Nottingham lace curtains have been reduced.

Mr. KITCHIN. About 90 per cent of the labor are foreigners, are they not?

Mr. WOODRUFF. Yes, sir; they are of foreign birth. They come from England, largely; England, Scotland, and Ireland.

Mr. KITCHIN. None of them can speak and read English?

Mr. WOODRUFF. Oh, no, sir; the great bulk of them. Mr. Gould, the secretary, won't you come here? How many of them can speak and read English?

Mr. KITCHIN. I understood they came in since 1909, for the most part.

Mr. WOODRUFF (addressing Mr. Gould). Are there any of the members whom you represent that do not speak the English language, of whom you have any knowledge?

Mr. GOULD. There are about 25 Frenchmen.

Mr. KITCHIN. Just in your establishment?

Mr. GOULD. No; in the whole union.

Mr. WOODRUFF. They are mostly men who came from England, Scotland, and Ireland, are they not?

Mr. GOULD. Most of the men came from England and Scotland.

Mr. WOODRUFF. It is a pretty nearly uniformly English-speaking immigration, and, as I said a moment ago, a most desirable one. I do not think I will add anything more to what I have said. The industry, as Mr. Turner pointed out this morning, is a highly competitive one, both on this side of the water and as between American and foreign manufacturers, and, in the second place, as regards the question of revenue, the maintenance of the present rate on the Lever or Gothrough products would be a very considerable one, for the reasons which have already been pointed out.

I may say that both Mr. Gould, the secretary, and Mr. Miller, the treasurer of the union, are here, should you want to ask them any questions. They, however, have set forth their views in the briefs already filed with the committee.

PARAGRAPH 350—LEVER OR GOTHROUGH LACES.

I just want to leave with you and file, by the request of the association, a request that your committee look into the question of establishing the bobbin-net industry, which is an allied industry. I will not, unless you request, read it now. I will file it with you for your further consideration, and will be glad to give you such further data as you may request in the matter.

Mr. PALMER. The wages in the Nottingham industry are lower than in the Lever or Gothrough?

Mr. WOODRUFF. Yes, sir; I believe that is so, Mr. Palmer, slightly.

Mr. PALMER. And that the Nottingham industry is protected so as to keep out very much of its competition, apparently.

Mr. WOODRUFF. I did not get the question.

Mr. PALMER. There is really more competition in the Lever's lace making than in the Nottingham industry?

Mr. WOODRUFF. Yes, sir. That is quite true, because of the fact that the great mass of the Lever's products is made in Calais, France. As I pointed out in our brief, one reason why there has been so complete an absorption of the American market in the Nottingham industry is because the things manufactured are governed by the styles of curtains. In other words, it is a question of style, rather than a question of price.

Mr. PALMER. Why is it that the wages are not better in the highly protected branch of the industry than in that which must face all this competition?

Mr. WOODRUFF. The average wage, sir, is about the same in both. The average is about \$9. To men like Mr. Gould and Mr. Miller, who are here, who represent the highly technical mechanical work, the wage is higher for the Levers or Gothrough than it is in the lace-curtain industry, but taking the wages all through, all the various attendants, twisters, and binders, and so forth, men and women, the average is pretty close.

Mr. PALMER. From what I have just heard, I understand that the wages in the Nottingham industry are considerably higher.

Mr. WOODRUFF. The wages of the men who actually manipulate the machine, which is a small proportion, about 8 per cent of the total number engaged in the industry. If the lace-curtain operatives were fully employed he would be able to come up to the average of the Lever operative.

Mr. PALMER. You have practically a prohibitive tariff for that industry, which is highly competitive.

Mr. WOODRUFF. It is a highly competitive industry on this side of the water, sir. That is a case where I think the laboring men are really protected in both, and they fear, and that is the reason I am here to represent them, that a change of the duties, in the way of lowering them, would be disadvantageous to them.

THE CHARTERED SOCIETY OF
AMALGAMATED LACE OPERATORS OF AMERICA,
Philadelphia, January 20, 1913.

Hon. OSCAR W. UNDERWOOD,

*Chairman, Committee on Ways and Means,
House of Representatives, Washington, D. C.*

DEAR SIR: We respectfully petition your honorable committee to investigate the bobbin net industry in this country, as we know that American labor is standing idle while an enormous amount of this class of goods is being imported from Europe.

PARAGRAPH 350—LEVER OR GOTHROUGH LACES.

The manufacturers in this line of business contend that these goods can be imported from Europe cheaper than the cost of production in this country.

The United States Government consumes a considerable amount of this class of goods which is used for canopies. At the present time there is a New York manufacturer who is fulfilling a Government contract for these canopies and is importing net from France, while American labor is standing idle because of a dispute over the price paid for the production of this particular net on what is termed as a spot-net machine.

Bobbin net, as the goods are termed, is used extensively in this country, and there is no reason why the American operator should not produce the goods used by our Government at least. Therefore we petition your honorable committee to fully investigate this industry, and we feel sure that you will not only retain the present duties but will favor an increase in the tariff thereon.

Respectfully submitted on behalf of the executive board, I am,

Very truly, yours,

D. L. GOULD, *Secretary.*

 SCHEDULE J, PARAGRAPH 351.

Providing for lace window curtains, nets, nettings, etc., made on the Nottingham lace curtain machine.

We petition that the present duties provided for in this paragraph be not reduced for the following reasons:

The Nottingham lace curtain industry had its start in this country in 1890 under the 60 per cent ad valorem duty provided for by the act of 1890. Under the act of 1894 providing for an ad valorem duty of 50 per cent no progress was made, but under the act of 1897 providing for the present compound duties, the industry grew rapidly reaching its maximum development in 1903, since which date no new plants have been started.

There are now 12 companies with 487 machines. (See Exhibit No. 1.)

Since 1907 these 487 machines have not been fully employed, as plain window fabrics such as scrimms have come into style, and with such fabrics the nets made on a Nottingham lace curtain machine can not compete, as the difference in cost of production is so great.

There are 900 men employed in operating these 487 machines on the double-shift system, and each machine is reckoned to be able to produce a sufficient number of window curtains, nets, or nettings to furnish employment for 20 people in the auxiliary departments. Therefore, plus the number of men employed, there would be approximately 12,000 people affected by the reduction of the present tariff rates on the product of these machines.

Since 1907 the 12,000 skilled operatives of the Nottingham lace-curtain trade have only been employed one-half to two-thirds of their full time, thereby causing a depreciation in their earning capacity of 35 per cent.

Recently there was held at New York a conference with the lace-curtain manufacturers with reference to an advance in wages throughout the trade, which resulted in a slight readjustment of certain prices; the additional compensation received thereby only affected a very small percentage of the operatives. The question pertaining to a general advance in wages was held in abeyance until after election, when the manufacturers contended that they would then be in a better position to foresee what the future contained. However, since that time letters have been received intimating that if there was a downward revision in tariff rates on the product of the Nottingham lace-curtain machine, there would also be a downward revision in wages. Therefore, under such conditions we earnestly request your honorable committee to support the retention of the present tariff rates.

We also claim that every pair of Nottingham lace curtains imported in this country is an injustice to American labor.

Government figures show that the imports for the year 1912 were \$278,837.50, paying a duty of \$145,102.72, or a landed value of \$423,940.29. The highest duty of 56.80 per cent came on fine 14-point curtains, where the percentage of labor is the highest. The average duty was 52 per cent.

These importations seem small, but they are equivalent in amount to one-twentieth of the domestic production for 1912, and are an injustice to American labor for the following reasons:

First. American skilled labor was standing idle while these imported Nottingham curtains were being made with the cheaper labor of other countries.

PARAGRAPH 350—LEVER OR GOTHROUGH LACES.

Second. The average duty of 52 per cent does not cover the difference in labor cost between the United States and the foreign countries. This we have proven by investigation through the different societies of operative lace makers throughout the world.

Third. The United States manufacturer can not export and his production capacity is greater than the needs of his domestic market. Such a condition means a restriction of production or the keenest domestic competition.

We know the latter condition exists, as, notwithstanding advances in wages and shorter hours of employment, the price of Nottingham lace curtains has declined and they are sold to the dealer to-day at lower prices than they were several years ago.

If the United States manufacturers are in unrestricted competition with each other and are in keen competition with cheaper window fabrics, such as scrim, which has the call at present, and the cost of Nottingham lace curtains to the dealer is lower than when such curtains were all imported, we can not see any reason for reducing the duties except the need of revenue.

Fourth. Any revenue so raised would ultimately have to be paid for by us. We therefore respectfully protest against any reduction of the present duties on Nottingham lace curtains, and would draw your attention to Lever's lace and laces, generally, as an article of luxury that should be highly taxed for adequate revenue.

The facts of the Lever's lace industry we are presenting in a separate brief, as its products are specifically provided for under paragraph 350 of Schedule J.

Respectfully submitted,

D. L. GOULD,
*Secretary, the Chartered Society of
Amalgamated Lace Operatives of America.*

SCHEDULE J, PARAGRAPH 350.

Providing for an ad valorem duty of 70 per cent on laces, etc., made on the lever or gothrough lace machine.

We respectfully petition that this duty be not reduced.

The manufacture of Lever's lace in the United States is a new industry. Since 1866 there have been attempts that were sporadic, spectacular, and selfish, but it has only been since the tariff act of 1909, advancing the duty to 70 per cent ad valorem and admitting lace machinery free to January 1, 1911, that adequate and self-sacrificing efforts have been made to develop a lace industry in this country.

The wisdom of the 1909 tariff provision has been proven by the results. There are now 26 plants, having a total of 527 machines, distributed as follows:

Rhode Island.....	192	Illinois.....	30
Pennsylvania.....	136	Connecticut.....	26
New York.....	65	Ohio.....	24
New Jersey.....	47	Iowa.....	7

The new machines are of the most up-to-date type, equipped to make all varieties, and the finest grades of Lever's lace. Factories of the most modern type have been erected, designers assembled, related processes amply provided for.

PARAGRAPH 350—LEVER OR GOTHROUGH LACES.

A distinctive lace industry having been started, we can not believe that a duty of 70 per cent which made this possible is going to be reduced before the American industry has been established.

We have had and probably always will have a few small plants making staple goods of the cheapest class, but this is not a lace industry, diversified to meet all demands and with creative resources that will meet American needs. Notwithstanding the strenuous efforts that are being made to establish quickly the American Lever's lace industry, it will be several years before its present capacity of 527 machines will be fully employed and give employment to its full quota of 15,600 people.

There are 898 men employed in operating these 527 machines on the double shift system and each machine is reckoned to produce sufficient lace to employ 26 people in the auxiliary departments.

Because of so much machinery coming into this country in such a short time, and the advance in duty, the foreign manufacturer has sought to cripple progress by selling close, with the result that under the 70 per cent ad valorem duty lace values have been lower than when the duty was at 60 per cent. This is a condition that will continue.

There are more than 7,000 Lever's lace machines in France and England, and Government reports show that more than half of their production is for the American market. The 527 machines in this country, in competition with the large number of machines abroad, are sufficient in number to establish the American industry by ample protection without the loss of the revenue which should be collected on this article of luxury.

We therefore ask that the 70 per cent duty be retained for the following reasons:

First. It is necessary that the American industry be established by conserving the value of the machinery imported and plants erected under inducements offered by the tariff act of 1909.

Second. Skilled labor has come from abroad under contract to teach American labor, which could not return for employment on account of the prejudice toward the American effort.

Third. America should have as one of its industries what Calais seeks for its monopoly. Between 1906 and 1909 there were more lace machines erected in France than are now in the United States. This is the reason why the foreign manufacturer through their trade association and the press have waged a campaign of misrepresentation toward the American industry.

Fourth. Laces are a luxury, afford a large revenue in proportion to value. Laces are used largely and are in the reach of everybody, being sold by the 5-cent stores as low as two yards for 5 cents. They are nevertheless a luxury, as everybody can do without them without any inconvenience, and a woman can be correctly attired for fashion without the use of any lace. The present duty has not advanced the cost of the goods to the consumer, is essential to safeguarding the most promising American industry, and is vital to an adequate earning of American operatives who desire to labor under conditions that are American and therefore humane.

Respectfully submitted.

D. L. GOULD, *Secretary.*

STATEMENT OF HENRY N. BERRY, ESQ., REPRESENTING THE RICHMOND LACE WORKS.

[Hearing of Jan. 11, on Cotton Schedule.]

The witness was duly sworn by the chairman.

Mr. BERRY. Mr. Chairman and gentlemen, I am here on behalf of the Richmond Lace Works to ask the retention of the present existing duty on manufactured lace, as specified in section 350 of the tariff act of August 5, 1909.

The Richmond Lace Works has an invested capital at the present time of \$460,000, approximately. It is located at Alton in the State of Rhode Island, and it is owned chiefly in Massachusetts. It has been in existence for approximately five years, very close to five years. We feel that it is more or less essential to our existence that

PARAGRAPH 350—LEVER OR GOTHROUGH LACES.

substantially at least, and we believe fully, the present rate of duty, as specified in that section, be maintained.

Mr. LONGWORTH. Pardon me, but that does not come under this schedule at all, does it?

Mr. BERRY. It is under Schedule J in the act of August 5, 1909. I did not understand why it was assigned at this time, except, perhaps, it was coming under Schedule I in the next act. In any event, I was notified it was to be heard to-day at 12.40 o'clock.

Mr. HARRISON. I will state for the benefit of the witness that the committee has at various times considered the advisability of putting cotton lace into the Cotton Schedule, and that is possibly why you were invited to appear to-day.

Mr. BERRY. Thank you. That is what I supposed. Our product is entirely manufactured from cotton yarns, some of it domestic and some foreign.

The great trouble we have had in going ahead with the business to any great degree of success has been the competition of the imported laces of the same general quality as we ourselves manufacture at Alton.

We use exclusively the so-called Lever and Gothrough machines. We imported, before the duty was taken off, six of them, and in the period which gave us a chance to get in free machines, namely, the period between August 5, 1909, and the last of December, 1910, we imported 18 more machines, giving us our plant of 24 at the present time.

Mr. HARRISON. Are your mills in Providence?

Mr. BERRY. No; we are at Alton, R. I., which is about 12 miles east of Westerly, some 25 miles west of Providence.

Mr. HARRISON. You say after the Lever-Gothrough lace-making machinery was put on the free list by the Payne-Aldrich Act, that your mills imported 18 of these machines?

Mr. BERRY. Yes, sir.

Mr. HARRISON. Do you know whether any other would-be lace-making manufacturers in the United States imported any of these machines free?

Mr. BERRY. Oh, there were a great many imported. As a matter of fact prior to approximately the date of the passage of the Payne-Aldrich Act there were only, as I understand it, 83 of these machines in the United States.

Mr. HARRISON. Do you know of other manufacturers, if any, that obtained free under the provisions of the present act, any Lever-Gothrough machines?

Mr. BERRY. I understand there were a great many.

Mr. HARRISON. Do you know of your own knowledge that any of them did?

Mr. BERRY. No; except from general hearsay.

Mr. HARRISON. You will, of course, appreciate why I am asking these questions is because it has been asserted with more or less show of truth that certain favored manufacturers in the State of Rhode Island were the only ones who could obtain any of these Lever-Gothrough machines after they were put upon the free list.

Mr. BERRY. Oh, I am very sure that is not so.

PARAGRAPH 350—LEVER OR GOTHROUGH LACES.

Mr. HARRISON. It was stated that mills in my own State of New York who expected to reap their share of the advantage of this act were not able to obtain any Lever-Gothrough machines because other manufacturers in advance had bought up all of the possible output of the English factory where this machinery is made, knowing that it would be on the free list for a limited time.

Mr. BERRY. I do not believe that can be so. I have been directly connected with this lace works since it was started in 1908, and the suggestion that you have just made is the first time I ever heard any suggestion of that kind.

Without attempting to relate precisely what the facts were, I have a very definite memory that we were urged to purchase more and that we heard in a general way there were many other of these machines being sold both by Spridgeon and by Jardine, who, I understand, are the two largest manufacturers of these Lever-Gothrough machines, during that period, and in particular during the last part of the year 1910. That is distinctly my best memory of it, and I never heard a suggestion that there was any particular difficulty in getting them, or that we were getting machines better than the New York concerns or other concerns outside of Rhode Island until you made it this minute.

Mr. HARRISON. I do not state it as a fact.

Mr. BERRY. Exactly.

Mr. HARRISON. But I merely say it had been stated to me from several sources that that was believed to be the case.

Mr. BERRY. I do not think it can be so.

Mr. HARRISON. You are unable to tell us any of your competitors that obtained these machines free?

Mr. BERRY. I am very sure they did. I know just before that free period came along there were only 83 machines in the country, and I am satisfied from information I have, which is, of course, hearsay to some extent, there are substantially 527 or thereabouts in the country to-day. I read that over 400 of those were imported in the period between August 5, 1909, and December 31, 1910; and based on a tremendous amount of hearsay I am satisfied that a great many of our competitors have those machines in use in their plants to-day.

The only plant I think of this minute in New York is the plant at Elyria. We have been more or less in touch with them, and we have never heard they had had any difficulty in getting any. I think there are perhaps some others

Mr. PALMER. Do you know the Lehigh Lace Co., in Pennsylvania?

Mr. BERRY. Yes.

Mr. PALMER. They imported these machines?

Mr. BERRY. I think they imported some. They have a small plant. The American Textile Co., I think, imported some.

Mr. PALMER. Would you like to have these machines go back on the free list?

Mr. BERRY. That brings up another question. I do not know. Of course, we want to get more machines as cheaply as we can. That is what we are in business for. On the other hand, I do not know but what eventually, if we are going to continue in this business for a long time, it might be of advantage to have the duty on

PARAGRAPH 350—LEVER OR GOTHROUGH LACES.

the machines maintained until some machines can be made in this country.

There is considerable thought and some direct effort in the direction of making machines which are substantially the lever and go-through machines. There is no reason in the world why they can not. There are no patent laws or anything of that kind to prevent the manufacture of such a machine.

I happen to know that in southeastern Massachusetts one of these Lever and Gothrough machines has been manufactured and set up and is to-day making lace, and is making it just exactly as well, as accurately and as effectively as the Spridgeon and Jardine machines which we have in our factory.

That concern, if the tariff on machines is kept up and if the lace business makes any reasonable development in this country, will go ahead and manufacture machines, and I do not see why with American ingenuity and American ability they should not make a very high-grade machine, and exactly as good as machines which are made in Nottingham, England, to-day.

It is a question in my mind whether in the long run it would not be better for us to have machines of that kind made in the United States as well as abroad than to be dependent solely on the foreign product.

Mr. PALMER. Most of the lace manufacturers take the position that putting these machines back on the free list would increase domestic competition in lace manufacturing, do they not?

Mr. BERRY. I think it would. What we want is fair competition in our lace business, and that is what if the tariff is reduced we fear, and fear strongly, we would not have.

Mr. PALMER. You would be all on the same basis. As it is now, the only competition which you could get which you do not now have would be from mills which would have to pay a 45 per cent duty on these machines.

Mr. BERRY. Yes.

Mr. PALMER. So that would be competing, although your factory has them free of duty.

Mr. BERRY. We got 18 of them free in that period.

Mr. PALMER. That would not be fair competition, would it?

Mr. BERRY. No; it would not. We bought as many as we could. We wished we had money enough to buy more at that time.

Mr. PALMER. Then to have fair competition in this country the lace manufacturers ought to be permitted to import their machines just as you did?

Mr. BERRY. To a certain extent; yes. On the other hand, if it comes to getting a large number of machines we can not tell how it would work out, because we only got a limited number. We hope some day to have a very much larger number, if the business gets to a point where we can compete with foreign lace, which is the real fundamental trouble we have had. You see, there is not a particle of this manufactured lace exported. As a matter of fact, there is a very large quantity of this manufactured lace imported and imported continuously all the time.

Mr. RAINEY. How expensive are these machines?

PARAGRAPH 350—LEVER OR GOTHROUGH LACES.

Mr. BERRY. This machine, which came in free, cost us \$6,250 set up and without the duty.

Mr. RAINEY. For how many?

Mr. BERRY. That is the cost of one machine, \$6,250.

Mr. RAINEY. It takes how many to start a factory?

Mr. BERRY. We started in 1908 with three machines.

Mr. RAINEY. How many have you now?

Mr. BERRY. We have 24.

Mr. RAINEY. What do they cost now, with the duty on them?

Mr. BERRY. Pretty nearly \$8,000. That is not 45 per cent of \$6,250, because I have given you the price of \$6,250 as the price of the machine set up in the mill.

Mr. FORDNEY. You say there is a man now engaged in the manufacture of that machine in this country?

Mr. BERRY. Yes.

Mr. FORDNEY. Which makes just as good lace as the imported machinery does?

Mr. BERRY. Yes.

Mr. FORDNEY. And that he is struggling along to establish an industry there for the manufacture of that machinery, which is your raw material, the machine?

Mr. BERRY. Yes; technically.

Mr. FORDNEY. Would it be fair for you to ask for a duty on your finished product and have free trade on his finished product, which is your raw material?

Mr. BERRY. I think, perhaps, that is the correct view. I am not quite sure about that. I have not balanced those equities.

Mr. FORDNEY. I have my mind made up pretty thoroughly.

Mr. BERRY. It works both ways. In looking at it from one angle, you can see the man who has to purchase machines abroad and pay a duty of 45 per cent on them is not on the same basis as we were who got in our machines for nothing at that time.

Mr. FORDNEY. But here is the point. If you have adequate protection of your industry, is it fair for you to ask for free trade on machinery which you buy, which is your neighbor's finished product?

Mr. BERRY. I am not sure about that. There are two ways of looking at it. I am not sure which is the fairer.

Mr. FORDNEY. I can not see it in two ways. Explain how you see it in two ways.

Mr. BERRY. It seemed to me that comparing the machines my competitor would have to buy to-day, he would have to pay a duty of 45 per cent on those machines. Eighteen of our machines came in free of duty. Looking at it from that standpoint, we might say that my competitor was not having an equal show with us. It is true, however, that he did have a chance, if he was ready and able to buy the machines in that period between August 5, 1909, and the last of December, 1910, when the machines did come in free.

Mr. FORDNEY. Does this man who is manufacturing this lace machinery in this country sell his machine at a higher or lower price than you paid for your imported machine?

Mr. BERRY. As a matter of fact, he has only made one machine so far. He has got a number under way, but I do not think he has made

PARAGRAPH 350—LEVER OR GOTHROUGH LACES.

any definite sales. But his purpose is to sell it of course as high as he properly can, but I should say pretty close to the price, probably a little under what it will cost to import machines with the duty on.

Mr. FORDNEY. He can not sell it for any more?

Mr. BERRY. No.

Mr. FORDNEY. Than an imported machine?

Mr. BERRY. No.

Mr. FORDNEY. Unless it is a better machine, can he?

Mr. BERRY. No; he has to sell it for less or at the same price, in order to sell it. I think it is an equivalent machine. As I say, there is only one completed. It may be that in time some fault will develop, but I should suppose not, because that machine is manufacturing at the present time lace precisely the same as we are manufacturing with the English machines at our plants.

Mr. FORDNEY. If it would develop that under a protective tariff this man would succeed in manufacturing that machinery and put it on the market at a less price than you are paying for foreign machinery you then would be in favor of some plan or other that would encourage his industry, would you not?

Mr. BERRY. Yes; I would. And I should dread to think if we were going on to increase our plant and buy more machines, that we were solely dependent on the foreigner for the purchase of our machines, because if a trust is formed over there, we are helpless; we can not do anything.

Mr. FORDNEY. Has your production of lace in this country lowered or changed the price paid by the consumer for foreign-made lace?

Mr. BERRY. Our production has lowered the price. I do not think there is any doubt about that. That is the reason why I believe a retention of the present duty according to the act of August 5, 1909, is going to benefit the consumer as well as the manufacturer.

Mr. FORDNEY. Then let us try to help that poor devil out who is trying to make machinery, and give him an opportunity to grow in the business.

Mr. BERRY. I agree to that. I was looking at it from the question of fairness to the other side, and that would be my desire, to be in favor of it.

Mr. FORDNEY. I wish you were a member of this committee. [Laughter.]

Mr. RAINEY. If some other poor devil was thinking about starting in business in opposition to you with 18 machines, it would cost him \$40,000 more to do it than it cost you.

Mr. BERRY. Yes; it would cost more.

Mr. RAINEY. It would cost \$40,000 more?

Mr. BERRY. It would depend on how many machines he had.

Mr. RAINEY. If he got 18.

Mr. BERRY. Yes.

Mr. RAINEY. It would be \$40,000?

Mr. BERRY. Yes.

Mr. RAINEY. Then you have just \$40,000 the best of the poor devil who might want to start in business against you now?

Mr. BERRY. Yes.

Mr. FORDNEY. But if eventually it would help out the industry and lower the cost of the machinery to the masses of the people, you

PARAGRAPH 350—LEVER OR GOTHROUGH LACES.

would have a little advantage by having got in on the ground floor, and by and by the whole people would be benefited by having that machinery made in this country if it can be made and purchased at a lower price?

Mr. BERRY. That is true, sir.

Mr. FORDNEY. That is the milk in the coconut.

Mr. RAINEY. How much would be the investment in a plant of 18 machines, besides the machinery?

Mr. BERRY. In our plant, where we have 24, we have a total investment of pretty close to \$450,000, or a little over that.

Mr. RAINEY. That includes the building and everything else?

Mr. BERRY. That includes the building. As a matter of fact, we bought our building pretty cheap. The reason we went into that business—it was novel to us—was because we thought we had a good opportunity to buy the plant cheap, and I think ordinarily a plant of our size would represent a larger investment.

Mr. HILL. Does that include your working capital?

Mr. BERRY. That includes our working capital. We have borrowed some money, but that is practically offset by quick assets on hand, so that I should say that \$460,000 did represent the working capital.

Mr. RAINEY. How much is your capital stock?

Mr. BERRY. Five hundred thousand dollars, of which \$460,000 is issued.

Mr. RAINEY. What dividends do you pay?

Mr. BERRY. We have paid 7 per cent for four consecutive years. In order for this committee to appreciate what that means, I think it is no more than fair that you should bear in mind we have employed exceptional means of keeping down the expenses during the early part of this business. For instance, no officer has been salaried at all except the treasurer. It has been more than the ordinary running of a business, because it has been creating business—starting with three machines, practically nothing, and building it up to a 24-machine plant. The treasurer has had only \$5,000 a year, and no other officer has had any money. Also no depreciation has as yet been charged off, although in all fairness after about five years something should come off; but we have succeeded in earning just about the 7 per cent which we have paid.

Mr. PALMER. Do you know what the total American production in cotton laces is?

Mr. BERRY. It is difficult to accurately determine it, but I understand that the total American cotton lace production for the last year is approximately \$10,000,000. That is what I have understood.

Mr. PALMER. And the imports run to something like \$37,000,000?

Mr. BERRY. They approximate about forty millions during the last year.

Mr. PALMER. The statistics which I have before me from the department give them at \$37,000,000.

Mr. BERRY. I should say that that was correct for the year ending last July.

Mr. PALMER. That is with a duty of 70 per cent?

Mr. BERRY. That is with a duty of 70 per cent.

PARAGRAPH 350—LEVER OR GOTHROUGH LACES.

Mr. PALMER. Then, as I understand the situation, you people in the lace-manufacturing business have been able to make very satisfactory profits, 7 per cent on your capital invested, as you say, despite the fact you have had competition from abroad amounting to nearly four times your total production.

Mr. BERRY. We have succeeded in doing it, and some other lace concerns have done substantially as well. On the other hand, as I know from being in the business, many lace concerns have not done nearly so well, and there is very abundant hearsay which satisfies me that many other lace concerns have been running at a loss or at a standstill.

One of the chief reasons we have succeeded in doing it (of course we have not taken into account depreciation) is that we have run the mills as economically as we possibly could; there has been only \$5,000 annually paid in salary, and to a man of the ability that would ordinarily require and receive substantially a larger salary. So I do not think that is really a fair sample, what we have succeeded in doing.

On the other hand we have succeeded in making some patterns which have proved to be attractive, and of which we have sold a considerable quantity.

Mr. PALMER. You have been able to make money because your plant has been economically and efficiently managed, and some other companies have not been able to make money because their plants have not been so efficiently and economically managed.

Mr. BERRY. I should say not more than half of the lace mills, from what I know of it, have been making a reasonable showing.

Mr. PALMER. So that as far as your trade goes the American manufacturer is able to stand a competitive rate where it is a competitive rate based upon the amount of imports?

Mr. BERRY. Yes.

Mr. PALMER. And still make a profit?

Mr. BERRY. Yes; we have done it as I have explained.

Mr. PALMER. And do you not think we ought to legislate to protect the inefficient plants?

Mr. BERRY. No.

Mr. PALMER. Which are not economically managed?

Mr. BERRY. No. On the other hand, I think some of these plants have been ground out by the importer. I think we have been fortunate in making as much as we have. For instance, we start certain patterns; the market is flooded with similar patterns by the importers. We watch very closely to try and find out what is coming, and we immediately withdraw those patterns and put out others. We happen to make a hit. Some of the patterns which our designers make, whom I believe to be exceptionally good men, happen to hit the public eye, and we make big sales. There is more money in making one pattern, for you can sell a great big order of one pattern, and there is a very nice profit in it. The trouble is, you can only do that occasionally, and it is the change from one pattern to another which delays the machinery.

Mr. PALMER. You are not asking for any increase in this rate; you are asking to have it let alone?

Mr. BERRY. I am asking to have it let alone. On one or two, a few exceptional classes of laces, which we make in competition with

PARAGRAPH 350—LEVER OR GOTHROUGH LACES.

the foreigner, we have to have some rivalry, but on the whole I am willing to say in all fairness it is a reasonable and satisfactory duty. But I do feel that a reduction such as this suggested, even of 10 per cent, putting it at 60, would be very serious.

We do not want anything unreasonable, but in view of the fact that we are fighting with a foreign importation of four times in value what the total American product is, it does seem that until we struggle along to a point where we are nearer equal to the foreigner and where we can have a closer and even competition that there should be no reduction in the amount at present existing.

Mr. PALMER. I am inclined to agree with you, and I wish more American manufacturers had your courage.

Mr. FORDNEY. I just wished to ask one question, please. How many of those machines were admitted prior to the adoption of the Payne tariff law?

Mr. BERRY. Six, as I remember it.

Mr. FORDNEY. Only six?

Mr. BERRY. Yes.

Mr. FORDNEY. How many since?

Mr. BERRY. Eighteen in that interval.

Mr. FORDNEY. Then there were only 24, all told?

Mr. BERRY. Twenty-four all told.

Mr. FORDNEY. In this country?

Mr. BERRY. No; this is all in our plants here—

Mr. HARRISON. Pardon me, Mr. Berry, but will you please step up to the witness stand to speak, as the reporter can not hear what you are saying?

Mr. BERRY. Yes.

Mr. FORDNEY. What I mean is, what were the total importations into this country prior to the adoption of the Payne tariff law?

Mr. BERRY. Eighty-three.

Mr. FORDNEY. How many since?

Mr. BERRY. The precise number in the country to-day is 527. The difference between 527 and 83 was almost entirely imported in the period between August 5, 1909, and December 30, 1910. I should say that since December 30, 1910, very few, perhaps 20 or 30, and I do not guarantee that these figures are absolutely right, but they are approximately right.

Mr. FORDNEY. Then the heavy importation was during the time when they were on the free list?

Mr. BERRY. Yes; they took advantage of it. They moved them in as quick as they could. One man brought in a good many. I think Bromley, of Philadelphia, brought in 50 or 60. I am giving you that on his say-so. I am not giving you the precise figures.

ALTON, R. I., *January 16, 1913.*

The WAYS AND MEANS COMMITTEE.

House of Representatives, Washington, D. C.

GENTLEMEN: We, the undersigned, employees of the Richmond Lace Works at Alton, R. I., hereby respectfully request that there be no reduction in the present duty on imported lace goods for the following reasons: We believe that the most important item in the cost of production of manufactured laces in the United States is the labor item. We are convinced that if any reduction is made in the present duties on manufactured lace it will result in an immediate decrease in our wages, because

PARAGRAPH 350—LEVER OR GOTHROUGH LACES.

the only reduction that can be made in the cost of manufacturing lace in the United States is in the labor item; and we further believe that if any material reduction is made in the present duties on lace it will throw us out of employment.

SAMUEL GRIFFITHS
(And 94 others).

RICHMOND LACE WORKS.

The Richmond Lace Works, of Alton, R. I., a corporation representing an investment of \$460,000 of American money, requests that paragraph 350 of the present tariff act be retained, and that there be no change in the present duty of 70 per cent which is levied on laces imported to this country made on Lever and Gothrough machines, and respectfully submits the following brief for your consideration:

I. The two great centers of machine-made laces are Nottingham, England, and Calais, France. There are in operation in these two cities and the surrounding towns over 7,000 lace machines, and about one-half of the product of these machines is exported to the United States. Employees in this industry receive higher wages than those of any other textile trade. The workmen represent the highest class of skilled labor, and such an industry as this, firmly established in this country, will aid in increasing the production and developing manufacture of this nature. As our late President, William McKinley, said: "To increase production here, diversify our productive enterprises, enlarge, build, and increase the demand for American workmen, what American would oppose these worthy and patriotic objects?"

THE LACE MANUFACTURE IN THIS COUNTRY AS YET AN INFANT INDUSTRY.

II. It was hardly over 25 years ago that the first lace machine was put in operation in the United States. In the year 1908 there were about 83 machines in operation, many of which were of the Lever and Gothrough type. The Payne-Aldrich bill increased the duty on lace imports made on the Lever and Gothrough machines from 60 per cent to 70 per cent, and at the same time for a short period, a little over a year, remitted the 45 per cent duty on these two types of machines. During this period over 450 machines were imported to this country, and a large number of lace mills were started. There are at the present time over 25 lace mills having over 500 machines in operation, and employing over 5,000 skilled operatives.

The industry especially of manufacturing lace on Lever and Gothrough machines can hardly be said to be more than five years old. No industry can be built in a night, and our lace manufacture needs and is entitled to high protection during the stage of its infancy.

MILLIONS OF DOLLARS HAVE BEEN INVESTED IN THE INDUSTRY ON THE STRENGTH OF ITS CONTINUATION.

III. The 527 machines in operation in this country represent several millions of dollars on the part of American investors. This vast amount of capital was turned to lace industry because it was felt that the American machine-made lace was to be sufficiently protected to enable the home producer to compete on a fair basis with long and permanently established manufacturers of Nottingham and Calais. The opportunity of importation of free machines for a short period combined with the increase from 60 per cent to 70 per cent in the tariff opened a field for the investment of American capital in this new industry. These investors had no thought that there would be a likelihood of a reduction in the duty on lace imports, or they would not have invested their money.

The industry has grown rapidly in the past few years and will continue to grow, and laces will become a large and important textile product; but the manufacturers of machine-made lace in this country must have sufficient protection to enable them to compete with the foreign producer and make a fair profit. A slight reduction in the present duty means the deterring of new capital from entering the business and the endangering of the millions already invested. A radical reduction would destroy the industry and turn millions of dollars' worth of machines into junk.

PARAGRAPH 350—LEVER OR GOTHROUGH LACES.

THE FOREIGN PRODUCER HAS THE LION'S SHARE OF THE AMERICAN MARKET.

IV. Table 85, page 162, of the report of the Tariff Board on Schedule I shows that between the years 1896 and 1910 the importation of laces has made a rapid rise. In 1896 these imports were less than \$11,000,000 in value. By 1900 they increased to a total in excess of \$18,500,000, and in the next 10 years the imports more than doubled, the figures for 1910 being \$37,607,819, and in the year 1910-11 the report of the Department of Commerce and Labor shows that the imports were \$36,079,655 in value, and in the year 1911-12, for the year ending June 20, 1912, they were \$37,106,237. During this period the duty on lace imports increased from an equivalent of 50 per cent ad valorem to over 60 per cent, and to 70 per cent on the laces made on the Lever and Gothrough machines. The production of lace in this country from 1909 to 1910 was slightly less than one-fifth of the value of the total lace sold, and in 1911-12 about 23 per cent. This per cent is really high, as laces imported attached to various kinds of wearing apparel are not included in the above, and figures concerning the value of such importations are almost impossible to ascertain. It is submitted that the foreign producers supply at least 80 per cent of the home market to-day.

The Department of Commerce and Labor figures show that in 1909-10, \$6,666,693 represented the value of Lever and Gothrough machine-made laces imported to this country; that in 1910-11 \$7,202,801 worth were imported, and that in 1911-12 \$7,633,629. These figures are, however, far below the actual value of the laces of this character imported to this country, for the importer in nearly all cases enters his goods under the class of laces paying 60 per cent duty, and his entries, with very few exceptions, are taken by the deputy collector and entered in his book, and it is from the custom-house records and not from the appraisers' department that the Department of Commerce and Labor obtains its estimates. If the port of Boston is a fair example, and it is submitted that it is, the facts show that from 25 per cent to 33½ per cent of the lace goods entered by importers as falling within the class on which there is a duty of 60 per cent are found by the customs appraisers to be lace products made on the Lever and Gothrough machines, and a duty of 70 per cent is levied upon them. It is thus clear that laces of this type imported into this country amounted to nearly \$15,000,000 during the past year. This amount is in itself over \$6,000,000 more than the value of all kinds of laces manufactured by our home mills in 1909-10. The production of laces of all kinds, including laces made on Lever and Gothrough machines in this country, has risen from about \$3,500,000 in 1900 to nearly \$9,000,000 in 1910, and probably close to \$10,000,000 in 1911-12.

These facts show that the foreign manufacturers are supplying by far the larger part of the American market; that the importations have increased each year, with the possible exception of 1909-10, though in that year there was an increase in the imports of Lever and Gothrough machine-made laces. The American lace mills have not had any effect on the importation of foreign goods. The duty of 70 per cent has not built up a wall behind which the American manufacturer can combine and control prices to the detriment of the consumer. Our mills, under these conditions, can not be said to be in strong competition with the lace producers of Calais, Nottingham, and other foreign centers.

COST OF PRODUCTION.

V. The cost of production in this country is much higher than in the European centers of the lace industry. Labor is from 20 per cent to 100 per cent higher, and other items entering into the cost are much higher than they are in foreign centers. There are a great many varieties of lace manufactured, and the cost of the different laces varies greatly, and if an itemized statement of the cost of producing the numerous kinds of lace in our mills as compared with the cost of producing the same character of lace in foreign mills is desired we should be glad to furnish these figures.

Under the present tariff of 70 per cent the American manufacturer is able to produce some of his lace goods at about the same price that it costs the foreign manufacturer to land his goods in this country; but in many cases the cost to the home producer is far in excess of what it costs the foreign manufacturer to land his goods, and in many grades of laces he is unable to compete at all with the foreign producer, even under this high protection. Any cut in the present rate is going to seriously handicap this infant industry. The foreign mills would completely control the entire American market, and they would soon destroy the American industry.

The lace manufacturers in this country need the present protection until they are firmly established and the industry has progressed beyond the stage of infancy and has reached a point where it can compete with the foreign mills on an equal basis.

PARAGRAPH 350—LEVER OR GOTHROUGH LACES.

THE 5,000 SKILLED OPERATIVES EMPLOYED IN OUR LACE MILLS SHOULD RECEIVE CONSIDERATION.

VI. A cut in the present tariff means a decrease in wages, as it is the only item in the cost of production where there can be a cut if the tariff is lowered, the labor item being approximately 53 per cent of the cost of production. While about 80 per cent of the employees in our lace mills are domestic, about 75 per cent to 80 per cent of the weavers are foreigners, but the per cent of domestic weavers is rapidly on the increase. If a reduction is made in the present tariff necessitating a cut in the wages, it may mean a loss to the industry of its foreign help who are teaching the domestic weavers. This would, of course, be a handicap to the manufacture of lace in this country and greatly retard its advance. A cut in the tariff sufficient to destroy the industry throws 5,000 skilled workmen out of employment.

THE CONSUMER HAS BEEN BENEFITED BY THE ESTABLISHMENT OF THE LACE INDUSTRY IN THIS COUNTRY.

VII. While lace as a whole may not perhaps be called a luxury, yet certainly the higher grades of laces fall within that class, and even the cheapest grades of laces can not be called necessities. It is submitted that there is no crying demand on the part of the American public for a reduction of the tariff on laces. As a matter of fact, during the last three years, in which the lace industry in this country has made rapid strides, the cost of manufactured lace to the consumer has decreased approximately 25 per cent. This has resulted indirectly. The foreign trade has been forced by the competition of American industry to drop the price of lace, and as a matter of fact they have endeavored to prevent the American product from having a market here; and this has been to a considerable extent a reason for the foreign manufacturer selling the lace goods under cost. Thus it is apparent that it is greatly for the benefit of the purchasing public that the tariff should be retained. The direct result of the American lace industry thus far has been to benefit the public to a material extent, and the increasing of the industry here and the looking out for development will be a still further benefit to the public. If the American lace producer is driven from the market there is nothing to prevent the foreign producer, combined with the importers, from raising the price to any figure they see fit, the competing American manufacturer having been eliminated.

THOSE WHO OPPOSE THE PRESENT DUTY.

VIII. The only persons who at the present time are asking for any reduction in the lace tariff are two classes: (1) The foreign manufacturers of machine-made laces, who, of course, are desirous of crushing this industry in the United States, and (2) the importers of foreign-manufactured lace, who wish to control the market by being the only sellers of manufactured laces. The presence of a growing and increasing lace industry is detrimental to these two classes by the competition and consequent reduction in price of manufactured laces which the growth of the American industry creates.

PROTECTION OF THE LACE MANUFACTURE MEANS THE BUILDING UP OF A STILL MORE INFANT INDUSTRY.

IX. A cut in the present tariff rate on lace products sufficient to crush the industry will surely prevent any investments of capital in the making of lace machines. There has been one lace machine made in this country, and if the lace industry continues to grow it will mean the building up of large plants where lace machines will be manufactured.

RICHMOND LACE WORKS,
By JUSTIN N. MORSE, *Treasurer.*

PARAGRAPH 350—LEVER OR GOTHROUGH LACES.

STATEMENT SUBMITTED BY THOMAS O. MARVIN, SECRETARY OF THE HOME MARKET CLUB, BOSTON.

The establishment of lace manufacturing in the United States is one of the modern instances of the stimulating effect upon industry of the American economic system.

Lace making is one of the advanced branches of textile manufacture and requires the services of skilled and experienced workers. Capital was not willing to venture in this untried field and labor of sufficient skill was not to be found. For years we imported practically all of the lace goods consumed in this country, one concern in Brooklyn and another in Jersey City being about the only survivors of the early attempts made to establish lace factories.

Under more favorable tariff conditions other manufacturers have begun to venture in this field. They have equipped modern factories and are now offering American-made laces to the American markets, but our entire number of lace factories, about 25 in all, has not been able to make any appreciable effect upon the importation of foreign laces. In fact, our imports of laces for 1912, amounting to \$37,000,000 in value, were a million dollars larger than the previous year.

The value of our imports is far in excess of the total value of our domestic production. And this is taking place under tariff duties of 60 and 70 per cent. If the foreign manufacturers can pay a duty of 70 per cent, and still command the lion's share of our market, it is clear that the present rate of duty is competitive and it is evident that any such reduction in the duties as is already being hinted at in French papers would drive American laces out of the market; close the American lace factories; force these skilled operatives out of work and turn million of dollars' worth of lace-making machinery into junk.

The growth of the lace industry in the United States is watched with jealous eyes by the manufacturers of Calais and of Nottingham. Three-quarters of the production of Calais is sold in the American market and the United States is one of Nottingham's largest customers. To meet the increasing competition of the American factories, foreign manufacturers have lowered their prices to an extent unequaled in years. To prevent the growth of our industry they cut prices, at times until profits vanish, and try to overcome the advantage which a protective tariff gives to our products by quoting prices which, they hope, will swamp our new industry.

A Calais manufacturer who investigated conditions here with a view of shipping his machinery to this country, found operatives earning here \$20 a week who had worked in his own mills at Calais for \$4 a week. Our higher wages, higher price of cotton yarns, higher machinery and factory costs forced him to conclude that a 70 per cent duty does not make up for the advantages of foreign manufacture.

A French manufacturer would regard such a duty as high, but he can get peasant women to do the clipping on lace work who are satisfied with 20 cents a day, whereas in America, women are paid \$1 or \$2 a day to do this work.

But, encouraged by the tariff duties, manufacturers have stood bravely by their determination to establish in this country a lace-making industry which shall give employment to thousands of skilled workers and supply our market with laces of American manufacture. The silk industry has been established by reasonable protection and the United States is now the foremost silk-manufacturing country of the world. Under similar encouragement the lace industry has laid already a strong foundation, and with the continued encouragement of our tariff laws it can develop into an industry of great national importance. The foreign manufacturers view such a prospect with serious apprehension. While the Payne-Aldrich bill was under consideration by Congress every possible effort was made by foreign manufacturers and their agents, the importers of foreign laces, to break down the protective features of the lace schedule, and they succeeded in preventing the adoption of specific duties, which would have lessened the danger of undervaluations, in place of ad valorem duties, which gave them easier means of access to our markets.

Referring to the efforts of the Nottingham manufacturers to weaken the protective features of the Payne-Aldrich bill, the Nottingham Guardian, of May 22, 1909, said: "It is to be hoped that the energetic protest lodged by the Chambers of Commerce of Nottingham, Calais, and Lyons may have some good effect."

It is an astounding situation when foreign manufacturers assume the right to interfere in American tariff legislation, and every patriotic American should easily realize on which side of the controversy lie the best interests of the United States. If the foreign manufacturer believes that our lace industry is worth fighting, why should not we decide that it is worth defending? If they believe that our market for their lace

PARAGRAPH 350—LEVER OR GOTHROUGH LACES.

products is worth enough to them to lead to the forceful presentation of energetic protests against our efforts to restrict their sales in our home market, why should not we believe that establishing and maintaining our own lace industry is a wise and patriotic course to pursue?

The attempts of the United States Congress to encourage the American lace industry caused the same alarm in Calais that they did in Nottingham. In an effort to prevent skilled lace workers from emigrating to America, a Calais newspaper published a sensational article with such scare heads as "America Covets Our Industry and Our Lace Makers"; "Workmen Beware of Them. Do Not Seek Misery on the American Streets."

Another Calais paper published an article under the title of "Lace Crisis," and discussed means to prevent the exportation of the industry. A Calais manufacturer who was contemplating moving his plant to Rhode Island was boycotted and threats were made of burning his mill.

The article referred to in the Calais paper said: "This monopoly can be taken from us. An American company has been formed for the purpose of manufacturing lace. Not one workman worthy of the name should consent to leave to go to America. Not one design should be copied for American machines." And a bonus of 20 francs a week in addition to the wages that they would earn if working was offered to the unemployed to induce them to remain in Calais and not seek employment in the lace factories of America.

When our Government was founded the wise statesmen who laid the broad foundation of our nation believed that diversified industries were essential to the proper development of the country.

If diversified industries were desirable then, when a sparsely peopled continent offered abundant opportunities to settle on fertile land, where diligent cultivation of the soil would yield a competence, how much more necessary is it to-day that every possible avenue of industry should be opened to the vast and varied population of a great and growing nation.

These 25 mills have been built under our present tariff policy. A reduction of duties would close every one of them and force 5,000 workers out of employment, thus obliterating an American industry which is now on a highly competitive basis.

BRIEF OF MARSHALL FIELD & CO. IN RE LEVER OR GOTHROUGH LACES.

WASHINGTON, D. C., *January 24, 1913.*

The WAYS AND MEANS COMMITTEE,

House of Representatives.

GENTLEMEN: We respectfully submit, for the consideration of your committee, the following statement in the matter of import duties upon cotton laces made on the Lever or Gothrough machine, which are provided for in paragraph 350, Schedule J, of the present tariff act, at the rate of 70 per cent ad valorem.

In explanation of our position, would state that we are both importers and manufacturers in this country, our domestic plant being located at Zion City, Ill.

This statement is offered to show that this industry in the United States is not overprotected at the present rate of 70 per cent, but that, under comparative labor conditions prevailing in this country and in Great Britain and France, this rate is necessary to put the American industry on a competitive basis with foreign makers.

The yarns of which these laces are made are spun in England, and upon entry into the United States are assessed at various rates, equaling from 40 to 45 per cent duty and amounting to 5 to 10 per cent of the full cost.

The great difference in the cost to produce in this country lies in the labor rates paid workers, particularly hand workers, there being a large amount of such labor

PARAGRAPH 350—LEVER OR GOTHROUGH LACES.

necessary in producing this lace. The rates for hand labor here rise in certain steps of the manufacture to five times the rates paid abroad. Many patterns successfully made in Europe can not, on account of these labor conditions, be made in this country, even with the 70 per cent protection now accorded. The lace workers of Great Britain and France are trained in the work from childhood, developing a speed and efficiency which is not duplicated in this country. This is particularly true of the hand labor. The difference in wage rates, therefore, does not fully represent the advantage of the European maker.

The following are the comparative wage rates paid in the United States and in Great Britain. Wages in France are generally about 20 per cent lower than in Great Britain:

	English rates.	American rates.
Bobbin winding.....	14 to 16 shillings week—\$3.50-\$4.	\$13-\$14 week.
Bobbin threading.....	13 cents per M.....	25 cents per M.
Slip winding.....	12 shillings or \$3 week.....	\$5-\$13 week.
Mending.....	14 shillings or \$3.50 week.....	\$6-\$13 week.
Drawing.....	1½ pence or 3 cents per gross yards.	15 cents per gross yards.
Clipping.....	1 penny or 2 cents per M clips.	6 cents per M clips.
Scalloping.....	¾ penny or 1½ cents per dozen yards.	7 cents per dozen yards.
Dressing.....	2½ to 3 pence per hour or 5½ to 6 cents per hour.	12 to 15 cents per hour.
Weaving:		
8 point.....	12-15½ cents per rack.....	16-19 cents per rack.
9 point.....	13-16½ cents.....	17-26 cents.
10 point.....	13½-14 cents.....	15-17 cents.
10½ point.....	12-14 cents.....	Do.
12 point.....	14½-15½ cents.....	17-18½ cents.
12 L point.....	14½-15½ cents.....	20 cents.
14 L point.....	16-17 cents.....	23 cents.

The rates for weaving vary both in England and the United States in each gauge, according to the character of lace made, but within the limits stated above.

The samples of foreign and domestic lace attached hereto were taken at random from our import and domestic lines wherever we could make close comparisons. The landed prices on the foreign goods are the net costs to land in the United States with 70 per cent duty and include the foreign manufacturer's profit. The prices on our domestic-made article are the net factory costs with no factory profit added.

The steps in which hand labor makes the greatest difference are drawing, clipping, scalloping, and mending. For example, the cost of drawing threads in our Zion-made lace Nos. 04016 and 04012, sheets Nos. 2 and 3, is five times that paid in England and constitutes 30 and 24 per cent, respectively, of the full factory cost.

The industry has only been established in the United States in very recent years, and unless continued protection is afforded at approximately present rates it can not compete with the foreign-made article.

Respectfully submitted.

MARSHALL FIELD & Co.,
By THOMAS H. EDDY.

BRIEF OF MERCHANTS AND MANUFACTURERS ASSOCIATION.

BALTIMORE, *January 16, 1913.*

HON. DAVID J. LEWIS,

House of Representatives, Washington, D. C.

DEAR SIR: A number of our members have requested me to bring to your attention Schedule J, paragraph 350 of the tariff act of 1909. This paragraph deals with laces made on the Lever and Gothrough machines and puts these laces at 70 per cent ad valorem. Laces made on any other machine or made by hand have 60 per cent ad valorem.

These Lever machines, as well as embroidery machines, were admitted free of duty until January, 1911, and they say there is no reason whatsoever why this lace made on Lever and Gothrough machines should pay more duty than goods made on other

PARAGRAPH 350—LEVER OR GOTHROUGH LACES.

machines or by hand. They further say that the handmade goods and those laces made on embroidery machines are much more expensive and are mainly used by the rich, while those made on the lever machines are used by the poorer class of people.

What these members desire is a uniform rate ad valorem, whatever that rate might be, for laces made on any lace machine.

I am sending this to you for your information.

Yours, very truly,

ROBERT J. BEACHAM, *Secretary.*

BRIEF OF REDFERN LACE WORKS, SOMERVILLE, N. J.

SOMERVILLE, N. J., *February 17, 1913.*

HON. JAMES A. HAMILL,

House of Representatives, Washington, D. C.

DEAR SIR: The tariff committee of the House of Representatives is now at work on a schedule that relates to the duty on laces. We are especially interested in the laces made on Lever and Goththrough machines, on which the present duty is 70 per cent.

An extraordinary importation of these machines was brought about by the free entry clause of the Payne-Aldrich tariff bill, which admitted these free of duty for a period of 17 months. Important investments were made, and the reward on efforts put forth to develop this line of goods has been nil as to any benefits on the investments. From a technical standpoint very satisfactory results have been made, and a very good line of goods are now shown by domestic manufacturers, and with a reasonable amount of time, those engaged in the business hope to benefit also from an investment viewpoint. But to accomplish this it is indispensable that the present rate of duty should be maintained. The capital invested in this line was made under the assumption that the Government would certainly foster this industry, at least until it got on its feet, and was making a reasonable percentage of the goods consumed at home.

Among the difficulties that have retarded the development we are only naming two:

First. The extraordinary efforts made by the English, also and especially by the French, manufacturers to prevent this industry from taking root in this country. The most determined opposition has been exercised to prevent help leaving for this country. Another matter has been the selling of goods at such a low figure that it would be impossible for the new industry to compete. Goods have been sold at such a loss to all concerned, with this object in view, that it can not last much longer without disaster to the foreign manufacturers, who are practicing this method, and it is a natural assumption that his state of affairs will only cease when the foreign manufacturers realize that it is useless to continue it and until that time the domestic manufacturers will not be in a position to make any reasonable profit.

The second difficulty has been the impossibility of getting either sufficient or efficient skilled labor. A careful scrutiny of the records of the immigration stations would reveal facts in this connection that are quite sufficient in themselves to explain why the industry has been almost strangled to death in its babyhood. The facts in this case are beyond credence. That the immigration station officials should have the power and inclination to thwart the intentions of the legislator as has been done in this instance, and it has not been one department of the Government working against the other department, by the subordinate officials of the immigration stations, that have exercised such an absolutely baneful power that this industry has been prevented from using more than about one-half of the machines imported under the free clause of the last tariff bill, and yet it is a well-known fact that a large number of these needed men have arrived at our ports and have been criminally deported under the misconception of the contract labor laws by these officials.

The above are two of the special reasons why a reasonable opportunity is due this new industry, while the following are the arguments from a more general standpoint.

Our goods are not an article of necessity, or at least they are an article of voluntary consumption. They are bringing in a large revenue to the Government under the present duty. Highly competitive conditions exist both between the manufacturers and between domestic manufacturers and importers. The latter is so much the case that there are very few articles that we could compete with if the duty were any lower.

We think we can not do better than refer you on these matters to the copy of the hearing before the Ways and Means Committee. To help you in this we would suggest that you read Book No. 15, date January 23, 1913, pages 3321 to 3323; Book No. 16,

PARAGRAPH 351—NOTTINGHAM LACES.

January 24, pages 3403 and 3424, and especially pages 3407 and 3408, 3353, 3373, and 3505 to 3511.

The matter regarding this case is so complete in these hearings that we feel we need add nothing further, and trust that you will do all in your power, and use your influence for the maintenance of the present duty in the first draft of the bill made, as it would be much easier than to get a change or addition afterwards.

Yours, respectfully,

REDFERN LACE WORKS.
W. H. SMITH.

PARAGRAPH 351.

Lace window curtains, nets, nettings, pillow shams, and bed sets, finished or unfinished, made on the Nottingham lace-curtain machine or on the Nottingham warp machine, and composed of cotton or other vegetable fiber, when counting five points or spaces between the warp threads to the inch, one cent per square yard; when counting more than five such points or spaces to the inch, one-half of one cent per square yard in addition for each such point or space to the inch in excess of five; and in addition thereto, on all the foregoing articles in this paragraph, twenty per centum ad valorem: Provided, That none of the above-named articles shall pay a less rate of duty than fifty per centum ad valorem.

NOTTINGHAM LACES.

STATEMENT OF J. BENJAMIN DIMMICK ON BEHALF OF THE SCRANTON LACE CURTAIN CO., OF SCRANTON, PA.

Mr. Dimmick was duly sworn by the chairman.

The CHAIRMAN. What paragraph of the schedule do you wish to address yourself to, Mr. Dimmick?

Mr. DIMMICK. Paragraph 351.

The CHAIRMAN. Proceed.

Mr. DIMMICK. I beg to submit herewith the views of the Scranton Lace Curtain Co. in regard to the tariff upon lace curtains, nets, and nettings, Schedule J, paragraph 351, setting forth, first, that the said company is of moderate size, having a total capitalization, including both bonds and stock, of, say, \$520,000; being also a company disposing of its products through active and genuine competition with all other domestic manufacturers in the same industry, paying the wages that are common to that industry, buying its raw material as advantageously as is possible owing to its high credit, yet enjoying no special advantage, or suffering no special disadvantage in comparison with its said competitors; being also a company that, in its solicitude for all its employees, responds to the best standards of present day public opinion; in short, being a company that, while strong, is of moderate size, and absolutely free from any agreements, expressed or implied, with any of its competitors.

As to any and all figures and statements involved in this brief, we would offer free access to our accounting department, and in order that the committee might be the better informed as to our argument, we have set forth frankly the financial results of our company for the past five years, notwithstanding that in so doing we are necessarily disclosing same to our many competitors.

The lace-curtain industry was started in 1890—and the act of 1890 provided for duty of 60 per cent ad valorem—under act of 1894 this was reduced to 50 per cent and several factories were sold out by the sheriff—and all had hard sledding. Under the tariff of 1897 the factories resumed and have been, except for the ups and downs of

PARAGRAPH 351—NOTTINGHAM LACES.

trade, running fairly well; though as shown by the records of the Department of Commerce and Labor on high-grade curtains—that is, from 10 points upward—the duties are not high enough to allow the domestic manufacturers to compete successfully with those of England and Scotland, and a large amount is imported, and we feel that we are entitled to a higher duty on these grades of goods.

Owing to the open and unrestricted competition which has continually existed in the domestic business, many grades were unprofitably sold, oftentimes at cost and below, and are being so sold to-day; as evidenced by detailed cost and price received on fairly representative goods. Exhibit A.

In 1907, with raw materials at about the same price as existing to-day, the trade price on 50-inch 6-point curtains 3 yards long (being a grade constantly in demand) was 67½ cents. The trade price on same curtain at present being 60 cents and within six months past has been sold for 55 cents, and it might be fairly stated that through domestic competition, almost our entire line is selling at less than the prices existing before the present tariff law was passed.

The average wage of weavers, as shown by our books in 1898 running full time, was about \$18 per man per week of 54½ hours. The average wage to-day under similar conditions, running 48½ hours per week, is \$24. In England the average wage, running 54 hours per week, is £2 6s. 5d., or \$12 per week. In Scotland the average wage is about \$8 per week. Female labor in the Nottingham district averages 12 shillings, or \$3 per week. In this country it is well above \$6 per week and we run 50 hours as against 60 in England. (See Exhibit B.)

We have endeavored during the past three years to sell our goods in the Canadian market, but find that, even if the 10 per cent differential in Canadian customs in favor of England against American curtains was eliminated, we would be unable to compete. We give as Exhibit C samples of English curtains bought in Winnipeg, with manufacturing details, English cost, Canadian cost, and the prices at which these could be made and sold in the United States, showing the utter impossibility of competing with English or Scotch curtains without a substantial reduction in wages as evidenced by Exhibit D, showing the proportionate factors of cost of a curtain—in which has been worked out the reduction in the price of curtains which would follow the adoption of Schedule I of the proposed Underwood bill, where the tariff on yarns is reduced to 15 per cent on 50/2 ply to 100/2 ply.

While we could urge with propriety that no reduction should be made in the duty on lace-curtain machinery—which is made exclusively abroad—inasmuch as our plant is capitalized, as are all the others, upon the basis of cost plus the duty, yet we submit that, if the general economic policy of the country looks to foreign as well as domestic competition in the long run, and we are not prepared to say that it should not, the first and only step at present in that direction should be a reduction in the tariff upon machinery rather than in the tariff upon product, for such a policy would make it possible for domestic plants to equalize at least one factor in the cost of production.

PARAGRAPH 351—NOTTINGHAM LACES.

Our average net earnings, after making fair but not excessive allowance for depreciation, during the last five years has been 9 per cent upon the capital invested, a return that would seem to be less rather than more than should be both accepted and permitted if further capital is to flow into industrial channels, for, of course, with net earnings of 9 per cent, the actual return to the investor would, of necessity, be substantially less in any conservatively managed institution. As stated before, this figure is subject to your investigation, if you so desire.

We therefore believe and will ask that the duty on 6 to 10 points should be left as now existing, and from 11 to 16 points should be advanced, this request for an advance being clearly justified by the fact that high-grade curtains are a distinct luxury and by the importation of same.

The exhibits referred to by Mr. Dimmick are as follows:

EXHIBIT A.

Sold 23,908 pairs of 28-inch 6-point curtains from June 1, 1912, to January 15, 1913, net price at which same were sold was \$5,686.29, total cost of these goods amounted to \$5,986.55, showing that these goods were sold at a net loss to the manufacturers of \$300.26.

Sold 32,730 pairs of 50-inch 6-point curtains from June 1, 1912, to January 15, 1913, net price at which same were sold was \$17,218.69, total cost of these goods amounted to \$18,467.71, showing that these goods were sold at a net loss to the manufacturers of \$1,249.02.

EXHIBIT B.

Attached exhibit is the standard price card for the American trade, also the Nottingham trade. In comparing the two cards 5 per cent must be added to the American card and the percentage, marked opposite the column in large figures, must be deducted from the Nottingham card; for example, to make it clear, the prices on a few standard gauges are as follows:

D. A. 4 gait.	American.	Nottingham.
366 inches 6 point.....	\$9.45	1\$3.72
324 inches 8 point.....	9.71	13.65
324 inches 10 point.....	9.71	13.76
324 inches 14 point.....	11.02	15.46

* These figures reduced to American money.

Showing wages paid are less than 50 per cent of American wages.

...in that direction
 ...upon machinery rather than in the
 ...for such a policy would make it possible for
 ...to realize at least one factor in the cost of pro-
 duction

ARTICLE 1. No work made otherwise than called for on order ticket will be paid for.

ART. 2. All gauges to rise and fall one-fourth cent for every gauge.

ART. 3. Ordinary double action with one cylinder, one-half cent more than when made with two jacquards.

ART. 4. All laces and edgings to be paid the same price as curtains.

ART. 5. Punched-through patterns one-fourth cent less.

Patterns not punched through, up to and including 30 quality, shall be paid one-half cent extra, and if punched through, up to and including 30 quality, the one-fourth cent shall not be deducted.

PARAGRAPH 351—NOTTINGHAM LACES.

ART. 6. All time lost putting up threads to be paid for. This applies only to machines which have been narrowed down.

ART. 7. Time-work to be paid for at the rate of \$0.286 per hour. Men on time-work to make 50 hours per week.

Putting in comb leads, trick leads, and jack leads to be paid as time-work by the firm unless done by the company machinists.

In extraordinary circumstances the company is willing to pay time-work if company considers same a just claim.

ART. 8. All spooling to be done by the firm.

ART. 9. If by accident the weaver in going forward or backward should make a short length over $1\frac{1}{2}$ yards long, he shall be paid the rack price for same.

This in no way to vitiate the rule already in force of not paying for curtains made otherwise than called for by the order ticket.

ART. 10. Where in making nets or curtains the firm requires the use of an extra bar for draw threads, in order to get a perfect selvage, one-fourth cent to be paid on the existing rack price.

This will apply in all cases where bar is at work.

ART. 11. All nets to be paid on the same basis as punched-through curtain patterns.

ART. 12. When beams are entered at back of bar, 50 cents extra will be paid.

ART. 13. All curtain machines to be cleaned Saturday morning, and while being cleaned must be stopped.

Price for warps and beams as follows: Six points—256 inches, \$1.50; 300 inches, \$1.50; 324 inches, \$1.75; 360 inches, \$1.75.

For all other warps and beams we will adopt the following plan, paying on a basis of \$1 per warp, with 3 cents per hundred or portion of hundred threads for entering the warp, and in addition a price of 5 cents per hundred or portion of hundred threads for slewing the warp.

The basis for Madras beams will be 50 cents, and as these are all sleyed 8 cents per hundred or portion of hundred threads additional.

The basis for bar ground beams will be 75 cents, and as these are all sleyed 8 cents per hundred or portion of hundred threads in addition, making the prices as follows:

	Inches.	New price warp.	New price M. beams.	New price B. G. beams.

PARAGRAPH 351—NOTTINGHAM LACES.

Of above yarn, valued at \$103,852.82, \$32,807.12 was imported yarn, on which we paid the various Payne-Aldrich duties. The same yarn, under the proposed Underwood bill, would cost us \$27,767.90, a saving of \$5,000.

So that:

	At present.	Under Underwood bill.
	<i>Per cent.</i>	<i>Per cent.</i>
Labor cost.....	28½	28½
Yarn.....	45	42½
Other materials.....	8½	8½
General expense, including selling.....	18	18
	100	97½

Any ordinary change in soaps, starches, etc., comprising "Other materials," would practically make no appreciable difference.

Above figures have been taken from records dating from October 1, 1912, to January 1, 1913, during which time there were no abnormal factors.

Mr. HARRISON. Bearing upon one of the arguments that you have just made, Mr. Dimmick, you will probably recollect that the metal schedule which is proposed by this committee and which has passed the House, reduced the rate on machinery from 45 to 25 per cent ad valorem.

Mr. DIMMICK. I have not followed it. I myself am perfectly willing to admit the general proposition that we have reached the maximum of tariff protection, and that we should tend in that direction; but it seems to me that our first move should be in the direction of getting our plants, at least, on the same basis as our foreign competitors would be, namely, by the elimination of the duty which is now naturally a part of our plant assets.

Mr. HARRISON. It has been the endeavor of this committee in handling such schedules as they have already framed bills upon to recognize those facts, and if possible, consistent with revenue, balance those very features, and I just pointed out to you one respect in which it might affect your business.

Mr. DIMMICK. That is to say, the duty has been reduced how much, sir?

Mr. HARRISON. From 45 to 25 per cent on machinery.

Mr. DIMMICK. That would be a move, in my judgment, in the proper direction.

The CHAIRMAN. You are a manufacturer of curtains?

Mr. DIMMICK. Yes, sir.

The CHAIRMAN. Do you manufacture them both out of linen and cotton?

Mr. DIMMICK. Only cotton.

The CHAIRMAN. Do you know what is the total production of lace curtains in this country?

Mr. DIMMICK. As I understand, this past year it has been approximately eight and a half million dollars.

The CHAIRMAN. That includes cotton and linen?

Mr. DIMMICK. No; just cotton.

The CHAIRMAN. Eight and a half million dollars?

Mr. DIMMICK. Yes.

PARAGRAPH 351—NOTTINGHAM LACES.

The CHAIRMAN. Do you know how much linen was used?

Mr. DIMMICK. No; I could not tell you that. I might say that I am not by profession a manufacturer. I am handling largely the financial end of this, and information of that sort would be rather difficult for me to give.

The CHAIRMAN. Under this paragraph No. 351, which bears a rate ranging from about 50 to 52 per cent ad valorem, in 1910 there were two hundred and nineteen millions of imports, and in 1912 there were two hundred and seventy-eight millions of imports, which covers the entire schedule, both linen lace and cotton lace. That looks as though there was evidently a block in the schedule and that the importations were small, if these Treasury figures are right, as compared with the American consumption. Can you tell me where the most competitive point in the schedule is?

Mr. DIMMICK. The most competitive point is in the high grades, 10 points and up.

The CHAIRMAN. Both for cotton and linen?

Mr. DIMMICK. I can not speak at all about linen.

The CHAIRMAN. In the lower grades of lace curtains there are practically no importations, are there?

Mr. DIMMICK. There are practically no importations, but I believe from the figures which are shown in our exhibit as to the English curtains that are obtained through Canada, in our endeavor to sell goods there, it is very equally balanced. Out of four low-grade curtains, that schedule shows that two, after allowing for our duty, were slightly above our selling price and two were slightly below. They were taken haphazard a year ago and not with reference to this hearing or on this subject, but simply with reference to whether or not we could extend our trade, and our selling force felt that they were fairly representative of the line, but, of course, they only cover four specific curtains.

The CHAIRMAN. Of course, there are some grades of lace curtains that are luxuries of the highest class, and if they are reasonably competitive there would be no objection to having a pretty high rate of duty on them. There are lower grades of curtains that come closer to a necessity, and the committee would be disposed to put a rate on them where they can be reasonably obtained. Of course, they are all under one paragraph. Can you make a suggestion to the committee from a practical standpoint as to how we could differentiate between the low grades of these goods so that we could put a lower tax on the lower goods and bring in some importations, and yet get a better revenue from the higher grades of goods, which are strictly luxuries?

Mr. DIMMICK. I should want to think that over. I could not off-hand. I would like to say this, that the total domestic output in the last three or four years has fallen off. It has decreased from somewhere about \$12,000,000 to \$8,000,000, while our capacity of output has been increasing, and the decrease is due, in my judgment, largely to the fact that Nottingham lace curtains are in competition from time to time with curtains of a different type. During the past summer the consumption of Nottingham curtains, as such, not against the patterns themselves, but against other makes, has fallen off almost 50 per cent.

PARAGRAPH 351—NOTTINGHAM LACES.

The CHAIRMAN. That is due to the physical fact that there are a number of Nottingham lace machines allowed to come in here free, and an industry was started in this country?

Mr. DIMMICK. No; I think not, sir. The Lever lace machines have been permitted, but I do not think any Nottingham machines, at least not since I have had anything to do with this company, have ever been imported without a tariff.

The CHAIRMAN. Do not the Lever laces compete, in a way, with the Nottingham laces?

Mr. DIMMICK. Not at all. They are entirely separate and distinct, and we think it is only fair to state that the lace-curtain industry, which is separate and distinct, and which we represent, never having gone into the other, should be treated absolutely separately and apart.

The CHAIRMAN. That is the point I am making. You say you are not able to differentiate now. If you have a view of your own, the committee may not adopt it when you suggest it—

Mr. DIMMICK. Yes.

The CHAIRMAN. But, as you are a practical manufacturer, and they are the men whose views we want about the classification, probably, after reading the classification, you will be able to arrange a classification that would differentiate between these various grades, and I would be pleased if you would do that at your leisure.

Mr. DIMMICK. I will be very glad to do it, indeed.

The CHAIRMAN. Are there any further questions, gentlemen? [After a pause.] That is all, Mr. Dimmick.

STATEMENT OF WILLIAM L. TURNER.

Mr. Turner was duly sworn by the chairman.

The CHAIRMAN. Proceed, Mr. Turner.

Mr. TURNER. We beg to present our views in regard to paragraphs 351 and 350 of the existing tariff law, relating to Nottingham lace curtains and Lever laces. We call attention to the fact that these articles are distinct from each other, made on different machines, to meet different classes of demand, and are imported and distributed under different conditions. Each of them also is quite distinct from embroideries, although the latter are provided for in paragraph 349, along with certain classes of laces. Some misapprehension has apparently arisen at hearings in previous Congresses, owing to confounding together statements relating to these three differing classes of articles.

The Nottingham lace-curtain industry has been established on comparatively firm foundations since about 1897, and now supplies more than 90 per cent of the American demand for these articles. The business of manufacturing lace on the Lever and Gothrough lace machines, although attempted on a small scale a generation ago, has attained its present development only since the enactment of the tariff of 1909. The two industries stand, therefore, upon somewhat different footing and will be discussed separately in this brief. The Nottingham lace-curtain industry has vindicated its right to exist by reducing retail prices to the consumer; the Lever lace industry

PARAGRAPH 351—NOTTINGHAM LACES.

as yet supplies only a small portion of the American demand, but is in a fair way to bring down prices ultimately in the same way.

In the Nottingham lace-curtain industry are now employed some 6,000 skilled operatives, with an annual production at wholesale prices of about \$8,000,000. There are now in use in this country some 487 Nottingham lace-curtain machines, which were imported under a duty of 45 per cent. They represent, duty paid and with the plant required for their operation, about \$20,000 per machine, or a total plant value of at least \$9,000,000. A list of these machines, according to location, is appended to this brief as Exhibit A. I will not read that unless it is desired. It is worthy to note that the Nottingham lace-curtain machines can be installed only in special types of buildings. From this and other causes, the capital investment required is exceptionally large in ratio to product, the value of the "turn-over" representing in a year less than the value of the investment in the plant. Obviously, such an investment would have been made only in the belief, based upon the formal legislative acts of the Government, that the equitable relation established between the duties on curtains, raw materials, machinery required for their production, and other competing foreign goods, would not be changed suddenly and arbitrarily or without due consideration of these conditions.

The raw materials of Nottingham lace curtains are cotton yarns, of which a large proportion are bobbin yarns, which are not made in this country. Analysis of the consumption of yarns used by one of the signers of this brief during the year 1911 showed that \$445,000 was paid for American yarns and \$243,000 for imported bobbin yarns, laid down with duties paid at the average rate of 29.25 per cent ad valorem. The domestic yarns, which form 64 per cent of the raw material in value, are produced almost exclusively in southern mills, while the bobbin yarns are made entirely in England, and there is no indication that American mills are likely to produce them in commercial quantities in preference to other goods which they can produce more easily and at a greater profit.

The CHAIRMAN. I do not like to interrupt you, but let me ask you a question right there.

Mr. TURNER. Certainly.

The CHAIRMAN. I wish you would explain the difference between the bobbin and the other yarns.

Mr. TURNER. The bobbin yarn is a yarn that is run through cylinders and made oblate.

The CHAIRMAN. Made what?

Mr. TURNER. Oblate; flattened so that it can be wound narrow wise on a bobbin, in order to get the greatest yardage in the shortest possible space. In 16-point curtain machines, for instance, there are 16 bobbins which must have free accommodation in 1 inch of space, and in order to arrange for that there has been developed in England, where this industry had its birth, a special preparation of yarn for bobbins, which consists in oblatizing the yarns so that they can be wound narrow wise on the bobbin, thereby saving space.

The CHAIRMAN. The bobbin yarns carry the same numbers as other yarns?

PARAGRAPH 351—NOTTINGHAM LACES.

MR. TURNER. The same numbers, except, being round, under a microscope they are oblate.

Obviously, it seems to us, if an adjustment of duties is to be sought which is equitable and scientific, such an adjustment must recognize the justice of a duty on curtains to compensate for the duty on the raw materials used, quite apart from what may be added to equalize labor costs and other factors in American production.

The labor cost of producing Nottingham lace curtains in the United States is much greater than in Europe. Affidavits were submitted to the Committee on Ways and Means in 1908 made by several workers who had come from English and Scotch mills to America, which showed differences in wages paid of 68½ per cent over the union rate in Nottingham, England, and 164 per cent to 327 per cent over the rates paid in Scotland (see Tariff Hearings, 60th Cong., 2d sess., Doc. No. 1505, pp. 4833-4834). Comparison of rate cards now in force show substantially the same differences. While these figures relate specifically to skilled labor, it is notorious that the less skilled services, performed largely by women and children, command in this country rates two or three times those paid abroad.

On the subject of weavers' wages, a memorandum appended to this brief as Exhibit B, made by one of the signers, shows increases between December 4, 1897, and June 3, 1907, amounting to 52½ per cent, calculating each of the six different increases as a percentage of the wage paid at the time of the increase, but really representing 64.44 per cent increase upon the original wage rate of 1897. In addition to this increase in money wages, working hours were reduced from 58 to 51 hours per week on the day shift and 50 to 45 hours on the night shift. While there have been fewer increases in money wages paid to weavers since 1907, there have been a number of readjustments of wages upon particular classes of work and in the classification of work, all of which have added to the real wage earned by the laborers in these classes. If the reduction in time, amounting to more than 10 per cent, is added to the increase in money wages, the cost of labor for a given period of work is now at least 75 per cent greater than in 1897.

It is not possible to make exact comparisons of the prices of Nottingham lace curtains to the consumer in times gone by with those now prevailing because of the constant changes in style of goods. Speaking generally, it is well known to importers that goods of substantially the same quality and attractiveness of pattern can now be obtained much cheaper than before American manufacturers entered the field. This is not because the American manufacturer can actually produce cheaper than the foreign manufacturer, but because he has reduced the margin of profit charged. The effect of American competition has been to bring down importers' profits to a moderate return on cost. Gradually, as the American industry grew in magnitude, it created an organization for selling curtains which distributed them widely in the hands of jobbers and retailers throughout the country and put them within reach of people of small incomes as a familiar means of household comfort and ornamentation.

With the loss of the bulk of the American trade, foreign manufacturers have made less effort to adapt their patterns to American

PARAGRAPH 351—NOTTINGHAM LACES.

taste and have thus to a considerable degree withdrawn from the market. If a reduction of duty should be made, however, which made the American market more accessible to them, more attention would be paid to its requirements and an effort would probably be made to build up an organization for distributing foreign curtains and thereby driving American manufacturers out of business.

We believe, therefore, that the continuance of existing duties on lace curtains is necessary to the maintenance of reasonable prices for curtains to the American consumer as well as to the maintenance of the industry on sound condition.

Even under present conditions, with American manufacturers supplying over 90 per cent of the domestic demand, they are not working their machinery to its full capacity. The capacity of the Nottingham lace-curtain machines in the United States is about \$12,500,000 annually, while the actual production is only a little in excess of two-thirds of this amount, or from \$8,000,000 to \$9,000,000. To reduce duties to a point intended to increase importations would throw out of employment a proportionate amount of machinery and skilled laborers. From a revenue point of view, the gain would be almost negligible under any rate which we believe your committee would be disposed to consider. With annual imports at the present time of about \$280,000, the duty, which works out on an average at about 52 per cent, affords revenue of about \$145,000. If the duty were reduced to 40 per cent and the effect was to transfer business to the amount of \$2,500,000 from American to foreign mills, the total duties collected would be \$1,000,000, or an increase of about \$850,000. We submit that this is too small a gain to the public revenue to afford grounds for crippling an industry and throwing out of employment several thousands of laborers. Such a policy, moreover, would go further in its injurious effects than the mere pro rata loss shown by the substitution of foreign for domestic product; because it would materially reduce the proportion of product to value of plant, which is already low as the result of the large capital investment in imported machinery and special buildings. The equipment for the manufacture of Nottingham lace curtains is not capable of being diverted to any other form of production and the tendency of impairing seriously its earning capacity would be to destroy the value of nearly the entire capital invested and to deprive of a livelihood all the skilled labor now employed.

The production of laces in the United States upon a commercial scale is essentially a new industry. While spasmodic efforts were made as early as 1866 to manufacture laces, through the importation of foreign lace workers and machinery on a small scale, they produced little effect down to the enactment of the tariff of August 5, 1909. Under that act Levers and Gothrough lace machines were admitted to the United States free of duty if imported prior to January 1, 1911. The result has been that there are now 527 such machines in the United States, of which 330 to 393 have been imported free of duty. The cost of these machines, with accessories, set up and ready to run in America, is about \$7,500 each, making the total investment under the present tariff about \$2,400,000, apart from plant and other expenses. With the object of putting this industry upon its feet, the

PARAGRAPH 351—NOTTINGHAM LACES.

request was made of the Sixtieth Congress that a system of specific duties be adopted. This request was rejected, but the rate of duty was fixed at 70 per cent ad valorem.

In this industry the yarns employed for fashion laces and most in demand at present are imported from abroad. The importation of machinery free of duty was a provision of the act of 1909, not asked for or suggested by your petitioners, but was embodied in the law upon the recommendation of an expert of the United States Department of Commerce, with the object of encouraging the creation of a distinctive American lace industry, and was accepted and capital invested under it by your petitioners in the belief that the Government would not arbitrarily and hastily abandon and reverse a decision thus deliberately adopted upon its own sole initiative.

This industry has gone through the same experience as the curtain industry in its earlier history, in being compelled to offer exceptional rewards to skilled workmen to come to the United States for the purpose of establishing the manufacture. A memorandum furnished by one of the signers of this brief on May 31, 1912, for the use of the Tariff Board, is appended hereto as Exhibit C, showing the high wages paid to designers and skilled workers in the various processes of the industry. The wages paid, at the date of this communication, were not less than twice the compensation which was contracted for, which compensation averaged three times what these men were getting in their positions in England.

In spite of the comparatively high rate of duty imposed by the existing tariff on Levers laces, in lieu of the rate of 60 per cent under the previous tariff, and in spite of the high cost of initial installation in America, the industry is one in which these factors count but little in fixing retail prices. The manufacturer's price is determined by his cost of manufacture—but not so the price to the consumer. This is determined by the attractiveness of designs and the demand which may develop among consumers for particular patterns. If a pattern proves attractive, the retailer may and often does add 100 to 125 per cent to the price which he pays to the importer or to the American manufacturer. On the other hand, if he finds that he has purchased more of a certain pattern than he can readily sell at such an advance, he may reduce his profit to 15 per cent, or even sell at a loss to close the lot out. Very few purchasers at retail are sufficiently expert to determine the cost of manufacture of a piece of lace except in a general way, and will pay two or three times as much for a pattern which attracts them as for another pattern of the same quality which is less attractive.

The reduction of the duty from 70 per cent to 60 per cent or even to 50 per cent, would therefore have practically no effect upon the price of patterns which prove attractive to discriminating purchasers. A piece of lace costing 10 cents a yard to manufacture abroad would cost 17 cents with the duty added at the existing tariff rate (apart from other items), and the same piece of lace would cost 16 cents a yard to the importer at a duty of 60 per cent, and 15 cents a yard at a duty of 50 per cent. Obviously, when the retail price was fixed at from 50 to 100 per cent above these figures, the difference between one and the other would have practically no influence if the goods

PARAGRAPH 351—NOTTINGHAM LACES.

were attractive to consumers. It is a simple principle of economics; the price of a pure luxury is determined, not by costs, but by demand.

Laces are imported almost entirely for ornamental purposes, and must be classed exclusively as luxuries, if the term luxury marks a definite distinction between what is necessary to health, cleanliness, and comfort, and that which is essentially ornamental. The higher the quality of goods, other things being equal, the higher is the price, and the larger the revenue which is derived from the ad valorem duty of 70 per cent levied by the existing tariff. It does not seem to us that public policy demands a reduction of duty upon an article so exclusively a luxury, which affords so large a revenue, and where the tariff falls most heavily, in exact proportion to value, upon the high-grade goods consumed by the rich and prosperous.

In view, therefore, of the fundamental character of this article as a luxury, the fact that the price is determined not so much by cost as by taste and fashion, and that much American capital has been invested in laying the foundations of the industry in this country, we feel justified in asking that the existing rate of duty be retained.

The exhibits referred to by Mr. Turner are as follows:

EXHIBIT A.

Number of Nottingham lace-curtain machines in the United States.

	Machines.
Pennsylvania:	
Bromley Manufacturing Co., Philadelphia.....	77
Chester Lace Mills, Chester.....	17
Columbia Lace Mills, Columbia.....	14
North American Lace Co., Philadelphia.....	58
Quaker Lace Co., Philadelphia.....	116

Nottingham lace curtains—Wages paid in weaving department.

These advances apply to our entire product:	Percent.
Increase:	
Dec. 4, 1897.....	15
Aug. 13, 1898.....	7½
July 1, 1899.....	5
Jan. 13, 1900.....	15
Apr. 1, 1903.....	5
June 3, 1907.....	5

Working hours reduced from 58 to 51 on day shift.

Working hours reduced from 50 to 45 on night shift.

The following increases apply to special grades of work:

January 30, 1911, all square grounds were advanced one-half cent per rack above the card rate. On the gauges we make this means an average raise of 4½ per cent.

PARAGRAPH 351—NOTTINGHAM LACES.

On the same date we agree to pay for all nets on the basis of full punched curtains, which amounted to an increase of one-quarter cent per rack. Approximately, this increase is equivalent to from $2\frac{1}{2}$ to 3 per cent.

On September 30, 1912, all goods classed as "linon effects" had 1 cent per rack added to the card rate, the gauges affected being 6, 7, 8, 10, and 12. This advance averages $10\frac{1}{2}$ per cent.

MR. HAMMOND. What is the cost of a Nottingham lace curtain machine?

MR. TURNER. I beg your pardon?

MR. HAMMOND. What is the value of a Nottingham lace curtain machine?

MR. TURNER. There are in this country 487 Nottingham machines, which, put down with the 45 per cent, ready to run, average about \$7,000 to \$7,500 apiece.

MR. HAMMOND. That \$7,500 includes the duty?

MR. TURNER. Yes, sir.

MR. HARRISON. All of these machines are imported?

MR. TURNER. They are all imported. There are none of them made in this country.

MR. HARRISON. Is there not an industry started now to make Nottingham lace machines in the United States?

MR. TURNER. I received a circular stating that they were expected to be able to make a Nottingham lace machine—a Nottingham lace machine, not a Nottingham lace-curtain machine—but the two are

PARAGRAPH 351—NOTTINGHAM LACES.

so closely allied that I suppose that if they could make one they could make the other.

Mr. HAMMOND. Is there any difference in value between the two?

Mr. TURNER. Yes; the Nottingham lace curtain machines range within a compass of from \$5,000 to \$7,000, that compass being determined by the width of the machine and the gauge. The machines in this country are of broad width. The lace machines run in a compass from about \$6,000 to \$9,000, according to the width and gauge. The increased cost of the Lever lace machine is due to the fact that twice the number of these bobbins of which I speak work within an inch on the Levers machine. For instance, we have some lace machines where we have 32 bobbins with a free and uninterrupted motion within an inch of space. The preparation of those bobbins requires a very high grade of skilled labor, and at the present time no country in the world has succeeded in making them except in Nottingham, England. For instance, Germany supplies their own carcasses, but England supplies the high-class skilled labor on what we call the insides.

Mr. HARRISON. Are you in favor of the reduction upon machinery such as is proposed in the metal schedule, from 45 to 25 per cent?

Mr. TURNER. I do not see what it would accomplish. It would write off a depreciation on our plants of about \$3,000 for every curtain machine we have, and if there are 487 machines in this country, that would be about \$1,300,000. If it is done in an effort to equalize conditions between here and abroad, and this country is going to adjust itself to that condition, and some equalization has to be made, I agree with Mr. Dimmick, that we might as well start; but even if we do that, with our labor cost two and a half times what it is abroad, it would not accomplish the purpose.

Mr. HARRISON. Even according to your own point of view, it would more nearly equalize the differences in cost of production in the two countries, as to the future.

Mr. TURNER. After you had accumulated that depreciation loss. I do not think there is a Nottingham lace-curtain machine plant in this country, on account of the keen competition in that industry, that has accumulated, since 1897, sufficient depreciation to write off the loss of a 45 per cent duty on these curtain machines.

Mr. HARRISON. It is not proposed to put the machinery on the free list, but to reduce it to 25 per cent. It was upon that basis that you made your calculation allowing a depreciation of \$1,300,000?

Mr. TURNER. May I depart just a moment from the Nottingham lace-curtain industry and answer that question from both the standpoint of the Nottingham and the Levers lace? With 487 Nottingham lace-curtain machines in this country, making one-third more than the market uses, and the market constantly using less, due to competition of scrim and plain materials, to write off any depreciation on Nottingham curtain machinery would mean a loss of capital. But if the duty on the Nottingham lace machines were reduced it might result in larger importations in this country. At the present time we only have about 527 Levers lace machines here and there are over 7,000 abroad, and reducing the duty might have some of the effect that the exemption from the duty had under the present

PARAGRAPH 351—NOTTINGHAM LACES.

tariff law. It might cause freer importation and have a compensation in making more goods in this country.

Mr. HARRISON. It will start up new industries.

Mr. TURNER. But in the Nottingham lace-curtain machine industry it will only serve the purpose of lessening the plant value.

Mr. HARRISON. Have you any exports in Nottingham lace?

Mr. TURNER. Absolutely none.

Mr. HAMMOND. What particular difference would it make to a manufacturer if he did have to write off \$3,000 on each machine? You would have the same machines, and they would be doing the same work. What particular difference would it make on the basis of credit?

Mr. TURNER. I should say the same difference as when the house in which you live is assessed from \$10,000 to \$5,000.

Mr. HAMMOND. You have no greater expenses to meet?

Mr. TURNER. No; we have already paid for them.

Mr. HAMMOND. You have the same machines, even though you do have to write it down in the books.

Mr. TURNER. I think that is—

Mr. FORDNEY. Could not other people, under the lower rate of duty, go into competition with you with less capital invested?

Mr. TURNER. Certainly.

Mr. HARRISON. But Mr. Turner says the market is already overstocked.

Mr. FORDNEY. Well, they hope to establish a greater trade, I presume.

Mr. HARRISON. So that, from his point of view, it becomes largely a matter of bookkeeping, it seems to me.

Mr. TURNER. Yes; it is a matter of bookkeeping, but when you keep your books very honestly there is a difference if you have 111 machines at \$7,000 on your books or have 111 machines at \$4,000 on the books.

Mr. HAMMOND. You are perfectly justified in charging off something against your machines every year.

Mr. TURNER. If you make it, for your depreciation has to come out of your profits, and if your profits are not more than your interest charges on your investment, you have nothing to set aside for depreciation; that is all.

Mr. HAMMOND. As has been stated by one of the members, it is merely a matter of bookkeeping—a paper depreciation. It is not a real loss of value or real depreciation.

Mr. TURNER. If you have two million of capital employed, say, and your earnings are 7 per cent, and you have capital requirements to pay 6 per cent, you pay the 6 per cent, and anything left over you write off for depreciation; but if there is nothing left over, you can not write off depreciation. It is the impression of the companies I represent and of those with which I have conferred that the profits in the Nottingham lace-curtain industry have never been adequate to build up a depreciation fund. Probably that was a mistake of the past.

Mr. HARRISON. Your time has expired, Mr. Turner, unless some of the members desire to ask you questions.

PARAGRAPH 351—NOTTINGHAM LACES.

Mr. HILL. I would like to ask you, Mr. Turner, how long you have been in the Nottingham lace-curtain business?

Mr. TURNER. Since 1891.

Mr. HILL. You are one of the pioneers?

Mr. TURNER. Yes, sir.

Mr. HILL. The business has grown to meet the American demand, has it not?

Mr. TURNER. Yes; the business reached its height in 1903.

Mr. HILL. I understood you to say that after the passage of the Payne tariff bill the business took on some additional life, or you used some such expression, and that it increased during the past three or four years. Why did it increase?

Mr. TURNER. The reference I made was to the wonderful development of the lace business. The Nottingham lace-curtain business has decreased since 1903.

Mr. HILL. And you meet an additional expense in the increased cost of the yarn in late years, do you not?

Mr. TURNER. Our southern yarn cost, which represents 64 per cent of our entire use in 1912, on a general average, has gone up about 60 per cent since 1902.

Mr. HILL. You are meeting additional competition by decreased wages in Nottingham in the last two or three years?

Mr. TURNER. No; the wages in Nottingham have increased about 4 per cent in the last seven years.

Mr. HILL. Do you know anything about the Asquith agreement with the lace makers of Nottingham?

Mr. TURNER. Yes; but you are confusing Nottingham lace-curtain industry with the lace industry.

Mr. HILL. Then the Asquith agreement does not reach to the Nottingham lace-curtain industry?

Mr. TURNER. It touches the Nottingham Levers lace industry, but not the curtain industry.

Mr. HILL. Has there been any reduction in the wages in the Nottingham lace-curtain industry in the last three or four years?

Mr. TURNER. I have gone to considerable trouble and the only conclusion I can reach is that since 1907 there has been an advance of about 4 per cent. The Scotch mills, with which we are competing, had a strike about three years ago and the adjustment of that strike was so intricate that even those in the business do not know what it was, but I figured it up as an advance equivalent to about 3 or 4 per cent. At the same time, the American advance has been 41 per cent.

Mr. HILL. What was the tariff on these curtains when you entered the industry?

Mr. TURNER. Sixty per cent ad valorem.

Mr. HILL. What have been the variations since?

Mr. TURNER. The Wilson bill cut it to 50, and three American mills were sold out by the sheriff. I am not testifying as to whether that was due to bad management or not. Under the Dingley tariff the duties were compounded, and made an average ad valorem equivalent of about 52 per cent.

Mr. HILL. It is now about 50 per cent?

Mr. TURNER. About 52 per cent.

PARAGRAPH 351—NOTTINGHAM LACES.

Mr. HILL. What was the average price of lace curtains when you started in the industry as compared with what it is now? I want to know what the effect has been on the establishment of the industry in this country.

Mr. TURNER. In 1886, when the duty was 35 per cent, the firm of William H. Fletcher & Co., in New York, were very jubilant and gave a dinner to their employees because they succeeded in landing in this country a curtain at about 82 cents which they could job at \$1. That same grade of curtain to-day is sold by every domestic mill at or lower than 65 cents.

Mr. HILL. So that there has been a reduction, in round figures, of about 33½ per cent since you have been in the Nottingham lace-curtain industry?

Mr. TURNER. On some grades, but taking all grades, I should think it would be to-day about 12 per cent. On some grades it has been one-third, where there has been a great deal of competition among domestic manufacturers. Peculiar as it may seem, it is on that grade of goods that is not imported from the other side.

Mr. HILL. You are giving the wholesale prices?

Mr. TURNER. Yes.

Mr. HILL. A wholesale comparison now?

Mr. TURNER. But taking the industry right through, I think we are selling our goods at 12 per cent cheaper to-day than we did in the past. We have had an advance in the price of yarns, and we have shortened our hours of labor from 60 to 50. We have made an advance in wages in some mills of 41 per cent and in the other mills of 32 per cent. We are proud of our record, and would like to be catechized.

Mr. HILL. I think you have a right to be.

The CHAIRMAN. Some years ago, before the Dingley bill, I believe cotton laces were in Schedule I and linen laces in Schedule J, and I think the classification later was changed, and they were all classified in Schedule J. The purpose of changing the classification was to give the cotton lace a higher rate of duty. What do you say to transferring the cotton laces back to Schedule I and putting them under the cotton schedule?

Mr. TURNER. Paragraph 350, which is the paragraph covering the Lever laces, carries laces whether they be made out of cotton, linen, jute, or silk. To put them into the cotton schedule, unless you have a provision for the other grades of goods, made out of other materials, would seem strange.

The CHAIRMAN. Of course, that would be done.

Mr. TURNER. I do not know why the Nottingham lace-curtain industry is in this schedule. We use nothing but cotton yarns, and ours is a cotton fabric.

The CHAIRMAN. Does paragraph 351 include only cotton laces? If you have not it before you, I will read it to you.

Mr. TURNER. Paragraph 351 provides only for Nottingham lace curtains made on Nottingham lace-curtain machines, and provides for no other class of goods. Those goods are made entirely of cotton.

The CHAIRMAN. There is no reason, then, why paragraph 351 should not be bodily transferred back to Schedule I?

PARAGRAPH 351—NOTTINGHAM LACES.

Mr. TURNER. I do not see any reason.

The CHAIRMAN. Are there any further questions?

Mr. HILL. Is there any reason why there should be a difference in the rate of duty on the cotton and on the linen?

Mr. TURNER. I know absolutely nothing about the linen, except we brought over German Barmen lace machines within the last year. And then we found that the duty on linen laces, which came in under paragraph 349, was 60 per cent, and that the duty on linen yarns ran all the way from 50 to 90. In other words, the duty on the finished article was lower than the duty on some of the yarns which enter into it. Now, I do not know why that is. I do not know anything about linen.

Mr. HULL. What percentage of your yarn do you have to import?

Mr. TURNER. Thirty-six per cent for the year 1912, figures taken from the Quaker Lace Co.

Mr. HULL. Your yarns are not procurable in this country?

Mr. TURNER. They are not made in this country.

Mr. HULL. What is the present duty on them?

Mr. TURNER. What is the duty?

Mr. HULL. Yes.

Mr. TURNER. The three counts are 60's, 70's, and 80's, all of which bear a specific duty. The ad valorem equivalent to all three is 29.33 per cent. That would vary, according to degree, more or less, of the fine or lower counts; but for 1912 the Quaker Lace Co. paid an ad valorem duty on its bobbin yarns of 29 per cent plus.

Mr. HULL. What would be the effect of a reduction in the rates on these yarns with respect to your business?

Mr. TURNER. The question would be easier, if you would state a fixed reduction. For instance, if an ad valorem duty of 15 per cent is fixed instead of 29 per cent plus, it would be an equivalent to 2.5 per cent on a curtain which had 50 per cent yarn. For instance, if the duty on fine yarns was made 15 per cent, and the foreigner did not advance it in proportion, he has a monopoly of the market, a beautiful one by the way, and if the foreigner did not advance his price, and the duty was cut from an average of 30 per cent to an ad valorem duty of 15 per cent on that curtain bearing 50 per cent yarn, which is about the average, we think that that will make a difference of 2.5 per cent.

Mr. HULL. Taking these Lever and Gothrough machines, is there any difference in the cost of manufacture on them as compared to the cost by other methods, leaving out your Nottingham machines?

Mr. TURNER. I do not grasp that question.

Mr. HULL. Is there any difference in the cost of manufacturing lace on the Lever and Gothrough machines than by other methods of manufacture, not including your Nottingham machines?

Mr. TURNER. There are three machines to-day making lace. One is the Barmen machine of Germany, which uses almost entirely linen and has a very small field of manufacture; then there is an allied industry, which really belongs to embroidery, that is, cutting out of burned lace. That pays a duty of 60 per cent. I know nothing at all about labor conditions in that industry. You can not confuse the lace made on a Levers machine with the lace made on any other kind

PARAGRAPH 351—NOTTINGHAM LACES.

of a machine. The Levers lace machine is a machine to imitate hand-made lace.

Mr. HILL. What number would you start with if you were to reduce the rates from 30 per cent to 15 per cent on lace yarns? What number would you start with to make it 15 per cent?

Mr. TURNER. I would not do it at all.

Mr. HILL. I thought you recommended that it be reduced?

Mr. TURNER. I did not recommend it; I am just answering your question. I would not recommend reduction on another line of goods for the same reason that I do not ask for one on ours.

I would like to see fine bobbin yarns made in this country. We have offered to American firms contracts at 10 per cent above English prices, but without avail. If England would go to war to-morrow every Nottingham mill in the United States would shut down until the war was over.

Mr. HILL. Have you any high numbers in your proposition?

Mr. TURNER. The highest number which we use in any quantity in the Nottingham lace-curtain business is 80. In the lace business we go up to 240.

Mr. HILL. You would recommend a continuance of the duty on above 120's?

Mr. TURNER. I prefer not to speak for yarn in any way whatever. I would like to see the goods made in this country. I do not know whether they can or can not be made in this country. I doubt whether they will if in all these years they have not succeeded in doing it.

Mr. HILL. You say you have offered 10 per cent extra above the English price for the No. 80?

Mr. TURNER. On Nos. 60, 70, and 80 we offered the American Thread Co., some years ago, a contract at 10 per cent more than the English price. It is desirable to make the goods in this country.

Mr. HILL. Do they not make 60's, 70's, and 80's?

Mr. TURNER. Not the bobbin yarn. The bobbin yarn requires special machinery, and they claim the market is too restricted and the demand too fickle to make it worth while.

Mr. HILL. You would not suggest any change at all on yarn above 120? You prefer not to say anything about it?

Mr. TURNER. I prefer not to say anything about it.

Mr. HULL. Suppose there should be some reduction made on your laces?

Mr. TURNER. I presume any duty on laces or on Nottingham lace curtains is scientifically adjusted to the cost of yarns. If yarn goes down in price, there is no reason why the duty should not go down proportionately. If the yarn goes up, if the duty is properly adjusted, it should go up, naturally.

The CHAIRMAN. There are practically no Nottingham curtains imported at all?

Mr. TURNER. In the year 1912 there were \$278,000, \$178,000 of which came in under the saving clause of 50 per cent.

The CHAIRMAN. What is the total amount of your production in this country?

PARAGRAPH 351—NOTTINGHAM LACES.

Mr. TURNER. \$8,000,000. One-twentieth of that used in this country comes from the other side. That seems very small, but it is a very serious proposition in this respect. Our costs are going up, because we ought to be making \$12,500,000, where we are making \$8,000,000, and our labor is only two-thirds employed. The result is we feel very sensitive to every importation from the other side.

The CHAIRMAN. If there was a demand for \$12,000,000 and you are only making \$8,000,000, the importations would certainly be more than \$300,000?

Mr. TURNER. The fact that importations have gone up in the last three years would seem to indicate the margin of our present equalization of cost between here and abroad is about right, and the slightest change means goods made here or goods made abroad.

The CHAIRMAN. I think that is logically correct, for they had more importations, and the increase in your imports has been only from \$212,000 to \$270,000 at the outside in the highest year.

Mr. TURNER. The importations were four times in 1912 what they were in 1909, and the domestic production was one-third less.

Mr. HILL. I would like to ask the gentleman about the Levers machine, Mr. Chairman.

You are engaged in that business in which you use the Levers machine?

Mr. TURNER. We just started the Levers business under the last tariff.

Mr. HILL. How many Levers machines have you in your factory?

Mr. TURNER. We have 102 in the two factories in which I am interested.

Mr. HILL. What is the concern which you represent?

Mr. TURNER. I am vice president of the Quaker Lace Co. and president of the North American Lace Co.

Mr. HILL. To what extent has the industry developed since 1909, when the tariff bill was passed giving free machines?

Mr. TURNER. What shall we consider the evidence of development—sales, importations, machinery, or progress made?

Mr. HILL. Anything. What has been the effect of the free machinery clause of the Payne tariff bill on the domestic market?

Mr. TURNER. The Quaker Lace Co. and the North American Lace Co., which started the manufacture of Levers lace under the present tariff, have spent to date \$1,165,000, exclusive of plant or machinery, exclusive of investment cost. Our sales to date have been less than \$600,000. In other words, we have spent double what we have sold, but we feel we are making decided progress, and under the present duty of 70 per cent we can contribute toward the development of American industries that will be in every way worth while.

Mr. HILL. Has the price of lace, as compared with foreign prices, decreased since 1909?

Mr. TURNER. Very materially.

Mr. HILL. So that the American people, notwithstanding the high duty, are getting the same article at a very materially reduced price, as I understand you to say?

Mr. TURNER. The Government states that about one-half of all lace made abroad is imported to America. I do not know positively

PARAGRAPH 351—NOTTINGHAM LACES.

whether that is so or not. I take that from the reports of the Bureau of Commerce and Labor. If half of the machines abroad send their laces to this country, then the proportion of the machinery in this country is 15 per cent of the entire machinery that is working on the American consumption.

Mr. HILL. Then the effect has been, as I understand in a general way, that the product of half of the machinery of Europe has been coming to this country?

Mr. TURNER. The sales for 1912, as nearly as I can approximate them, are about \$2,500,000 of Levers laces. The production of \$2,500,000 of Levers laces has been a sufficient quantity to cause the foreigner to come down as low as he can in his cost, with the result that notwithstanding the advance in duty, laces have been coming in ever since at the lower prices.

Mr. HILL. What has been the effect on the wage market by the establishment of this industry in Europe?

Mr. TURNER. On the Levers laces, it has probably lowered it just a little.

Mr. HILL. Does the Asquith agreement relate entirely to the Levers lace territory?

Mr. TURNER. I so understand it.

Mr. HILL. Do you know the substance of that agreement?

Mr. TURNER. Yes; I have seen it.

Mr. HILL. Will you kindly give us the gist of that and tell us when it went into effect?

Mr. TURNER. I can not say positively, but I think two years ago.

Mr. HILL. Since the Payne tariff bill was passed?

Mr. TURNER. Yes. After the Payne tariff bill was passed, the free districts of England, where the bulk of the lace is made—it is not all made in Nottingham, you understand—made contracts with their labor to work for a special price. A manufacturer would say, "I can get a contract with this concern on this particular lace for so much. If you will labor for so much we will sell it and get this price." That became so atrociously low as affecting the wages that the Government took cognizance of the situation and tried to come to a settlement which covered not only the Nottingham district but the free labor in perhaps 80 per cent of the English districts where laces were made.

Mr. HILL. Then the effect of the Payne tariff bill, so far as concerns the duty and the free machinery clause, in general terms, has been to establish in this country a new industry, has it not?

Mr. TURNER. The result of the Payne tariff bill, as we have it as a matter of record, is that 62 per cent of the machinery of this country to-day making Levers laces came in under the free provision. That represented an investment of about \$4,000,000, roughly speaking. The result of it was to lower the prices of lace and wages here on account of the large quantity of machines which came in so quickly, have gone up perhaps illogically high in proportion to the time, because the demand for labor was so much greater than the supply.

Mr. HILL. Let me ask in regard to the character of the labor. Aside from the men to run the weaving machines, the industry is one

PARAGRAPH 351—NOTTINGHAM LACES.

which is especially adapted to the employment of girls or women, is it not?

Mr. TURNER. Two men running a Levers lace machine—because they run 18 hours of 24 hours in this country, while on the other side they run from 20 to 22 hours out of 24 hours—afford average employment to about 30 other people. Of that 30, I should think that 25 were female labor.

Mr. HILL. And that labor is very much more highly paid than it is in any of the competing countries of Europe?

Mr. TURNER. Based on our pay roll, as compared with the Government records to which we have access, I think we can prove as a matter of figures that it is two and one-half times.

Mr. HILL. That is practically in the development of an industry which gives a cheaper luxury, is it not; or practically a luxury, or do you come to regard it as a necessity, now that the price has been reduced so much during the past three years?

Mr. TURNER. Of course, the answer to that question hangs on the definition of the word "luxury." I believe you have used the term in your hearings "voluntary consumption." No woman need wear lace unless she does it for personal reasons of style, vanity, or luxury.

Mr. HILL. Those are motives that govern most of our actions, are they not? Then, you think as a result of the whole proposition, it has been a marked success?

Mr. TURNER. Unquestionably.

Mr. HILL. In developing an industry and reducing the cost of the product and furnishing a materially high class of labor good wages?

Mr. TURNER. I do not know of any proofs on the other side of that statement.

Mr. HULL. You say these Levers machines were not brought into this country on account of the tariff rates until they were allowed to be imported without duty?

Mr. TURNER. From a careful investigation, we would state the number of Levers lace machines at this time at 527. Figures differ as to whether 330 or 393 came in under the free provision.

Mr. HULL. There have been very few brought in under the 45 per cent tariff rate?

Mr. TURNER. Taking the minimum figures, 393 from 527, there were probably 134 machines here previous to the passage of the Payne tariff bill. Since the tariff, there have come in 393.

Mr. PALMER. A witness said yesterday there were 83 machines in the country before that time.

Mr. TURNER. He would have very great difficulty in proving it.

Mr. HULL. How long has that Levers machine been in use in the other countries?

Mr. TURNER. It really starts back about 1827, but the perfecting of the machine and the radical development of the industry in Calais has occurred within recent years. For instance, in the three years preceding the present tariff law there were more machines put into Calais alone than were brought into this country. There were 660 machines put into Calais. As I say, there were more machines put into Calais alone in the two years previous to 1909 than were brought into this country under the free exemption of the machinery.

PARAGRAPH 351—NOTTINGHAM LACES.

Mr. HULL. Would those machines have been imported so largely if this tariff rate had been reduced early?

Mr. TURNER. I could not answer that question. I can answer for ourselves. We went into the Levers industry not because the machinery was made free, but because the duty was advanced to 70 per cent.

Mr. HULL. Why is it that the lace and embroidery industry in this country only runs back so short a length of time?

Mr. TURNER. I know nothing about the embroidery industry in this country. I would like to eliminate that, because I know absolutely nothing about it.

The Levers lace industry in this country goes back to 1866. Previous to the present tariff law there were plants in this country making Levers lace, but they were all specialized on certain classes of goods which they thought they could make under the 60 per cent duty. The advance in duty seems to have had the effect of broadening that avenue of manufacture so that we have access to the entire lace market and can vary our plans according to the demands of fashion.

Mr. HULL. The fact does exist that prior to the suspension of this 45 per cent tariff rate on these machines only a small number were brought into this country and placed in use, but immediately upon the suspension of this rate an immense number came in and the industry increased in volume?

Mr. TURNER. I think the reason for that is this: The small firms rushed in because the duty was free. The large firms, who had been more or less studying the industry, because it relates to some extent to our business and we had been investigating the labor cost for years, went into the industry, not because machinery was free but because the duty had been advanced to 70 per cent.

Mr. KITCHIN. How much of these goods were imported before the duty was advanced to 70 per cent?

Mr. TURNER. I can not answer that question, because they were all brought in under the present paragraph 349. I can give the cotton imports of that entire schedule.

Mr. KITCHIN. I have that; but about how much do you think?

Mr. TURNER. We have no way of ascertaining.

Mr. KITCHIN. Do you think there were a great many more imports before 1909 than since?

Mr. TURNER. On the contrary; I think it is larger since 1909, because lace has been more in vogue. Laces are a fashion article.

Mr. KITCHIN. The increased tariff did not decrease the imports?

Mr. TURNER. Since the advance in the duty the imports, I think, have increased. Certainly 1912 increased over 1911.

Mr. KITCHIN. I am trying to get at whether this increased tariff, which induced you to go into the business, decreased the imports. Were there more imports before or after the increase?

Mr. TURNER. I think it increased.

The CHAIRMAN. What is the total production of these Levers machines in this country?

Mr. TURNER. In this country?

The CHAIRMAN. Yes.

PARAGRAPH 351—NOTTINGHAM LACES.

Mr. TURNER. I would estimate them at \$2,500,000. I see a statement has been made before the committee of about \$7,000,000. I take it the witness was sincere, but mistaken.

Mr. PALMER. It was stated yesterday by Mr. Berry—do you know Mr. Berry?

Mr. TURNER. No, sir; I do not.

Mr. PALMER. Mr. Berry represented the Richmond Lace Works. Do you know that concern?

Mr. TURNER. Yes.

Mr. PALMER. He stated that the total output of the lace industry was \$10,000,000.

Mr. HILL. That included curtains?

Mr. PALMER. No; I do not so understand it.

Mr. TURNER. Mr. Berry probably guessed. I am giving you actual figures in the statement I make, and any statement I make to the committee I can prove.

The CHAIRMAN. You mean the American production, under paragraph 350, that referred to laces made on the Levers machines, is \$2,000,000?

Mr. TURNER. I think about \$2,500,000. I do not see any way it could be more than \$3,000,000, because we have a tabulation of how many lace weavers there are in this country. The number of lace weavers is very much less than the number of machines. The number of machines in this country does not give a cue to the amount of the industry. It is the number of people on those machines that determines that. The number of lace weavers in this country could not make more than \$3,000,000 worth of laces.

The CHAIRMAN. The \$8,332,000 worth of imports under this schedule are entirely this class of laces. Under this paragraph 350 I notice that in the year 1912 the imports amounted to \$8,332,000, as shown by the Treasury reports. I want to know whether those imports were entirely of the class of goods you refer to?

Mr. TURNER. Exclusively Levers laces. The gentleman who testified yesterday said there were \$35,000,000 imported.

Mr. LONGWORTH. Do I understand you to say you are now producing about \$8,000,000, and could produce \$12,000,000, but your labor is about only two-thirds employed?

Mr. TURNER. When I said that I was speaking of the Nottingham lace curtains. I am under the disadvantage of speaking for two paragraphs. I made that response entirely with reference to the Nottingham lace curtains.

Mr. LONGWORTH. That did not apply to the general industry?

Mr. TURNER. In the Nottingham lace-curtain industry we could produce one-third more than is being used to-day.

Mr. LONGWORTH. Suppose you could run full time instead of only two-thirds time in the Nottingham industry, would that materially decrease your cost production?

Mr. TURNER. Yes; but what would we do with the goods? We can not send them into any other market. We have investigated every channel. When the machinery production is larger than the uses of the domestic market, one of two things happen: You either have

PARAGRAPH 351—NOTTINGHAM LACES.

to restrict the production or you have the very closest kind of competition. There is not a Nottingham lace-curtain mill in the United States that is making 7 per cent clear on its capital.

Mr. HILL. How low a yarn, in count, do you use on the Levers machine?

Mr. TURNER. On the Levers machine, the answer is in the fashion.

Mr. HILL. I mean how low do you use ordinarily?

Mr. TURNER. At the present time the Quaker Lace Co. is using nothing below 120.

Mr. HILL. Can you get that manufactured in this country?

Mr. TURNER. No, because it is all bobbin yarn. Bobbin yarn has all to come from the other side for the Levers industry.

Mr. HILL. The Government is getting a very considerable revenue from the yarn imports for the Levers machines?

Mr. TURNER. On our Levers yarns used in 1912 by the Quaker Lace Co., from which we make the finest grade of laces attempted in this country, the ad valorem equivalent on yarns was 42 per cent. It was 29 per cent plus on the curtain yarns.

Mr. HILL. About 30 cents a pound on the 120's, is it not?

The CHAIRMAN. Mr. Turner, suppose we reduce the duty on yarn and leave the same duty on Nottingham laces, would that have any disposition to make this schedule prohibitive?

Mr. TURNER. I think not. I do not think any schedule can be prohibitive with conditions existing as they do now in the Nottingham lace-curtain industry.

The CHAIRMAN. It is undoubtedly very competitive right now. There is no question about that. That is shown by the figures.

You say these bobbin yarns are 42 per cent?

Mr. TURNER. The yarns which the Quaker Lace Co. are using to-day in its Levers lace industry are 200's, which pay a specific duty of 60 cents; the 180's a specific duty of 54 cents; the 160's a specific duty of 48 cents; the 140's a specific duty of 42 cents; the 120's a specific duty of 37 cents; the 100's a specific duty of 31 cents. Of course the proportions of these yarns vary, but for the year 1912 the ad valorem equivalent of all foreign yarns used by the Quaker Lace Co. that went into its Levers laces was between 40 and 42 per cent.

Mr. HILL. Then we are getting a reduced cost of product and we are getting a very large revenue from the yarns, are we?

Mr. TURNER. We are getting a reduced cost of products and a revenue from the yarns, an increasing revenue on the laces, because the trend is toward finer goods.

Mr. HILL. Is there any climatic reason why we can not make that yarn in this country—120's and up?

Mr. TURNER. Absolutely none. Back when the Dingley bill was passed it was testified before this committee by an importer in New York, that curtains made in this country would not stand the wear and tear of laundering owing to climatic conditions. We are still in the business.

The CHAIRMAN. Suppose the reduction on this bobbin yarn came down one-third on the present rates, how much difference would that make in your business?

Mr. TURNER. I could not answer that, Mr. Underwood, because the demands of the yarn vary so with different classes of goods. The

PARAGRAPH 351—NOTTINGHAM LACES.

only thing I have figured on was what it would be equivalent to on Nottingham lace-curtain yarns, where the percentage of domestic yarn is about 36 and the foreign yarns about 34. But in laces two years ago, when this bill was passed, we had almost entirely American yarns, because it was true that at that time laces were in demand which were heavier. To-day the shadow laces have come into vogue, and if you will ask your wife she will tell you what a shadow lace is. They are made from the very thinnest and finest yarns, and the result is for the last nine months we have not used any domestic yarns at all, and 120 has been our minimum number.

The CHAIRMAN. If the tariff on yarn was reduced one-third, what would be the corresponding reduction on paragraph 350 that would equalize that?

Mr. TURNER. That would have to be very carefully figured out.

The CHAIRMAN. If you desire to do so, we would be very glad to have you submit figures.

Mr. HULL. You may have stated, but I did not hear you if you did, what the amount of domestic production of laces is as compared with foreign importations of like products.

Mr. TURNER. The only comparison would have to be made on the basis of the Levers laces. I could not speak with any intelligence of laces not made on a Levers machine, but of the product of the Levers lace machine, I think from \$2,500,000 minimum to \$3,000,000 maximum was made in this country in 1912, and the imports were over \$8,000,000.

Mr. HULL. Why is it that, during all these years that the rates ranged from 50 to 70 per cent, our manufacturers had not built up this industry more rapidly?

Mr. TURNER. We all know the difference between success and failure hangs on a very slight margin. The difference in the case of the Levers laces is the difference between 60 and 70 per cent. On 70 per cent you are able to have a business in this country. On 60 per cent, there will be a very small business.

Mr. HULL. You have had as much protection as you have asked for heretofore, have you not?

Mr. TURNER. We never asked for 70 per cent, because we were not in the business at that time.

Mr. HULL. How long would it take to build up this industry with all the protection that you might ask for, say that you could produce enough of these goods to supply the market?

Mr. TURNER. I can only testify accurately on the things that have happened, but I will prophesy on things that may happen, and this is merely a prophecy: I should think 10 years would be sufficient to build up in this country a strong, sturdy industry—and by industry I mean one which can meet all these demands which fashion dictates. In the Nottingham lace-curtain business our fashion does not change. The curtain we made five years ago will bring within 20 per cent of its value to-day.

In the matter of laces, if they are in demand and are in vogue, and the people want them, they apparently will pay any price; but if they are not in vogue you can hardly give them away. The result is that to have an American industry you will have to meet those conditions,

PARAGRAPH 351—NOTTINGHAM LACES.

as they do abroad. To-day it is a class of goods made out of the finest yarns; to-morrow it may be a class of goods made out of the domestic heavy yarns.

Mr. HULL. You mean with this tariff duty continuing for 10 years you will be able to produce in this country enough laces to satisfy a majority of the American demand?

Mr. TURNER. I do not think so, because in a fashion article multiplied manufacturers can bring out that which the people want better than any one small percentage of manufacturers. I do not think in the lace business you will ever have a domestic market manufacturing anything like the quantity that will be used. They may make half of it.

Mr. HULL. That just applies to this country?

Mr. TURNER. Yes.

Mr. HULL. Other countries supply domestic markets, and supply most of our market?

Mr. TURNER. There are 26 domestic lace manufacturers in this country. In the French district alone there are over 1,400.

Mr. HULL. If this tariff were suspended again on these machines and they were imported in proportion to the number that were imported when the tariff was suspended under the Payne law, the industry would climb up much more rapidly, would it not?

Mr. TURNER. It would put more concerns in the business, and the more concerns there are in the business the cheaper we make the product. It is a little hard for those who are in it, but it is along the line toward progress.

The CHAIRMAN. That seems to be all; you may be excused, Mr. Turner.

BRIEF IN RE LACE CURTAINS AND LACES.

NEW YORK, *January 11, 1913.*

DEAR SIR: We beg to present our views in regard to paragraphs 350 and 351 of the existing tariff law, relating to Nottingham lace curtains and lever laces. We call attention to the fact that these articles are distinct from each other, made on different machines, to meet different classes of demand, and are imported and distributed under different conditions. Each of them, also, is quite distinct from embroideries, although the latter are provided for in paragraph 349, along with certain classes of laces. Some misapprehension has apparently arisen at hearings in previous Congresses, owing to confounding together statements relating to these three differing classes of articles.

The Nottingham lace-curtain industry has been established on comparatively firm foundations since about 1897, and now supplies more than 90 per cent of the American demand for these articles. The business of manufacturing lace on the lever and go-through lace machines, although attempted on a small scale a generation ago, has attained its present development only since the enactment of the tariff of 1909. The two industries stand, therefore, upon somewhat different footing and will be discussed separately in this brief. The Nottingham lace-curtain industry has vindicated its right to exist by reducing retail prices to the consumer; the lever lace industry as yet supplies only a small portion of the American demand, but is in a fair way to bring down prices ultimately in the same way.

NOTTINGHAM LACE CURTAINS.

In the Nottingham lace-curtain industry are now employed some 6,000 skilled operatives with an annual production at wholesale prices of about \$8,000,000. There are now in use in this country some 487 Nottingham lace-curtain machines, which were imported under a duty of 45 per cent. They represent, duty paid and with the

PARAGRAPH 351—NOTTINGHAM LACES.

plant required for their operation, about \$20,000 per machine, or a total plant value of at least \$9,000,000. A list of these machines, according to location, is appended to this brief as Exhibit A. It is worthy of note that the Nottingham lace-curtain machines can be installed only in special types of buildings. From this and other causes, the capital investment required is exceptionally large in ratio to product, the value of the "turn over" representing in a year less than the value of the investment in the plant. Obviously, such an investment would have been made only in the belief, based upon the formal legislative acts of the Government, that the equitable relation established between the duties on curtains, raw materials, machinery required for their production, and other competing foreign goods would not be changed suddenly and arbitrarily or without due consideration of these conditions.

The duty on materials employed.—The raw materials of Nottingham lace curtains are cotton yarns, of which a large proportion are bobbin yarns, which are not made in this country. Analysis of the consumption of yarns used by one of the signers of this brief during the year 1911 showed that \$445,000 was paid for American yarns and \$243,000 for imported bobbin yarns, laid down with duties paid at the average rate of 29.25 per cent ad valorem. The domestic yarns, which form 64 per cent of the raw material in value, are produced almost exclusively in southern mills, while the bobbin yarns are made entirely in England, and there is no indication that American mills are likely to produce them in commercial quantities in preference to other goods which they can produce more easily and at a greater profit. Obviously, it seems to us if an adjustment of duties is to be sought which is equitable and scientific such an adjustment must recognize the justice of a duty on curtains to compensate for the duty on the raw materials used, quite apart from what may be added to equalize labor costs and other factors in American production.

Labor cost and wages.—The labor cost of producing Nottingham lace curtains in the United States is much greater than in Europe. Affidavits were submitted to the Committee on Ways and Means in 1908, made by several workers who had come from English and Scotch mills to America, which showed differences in wages paid of 68½ per cent over the union rates in Nottingham, England, and from 164 per cent to 327 per cent over the rate paid in Scotland (see tariff hearings, 60th Cong., 2d sess., Doc. No. 1505, pp. 4833-4834). Comparison of rate cards now in force show substantially the same differences. While these figures relate specifically to skilled labor, it is notorious that the less skilled services, performed largely by women and children, command in this country rates two or three times those paid abroad.

On the subject of weavers' wages, a memorandum appended to this brief as Exhibit B, made by one of the signers, shows increases between December 4, 1897, and June 3, 1907, amounting to 52½ per cent, calculating each of the six different increases as a percentage of the wage paid at the time of the increase, but really representing 64.44 per cent increase upon the original wage rate of 1897. In addition to this increase in money wages, working hours were reduced from 58 to 51 hours per week on the day shift and 50 to 45 hours on the night shift. While there have been fewer increases in money wages paid to weavers since 1907, there have been a number of readjustments of wages upon particular classes of work and in the classification of work, all of which have added to the real wage earned by the laborers in these classes. If the reduction in time, amounting to more than 10 per cent, is added to the increase in money wages, the cost of labor for a given period of work is now at least 75 per cent greater than in 1897.

Prices to the consumer.—It is not possible to make exact comparisons of the prices of Nottingham lace curtains to the consumer in times gone by with those now prevailing, because of the constant changes in style of goods. Speaking generally, it is well known to importers that goods of substantially the same quality and attractiveness of pattern can now be obtained much cheaper than before American manufacturers entered the field. This is not because the American manufacturer can actually produce cheaper than the foreign manufacturer, but because he has reduced the margin of profit charged. The effect of American competition has been to bring down importers' profits to a moderate return on cost. Gradually, as the American industry grew in magnitude, it created an organization for selling curtains which distributed them widely in the hands of jobbers and retailers throughout the country, and put them within reach of people of small incomes as a familiar means of household comfort and ornamentation.

With the loss of the bulk of the American trade, foreign manufacturers have made less effort to adapt their patterns to American taste and have thus to a considerable degree withdrawn from the market. If a reduction of duty should be made, however, which made the American market more accessible to them, more attention would be

PARAGRAPH 351—NOTTINGHAM LACES.

paid to its requirements and an effort would probably be made to build up an organization for distributing foreign curtains and thereby driving American manufacturers out of business.

We believe, therefore, that the continuance of existing duties on lace curtains is necessary to the maintenance of reasonable prices for curtains to the American consumer as well as to the maintenance of the industry in sound condition.

Even under present conditions, with American manufacturers supplying over 90 per cent of the domestic demand, they are not working their machinery to its full capacity. The capacity of the Nottingham lace-curtain machines in the United States is about \$12,500,000 annually, while the actual production is only a little in excess of two-thirds of this amount, or from \$8,000,000 to \$9,000,000. To reduce duties to a point intended to increase importations would throw out of employment a proportionate amount of machinery and skilled laborers. From a revenue point of view, the gain would be almost negligible under any rate which we believe your committee would be disposed to consider. With annual imports at the present time of about \$280,000, the duty, which works out on an average at about 52 per cent, affords a revenue of about \$145,000. If the duty were reduced to 40 per cent and the effect was to transfer business to the amount of \$2,500,000 from American to foreign mills the total duties collected would be \$1,000,000, or an increase of about \$850,000. We submit that this is too small a gain to the public revenue to afford grounds for crippling an industry and throwing out of employment several thousands of laborers. Such a policy, moreover, would go further in its injurious effects than the mere pro rata loss shown by the substitution of foreign for domestic product, because it would materially reduce the proportion of product to value of plant, which is already low as the result of the large capital investment in imported machinery and special buildings. The equipment for the manufacture of Nottingham lace curtains is not capable of being diverted to any other form of production, and the tendency of impairing seriously its earning capacity would be to destroy the value of nearly the entire capital invested and to deprive of a livelihood all the skilled labor now employed.

LEVER LACES.

The production of laces in the United States upon a commercial scale is essentially a new industry. While spasmodic efforts were made as early as 1866 to manufacture laces, through the importation of foreign lace workers and machinery on a small scale, they produced little effect down to the enactment of the tariff of August 5, 1909. Under that act lever and go-through lace machines were admitted to the United States free of duty if imported prior to January 1, 1911. The result has been that there are now 527 such machines in the United States, of which 330 have been imported free of duty. The cost of these machines, with accessories, set up and ready to run in America, is about \$7,500 each, making the total investment under the present tariff about \$2,400,000, apart from plant and other expenses. With the object of putting this industry upon its feet, the request was made of the Sixtieth Congress that a system of specific duties be adopted. This request was rejected, but the rate of duty was fixed at 70 per cent ad valorem.

In this industry the yarns employed for fashion laces and most in demand at present are imported from abroad. The importation of machinery free of duty was a provision of the act of 1909, not asked for or suggested by your petitioners, but was embodied in the law upon the recommendation of an expert of the United States Department of Commerce, with the object of encouraging the creation of a distinctive American lace industry, and was accepted and capital invested under it by your petitioners in the belief that the Government would not arbitrarily and hastily abandon and reverse a decision thus deliberately adopted upon its own sole initiative.

Labor cost of skilled artisans.—This industry has gone through the same experience as the curtain industry in its earlier history in being compelled to offer exceptional rewards to skilled workmen to come to the United States for the purpose of establishing the manufacture. A memorandum furnished by one of the signers of this brief on May 31, 1912, for the use of the Tariff Board, is appended hereto as Exhibit C, showing the high wages paid to designers and skilled workers in the various processes of the industry. The wages paid at the date of this communication were not less than twice the compensation which was contracted for, which compensation averaged three times what these men were getting in their positions in England.

Duty does not affect retail prices.—In spite of the comparatively high rate of duty imposed by the existing tariff on Levers laces, in lieu of the rate of 60 per cent under the previous tariff, and in spite of the high cost of initial installation in America, the

PARAGRAPH 351—NOTTINGHAM LACES.

industry is one in which these factors count but little in fixing retail prices. The manufacturer's price is determined by his cost of manufacture, but not so the price to the consumer. This is determined by the attractiveness of designs and the demand which may develop among consumers for particular patterns. If a pattern proves attractive, the retailer may and often does add 100 to 125 per cent to the price which he pays to the importer or to the American manufacturer. On the other hand, if he finds that he has purchased more of a certain pattern than he can readily sell at such an advance, he may reduce his profit to 15 per cent, or even sell at a loss to close the lot out. Very few purchasers at retail are sufficiently expert to determine the cost of manufacture of a piece of lace except in a general way and will pay two or three times as much for a pattern which attracts them as for another pattern of the same quality which is less attractive.

The reduction of the duty from 70 per cent to 60 per cent, or even to 50 per cent, would therefore have practically no effect upon the price of patterns which proved attractive to discriminating purchasers. A piece of lace costing 10 cents a yard to manufacture abroad would cost 17 cents with the duty added at the existing tariff rate (apart from other items), and the same piece of lace would cost 16 cents a yard to the importer at a duty of 60 per cent and 15 cents a yard at a duty of 50 per cent. Obviously, when the retail price was fixed at from 50 to 100 per cent above these figures, the difference between one and the other would have practically no influence if the goods were attractive to consumers. It is a simple principle of economics—the price of a pure luxury is determined not by costs but by demand.

Laces are imported almost entirely for ornamental purposes and must be classed exclusively as luxuries, if the term luxury marks a definite distinction between what is necessary to health, cleanliness, and comfort and that which is essentially ornamental. The higher the quality of goods, other things being equal, the higher is the price and the larger the revenue which is derived from the ad valorem duty of 70 per cent levied by the existing tariff. It does not seem to us that public policy demands a reduction of duty upon an article so exclusively a luxury, which affords so large a revenue, and where the tariff falls most heavily, in exact proportion to value, upon the high-grade goods consumed by the rich and prosperous.

In view, therefore, of the fundamental character of this article as a luxury, the fact that the price is determined not so much by cost as by taste and fashion, and that much American capital has been invested in laying the foundations of the industry in this country, we feel justified in asking that the existing rate of duty be retained.

Yours, very respectfully,

Patchogue Mfg. Co., I. D. Einstein, president; Regina Lace Co., Clarence Whitman, president; Wilkes-Barre Lace Mfg. Co., Clarence Whitman, treasurer; Bromley Mfg. Co., National Lace Co., Quaker Lace Co., Joseph H. Bromley, president; North American Lace Co., Wm. L. Turner, president.

Hon. OSCAR W. UNDERWOOD,

Chairman of the Committee on Ways and Means, Washington, D. C.

These advances apply to our entire product.

Increase:	Per cent.
Dec. 4, 1897.....	15
Aug. 13, 1898.....	7½
July 1, 1899.....	5
Jan. 13, 1900.....	15
Apr. 1, 1903.....	5
June 3, 1907.....	5

Working hours reduced from 58 to 51 on day shift.

Working hours reduced from 50 to 45 on night shift.

The following increases apply to special grades of work:

January 30, 1911, all square grounds were advanced one-half cent per rack above the card rate. On the gauges we make this means an average raise of 4½ per cent.

On the same date we agreed to pay for all nets on the basis of full punched curtains, which amounted to an increase of one-quarter cent per rack. Approximately, this increase is equivalent to from 2½ to 3 per cent.

On September 30, 1912, all goods classed as "linen effects" had 1 cent per rack added to the card rate, the gauges effected being 6, 7, 8, 10, and 12. This advance averages 10½ per cent.

PARAGRAPH 351—NOTTINGHAM LACES.

BRIEF SUBMITTED BY LACE CURTAIN MANUFACTURERS.

NEW YORK, *January 11, 1913.*

DEAR SIR: The undersigned American manufacturers herewith present a statement outlining the conditions existing in the industry of manufacturing Nottingham lace curtains by the pair and by the yard.

Previous to 1897 the lace curtain industry in this country languished, mainly because the duties were on an ad valorem basis, and as it calls for expert knowledge to decide on the value of lace products, undervaluation was practiced to a great extent. To overcome this condition the tariff act of 1897 provided for a combination of specific and ad valorem duties, and from the time it took effect the American industry started to prosper. There can be no question but that a specific basis is the most equitable method for arranging duties on our product.

Over two-thirds of the yarns we use, which comprise from 20/2 to 50/2, are spun in this country in the Southern States; the balance, above 50/2, is imported, because up to date the American spinner has not produced the finer counts in qualities suitable for lace weaving. Since 1897 the prices of American spun yarns have increased as follows:

	Average price per pound, 1897.	Average price 1910-1912.	Average price to-day.
20/2.....	\$0.14	\$0.21½	\$0.24
24/2.....	.15½	.23½	.26
30/2.....	.17	.26	.30
40/2.....	.22	.33	.39
50/2.....	.32	.38	.46

The American manufacturers pay their labor over 50 per cent more than is paid in England, and from 100 per cent to 200 per cent more than is paid in Scotland. England originally supplied all the Nottingham lace curtains consumed, but Scotland, because of its great advantage over England through lower wages, is rapidly cutting into the English trade. The manufacturers have started to operate machines in Scotland 133 hours weekly, with three weavers, which they consider full time (see Exhibit A), while in this country, when there is sufficient business to run full time, we only operate our machines 97 hours. The result is, the Scotch manufacturer, on the above basis, gets one-third more production per machine on his investment, which in turn reduces his fixed charges per pair or per yard, and his manufacturing cost is correspondingly lowered. It should also be borne in mind that the Scotch manufacturer pays only one-third of what the American manufacturer does for labor.

In considering the above we beg to call your attention to the fact that the foreign manufacturer saves the 45 per cent duty which all American manufacturers have paid on all their machinery, and the investment in buildings, etc., in this country is naturally on a much higher basis than in Europe.

There seems to be a general impression that American skilled labor is capable of producing and does produce a greater output in a given time than the same class of labor does in other countries. This, however, is not a fact in the lace-curtain industry, for the reason that the volume of product is governed by the speed of the machine, which can not be increased without seriously damaging the machine and producing imperfect goods, the loss on which would more than offset any gain which might be made in production.

The figures of the United States Government reports show the following to be the average rate of duty paid during the last five years:

Year ending June 30—	Per cent.
1908.....	51.60
1909.....	55.82
1910.....	52.98
1911.....	50.00
1912.....	52.04

Average rate of duty for the last five years..... 52.49

PARAGRAPH 351—NOTTINGHAM LACES.

Surely, these figures do not show that the duties on our goods are excessive, when it is remembered that lace curtains are luxuries.

Previous to 1897 the great bulk of our goods were sold by the foreign manufacturers to importers in this country, who, in turn, sold them to the retail distributors. After the tariff act of 1897 the foreign manufacturers gradually withdrew to a large extent from this market. However, during the last few years they have been establishing selling agencies in this country, to sell direct to the retail dealers, which in the last five years has resulted in a steady increase in imports, as per the following figures taken from the United States Government reports:

Year ending June 30—

1908.....	\$71, 812
1909.....	79, 063
1910.....	219, 922
1911.....	265, 782
1912.....	278, 868

This shows an increase of over 290 per cent in imports in five years, under our present tariff, and we who are conversant with business conditions in our line look for a continued increase of importations, as other foreign manufacturers learn that they can sell their goods in this market under the existing tariff conditions.

On the Nottingham lace-curtain machine it is impossible to weave other than the one fabric, so if our market is taken from us, the machines will be absolutely useless.

For the foregoing reasons, we submit that any reduction in the duties provided for in Schedule J, paragraph 351, of our present tariff laws, or a change from specific and ad valorem duties to all ad valorem, will work an irreparable injury to American manufacturers, force down wages, and possibly result in the loss of employment for a large number of well-paid expert workers in our lines.

Very respectfully, yours,

International Lace Co., Geo. E. Laskey, President, Gouverneur, N. Y.;
Wyoming Valley Lace Mill, W. T. McKees, Vice President; United
States Lace Curtain Mills, Edgar F. Stiner, Treasurer; Chester Lace
Mills, Chester, Pa.

HON. OSCAR W. UNDERWOOD,

Chairman of the Committee on Ways and Means, Washington, D. C.

BRIEF OF THE SCRANTON LACE CURTAIN CO., SCRANTON, PA.

SCRANTON, PA., *February 3, 1913.*

HON. OSCAR W. UNDERWOOD,

*Chairman Committee on Ways and Means,
House of Representatives,
Washington, D. C.*

DEAR SIR: In compliance with your oral request made when I was before your committee on January 24, 1913, I would state that we have given very careful thought concerning your queries as to the classification and differentiation of Nottingham lace curtains and the various grades thereof, and I beg leave to submit the following:

First. That Nottingham lace curtains should properly be placed in the cotton schedule rather than Schedule J.

Second. That the Nottingham lace curtain industry and the Levers lace industry are so entirely separate and distinct, that I would emphasize the point raised in our brief, namely, that they should be treated absolutely separately and apart, each upon its own merits—the mere fact that certain curtain manufacturers have also gone into the Levers lace not being permitted to confuse the situation.

Third. That inasmuch as the consumption in this country of Nottingham lace curtains is distinctly decreasing, the consumption last year being about \$8,500,000, while domestic capacity of output is estimated variously from twelve and a half to fifteen million dollars, it becomes clearly evident, first, that any foreign importations would simply displace that amount of home product, and secondly, that any decrease in the existing tariff on low grade goods would bring about such displacement, as is evidenced from the comparison of English cost with our own, as shown in Exhibit C attached to our brief, and which comparison is made with English goods obtained in Canada.

PARAGRAPH 351—NOTTINGHAM LACES.

It would, therefore, seem that no appreciable change could be made in the tariff upon Nottingham lace curtains without injury to the industry, unless possibly it might be a slight raise upon high grades, of which importations are made annually, and which, in a sense, might be regarded as a luxury.

I would again emphasize what was so clearly established through our brief, and which I understood that you orally acknowledged, namely, that there is and has been in this industry genuine and bona fide competition, that there exist no contracts or conspiracies in restraint of trade, either expressed or implied, neither have there been any such to my knowledge; in short, that we come within the modern conception of legitimate business, whether legally or economically speaking.

Respectfully submitted,

J. BENJAMIN DIMMICK, *President.*

BRIEF OF MARSHALL FIELD & CO., CHICAGO, ILL.

CHICAGO, *February 14, 1913.*

HON. OSCAR W. UNDERWOOD,
*Chairman of the Ways and Means Committee,
House of Representatives, Washington, D. C.*

DEAR SIR: We beg to refer to our statement on Nottingham lace curtains, covered by paragraph 351 of the present act, and copy of which we inclose herewith. This statement was filed with the clerk of your committee, but we do not find it in the printed record, and have taken the liberty of again drawing your attention to same. We are importers and domestic manufacturers of these curtains, importing only the finer gauges, namely, from 10 point up.

In order to more clearly demonstrate to your committee the comparative cost to manufacturer in this country and England, we have selected curtains of exactly the same gauge and quality from our import and domestic lines, and in the inclosed statement we give a comparison of the costs to manufacturer in the country as against the cost to importer.

We also filed with your committee samples of the curtains selected for your inspection. Not being importers of six and eight point curtains, we can give you only comparisons of the higher gauges. The comparisons given in the inclosed statement, however, do actually show the comparisons upon gauges from 10 point up, and upon these gauges the present duty does not more than equalize the difference in the cost to manufacturer in this country and Great Britain. We do not desire to unnecessarily burden your committee, but feel that our position as both importers and domestic manufacturers places us in a position to give information to your committee not otherwise obtainable.

An agent of the Tariff Commission made a careful investigation of our plant, of both our lace-curtain and our Levers-lace factories, and we believe that his report will undoubtedly give your committee many facts regarding both the above industries which may be of value.

Respectfully,

MARSHALL FIELD & Co.,
By THOMAS H. EDDY.

WASHINGTON, D. C.,
January 23, 1913.

The WAYS AND MEANS COMMITTEE,
House of Representatives.

GENTLEMEN: We respectfully desire to call your attention to paragraph 351 of Schedule J of the present tariff act, providing for lace window curtains made on the Nottingham lace curtain machine or on the Nottingham warp machine, and composed of cotton or other vegetable fiber, when counting 5 points or spaces between the warp threads to the inch, 1 cent per square yard; when counting more than 5 points or spaces to the inch, one-half of 1 cent per square yard in addition for each such point or space to the inch in excess of 5; and in addition thereto on all the foregoing articles in this paragraph 20 per cent ad valorem; provided that none of the above articles shall pay a less rate of duty than 50 per cent ad valorem.

As manufacturers of lace curtains (our plant is situated at Zion City, Ill.) we would urge the retention of the present rates and method of classification, particularly the feature of specific duties, on the grounds that the present rate of duty practically equalizes the cost to manufacture in the United States as compared with Great Britain.

PARAGRAPH 352—BURLAPS.

In support of our contention, we submit herewith comparative labor rates per month paid in this country and Great Britain, and covering the various steps in the manufacture of lace curtains.

	Prices paid in United States.	English prices.
Curtain designing and drafting.....	\$90 to \$125	\$35 to \$65
Reading.....	75 to 95	25 to 40
Punching.....	50 to 70	18 to 25
Weavers.....	75 to 130	50 to 80
Mending.....	25 to 55	13.50 to 20
Finishing.....	28 to 45	9 to 15
Warping (time-work by the month).....	60 to 120	30 to 45

Rates in Scotland about 20 per cent less than England.

We have also selected certain curtains made at our factory in Zion and certain curtains which we have imported for our wholesale jobbing business, where we could find close comparisons, samples of which we submit herewith.

Below we give the comparative cost to manufacture in this country as compared with the cost to import under the present tariff.

	No.	Quality.	Point.	Size.	Cost.	Exhibit.
Cost to manufacture in Zion.....	038.....	81	14	54 by 3	\$1.98	1A.
Cost to import.....	8303.....	81	14	52 by 3	2.09	1B.
Cost to manufacture in Zion.....	35411.....	90	14	54 by 3	1.97	2A.
Cost to import.....	8202.....	90	14	50 by 3	1.95	2B.
Cost to manufacture in Zion.....	032.....	81	14	52 by 3	1.94	3A.
Cost to import.....	8472.....	81	14	50 by 3	2.11	3B.
Cost to manufacture in Zion.....	8371.....	108	16	50 by 3	2.67	4B.
Cost to import.....	07.....	108	16	52 by 3	2.48	4A.
Cost to manufacture in Zion.....	35940.....	108	16	52 by 3	2.50	5A.
Cost to import.....	8462.....	108	16	50 by 3	2.67½	5B.

Respectfully submitted.

MARSHALL FIELD & Co.
THOMAS H. ERDDY.

PARAGRAPH 352.

Plain woven fabrics of single jute yarns, by whatever name known, weighing not less than six ounces per square yard and not exceeding thirty threads to the square inch, counting the warp and filling, nine-sixteenths of one cent per pound and fifteen per centum ad valorem; if exceeding thirty and not exceeding fifty-five threads to the square inch, counting the warp and filling, seven-eighths of one cent per pound and fifteen per centum ad valorem.

BURLAPS.

TESTIMONY OF E. V. BENJAMIN, REPRESENTING MENTE & CO., NEW ORLEANS, LA., ON THE SUBJECT OF BURLAPS AND BAGS.

Mr. BENJAMIN. I understood that I was to be heard to-morrow afternoon, and I have not my brief.

I will be glad to make my oral statement and then put my brief in to-morrow.

The CHAIRMAN. You may put in your brief to-morrow.

Mr. BENJAMIN. Mr. Chairman, I represent Mente & Co., of New Orleans, manufacturers of burlap and cotton bags.

PARAGRAPH 352—BURLAPS.

As manufacturers of burlap bags and imported burlap, I want to first refer to paragraph No. 352, to which we, as manufacturers of burlap, have no special preference as to whether the duty shall be retained or not, as there is no interest in this country that can be protected or that needs to be protected by that special duty. The duty on burlap as in that paragraph has existed for nearly 20 years, and it has never given an impetus to the manufacture of burlap in this country. But it is nevertheless true that free burlap would interfere with the use of cotton constructions that are now being marketed all over the country. With the southern cotton crop annually increasing, these cotton bags, which are made of low-grade cotton, form a good outlet for that low-grade cotton. While the bag manufacturers of this country at large are not particularly interested in whether or not this duty on burlap is retained or not, we do believe that an article that is so widely distributed and of such general use would be, in its nature, a revenue producer. We think this vast quantity of cotton sheeting, osnaburgs, and other material that is now being used in competition with jute, should carry a tariff that would encourage us in producing these cotton goods throughout the country. It is a known fact that these cotton goods made out of these lower grades of cotton can be sold in competition with burlap, if burlap is protected to the extent of at least 20 per cent; that is, a tax to that extent, but they could not compete with burlap if burlap came into this country free.

The clause in which the bagging men of this country are particularly interested now is section 354: "Bags of sacks made from plain woven fabric"; that is, bags made of burlap. The differential duty between the burlap and the burlap bag is the difference between 15 per cent ad valorem and nine-sixteenths of a cent per pound on burlap and 15 per cent ad valorem and seven-eighths of a cent per pound on bags, or a total difference of five-sixteenths of a cent per pound between the burlap and the burlap bag. The average value of burlap bags is about \$70 per thousand. The average weight is about 800 pounds, and a differential of five-sixteenths would give the manufacturers in this country protection—if you wish to call it so—of \$2.50 per thousand, on the bags, which is scarcely $3\frac{1}{2}$ per cent of their value. It is a strange thing, and a very strong argument, to know that 90 per cent of the burlap bags that are imported into the United States are imported into the States of California, Oregon, and Washington, notwithstanding the fact that they manufacture burlap bags in the penitentiary at San Quentin, in California. Burlaps bags are manufactured in that penitentiary, but, notwithstanding that, 80 per cent of the consumption of the State is imported.

There is one thing, Mr. Chairman, that I tried to make very clear to you the last time I had the pleasure of seeing you. There seems to be a misunderstanding as to the use of burlap bags. Burlap bags are not used, generally speaking, by farmers. The farmer does not use the burlap bags, generally speaking. The only reason burlap bags are used as extensively as they are in the western States is on account of the lack of grain elevators, or, more importantly, that the grain, in passing around the Cape to go to Europe, must necessarily be sacked in order to prevent the cargo from shifting and the grain

PARAGRAPH 352—BURLAPS.

from being heated. Wherever you go in an agricultural district you will never see a farmer using a burlap bag. He is equipped with a dozen or two of cotton seamless bags, in which he will carry his product to the city; he will take the bags back home and they will last him 15 or 20 years. In my experience I have never seen a farmer use a burlap bag.

The CHAIRMAN. Burlaps are not used for cotton bagging at all, are they ?

Mr. BENJAMIN. No, sir; it is entirely different.

The CHAIRMAN. What is cotton bagging made out of ?

Mr. BENJAMIN. Jute.

The CHAIRMAN. Entirely out of jute ?

Mr. BENJAMIN. Entirely out of jute, Mr. Underwood. We are not interested in cotton bagging at all. Cotton bagging is exclusively used for cotton and burlap is used almost exclusively for the manufacture of bags and the wrapping of bales of merchandise. You will often see it on walls, instead of paper, in the form of decoration. It is printed and made into a cheap decoration of that kind.

We have also in Schedule J, section 358, which, as manufacturers, we recommend be left as it is.

Mr. KITCHIN. I want to ask you a question before you leave the subject of bags.

You say the farmers do not put wheat or corn or rye or any of that kind of products into burlap bags ?

Mr. BENJAMIN. Not in the burlap bags.

Mr. KITCHIN. What kind of bags do they put them in ?

Mr. BENJAMIN. As I say, the farmers will have at home maybe 15 or 20 cotton seamless bags—

Mr. KITCHIN. What kind of bags ?

Mr. BENJAMIN. Cotton seamless bags; bags made of cotton. They will carry their produce backward and forward in those bags.

Mr. KITCHIN. I understand that; but take the farmers of the West.

Mr. BENJAMIN. The farmers in Kansas, Iowa, Nebraska, Ohio, and Indiana never use burlap bags.

Mr. KITCHIN. I have seen carloads of bags of corn shipped out of different points. What kind of bags are those bags? What material are they made out of? They are certainly not made out of cotton.

Mr. BENJAMIN. I will explain that to you. You will find that corn is shipped in bulk to the elevators at the central point, but at a great many points in the South or southeast, for instance, in your part of the country, where there are no grain elevators, the grain men at Cairo, St. Louis, or perhaps Cincinnati and Nashville, will sack the corn in burlap bags and it is shipped down to these southeastern points—

Mr. KITCHIN. And bran ?

Mr. BENJAMIN. Yes; bran.

Mr. KITCHIN. And peanuts ?

Mr. BENJAMIN. Yes.

Mr. KITCHIN. They use nothing but burlap bags for peanuts ?

Mr. BENJAMIN. Yes, burlap bags.

PARAGRAPH 352--BURLAPS.

Mr. KITCHIN. Do not the farmers ship their cotton seed to the oil mills frequently in burlap bags?

Mr. BENJAMIN. No; they did that 20 years ago, but they do not do that any more.

Mr. KITCHIN. They sometime ship it that way in my country.

Mr. BENJAMIN. In bags?

Mr. KITCHIN. Yes; in bags, to the oil mills.

Mr. BENJAMIN. It has been many years since I have seen a sack used for cotton seed.

Mr. KITCHIN. Do not the oil mills use these burlap bags in shipments of cotton and meal?

Mr. BENJAMIN. Yes.

Mr. KITCHIN. That is one of the largest uses to which they are put.

Mr. BENJAMIN. Yes, sir.

Mr. KITCHIN. I knew they did not use cotton bags for those articles that I have enumerated.

Mr. BENJAMIN. The farmer does not use the burlap bags. The burlap bag is used to a great extent by manufacturers, such as flour millers, salt mines, and fertilizer manufacturers, and anywhere that bags are used for shipping the products of the manufacturer.

Mr. KITCHIN. There are just two kinds of bags used generally for those purposes, either cotton or burlap?

Mr. BENJAMIN. You mean for shipping?

Mr. KITCHIN. I mean for those purposes.

Mr. BENJAMIN. For shipping they use almost exclusive jute burlap.

Mr. KITCHIN. Is there any other material that they make bags out of for those purposes, except cotton or burlap?

Mr. BENJAMIN. No, just cotton and burlap.

Mr. KITCHIN. I have seen a great many articles shipped in bags. I knew they were not cotton bags, so they must have been burlap bags.

Mr. BENJAMIN. Yes. The burlap is used almost exclusively for the shipment of manufactured articles. In this section 358 of Schedule J:

All woven articles, finished or unfinished, and all manufactures of flax, hemp, ramie, or other vegetable fiber, or of which these substances or any of them is the component material of chief value, not specially provided for in this section, forty-five per centum ad valorem.

I wish to say that that section at that time was provided to give special protection to manufactures of burlap, hemp, and other fibers, such as printed and stained material and stamped material, and articles made of fine texture, and so on, which now come into this country and which are so strongly competitive with our cotton schedule.

Referring to Schedule J, for a moment, you will notice that in my brief I make a suggestion that is giving the importers of bagging a great deal of trouble. We import into this country from fifteen to twenty-five thousand tons of old bagging. This old bagging was imported mainly for use in paper mills in this country. This wood pulp is now used more commonly. The manufacturers of paper do not use this old bagging, and in recent years this old bagging has been imported here and is torn apart, shredded, and used for the upholstering of collar pads and furniture, and a great deal of this material also

PARAGRAPH 352—BURLAPS.

picked out and sorted and again sold as a covering for cotton. There has been a great deal of difficulty between the importers and the Government simply because there was no special provision made in the tariff regarding the classification of that material. It could not carry the rate that was applied on new bagging, which was six-tenths of a cent per square yard; the material could not be measured and the Government gave it a classification under Schedule N, in paragraph 479, as waste, not specially provided for in this section, with a duty of 10 per cent ad valorem. This language is rather ambiguous and I do not believe there has been more cases in any department of the Custom House appealed to the board of appraisers more than on this same classification.

The CHAIRMAN. I suppose it got in there through the Treasury ruling.

Mr. BENJAMIN. Yes, to facilitate. We have, therefore, provided a special paragraph and we would ask you gentlemen to put into Schedule J, for bagging and gunny cloth—that is, old bagging and gunny cloth, suitable for covering cotton, 10 per cent, ad valorem with a recommendation that should you put bagging for covering cotton on the free list, that you will put this grade of material on the free list as well.

The CHAIRMAN. Old bagging and gunny cloth?

Mr. BENJAMIN. Yes. You will find that in my brief. I think that will do a great deal to facilitate the importation of this material, if a special provision were made. I think it would be very desirable for the Treasury Department as well.

Mr. KITCHIN. I see that a great amount of burlap, not exceeding 30 threads to the square inch, is imported into this country.

Mr. BENJAMIN. Yes, sir.

Mr. KITCHIN. About \$25,000,000 worth?

Mr. BENJAMIN. Yes, sir.

Mr. KITCHIN. What is most of that used for?

Mr. BENJAMIN. Most of it is used for burlap bags, and the next greatest quantity is used for wrapping cotton goods and bales of material.

Mr. KITCHIN. Is much of it used to put on walls?

Mr. BENJAMIN. Yes, sir; a world of it.

Mr. KITCHIN. About what per cent of it would you suppose is used on walls?

Mr. BENJAMIN. I would say perhaps 5 per cent. It is a new industry in this country.

Mr. KITCHIN. Five per cent of the imports?

Mr. BENJAMIN. Yes, sir.

Mr. KITCHIN. And the other 95 per cent is used for what?

Mr. BENJAMIN. It is an industry, Mr. Kitchin, for which this clause was provided in that paragraph, in order to encourage that business in this country; and it is growing very nicely.

Mr. KITCHIN. What I want to know is is burlap that is used on the walls the same kind and quality of material that is used for bags, except that it is stained or printed?

Mr. BENJAMIN. It is the same grade of material, only a bit better in quality, but it is stamped, stained, and so forth.

PARAGRAPH 352—BURLAPS.

Mr. KITCHIN. It costs but little more in the finished state than in the raw state?

Mr. BENJAMIN. There is very little difference; not a difference of more than 5 per cent in the actual value.

The CHAIRMAN. That is all, Mr. Benjamin.

BRIEF OF MENTE & Co.

BURLAPS.

NEW ORLEANS, LA., *January 22, 1913.*

The WAYS AND MEANS COMMITTEE,
House of Representatives, Washington, D. C.

GENTLEMEN: I represent the firm of Mente & Co., of the city of New Orleans, La., manufacturers of burlap bags and cotton bags and importers of burlaps, burlap bags, and old bagging. Business established since the year of 1886, with factories at New Orleans, La., and Boston, Mass.

Schedule J, paragraph 352, reading as follows:

"Plain woven fabrics of single jute yarns, by whatever name known, weighing not less than six ounces per square yard, and not exceeding thirty threads to the square inch, counting the warp and filling, nine-sixteenths of one cent per pound and fifteen per centum ad valorem; if exceeding thirty and not exceeding fifty-five threads to the square inch, counting the warp and filling, seven-eighths of one cent per pound and fifteen per centum ad valorem."

We recommend this paragraph remain as it is.

Burlap is made of jute and chiefly in Calcutta, India, and Dundee, Scotland. Burlap is not made in the United States.

Imports into the United States are about 700,000,000 yards per annum—about 600,000,000 from India and about 100,000,000 from Scotland.

Chiefly used in this country for wrapping purposes and for the manufacture of bags, and largely used in the construction of manufactured articles; also is used, by being printed and stained, for the decoration of walls.

Burlap is at all times keenly competitive with cotton sheetings, drills, and osnaburgs. Two hundred million cotton bags are made annually for flour, cement, seeds, etc., which could be and would be displaced by any material reduction in the duty of burlap. The general use of cotton material for bag use and for baling use is continually growing and will reach very large proportions when cotton becomes more normal in price. It is the lower grades of cotton which are used for making sheetings for these purposes, and at all times is a very reliable outlet for these low grades of cotton. This is a great advantage to the cotton grower and gives a market for the low grades of cotton, which heretofore have brought very low prices in comparison with the better grades.

Schedule J, paragraph 354, reading as follows:

"Bags or sacks made from plain woven fabrics, of single jute yarns, not dyed, colored, stained, painted, printed, or bleached, and not exceeding thirty threads to the square inch, counting the warp and filling, seven-eighths of one cent per pound and fifteen per centum ad valorem."

We recommend this paragraph be changed to read as follows:

"Bags or sacks made from plain woven fabrics, of single jute yarns, not dyed, colored, stained, painted, printed, or bleached, and not exceeding thirty threads to the square inch, counting the warp and filling, one cent per pound and fifteen per centum ad valorem."

There seems to be a general misunderstanding regarding the use of burlap bags. Outside the States of California, Oregon, and Washington the farmers throughout the country use very few burlap bags. The entire consumption of burlap bags by farmers outside of the States and throughout the entire country is, in my opinion, less than 5 per cent of the total number of burlap bags made in this country, i. e., 450,000,000 bags annually, and I am safe in saying not 5 per cent of the grain crop of the United States is sacked.

Burlap bags are used for the packing of flour, chop, bran, and grain; by the oil mills for the packing of oil cake and meal; by fertilizer factories for the shipment of fertilizer; by cement factories, salt manufacturers, and for the general shipment of a vast number of manufactured articles.

PARAGRAPH 352—BURLAPS.

The differential duty at present between burlap and burlap bags is five-sixteenths of 1 cent per pound. The average weight of burlap bags is about 800 pounds per 1,000 bags. The average cost value is, in a normal market, \$70 per 1,000 bags. The differential duty is, therefore, five-sixteenths of 1 cent on 800 pounds, equaling \$2.50 per 1,000 bags of value of \$70 per 1,000 bags, or about 3½ per cent.

There are at present nearly 40,000,000 burlap bags imported into the United States, mostly into California, Oregon, and Washington. These bags are made in Calcutta. Much importance has been given to the daily outturn of an India operative as against an operative in this country. Burlap bags are made, in the main, by machinery, requiring very little skilled labor, and any operative can become expert in the making of burlap bags with 60 days' experience.

Average wages per day of 10 hours in this country:

Cutter.....	\$1.75
Sewer.....	1.25
Turner.....	.85
Baler.....	1.50

It would be superfluous to compare these rates with the rates which are paid in India, where the working time is 13½ hours per day.

The present duty of about \$2.50 per thousand bags above the duty of the same yardage of burlap, is not enough to protect the American operative against India competition, and by making the above change it would increase this differential duty one-eighth of a cent per pound, which is equal to about \$1 per thousand bags more, and would give us a differential duty above the cloth of \$3.50 per thousand bags. This change in the tariff would decrease the import of burlap-made-bags, and would relatively increase the import of burlap to be manufactured into bags in the United States, instead of India.

Schedule J, paragraph 358, reading as follows:

"All woven articles, finished, or unfinished, and all manufactures of flax, hemp, ramie, or other vegetable fiber or of which these substances or any of them is the component material of chief value, not specially provided for in this section, forty-five per centum ad valorem."

We recommend this paragraph remain as it is.

This paragraph was especially provided for to cover woven articles made of flax, hemp, ramie, jute, and other vegetable fibers, such as highly finished cloth made of flax, and jute, and which in construction are of high class, and would come in direct conflict with material of cotton construction, such as braids, bands, mats, and pads. It also was intended to provide against woven articles of jute, such as dyed, stamped and colored burlap, which is largely used for the decorating of walls, for hangings, curtains, tents, and awnings, and which are extremely competitive with cotton material used for the same purpose.

WHY BURLAP AND BURLAP BAGS SHOULD CARRY A DUTY.

Burlap is not manufactured in the United States; therefore there is no industry of this nature in the United States to protect.

The general use of burlap and burlap bags is well distributed throughout the country by manufacturers, shippers, and exporters, and are not generally used by farmers or by the laboring classes, and is, therefore, a reasonable proposition for "tariff for revenue only," and we believe further, the general use of cotton sheetings, osnaburgs and twills, as well as bags made of these articles, will rapidly increase if burlap and burlap bags are kept under the rates of duty as indicated in this brief.

MENTE & Co.,
E. V. BENJAMIN, *Of the firm.*

TESTIMONY OF W. H. BOWKER ON BEHALF OF THE BOWKER FERTILIZER CO., OF BOSTON, MASS.

Mr. Bowker was duly sworn by the chairman.

Mr. BOWKER. Gentlemen, I am president of the Bowker Fertilizer Co., of Boston, and I am here asking for free burlaps to be used in packing fertilizers, and they come under Schedule J, section 352.

PARAGRAPH 352—BURLAPS.

The fertilizer industry was built up on a free-trade basis. It asks for no protection. All fertilizers, manufactured and raw, are on the free list, but the containers or bags made from burlaps are taxed, except those carrying goods which are imported, and these, along with the contents, are duty free. This is not a large item and it is hardly worth considering, except as showing an inconsistency.

Practically all bags for packing fertilizers are made from burlaps imported from Calcutta, Bombay, or Dundee, and have been for many years.

Mr. HARRISON. Mr. Bowker, may I interrupt you a moment?

Mr. BOWKER. Yes, sir.

Mr. HARRISON. For what other purposes than to contain fertilizers are burlap bags used?

Mr. BOWKER. They are used for grain, and salt, and a great many things.

Mr. HARRISON. You ask that only those that are used for fertilizers should come in free?

Mr. BOWKER. Yes, sir. I address myself to that because that is particularly what interests the fertilizer industry.

Mr. HARRISON. How would we be able to follow a bag through the customhouse and find out that it was to be used only in the fertilizer industry?

Mr. BOWKER. Then, you might have to include all the bags in this section 352.

Mr. HARRISON. Would that not be a difficult thing?

Mr. BOWKER. It might be a difficult thing.

Mr. HARRISON. And would it not be a difficult thing to give up \$6,000,000 revenue?

Mr. BOWKER. Does it amount to \$6,000,000 revenue?

The CHAIRMAN. \$5,986,000.

Mr. BOWKER. That is up to you, sir. Practically all bags used for packing fertilizers are made from burlaps, imported from Calcutta, Bombay, or Dundee, and have been for many years. In all that time the duty on burlaps has not stimulated the manufacture of burlaps for this purpose in this country, for reasons with which you are familiar. Thus, the duty, while nominally protective, is in effect a duty for revenue only.

Mr. PETERS. As I understand you, Mr. Bowker, there are practically no burlaps manufactured for this purpose?

Mr. BOWKER. There are practically none manufactured in this country for that purpose, nor have there been for the 60 years since the fertilizer industry has been going on.

Mr. PETERS. Are you able to give us the amount of the importations of burlaps to which you have referred, as compared with the total importations under schedule No. 352?

Mr. BOWKER. I have not those statistics from the statistical department, but I think the chairman has them for those coming in class 3 as \$5,986,000. That is the revenue.

Mr. PETERS. Yes; that is the whole section.

Mr. BOWKER. Yes. I tried to get it for all purposes, but they did not have it divided.

The CHAIRMAN. Proceed.

PARAGRAPH 352—BURLAPS.

Mr. BOWKER. The 1910 census gives the total tonnage of fertilizers produced in this country for 1909 as 5,240,164 tons. It is safe to assume that it amounted to 6,000,000 tons in 1912. Some part of this, however, was distributed in bulk or in secondhand bags; but assuming that 5,000,000 tons were delivered in new bags last year, and that half of it was packed in 100-pound bags and the remaining half in 200-pound bags, it required 75,000,000 bags, or approximately 93,000,000 yards of burlaps for this purpose, and practically every yard of it was imported from Calcutta or Bombay.

The kind of burlaps used for packing fertilizers is 10 and 10½ ounce, 40 inches wide, and pays a specific duty of nine-sixteenths cent per pound plus 15 per cent as ad valorem duty. The present market price of this kind of burlaps is about 6½ cents per yard. Thus the duty upon the 100-pound package amounts approximately to 0.0124 cent and on the 200-pound package to 0.0168 cent per bag.

Or to put it another way, the duty adds approximately 25 cents per ton to each ton of fertilizer packed in 100-pound bags and 17 cents per ton to each ton in 200-pound bags. Thus, the total tax on the 5,000,000 tons, assuming that it is packed half in 100-pound bags and half in 200-pound bags, amounts approximately to 20 cents per ton or \$1,000,000 annually.

Will the farmer get the benefit of this reduction if the duty is removed on fertilizer burlaps? We answer yes, for it is as much a part of the cost of the fertilizer as the raw materials, labor, or any other item which enters into the cost. Every cent saved in the cost of manufacture and packing bears its relative saving in cost to the consumer.

Products of jute which concern the farmer: The products of jute which particularly concern the farmer are binder twine, which is now admitted free, cotton bagging for baling cotton, and burlaps for packing fertilizers. If it is desirable to admit binder twine free, then it is equally desirable to admit free burlaps for baling cotton and for bagging fertilizers. We are not pleading here for free made-up bags, but only for free burlaps for the above purposes. The manufacturers of bags in this country are entitled to protection to the extent of a competitive duty sufficient to cover the extra cost of labor in this country.

In all tariff legislation this country has always stood for the principle of free plant food, and therefore it seems logical that the burlaps which are used for packing it should likewise be admitted duty free, especially since practically every yard of this kind of burlaps is imported. Moreover, it is not likely to be produced in this country in competition with the cheap labor of India.

If the duty on fertilizer burlaps fostered the growing of jute and the manufacture of coarse burlaps in this country, its retention might be justified, but since it amounts to a duty for revenue only, it is questionable if it should be continued since it adds approximately 20 cents a ton to the cost of fertilizers, which now bear no other duty.

If it is wise economy to admit all forms of plant food free—and all civilized countries except Canada agree that it is—it would seem equally wise to admit free the material necessary for making the container for shipping it.

PARAGRAPH 352—BURLAPS.

Addenda: The average cost of standard burlaps used for fertilizer sacks—goods weighing $10\frac{1}{2}$ ounces per linear yard 40 inches wide—delivered on contract at United States ports from October, 1912, to January, 1913, for the fertilizer manufacturers' requirements for the spring season of 1913, may conservatively be taken at $6\frac{1}{2}$ cents per yard. This is made up of cost f. o. b. Calcutta, 5 cents, freight 0.003 cent, insurance 0.0003 cent, banking charges 0.0005 cent, and duty 0.0112 cent. The "spot" price to-day for the same goods is approximately $8\frac{1}{2}$ cent per yard.

Assuming for determination of duty that the average f. o. b. Calcutta price above mentioned has been the same as the average f. o. b. Calcutta price at the time contracts were made, thus the f. o. b. Calcutta price to correspond to a duty-paid United States landed price of $6\frac{1}{2}$ cents per yard for 40-inch $10\frac{1}{2}$ -ounce burlaps would be 5 cents per yard.

Fifteen per cent ad valorem on 5 cents is 0.75 cent; nine-sixteenths cent per pound specific duty on 1 yard 40-inch $10\frac{1}{2}$ -ounce is 0.37 cent; total duty, 1.12 cents.

A 100-pound fertilizer sack requires of 40-inch goods $1\frac{1}{3}$ linear yards, which at $6\frac{1}{2}$ cents per yard is 7.22 cents; cost of making and printing \$5 per 1,000, 0.5 cent; cost of 100-pound bag is 7.72 cents.

Cost per ton of fertilizer, 20 bags, at 7.72 cents is \$1.54.

A 200-pound fertilizer sack requires of 40-inch goods $1\frac{1}{2}$ linear yards, which at $6\frac{1}{2}$ cents per yard is 9.75 cents; cost of making and printing \$5 per 1,000, 0.5 cent; total cost of bag, 10.25 cents.

Cost per ton of fertilizer, 10 bags, at 10.25 cents, is \$1.025.

Mr. FORDNEY. Mr. Bowker, let me ask you a question.

Mr. BOWKER. Yes, sir.

Mr. FORDNEY. You are asking for free raw materials for the making of these bags.

Mr. BOWKER. Yes.

Mr. FORDNEY. In which you put fertilizer?

Mr. BOWKER. Yes, sir.

Mr. FORDNEY. What is the average size of the bag in which fertilizer is put?

Mr. BOWKER. They are practically all put up in 100-pound packages, 167-pound packages, and 200-pound packages.

Mr. FORDNEY. From 100 pounds up?

Mr. BOWKER. Yes; but the usual size is 100 pounds or 200 pounds.

Mr. FORDNEY. What does a hundred pounds of the average commercial fertilizer sell for?

Mr. BOWKER. That depends entirely upon the grade. There are grades selling as low as \$12, such as acid phosphate.

Mr. FORDNEY. \$12 per ton?

Mr. BOWKER. \$12 per ton. Then there are grades for tobacco and for trucking purposes that are selling as high as \$50 a ton.

Mr. FORDNEY. Is that the wholesale price?

Mr. BOWKER. No; I am speaking generally of the consumer's price. I have some figures here which show that the 100-pound bags cost 7.72 cents, and that it costs to pack a ton of fertilizer in 100-pound bags \$1.54.

Mr. FORDNEY. That is the value of the bags to the manufacturer?

Mr. BOWKER. Yes; that is what they cost us.

PARAGRAPH 352—BURLAPS.

Mr. FORDNEY. Seven cents a bag?

Mr. BOWKER. Yes; on the present market—that is based on the market of Calcutta.

Mr. FORDNEY. Do you know what proportion of that cost is raw material?

Mr. BOWKER. That depends entirely upon the contents of the bag. If it is acid phosphate in 100-pound bags, it costs \$1.54, packed. On a ton of acid phosphate that would be 13 per cent.

Mr. FORDNEY. What I was trying to get at is how much would it reduce the value of the bag or the price the farmer pays for a ton of fertilizer?

Mr. BOWKER. Twenty-five cents a ton if packed in 100-pound bags; 17 cents a ton if in 200-pound bags.

Mr. FORDNEY. Do you think the consumer would get the benefit of that?

Mr. BOWKER. Eventually, sir.

Mr. FORDNEY. That is all.

The CHAIRMAN. That is all.

TESTIMONY OF J. J. CULBERTSON.

The witness was duly sworn by the chairman.

Mr. CULBERTSON. Mr. Chairman and gentlemen, the figures that I propose to present here may be in some instances only approximate.

We desire to present to your honorable body the following.

Mr. LONGWORTH. This is what paragraph?

Mr. CULBERTSON. This is paragraph 352.

We ask consideration of your committee in the matter of the present duty on burlap or jute fabrics which enter into the manufacture of bags and on jute or burlap bags used for cake, meal, and hulls, which under paragraphs 352 and 354 have a duty equal to 23 per cent ad valorem. Inasmuch as in our business and those allied thereto there is used about 80,000,000 sacks for cake, meal, and fertilizer, the duty on each being equivalent to about 1.4 cents, this would equal over \$1,000,000.

The claim that the free entry of burlap or jute fabric and free entry for bags would interfere with the manufacture of cotton bags such has not been borne out by the facts, as such has been tried on meal and cake containers, but are not suitable, not being sufficiently strong and easily torn, the rents effecting an easy escape of the contents, but in the case of burlap such is not the case.

Cotton bags for cement do not come in competition with burlap or jute bags for the same purpose, because of the fact that the burlap or jute will not hold such, on account of the fineness to which the article is bolted. Burlap or jute bags for such could be sold for 5 cents, while cotton bags cost 10 cents each. We therefore do not think that a substantial reduction of duty on burlap and jute fabrics for bags, as enumerated above, will in any way interfere with the American manufacture of cotton bags, but would prove to be a boon to the manufacturers and users of such for the purposes named.

Under paragraph 355 of the tariff act of 1909 the duty on bagging for cotton is six-tenths of 1 cent per square yard, which tax has been

PARAGRAPH 352—BURLAPS.

in effect for the past 16 years. This would equal 4.2 cents per bale of cotton and linters, which, on a basis of last year's crop, would amount to nearly three-quarters of a million dollars. This article bears to the southern farmer the same relation to his products as binder twine bears to his brother in the North and West, which article has been entered free of duty under the acts of 1897 and 1909. We therefore think it unjust to the southern farmer to tax an article that to him is used for a similar purpose as to his products as that used by northern and western farmers, in which the latter has the benefit of no tax. We therefore ask that bagging for cotton be placed on the free list.

I have very little to say, gentlemen, on these bags for use for cottonseed-oil mills, except that any reduction in duty would redound to the benefit of the industry; that the American manufacturer takes the cloth—that is, the jute bagging—and manufactures it into the material that we use; so that any reduction in that line would be a benefit to us.

The proposition to get relief on cotton bagging is something, of course, that affects every interest in the South. It is a tax on a product that has been taxed, as I say, for the past 16 years, and we think that there has been some partiality shown in a continuance of that tax, inasmuch as the western farmer has had advantages shown to him under this same act, and we therefore ask you gentlemen to consider the suggestions made, with a view of such relief.

The CHAIRMAN. Are there any questions, gentlemen?

Mr. FORDNEY. Do I understand that you are asking for a lower rate of duty on your raw material?

Mr. CULBERTSON. Are you speaking now of bags or cotton bagging?

Mr. FORDNEY. On jute, I understand you to say.

Mr. CULBERTSON. Oh, jute, I understand, comes in free.

Mr. LONGWORTH. You spoke first of paragraph 352?

Mr. CULBERTSON. Yes. That was for material that is used in making bags for cottonseed products.

Mr. FORDNEY. Out of what?

Mr. CULBERTSON. Out of the cloth that is imported from India and elsewhere.

Mr. FORDNEY. Cotton?

Mr. CULBERTSON. No.

Mr. FORDNEY. Jute?

Mr. CULBERTSON. Made from jute.

Mr. FORDNEY. What rate of duty have you on your finished product?

Mr. CULBERTSON. Bags?

Mr. FORDNEY. Yes; whatever product you make.

Mr. CULBERTSON. On bags I think it is equivalent to about 23 per cent. I think there is a specific—

Mr. FORDNEY (interposing). So that you want a lower rate of duty on the article out of which you make bags? Is that right?

Mr. CULBERTSON. That is what we ask, sir.

Mr. FORDNEY. Do you ask for any lower rate of duty on bags?

Mr. CULBERTSON. There are so few imported that it is not a vital question with us.

Mr. FORDNEY. Then you do not care whether the duty remains or is taken off?

PARAGRAPH 352—BURLAPS.

Mr. CULBERTSON. Practically all of the bags we use come from American manufacturers, made out of this imported material.

Mr. FORDNEY. I know. Now, do you want to have the duty removed from bags, such as you make?

Mr. CULBERTSON. We certainly would, to be consistent, if we ask for the reduction of duty on the material that enters into the manufacture of these bags.

Mr. FORDNEY. Have you filed a brief?

Mr. CULBERTSON. No, sir; we have not because we understand—I have been under the impression that there have been but few bags of that material imported for our purpose.

Mr. FORDNEY. You did not mention that you wanted the duty removed from the finished product. What I want you to understand is that in the arrangement of the new tariff law, if the duty is removed or lowered on your raw material, you are willing to have it removed or lowered on your finished product?

Mr. CULBERTSON. Most assuredly.

Mr. FORDNEY. All right.

Mr. CULBERTSON. I want to say, though, in connection with that, that in our own particular business almost all of the bags that we use are of American manufacture, made out of this imported cloth. There are some bags, however, what we call second-hand bags, which are used for wheat and grain, on which a duty, of course, is in effect. I do not know to what degree those are used, but that would naturally affect the whole proposition, and that carries with it practically the same rate of duty as the material from which these bags are made that we use in our particular business.

Mr. LONGWORTH. Let me ask you: I am not sure that I understand you. Is your finished product that which is named in paragraph 354; that is to say, bags or sacks made from plain woven fabrics, etc.?

Mr. CULBERTSON. I would take it it was; yes, sir.

Mr. LONGWORTH. That is your finished product?

Mr. CULBERTSON. Yes, sir; I would take it it was.

Mr. LONGWORTH. You are recommending only a reduction in the duties in paragraph 352 which, I take it, is the raw material from which your finished product is made.

Mr. CULBERTSON. Well, I think so. But, as I explained and what I wanted to say is this, that all the bags that we use in our particular line of business are practically made in this country from this imported cloth.

Mr. LONGWORTH. Bagging?

Mr. CULBERTSON. Bagging.

Mr. LONGWORTH. Such bagging as is denominated in paragraph 355?

Mr. CULBERTSON. Paragraph 352.

Outside of that we use, as I say, second-hand bags, on which, of course, we would like a reduction of duty, to be consistent with our request for a reduction in the raw material. While we have not incorporated it here, I would take it for granted it would follow, because it practically carries the same rate ad valorem.

Mr. LONGWORTH. The two paragraphs are very different, so far as the revenue is concerned. Under paragraph 352 there are not very

PARAGRAPH 352—BURLAPS.

many importations, but under paragraph 354 there are very large importations.

Mr. CULBERTSON. It is just possible that it is under that where the importations amount to something like three hundred or four hundred million pounds of material for bags.

Mr. KITCHIN. You are not a manufacturer of bags?

Mr. CULBERTSON. No, sir; we are users.

Mr. KITCHIN. Mr. Longworth is under the impression that you are manufacturing bags.

Mr. LONGWORTH. I asked him a moment ago whether his finished product of bags was under paragraph 354, and he said, "Yes."

Mr. CULBERTSON. We are not manufacturers of bags; we are users of them.

Mr. FORDNEY. Then, you do not care if the whole business goes on the free list, do you?

Mr. CULBERTSON. We would be very glad indeed if they should go. When you spoke of products, I thought you said cottonseed meal.

Mr. LONGWORTH. I asked you the question because I did not understand what you were driving at. I asked you whether your finished product was that product described in paragraph 354, and you said yes.

Mr. CULBERTSON. I thought you said the finished product; not our finished product.

Mr. LONGWORTH. Just what is your business?

Mr. CULBERTSON. Cottonseed manufacturers, cottonseed products.

Mr. LONGWORTH. You use these bags?

Mr. CULBERTSON. We use these bags in packing our products.

Mr. LONGWORTH. But you do not make bags?

Mr. CULBERTSON. Oh, no; we have no interest in them except to get them at a reduced cost.

Mr. PAYNE. Do you buy bags for cotton seed? What is your relation to this industry?

Mr. CULBERTSON. For cottonseed products.

Mr. PAYNE. For the products of cotton seed? It is not cotton bagging that you are after; it is the bags, is it; or is it both?

Mr. CULBERTSON. Both.

Mr. PAYNE. And I understood you to say something about bags in the interest of the western farmer.

Mr. CULBERTSON. Oh, no.

Mr. PAYNE. Then I misunderstood you.

Mr. CULBERTSON. In the interest of the southern farmer. Of course we would like to see the western farmer prosper, but our interest lies directly in the southern farmer.

Mr. PAYNE. Did you not ask to have grain bags put on the free list?

Mr. CULBERTSON. No.

Mr. PAYNE. Simply your cottonseed bags?

Mr. CULBERTSON. That is all we are directly interested in, sir.

Mr. PAYNE. When you get to the cotton oil, you put it in what kind of a container?

Mr. CULBERTSON. The bag that I have referred to in this—

Mr. PAYNE. No; but your oils. What kind of a container do you put that in?

PARAGRAPH 352—BURLAPS.

Mr. CULBERTSON. Oil?

Mr. PAYNE. Cottonseed oil, yes. You crush cotton seed, don't you?

Mr. CULBERTSON. Oh, yes.

Mr. PAYNE. Do you make any oil?

Mr. CULBERTSON. Yes, sir; we certainly do.

Mr. PAYNE. What do you put it up in?

Mr. CULBERTSON. We put it up in tank cars, and barrels, and so on.

Mr. PAYNE. You do not put it up in cans or barrels?

Mr. CULBERTSON. Some of the refineries do; yes.

Mr. PAYNE. Have you looked after the duty on barrels or cans?

Mr. CULBERTSON. I think the refineries have taken those up.

Mr. PAYNE. I think you ought to tell this committee about that.

Mr. CULBERTSON. I think the refinery has taken care of that part of it.

Mr. PAYNE. You want those on the free list?

Mr. CULBERTSON. If you gentlemen choose to put them on we won't object.

Mr. PAYNE. You would like to have it, would you not?

Mr. CULBERTSON. We certainly would.

Mr. LONGWORTH. How many men do you employ?

Mr. CULBERTSON. When you say "we" do you mean the industry?

Mr. LONGWORTH. No.

Mr. PAYNE. I thought you had overlooked that. I want you to suggest it.

Mr. CULBERTSON. Oh, no. I have found this, that if we do not ask for what we want we never get it, and especially a man from the South.

Mr. PAYNE. Everything else you use in the process of your manufacture is on the dutiable list?

Mr. CULBERTSON. I will try and find out, sir, for you, and let you know.

Mr. PAYNE. I am asking this for your benefit.

Mr. CULBERTSON. I do not know, sir.

Mr. LONGWORTH. I would like to have an answer to my question.

Mr. CULBERTSON. Yes, sir. I am representing, sir, the Interstate Cotton Seed Crushers' Association.

Mr. HILL. What is that, an incorporated company?

Mr. CULBERTSON. No, sir.

Mr. HILL. What is the character of the association?

Mr. CULBERTSON. The character?

Mr. HILL. Yes.

Mr. CULBERTSON. It is an association of manufacturers to protect their interests in just such things as this.

Mr. HILL. What are the things?

Mr. CULBERTSON. Interstate legislation in the application of rules for business, and those things that are necessary for a well-ordered business.

Mr. HILL. Is it a purely voluntary association?

Mr. CULBERTSON. Absolutely.

Mr. HILL. With headquarters and central offices, and so forth, like other farmers' associations?

PARAGRAPH 352—BURLAPS.

Mr. CULBERTSON. Our president lives in north Alabama, and our secretary lives in Texas.

Mr. HILL. Do you take any action whatever in regard to the fixing of prices?

Mr. CULBERTSON. Absolutely not. Those things are not considered.

Mr. HILL. The important feature, then, of the association is not given any attention?

Mr. CULBERTSON. The which?

Mr. HILL. The important feature of the business is not given attention by this association?

Mr. CULBERTSON. What is that, sir?

Mr. HILL. The fixing of prices.

Mr. CULBERTSON. The fixing of prices?

Mr. HILL. Yes, sir. Do you ever establish prices at which you buy cotton seed?

Mr. CULBERTSON. We do not.

Mr. HILL. Do you come in competition with the American Cotton Oil Co.?

Mr. CULBERTSON. We certainly do. Are you trying to prove a trust now, sir?

Mr. HILL. I am not trying to prove anything. I want to prove the facts.

Mr. CULBERTSON. I do not know that that is germane to this question.

Mr. HILL. Do you have any machinery for fixing prices of your product after you get it manufactured?

Mr. CULBERTSON. We have not.

Mr. HILL. What is the purpose, then, of the organization; just to look after legislation in the various States and before Congress?

Mr. CULBERTSON. To adopt rules governing the sale of products, to have arbitrations or committees for the settlement of differences in the matter of sale.

Mr. HILL. Differences in what respect? Differences between whom?

Mr. CULBERTSON. Between a buyer and seller in sales of the products, and that machinery that is usually used in organizations and associations of that sort.

Mr. HILL. How extensive is this association?

Mr. CULBERTSON. It extends all over the South.

Mr. HILL. How many members?

Mr. CULBERTSON. We have, I think, about 400 mills.

Mr. HILL. About 400 mills?

Mr. CULBERTSON. Yes, sir.

Mr. HILL. A big combination, isn't it?

Mr. CULBERTSON. No, sir; it is not a combination. It is an association.

Mr. HILL. Each mill is represented in the association?

Mr. CULBERTSON. It is.

Mr. HILL. And they have a common election of officers?

Mr. CULBERTSON. They have their conventions each year; go over their rules and their business, of which we have a record, and elect their officers.

Mr. HILL. There is nothing done whatever with regard to the fixing of prices there by this association?

PARAGRAPH 352—BURLAPS.

Mr. CULBERTSON. Absolutely not; absolutely not.

Mr. HILL. I am very glad to hear that, sir.

Mr. LONGWORTH. You, yourself are a manufacturer?

Mr. CULBERTSON. I am engaged in that business; yes.

Mr. LONGWORTH. You own a mill?

Mr. CULBERTSON. Yes, sir; I am interested in several.

Mr. LONGWORTH. How many men do you work?

Mr. CULBERTSON. The mills that I am connected with?

Mr. LONGWORTH. Yes.

Mr. CULBERTSON. I would say about 400 to 500.

Mr. LONGWORTH. It is a large industry?

Mr. CULBERTSON. A large industry; yes.

Mr. HILL. Is there any selling of products through agents of this association? I mean do the individual members of the association sell their products each one by himself in a competitive market, or is it combined and sold through you or through the secretary of this interstate association?

Mr. CULBERTSON. No, sir. The products are sold the way all other products are sold; that is, to the buyers in various parts of this and other countries, and not through any combination whatsoever.

Mr. HILL. I want to find out whether it is an association similar to that of the Citrus Fruit Association of California.

Mr. CULBERTSON. Oh, no; I wish we could get up something of that sort.

Mr. HILL. You are entirely at liberty to sell the product of your mills anywhere you please, at any price you please, and to buy your raw materials at an price you please and anywhere you please, without reference to any of the other members of this association?

Mr. CULBERTSON. Absolutely so.

Mr. HILL. That is just what I want to know.

Mr. CULBERTSON. Absolutely so.

Mr. KITCHIN. Mr. Culbertson, you say you manufacture cotton oil and other products from the cotton seed?

Mr. CULBERTSON. Yes, sir.

Mr. KITCHIN. Is not everything that you manufacture on the free list?

Mr. CULBERTSON. Yes, sir.

Mr. KITCHIN. Is your oil on the free list, and everything you manufacture? Everything you sell is on the free list, is it not?

Mr. CULBERTSON. Practically so.

Mr. KITCHIN. Well, it is.

Mr. CULBERTSON. Cotton seed is entered free; cottonseed oil comes in free.

Mr. KITCHIN. Cottonseed meal is free?

Mr. CULBERTSON. Furthermore, if you will permit me, while it is a new subject, perhaps, and does not come under this head, yet it opens up such a wide field that I can not refrain, if you gentlemen will give me time, to just say a few words on these matters that I have in mind, with reference to our industry and the injustice of the present condition of things.

In speaking of oil—and we have already presented to your honorable committee a brief on that particular subject, and I appeared a few

PARAGRAPH 352—BURLAPS.

days ago on it, to show the inconsistencies of certain things in connection with our particular business, the matter of soy beans, which are now grown in the Orient in very large quantities, and which take to-day a duty of 45 cents a bushel, which is practically prohibitive, and we can not use it in this country. The soy-bean oil company can import under such conditions that the American manufacturer can not, in the natural order of things, manufacture it.

Mr. FORDNEY. If they are going to be put into baked beans, we want to keep them out.

Mr. CULBERTSON. That is for the Eastern people to say, not for us.

Mr. KITCHIN. You make products from this cotton seed?

Mr. CULBERTSON. We do.

Mr. KITCHIN. Cottonseed oil is the main product, and you get your by-products, your linters, and your cottonseed hulls, and then the main by-product is cottonseed meal?

Mr. CULBERTSON. Yes, sir.

Mr. KITCHIN. All of which are on the free list?

Mr. CULBERTSON. Absolutely.

Mr. KITCHIN. And in 1910 over 15,000,000 pounds of cottonseed oil came into this country in competition with your oil?

Mr. CULBERTSON. Yes, sir; I take those figures from you.

Mr. KITCHIN. I have the statistics before me here. Everything you buy, your machinery, your belts, all of your equipment, even things like camel's-hair and everything that is purchased by your industry is highly protected, is it not?

Mr. CULBERTSON. As a rule.

Mr. KITCHIN. Do you know of anything that you buy that goes into your equipment or into your plant or into the articles that you must have in order to operate your plant that is not taxed? Can you recall anything?

Mr. CULBERTSON. I do not know of a thing, except we get free air in our automobile tires that we use in connection with our business.

Mr. KITCHIN. And air and water are the only things you get free?

Mr. CULBERTSON. Air and water; that is right.

Mr. KITCHIN. You are simply asking this committee to put bags, in which you wrap up your cottonseed meal to sell to the market, on this free list?

Mr. CULBERTSON. Yes.

Mr. KITCHIN. That is used by the farmers mostly as fertilizer and in great quantities to feed cattle?

Mr. CULBERTSON. Yes, sir.

Mr. KITCHIN. And you are asking this committee, in view of the tax upon everything that you use, to put on the free list or relieve you of a little tariff on bags?

Mr. CULBERTSON. That is our position.

Mr. LONGWORTH. You can see that the Representative is against you.

Mr. CULBERTSON. I can readily see that. That is the reason I want to address him.

If you will pardon me, I want to finish my point relative to soya beans.

The CHAIRMAN. Mr. Culbertson, your time is up.

PARAGRAPH 352—BURLAPS.

Mr. KITCHIN. I would like to hear him on soya beans.

Mr. CULBERTSON. Inasmuch as these beans have been injected in this, which is a foreign proposition, but my brothers are particularly interested in it, I just want to show you where we stand on that particular subject.

As I said, the duty on soy beans is 45 cents a bushel. Soya-bean oil is imported from the Orient. There was imported last year about from 80,000 to 100,000 bushels of soy beans grown in the Orient.

Mr. HARRISON. They were grown in Texas, were they not, originally? Did they not start an industry of soya beans down there?

Mr. CULBERTSON. Not that I know of.

Mr. HARRISON. They are grown in Georgia, now?

Mr. CULBERTSON. Only to the extent of providing the fertilizing agents to the soil, the same as cowpeas. They are not used for the purpose of producing a product to manufacture oil.

Mr. HARRISON. There is no oil manufactured in this country?

Mr. CULBERTSON. The trouble is we have got a prohibitive duty. The foreign countries have these beans entered free. They produced this oil that they send over to our country, and these countries that to-day are exporting into our country are the very countries that are placing almost prohibitive duties against cottonseed oil. That is my point.

Mr. PAYNE. How much of this cotton seed is carried in bulk, not in bags?

Mr. CULBERTSON. Cotton seed is stored in bulk. We are talking about cottonseed products, sir.

Mr. PAYNE. I say, how much of the cotton seed is carried in bulk, not in bags?

Mr. CULBERTSON. Cotton seed?

Mr. PAYNE. Yes.

Mr. CULBERTSON. All of it.

Mr. PAYNE. All of it is carried in bulk?

Mr. CULBERTSON. I was speaking of cottonseed products. They are.

Mr. PAYNE. Are the products of your factory in bulk, or in bags?

Mr. CULBERTSON. In bulk.

Mr. PAYNE. Then, how do you use these bags on which you are complaining about the duty?

Mr. KITCHIN (addressing Mr. Hill). Explain to Mr. Payne that he manufactures cottonseed products. He does not understand.

Mr. PAYNE. Oh, you pack the meal?

Mr. CULBERTSON. Yes, sir.

Mr. PAYNE. You have not got to the point where you send that in bulk?

Mr. CULBERTSON. We would like to.

Mr. FORDNEY. Mr. Culbertson, in order to reply to Mr. Kitchin, he states that all the things you produce are on the free list and the things you purchase are on the protected list, therefore you are consistent in asking to have your things put on the free list that you purchased.

Mr. CULBERTSON. That is it.

Mr. KITCHIN. I made no such argument. I simply stated the facts, in order to get them clear in the record. I made no deductions.

PARAGRAPH 352—BURLAPS.

Mr. FORDNEY. I do not want to misquote you. If that is the fact, then you are consistent in asking to have your raw material put on the free list. On the other hand, if the things that you produce were on the protected list and the articles you were purchasing on the free list, I take it for granted that Mr. Kitchin would agree with you that you would be consistent if you were asking to have a duty put on your finished product.

Mr. KITCHIN. You are not asking that, are you?

Mr. CULBERTSON. I am not asking that.

Mr. FORDNEY. Because it is the shoe on the other foot.

Mr. CULBERTSON. I think this whole tariff proposition, sir, is, as I think Gen. Hancock said, a local proposition entirely. It depends on whose shoe is hurting.

The CHAIRMAN. Gentlemen, we are getting far away from the investigation.

Mr. FORDNEY. I agree with you. It is a local question.

Mr. HILL. May I ask you what you do with soya-bean oil?

Mr. CULBERTSON. We do not do anything with it. It goes into the manufacture, largely, of soap, as an ingredient for soap.

Mr. HILL. Is it in any case mixed with cotton oil?

Mr. CULBERTSON. Oh, no. It comes in competition, though, as a soap ingredient.

Mr. HILL. But they are not used as a food product?

Mr. CULBERTSON. Some, I understand, is; yes, sir.

Mr. HILL. Some soya-bean oil?

Mr. CULBERTSON. I understand that they have been able to refine it to that degree that it now enters into edible compounds.

Mr. HILL. But you have no knowledge of its being mixed with cottonseed oil and accomplishing an adulteration?

Mr. CULBERTSON. I am not in the refining business, and I do not know.

The CHAIRMAN. That is all, Mr. Culbertson.

Mr. CULBERTSON. Thank you, sir, and gentlemen.

TESTIMONY OF E. P. WILLARD, SECRETARY OF THE WILLARD BAG & MANUFACTURING CO., WILMINGTON, N. C.

Mr. WILLARD. Mr. Chairman and gentlemen, in appearing before this committee, I desire it clearly understood that I am representing my own business and not an association of bag manufacturers. I will, therefore, have to assume the responsibility for any statement that I may make.

Our company is a corporation doing business in Wilmington, N. C., and our output is limited to the manufacture of bags made of burlap. Probably not over one or two per cent of our output is made of cotton goods.

Our factory is somewhat unique in this industry, because of the fact that we employ negro labor almost entirely. It is a very desirable thing to give this class of labor employment, as it is from this element that most of our idle population comes.

When we began business in 1893, the average wage of our sewers was 25 cents a day. This has been advanced until now we have to

PARAGRAPH 352—BURLAPS.

pay 75 cents a day for the same grade of labor. This advance has been gradual, but at the same time I would like to impress on this committee that the margin of profit on our manufactured articles has practically made no advance. If anything competition is more keen now than it was when we began business.

We do not desire to present an argument in favor of a duty on burlaps. In some respects free burlaps would tend rather to increase our output than otherwise through the probable increase in the consumption of burlap bags. We believe this feature of the matter is to be covered by those who are more interested than we are ourselves.

I would like to correct an impression which appears to have been made at the hearing last Wednesday while Mr. A. F. Bemis was appearing before you. I gather from the testimony that certainly a part of your committee received the impression that the larger bag manufacturers of the United States had agreed among themselves to allot or divide off certain sections of the country, so that there would be practically no competition in the sale of bags. I have not found such to be the case in my territory. In fact, nearly all of our inquiries for bags is accompanied by the statement that our friends are getting quotations from other parties, and in order to secure the business it will be necessary for us to make the lowest possible prices. Under such circumstances you may well realize that the competition is very keen.

In order that this committee may get a clear idea just how the present tariff law is applicable so far as the differential is concerned, I desire to submit, merely for the purpose of illustration, the following figures: The unit of manufacture in our industry is 1,000 bags. Assuming the value of this quantity of bags at \$100, which is at the rate of 10 cents per bag, I should say that the cost is divided about as follows: Material, \$90; overhead charges, such as fuel, power, and office expenses, \$5; labor, \$5. In Calcutta the proportion would be about as follows: Material, \$90; overhead expenses, \$5; labor, \$1.50; a total of \$96.50.

We are just estimating these figures, but they are approximately accurate, I think.

As the freight and transit charges on bags and burlaps are practically the same, the Calcutta manufacturer can place 1,000 bags in this country at a total cost of \$96.50, against our cost of \$100. You understand we have assumed that there is no duty either on burlaps or on bags.

If the present differential of 6 per cent ad valorem should be maintained the Calcutta manufacturer would be compelled to add approximately \$6 to the cost of his 1,000 bags, bringing his cost to \$102.50, as against our \$100. It seems to us that this small differential can be readily borne by the consumers of bags and is well worth while in order to maintain this industry.

The Democratic Party has always stood for the principle of the greatest possible freedom of trade—a freedom limited only by the need for public revenue—but has never held to the policy of free trade. This position has from the first been rendered absolutely necessary by reason of the fact that so large a part of our public revenues are derived from imports, and in the course of time the public

PARAGRAPH 352—BURLAPS.

has come to consider indirect taxation as our settled national fiscal policy. If this practice were true under conditions where the administration of public affairs involved a relatively small resource, and before the business of the country had become permanently adjusted to a fixed fiscal system, it is doubly true of present existing conditions. In the policy of laying tariff taxes a differential between raw materials and manufactures has always obtained, and in a general way the basis of differential has been the measure of skill entering into the manufactured product inversely applied, and this is a sound and just principle.

Agriculture is the basis of this country's prosperity, but a basis has no meaning when detached from a superstructure. It is economically sound to relieve the basis of all unnecessary burden, but it is not possible to consider immunity of the basis apart from the rights of the superstructure. To ignore this principle would mean to relegate commerce to the most primitive conditions of industry, wherein the producer is virtually one with the manufacturer. This is not democratic creed and is certainly very foreign to democratic practice.

Burlap is not produced in this country at all, and India has a virtual, if not actual, monopoly of the production. Upon general principles burlap would be a most legitimate article of revenue taxation, and except for the agriculture argument could be made to produce a substantial revenue to the Government.

Manufactures from the raw material are necessarily of a low order and quite crude as a finished product, in which skilled labor plays no part at all. In the highest manufactured forms this article is a cheap and crude bag, in which skilled labor finds no employment and manufacture no economy through increased production of superior machinery and skilled labor. The manufacturers of Calcutta use the same machinery as is used in this country and produce more cheaply than our manufacturers by reason of pauper labor, and this condition is made inevitable and beyond remedy because of the low character of the finished product. In advanced industries where skilled labor and more efficient machinery are the controlling elements in cost of production the economic strength of the local industry can resist foreign competition in which less skilled labor and less efficient machinery are employed, but in the burlap industry no such condition exists or can be made to exist.

Whether the raw material be placed on the free list or not is a matter for the judgment of the Congress concerning revenue, but a differential in favor of burlap manufacturers is a matter of justice to the capital and labor engaged in this industry, and the present differential is as small as is consistent with the prosperity of the industry.

The farmer is entitled to much but is not entitled to all, and the small differential now enjoyed by manufacturers under the present schedule is no uncompensated hardship to the farmer, for the labor and capital employed in this industry contribute to the public welfare and are entitled to as much consideration as any other element of population and character of property.

I thank you.

PARAGRAPH 352—BURLAPS.

BRIEF OF EVERETT AMES ET AL., CONCERNING BURLAPS.

NEW YORK CITY, *January 17, 1913.*

The COMMITTEE ON WAYS AND MEANS,
House of Representatives, Washington, D. C.

GENTLEMEN: We, the undersigned committee, representing 22 of the principal manufacturers of cloth bags or sacks in all sections of the United States, having factories in 21 different States, and indirectly representing 10,000 workers, and through them 20,000 dependents, respectfully but insistently make the following statement and recommendations in regard to paragraphs 352 and 354 of the present tariff act, effective August 6, 1909.

The two or three persons who will present this petition to you are but two or three out of approximately 10,000 persons employed in this industry; these 10,000 provide a livelihood for approximately 20,000 dependents. To transfer employment from any number of these 10,000 workers to foreign labor would take away the means of livelihood from a corresponding number of consumers. There are approximately 30,000 people in the United States who are dependent upon this industry, and this petition is made informally in their behalf.

ARTICLES DESCRIBED IN PARAGRAPHS 352 AND 354.

The goods described in paragraph 352 are known in this country as burlaps.

The goods described in paragraph 354 are known in this country as burlap bags.

RECOMMENDATIONS.

As to paragraph 352: Any rate of duty between free entry and the rate under the present law would be satisfactory to the bag manufacturers, provided a proper differential were maintained between paragraphs 352 and 354. However, it is the judgment of the bag manufacturers that a moderate duty on burlaps forms a proper and substantial source of revenue without injury to any industry, and, therefore, that at least a portion of the present duty should be retained. Burlaps compete with coarse cotton cloth, and this is an additional reason for maintaining at least a portion of the present duty.

As to paragraph 354: The present differential between paragraphs 352 and 354 should be maintained or increased, and under no circumstances should it be reduced. It is the equivalent, approximately, of $\frac{3}{4}$ cent per pound (specific), or 6 per cent (*ad valorem*). This differential is already a competitive marginal duty, as proved in two ways: 1. By a comparison of labor and wages in the United States and foreign countries, especially India, against which country 12 per cent differential would not be too much. 2. By the importations of bags—roughly, 15 per cent of all those used in this country—and with a tendency already for such importations to increase.

RATES.

At a meeting held in New York January 17, 1913, attended by the representatives of 12 prominent burlap bag manufacturing concerns, it was the unanimous opinion that our first choice for rates would be:

	Cents per pound.
Burlaps, paragraph 352.....	1
Bags, paragraph 354.....	1 $\frac{1}{2}$

Based on Treasury statistics for eight years ending June 30, 1912, these rates would reduce the revenue:

Under paragraph 352.....	\$1, 700, 000
Under paragraph 354.....	120, 000
Total.....	1, 820, 000

It was also the unanimous opinion that the duty on burlaps and burlap bags ought to be specific, and we understand that the collectors of customs, who are well informed on the point, would strongly favor a specific duty.

The principal ports of entry for burlaps are New York, Boston, New Orleans, San Francisco, and Portland, Oreg. If you would ask the Board of General Appraisers and the collectors at these five ports, we think they would be unanimous in recommending

PARAGRAPH 352—BURLAPS.

specific duty for burlaps. It would save the Government and the importers an enormous amount of trouble and expense, and, we believe, would not harm anyone.

But the extra trouble and expense of doing business under ad valorem duties are of less importance to us than would be the loss of our business, resulting from a reduction in the present differential between paragraphs 352 and 354. We can get along with compound ad valorem and specific duties, if we must, and it is not of great importance to us whether the duty on the burlap cloth is somewhat more or less than 1 cent per pound; that item would be chiefly a matter of revenue. But we can not get along if the difference between paragraphs 352 and 354 is reduced. A reduction in the already small competitive difference of 6 per cent now existing might mean our extermination, and on no account should this difference be diminished.

CHANGES IN IMPORTATIONS SHOULD THE ABOVE RECOMMENDATIONS BE FOLLOWED.

There would be no material change in the volume of importations of burlaps or bags if the foregoing suggestions were followed, because the present relation of burlaps and bags to competing articles would not be materially altered. But if the present differential between burlaps and bags were diminished, it would undoubtedly result in increased importations of bags, with a corresponding reduction in burlaps. In just such degree would American laborers engaged in this industry be forced to compete for work in other lines. The only possible result of such a condition in this and other industries would be a general lowering of wages in this country.

We wish to emphasize the statement that a considerable portion of the burlap bags used in this country is imported from abroad because the present difference between the rate of duty on bags and the rate of duty on burlap cloth is too small to enable the American manufacturers to compete with Calcutta. The importation of these bags proves that the present difference is not protective and is only competitive. Any reduction in this difference would deprive the American manufacturer of the opportunity to compete with Calcutta. We understand your honorable committee wishes to establish competitive rates and does not intend to deprive the American manufacturer of the opportunity to compete. We respectfully urge you not to make any reduction in this difference, which is already too small to allow us to get more than a fair share of the business. Any reduction in this difference would prevent us from holding that portion of the business which we are now able to get.

We further recommend adhering to the present phraseology of paragraphs 352 and 354 as far as possible. Any radical change in classification, such as that contained in the so-called "Farmers' free list bill" (62d Cong., H. R. 4413), would be confusing and possibly disastrous, without apparent advantage of any kind. The meaning of the present phraseology has been defined by 15 years of entries. It should not be changed in its fundamental construction.

Under H. R. 4413, Sixty-second Congress, goods described as follows would have been put upon the free list:

"_____ gunny cloth, and all similar fabrics, materials, or coverings, suitable for covering and baling cotton, composed in whole or in part of jute, _____, or any other materials or fibers suitable for covering cotton; and burlaps _____ or other materials suitable for bagging or sacking agricultural products."

The figures submitted for the present use of the Ways and Means Committee in a pamphlet entitled "Tariff Handbook," indicate that your honorable body has no conception of the articles that might have been given free entry under the above classification. Not only would free entry have been accorded to the articles referred to in paragraphs 352, 354, and 355, but an indefinite, indescribable, incalculable quantity and variety of other materials now covered in other paragraphs of Schedules I and J, and, possibly, even Schedule K. There have been rulings of the Board of General Appraisers regarding the entry of goods classified under the phraseology "suitable for, etc.," that indicate clearly the wide and dangerous and indefinite scope of such classification for tariff purposes.

SUMMARY OF RECOMMENDATIONS.

Our recommendations, then, are not so much requests for protection as they are protests against the abrogation of the present competitive duty, which we require in order to continue in business. Radical changes in the classification or descriptive phraseology should be avoided if possible.

PARAGRAPH 352—BURLAPS.

DATA REGARDING IMPORTATIONS UNDER PARAGRAPHS 352 AND 354.

Average yearly importations of burlap cloth and burlap bags for eight years ending June 30, 1912, showing weight and value and the amount of duty under the present law.

[These figures are obtained from the Treasury Department statistics and are accurate and reliable.]

	Burlap cloth, not exceed- ing 30 threads per square inch (par. 352).	Burlap bags (par. 354).
Weight: Average yearly imports during the 8 years ending June 30, 1912, pounds.....	351,147,013	50,073,223
Value: Average yearly imports during the 8 years ending June 30, 1912.....	\$21,855,107	\$2,911,137
Ad valorem equivalent of present duty.....per cent..	24	30
Amount of duty at present rate.....	\$5,253,468	\$874,811

SIZE AND EXTENT OF CLOTH BAG MANUFACTURING INDUSTRY.

This industry is generally considered a small one. It is neither small nor local. The following list gives the States in which the larger factories are located, with the number of such factories in each:

California.....	3	Massachusetts.....	1	Ohio.....	1
Georgia.....	2	Minnesota.....	2	Oregon.....	2
Illinois.....	2	Missouri.....	5	Pennsylvania.....	1
Indiana.....	2	Nebraska.....	1	Tennessee.....	3
Kentucky.....	1	New Jersey.....	1	Texas.....	2
Louisiana.....	4	New York.....	6	Washington.....	1
Maryland.....	1	North Carolina.....	1	Wisconsin.....	1

According to the statistics of manufactures of the United States, Thirteenth Census, 1910, the cloth-bag manufacturing industry (which is listed under "Bags, other than paper") held the following position in 1909:

	Number of industries larger.	Number of industries smaller.	Rank expressed in per cent.
In number of establishments.....	138	118	46
In persons engaged in industry.....	96	161	62½
In number salaried employees.....	119	138	53½
In number wage earners.....	94	163	63½
In capital invested.....	93	164	64
In salaries paid.....	117	140	54½
In wages paid.....	110	147	57
In cost materials used.....	49	208	81
In value products made.....	66	191	74
In value added by manufacture.....	109	148	58
Average.....	99	158	61.4

It is clear from the foregoing that this industry demands your careful consideration. It has been developed during the past half century under tariff laws favorable to its growth. It is clearly upon a competitive tariff basis now. It deserves a continuation of that basis to just the same extent that other industries are accorded.

REASONS WHY THERE SHOULD BE A DIFFERENTIAL BETWEEN PARAGRAPHS 352 AND 354.

The principal point of manufacture of burlap, which is the bag manufacturers' raw material, is in Calcutta, India. The Indian manufacturers of burlap would like also to manufacture the bags. Enough, perhaps, is known regarding the difference in conditions of employment, hours of labor, and wages in this country and in India to make unnecessary any further reference here. However, the following table may serve to make perfectly clear the fact that no difference in methods or atmosphere or scenery can, unaided by a protective duty, put American labor on a competitive basis with Indian labor.

PARAGRAPH 352—BURLAPS.

	United States of America.	India.
Average hours per week.....	54	72
Average sewers' wages per week.....	\$9.00	\$0.66
Average hemmers' wages per week.....	9.00	.45
"Learners".....	5.00	.40

Figures already given show that under the present differential there are importations of bags in considerable volume, and therefore that there is certainly no prohibition of importations from abroad nor monopoly for the American manufacturer in the present rates.

It has always been assumed that the consumer of burlap bags is confined exclusively to those engaged in agricultural pursuits. This is entirely wrong. We do not disguise the fact that the farmer is to some extent a user of burlap bags, but only to a very small extent. The grains and cereals from the Rocky Mountains to the Atlantic Ocean are handled by the farmer in bulk, and only a very small quantity of bags is used in this section for the purpose of moving the crops. From the Rocky Mountains to the Pacific coast grain is moved partly in sacks, partly in bulk, though the tendency toward the bulk movement of grain is strong, and it is freely predicted that within a short time after the opening of the Panama Canal the Pacific slope will handle all its grain in bulk. Eliminating the Pacific coast, which we believe will soon be on a bulk basis, the farmer is a user of bags in a very restricted sense—largely as a consumer of the goods he buys rather than of the goods he sells, and we do not see what material benefit would result to him by a reduction in duty on bags which are merely used as covers for articles which he purchases.

Furthermore, the products of this country for which bags are used as containers or conveyers are consumed almost entirely at home. This is clearly shown by the comparatively small "drawbacks" applied for upon bags exported filled with American product.

It is clear, therefore, that even if the removal of the present differential should result in a slightly lower cost of burlap bags to the bag consumers of this country it would not materially benefit such consumers, and the retention of the industry in this country is justified.

CONCLUSION.

In conclusion, therefore, we respectfully petition that for the good of this country, for the greatest good to the greatest number, and for the preservation of the industry which we represent, the present differential of 6 per cent between paragraphs 352 and 354 should be increased rather than reduced.

Respectfully submitted.

EVERETT AMES,
Chairman (Ames-Harris-Neville Co., Portland, Oreg.).

ADDENDUM.

TARIFF REVISION, UNDERWOOD BILL, BAG MANUFACTURERS' FIRST CHOICE FOR RATES OF DUTY.

NEW YORK, *January 17, 1913.*

SCHEDULE J.—*Duty on burlaps and burlap bags.*

AS THE LAW NOW IS.

Section 352.

Plain woven fabrics of single jute yarns, by whatever name known, weighing not less than six ounces per square yard, and not exceeding thirty threads to the square inch, counting the warp and filling,

Nine-sixteenths of one cent per pound and fifteen per centum ad valorem;

If exceeding thirty and not exceeding fifty-five threads to the square inch, counting the warp and filling, seven-eighths of one cent per pound and fifteen per centum ad valorem.

Section 354.

Bags or sacks made from plain woven fabrics of single jute yarns, not dyed, colored, stained, painted, printed, or bleached, and not exceeding thirty threads to the square inch, counting the warp and filling,

Seven-eighths of one cent per pound and fifteen per centum ad valorem.

AS THE LAW SHOULD BE.

Section 352.

Plain woven fabrics of single jute yarns, by whatever name known, weighing not less than six ounces per square yard, and not exceeding thirty threads to the square inch, counting the warp and filling,

One cent per pound;

If exceeding thirty and not exceeding fifty-five threads to the square inch, counting the warp and filling, seven-eighths of one cent per pound and fifteen per centum ad valorem.

Section 354.

Bags or sacks made from plain woven fabrics of single jute yarns, not dyed, colored, stained, painted, printed, or bleached, and not exceeding thirty threads to the square inch, counting the warp and filling,

One and one-half cents per pound.

Statement of average yearly importations of burlap cloth and burlap bags for eight years ending June 30, 1912, showing weight and value and the amount of duty under the present law compared with what the amount would be under the proposed change.

[These figures are obtained from Treasury Department statistics, and are accurate and reliable.]

	Burlap cloth (not exceeding 30 threads per square inch).	Burlap cloth (exceeding 30 threads per square inch).	Burlap bags.
Weight: Average yearly imports during the 8 years ending June 30, 1912..... pounds.....	\$51,147,013	50,073,223

PARAGRAPH 352—BURLAPS.

BRIEF OF J. ROSS COLLINS, NEW YORK, N. Y.

NEW YORK, N. Y., February 17, 1913.

The WAYS AND MEANS COMMITTEE,

Oscar L. Underwood, Chairman, Washington, D. C.

SIR: This letter is in reference to jute goods, burlaps, etc. I will make it as short as possible. It is the result of 26 years of experience in this line of business. Will you kindly give it consideration?

Jute is a fiber grown in India, manufactured principally into burlaps and baggings, the coarser cloths in India, the finer in Scotland. Jute does not grow in the United States; the climate is not adapted to it.

There is no American industry in the manufacture of burlaps. Unsuccessful attempts have been made to introduce it. The 12 to 35 cent daily labor of India, as against the 83 cent to \$2 daily labor in this country, prohibits it. Seven hundred million yards of burlaps are imported to this country from India annually. Roughly speaking, the present tariff totals about 25 per cent of the selling price.

Burlaps are used by almost every industry in the country and affects the cost of almost every article used in the home. It covers furniture. It sacks wool which goes into clothing. It carries a great deal of flour; is a necessity for fertilizer bags. It holds coffee, salt, grain of every description. Hundreds of millions of pounds of sugar move in it. It is a vital necessity and enters into consumers' costs. For instance, it takes 1½ yards of goods to make the commonly used fertilizer bags. At the present prices the duty amounts on this 1½ yards to very close to 2 cents. It takes 12 such bags to hold a ton of fertilizer. The extra cost of fertilizer, in consequence of this duty, is therefore 20 to 25 cents per ton.

It takes 1½ yards of burlaps to make a bag to hold 140 pounds of flour. The duty on the goods in this bag amounts to about 1½ cents; on a barrel of such flour it would be 2½ cents, which is equal to nearly one-half of 1 per cent on all the flours so packed that is used in the United States.

Sugar, coffee, salt, wool, all absolute necessities to everyone in the country, cost more on account of this duty on burlaps.

There is no burlap industry here to protect. It would be impossible to start such an industry without a protection which would equalize the difference in wages. This would require in the neighborhood of 70 per cent protection, which would be obviously an unnecessary burden. Therefore, if the Government can afford to do away with the duty on burlaps, although the percentage on each individual item may be small, the cost of many foodstuffs to the people can be eventually reduced.

Now, there are millions and millions of secondhand bags brought to this country from abroad and sold here. At present there is a duty upon such bags, but the difference between this duty and the duty upon the burlap is not sufficient to keep them out, and the result is a loss to the country in the wages that would be earned and the additional business that there would be in making new bags to take the place of these secondhands if the duty on secondhand bags was sufficient to keep them out. If the duty is removed on burlaps, and burlaps are admitted free, and the jute, which does not grow here, is also admitted free, and there is put upon secondhand bags a duty of 1 cent per pound, then the business of manufacturing new bags, to take the place of secondhand bags, which will be kept out, will be increased in this country, to the ultimate benefit of the whole people. Instead of paying profits to people abroad to gather up and mend these secondhand bags and to foreign steamship companies to carry them here, we should employ our own people, making new bags for their own use, and keep the wages and profits in our own country. The admission of burlaps and baggings free and the collection of a duty of 1 cent a pound on all bags, either new or secondhand, would open up to this country the enormous field here at our doors, in Cuba, and the West Indian, Central American, Mexican, and South American countries, so that the United States would stand some chance of exporting to those countries their bags to move the sugar and coffee crops, the largeness of which trade it is necessary to dwell upon.

The removal of the duties on burlap would do away with the vexatious drawback department on jute goods.

I respectfully suggest to your committee that when taking into consideration the duties collected from burlap, that your committee get the statistics as to the drawbacks allowed upon burlaps and bags, when exported, if such are available. All that appears upon the surface in the way of duties on burlap is not so on account of these rebates,

PARAGRAPH 352—BURLAPS.

to say nothing of the cost of the inspection at time of export and of the clerical force necessary to take care of them.

If it is found inadvisable to take off the entire duty on burlaps, in any case, whatever duty is left, either on burlaps or bags or baggings of any kind, should be by the pound, specific duty. At present it is a mixture of specific and ad valorem duties. The ad valorem feature has loopholes, containing possibilities of irregularity, and should be abolished for the good of the country, as well as the customs service.

My contention is that free burlaps and a specific duty of 1 cent a pound on bags will be the best for everyone concerned.

Very respectfully,

J. ROSS COLLINS.

ARMOUR FERTILIZER WORKS IN REGARD TO BURLAPS.

CHICAGO, ILL., *January 8, 1913.*

HON. A. F. LEVER, M. C.,

Washington, D. C.

MY DEAR CONGRESSMAN: You will remember meeting me in Washington in connection with our mutual friend, Atherton Brownell, on the potash matter, and my having made the suggestion that an appropriation by Congress to hunt for potash might benefit the country and get us out of the hands of the Germans. Am pleased to say that potash has been found in large quantities in this country, and I feel that within a couple of years American potash will be on the market. You have, no doubt, been following the Government developments. The German Government still owes the fertilizer people of this country a large amount of money which should have been paid a year to a year and a half ago. As I understand it, they are under moral obligations to this Government to pay it, but they seem slow in releasing the money.

In connection with fertilizers, I would like to call your attention to the duty on burlap bagging, which so largely enters into the cost of shipping cotton, grain, and especially fertilizer. As far as I can ascertain, there is very little burlap manufactured in this country, practically all of the cloth coming from Dundee. Some cotton bagging is made here from junk material. This duty imposes a large cost on shipping the products of the field as well as imposing added cost on the manufacturer and on the farmer for bags containing fertilizer and other materials which he uses. The price of burlap has increased enormously the last year. Fertilizer bags have gone up from \$80 a thousand to \$135 a thousand in the face, I am told, of a large jute crop—the excuse being that the Indian Government has passed a law restricting the hours of labor in India, and that machinery must be installed to take the place of hand labor. We are promised after a time some little relief from the present intolerable conditions. Whether this is so or not, I know that it will cost the farmers of the United States many millions of dollars more for their bagging, due to this advance, than they paid last year and the year before.

No doubt you are fully informed on all these matters, but I thought I would write you calling your attention specially to them, as they are naturally of interest to you in your representative work.

Believe me, with high regard, very truly, yours,

C. H. MACDOWELL, *President.*

BRIEF OF LANDERS BROS. CO., TOLEDO, OHIO.

TOLEDO, OHIO, *February 18, 1913.*

HON. OSCAR W. UNDERWOOD,

Chairman Committee on Ways and Means,

Washington, D. C.

DEAR SIR: Taking up the matter of burlap, that has been discussed before your honorable board, and referring particularly to paragraph 352:

“Plain woven fabrics of single jute yarns, by whatever name known, weighing not less than six ounces per square yard, and not exceeding thirty threads to the square inch, counting the warp and filling, nine-sixteenths of one cent per pound and fifteen per centum ad valorem; if exceeding thirty and not exceeding fifty-five threads to the square inch, counting the warp and filling, seven-eighths of one cent per pound and fifteen per centum ad valorem.”

We note that several large importers like ourselves have requested that this section be left as it is. We do not feel disposed to view the matter in this way. In fact, these

PARAGRAPH 352—BURLAPS.

goods are not manufactured in this country, and do not think that they will be for a very great length of time, and consequently there is no protective tariff required.

We feel, therefore, that this duty, or at least part of it, could be eliminated, as it is practically a noncompetitive product in this country, like the reeds referred to in previous letter.

We do not wish to dictate to your Ways and Means Committee what would be the best for this country, but knowing to what extent the competition exists in this fabric, as well as the reeds, we feel that it is the duty of importers of these goods to express themselves and recommend suggestions that might be beneficial to your board.

In the meantime we thank you for the privilege of bringing this matter to your notice, and assuring you that we would appreciate due consideration of what we have outlined regarding these two important matters.

Meanwhile, we remain, yours, truly,

LANDERS BROS. CO.,
W. A. MARTIN.

FROM LETTER OF YOUNG & METZNER, LONG ISLAND CITY, N. Y.**BAGGING FOR COVERING COTTON.**

There are now, besides the so-called "trust," which is no longer a trust, about a dozen reweaving mills, all in the Southern States; two mills making "sugar-bag cloth" for covering cotton, one in the South; and 8 or 10 mills making patent and piece bagging; these with the imports supply about 40 per cent of the bagging used for cotton. All the mills engaged in making bagging aggregate a wage pay roll for purely labor of perhaps \$2,500,000 per annum.

The duty on the amount of bagging that would imported if all the bagging not reused, etc., were made abroad would be about \$400,000. The mills employ in the bagging departments 3,000 to 4,000 people, with, say, a total of 10,000 to 12,000 dependent for a living on the wages paid.

BRIEF OF PERCY F. PHILLIPS, NEW YORK CITY.

NEW YORK, *January 31, 1913.*

The WAYS AND MEANS COMMITTEE,
Washington, D. C.

GENTLEMEN: The argument in favor of free burlaps is simply an argument in favor of jute grown in India and burlaps grown in India (with a labor cost of one-third estimated of what it is in the United States), as against cotton grown in the United States and cotton cloth manufactured in the United States.

The one item of cotton cloth called "osnaburgs," 30 inches wide, and weighing 7 ounces to the yard, has been used in this country during the last year, for the purpose of cement bags to the extent of something like 60,000,000 yards.

With a free entry of burlaps, this business would be entirely wiped out. There are already samples in the market of the cloth that would answer this purpose, which could be imported. If burlaps came in free there would be no more osnaburgs used for cement bag purposes.

It is a subject of remarks that all of the testimony given you before your committee, and all the briefs that have been handed into you, the only people who want free burlaps are the importers of the same, who are calculating to push out cotton goods to just that extent.

Yours, very truly,

PERCY F. PHILLIPS.

BRIEF OF JACOB LAWSON BAG CO., NEW YORK, N. Y.

JACOB LAWSON BAG CO.,
New York, January 22, 1913.

Hon. OSCAR W. UNDERWOOD,
Chairman Ways and Means Committee, Washington, D. C.

DEAR SIR: We take the liberty of writing you in connection with the contemplated tariff changes in Schedule J, bags and bagging. We wish to treat this matter in a broad, liberal spirit, both from a partly interested viewpoint, but first and more especially as good citizens, desiring that at this time your committee have any information which may be of help in the drafting of a new schedule.

PARAGRAPH 352—BURLAPS.

First. We can not too strongly urge that if any duties are placed on these products they be "specific," the ad valorem feature of present tariff being most unsatisfactory, making the duties uncertain and speculative, and in its actual operation has resulted in loss to manufacturers who sell bags for future delivery, cover their sale at once by the purchase of burlap but can not know just what the duty on such goods will be at time of shipment from India, thus introducing a speculative operation where there is no need of such.

Second. We believe the bag manufacturers should have a slight protective duty on new burlap bags, because of the unusually low cost of labor in India, from where the large proportion of burlap comes, and which market could readily absorb the new bag manufacturing business of the United States without such slight protective duty. In our opinion a duty of one-half cent per pound would prevent the practical transfer of this industry to India.

Third. We believe burlap, the raw material, should be admitted free of duty, unless for revenue purposes a duty is needed. In such case a slight differential should be made between burlap bags and burlaps.

Fourth. We recommend second-hand bags (both burlap and bagging) be admitted free. While we frankly feel it may affect our business adversely at first, yet, for the good of the many and tending in a general way to steady and keep down the prices of all bags to the consumer, we think it is the right thing to do, and we hope the natural laws of supply and demand will finally correct any bad conditions in the bag trade due to the free entry of second-hand bags.

The writer respectfully offers to answer any question or questions in connection with this portion of Schedule J frankly and to the best of his knowledge, if called upon to do so.

Yours, very respectfully,

JACOB LAWSON BAG CO.,
WILLIAM M. LAWSON, *President*.

TARIFF ON JUTE FABRICS.

MILLERS' NATIONAL FEDERATION,
Chicago, January 24, 1913.

The WAYS AND MEANS COMMITTEE,
House of Representatives, Washington, D. C.

GENTLEMEN: In considering Schedule J, the millers of the United States ask your careful consideration of paragraph 352, providing for tariff on jute cloth. A very large proportion of the jute cloth imported is used by millers in the form of flour sacks, which are used very extensively for both domestic and foreign shipments.

The tariff at present amounts to about 3 cents per barrel on flour packed in jute sacks, and no satisfactory substitute for jute for this purpose has been produced. As there is no jute cloth manufactured in this country, no American industry would be effected by the removal of this tariff.

Respectfully submitted,

MILLERS' NATIONAL FEDERATION,
A. P. HUSBAND, *Secretary*.

PARAGRAPHS 353-355—JUTE BAGGING.

PARAGRAPH 353.

All pile fabrics, whether or not the pile covers the entire surface, composed of flax, or of which flax is the component material of chief value, and all articles and manufactures made from such fabrics, not specially provided for in this section, sixty per centum ad valorem.

PARAGRAPH 354.

Bags or sacks made from plain woven fabrics, of single jute yarns, not dyed, colored, stained, painted, printed, or bleached, and not exceeding thirty threads to the square inch, counting the warp and filling, seven-eighths of one cent per pound and fifteen per centum ad valorem.

See Everett Ames, page 4064.

PARAGRAPH 355.

Bagging for cotton, gunny cloth, and similar fabrics, suitable for covering cotton, composed of single yarns made of jute, jute butts, or hemp, not bleached, dyed, colored, stained, painted, or printed, not exceeding sixteen threads to the square inch, counting the warp and filling, and weighing not less than fifteen ounces per square yard, six-tenths of one cent per square yard.

JUTE BAGGING.

BRIEF OF THE CAROLINA BAGGING CO., HENDERSON, N. C.

HENDERSON, N. C., *January 27, 1913.*

Hon. F. M. SIMMONS,
United States Senate, Washington, D. C.

DEAR SIR: At present, as you are aware, new jute butts come into this country duty free, a very decided advantage to the Jute Bagging Trust, but old bagging, which has been used on exported cotton, is taxed 10 per cent duty. Now, we handle a considerable quantity of this old bagging which has been shipped out of this country on cotton to foreign ports, and we fail to see the justice in allowing the new jute butts to come in free and charge a 10 per cent ad valorem tax duty on this old material.

There was no duty on this material prior to 1910, as it was used at that time altogether for making paper, but since it is being used largely for making re woven bagging, we understand the trust has been instrumental in having this tax levied.

There was during November, 1910, a trial held before Judge Summerville at the customhouse in New York with reference to charging duty on this old material. The decision of the judge allowed scrap for paper making free, but placed 10 per cent tax on all bales containing large selected sides, and while 90 per cent of a shipment may prove to be scrap, if there is found any large pieces they tax the whole shipment 10 per cent, which is a most unjust and unreasonable decision. The fact of the matter is there should be no duty on this old material, and we trust you will use your efforts in that end. This company produces 150,000 rolls of bagging, employ 400 laborers, and have a pay roll of more than \$75,000 annually, and we need your aid, and judging from your past record for a square deal, believe you will interest yourself in having this duty removed.

Yours, very truly,

CAROLINA BAGGING Co.,
S. S. PARHAM, *Vice President.*

GUNNY CLOTH OR BAGGING FOR COTTON BALES.

Bagging for cotton bales is dutiable at six-tenths cent per square yard, or much less than half the ad valorem rate of other jute goods.

The competition comes from Calcutta, India, and Dundee, Scotland.

	Yards.
Total sales in United States year 1911 (approximately).....	100, 000, 000
Of which—	
American manufacturers sold	83, 000, 000
Foreign manufacturers sold.....	17, 000, 000
	100, 000, 000

Of the above 100,000,000 yards this company manufactured about 47,000,000 yards. Of the balance of 53,000,000 yards 17,000,000 yards were made by seven foreign competitors and 36,000,000 yards by seven domestic competitors.

PARAGRAPHS 353-355—JUTE BAGGING.

Apart from raw material, which fluctuates greatly in market value, the cost of making, transporting, and marketing a yard of bagging is about 3 cents. Of this more than two-thirds or more than 2 cents per yard is labor in some form in or out of the mills.

Much of the raw material used in making bagging is charged with import duties.

The machinery has nearly all paid 45 per cent duty to the Government.

Average wages in our bagging mills per individual per week, 1896, 57 hours, \$4.58; average wages in our bagging mills per individual per week, 1910, 57 hours, \$8.79; an increase in 14 years of over 90 per cent in rate of pay. Average Calcutta jute mill wages per individual, per week, 1910, 70 cents.

Total increase in cost of manufacture in United States in 10 years, nearly 1 cent per yard, or one-third more than the entire present duty.

Our people are paid, for equal work, more than 12 times as much money as East Indian mill hands. We are unable to compete with Asiatic labor and pay American wages.

AMERICAN MANUFACTURING Co.,
By F. H. FILLEY, Vice President.

BROOKLYN, N. Y., January 21, 1913.

(See attached certificate from Haskins & Sells.)

[One of six signed copies.]

HASKINS & SELLS, CERTIFIED PUBLIC ACCOUNTANTS,
NEW YORK, June 16, 1911.

THE AMERICAN MANUFACTURING Co.,
Nos. 63-65 Wall Street, New York.

DEAR SIR: In accordance with your request, we have made an examination of the pay rolls of the American Manufacturing Co. for the calendar years 1892 to 1910, inclusive, for the purpose of ascertaining the average weekly wages paid to employees in the company's bagging manufacturing mills at St. Louis, Mo., equalized to the basis of 57 hours per week, and we find such average weekly wages to have been as follows:

Year.	St. Louis mills.		
	Average.	Standard.	Southern.
1892.....	(1)	\$5.3094	(1)
1893.....	(1)	5.5640	(1)
1894.....	\$4.5933	4.7851	\$4.4854
1895.....	4.4800	4.6505	4.3814
1896.....	4.4752	4.6565	4.3643
1897.....	4.5763	4.6669	4.5215
1898.....	5.3229	5.2922	5.3425
1899.....	5.7351	5.8875	5.6413
1900.....	6.2592	6.4015	6.0802
1901.....	6.3733	6.5782	6.2386
1902.....	6.3851	6.4984	6.2847
1903.....	7.3099	7.3277	7.3006
1904.....	7.6938	7.7587	7.6029
1905.....	7.7420	7.8147	7.6950
1906.....	7.8519	8.0789	7.7036
1907.....	8.6598	8.6908	8.6439
1908.....	7.8238	7.8774	7.7950
1909.....	8.0813	8.0804	8.0819
1910.....	8.7917	8.7350	8.8346
Ratio of increase 1910 over 1894 (per cent).....	91.40	82.55	96.96

¹ Southern pay rolls missing for this year.

These averages have been determined by dividing the total amount of the pay rolls by the total number of employees, equalized to the basis of 57 hours per week, and do not include salaried employees.

Yours, truly,

HASKINS & SELLS,
Certified Public Accountants.

PARAGRAPHS 353-355—JUTE BAGGING.

STATEMENT SUBMITTED BY C. LEE M'MILLAN & CO. (LTD.),
NEW ORLEANS, LA.NEW ORLEANS, *February 22, 1913.*HON. OSCAR W. UNDERWOOD,
Washington, D. C.

SIR: I beg to call your attention to latest Treasury decision on the subject of "Bagging for covering cotton."

If you will kindly read this decision, you will see that the "Bagging Trust" is making an effort now to have Treasury Department declare that "jute waste" is not jute. If the trust is successful when its appeal is heard, it will be unsafe to import any bagging that does not analyze pure jute.

Unless such a paragraph as the one written in your bill last year is incorporated in whatever new bill passes, there is going to be trouble for importers whether bagging is free or not, and much higher prices for the bagging the farmers have to buy.

If bagging is not going on the free list, please try and have the paragraph you approved last year used as a substitute for paragraph 355 of the present tariff act.

The "Bagging Trust" buys from all Europe and America any cheap fiber, new or second hand, to make the cloth it puts upon the domestic market.

None of the bagging imported from India or Great Britain is anything like as poor in quality as the major part of that produced by the trust in this country, but just the same, the "trust" has verbally notified importers that, "if any bagging is brought in which is not pure jute, that trust will see that the Government charges 45 per cent ad valorem duty, instead of the six-tenths cent per square yard," as contemplated in law as exists now.

Thanking you in advance for any efforts you may use in behalf of this matter, I beg to remain,

Yours respectfully,

C. LEE McMILLAN.

[Treasury Decisions, vol. 24, No. 7, Feb. 13, 1913.]

DECISIONS OF THE UNITED STATES COURT OF CUSTOMS APPEALS.

(T. D. 33161.)

American Manufacturing Co. v. United States (No. 818). Bagging for cotton.

The merchandise was classified by the collector as bagging, made of jute butts and wastes, and was assessed for duty under paragraph 355, tariff act of 1909. The protest claimed alternatively under two paragraphs—to wit, 358 and 480—of that act. On the date set for hearing the Government asked that a consent order sustaining the protest should be entered of record. The protestants objected to this, insisting on a hearing and a decision upon the question of law involved. The board denied this and, directing a submission of the case without a trial of the issues of fact, sustained the protest. An assessment was ordered under the provisions of paragraph 358. The appeal was taken from the order sustaining the protest.

A CONSENT ORDER, WHEN BOTH PARTIES DO NOT CONSENT.

The order sustaining the protest was not made by the consent of both parties nor upon the express admission by the Government of any of the facts alleged in the protest. This was not a consent order in the legal acceptance of the term. It was not an order legally following on an express admission of fact by one of the contending litigants. The protestant had the right to show by evidence whether the merchandise belonged to one or the other of the two classes, as alleged in the protest.

PARAGRAPHS 353-355—JUTE BAGGING.

United States Court of Customs Appeals, February 1, 1913.

Appeal from Board of United States General Appraisers, abstract 27492 (T. D. 32126).

(Reversed.)

Brown & Gerry for appellant; Wm. L. Wemple, Assistant Attorney General (Chas. E. McNabb, assistant attorney, of counsel; Wm. A. Robertson, special attorney, on the brief), for the United States.

Before Montgomery, Smith, Barber, De Vries, and Martin, Judges.

Smith, Judge, delivered the opinion of the court.

Certain goods imported at the port of New York was classified by the collector of customs as bagging for cotton, made of jute butts and wastes. The merchandise was accordingly assessed for duty at six-tenths of 1 cent per square yard under the provisions of paragraph 355 of the tariff act of 1909, which said paragraph reads as follows:

"355. Bagging for cotton, gunny cloth, and similar fabrics, suitable for covering cotton, composed of single yarns, made of jute, jute butts, or hemp, not bleached, dyed, colored, stained, painted, or printed, not exceeding 16 threads to the square inch, counting the warp and filling, and weighing not less than 15 ounces per square yard, six-tenths of 1 cent per square yard."

The importer protested that the merchandise was not composed of single yarns made of jute, jute butts, or hemp, and that therefore it was not dutiable under the provisions of paragraph 355. The protest claimed, first, that the goods were woven articles or manufactures composed wholly or in chief value of vegetable fiber other than flax, hemp, or ramie, dutiable at 45 per cent ad valorem under paragraph 358, and, second, that if not dutiable under paragraph 358, it was dutiable at 10 per cent ad valorem under the provisions of paragraph 480. Paragraphs 358 and 480, under which the importer claimed, are as follows:

"358. All woven articles, finished or unfinished, and all manufactures of flax, hemp, ramie, or other vegetable fiber, or of which these substances, or any of them, is the component material of chief value, not specially provided for in this section, 45 per centum ad valorem."

"480. That there shall be levied, collected, and paid on the importation of all raw or unmanufactured articles, not enumerated or provided for in this section, a duty of 10 per centum ad valorem, and on all articles manufactured, in whole or in part, not provided for in this section, a duty of 20 per centum ad valorem."

The paragraph under which the assessment was made by the collector imposed on the goods a total duty of 73 cents. If the importation had been classified as woven articles or manufactures composed wholly or in chief value of vegetable fiber other than flax, hemp, or ramie, the full duty on the goods at 45 per cent ad valorem under paragraph 358 would have amounted to \$3.60. Had the merchandise been assessed as a nonenumerated raw or unmanufactured article the duty thereon under paragraph 480 at 10 per cent ad valorem would have amounted to 75 cents.

When the protest came up for hearing apparently no sample of the goods or testimony on behalf of the Government was submitted to the Board of General Appraisers. At that time, counsel for the Government asked for a suspension, which, being denied, he announced to the board that inasmuch as the amount involved in the case was extremely small, he was authorized by the Assistant Attorney General to consent on the record to the entering of an order sustaining the protest. Counsel for the importer refused to accept the stipulation of Government counsel, and stated that the protestant desired to try the case and present testimony in support of its protest, inasmuch as the proceedings had been taken with the knowledge and consent of the Secretary of the Treasury for the purpose of securing from the board a ruling on the question of law involved. The Board of General Appraisers refused, however, to hear any testimony on behalf of the protestant, and after directing that the case be submitted without a trial of the issues of fact, ordered that the protest be sustained. To these rulings of the board counsel for the importer took their exception.

In the formal decision of the board it was directed that the protest be sustained and that assessment "be made under the provisions of paragraph 358, as claimed."

The order sustaining the protest was not made by consent of both parties, nor upon the express admission of the Government of any of the facts alleged in the protest.

PARAGRAPHS 353-355—JUTE BAGGING.

It was consequently not a consent order in the legal acceptance of the term, and neither was it an order which legally followed any express admission of fact by one of the contending litigants.

From the language used in consenting to the order sustaining the protest we can draw no other conclusion than that the Assistant Attorney General did not deem a contest worth while, and that so far as he was concerned the protest might be sustained on any of the grounds alleged by the importer.

Admitting for the purpose of this case only that the concession of the Assistant Attorney General eliminated the return of the collector from all consideration, the board was still confronted with the problem of determining on which of the two claims alleged by the importer the protest should be sustained. The board could not sustain both grounds of the protest, and even if the consent of the Assistant Attorney General could be construed into an admission of all the facts alleged in the protest, it was still necessary for the board to ascertain whether the merchandise imported was a woven article or manufacture composed wholly or in chief value of "other" vegetable fiber or whether it was a raw or unmanufactured article not specially provided for. Whether the merchandise belonged to one or the other of the two classes alleged in the protest was a question of fact, and that question could not be settled by the board without some evidence to justify the conclusion reached.

As the importer was not permitted to introduce any testimony in support of his protest, the decision of the board that the goods were dutiable under paragraph 358 finds no more warrant in the evidence disclosed by the record than would a finding that the goods were nonenumerated raw or unmanufactured articles under the provisions of paragraph 480.

True, the collector returned the merchandise as cotton bagging, and cotton bagging may be a manufactured article; but as the correctness of the collector's return was the very thing put in issue by the protest we do not see how the return can be invoked as conclusive evidence against the claims of the importer, who was not permitted to impeach it by testimony. We think the finding of the board is not sustained by the evidence, and that the board erred in refusing to permit the importer to introduce testimony in support of its protest. The decision of the board is therefore reversed, with directions that the case be retried, and that on such retrial the importer may be permitted to introduce proper testimony and evidence in support of either on any of the claims of its protest.

DISSENTING OPINION.

Barber, Judge. Among other reasons, therefore, I dissent because—

(a) I think the tender of the Government before the board gave to the importer the right to take an order from that tribunal sustaining its protest as to any claim made therein upon which it might elect to stand, and therefore that there was nothing further to litigate there.

(b) The Government in this court tenders its consent that the importer may have judgment sustaining the protest upon any claim made therein, or may have the judgment of the board reversed and the action of the collector sustained, and there is, therefore, nothing to litigate here.

(c) The logical result of the court's decision is, I think, that the Government can not consent that judgment may go against it, either before the Board of General Appraisers or in this court, unless the importer is willing. If this be so, it must follow that importers have not a corresponding right unless the Government is willing. To my mind such results are not justifiable and can not be sustained in principle or by authority.

Either party, by conceding all the other claims, should have, and I think has, a legal right to get out of court by suffering judgment in a civil case, like the one here.

The fact that the protest makes alternative claims is immaterial, as an importer should be able to select one on which he will take his judgment; otherwise he is using the courts to settle a question, real or fictitious, concerning which he is the only party who is interested in its determination.

PARAGRAPH 356—LINEN HANDKERCHIEFS.

PARAGRAPH 356.

Handkerchiefs composed of flax, hemp, or ramie, or of which these substances, or either of them, is the component material of chief value, whether in the piece or otherwise, and whether finished or unfinished, not hemmed or hemmed only, fifty per centum ad valorem; if hemstitched, or imitation hemstitched, or reversed, or with drawn threads, but not embroidered, initialed, or in part of lace, fifty-five per centum ad valorem.

LINEN HANDKERCHIEFS.

STATEMENT OF HENRY DOUGLAS, NEW YORK, N. Y.

DOUGLAS & BERRY,
New York, January 23, 1913.

I, Henry Douglas, partner in the firm of Douglas & Berry, linen and handkerchief importers and manufacturers of domestic handkerchiefs, 82 Franklin Street, New York, being duly sworn, deposeseth under oath that the annexed statement is a correct showing of the foreign cost to manufacture 1 dozen of a 14⁰⁰ 19-inch gents' handkerchief, punch hemstitch, damp smoothed, hemstitch fold, and put up in 5 dozen boxes, with a manufacturer's profit of 10 per cent added to same; also swears that the cost as given for the same article as per sample handkerchief attached, manufactured in Passaic, N. J., from imported linen cambric, on which the present rate of duty is 35 per cent, is also correct and true.

HENRY DOUGLAS.

STATE OF NEW YORK, *County of New York*, ss:

Subscribed and sworn to before me this 23d day of January, 1913.

[SEAL.]

HENRY S. HAWKS,
Notary Public, New York County.

Certificate filed in Kings County.

DOUGLAS & BERRY,
New York, January 22, 1913.

Gents' plain hemstitched linen cambric handkerchiefs.

Imported cost to land 14 ⁰⁰ 38-inch cloth, foreign costs.	Domestic costs for same goods. Duty on cloth 35 per cent.
Yards to the dozen 3½ at 9½..... 29.30	Cloth per yard 9½. Currency cost at 35 per cent, 27½ cents less 7 per cent discount.
Stitching, 14 stitches damp smoothed, 5 dozen box, H. S. fold..... 5.25	Yards to the dozen 3½, at 27 cents..... 87.87
34.55	Discount 7 per cent..... 6.15
Manufacturer's profit 10 per cent..... 3.45	81.72
38.00	Price paid for 14 stitches damp smoothed, 5 dozen box, H. S. fold..... 16.00
Discount 3½ per cent..... 1.33	97.72
36.67	Domestic cost for the same article.
Duty (to the penny):	
40 per cent at 3.10 3/2.	
55 per cent at 3.40 3/2.	
117.80	
129.20	
Discount 7 per cent.... 8.22	
9.04	
109.58	
120.16	
Cost to land foreign goods.	

Note the cost of stitching, etc., in the domestic-sewn goods is that charged by factories who stitch for the trade in which it is reasonable to presume they have a profit of 3 to 4 cents per dozen on what the worker is paid.

DOUGLAS & BERRY,
Per HENRY DOUGLAS.

PARAGRAPH 356—LINEN HANDKERCHIEFS.

DOUGLAS & BERRY,
January 23, 1913.

COMMITTEE ON WAYS AND MEANS,
House of Representatives, Washington, D. C.

GENTLEMEN: We herewith respectfully submit statement of foreign cost to manufacture hemstitched linen cambric handkerchiefs, also the cost to manufacture same goods in Passaic, N. J., from imported linen cambric, on which the present rate of duty is 35 per cent.

From these figures you will see the foreign completed handkerchief, paying present duty of 55 per cent, would cost to land, without any profit to the importer, \$1.2016, while the domestic article costs to produce \$0.9772. At 40 per cent duty the foreign article would cost to land \$1.0958, and at 35 per cent \$1.0602.

We therefore request that the present duty of 50 per cent on hemmed, and 55 per cent on hemstitched linen cambric handkerchiefs be reduced to 35 per cent on both, which in our judgment would give the domestic manufacturer ample protection, the foreign article having to pay the duty on the labor cost to complete the handkerchief, while the domestic manufacturer pays duty on his raw material only.

We regret not having particulars to give you the exact difference in cost between foreign and domestic initialed or embroidered handkerchiefs, but think it fair to assume the percentage of difference would be about the same as on the plain goods. The present duty on both initialed and embroidered handkerchiefs is 60 per cent.

Would therefore ask that it be reduced to 40 per cent.

Yours truly,

DOUGLAS & BERRY,
Per HENRY DOUGLAS.

BRIEF OF LINEN-HANDKERCHIEF MANUFACTURERS.

The WAYS AND MEANS COMMITTEE,
House of Representatives, Washington, D. C.

GENTLEMEN: The undersigned, manufacturers in the United States of handkerchiefs made from linen, desire to call the committee's attention to some facts in regard to the proposed reduction of duty which they desire to respectfully protest against.

The particular paragraph to which attention is called is paragraph 356, wherein provision is made for handkerchiefs composed of flax, hemp, or ramie, or or which these substances, or either of them, is the component material of chief value, whether in the piece or otherwise and whether finished or unfinished, not hemmed or hemmed only, 50 per cent ad valorem; if hemstitched or imitation hemstitched, or revered, or with drawn threads, but not embroidered, initialed, or in part of lace, 55 per cent ad valorem.

Paragraphs 349 and 350 cover handkerchiefs when made in part of lace, embroidered or initialed.

Under these provisions the rates of duty vary from 50 per cent (under pars. 350 and 356) on the plain handkerchief, 55 per cent if hemstitched, 60 per cent (under par. 349) if made in part of lace, and 70 per cent (under par. 350) when made on the Lever or Gotherough machine and composed in part of lace.

The several parties who have joined in this brief, use the linen cloth as their raw material. Inasmuch as all of this cloth is imported, the question of the rate and amount of duty to be collected thereon is one in which the question of protection is not involved in any sense, in so far as the linen cloth itself is concerned, and may have an incidental hearing on the question of the duty on cotton cloth, inasmuch as the removal of all duty on linen would, perchance, offer this cloth as a substitute for cotton cloth.

According to the press, this committee is accredited with the view that duties on a revenue basis should be assessed on such lines of merchandise as are not produced in this country and if this be true, then some measure of duty would be assessed on linen cloth imported. Under the present act this duty ranges from 30 per cent on fabrics containing not more than 100 threads to the square inch to 54.65 per cent on fabrics containing 120 and not more than 180 threads to the square inch, although on the total of importations fabrics made of flax, hemp, ramie, etc., for the fiscal year ended June 30, 1912, which amounted to \$46,687,000, including a certain amount of pile fabrics, on which the duty was 60 per cent, the average equivalent ad valorem on such total importations was 33.47 per cent. The quantity of handkerchiefs imported

PARAGRAPH 356—LINEN HANDKERCHIEFS.

under paragraph 350 is entirely negligible and the total importation of linen handkerchiefs, amounting to \$2,333,000, was subjected to an average ad valorem of 58.69 per cent, making a differential of 25.22 per cent, or 15 per cent, on handkerchiefs not hemmed or hemmed only; 20 per cent differential on hemstitched or imitation hemstitched or revered or with drawn threads, and 25 per cent differential on handkerchiefs embroidered, initialed or in part of lace. It is with respect to this differential that the manufacturers of linen handkerchiefs in this country are interested.

LABOR CONDITIONS ABROAD.

By far the largest quantity of linens imported into this country for use in manufacturing handkerchiefs come from Ireland and the labor conditions are such that a committee of inquiry was appointed by Mr. Winston Churchill, who was home secretary in 1911, and on December 10, 1912, a report of this committee was filed. In their report, leading up to the conclusions reached, the fact is commented upon that the total number of so-called outworkers is unknown; but that it is very likely in excess of the factory and workshop employees, who in 1907 numbered 22,000. The committee is satisfied that outwork is indispensable. Certain processes are carried on exclusively as home industries, and in the case of hand embroidery in rural Ulster to convert it into a factory industry would be nothing short of revolution in the trade. The committee investigating the causes of low earnings for outwork developed the proposition that these outworkers have no kind of organization and that no standard rate of pay for the various making up processes could be said to exist. Some firms paid considerably better than others; but in the more important processes, such as thread drawing, thread clipping, fancy sewing and embroidery, as low as a penny per hour and under was paid in the majority of instances furnished by the persons intrusted with inquiries. The facts just stated are taken from the issue of the Northern Whig of December 10, 1912, a paper published in Belfast, which clipping will be submitted to the clerk, with the request that it be printed as part of the record.

Whatever may be the actual conditions of labor in Belfast, the fact undoubtedly is that unless the differential as between the linen cloth and the completed handkerchief is preserved, as above outlined, the manufacturers here will be utterly unable to compete in maintaining their factories under the conditions extant in this country, against the home worker of Ireland.

The importation of handkerchiefs has increased practically every year from 1893 to 1912 on the handkerchief of the more expensive character. In 1893 the duties collected amounted to \$246,000, and in 1912 it amounted to \$1,048,142, so that at no time has the duty of 60 per cent been prohibitive and the importations have at all times furnished an increasing revenue to the Government.

Under the Wilson tariff the importations in the year 1895 or 1896 were about a million dollars, bringing into the Government the sum of \$400,000 on a 40 per cent basis, as against a revenue of over a million dollars in 1912 on a 60 per cent basis. We think, therefore, that these figures demonstrate the fact that in preserving a differential of 25 to 30 per cent, as between the duty on the linen cloth and the manufactured article, the revenue has constantly increased and, therefore, no harm has been done to the Government.

Succinctly, therefore, so far as we are concerned with respect to the duties on on handkerchiefs made from linens, we are not concerned with respect to the rate of duty assessed on the linen cloth, although that is our raw material, and the committee is, therefore, free to assess such rate of duty as in its wisdom shall be deemed wise and proper. We only ask that, in the light of the labor situation abroad, the present differential be maintained and, representing the general feeling of the domestic manufacturers of linen handkerchiefs, your petitioners aver that it is to the best interests of all concerned—the manufacturers and the Government alike—that our request be granted.

Respectfully submitted.

PARAGRAPHS 357-358—LINENS, ETC.

PARAGRAPH 357.

Woven fabrics and articles not specially provided for in this section, composed of flax, hemp, or ramie, or of which these substances or any of them is the component material of chief value, weighing four and one-half ounces or more per square yard, when containing not more than sixty threads to the square inch, counting the warp and filling, one and three-fourths cents per square yard; containing more than sixty and not more than one hundred and twenty threads to the square inch, two and three-fourths cents per square yard; containing more than one hundred and twenty and not more than one hundred and eighty threads to the square inch, six cents per square yard; containing more than one hundred and eighty threads to the square inch, nine cents per square yard, and in addition thereto, on all the foregoing, thirty per centum ad valorem: Provided, That none of the foregoing articles or fabrics in this paragraph shall pay a less rate of duty than fifty per centum ad valorem. Plain woven fabrics, not including articles, finished or unfinished, of flax, hemp, or ramie, or of which these substances or any of them is the component material of chief value, including such as is known as shirting cloth; weighing less than four and one-half ounces per square yard and containing more than one hundred threads to the square inch, counting the warp and filling, thirty-five per centum ad valorem; weighing less than four and one-half ounces per square yard and containing not more than one hundred threads to the square inch, thirty per centum ad valorem.

PARAGRAPH 358.

All woven articles, finished or unfinished, and all manufactures of flax, hemp, ramie, or other vegetable fiber, or of which these substances, or any of them, is the component material of chief value, not specially provided for in this section, forty-five per centum ad valorem.

LINENS, ETC.

TESTIMONY OF MAX WILNER, REPRESENTING HENRY GLASS & CO., NEW YORK CITY.

Mr. WILNER. Mr. Chairman and gentlemen, the paragraphs of Schedule J, to which I wish to refer, are Nos. 357 and 358, under which we import tablecloths, napkins, towels, and articles of that description which are only in a very small amount manufactured in this country. They are practically all imported.

Owing to certain interpretations of paragraph 357 there has been brought into this country a class of merchandise which is not made or manufactured for any other country in the world, but is only made for the American trade.

The intention originally was to have this clause interpreted only for shirtings, but there are now brought into this country tablecloths and napkins of every description which are of such a nature as it is in the nature of a fraud on table linen.

I wish to offer to you gentlemen some practical illustrations of these goods. Owing to the workings of the tariff we are forced to import this class of goods where we could import goods of a decent class of material for the American people the same as they use all over the world.

You gentlemen may not know the merchandise business, but I will give you a practical illustration which you can readily understand. Here are two tablecloths that cost the manufacturer practically the same price, but owing to the workings of the tariff one of these samples pays duty at the rate of 45 per cent and the other pays duty at the rate of 30 per cent ad valorem and 6 cents per square

PARAGRAPHS 357-358—LINENS, ETC.

vard. This cloth in normal times would pay about 45 per cent and this one would pay about 67½ per cent, according to my brief.

The CHAIRMAN. Under what paragraph do they fall?

Mr. WILNER. Table linens.

The CHAIRMAN. Which paragraph does that one come under [indicating sample]?

Mr. WILNER. Under paragraph 357.

The CHAIRMAN. I thought you said that carried a 60 per cent duty?

Mr. WILNER. This is under 358, goods not provided for in this act.

The CHAIRMAN. That falls under the basket clause.

Mr. WILNER. This one [indicating sample] comes under the clause not provided for.

The CHAIRMAN. Tell us why that is so.

Mr. WILNER. This cloth [indicating] which is under 4½ ounces is not provided for. The paragraph 357 only provides for goods weighing over 4½ ounces per square yard. Paragraph 358 takes this in and goods not provided for.

The CHAIRMAN. And it costs the same to manufacture?

Mr. WILNER. Yes, sir. I wish to state that we ask for a lower rate of duty to enable us to import the housekeeping linens, which are not in any way a luxury. A tablecloth that we are selling to the retail trade for \$1 can not be called a luxury. A towel selling for 15, 20, and 25 cents could not be called a luxury, nor could a napkin be called a luxury. If we are provided with a lower rate of duty we can import a great many more of these goods than we are now importing at the present time. Owing to a heavy rise in the foreign market, we are practically cut out of importing a great many goods, and the Government is thereby losing the revenue.

The CHAIRMAN. You want a reduction, and you also want a change in classification so that they will all fall together?

Mr. WILNER. We ask for that. I believe it would be to the interest of the consumer as well as to the interest of the Government, and I think there would not be any loss by it.

The CHAIRMAN. Is there any reason why this classification should be limited to 4½ ounces? Is there any good reason for that?

Mr. WILNER. No; there is no good reason at all.

The CHAIRMAN. It is merely a change of the classification for the purpose of raising the rate on something, is that it?

Mr. WILNER. That was the intention. This article [indicating] is not made for any other country in the world, except for the American trade. You could not go to a man with a towel of this description and offer it to him for sale; you would be laughed at. This is like tissue paper, being sold as a towel. This towel could be made heavier for the same price. We must say to the manufacturer that these goods are too good for our country; our country will not allow our people to have such goods.

The CHAIRMAN. In other words, the law forces the importer to reduce goods below 4½ ounces in order to get them in under the lower duty?

Mr. WILNER. I ask that you eliminate the 4½ ounce clause on all but plain woven goods, and believe with the ad valorem rate of 35 per cent on all but the plain woven goods, it will enable us to import

PARAGRAPHS 357-358—LINENS, ETC.

good serviceable goods in larger quantities than we have been doing, which will give the Government increased revenue and the consumer increased value without extra cost to the manufacturer. The Government would lose nothing. The goods are not made in this country, and it therefore could not interfere with the American producer.

The CHAIRMAN. You simply ask that we eliminate the 4½-ounce clause?

Mr. WILNER. Yes, sir; so that we can sell them here at a proper price to the consumer. We want a reduction of the rate. Where the prices are a little higher we are absolutely shut off from importing the goods on account of the high rate of duty. We believe if we had a lower rate we could import these goods and the Government would obtain a revenue which it is now losing.

Mr. FORDNEY. Is that class of goods made in this country?

Mr. WILNER. No, sir; it is not made in this country. They have been trying for 50 years, and I think that the Government has done all that it should do for an industry that, after 50 years, has not progressed any further than this has at the present time.

I thank you.

BRIEF OF HENRY GLASS & CO., MANUFACTURERS AND IMPORTERS OF LINENS AND WHITE GOODS.

NEW YORK, January 8, 1913.

To the honorable Committee on Ways and Means, Washington, D. C.

GENTLEMEN: We respectfully beg to submit the following brief regarding sections 357 and 358, Schedule J of the tariff act.

Being actively engaged, and having been for over 30 years, in the importing of linens into this country, it is our knowledge and experience that the one important necessity for housekeeping linens, such as table linens, tablecloths, napkins, towels, towelings, etc., to allow for a fair amount of durability is to have a proper weight to the goods, but owing to the interpretation of sections 357 and 358 of this schedule there has been imported into this country to a very large extent household linens, viz, table linens, tablecloths, napkins, towels, etc., weighing under 4½ ounces to the square yard which pay the rate of 45 per cent ad valorem duty, coming in under section 358 as "articles not specially provided for in this section."

This class of goods of the weight as described above is made only for export to the United States, as no other country in the world would dream of purchasing household linens of this weight when it is common knowledge that the one essential necessity for durability is to have proper weight to these articles, and as household linens are a commodity used in every civilized country in the world we must admit our error and seek a remedy.

While it is true that article 357 provides for goods weighing over 4½ ounces to the square yard, its hardship on the importer and consumer is practically illustrated as follows: "The manufacturer is at all times able to manufacture a good weighty cloth, perhaps a few threads coarser, but a good substantial cloth at the same price as the lighter inferior cloth, but owing to the working of section 357 it is very difficult to import unless at a very high rate of duty, as per example.

"A lightweight table linen measuring 70 to 72 inches wide, counting about 135 to 140 threads to the square inch, we have in a normal market imported at 16 pence per yard which pays at the rate of 45 per cent ad valorem, as per section 358, or we have paid 14.40 cents duty to the Government, 16 pence equal to 32 cents."

At the same time we could have imported at the same price a good heavy substantial table linen, measuring the same width but counting, say, 130 threads to the square inch, but which comes under section 357 as weighing 4½ ounces or more, containing more than 120 and not more than 180 threads to the square inch, paying at the rate of 6 cents per square yard and in addition thereto 30 per cent ad valorem, which works out as follows: Sixteen pence per yard equals 32 cents at 30 per cent ad valorem

PARAGRAPHS 357-358—LINENS, ETC.

equals 9.6 cents; 72 inches wide equals 2 square yards at 6 cents per square yard, 12 cents; making a duty of 21.6 cents or 67½ per cent.

In other words, the Government takes the position that you must not give the American consumer decent, substantial goods at the same price as inferior goods or it will compel you to pay 22½ per cent extra duty. This naturally has hindered the manufacturer in giving the consumer fair goods at reasonable prices.

The importer prays your honorable committee to recommend a lower rate on this schedule, not for the purpose of importing goods in competition with American manufacturers (as it is admitted there are no American manufacturers making these goods to any extent), but solely to allow them to import decent, substantial goods at reasonable prices for the benefit of the American consumers, who are entitled to purchase substantial goods at the price of inferior goods, and recommend 35 per cent ad valorem as a fair and equitable rate on Schedule J.

We believe that part of section 357 relative to "plain woven fabrics, paying 30 per cent and 35 per cent" to be quite correct, as these goods are used for the purpose of manufacturing into wearing apparel, and the weight is correct.

We suggest that the wording in sections 357 and 358 mentioning "component material" should be eliminated, as it is continually a source of contention between the appraisers and the importers, and suggest that where any linen is a part, the same to come under the linen schedule.

Very truly, yours,

HENRY GLASS & Co.

TESTIMONY OF PHILIP W. THOMSON, ON BEHALF OF THOMSON & FESSENDEN, 264 DEVONSHIRE STREET, BOSTON.

Mr. Thomson was duly sworn by the chairman.

The CHAIRMAN. Proceed, Mr. Thomson.

Mr. THOMSON. Mr. Chairman and gentlemen of the committee, I wish to speak in regard to paragraphs 357 and 358.

The following fabrics are not manufactured in this country, and no attempt is being made to manufacture them: All-linen towels, all-linen napkins, all-linen tablecloths, linen for handkerchiefs, linen for sheets and pillowcases, linen for dress goods, linen for shirts, linen for waists, linen for underwear, and linens commonly known as canvases or paddings, and other miscellaneous sorts. On these goods there is no tariff for protection, since there is no industry to protect.

Therefore, in respect to these goods, the tariff can be considered only as a tax, justified perhaps in the same way as a tax on tea and coffee might be justified. What is the tax? On most of the goods, 50 per cent and over.

Now, in regard to the protected industry (to quote from the tariff hearings of 1908-9, on p. 4653). In a letter dated January 4, 1909, Mr. George F. Smith, of the Smith & Dove Manufacturing Co., makers of linen thread, says:

The Stevens Linen Works are the only mills in this country that are making real linens to any extent. The other mills are either making unions or so-called linens from waste.

The unions are combinations of cotton and linen.

The one mill making real linen to any extent makes coarse crash for roller towels and dish cloths—nothing else. This mill has made these goods since 1846, under all tariffs, and therefore presumably needs no more protection than was afforded by the Wilson bill—perhaps not so much.

Since, practically speaking, there is only this one mill which makes all-linen woven fabrics, and since this mill has been making one particular kind of linens since 1846, I think your committee will discard

PARAGRAPHS 357-358—LINENS, ETC.

the idea of a tariff for protection on plain woven linen fabrics. Therefore, to consider this tax of 50 per cent from the standpoint of revenue, let us examine Schedule J. If in the eyes of your committee this Schedule J seems relatively unimportant, you may be interested in the fact that an important principle of taxation is involved in this schedule. Your attitude toward it should be of interest. You are taxing the light-weight fine goods, the delicate, expensive materials, 35 per cent. You are taxing the non-luxuries, the coarse, strong, heavy, rough goods 50 per cent and more.

The fact that since Columbus landed never a yard of the goods that pay a 35 per cent duty has been made in this country would argue that the 35 per cent duty was set as the best revenue producer. One would hardly consider 50 per cent on linens as the best revenue producer. Fifty per cent might force consumers to use cotton fabrics wherever possible, and thereby serve perhaps to protect cottons.

As, if a coffee-growing industry should be started in the United States, and the coffee growers desired a tax on tea.

With a 50 per cent duty, those of lesser means can not use cheap coarse tablecloths of linen, can not buy cheap coarse linen for clothing.

The economy of using linen, instead of cotton, for these purposes is perhaps best indicated by the almost universal use in every kind of home of coarse all-linen crash for toweling. Its use is almost universal where the rotting effect of constant moisture is to be withstood; hence our industry of linen thread for shoes. (It is not considered unpatriotic to put linen threads into shoes.)

The only possible argument for the retention of the 50 per cent duty is the argument that a cut in the duty of 50 per cent on coarse linens of every description (for sheets, tablecloths, clothing, what not) that a cut in this duty will jeopardize the prosperity of one maker of one class of goods—crash or toweling. I should be sorry to see this industry, which is a worthy one, hurt; but I think that the mill was prosperous under the Wilson bill with a 35 per cent duty. I think that the 35 per cent duty, long existing, existing I think at the founding and during the upbuilding of this industry, was raised not in order to afford him protection, and not I think at his request.

I should recommend a tax of 45 per cent ad valorem on all union goods—a large tax—in order to protect the makers of union towels in this country and in order to protect this country where possible, as in the case of imports, against union goods which, generally speaking, are apt to deceive the ultimate consumer.

The CHAIRMAN. What do you call union goods?

Mr. THOMSON. Goods made of cotton warp and linen filling.

The CHAIRMAN. Is that a term generally used in the trade?

Mr. THOMSON. Yes, sir. There are union goods besides the unions of linen and cotton—linen and hemp, cotton and jute, etc.

Mr. PETERS. Is the term "union goods" sufficiently definite to allow that definition to apply to the class as a whole?

Mr. THOMSON. To appear in a schedule, no. I should think not, decidedly. In what I am saying here I am not trying to be technical, but I am trying to present some general ideas.

Mr. PETERS. What would be the difference in the cost of production between union goods and linen goods?

PARAGRAPHS 357-358—LINENS, ETC.

Mr. THOMSON. I am sure I can not answer that. I can only say that probably the development of the industry in union goods, such as union towels, in this country is because they are not able to make all linen towels. Warp threads of linen in this country tend to break.

The CHAIRMAN. Proceed.

Mr. HAMMOND. Just a moment. Are all the union goods made of cotton warp?

Mr. THOMSON. I should say so; that is, practically all of them.

Mr. HAMMOND. Are there any union goods made with linen warps?

Mr. THOMSON. I know of none.

Mr. HAMMOND. So that whatever the filling may be the warp is always cotton in union goods?

Mr. THOMSON. I would not say always, because——

Mr. HAMMOND. Well, as known to the trade?

Mr. THOMSON. Practically speaking, I should say offhand, certainly.

Mr. HAMMOND. That is all.

The CHAIRMAN. Proceed.

Mr. THOMSON. As to all linen goods: If I were a member of your committee, I should be very reluctant to deal radically with this schedule all at once, but I should want to proceed on some reasonable theory in seeing through this tariff on woven linen fabrics.

With this in view, I should suggest for your consideration:

(a) A tax of 35 per cent on all pure linen, plain woven fabrics, counting 100 threads and under 100 threads to the inch, regardless of weight.

(b) A tax of 50 per cent on all pure linen, plain woven fabrics, counting over 100 threads to the inch and under 200 threads, regardless of weight.

(c) A tax of 75 per cent on all pure linen, plain woven fabrics counting over 200 threads and over 200 threads to the inch, regardless of weight.

The CHAIRMAN. Is that all, Mr. Thomson?

Mr. THOMSON. I should like to add that my special point here is in regard to the weight. Some one spoke here a few moments ago and held up samples of napkins. I hope the committee understood that the difficulty is here: Over $4\frac{1}{2}$ ounces those goods pay a very high rate of duty; under $4\frac{1}{2}$ ounces they pay a low rate, regardless of count. It seems to me that this tax should be less on the coarse fabric and higher on the fine fabric. It seems to me that that is a reasonable way to work.

The CHAIRMAN. You would suggest that in making a classification we do so according to the thread instead of the weight?

Mr. THOMSON. Yes; and my point is, in answering that, that I do not see why this question of $4\frac{1}{2}$ ounces was put in, and I see no reason for its existing.

Mr. PALMER. Was this classified according to the number of threads to the inch?

Mr. THOMSON. I propose that.

Mr. PALMER. The cotton schedule, to which Mr. Underwood referred, is classified according to the number of yarns in the cloth.

Mr. THOMSON. Yes? I did not know that.

Mr. PALMER. What is your relation to the linen trade?

PARAGRAPHS 357-358—LINENS, ETC.

Mr. THOMSON. We are importers in Boston of fabrics of various descriptions.

Mr. PALMER. That is all.

Mr. HARRISON. From which country do you import your linen?

Mr. THOMSON. Belgium, Ireland, and Scotland, mostly.

Mr. HARRISON. Where are the domestic manufacturers of linen?

Mr. THOMSON. The Stevens Linen Works are at Webster, Mass.

Mr. HARRISON. What others are there?

Mr. THOMSON. I know little or nothing about the Stevens Linen Works, and I know nothing specially about the others. I know that a great many have been said to have been started like the Oxford linen mill. There is another linen firm, somewhat, perhaps, on the order of Mr. Stevens's, in Meredith, N. H. I think it is a very small mill, and I do not know what class of goods they make.

Mr. HARRISON. Can you give any estimate of what the total amount of linen goods produced in the United States is annually?

Mr. THOMSON. Produced?

Mr. HARRISON. Yes.

Mr. THOMSON. I should think that question could be answered by taking Mr. Stevens's figures which he gave you yesterday and by finding out what the union towel makers produce. I can not give you those figures.

Mr. HARRISON. It would be difficult to ascertain it from that, because you have just testified that union goods consist of about one-half linen and one-half cotton.

Mr. THOMSON. Yes.

Mr. HARRISON. Now, I want to ask you whether, in your judgment, the American manufacturers of linen manufacture articles which can be said to compete with the Irish linen?

Mr. THOMSON. Without any question.

Mr. HARRISON. It is as good as the Irish linen?

Mr. THOMSON. I have not had any experience with that particular kind of crash. I might say that the material that Mr. Stevens makes I am not interested in one way or another. We do not handle that class of material at all.

Mr. HARRISON. It is fine table linen, is it not?

Mr. THOMSON. No; Mr. Stevens makes crash for toweling.

Mr. HARRISON. What kind of goods do you import?

Mr. THOMSON. We import canvases, tailors' paddings, and fine linens of a certain kind, a very expensive sort, but a very small quantity of them.

Mr. HARRISON. Is it not true that in our markets linen is being more and more displaced every year by an improvement in the manufacture of cotton cloth?

Mr. THOMSON. I am not aware of that fact. The mercerized cottons, of course, present a very excellent appearance. You can not use cotton everywhere. Moisture has to be withstood, as I indicated in my remarks about toweling. The fact that Mr. Stevens's crash, as well as imported crash, exists everywhere, in this building, in factories, in homes, for towels, etc., shows that there is something about linen that makes cotton an impossible substitute, for certain purposes, at any rate.

PARAGRAPHS 357-358—LINENS, ETC.

Mr. HARRISON. Well, it has always been a matter of amazement to me to note the excessive cost of linen goods in the United States. Anybody who has ever done any traveling abroad can tell you what a very striking thing the small market for finer linen goods here, and how excessive the price is. I have never been able to understand it.

Mr. THOMSON. It can only be accounted for by the 35 per cent duty, the 35 per cent duty on these fine linen goods that you speak of.

ADDITIONAL STATEMENT MADE LATER IN WRITING.

In regard to my previous statement that the Stevens Linen Works had prospered under a 35 per cent duty, I failed to state the fact (which I was not aware of at the time) that the Stevens Linen Works, during the period of the 35 per cent duty, had the benefit of free flax and flax tow, which are now dutiable.

JANUARY 25, 1913.

HON. OSCAR W. UNDERWOOD,

Chairman of Committee on Ways and Means, Washington, D. C.

DEAR SIR: The wooden cases in which imported merchandise is packed now pay duty—the same duty that is paid on the merchandise that the cases hold.

This may be a small point; but, as a matter of principle, is it just that a duty of a hundred per cent should be imposed on cases made of pine boards?

Yours, very truly,

PHILIP W. THOMSON.

TESTIMONY OF NATHANIEL STEVENS, OF THE STEVENS LINEN WORKS, OF WEBSTER, MASS.

The witness was duly sworn by the chairman.

The CHAIRMAN. What paragraphs do you desire to speak on, Mr. Stevens?

Mr. STEVENS. Paragraph 357.

The CHAIRMAN. You may proceed.

Mr. STEVENS. The Stevens Linen Works, of Webster, Mass., established in 1846, manufacture about 7,500,000 square yards of pure linen-crash toweling annually—400,000 square yards of this amount is what is known as "Russia crash." The goods are sold entirely in the United States, and are distributed and used for household purposes. They come under paragraph No. 357 in Schedule J of the present tariff, weighing over $4\frac{1}{2}$ ounces per square yard, and contain not more than 60 threads per square inch, calling for a duty of $1\frac{1}{4}$ cents per square yard and 30 per cent ad valorem.

The raw materials consist of flax and flax tow. Every pound of it used by us is imported, mostly from Russia. Upon this stock we now pay duty of 1 cent per pound on the flax and \$20 per ton on flax tow. No flax fiber suitable for our purposes is raised in the United States.

If your committee should decide to remove the duty from flax and flax tow, we should strongly urge retaining a duty under paragraph 335, flax hackled, known as "dressed line." If the duty was removed from hackled flax, it would throw a large number of people out of work in this country. We are now making large expenditures to improve our hackling department.

PARAGRAPHS 357-358—LINENS, ETC.

Nearly all of our machinery is of foreign manufacture. Flax machinery is very heavy, and requires mills of expensive construction. Goods similar to ours of the same grades and character are being continually imported and sold in our markets, indicating that the present rate of tariff does not prohibit the importation of foreign goods.

The following statistics give the importations and duties collected on same, under paragraph 357:

	1910	1911	1912
Square yards.....	\$3, 729, 853	74, 812, 943	78, 825, 318
Value.....	\$13, 305, 994	\$12, 654, 856	\$13, 798, 151
Duties.....	\$7, 000, 662	\$6, 612, 121	\$7, 144, 400

With the tendency in this country toward higher wages and shorter hours, together with the increased cost of the general expense of operating our mills, a radical reduction in the tariff would result in giving the business to foreigners and taking it away from our own people.

Mr. PALMER. I notice the figures you have given us agree with the figures given by the Department of Commerce and Labor. They are probably taken from the same source?

Mr. STEVENS. Yes.

Mr. PALMER. But the figures for the production in 1910, as given us by the department, are \$1,574,000. Is that correct?

Mr. STEVENS. Yes; and in 1910, out of 10,467,000 yards, we produced about 7,500,000 in our concern.

Mr. PALMER. What is that concern?

Mr. STEVENS. Our concern is the Stevens Linen Works, of Webster, Mass. We have been established since 1846.

Mr. PALMER. The foreign trade under the present rate runs to perhaps 80 per cent of the domestic consumption and more?

Mr. STEVENS. I should say so.

The CHAIRMAN. What are the items that come in under this paragraph 357?

Mr. STEVENS. Linen crash toweling. I have a sample of it here.

The CHAIRMAN. It is entirely limited to crash toweling?

Mr. STEVENS. Yes.

The CHAIRMAN. Nothing else comes in under it?

Mr. STEVENS. I do not know.

The CHAIRMAN. You need not show me the sample; I know what it is.

Mr. STEVENS. The duty on the flax used would amount to 5 per cent on the cost of the goods.

Mr. PALMER. How long have you been in the business?

Mr. STEVENS. Our concern has been in business since 1846.

Mr. PALMER. Making these same goods?

Mr. STEVENS. Yes; making the same goods.

Mr. PALMER. How does it happen that you are not able to get more of the American market?

PARAGRAPHS 357-358—LINENS, ETC.

Mr. STEVENS. We have increased our machinery. In 1900 we added 50 per cent. We have got the plans all ready to add more to it. In fact, we are now spending \$100,000 on our plant to improve our lapping, to get rid of what we call small help. As soon as the tariff is settled, we are ready to go on and spend the money.

Mr. PALMER. You think if this tariff rate is not reduced, despite the fact the foreign competition runs to 80 per cent of the domestic production, you can live and do business properly?

Mr. STEVENS. You mean under the present tariff?

Mr. PALMER. Yes.

Mr. STEVENS. Oh, yes.

Mr. PALMER. You are standing a good deal of foreign competition now, are you not?

Mr. STEVENS. Yes; they bring in a great many goods now. We put out our goods under our own trade-mark and they are distributed. All the leading jobbers carry our goods.

Mr. PALMER. Most of the manufacturers that come here say that it is absolutely ruinous to them to have that competition from abroad. They squeal at 10 per cent competition, when you have pretty nearly 90 per cent?

Mr. STEVENS. We manufacture about 7,000,000 yards out of 10,000,000.

Mr. PALMER. Yes.

Mr. STEVENS. We have had trouble. We have not reached where we are by any easy method.

Mr. PALMER. You have been prosperous, have you not?

Mr. STEVENS. Yes; we are now. For the last number of years we have been very prosperous. The linen industry all over the world has been exceedingly prosperous.

The CHAIRMAN. Proceed.

Mr. STEVENS. If your committee will decide to lower the duty on yarn, the duty on our goods should be lowered to a less degree. The difference between the duty on yarn and our goods is very slight. I do not know that in the yarn we use there is very much difference, and possibly that is why the industry has not flourished. I wish it would flourish. I would be glad to see competition.

The CHAIRMAN. Are the yarns competitive—is there a reasonable competition in yarns?

Mr. STEVENS. You mean in this—

The CHAIRMAN. I mean the imports as compared with the American consumption in yarns. In this paragraph it is apparent it is competitive, but I wish to know about the yarns.

Mr. STEVENS. I could not tell you, Mr. Underwood, about that because we do not handle yarn. We import the raw flax.

The CHAIRMAN. And manufacture your own?

Mr. STEVENS. And manufacture the finished product. We run on just one line of goods so as to keep our cost down. Our goods have been an established trade for years, and we are going on, we are progressing, and I simply come here to let you gentlemen know that we have got a flourishing business up there, and we want to be able to go on, and I hope to see the linen-weaving industry increase. That is all.

PARAGRAPHS 357-358—LINENS, ETC.

TESTIMONY OF JOHN L. HARPER, PRESIDENT OF THE NIAGARA FALLS LINEN CO., NIAGARA FALLS, N. Y.

Mr. HARPER. Mr. Chairman and gentlemen, the remarks I will make will have reference to paragraph 357 of the present tariff law.

I am president of the Niagara Falls Linen Co., a company organized under the laws of the State of New York. It has so far spent its money in building its plant and in the purchase of machinery and it is now just beginning to turn out finished linen articles. The goods we propose to manufacture are tablecloths, napkins, and linen towels.

So far as we know this is a new industry in the United States. It would seem to be the belief that the climate is not adapted to the making of finished linen articles, but we have carried on experiments which have shown to-day that we can do it very nicely. As I said, we are now just beginning to turn out the goods and have not been running long enough to know whether we will have any excess of profit even under the present tariff laws. We ask that there be no reduction in the tariff on articles of this kind.

As shown from your tabulated data, which I think each of you have before you, last year there was about \$13,798,000 worth of this class of goods brought in, bringing in a revenue of something over \$7,000,000.

As there is nothing except our own works to consider as a protective proposition, the whole matter is, as we understand it, that we have begun to work under a tariff that is producing revenue only, and we desire that it shall not be changed on the finished linen articles. We purchase our yarn at present from importers. The yarn is brought in in hanks, which we take and weave. We do no spinning. We are perfectly willing to purchase our yarn at home when the processes are so developed that we can get the proper class of yarn here.

That is all I have to say.

BRIEF OF THE LOWELL TEXTILE CO., NORTH CHELMSFORD, MASS.

NORTH CHELMSFORD, MASS., *January 8, 1913.*

The COMMITTEE ON WAYS AND MEANS,

House of Representatives, Washington, D. C.

GENTLEMEN: We beg to call your attention to the following: Schedule J, flax, hemp, and jute. The goods we manufacture are towels and crashes made from cotton warp and linen filling, and are called union goods. We use 11's and 14's cotton warp and 14's and 18's bleached linen tow filling. These goods vary from 55 ends of warp per inch and 26 ends of filling to 80 ends of warp per inch and 34 picks of filling.

Now the point is this, we pay 45 per cent duty on the linen yarn and there is also a duty of 45 per cent on merchandise similar to ours. We claim that there should be a difference of 5 to 10 per cent, varying according to the fineness of the merchandise, between the duty on the yarns and the duty on the finished merchandise. That is, you cut the duty on the merchandise from 45 to, say, 25 and 30 per cent, according to the texture, the duty on the yarn should be cut from 45 to 20 per cent. This would give an opportunity to build up the linen-weaving industry.

Yours, respectfully,

THE LOWELL TEXTILE CO.
H. SELFRIDGE, *Treasurer.*

PARAGRAPHS 357-358—LINENS, ETC.

BRIEF OF ERSKINE BEVERIDGE & CO. (LTD.), NEW YORK, N. Y.

NEW YORK, *January 21, 1913.*

HON. OSCAR W. UNDERWOOD,

Chairman Ways and Means Committee, Washington, D. C.

SIR: I am an American citizen, a tariff-for-revenue Democrat, engaged in the importation of housekeeping linens, and I wish respectfully to call your attention to the present unscientific and unjust tariff on manufactures of flax, hemp, etc. (Schedule J). It is unscientific because under the present classification the lower qualities in each subdivision pay a much higher rate of duty than the finer qualities in the same subdivision. This is unavoidable where there is a specific or a specific and ad valorem rate combined. It is unjust because the millions of people of moderate means who use the lower and medium qualities are compelled to pay a much higher rate of duty than those who can afford to purchase the finer grades.

The rate of duty on the lower and medium qualities ranges from 50 per cent (the minimum) to 75 per cent or over, while the finer grades pay the minimum rate (50 per cent). Even from a protectionist standpoint these rates are excessive, when, apart from the manufacture of a few linen crashes and union goods (about two-thirds cotton, one-third linen), there are no domestic industries to protect, as with the exceptions above noted there are no housekeeping linens manufactured in this country, never have been (commercially), and never will be, if a protection of 50 to 75 per cent will not enable manufacturers to make such goods at a profit, as the climatic and economic conditions are not favorable to the manufacture of linens in the United States. There is therefore absolutely no justification for such a high tariff on these goods.

As to a revenue-producing tariff. It is a fact well established that the lowering of the price of an article will result in much greater consumption, and I believe that a much lower rate will produce more revenue than the present high tariff, on account of increased importations. A 25 per cent tariff on Schedule J (manufactures of flax, hemp, etc.), which I strongly advocate, with a corresponding reduction in flax and flax yarn, will amply protect the few home industries engaged in the manufacture of crash and union goods, and will confer a great boon on the millions of consumers in this country who use housekeeping linens.

I strongly urge a straight 25 per cent ad valorem rate, as it is impossible to have an equitable tariff on the different grades of goods where the rate is specific or specific and ad valorem combined. The present tariff is unscientific, unjust, difficult to classify, expensive to collect, and a constant source of annoyance to importer and appraiser alike. I would suggest that the new rate take effect not later than July 1 of this year, if the bill is passed by that date.

Some people advocate a sliding scale, reducing the rate, say 5 per centum per annum for five years, but this I think would be a great mistake. It would mean that business would have to be carried on, on very conservative lines for that period, and would result, justly or unjustly, in dissatisfaction with the administration, and a probable change in Government in a few years.

If it were necessary for me to have a limb amputated, I would want to have it done all at once, and not by inches. In many cases, where importers have to carry large stocks of imported goods, it would mean a severe loss on goods on hand when the change takes place, but I believe that what is for the best interests of the country as a whole will ultimately be for the best interests of the individual.

Respectfully,

D. STRACHAN.

BRIEF OF JAMES McCUTCHEON & CO., NEW YORK, N. Y.

NEW YORK, *January 21, 1913.*

HON. OSCAR W. UNDERWOOD,

House Office Building, Washington, D. C.

DEAR SIR: In company with many other of the merchants in our line of business, we are looking forward with much interest to a reduction of the tariff on linen goods. For nearly 60 years we have made a specialty of dealing in household linens and linen goods of all kinds, and we do business with people residing in every State in the Union. Our standing in relation to linen goods is, we believe, very much the same as that of Tiffany to jewelry and the Gorham Co. to silverware. In view of all this we take the liberty of offering the following suggestions as to what seems to us the new tariff on linen goods ought to be.

PARAGRAPHS 357-358—LINENS, ETC.

In the first place, there are imported into this country large quantities of what are known as linen lawns (made in whole or in part of linen), to be manufactured into handkerchiefs. There are also imported large quantities of plain white linen goods (made in whole or in part of linen), to be manufactured into collars and cuffs, etc. These might in a measure be regarded as raw materials, and we believe, therefore, that all goods of this character weighing under $4\frac{1}{2}$ ounces to the square yard, without regard to count or value, ought not to be taxed more than 30 per cent.

On all other "linen goods" (made in whole or in part of linen), counting less than 120 threads to the square inch and weighing more than $4\frac{1}{2}$ ounces to the square yard, such as table linens, towelings, sheetings, and pillow linens, art and upholstery linens, etc., whether in the piece or made up by being hemmed, hemstitched, or with drawn work, a fair tariff would be 35 per cent. On these same goods under the same conditions, but counting more than 120 threads to the square inch, a fair tariff would be 40 per cent.

On all linen goods, including handkerchiefs, without regard to weight or count, which are embroidered, scalloped, tamboured, or lace-trimmed, whether the embroidering, scalloping, or tambouring is done by hand or by machine, whether the lace is made by hand or by machine, we believe that a fair duty would be 50 per cent.

On plain handkerchiefs, hemmed or hemstitched, plain white or colored (made in whole or in part of linen), we believe that a fair duty would be 45 per cent.

If we can be of service in any way in this matter please command us.

Yours, respectfully,

JAMES McCUTCHEON & Co.
JAS. M. SPEERS,
Vice President.

NEUSS, HESSLEIN & CO., WRITE ON LINEN GOODS.

NEW YORK, *January 18, 1913.*

HON. OSCAR W. UNDERWOOD,
The House Office Building,
Washington, D. C.

SIR: We take the liberty of writing you in reference to the new tariff rates under the present Schedule J on flax and manufactures of flax, a hearing on which your committee has set down for the parties interested on January 24.

As a firm, the members of which are American born, with one exception, who is an American citizen, we have been importing and selling linen goods in this country for ourselves and predecessors for the past 40 years and we are therefore in a position, we believe, to appeal for a tariff which will be revenue bearing to the Government, advantageous to an increased consumption, and also beneficial to the consumer.

The present tariff on flax and manufactures of flax, as also the preceding tariff, has been conducive to the manufacture and consumption of a great many so-called light-weight linen goods, because of the lower rate of tariff which goods of this description, i. e., linen fabrics weighing under $4\frac{1}{2}$ ounces per square yard, have paid. These goods are slightly, but of very little use to the consumer, being absolutely too thin for any continued satisfactory wear.

We believe, however, that there is still a reason for making a lower tariff on plain, woven, bleached cloths in the piece, as these goods are being used in this country largely in the manufacture of handkerchiefs and in a very small way in the manufacture of collars, cuffs, and shirt fronts. The latter use, however, is becoming smaller every year as cotton is replacing linen in this respect. But for the former, namely, the manufacture of handkerchiefs, this reason for a lower tariff on bleached, plain linen cloths weighing under $4\frac{1}{2}$ ounces per square yard will still hold.

Aside from these bleached plain woven cloths we believe it is in the interest of all concerned that all classes of linen goods should then come under one or two classifications, namely (a) counting both warp and weft not over 120 threads per square inch, 35 per cent; (b) counting both warp and weft over 120 threads per square inch, 40 per cent, regardless of weight, color, or whether in the piece or made up into finished articles, hemmed, hemstitched, or with drawn work, but not embroidered, tamboured, or scalloped, whether by hand or by machine.

A tariff of this nature would benefit the working classes who use goods counting under 120 threads per square inch in very large quantities, whereas goods counting over 120 threads per square inch could well afford to pay 5 per cent higher tariff, as they are used by a wealthier class of consumers.

PARAGRAPHS 357-358—LINENS, ETC.

As regards all manufactured articles composed of linen, embroidered, tambdaured, or scalloped, by hand or machine, we believe that a tariff of 50 per cent would be fair and just to all concerned and tend to stimulate larger importation of this class of merchandise.

We believe sincerely that this adjustment of the tariff schedule for linen goods will not injure any established manufacturing industry in this country, but would prove a great benefit to the consumer and an increased source of revenue to the Government.

The only classes of linen goods which are manufactured here are a few crash towelings, which are manufactured in Massachusetts, and a few union huck towels, which are manufactured in various small mills, but the sale of which is being replaced more and more by the all-cotton huck towel manufactured by American cotton mills.

We would thank you kindly to give this appeal from us the valued attention and consideration of your honorable committee and shall be pleased to forward you any further particulars or information which you may call for, upon a request from you.

We remain, yours, very respectfully,

NEUSS, HESSLEIN & Co.

LETTER OF MARSHALL FIELD & CO., CHICAGO, ILL.

CHICAGO, *February 15, 1913.*

HON. OSCAR W. UNDERWOOD,

Chairman Ways and Means Committee,

House of Representatives, Washington, D. C.

DEAR SIR: We respectfully desire to recommend to your committee that in place of the various rates of duty upon flax fabrics and articles provided for in paragraphs 357 and 358 of the present act there be substituted in the bill now being framed one rate of duty only and would suggest 35 per cent.

The Wilson bill enacted in 1894 provided for one rate of duty only upon all fabrics of flax, viz, 35 per cent. The Dingley bill enacted in 1897 provided for various rates, according to the weight and count of thread. The provision in this act for flax fabrics weighing under 4½ ounces per square yard and counting over 100 threads per square inch at 35 per cent was inserted to permit the entry, at a rate of duty lower than the balance of the line, of such goods as are known as shirting cloths, used by shirt manufacturers. The result of this provision was to force the manufacture and importation of many articles, such as towels, tablecloths, napkins, doilies, etc., of lower weights, to meet this provision. Competition forced these goods upon the dealer, and the consumer obtained an article of inferior weight and durability.

The Payne bill enacted in 1909 continued the same conditions, except that such articles were provided for in the basket clause at 45 per cent, as against a duty of about 54 per cent on goods weighing over 4½ ounces, thus perpetuating the conditions which prevailed under the Dingley bill.

We believe that one rate upon all classes of linens would be more satisfactory to importers and dealers and would operate to give to the consumer a better quality of merchandise. Linens have not been, and we believe can not be, made in this country. There is no industry, therefore, which needs protection; and from a Government standpoint a straight rate of 35 per cent would, in our judgment, produce more revenue than the present act.

Respectfully,

MARSHALL FIELD & Co.,
By THOMAS H. EDDY.

BRIEF OF REMY, SCHMIDT & PLEISSNER, NEW YORK, N. Y.

NEW YORK, *January 21, 1913.*

HON. OSCAR W. UNDERWOOD,

The House Office Building, Washington, D. C.

SIR: We take the liberty to submit to you in the following our views in reference to the proposed change in the present tariff as regards Schedule J, on flax and manufactures of flax, etc., for your kind consideration.

The present rate of specific duty, with the addition of 30 per cent on all goods weighing over 4½ ounces, is so finely drawn in the present tariff that it invariably amounts to about 50 per cent ad valorem. At any rate the differences between the

PARAGRAPHS 357-358—LINENS, ETC.

straight ad valorem duty and the specific and ad valorem duty is so small that it is negligible. It is our opinion that the present specific duties should not be changed, and if a reduction is contemplated, this could be easily effected by reducing the now prevailing duty of 30 per cent to a lower figure.

We think this would make a very equitable rate, and would do away at once with any possible undervaluations, especially if no such proviso is added that no goods should pay a lower rate of duty than so and so many per cent.

As to goods under 4½ ounces, we think it but fair that all goods whether plain woven or not should be admitted at the same rate as the even-weight goods. These light goods are not serviceable, simply showy, and the consumer is constantly misled, and does not receive good value for his money.

We also believe that if the embroidered, tamboured, and scalloped goods were reduced to a 50 per cent rate, it would stimulate the sale of these, and thus be a greater source of revenue to the Government.

Very respectfully,

REMY, SCHMIDT & PLEISSNER.

BRIEF OF THE AMERICAN BOBBINET CO., NEWBURGH, N. Y.

NEWBURGH, N. Y., February 1, 1913.

Hon. Oscar Underwood and gentlemen of the Ways and Means Committee of the House of Representatives, Washington, D. C.

GENTLEMEN: The undersigned respectfully directs your attention to the bobbinet industry in these United States.

Under the belief that that tariff law of 1897 would give adequate protection to the making of bobbinet in this country, we engaged in its manufacture, imported the necessary machinery from Europe (on which we paid 45 per cent duty), and began to produce bobbinet in the city of Newburgh, county of Orange, twentieth congressional district, State of New York.

Since that time we have endeavored to continue its manufacture with the hope that by experience, thrift, and attention to strict economic management, we could build up our industry and meet foreign competition. But at this writing, we are forced to confess our inability to do so.

The value of importations into this country of this class of goods approximates annually \$10,000,000. In order to produce this amount it would require 1,000 looms, and as there are only 31 in this country at the present time, you can readily see what proportion of the home consumption is produced here.

This is an industry that should be fostered and developed so that it may give employment to American labor and keep for circulation within our own borders the large sums of money sent to Europe annually to pay for the product of European labor, instead of being paid out for sages in this country.

With the comparative cost of American and European production, you are, no doubt, familiar, as the writer had the honor of discussing this matter with you in 1909, while the present tariff law was in process of construction.

At the present time we are filling a contract with the United States War Department for mosquito bars made of bobbinet, and it has developed that, due to the high cost of production here compared with that in Europe, we can import this net cheaper than we can produce it in our own mill. In doing this our own machines remain idle and our own workman unemployed. This is an indisputable fact and will bring to your attention the absolute need of proper protection for the bobbinet industry in this country.

We believe that the duty on this kind of goods should be specific for the reason that in the year 1909, according to the schedule adopted by the United States Board of Appraisers, the European value for 27-hole mosquito net, such as that which we supply the Government, in 240-inch widths, was entered at the value of 25d. The same net in July, 1912, was entered at the value of 19¼d. You will readily see that though we got 60 per cent protection the real protection falls when the European value becomes less, as the United States cost does not become correspondingly cheaper. In 1909, when the duty was imposed on the value of 25d., the Government was getting a revenue of 60 per cent, which equalled 30 cents per yard, whereas to-day the Government is getting revenue of 60 per cent on 19¼d. value or 23.1 cents per yard. This shows a reduction of 14 per cent in protection given to the industry and a loss of 23 per cent in revenue to the Government.

PARAGRAPHS 357-358—LINENS, ETC.

Your attention is here respectfully directed to the fact that though the European value of these goods be reduced the American cost of production is not lessened—rather the labor conditions of our country insist on an increase. Hence our industry does not receive the protection it should get to enable it to compete with Europe.

This has been our experience, which we respectfully submit for your guidance when considering the duty that should be put on European-made bobbinet.

Yours, most respectfully,

THOS. J. DIAMOND, *President.*

BRIEF OF THE H. W. BAKER LINEN CO., NEW YORK, N. Y.

NEW YORK, *January 23, 1913.*

HON. OSCAR W. UNDERWOOD,

Chairman Ways and Means Committee, Washington, D. C.

DEAR SIR: I am an American citizen, believing in a tariff for revenue and at the same time believing in moderate protection to our American industries.

I am engaged in the importation of household linens and I would respectfully call your attention to the unscientific and unjust tariff on manufactures of flax, hemp, etc., as classified under Schedule J. It is unscientific because under the present classification the lower qualities in each subdivision pay a much higher rate of duty than the finer qualities in the same subdivision. This is unavoidable where there is a specific or a specific and ad valorem rate combined. It is unjust because the millions of people of moderate means, who use the lower and medium qualities, are compelled to pay a much higher rate of duty than those who can afford to purchase the finer grades.

The rate of duty on the lower and medium qualities range from the minimum, 50 to 75 per cent or over, while the finer grades pay the minimum rate, 50 per cent. Even from a purely protectionist standpoint these rates are excessive, and the burden of this duty should not fall upon the millions of people who can only afford to buy the lower or medium grades of linens. There are no fine qualities of household linens manufactured in this country, never have been (commercially), and never will be even if a duty of 50 to 75 per cent were maintained, as climatic and economic conditions are not favorable to the manufacture of linens in the United States. There is therefore absolutely no justification for such a high tariff on linen goods.

As to a revenue-producing tariff, it is a fact well established that the lowering of the price of an article will result in much greater consumption, and I believe that a lower rate of duty will produce more tariff than the present high tariff on account of the increase of importation. A tariff of 25 per cent on Schedule J (manufactures of flax, hemp, etc.), which I strongly advocate, with a reduction in flax and flax yarns, will amply protect the home industries engaged in the manufacture of union crashes, union towels, and union damask, and will confer a great boon on the millions of consumers in this country who use this cheaper grade of goods.

I therefore strongly urge a straight 35 per cent ad valorem rate, as it is impossible to have an equitable tariff on the different grades of goods where the rate is specific or specific and ad valorem combined. The present tariff is unscientific, unjust, difficult to classify, expensive to collect, and a constant source of annoyance to the importer and appraiser alike. I would suggest that the new rate take effect not later than July 1, if possible.

Some people advocate a sliding scale, reducing the rate, say, 5 per cent per annum, but this I think would be a mistake. It would mean that business would have to be carried on on very conservative lines for the whole period of protection, and the result, I believe, would be unsatisfactory, not only to the administration but also to the merchants, consumers, and the producers as well. If I were to lose a hand I would not care to lose a finger at a time; I would rather have the amputation completed in one operation.

I am not interested in the manufacturing of union goods, such as towels, crashes, cheap union damasks, etc., that are made in the United States, although we buy and sell many thousands of dozens of union towels and millions of yards of union crashes made in the United States. This industry is growing very rapidly and the domestic manufacturers are producing some very good, serviceable, as well as slightly articles, in the way of union towels and union crashes; also in the cheap union damask, notwithstanding the fact that the linen yarns which they use, which are mostly bleached tow yarns, pay a duty of 45 per cent, leaving only 5 per cent difference between the flax yarns and the union towels that are made in Europe.

PARAGRAPHS 357-358—LINENS, ETC.

I would strongly urge a very liberal reduction on the flax and tow yarns, such as used in the manufacturing of these goods. I would recommend a duty of not over 15 to 20 per cent at the most. Would also recommend that the raw flax be put on the free list, as some of our manufacturers are spinning their own yarns. If the class of flax and tow yarns that are used in the manufacture of union towels and union crashes in this country were put down to 15 or 20 per cent our American manufacturers would soon be able to make all the union towels sold in America under \$2.50 per dozen. I am not recommending this low-rate duty on flax yarns because of any interest in the manufacture of these goods except to give employment to American workmen and give American manufacturers an opportunity to compete with the world on the class of goods which they are able to make.

Very respectfully, yours,

H. W. BAKER LINEN CO.
H. W. BAKER, *President*.

JANUARY 30, 1913.

Messrs. H. W. BAKER LINEN CO.,
New York, N. Y.

GENTLEMEN: We acknowledge receipt of yours of the 27th, and will go ahead with the 11-x crash and will send samples for your road men as soon as we can get a sufficient quantity of this finished up.

We would like very much indeed to do as you suggest, and make this crash a little heavier and better, but it is absolutely impossible for us to do so while we have to pay so much for tow yarns. We are just in receipt of advices from our manufacturers of tow yarns on the other side, giving us notice of a very stiff advance in the price of these yarns, and tow yarns, which are now coming in and which we will have to use in producing these goods for you, we are forced to declare at about 1½ cents per pound higher in price than we did a couple of months ago, and of course we have to pay 45 per cent duty on this amount, which adds greatly to the cost of yarns which are now coming in. So you can readily understand it is very hard for us to produce your goods and give you as high a percentage of linen as we have been doing; however, we are going to keep all of our goods up to standard, even though we have to make some of these goods at a loss.

All of your work is now in the looms and is coming forward nicely, and unless something unforeseen happens we will be able to make you very large shipments during the next few months.

We wish to state, however, that the present prices which the spinners are quoting on tow yarns makes all the goods which we are shipping to you look very cheap indeed to us, and on further quantities, unless the present duty on tow yarns is very materially reduced, we shall be obliged to advance our prices on all union goods in the very near future. This we shall very much regret to do, because of the fact that were we to advance our prices you would be able to import union crash and union huck towels at less than we can make them for you, and as we have been making these for you in very large quantities during the last few years, it would be a very serious matter indeed should tariff legislation be such that this business would go back to foreigners.

We would be pleased to have you, as an expert on these goods, use your influence with the members of the Ways and Means Committee now revising the tariff, to put the duty on these yarns down to 15 or 20 per cent, that is, for yarns bleached or half bleached. As you know, all the yarns which we use in these goods are partially bleached in the old country before they are shipped to us. This would enable us to compete successfully with the foreign manufacturers of these goods, and at the same time enable us to give you what you are continually asking for, viz, better and more satisfactory goods with a higher percentage of linen at lower prices.

Very truly, yours,

NIAGARA TEXTILE CO.

BRIEF OF ROBERT M'BRATNEY & CO., NEW YORK, N. Y.

NEW YORK, *January 22, 1913.*

HON. OSCAR W. UNDERWOOD,

Chairman Ways and Means Committee, Washington, D. C.

DEAR SIR: Exhibit A. I inclose you samples of goods made entirely of cotton, which are labeled and sold as linen-finish suitings. These goods are sold to many of the ignorant consumers as linen goods. The object of the brand or ticket and of the

PARAGRAPHS 357-558—LINENS, ETC.

finish is to imitate as closely as possible linen goods and to sell them to the consumer as linen goods.

Exhibit B. Glasgow suitings: These goods are finished in imitation of linen goods and are given a Scotch name with the idea of causing the buyer to associate with the finish the supposed country of origin, and as Scotland is a large producer of linens, the object is to convince the buyer, and more especially the consumer, that the goods are linen.

Exhibit C. We send a heading describing certain cotton goods which are called "Flaxon," with a description below that they are "linen thread finish." This gives the consumer the name of flax and linen both in relation to the goods, and by suggestion or intimation endeavors to deceive the consumer and give him or her the idea that the goods are linen goods, whereas they are entirely cotton.

Some cotton manufacturers have endeavored more than once to give the idea that large plants were to be put into operation for the manufacture of linen goods in this country and that all they needed to be successful was to have a high rate of duty to protect them.

The present excessive rates of duty have existed for a number of years without having produced a realization of any of these plants. In a number of cases it was simply to deceive Congress in order that high rates of duty would be placed upon linen goods, which would make it easier to secure fancy prices for imitation linen goods.

Some law should be enacted prohibiting misleading designations and descriptions of merchandise cunningly devised and for the sole purpose of deceiving the consumer.

Respectfully, yours,

ROBERT McBRATNEY & Co.

DEZELL & HELWIG WRITE CONCERNING FLAX MANUFACTURES.

NEW YORK, *January 21, 1913.*

HON. OSCAR W. UNDERWOOD,
Chairman Ways and Means Committee,
Washington, D. C.

SIR: Presuming that in framing Schedule J of the proposed new tariff bill your honorable committee would welcome suggestions from all native-born, public-spirited citizens, especially those who as merchants and importers are qualified to express an intelligent opinion on the subject, we respectfully offer for your consideration the following recommendation.

It is our opinion, based on an actual experience of 25 years in this trade, that a uniform rate of 35 per cent ad valorem should be assessed on all manufactures consisting wholly or chiefly of flax, regardless of weight, count, or color, whether such manufactures are plain or figured, in the piece or the finished article, whether unhemmed, hemmed, hemstitched, fringed, scalloped, embroidered, or tamboured, with or without drawnwork.

In making this recommendation we wish to disclaim any other motive than a desire to offer a satisfactory solution of a difficult public problem. We are not engaged in the manufacture of this merchandise, but purchase it outright from the manufacturers.

It is our firm belief that the suggested rate of 35 per cent would inflict no hardship on the domestic manufacturer and that it would, on the other hand, redound to the benefit of the ultimate consumer. It is also our belief that with a uniform rate of 35 per cent Schedule J would bear its proper share in producing revenue for the Government.

In our observation of the domestic manufacturer, who has entered largely into consideration in the construction of the present tariff, we have found that even with the exorbitant rate of duty exacted allegedly for his protection the progress he has made is a negligible quantity. In fact, the importance of the domestic manufacturer of the class of merchandise covered in Schedule J has in our opinion been greatly overestimated. There is really only one fair-sized mill involved which produces linen crases, and a few small mills which manufacture half-liner, or so-called "union" huck towels.

We sincerely trust our recommendation may receive due consideration at the hands of your honorable committee, and we shall hold ourselves in readiness to furnish such other information as you might require in this matter.

Respectfully, yours,

DEZELL & HELWIG.

PARAGRAPH 359—ISTLE OR TAMPICO.

SUGGESTED RATE ON LINENS, ETC.

NEW YORK, *February 6, 1913.*

HON. OSCAR W. UNDERWOOD,
Washington, D. C.

SIR: On January 17, 1913, I wrote you regarding the rate on goods covered by Schedule J, asking for a simplification of the tariff and an elimination of the features in the present bill which cause very needless trouble and delay to the customhouse authorities and importers, who are often at a loss to determine just what classification would apply to certain goods or what is their actual cost.

I also urged a reduction of the rate to 25 per cent, which would, in my opinion, benefit the public without harming any interest, for, with the exception of the Stevens Co., of Webster, Mass., there has not been any serious or successful effort made to manufacture linens in this country. All efforts have proved disastrous, with the one exception of the Webster company, and although it has been manufacturing since 1846, it has not produced anything but a low crash. And it has prospered in this manufacture when the tariff was very much lower than it is under the existing bill.

I regret very much to find that a most erroneous impression has prevailed since the publication of the hearings before your committee—that articles covered by Schedule J are luxuries and as such should bear a high rate of taxation. And I fear this idea may be reflected in your new bill. No doubt some laces and embroideries imported under this schedule might be regarded as luxuries, but the linen goods imported are really necessities of life, and there is not a householder in the land, no matter how small his income is, who has no interest in having the rate on and cost of linens reduced, as the latter can be by changing the rate to, say, 25 per cent ad valorem.

Heretofore when a tariff bill was framed under the Republican administration, promises to build up the linen manufacturing interest were given, but they have not been fulfilled, and loss and disaster attended the feeble trials made years ago.

Everything points to the desirability of giving us a simple, easily understood tariff, providing for a rate of 25 per cent, applicable to goods imported or in bond and duty paid after the new bill becomes operative.

With the request for your kind consideration of the above, I am,

Yours, faithfully,

RICHARD H. GROOCH.

PARAGRAPH 359.

Istle or Tampico, when dressed, dyed, or combed, twenty per centum ad valorem.

ISTLE OR TAMPICO.

BRIEF OF E. B. & A. C. WHITING, BURLINGTON, VT.

BURLINGTON, VT., *January 21, 1913.*

HON. OSCAR W. UNDERWOOD,
Chairman Committee on Ways and Means, Washington, D. C.

DEAR SIR: Referring to Schedule J, paragraph 359, "Istle or Tampico when dressed, dyed, or combed, 20 per cent ad valorem."

When the writer, with his father, started the business of preparing brush fiber ready for the brush, 40 years ago, brush makers were preparing their own fiber by hand and were glad to pay for the ordinary mixtures of tampico from 15 to 17 cents and up a pound.

The machinery which we invented reduced the cost, and other machines since have come in so that prices have gradually kept falling, until the same goods are now sold for 10 and 12 cents, and even cheaper mixtures are put out. For mixtures that the brush makers were then making, costing them in the neighborhood of 45 cents a pound, we have put out substitutes and reduced the cost to now 14 or 15 cents a pound.

Learning of the machines which we developed, English and European manufacturers sought for the same, and we sent several of them abroad. With these and other machines developed since by European manufacturers they are now, with their prison and other cheap labor, able to dress fiber very low, lower than it is possible to do it in this country. And they are continually quoting very low figures to the trade in this country. But the competition among the several brush-fiber manufacturers in this country is now so severe and the prices so low that the brush makers are content with the prices they are now paying, and it would be a great misfortune to give the Europeans

PARAGRAPH 359—ISTLE OR TAMPICO.

any further inside advantage than they now have with the duty of 20 per cent, which does not begin to cover the difference in cost between manufacturing in this country and in Europe.

We were surprised when in England a few years ago to find that one of the English manufacturers who had installed a full set of our machinery had shut down that department—was not running it. On inquiry they told us that the reason was that the continental manufacturers were putting goods into the English brush factories right alongside of them cheaper than they could possibly do it. We also learned that the English manufacturer was paying his help about 50 per cent of what we were paying ours at that time, and still they were unable to compete. We are to-day paying our help much higher than then, and higher than ever before.

Now, we do not want to see the same conditions developed in this country. We do not want to see our factory and the business which we nursed and built up thrown out of existence by the cheap labor of Europe. We therefore do most earnestly beseech you that no action be taken to further injure our business.

The present duty of only 20 per cent was not fixed by Congress, but came about in this way. When the European manufacturers had developed machinery so that they began sending dressed Tampico into this country a few years ago, the appraisers could not find any mention of it in the Dingley tariff; but, realizing that a duty should be imposed, they classed it under that "catch-all" clause.

This "catch-all" clause referred to read: "There shall be levied, collected, and paid on all articles manufactured in whole or in part, not provided for in this act, a duty of 20 per cent ad valorem."

Hence the duty now in force of 20 per cent was not fixed by Congress on the merits of the case, but simply adopted by the appraisers as the only clause they could find which would possibly cover the case. This was the situation when the tariff discussion came up in 1909, at which time there was a strong opposition to any advance in any of the schedules. But when the situation was fully explained and comprehended by the committee, they were convinced that 20 per cent was not adequate protection, and decided that the demonstration given showed at that time conclusively that we should have a larger duty, and the Finance Committee agreed to the following:

"Istle or Tampico, or mixtures thereof with other vegetable or similar fibers, when dressed, dyed, combed, treated, or manufactured in any manner, 35 per cent ad valorem."

Later the House committee concurred in this amendment, and everyone interested supposed there was no question about its going through all right. There was much surprise, therefore, the morning the bill was printed to find that the bill called for a duty on istle of only 20 per cent, as before. Just how or by whom this was done no one seemed able to find out.

Dressed Tampico never has had a duty large enough to cover the difference between the cost of dressing the stock in this country and abroad, and I presume we can not now expect a duty to cover this difference (about 35 per cent, as near as we can figure it).

The Europeans are offering the dressed stock in this country now so cheap that we can hardly meet their prices and get any profit at all.

The fiber-dressing trade is a small one; and if cut into by foreign competition, the volume of business would be so reduced that it would be practically impossible for the fiber dressers to live. The competition in the business in this country is so severe now that dressed fibers are being sold lower than ever, while the cost of crude stock is high.

It costs to dress the commoner grades of Tampico in this country from \$4 to \$6 and \$7 per hundred pounds. We have lately received an offer from Europe to dress these stocks for us at from \$2.14 to \$3 per hundred pounds. In other words, the Europeans are now offering the dressed stock delivered at our stations here in America at about the cost to the American manufacturers without any profit.

One of these European manufacturers has just established an agent in this country who is sending out samples and offering stocks very low. Unless we can be properly protected we shall suffer more and more from this very cheap European labor. Then, too, the crude Tampico fiber all comes from Mexico, and unless we are duly protected the cheap peon labor of Mexico will be used to produce the dressed fiber and bring it into this country.

There is considerably more stock imported now than we wish there was, but there would be more yet were it not for the difficulties in getting so many different mixtures and kinds. We have never been able to get statistics that accurately gave the importations, but at one time we know they were increasing quite rapidly until we American manufacturers had to cut our prices to just about cost or lose the trade.

PARAGRAPH 359—ISTLE OR LAMPICO.

A good deal of dressed Tampico and mixtures of Tampico with other fibers come in under the head of dressed vegetable fiber, polished or glazed fiber, and other names, so that it is impossible to find out how much dressed Tampico and mixtures thereof are coming in.

We think the wording of the amendment offered by the Finance Committee as above covers the ground better, and would be an improvement over the present wording of the tariff, and we would therefore suggest as a substitute for paragraph 359, Schedule J, the following:

“Istle or Tampico or mixtures thereof with other vegetable or similar fibers, when dressed, dyed, combed, treated, or manufactured in any manner, 30 per cent ad valorem.”

We therefore once more ask that you give us 30 per cent duty. While 30 per cent will not cover the difference in cost between American labor and the cheap labor of Europe, still we can get along with that, and we trust you will see your way clear to grant our request and save our industry and the capital invested therein.

Respectfully yours,

A. C. WHITING,
For E. B. and A. C. WHITING.

This concluded the hearings on Schedule J.

SCHEDULE K.
WOOL, AND MANUFACTURES OF.

SCHEDULE K—WOOL AND MANUFACTURES OF.

COMMITTEE ON WAYS AND MEANS,
HOUSE OF REPRESENTATIVES,
January 27 and 28, 1913.

The committee met at 10 o'clock a. m., Hon. Oscar W. Underwood in the chair.

Present with the chairman: Messrs. Harrison, Kitchin, James, Rainey, Dixon, Hull, Hammond, Peters, Palmer, Payne, Hill, Fordney, and Longworth.

The CHAIRMAN. The committee will come to order. The first witness is Mr. Frank P. Bennett.

Before Mr. Bennett opens his remarks, I want to state that the committee started out to make a time schedule for the witnesses. We have found that we can not comply with that schedule on account of cross-examination by the committee. We have allowed 10 minutes to each witness, which does not count the time the committee itself takes in cross-examination. We desire that each witness should have a chance to be heard, and the committee reserves the right to extend the time if they desire to do so.

PARAGRAPH 360.

All wools, hair of the camel, goat, alpaca, and other like animals shall be divided, for the purpose of fixing the duties to be charged thereon, into the three following classes:

PARAGRAPH 361.

Class one—that is to say, merino, mestiza, metz, or metis wools, or other wools of Merino blood, immediate or remote, Down clothing wools, and wools of like character with any of the preceding, including Bagdad wool, China lamb's wool, Castel Branco, Adrianople skin wool or butcher's wool, and such as have been heretofore usually imported into the United States from Buenos Aires, New Zealand, Australia, Cape of Good Hope, Russia, Great Britain, Canada, Egypt, Morocco, and elsewhere, and all wools not hereinafter included in classes two and three.

PARAGRAPH 362.

Class two—that is to say, Leicester, Cotswold, Lincolnshire, Down combing wools, Canada long wools, or other like combing wools of English blood, and usually known by the terms herein used, and also hair of the camel, Angora goat, alpaca, and other like animals.

PARAGRAPH 363.

Class three—that is to say, Donskoi, native South American, Cordova, Valparaiso, native Smyrna, Russian camel's hair, and all such wools of like character as have been heretofore usually imported into the United States from Turkey, Greece, Syria, and elsewhere, excepting improved wools hereinafter provided for.

PARAGRAPH 364.

The standard samples of all wools which are now or may be hereafter deposited in the principal customhouses of the United States, under the authority of the Secretary of the Treasury, shall be the standards for the classification of wools under this act, and the Secretary of the Treasury is authorized to renew these standards and to make such additions to them from time to time as may be required, and he shall cause to be deposited like standards in other customhouses of the United States when they may be needed.

PARAGRAPHS 360-369—RAW WOOL.

PARAGRAPH 365.

Whenever wools of class three shall have been improved by the admixture of Merino or English blood, from their present character as represented by the standard samples now or hereafter to be deposited in the principal custom-houses of the United States, such improved wools shall be classified for duty either as class one or as class two, as the case may be.

PARAGRAPH 366.

The duty on wools of the first class which shall be imported washed shall be twice the amount of the duty to which they would be subjected if imported unwashed; and the duty on wools of the first and second classes which shall be imported scoured shall be three times the duty to which they would be subjected if imported unwashed. The duty on wools of the third class, if imported in condition for use in carding or spinning into yarns, or which shall not contain more than eight per centum of dirt or other foreign substance, shall be three times the duty to which they would otherwise be subjected.

PARAGRAPH 367.

Unwashed wools shall be considered such as shall have been shorn from the sheep without any cleansing; that is, in their natural condition. Washed wools shall be considered such as have been washed with water only on the sheep's back, or on the skin. Wools of the first and second classes washed in any other manner than on the sheep's back or on the skin shall be considered as scoured wool.

PARAGRAPH 368.

The duty upon wool of the sheep or hair of the camel, Angora goat, alpaca, and other like animals, of class one and class two, which shall be imported in any other than ordinary condition, or which has been sorted or increased in value by the rejection of any part of the original fleece, shall be twice the duty to which it would be otherwise subject: Provided, That skirted wools as imported in eighteen hundred and ninety and prior thereto are hereby excepted. The duty upon wool of the sheep or hair of the camel, Angora goat, alpaca, and other like animals of any class which shall be changed in its character or condition for the purpose of evading the duty, or which shall be reduced in value by the admixture of dirt or any other foreign substance, shall be twice the duty to which it would be otherwise subject. When the duty assessed upon any wool equals three times or more that which would be assessed if said wool was imported unwashed, the duty shall not be doubled on account of the wool being sorted. If any bale or package of wool or hair specified in this act invoiced or entered as of any specified class, or claimed by the importer to be dutiable as of any specified class, shall contain any wool or hair subject to a higher rate of duty than the class so specified, the whole bale or package shall be subject to the highest rate of duty chargeable on wool of the class subject to such higher rate of duty, and if any bale or package be claimed by the importer to be shoddy, mungo, flocks, wool, hair, or other material of any class specified in this act, and such bale contain any admixture of any one or more of said materials, or of any other material, the whole bale or package shall be subject to duty at the highest rate imposed upon any article in said bale or package.

PARAGRAPH 369.

The duty upon all wools and hair of the first class shall be eleven cents per pound, and upon all wools or hair of the second class twelve cents per pound.

RAW WOOL.

TESTIMONY OF FRANK P. BENNETT, EDITOR OF THE WOOL AND COTTON REPORTER, BOSTON, MASS.

MR. BENNETT. Mr. Chairman and gentlemen, I do not think I have condensed my remarks into a 10-minute space, but I will endeavor to do so.

THE CHAIRMAN. If you appear for this paper we will give you a little more time. How much time do you desire?

PARAGRAPHS 360-369—RAW WOOL.

Mr. BENNETT. I think I should have half an hour.

The CHAIRMAN. We have a large number of witnesses here. Do you think you could get through in 20 minutes?

Mr. BENNETT. I will try to.

The CHAIRMAN. The committee will allow you 20 minutes.

Mr. BENNETT. I want to urge the committee to report a reduction of the duties on goods to 50 per cent, and the entire removal of the duties upon wool, which would be substantially a reenactment of the Wilson law, the best tariff law that this country has ever seen, so far as wool and woollens are concerned.

The panic of 1893 was followed in August, 1894, by the Wilson law, and one year from that time the country was very prosperous and the textile industry was very prosperous. In September, 1895, came the Venezuela message, of which I think most of us are proud now, but it caused considerable fright just at that time. Then followed the campaign of 1896, which was fought, not on the tariff, but somewhat upon the tariff and more upon the financial question.

I have figures here in a little pamphlet to show that of \$3,300,000,000 of agricultural products this year, wool was $1\frac{3}{4}$ per cent. That is what all this disturbance and noise has been about all these years— $1\frac{3}{4}$ per cent of the agricultural products of the United States.

It has been a political movement. I have attempted and participated to some extent in every tariff hearing since and including the tariff of 1883. In 1889 I presented a petition signed by over 500 woolen manufacturers in favor of free wool. I have copies of the signatures and of the preamble here to-day, which I will hand to the clerk of the committee.

Following that period was the enactment of the McKinley law, which, as you know, lasted a very short time. We then had the Wilson law under which the country was very prosperous.

The main objection to the duty on wool is not only that it hampers the manufacturers, but it hampers a proper sheep husbandry in the United States. The people of the United States are very fond of lamb, roast lamb, lamb chops, and lamb in every form; but there is not the desire in this country for heavy mutton that there is abroad in England and France and elsewhere. There have never been half enough lambs produced in this country to supply the demand. During the past year there has been something in the sheep and wool business of the United States approaching what we call a liquidation in the stock market—there has been a liquidation of sheep, due to the scarcity of pork and mutton, and I do not know that anybody knows to how low a point the supply of sheep and lambs in the United States has been reduced.

If we had free wool and the enormous political atmosphere which has surrounded the sheep husbandry was removed, instead of producing 50 per cent of the lambs in the United States we would produce 100 per cent. They do in England. They have twins enough to offset the male sheep and their losses in other directions, and they produce 100 per cent. The demand exists in this country for 100 per cent of lambs, but the attention of the farmer has been directed to such an extent to wool that they have never developed in that direction as they should.

PARAGRAPHS 360-369—RAW WOOL.

I have been familiar with the wool growing in the West and sheep husbandry in the West for 35 years, and it is astonishing the extent to which they keep what they call dry sheep—that is wethers or denaturalized male sheep. They could sell them as lambs for \$7; they keep them for three years, and have to sell them as full-grown sheep for three or four dollars, for the sake of the wool. I maintain that it will not be difficult for this committee to satisfy itself that with free wool and the proper development of the sheep husbandry in the United States more sheep will be kept than to-day, and it will be a growing industry instead of a decadent industry.

It has been said that we should have a duty on wool as a revenue tariff, and the expression has been used, "Tariff for revenue with incidental protection." I maintain that you can not have such a thing as a tariff for revenue with incidental protection on a single article. You may have a whole tariff list of that kind, in which some duties shall be protective and some shall be for revenue. Take the case of wool—speaking of the tariff for revenue with incidental protection on a single article, and what do you find? In the first place, a revenue tariff should be placed upon luxuries and not upon necessities. In the second place it should be imposed upon something which is not produced in this country. Otherwise, what is the result? If you take wool you could get, say, \$20,000,000 of revenue, and your statistics and percentages give the percentage of duty as 44 or 45 per cent, or somewhere along there. As a matter of fact, the percentage of duty should be figured on what is shut out as well as what comes in, and the duty is 80 per cent and 100 per cent in many cases. Then what is the result in order to raise \$20,000,000 of revenue, under the absurd idea of tariff for revenue with incidental protection? In order to raise \$20,000,000 of revenue you impose forty or fifty million dollars of tax upon the manufacturers and upon the consumers in the raised price upon the domestic wool, and foreign competition is excluded. I say that is as plain as two and two make four.

Mr. HARRISON. If you will pardon me a moment. You spoke of \$20,000,000 revenue on raw wool. For the year ending June 30, 1912, we only received \$14,455,000, which is about an average—

Mr. BENNETT (interrupting). I am simply presenting the theory of the matter. I think it has been more than that sometimes. But that is not particularly important. The question is, What burden do you impose upon the consumer for the sake of raising \$14,000,000 or what not of revenue?

Now, Mr. Chairman, that that is a fact is proven by the compensatory duty which you give the manufacturer and have ever since the Morrill tariff, or at any rate since 1867—I think since 1861. If it were not true that the duties are a tax upon the consumer in respect to the wool produced in the United States and not alone on that which comes in from abroad; if that were not true, then there would be no justification for the compensatory duty. The compensatory duty proves that it is a tax upon the consumer.

Mr. HARRISON. May I ask your opinion as an expert whether it is possible for the woolen manufacturer under all circumstances to obtain the compensation supposed to be accorded to him by the compensatory duty, or whether there is not a price beyond which the

PARAGRAPHS 360-369—RAW WOOL.

public will not go in buying woolen goods, and therefore he can not collect out of the public his compensation?

Mr. BENNETT. Mr. Chairman, this is as true as the Ten Commandments, and that two and two make four, that an enormous protection has been concealed in the compensatory duties. Not only do they get the whole of it, but they get a great deal more than an offset to the duties upon the raw wool. I am simply presenting the theory as an argument of the philosophy of the matter in order to show that it is a most absurd revenue tariff.

That it hampers the manufacturer everybody knows. During the Wilson law, every day men who knew a little about wool supposed that wool that came from Russia was long staple, coarse wool for carpet purposes. We got into Boston the greatest lot of fine, heavy shrinkage wools from Odessa from the Merino sheep, dating back to the Greek Empire and beyond that. We got in Morocco wools dating back to the Roman occupation of North Africa. Most people did not know that those wools existed or that kind of sheep was kept there.

We do not make the finest worsted yarns in this country. They do not get the superfine Australian wool in here at all; they do not get the selection. As an animal product every fleece of wool differs from every other fleece, and each fleece has its value for certain manufacturing. As a practical fact, they grade all the wool in the world—I do not speak with exactness, but very nearly so—into perhaps a hundred grades or something like that. Our manufacturers are handled for selection. They have given a promise to the wool growers—I do not remember that old quotation—but they have given it to his hope, and broken it in the actual performance of the act.

The wool tariff from the beginning has been a marvel of loopholes to enable wool to come in here. The skirting clause is now so well known a commercial method that nobody would dispute it; but that was first started for the purpose of getting the wool in at a light shrinkage and for the purpose of evading the duty. This was applied to carpet wools in the same way, for the purpose of evading the duty.

A great many people are strong for the specific duty. I have heard a manufacturer say—and I think he was a little extravagant in this—that for a great deal of the wool he was getting at the present time 20 per cent duty would be an increase. He was referring to the very light shrinkage South American cross-breeds, because the shrinkage was so very light. The main argument for this is that the light shrinkage wools can be brought in and relieve the absolute necessities of the manufacturer.

Why, Mr. Chairman, you would think, to notice the great space which the wool tariff occupies in the bibliography of husbandry and the textile manufacturing industry, that it was of commanding importance; but it is only $1\frac{3}{4}$ per cent of the agricultural products of the United States. For years woolgrowers who used to take interest in it as woolgrowers do not take any interest in it. There was a certain fine man, an excellent man, a politician up around Syracuse, N. Y., who used to work it as a political instrument. In the framing of the Dingley law, as late as that, it was transferred from Syracuse to Ohio, and Mr. Columbus Delano used it for years; and then Judge

PARAGRAPHS 360-369—RAW WOOL.

Lawrence. But as late as the framing of the Dingley law there was not but one man west of the Mississippi River who came on to the hearings here primarily for the purpose of being heard and exerting an influence in the framing of the wool tariff. There were a couple of bankers here and there was one man who happened here with his wife from Colorado and who was making a tour somewhere. But there was only one man, one woolgrower, who came here for that purpose. It used to be in Ohio. Columbus Dlano had it, and then Judge Lawrence had it.

I have shown you how sheep husbandry has been distorted in the United States and how it has been distorted for these political reasons.

In a general way you can divide all the sheep husbandry in the United States into two classes. Of course there are lots of other classes; the raising of early lambs, and the raising of stud sheep for breeding purposes. But you can divide it pretty nearly into two classes—one in which your wool is a by-product, and another in which mutton is a by-product. Where wool is a by-product, the tariff on wool does them harm; where mutton is a by-product, it does not do them a particle of good, because the other elements are so controlling that I do not know that a thousand per cent duty would make a bit of difference. I refer to the primitive sheep husbandry for wool. Almost always this is upon elevated tablelands which are the natural habitat of these sheep—free sheep lands, preferably; free Government lands, on which woolgrowing is purely a pioneer incident. When the sheep disappear it is invariably an indication of prosperity. I used to go down into San Antonio, Tex., when San Antonio was one of the leading wool markets of the United States. Now, why did they lose that business around there? Because cotton came in and took its place, and land which was worth 50 cents an acre is worth—I do not know how much—\$200 an acre or more. The plow drives out the sheep always.

In New England in 1840 they had three and a half million sheep. In 1900 they had half a million sheep, and to-day they have two or three hundred thousand. It is diminishing like that.

Now, let us take Ohio. This is a coincidence merely. I do not give it as cause and effect, but it is a coincidence that the number of sheep in Ohio which had been rising at a tremendous pace up to 1867, dropped off enormously the moment that the famous tariff of 1867 the result of a conference between the manufacturers and growers at Syracuse, was framed and went into effect. That is merely a coincidence, I think. The number rose up to about 7,000,000 in 1866. It had been rising right up, and immediately dropped, until now they have a couple of million.

Mr. LONGWORTH. How many did you say?

Mr. BENNETT. About a couple of million.

Mr. LONGWORTH. Where do you get your figures?

Mr. BENNETT. I get them from the Agricultural Department, the last issue of this paper, and I will give them to you exactly. I do not wish to lose any time on this. Those figures are in the pamphlet. It is somewhere about 2,000,000.

Mr. RAINEY. What kind of sheep do they have—wool sheep?

Mr. BENNETT. They did have merino, but now they have very largely mutton sheep. They used to have those merinos. I would

PARAGRAPHS 360-369—RAW WOOL.

like to tell you something about the difficulty in regard to merino sheep. The most famous flock of sheep is the Rambouillet flock in France, where they keep 100 sheep. I established a flock of 500 of those sheep, bred without any mixture of blood from 1797—from the conclusion of the French Revolution. I established a flock of 500 of those sheep and kept them for a long time. I would like to take a little time and tell you about the difficulties had with merino sheep in general husbandry.

The CHAIRMAN. Mr. Bennett, your time is up, but I will allow you five minutes more if you wish.

MR. BENNETT. I will endeavor to conclude.

I want to call attention to Texas. The number of sheep in Texas rose to five or six million and fell back to a couple of million. Kansas used to be a wool State and to-day it is no wool State at all; they have a few sheep. They are riding in automobiles out there and the farmer in Kansas who does not keep an automobile is conspicuous by not having one or two. They have not any sheep. They used to have sheep, but higher forms of agriculture have driven the sheep out.

Just a word in regard to the merino sheep. They are the only sheep that will herd in large bands. They must have some merino blood to make them herd in large bands. The Lincolns, the Southdowns, the Cheviots, and the Shropshires will not. If you watch them feed you will see that they scatter out. The merino sheep will herd, and on those sheep there form diseases which take the form of animal parasites, inside and out—25 or 30 commonly known animal parasites. You can not get the mutton from them, because in order to get mutton you have got to have English grades of sheep and sheep of that description.

Mr. Chairman, I will not take up any more time. I would like to have an opportunity to take a few minutes later on after the hearing has progressed; maybe about five minutes.

MR. FORDNEY. You have stated that the plow drives out the sheep?

MR. BENNETT. Yes, sir.

MR. FORDNEY. That was true from 1892 to 1897, but not just now.

MR. BENNETT. That is absolutely inevitable and inviolably true, so far as sheep are concerned, in which wool is the product aimed at and not a by-product.

MR. FORDNEY. In southern Michigan, my dear friend, the most highly cultivated part of the State, there are more sheep to-day than ever before.

MR. BENNETT. I think, if you will ask the Agricultural Department, that that is not correct.

MR. FORDNEY. You think so or you would not say so; but I think I am right.

MR. BENNETT. Even if that were true, what kind of sheep were they? They used to keep merino sheep in Michigan, but they do not now; they keep the mutton sheep. Is not that true?

MR. FORDNEY. No; I differ with you.

MR. BENNETT. Ask any Boston wool merchant here to-day what kind of wool he gets to-day. Let him go and make an offer for wool up there and ask him what kind of wool he gets to-day as compared with what he used to get. Just ask him that question, and he will tell you that it is the medium wool that comes from mutton sheep.

PARAGRAPHS 360-369—RAW WOOL.

Mr. HARRISON. You agree with the statement of the Tariff Board that in the States east of the Missouri River wool production is incidental to general farming?

Mr. BENNETT. Absolutely.

Mr. FORDNEY. Ten million pounds in our State. That is merely an item. You say that removal of the duty or the destruction of the industry will be a kindness to the men engaged in the industry?

Mr. BENNETT. I did not say anything of the kind.

Mr. FORDNEY. You said it would benefit the country?

Mr. BENNETT. I did not say anything about that. I am sure I did not say that the destruction of the industry would be a benefit to anybody. I did not say anything of that kind.

Mr. FORDNEY. Well, words to that effect.

Mr. BENNETT. No; not to that effect.

Mr. FORDNEY. I think if the stenographer will read his notes—

Mr. BENNETT (interrupting). Not the slightest to that effect. Don't you think we had better make that clear, brother?

Mr. FORDNEY. I took a note of what you said. Maybe I am wrong, but I think I am right.

Mr. BENNETT. I can not control your interpretation of my remarks.

Mr. FORDNEY. I would not misquote you. That is the inference I drew from your remark and I made a note of it to that effect.

Mr. BENNETT. What is your note?

Mr. FORDNEY. There are over \$40,000,000 worth of wool produced in this country according to the Tariff Board, for which the farmer received 16 cents a pound in 1911.

Mr. BENNETT. Yes, sir.

Mr. FORDNEY. And you think that is an industry that is not worth considering?

Mr. BENNETT. What I said was that the farmer would be benefited by taking off the duty on wool. That is what I said—that more wool would be produced.

Mr. FORDNEY. Was that true when they did take it off in 1894 and 1896? Is it not true that the number of sheep in this country at that time dropped from fifty-two to thirty-seven million, during the life of the Wilson bill?

Mr. BENNETT. The time was very short.

Mr. FORDNEY (interposing). Oh, yes. If it had been a little longer it would have finished the industry entirely.

Mr. BENNETT. It takes time to increase flocks.

Mr. FORDNEY. Indeed it does.

Mr. BENNETT. But, as a matter of fact, you can not take the sheep industry or sheep husbandry by itself, except on the part of those few people who are occupying sheep lands and pursuing it as a primitive pursuit. You can not take it alone for the people of Michigan, because it is simply an element of miscellaneous agriculture.

Mr. FORDNEY. One of the agricultural products. In the State in which I have the honor to live, and in the district which I have the honor to represent, there are many sheep raised and much wool grown.

Mr. BENNETT. I know a great deal about Michigan.

Mr. FORDNEY. It is one of the highest cultivated districts in this country.

PARAGRAPHS 360-369—RAW WOOL.

Mr. BENNETT. Yes, sir.

Mr. FORDNEY. There is no greater efficiency in the cultivation of farms than is found right in that territory. There is a large number of sheep there, so that it does go with farming.

Mr. BENNETT. Yes.

Mr. FORDNEY. When wool was on the free list I have seen sheep sold for 75 cents a carcass in the State of Michigan, and wool for 9 cents a pound.

Mr. BENNETT. They were sheep that ought to have been sold years before.

Mr. FORDNEY. They ought to have been sold before they took the duty off, and then they would have gotten something for them.

Mr. BENNETT. Those sheep should have been sold—

Mr. FORDNEY (interposing). Yes. The man ought to have gotten out of the business in 1902.

Mr. BENNETT. He should have kept the right kind of sheep.

Mr. FORDNEY. He did have the right kind of sheep but he did not have the right kind of market.

Mr. BENNETT. He did not have the right kind of sheep. West of the Mississippi River, Mr. Chairman, for years it used to be customary to keep their ewes until they died on the range. There was no effort made and no care used in bringing up the flock and keeping the right kind of sheep.

Mr. FORDNEY. Under free trade, from 1894 to 1896, they did have to keep them until they died. Nobody would buy them.

Mr. BENNETT. I understood you to say they were sold for—

Mr. FORDNEY. For 75 cents.

Mr. BENNETT. Then they did not keep them until they died; they sold them off.

Mr. FORDNEY. In the State of Michigan the report shows there were over 1,500,000 sheep in 1910.

Mr. BENNETT. Yes.

Mr. FORDNEY. And every sheep was worth \$4 or \$5 a head. That is quite an industry?

Mr. BENNETT. Yes.

Mr. FORDNEY. And you would depreciate the value of that industry by taking the duty off of wool?

Mr. BENNETT. I do not think you would depreciate the value of those sheep a bit.

Mr. FORDNEY. The Tariff Board report here says that in the western part of the United States it costs an average of 11 cents a pound to produce wool outside of the lowest grade. Taking that grade into consideration, the cost of production to the farmer was 9½ cents a pound in 1911, and that is after giving credit to the wool industry all moneys received from the sale of mutton, etc. In 1911 the farmer received an average of 16 cents a pound for his wool, according to the Tariff Board report. Under those circumstances do you believe that the farmer was as prosperous under free trade from 1894 to 1896 as he has been since that time?

Mr. BENNETT. I deny the circumstances entirely.

Mr. FORDNEY. Then you deny the Tariff Board report?

PARAGRAPHS 360-369—RAW WOOL.

Mr. BENNETT. If I may be permitted to say, you are guilty of generalizing from insufficient data.

Mr. FORDNEY. This is not where I belong if I am guilty of a wrong—

Mr. BENNETT. You are generalizing from insufficient data.

Mr. FORDNEY. So did the Tariff Board.

Mr. BENNETT. I am here for one thing, and that is to drive the nail right in here in regard to what the gentleman says about sheep in Michigan. He says there were a million and a half sheep in Michigan in 1910, and he has said that there are more than ever before. I will get the figures and give them to the committee to show that that statement is absolutely wrong.

Mr. FORDNEY. I said in the farming section of the country. That is what I am talking about.

Mr. BENNETT. You said the State of Michigan.

Mr. FORDNEY. In the highly cultivated agricultural districts of southern Michigan. The census report shows that we had 1,545,000 head of sheep, not including lambs,

Mr. RAINEY. In 1890 the report shows they had 2,400,000. Does that include lambs?

Mr. BENNETT. If it does not, so much the better.

Mr. FORDNEY. This does not include lambs. The Tariff Board report says so.

Mr. HARRISON. If you will pardon me a moment, I would like to correct what seems to be an error in Mr. Fordney's statement of what the Tariff Board report shows. Here is what they say: "That if account is taken of the entire wool production of the country, including both fine and coarse wool, the average charge against the clip is about 9½ cents per pound."

Mr. FORDNEY. That is what I said exactly.

Mr. BENNETT. That is a very different proposition, and I will tell you why. It has very little value, because the wool is a by-product. I heard that a Lincoln ram was sold for 1,500 guineas by a man named Dutton in England. I immediately packed my grip and went over there with letters of introduction to see Dutton and found that it was true. He sold that ram for 1,500 guineas. That ram would shear about 40 pounds of wool. What did the wool cost? Isn't it absurd to consider anything about the cost of the wool? What was the wool cost in that case? A man sells early lambs, which is not a very general industry nor a very attractive one; but there are people who get into it and make a pretty good showing. He gets a dollar a pound for his lamb. What does the wool cost? I used to send two carloads of rams to Utah every year and used to get \$25 or \$30 per head. What did the wool cost? It was a by-product, an incident, and therefore you can not figure the cost of the wool with any exactness. You can not figure it unless you are figuring it on the great primitive steppes of Russia, Montana, and Wyoming, or such quarters as that, which are the natural habitat of the sheep, and where they have a free range.

Mr. FORDNEY. The Tariff Board report shows that they consulted 1,200 farmers in 173 counties in 19 States in the United States in order to get the average cost of the production of wool and the value of sheep?

PARAGRAPHS 360-369—RAW WOOL.

Mr. BENNETT. Yes, sir.

Mr. FORDNEY. You say that is of no value?

Mr. BENNETT. It is of no value——

Mr. FORDNEY (interrupting). But you would have the committee believe that the information you are giving, without investigation, except through newspapers, is absolutely correct and very valuable. That is what I deduct from your statement.

Mr. BENNETT. I would be very glad to answer that for a moment, if I may.

Mr. FORDNEY. I would like to have you answer it.

Mr. BENNETT. There are trained investigators for special interests acting without prejudice to it. The trained investigator has become to be very much sought after and very much relied upon. But I have owned more sheep than the gentleman has, probably far more. I owned them under different conditions and I have bought and sold wool. I have received on commission something like 5,000,000 pounds of wool.

Mr. FORDNEY. If I had any now I would sell them just as quickly as I could.

Mr. BENNETT. You would be wise, probably, according to the method of sheep husbandry with which you are familiar.

Mr. FORDNEY. Because of the sheep husbandry that you are here advocating.

Mr. BENNETT. No; I am urging the committee to release the textile industry and to release the agricultural industry and to give them an opportunity to proceed along the right line, and to cut politics out of the tariff. That is what I am urging them to do. I do not care to make any defense of myself in the matter. Let the facts stand upon their merits. They are at the disposal of the committee.

Mr. FORDNEY. Are you a manufacturer of wool, Mr. Bennett?

Mr. BENNETT. No, sir; I am not.

Mr. FORDNEY. How long have you been in the woolen industry or raising sheep for wool?

Mr. BENNETT. My business is textile journalism. I have been at it 35 years. Very nearly every textile journalist in the United States has been trained with me. Very nearly every journalist in the textile industry in the United States began with me and got his training with me. I have been in it 35 years.

Mr. FORDNEY. The Tariff Board did not get their training from you, did they?

Mr. BENNETT. I do not think so; no. They matriculated elsewhere.

Mr. HULL. Mr. Fordney has been complaining about the conditions in this country under the Wilson bill. How do you account for the decline, according to the Agricultural Yearbook, of the number of sheep in this country from 50,000,000 in 1884 to 43,000,000 in 1891?

Mr. BENNETT. For the reasons which I think I have already described.

Mr. HULL. How do you account for the decline in Texas alone from 4,281,812 in 1891 to 2,852,269 in 1894, under the McKinley law, and the previous high tariff rates on wool? Then how would you account

PARAGRAPHS 360-369—RAW WOOL.

for the decline in the number of sheep from 50,360,000 in 1885 to 42,000,000 in 1889?

Then I find these further figures. There was a decline from 63,965,000 in 1903, under the Dingley law, to 45,170,000 in 1905, a space of two years, under the Dingley law.

Mr. BENNETT. Yes, sir.

Mr. HULL. Is it not also true that the number and value of other live stock, such as hogs and cattle, declined in proportion to sheep during the panic of the early nineties?

Mr. BENNETT. I would like to say that where sheep have been declining in that way—I show it in the pamphlet here—the value of farms has increased prodigiously, with leaps and bounds. In the last ten years the value of farms in the United States has doubled. The present astonishing and amazing crop of corn is worth \$1,700,000,000 according to the Agriculture Department. While agriculture has been jumping ahead with leaps and bounds in every direction, this decline in sheep which you speak of has occurred. It is in many sections due, as I have said, to the primitive pursuit of sheep husbandry being superseded by more profitable farm products. If you put a thousand per cent duty on wool you could not keep the farmers in some sections from going into the raising of corn and cotton in place of sheep. Take Washington County, Pa., which was the largest sheep county in the United States. The sheep began to be driven out of there by other products, namely, coal and oil. These men made so much money in coal and oil that they would not fool any longer with sheep. That was the first blow to the sheep husbandry of Washington County, Pa. Is that depression? Is that adversity? No, that is prosperity. A thousand per cent duty would not have kept the sheep there.

Mr. FORDNEY. The coal and oil did not reduce the acreage of pasture at all, during that time?

Mr. BENNETT. Absolutely.

Mr. PETERS. I think I understood you to say that a duty of 20 per cent on raw wool would result in a higher duty than the present duty on certain South American wools of light shrinkage.

Mr. BENNETT. I did not make that statement. I quoted a manufacturer as making that statement. I thought it was rather extravagant, as I stated; but it was very near the truth.

Mr. PETERS. I notice in 1912 there were imported from Argentine Republic 21,000,000 pounds and a little over that, and from Uruguay about 3,000,000 pounds.

Mr. BENNETT. Yes, sir.

Mr. PETERS. Will you tell me whether that was substantially all the light shrinkage wool to which you referred?

Mr. BENNETT. It is growing in that direction; it is absolutely growing fast in that direction. When I was first around the markets the wools from that section were very heavy shrinkage wools. That is what became of that 1,500-guinea ram I spoke of. He went down there for the purpose of crossing with those open-wool sheep, and now the tendency in that direction is more marked all the time to produce that class of wool.

PARAGRAPHS 360-369—RAW WOOL.

Mr. RAINEY. In order to corroborate what you have stated about the State of Michigan and also to answer Mr. Fordney's contention, I have here the total number of sheep and lambs in Michigan in 1900 according to the census report. There was a total of sheep and lambs in Michigan in 1900 of 2,747,609; in 1910, according to the census report, there were of sheep and lambs in Michigan a total of 2,309,504, a falling off in the 10-year period of over 440,000.

Mr. BENNETT. Yes, sir.

Mr. RAINEY. I have here the census report as to all the States for 1900 and 1910, and it shows a similar falling off in all of the States where agriculture is the principal industry, even including the State of Montana.

Mr. BENNETT. Yes, sir.

Mr. RAINEY. Where they had in 1910 over a million less sheep and lambs than they had in 1900.

Mr. BENNETT. Those are the facts.

Mr. FORDNEY. You know those to be the facts, because they are in the record.

Mr. BENNETT. They are agricultural reports.

Mr. FORDNEY. I made a statement in reference to the highly cultivated districts in the State of Michigan.

Mr. BENNETT. Yes, sir.

Mr. LONGWORTH. Are you willing to take those figures with regard to the number of sheep in Ohio?

Mr. BENNETT. The figures which I present?

Mr. LONGWORTH. Do you insist on the report that you have from the Agriculture Department? I will say for your information that you are wrong in your estimate by about 50 per cent.

Mr. BENNETT. In the number of sheep?

Mr. LONGWORTH. If you prefer to stand by that report of the Agriculture Department.

Mr. BENNETT. Where will you get the figures if you don't take those?

Mr. LONGWORTH. I take them from the census. You have agreed with the census figures so far as Michigan is concerned, but you do not agree with them so far as Ohio is concerned.

Mr. BENNETT. Mr. Chairman, I stand here to say that these figures in the census and in the Agriculture Department are substantially as I have stated. For the State of Ohio I will leave it to the committee.

Mr. RAINEY. Here is what the census report shows for the State of Ohio. It shows that in 1900 they had a total of sheep and lambs of 4,020,628.

Mr. LONGWORTH. Mr. Bennett had it down to over 2,000,000.

Mr. BENNETT. There were 7,000,000—

Mr. LONGWORTH (interposing). Only 60 per cent wrong, that is all.

Mr. RAINEY. That is the number of sheep. That does not include lambs. In 1910 there was in the State of Ohio a total number of sheep and lambs of 3,912,411, a falling off of 1,100,000 in 10 years.

Mr. LONGWORTH. Mr. Bennett's statement was that in 1900 they had in Ohio over 2,000,000 sheep.

PARAGRAPHS 360-369—RAW WOOL.

Mr. BENNETT. In 1910 we had over 2,000,000 sheep in Ohio.

Mr. RAINEY. That is a great many more over.

Mr. LONGWORTH. We had 2,648,250 sheep in Ohio.

Mr. RAINEY. In what year?

Mr. LONGWORTH. In 1900.

Mr. RAINEY. I am speaking of 1910.

Mr. LONGWORTH. In 1910 we had 2,897,648 sheep, not including lambs. How many sheep did we have in 1896?

Mr. BENNETT. Before the tariff of 1867 you had over 7,000,000.

Mr. LONGWORTH. I am asking you a question. You can answer it if you can. How many sheep did we have in Ohio in 1896?

Mr. BENNETT. I have not got it right at my finger tips.

Mr. LONGWORTH. Have you any remote idea?

Mr. BENNETT. If we are to pursue the truth—

Mr. LONGWORTH (interposing). I am asking you a plain question. You can answer it or not. You may refuse to answer it.

Mr. BENNETT. I will not refuse to answer any question.

Mr. LONGWORTH. How many sheep did we have in Ohio in 1896?

Mr. BENNETT. The general tendency in Ohio has been downward. It was over 7,000,000 previous to 1867. I have those figures right here. I will take the time to get the figures for the specific year 1896.

Mr. LONGWORTH. Have you any idea how many there were? But I will put the question in another way. Have you any idea how greatly the number declined under the Wilson law?

Mr. BENNETT. Mr. Chairman, you must have statistics on these matters.

Mr. LONGWORTH. But you are here giving us information.

Mr. BENNETT. Yes, sir.

Mr. LONGWORTH. If you do not know about these figures, you need not answer.

Mr. BENNETT. I would not trust the figures from a protectionist wool-growing source, manufactured upon the moment, as having influence upon legislation.

Mr. LONGWORTH. You mean the Census Bureau report?

Mr. BENNETT. No; I will trust the Census Bureau report.

Mr. RAINEY. He can not give the year 1906, because it was not a census year. You can not give it either. He can give it for any census year.

Mr. BENNETT. That seems a pretty good answer. My argument in regard to the State of Ohio was not made on the year 1896 or any particular year. I was not there. There might have been scab or some other kind of disease.

Mr. LONGWORTH. During those three years the number of sheep fell off nearly 75 per cent. It has been very hard work getting them back since, although we had managed in 1910 to get back approximately—

Mr. BENNETT (interrupting). The statement you make to me, which you put to me in the form of a question, is that during the three years from 1893 to 1896 the number of sheep in Ohio fell off 75 per cent?

Mr. LONGWORTH. About that.

Mr. BENNETT. I will get some figures on that.

PARAGRAPHS 360-369—RAW WOOL.

Mr. RAINEY. By the same census figures, in 1890 there were 4,081,000 sheep and in 1910 there were 2,898,000 sheep. Those are reliable, because they are for census periods.

Mr. BENNETT. What caused the falling off in 1893?

Mr. LONGWORTH. Free wool caused it.

Mr. BENNETT. Free wool did not come until 1894.

Mr. FORDNEY. The party that was in power had promised to give it.

Mr. BENNETT. The Wilson bill was immediately followed by a tremendous increase in prosperity. It was better than anybody hoped.

The Wilson bill was followed in September of the following year by the greatest forward step in prosperity this country had ever seen. Look over the newspapers of September, 1905, before the Venezuela message, which we are all proud of now, but which frightened everybody most to death in 1905. They thought we were going to have war with England. It marked a forward step that we are all proud of now. In September, 1895, business was generally good. Look over the papers of that day and you will be surprised at the enthusiasm over the upward trend of affairs in September, 1895.

Mr. FORDNEY. Yes; we were quite surprised at the number of soup houses in existence.

Mr. BENNETT. Every intelligent advocate of one side or the other has abandoned that soup kitchen argument.

Mr. RAINEY. The falling off of the sheep industry, according to the census report, in Ohio commenced in 1880 when lambs in Ohio commenced to be valuable. In 1880 they had 4,903,000 sheep in Ohio. Ten years later, as their lambs increased in value all the time, they had a million less sheep. That shows a falling off before the Wilson bill was thought of. During that decade, prior to the enactment of the Wilson bill, the number of sheep in Ohio fell off over a million and it has been falling off ever since.

Mr. LONGWORTH. Of course, when they lost 75 per cent it is very hard to get that back. It takes time.

Mr. RAINEY. They lost a million sheep in the 10 years prior to the time that the Wilson bill was enacted.

The CHAIRMAN. Gentlemen, if you will allow the chairman to proceed, I would like to take up another witness.

Mr. PAYNE. I want to ask the witness a question. This is your brief, I suppose?

Mr. BENNETT. Yes, sir.

Mr. PAYNE. On page 16 you make this statement: Total duties upon wool for 1910 were \$21,128,728.74?

Mr. BENNETT. Yes, sir.

Mr. PAYNE. And have recently run above that amount?

Mr. BENNETT. Yes.

Mr. PAYNE. And so forth?

Mr. BENNETT. Yes, sir.

Mr. PAYNE. The facts are, according to Government statistics, that in 1910 they were, as you state, \$21,128,000; in 1911 they were \$12,482,854; and in 1912 they were \$14,454,234?

PARAGRAPHS 360-369—RAW WOOL.

Mr. BENNETT. Yes, sir.

Mr. PAYNE. It seems you are quite out of the way in those statistics. Of course they do not have much bearing on the case except the fact that in 1910, according to the statistics, over 250,000,000 pounds of wool came in and paid a duty.

Mr. BENNETT. Yes.

Mr. PAYNE. In excess of the home production of wool. But you figure from that as though it was a normal importation of wool as compared with home production, and then go on to state how much came to individuals in the United States who raised wool, and figure a large amount of money paid by the people of the United States. I think it would be fair for you to correct those figures.

Mr. BENNETT. To answer that question more fully, do I figure against myself in that; do I figure against my own argument?

Mr. PAYNE. No; in favor of your exaggerated statements all the way through.

Mr. BENNETT. I think I figure against my argument.

Mr. PAYNE. It does not, sir, if you take what you know to be the fact, that the average importation is nowhere near 250,000,000 pounds in the United States, but that it was a larger proportion of the importation to the consumption of wool in the United States, and shows a smaller use of the domestic wool in that instance. And being much smaller, your figures of forty millions paid by the people to the wool-growers are very much off, as you will find if you take the time in your fuller moments to sit down and figure it out.

Mr. BENNETT. Now, ought I not to answer that question before my friend proceeds with another?

The CHAIRMAN. I think you are entitled to that privilege.

Mr. BENNETT. I think I ought to.

Mr. PAYNE. Look at the figures and add the amount I have given.

Mr. BENNETT. I do not want to, and you do not want to, either.

Mr. PAYNE. All right; go ahead.

Mr. BENNETT. The whole thing shows, Mr. Chairman, the debauching influence of this tariff upon the minds of otherwise judicially minded men. [Laughter.] Does it not?

Mr. PAYNE. I think it does; I agree with you.

Mr. BENNETT. It absolutely does.

Mr. PAYNE. Yes.

Mr. BENNETT. Mr. Chairman, I have given the reasons here to show why the duty on wool is not a proper revenue duty, and if I have got a big year it seems to me I am figuring against myself. It seems to me it is an example of candor worthy to be emulated. [Laughter.]

Mr. PAYNE. Are you through with that?

Mr. BENNETT. Yes, sir.

Mr. PAYNE. As I understand your argument for free wool, you think the lamb industry would be increased 100 per cent instead of about 50?

Mr. BENNETT. Yes, sir; absolutely.

Mr. PAYNE. What would be the effect on the lamb industry of 20 per cent wool?

Mr. BENNETT. I should have to consider that a little. Now you have asked me that question, let me ruminate on it and take time to

PARAGRAPHS 360-369—RAW WOOL.

answer it. What would be the effect upon the lamb industry with 20 per cent—

Mr. PAYNE (interposing). Duty on wool.

Mr. BENNETT. With 20 per cent duty on wool?

Mr. PAYNE. Yes.

Mr. BENNETT. I think the lamb industry would begin to increase, I am free to confess. So far as that statement is concerned, I am free to confess I think the lamb industry would begin to increase. But the manufacturing industry would be hampered and the lamb industry would not increase any faster, or so fast, as it would with free wool.

Mr. PAYNE. And according to your idea, then, 29 per cent would have a still less beneficial effect upon the lamb industry?

Mr. BENNETT. Yes, sir; unquestionably.

The CHAIRMAN. That is all.

Witness excused.

SIXTH PAMPHLET—AN ARGUMENT IN FAVOR OF ENTIRE REMOVAL OF DUTIES UPON WOOL.

[Written by Frank P. Bennett and copyrighted 1913 by Frank P. Bennett & Co. (Inc.)]

THE WOOL TARIFF.

Mr. Chairman and gentlemen, I appear in favor of entire removal of duties upon wool and a reduction of the tariff upon goods to 50 per cent, and I desire to call your attention first to some reasons for believing that, with free wool, more sheep would be kept in the United States, and sheep husbandry would be more profitable than under a duty upon wool.

In brief, I urge a reenactment of the Wilson law of 1894, which was the wisest and most satisfactory tariff act within half a century. It has become customary in some ill-informed quarters to refer to it as the cause of the panic of 1893, but, as a matter of fact, that panic occurred in June, 1893, while the Wilson law was not enacted until August, 1894, and was followed by conditions of overwhelming prosperity. I make this assertion without fear of contradiction, and any of you who will examine the newspapers of September, 1895, can readily verify this statement. But in December, 1895, a panic was precipitated in Wall Street by President Cleveland's Venezuela message, and industries fell off 24 per cent in seven months. I think most of us are now proud of the underlying sentiment of that message, but at the moment its influence was very disturbing. Financial affairs were again seriously upset in 1896 when the gold standard was threatened by the Bryan campaign of that year. While the promise of tariff revision in the presidential campaign of 1896 was wholly upward under the candidacy of Mr. McKinley, yet, if the issue of that campaign had depended upon the tariff alone, Mr. McKinley would have been defeated and Mr. Bryan would have become President of the United States. I think there are plenty of you gentlemen who remember distinctly that threats of the "sixteen to one" silver coinage brought to the Republican side sufficient funds and sufficient influence to decide the contest in their favor. The danger of what was called "dishonest money" introduced into the campaign a degree of enthusiasm which never has been, and never can be, aroused by a tariff question. There was a feeling of great moral issues on both sides in the McKinley-Bryan campaign. Mark the contrast between that campaign and the presidential campaign through which we have just passed, when expectations of tariff revision caused hardly a ripple upon the surface of business. In fact manufacturers and merchants were so well employed and help was so scarce and everybody so prosperous during the year 1912 that the old myth that a presidential year was necessarily a bad business year has been forever exploded.

I think the members of this committee will agree with me that the tariff upon wool has been exploited as the corner stone of agricultural protection. For political reasons the farmer has been led to believe that the wool duty is of supreme benefit to him. But the value of the wool clip of the United States is now about \$60,000,000 per annum. Its value on the scoured basis at the seaboard markets is usually stated somewhat above this figure, but the value at first hands is about \$60,000,000. The value of the

PARAGRAPHS 360-369—RAW WOOL.

egg product of the United States is \$350,000,000; the wheat crop is estimated to be worth \$596,000,000; the oat crop is \$478,000,000; the potato crop is valued at \$190,000,000; the cotton crop is worth \$735,000,000 in lint cotton, to which is to be added \$117,000,000 for the value of the seed, or a total of \$860,000,000 for the combined value of the cotton lint and seed; the hay crop of the past year was valued at \$861,000,000; this year's corn crop is valued at \$1,759,000,000. These figures show the slight importance of the wool crop as compared with the great agricultural products of the United States. The dairy cow is one of the principal producers of wealth on the farm, and the value of her products in 1912 is estimated at about \$830,000,000, an amount which exceeds the value of the cotton lint and is nearly equal to the combined value of lint and seed. The total value of the annual products of the farm in 1912 is estimated to be about \$3,395,000,000. Hence the wool clip of the United States comprised about $1\frac{3}{4}$ per cent of this great total of agricultural products.

The tariff upon wool has distorted the sheep husbandry of this country by encouraging growers to keep unprofitable animals. The people of the United States are very fond of roast lamb and lamb chops, and although they are not especially fond of mutton of older growth, the lamb crop has been so insufficient in recent years that during the past 12 months sheep meat of all ages has been rushed to market in enormous quantities. We are not raising anywhere near enough lambs to supply the demand of American consumers. The lamb crop of the United States ought to be 100 per cent of the number of mature sheep, because there are twins enough to offset the proper proportion of male animals. But, as a matter of fact, the annual lamb crop has not exceeded 50 per cent of the mature sheep from year to year, because the demand for wool has led a multitude of growers to keep neutralized male sheep for the sake of their fleeces until they were 3 or 4 years old, and finally sell them for half what they would have brought when they were lambs 11 months old. There may be two forms of profitable woolgrowing in the United States. One is the by-product of the raising of mutton and the fertilization of land in the older agricultural regions. The other is purely incidental to the opening of new areas with temporary and primitive forms of agriculture.

The high tariff and the present labyrinthine classification of duties upon raw wool, which have served as the basis of all subsequent wool tariffs, were imposed by the famous act of 1867. Then the immediate result of that act was a falling off of the number of sheep in the United States. In Ohio, which was the leading wool State at that time, the number of sheep fell steadily from 7,631,338 in 1867 to 5,052,028 in 1870. The number of sheep in Ohio at the present time, enumeration of 1911, is 2,900,000. In a report of the United States Department of Agriculture, prepared by J. R. Dodge, special agent in 1900, occurs the following paragraph:

"Between 1860 and 1870 a very rapid advance was made from about 22,000,000 sheep in the whole United States to possibly 42,000,000, followed by a decline in the later years of the decade to 31,000,000."

In the State of Ohio the growth in number and value of sheep for 20 years previous to the tariff of 1867 had been almost steadily upward as follows:

Number and value of sheep.

Year.	Number.	Value.
1846.....	3,141,946	\$1,758,433
1848.....	3,677,171	1,988,316
1850.....	3,812,707	1,984,983
1851.....	3,619,674	2,060,012
1852.....	3,059,796	3,581,385
1853.....	4,104,450	6,448,391
1854.....	4,845,189	8,031,854
1855.....	4,337,943	5,664,829
1856.....	3,513,680	5,009,410
1857.....	3,276,539	5,357,275
1858.....	3,377,840	4,755,215
1859.....	3,366,073	5,442,984
1860.....	3,442,856	5,879,357
1861.....	3,943,436	6,681,427
1862.....	4,448,227	7,839,041
1863.....	5,042,439	14,337,058
1864.....	5,560,318	17,502,657
1865.....	6,305,796	22,088,176
1866.....	6,966,028	20,081,944

PARAGRAPHS 360-369—RAW WOOL.

The total number of sheep of shearing age in Pennsylvania on April 15, 1910, was 638,000, representing a decrease of 33.6 per cent, as compared with the number on June 1, 1900, of 959,000. Washington County, Pa., used to be the best sheep section in the United States, but not only has the number of sheep diminished but the average weight per fleece in 1909 was 6.4 pounds, as compared with 6.7 pounds in 1899. In Texas, the number of sheep in 1890 was 4,264,187, and in 1910, 1,108,709. In Kansas, the number of sheep in 1884 was 1,206,297, but had fallen to 272,475 in 1910, in which year only 1.8 per cent of the farms in the State reported sheep. The number of farms reporting sheep in Texas in 1910 was 1.6 per cent. In those States woolgrowing was but an incident of the opening up of new areas.

The number of sheep in the six New England States in 1911, 1900, and 1840 was as follows:

	1911	1900	1840
Maine.....	150,000	237,502	649,264
New Hampshire.....	33,000	76,176	617,390
Vermont.....	90,000	159,136	1,681,819
Massachusetts.....	23,000	39,790	378,226
Rhode Island.....	5,000	10,394	90,146
Connecticut.....	15,000	31,015	463,462
Total.....	316,000	554,013	3,880,307

At this point I desire to introduce a letter which I wrote recently to a Boston daily paper respecting the steady disappearance of sheep as an element of agriculture in New England:

To the EDITOR OF THE HERALD:

I desire to take issue with the letter in this morning's Herald in which the statement occurs that "if we should increase the dog tax and pass a law in Massachusetts that no person shall keep a dog and allow him to run at large, our hills and valleys, now so much neglected, would be covered with sheep and cattle and the meat problem would be solved." The writer of the letter even goes so far as to intimate that this would do more to reduce the high cost of living than anything else which has been suggested.

THIS ANCIENT FALLACY.

Now, my reason for writing you is to suggest your help in puncturing this ancient fallacy about sheep husbandry in New England, which has less basis than Salem witchcraft. I have kept larger numbers of sheep in New England than most any other man in the past half century, with a great flock on hills in Maine, where hunters had been in the habit of roaming with their dogs. I scarcely ever lost sheep from dogs. I have kept valuable sheep in Saugus, Mass., and elsewhere within a few miles of Boston, and have had very little trouble with dogs here. Moreover, the average farmer is not much distressed when he loses a few sheep by dogs, and the county pays more for them than he could have received in any other way.

CLIMATIC OBSTACLES.

The obstacles to sheep husbandry in New England are mainly climatic. The natural habitat of the only races of sheep which can be herded in large bands is an elevated table-land like the steppes of Russia and the great plains of Asia, Argentina, Montana, Wyoming, and others of our Western States, where an open-air range is possible for 12 months in the year, barring an occasional blizzard. On those elevated table-lands are grasses which cure on the root and are more nutritious in winter than in summer. The climate of New England does not permit the growth of such grasses. Even winter rye, which maintains a green appearance through the cold months with us, is frost bitten and nonedible for live stock. Every grass which will grow in New England becomes frozen wood fiber during the winter months.

PARAGRAPHS 360-369—RAW WOOL.

HOSTILE VEGETATION.

This controlling feature of vegetation is accompanied by a frigid and penetrating atmosphere which necessitates continual housing of the sheep, and these animals can not be closely housed in sufficiently large numbers to be profitable without immediately engendering a variety of parasitic diseases. Sheep are subject to 25 or more distinct varieties of animal parasites. There are lung worms, liver worms, three or four varieties of animal parasites in the head, several varieties of stomach worms, and cutaneous parasites. The origin of some of these is very curious, and they travel from other animals into the sheep and through the soil and back into the sheep again. Nearly all of them are developed by housing.

LIMITED POSSIBILITIES.

There are only three forms of sheep husbandry which can be profitable in New England, and on a very limited scale. First, a few animals in the hands of a small farmer as an adjunct of miscellaneous husbandry to run with the cows and clean up the corners of the pasture and to be so housed in winter that they can run in and out in all sorts of weather and each sheep receive the personal attention of the farmer, who can secure an addition of \$40 to \$50 per year to his income in this way; second, the raising of very early lambs to a limited extent for near-by markets; third, the raising of a few high-class thoroughbred sheep for stud purposes, which requires the attention of a very accomplished breeder and herdsman.

DECLINE IN NUMBERS.

The last-named form of sheep husbandry could be more profitable in New England when sheep raising in the Great West was more primitive. But now western ranchmen can develop bands of thoroughbred sheep and sell the pedigreed rams and ewes to their neighbors and at the gatherings at Salt Lake City, Pocatello, Caspar, and other points at prices representing but a fraction of the cost of production in New England.

WASTE OF WOOL DUTY.

As one who for half a century has had more experience than most men with sheep and wool and every process of sheep husbandry and wool manufacture, I hope the incoming administration and Congress will entirely remove the duty upon wool and free us from a great waste of American energy and an obstruction of American industry partially based upon such ancient fallacies as that to which I refer in the opening of this communication. With free wool and 50 per cent duty upon goods, more sheep would be kept in the United States than at present, because about the present number is required for mutton purposes, and more attention to mutton would lead to vastly increased exports. The number of sheep exported from the United States for the fiscal year ending June 30, 1911, was but 121,491; the number exported for the fiscal year ending June 30, 1912, was only 157,263. Moreover, there is absolute truth in the statement that free access to the wools of the world on the part of our manufacturers would increase the demand for various kinds of domestic wool. A prohibitory duty upon manufactured goods would not seriously advance prices because they would be regulated by domestic competition, but a thousand per cent duty upon wool would not develop sheep husbandry in New England, because this section is no more fitted for sheep husbandry on a large scale than for raising fur seals.

COMPETING INDUSTRIES.

In some other sections of the United States sheep husbandry could not be increased because of the competition of other forms of agriculture and industry. In West Virginia and the adjoining counties of Pennsylvania and Ohio sheep husbandry was partially driven away, because the owners of the land made fortunes from oil wells and coal mines. Sheep can not compete with wheat and corn anywhere, and, of course, not with fruit growing. Sheep husbandry in most forms is a primitive pursuit. The plow drives away the sheep, except for advanced forms of mutton raising. So far as the fleeces of wool are concerned, every sheep differs from every other sheep, and advanced and varied forms of manufacture require almost as great a variety of wools as there are sheep in the world.

PARAGRAPHS 360-369—RAW WOOL.

To attempt to develop profitable sheep husbandry upon a large scale in New England by the extermination of dogs or by a tariff or by any other artificial way is a waste of good American energy, which must be so replaced as to cause an increased cost of living.

BOSTON, November 22.

FRANK P. BENNETT.

NOTE.—The above letter appeared in the Boston Herald of Sunday, November 24. I present herewith a table showing the farms, farm land, and farm property of the United States of each decade from 1850 to 1910.

Farms, farm land, and farm property of the United States, 1850 to 1910.

	1910	1900	1890	1880
Population.....	91,972,266	75,994,575	62,947,714	50,155,783
Number of all farms.....	6,361,502	5,737,372	4,564,641	4,008,907
Land area of the country.....acres..	1,903,289,600	1,903,461,760	1,903,337,600	1,903,337,600
Land in farms.....do.....	878,798,325	838,591,774	623,218,619	536,681,835
Improved land in farms.....do.....	478,451,750	414,498,487	357,616,755	284,771,042
Average acreage per farm.....	138.1	146.2	136.5	133.7
Average improved acreage per farm.....	75.2	72.2	78.3	71.0
Per cent of total land area in farms.....	46.2	44.1	32.7	28.2
Per cent of land in farms improved.....	54.4	49.4	57.4	53.1
Per cent of total land area improved.....	25.1	21.8	18.8	15.0
Value of farm property, total.....	\$40,991,449,090	\$20,439,901,164	\$16,082,267,689	\$12,180,501,538

The table which I have presented shows that the population of the nation increased from 23,191,876 in 1850 to 91,972,266 in 1910. The increase was continuous throughout each decade, and the increase in farms kept pace with the population. The value of the farm property will be seen to have been \$3,967,343,580 in 1850, and to have advanced steadily until it reached the immense total in 1910 of \$40,991,449,090. In the decade from 1900 to 1910 the value of farm property in the United States doubled. During this decade, when the increase in value of farm property was so enormous, the Census Bureau reports a decrease of 9,056,000, or 14.7 per cent, in the total number of sheep and lambs in the United States. The total number of sheep and lambs reported as on farms and ranges in 1910 was 52,448,000, as compared with 61,504,000 in 1900.

PARAGRAPHS 360-369—RAW WOOL.

The principal decrease was in the number of lambs, partially due to the fact that all of the present number of sheep in the United States is necessary to supply the demand for lamb and mutton. The following table shows the decrease in number of sheep in various sections of the United States:

Section.	Decrease.	Per cent.
United States.....	9,055,852	14.7

¹ Increase.

During the same decade the number of mules in the United States increased from 3,264,615 in 1900, to 4,209,769 in 1910. In spite of the introduction of automobiles and trolley cars the number of horses increased from 18,267,020 in 1900 to 19,833,113 in 1910, and the value of the horses increased from \$896,513,217 in 1900 to \$2,083,588,195 in 1910.

As in the case of sheep, so there was an enormous decline in the number of calves and steers in the United States between 1900 and 1910, but there was an increase in dairy cows from 17,135,633 to 20,625,432. The textile manufacturing industries of the United States are adjusted to the theory and practice of protection, while woolgrowing has utterly failed to thus adjust itself. Even New Mexico, which is one of the natural woolgrowing sections of the United States, had 2,895,000 sheep in 1910, as compared with 3,334,000 in 1900, a decrease of 13.2 per cent. On the other hand, the total value of crops in New Mexico in 1909 was 191.2 per cent greater than in 1899, following the general rule to which we have previously referred that a decrease in the more primitive forms of sheep husbandry is an indication of agricultural prosperity.

VERIFICATIONS OF STATEMENT.

In Utah, the number of sheep in 1910 was 1,671,000, representing a decrease of 34.6 per cent, as compared with the number in 1900 of 2,553,000, but Utah reported a production of 3,118,000 quarts of strawberries in 1909, as compared with 1,695,000 quarts in 1899, and the total value of all crops in Utah was 124.2 per cent greater in 1909 than in 1899. This increase of more than 124 per cent in production occurred upon a gain of only 12.8 per cent in acreage. Even in Colorado—many sections of which include as natural areas for sheep husbandry, as Idaho, Wyoming, and Montana—the number of sheep of shearing age in 1910 was 1,306,800, representing a decrease of 3.5 per cent, as compared with the number of 1,353,000 in 1900, but the total value of crops in Colorado in 1909 was 200.4 per cent greater than in 1899, and this increase of over 200 per cent in value was based upon an increase of 68.7 per cent in acreage. Colorado produced \$6,059,000 worth of potatoes in 1909, and \$4,652,000 of orchard fruits.

To endeavor to drive prosperous farmers and planters of Colorado, Kansas, and Texas back into sheep husbandry by means of a protective tariff would be like trying to divert express traffic between Boston and New York from the railroads to the ox teams of less than a century ago. We have in our office an autobiography of a New England farmer who used to carry express matter from Boston to New York and even to Philadelphia 70 years ago in an oxcart, and it is as interesting a memento of the past as the sheep husbandry of many sections of the United States which has been displaced by cereals, hoe crops, fruits, and other improved forms of agriculture. During the present year the marketing of sheep and lambs throughout the United States has reached such proportions that the term "liquidation of flocks" has been almost as common as "liquidation of stocks" in a financial panic, and the next annual

PARAGRAPHS 360-369—RAW WOOL.

enumeration will probably show a very great further diminution in the sheep and lambs of the United States.

LIQUIDATION OF FLOCKS.

It will probably be argued by and by that this was in anticipation of a Democratic administration. But if so, the sheep men who depleted their flocks must have been gifted with abnormal foresight, because the depletion occurred mainly before the Republican convention at Chicago and the subsequent Republican disintegration. The important and primary cause of the enormous sale of sheep and lambs was the high price of other kinds of meat. Owing to beef and pork scarcity during the past year, a meat famine was averted in many sections only by plenty of mutton. First, the supply of lambs was exhausted, and then even breeding ewes were sent to market. The only influence of the tariff upon wool in this state of affairs had been to distort sheep husbandry into strange and unprofitable channels.

While the duty upon wool has been of no benefit to our agricultural interests, it has been a severe tax upon domestic manufacturing industries. This is proven by the allowance of compensatory duties upon woollen goods in every tariff law for the past 45 years, since 1867. The duty upon wool is a tax upon the manufacturer, and is by him transferred to the ultimate consumer through the compensatory duties. If the consumer does not pay the tax upon wool, then there is no argument in favor of a compensatory duty to the manufacturer. The very existence of compensatory duties upon wool is an admission that the duty upon wool is a tax.

Previous to our Civil War no such feature as compensatory duties upon wool ever occurred to framers of our tariff laws. Under the Walker tariff of 1846 the duty upon goods was 30 per cent and the duty upon wool was also 30 per cent. Under the succeeding tariff of 1857 the duty upon both wool and goods was reduced to 24 per cent, and the woollen industry flourished greatly during that period except for the brief interval incident to the short-lived panic of 1857. In fact, the distinguished author of the Morrill tariff of 1861, with its higher range of duties, is on record as saying that the high tariff which has made his name famous was not particularly favored by woollen manufacturers. They seem to have been pretty well satisfied with existing conditions. The only argument in favor of compensatory duties is that the duty upon wool is a tax upon the manufacturer, and is by him transferred to the ultimate consumer through the compensatory duties. In so far as the cost of domestic wool falls below the foreign price plus the duty, the compensatory duty is, of course, unnecessary.

Under our recent tariff laws a duty of 33 cents per pound upon scoured wool has imposed a tax of nearly \$100,000,000 upon the American people, besides greatly hampering manufacturers in the selections best adapted for their varied products. We regret that some protectionists are still encouraging a standpat tariff policy upon the mistaken belief that tariff revision by the incoming Congress will be followed by the discomfiture and defeat which often overtakes the administration that participates in extra-session tariff legislation.

The present demand for tariff revision extends beyond party lines, and is embraced in the widespread feeling that great wealth has been acquired by unfair means, including the legislative intrigues of tariff beneficiaries no less than by railroads and trusts, rather than by honest service to mankind. We are here simply stating the existence of certain sentiments and not expressing an opinion. If the dry goods jobbers of the United States could be joined in the conference between wholesale clothiers and woollen manufacturers, and all could unite in favor of free wool and 50 per cent upon goods, a tariff bill upon that basis could be presented to Congress with such business support and popular favor that it would insure the safe pilotage of President Wilson's administration through the dangerous channels of tariff revision.

The present duties upon wool average 43.47 per cent, ranging from 25.76 per cent upon inferior carpet wool on the skin up to 64.35 per cent upon some selections of washed fleeces.

It has been urged in some quarters that the tariff upon wool is a revenue tariff, because imported wools contribute \$20,000,000, or thereabouts, per annum to the national income. The total duties upon wool in 1910 were \$21,128,728.74, and have recently run above that amount; but the duties upon wool would come very far from measuring up to the Democratic idea of a revenue tariff. In the first place, duties for revenue only should be imposed upon luxuries and not upon necessities; second, a tariff for revenue only must be so framed that all the tax which the people pay the Government shall receive; in the third place, the Democratic literature of the past is replete with declarations that a tariff for revenue with incidental protec-

PARAGRAPHS 360-369—RAW WOOL.

tion, is one of the most costly methods of raising revenue, for while revenue to the State accrues only from the tax levied on what is imported, another tax arising from an increase of price is also paid by the nation upon all domestic products that are sold and consumed in competition with the foreign article. Hence the old-fashioned Democrat will exclaim to the "tariff for revenue, with incidental protection," in a paraphrase of Scripture, "Protective tariffs we know and revenue tariffs we know, but who are ye?"

The customs duty upon any commodity must be either solely a revenue duty or a protective duty. If a revenue duty, the entire tax should be turned into the National Treasury, because the article taxed should be one which can not be produced in this country. If a protective duty, the results should be shown in a development and growth of the industry which is protected. There has been no such growth of sheep husbandry in the United States. The duties on wool have always been indefensible, except as a political expedient or log-rolling device to secure votes for a general tariff bill.

THE ONLY PARALLEL.

The only parallel to the present obstruction of American industry by the wool tariff is the Russian example of hampering the cotton industry by duties upon raw cotton. For the purpose of stimulating cotton growing in its dominions the Russian Government burdens its cotton manufacturers with a tax on all imported raw cotton of 4 rubles per pound, or \$2.06 per 36.1 pounds, equivalent to about \$28.75 for a 500-pound bale. For the purpose of encouraging cotton production in Asiatic Russia a great hardship is imposed upon the Russian spinner. Even then he can sometimes buy American cotton to greater advantage than he can Russian cotton, and he is not partial to the latter, because it takes about a month to transport it, the freight charges are heavy, the cotton is very dirty, and the quality of the staple is undergoing a constant deterioration, because new seed is not supplied. The ocean freight from New York to Russia is only about 50 cents per hundred pounds, while the freight from the Russian growing sections to Moscow is \$1.10 for 36 pounds. The Russian duty upon raw cotton and the American duty upon raw wool are the very few antique instances remaining where modern nations tax raw materials.

WOOL SHRINKAGES.

The discussions of the past three years have made everybody familiar with the fact that what is commercially known as wool is not really wool suited for manufacturing purposes, but that when this wool is ready for manufacturing the amount of grease and dirt which has been washed out varies all the way from 20 to 80 per cent, more or less; hence, the duty being 11 cents per pound upon unwashed wool, the real tax upon the scoured wool which shrinks 80 per cent is 55 cents per pound, while the real tax upon the wool shrinking 20 per cent is less than 14 cents per pound. Hence, 20 per cent ad valorem would be an actual increase upon the lightest shrinkage wools. It should be borne in mind that many manufacturers prefer to buy their wools, both foreign and domestic, in the grease and do the scouring themselves. Therefore, 20 per cent upon grease wool would mean the payment of a duty upon a large amount of grease and dirt.

The carded woolen manufacturers, who have been such intelligent advocates of ad valorem duties upon wool, desire the very heavy shrinkage foreign wools of the world, and if these wools are placed at their disposal in the grease they would have to pay 20 per cent upon 80 per cent of grease and dirt in order to get their scoured foreign wool. Suppose the wool cost 12 cents in the grease and the phenomenal tax of 20 per cent ad valorem to be but 2.2 cents, but as it would be necessary to scour 5 pounds of commercial wool to get 1 pound of scoured wool, the actual tax would have been 11 cents a pound, to be offset by a sufficient compensatory duty, or tax, upon the consumer. I need not present any figures to repeat the facts with which you are all familiar respecting the great growth of manufactures in the United States, the enormous development of textile manufacturing, and the change in the character of our exports by the growing trade in American manufactures throughout the world. Where 23,000,000 American people received much of their household textiles and apparel from abroad in 1850, 92,000,000 American people secure nearly all of their household textiles and apparel from domestic manufacturers in 1910. As the Dutch captured Holland, so the Americans have captured America, so far as textiles are concerned.

PARAGRAPHS 360-369—RAW WOOL.

FREE WOOL AND PROSPERITY.

With free wool, and a duty of 50 per cent upon goods, the textile industries of the United States, with a cultivation of close economy and effectiveness, would extend to proportions which would be as beneficial to our agricultural as to our manufacturing communities. That 50 per cent would be necessary upon goods with free wool is proven by the moribund condition of the Canadian woolen industry, where 35 per cent maximum is reduced to 30 per cent actual by the 5 per cent preferential in favor of the mother country. The prosperous condition of our agricultural industries during the past decade has been largely due to our growth in manufactures. Sheep husbandry has almost entirely disappeared in Kansas, and yet that State is so prosperous that the demand for farm mortgages so far exceeds the supply that Kansas mortgages are actually hard to get. It is a mistake to suppose that years of bountiful crops have been invariably periods of prosperity. Three or four of the great panics of the United States have occurred in years of bountiful crops, because prosperous manufactures are as important as prosperous agriculture. Good crop years are frequently panic years, but periods of successful manufacturing are always free from financial crises and business depression.

It is hardly to be believed that the incoming Congress will propose any lower duty upon goods than those of the Wilson Act, which were 50 per cent upon goods costing above 50 cents per pound, and 40 per cent upon goods costing less than 50 cents. This will be equivalent to cutting the duties upon goods in halves, as the present average is 97 per cent. With free wool, I have no hesitation in predicting an increase in the number of sheep in the United States, and that the successful achievement of such a tariff upon manufactures of wool, with equivalent duties upon cottons, will weld New England and the South into a social, political, and industrial alliance such as existed in the founding of this Nation.

STATEMENT BY MR. RAINEY.

Mr. RAINEY. I ask permission to print in the record, after Mr. Bennett's testimony, a table showing the number of sheep and lambs by States in 1900 and in 1910, as shown by census reports, and also a table showing the number of sheep of shearable age in the United States by States in the decades from 1840 to 1910.

The CHAIRMAN. The tables referred to will be printed in the record, as Mr. Rainey requests.

The tables referred to are as follows:

Number of sheep of shearable age in the United States, by States and by decades, from 1840 to 1910.

[Census returns. In 1850 and 1900 lambs were specifically excluded; at other censuses probably a few lambs were included in the returns. The figures for 1880 and 1890 include the estimated number of range sheep.]

[The figures are to the nearest thousand.]

1 Estimate based on per cent of decrease in numbers reported

STATEMENT BY MR. HARRISON.

Mr. HARRISON. Before this subject is passed, I would like to have it appear in the record in connection with revenues from raw wool, that I investigated this subject about a year and a half ago, and my recollection is that for the past decade, exclusive of the year 1910, \$13,000,000 is about an average revenue from raw wool. As to 1910 we collected something more than \$21,000,000, but my information is that inasmuch as the Payne tariff law went into effect in August, 1909, the returns for the year 1910 are given as of June 30, 1910, and that woolen manufacturers in this country in some volume refrained from importing their wool the year before, in the hope that there might be a reduction of the duty under the Payne law, and when they found that was not the case they had to bring in more wool than usual in the following fiscal year under the old rate of duty.

Mr. PAYNE. That all goes to discountenance the statement of the previous witness as to \$21,000,000.

PARAGRAPHS 360-369—RAW WOOL.

FURTHER TESTIMONY OF MR. FRANK P. BENNETT, EDITOR
OF THE WOOL AND COTTON REPORTER, BOSTON, MASS.

Mr. BENNETT. Mr. Chairman, Mr. Fordney asked me a question yesterday and I want to modify my answer. I think his question was something like this: Would 20 per cent duty on wool divert sheep husbandry into less unprofitable channels than 29 per cent? The question came to me suddenly and I gave a somewhat hasty answer in the affirmative. As I have thought it over, I think my answer is in the negative, absolutely. It is not the amount of the duty on wool, it is the influence of the duty, deceiving the farmer and misleading him into unprofitable work and an unprofitable expenditure of his energies by extending the hand of the Government over an industry which ought not to be protected. I remember when I was a boy that the Army, or the Board of Agriculture, introduced a lot of camels down in the Southwest for the purpose of breeding them and using them for transportation purposes down there. I think some of their descendants are wandering around there yet. It was a most unprofitable expenditure of energy.

In the same way I remember that the Department of Agriculture was perfectly enthusiastic and seemed to be devoting all its energies to the promotion of tea gardens in the United States and the culture of tea. That was diverting energy into an unprofitable channel. That is what the duty on wool is. Twenty per cent would be as bad as 29 per cent.

There is one thing more that I want to say, Mr. Chairman. I do not know what impression Mr. John P. Wood left on your minds yesterday; but if he left on your minds the impression that the manufacturers did not believe that this committee is almost painfully trying to do right and that the manufacturers want to cooperate with you just as far as they possibly can, having in mind some differences of opinion, they left an entirely wrong impression on your mind. I have been in conference with manufacturers, large and small, in the New England and other States. In New England recently five States went Democratic. I have been in conference with them and I know that they recognize this amount of mutual interest between this committee and themselves, namely, that neither you nor they want to go through this thing again two years hence. You do not want to be dragged into this again two years hence. They want something that will stand and you want something that will stand, and the most that you care about is to get something permanent; something which is right and permanent, and that is the most that they care about. There is certainly that ground of mutual interest and I stand here to say, Mr. Chairman, that if Mr. John P. Wood left any contrary impression on your mind, he left an entirely wrong impression. The manufacturers, large and small, desire to cooperate with you on a basis of free wool and 50 per cent on the goods.

I remember that quite a number here considered it quite funny yesterday when I said that the Wilson law was followed by great prosperity.

Mr. FORDNEY. They just laughed; that is all.

PARAGRAPHS 360-369—RAW WOOL.

Mr. BENNETT. Yes; they laughed. They thought it was funny. However, if you will just have the files of the newspapers for September, 1895, brought to the committee you will be convinced of the correctness of that. Last night while the manufacturers were standing around in groups at the hotels and elsewhere there was occasionally a man who would refer to the failures following the Wilson bill. They could not name one; they could not name a single one. One fellow dragged up the Thomas Dolan case at that time. Dolan went out of the textile-manufacturing industry and became one of the multimillionaires of the United States in the street-railway business.

Now, Mr. Chairman, I say that free wool and 50 per cent will cause the textile industries to adjust themselves permanently or for a series of years—10 years under a tariff—and it will make them satisfied, and 2 years hence you would not have this all to go over again. They can get along with it. The textile industry, more than any other industry, adapts itself to protection. I can remember within my own knowledge when such a thing as worsted fabrics for men's wear was not known. Worsted first meant these zephyrs and these shawls for women, and so on; then it meant dress goods. Sixteen or seventeen years ago they used to say that they could not make certain kinds of cotton fabrics in the United States because we did not have the climate. The climate is artificial. Humidifiers and all those things have come in.

Mr. FORDNEY. Mr. Chairman, is this not rather an extended explanation or answer to my question?

Mr. BENNETT. I am talking about something besides your question. I got through with your question some time ago.

Mr. FORDNEY. You are not through with it yet. I want to ask the chairman whether the gentleman is going to be allowed time to make a speech?

The CHAIRMAN. We are very nearly through with our witnesses this morning, and I was allowing Mr. Bennett some latitude for that reason.

Mr. BENNETT. I do not desire to make a speech. There is nothing further from my desire than to make a speech, but I do want to impress upon the minds of this committee my belief—and my belief is shared by the bulk of the manufacturers—that there is a ground of cooperation between the manufacturers and this committee. I desire to do it and I do it with a great deal of seriousness, because, traveling through the different parts of the United States—in the Southwest, in Utah, in South Carolina, and the Northwest—I find an astonishing degree of misunderstanding.

Mr. HULL. Do you know what the attitude of the manufacturers is relative to the position that you have just stated on this proposition?

Mr. BENNETT. They are all in favor of it.

Mr. HULL. I have not been able to see the brief filed by Mr. Wood on yesterday, because we have not received a copy—

Mr. BENNETT (interrupting). You would not find in any brief filed by him what I am saying. They let the duty on wool alone.

The CHAIRMAN. The truth about the business is that they must apparently stand up for the woolgrower?

Mr. BENNETT. That is their tradition.

PARAGRAPHS 360-369—RAW WOOL.

Mr. HARRISON. Right on that point. I asked you a question yesterday which I did not care to pursue because your time was so limited. I would like to take advantage of this opportunity to repeat it and to carry it on a little bit further. I asked you whether the compensatory duties compensated the manufacturer.

Mr. BENNETT. Yes, sir.

Mr. HARRISON. You replied that they got a great deal more than the compensatory duty because the duty is a great deal higher than it should be.

Mr. BENNETT. Yes, sir.

Mr. HARRISON. That is not all of the question. We recognize that the rates upon the finished product are prohibitory; that they give the whole American market to the manufacturer.

My question really was this: Can the manufacturer collect out of the public the amount of the tax which he has to pay upon his raw wool? For example, suppose the duty upon raw wool instead of being 45 per cent were 100 per cent. The manufacturer probably could not collect that 100 per cent out of the public, and he would probably have to resort to an extended use of cotton substitutes or shoddies. He would not be able to get any wool from the foreign grower. So that there is a question whether the manufacturer has gained by the agreement or alliance between the woolgrowers and the woolen manufacturers. I think it is a serious question whether the manufacturers, by reason of their prohibitory rates, have been able to collect out of the public the tax they had to pay for their raw wool. The Tariff Board says, for example, that on the cheaper fabrics the compensatory duties in some cases equaled 200 per cent, and that the prices charged by the manufacturers instead of being as high as that, are only 60 or 80 per cent more than the foreign price on similar fabrics. If my reasoning is correct, instead of the compensatory duties compensating, they are more of a hardship upon the manufacturer because he can not make use of them, and consequently a bill such as we proposed and put through the last House, which lowered the duties upon the manufactured product to the competitive point, would be really of more advantage to the manufacturer by giving him his raw material at a cheaper rate, and consequently putting him in a better position than he is under the apparently compensatory duties. If you follow my reasoning—

Mr. BENNETT (interrupting). I follow your reasoning, and that is true, but here is the trouble: The duty on wool shuts out a great deal of wool that the manufacturer ought to have; it limits his selections.

Mr. HARRISON. Do you think the manufacturer has got his share of this bargain made in 1867 and which has been in force ever since?

Mr. BENNETT. I haven't any doubt about it.

Mr. HARRISON. You think the manufacturer has collected out of the public prices which have compensated him for the tax he has had to pay upon raw wool?

Mr. BENNETT. He has gone on and done business. The domestic competition has a great deal of effect there.

PARAGRAPHS 360-369—RAW WOOL.

Mr. HARRISON. But do you not believe he would be in a better position with a competitive rate upon his product, if he was able to buy his raw wool in the world's markets?

Mr. BENNETT. Absolutely. There is no question about it.

Mr. HARRISON. And the net result of a revision downward, if it preserves the proper balance on the raw material and the finished products, will be a benefit to the manufacturer even though he may not think so?

Mr. BENNETT. But 20 per cent on wool and 20 per cent on goods is not a proper balance. I was amazed at the statement of Mr. Goldman, of Cohen & Goldman, who talked in favor of 20 per cent on the wool and 40 per cent on the goods. It was very ill considered. I have not found a man who agrees with him—not one single man who agreed with him. It is very ill considered. It would cause the tariff law to be all ripped open again two years hence. If you want to do something permanent do not listen to it for a moment. With 20 per cent on wool and 40 per cent on goods the balance would be all wrong.

Mr. KITCHIN. Before Mr. Fordney gets to you, I want to ask one or two questions.

Mr. BENNETT. I am perfectly willing to place myself in his hands.

Mr. FORDNEY. I am not at all dangerous.

Mr. KITCHIN. Do you and the manufacturers of woolen goods regard free wool and 50 per cent on the finished product as the proper proportion?

Mr. BENNETT. Yes, sir.

Mr. KITCHIN. Will that furnish them as much protection as the present act furnishes them?

Mr. BENNETT. I do not think it will.

Mr. KITCHIN. I mean as much real protection.

Mr. BENNETT. It would not furnish them anywhere nearly as much protection as the present bill does.

Mr. KITCHIN. Would it not furnish as much protection as they are now utilizing?

Mr. BENNETT. It will afford them protection enough to continue in business and to grow. They would not be a bit injured by it.

Mr. KITCHIN. Of course, I understand that some of these tariff duties in the statute amount to 100, 150, and 200 per cent, but they do not utilize that much. I believe the Tariff Board found that they were utilizing about 65 or 75 per cent on a great many kinds of cloth, instead of 100 or 125.

Mr. BENNETT. I do not want to worry this committee, but I would like to talk a moment or two on that subject.

Mr. KITCHIN. Your idea is that free wool and 50 per cent would be all the protection generally that the manufacturers would want.

Mr. BENNETT. Yes, sir; absolutely.

Mr. KITCHIN. Now, another thing. Does the farmer or grower of wool sell directly to the manufacturer or does he sell his wool to the packers?

Mr. BENNETT. They sell largely to the wool dealers and the wool merchants.

PARAGRAPHS 360-369—RAW WOOL.

Mr. KITCHIN. I do not know whether you call them packers or storers.

Mr. BENNETT. They sell largely to those; yes, sir.

Mr. KITCHIN. In your opinion, does the farmer or grower of wool get the benefit of this tariff or do these packers or wool storers get it?

Mr. BENNETT. Nobody gets the benefit of it. There isn't any benefit to it.

Mr. KITCHIN. Take it over a period of three or four years, and you will find that the farmer gets a certain amount, say, 12 or 15 cents a pound. It is packed away or stored and finally it goes up—after it is out of his hands. I have noticed that several times. Who gets the benefit of that?

Mr. BENNETT. When it goes away up the speculators get the benefit of it, but when it goes away down they lose it. In a series of years it is evened up.

Mr. KITCHIN. The real benefit of a tariff on the raw product would go to the speculators and wool packers instead of to the woolgrowers.

Mr. BENNETT. Nobody gets any benefit from it, Mr. Kitchin, absolutely none. It is the most absurd thing that I have ever seen on the statute books.

Mr. LONGWORTH. If wool was put on the free list, how much do you think the price of raw wool would go down?

Mr. BENNETT. I do not think it would go down at all. All the manufacturers and pretty much all the growers agree with me about that. It would not go down. We would have a freer and more regular market and we would have a better selection.

Mr. LONGWORTH. Do you really think that free wool would reduce the price of wool?

Mr. BENNETT. I do; yes, sir.

Mr. LONGWORTH. Are you gentlemen in favor of free raw material?

Mr. BENNETT. I would not know how to answer that question. It depends upon what you mean by free raw material. I would say that in a general way, yes, sir.

Mr. LONGWORTH. I am speaking of raw materials generally used by the manufacturers.

Mr. BENNETT. I do not want to argue, but there is another question that comes in there. If by raw materials you mean something that we can exhaust, the supply of iron ore or lumber or coal, or something of that kind?

Mr. LONGWORTH. I am not speaking of lumber or iron or coal. I regard those as independent articles by themselves.

Mr. BENNETT. Yes, sir.

Mr. LONGWORTH. But free wool?

Mr. BENNETT. I am in favor of free cotton, free flax, free raw silk. They are all free now, every one of them. Wool is the only one of those fibers that has a duty on it. Cotton is free, flax is free, jute is free, and silk is free.

Mr. LONGWORTH. Are you in favor of free sugar?

Mr. BENNETT. I do not know much about sugar. I fancy that what we call raw sugar represents a considerable amount of labor and is to a certain extent a finished product.

Mr. LONGWORTH. You realize of course that sugar and wool are two of the largest revenue producers there are in the tariff.

PARAGRAPHS 360-369—RAW WOOL.

Mr. BENNETT. I imagine if you get the income tax through—and you are going to get it through without question—that you will have enough revenue in that way and that it will probably help us to get the tariff in the right shape.

Mr. LONGWORTH. You are in favor of free sugar, free wool, free raw material and the income tax?

Mr. BENNETT. I do not know about sugar. I do not know enough about it. I fancy that it represents labor; that it can be controlled by labor more than wool can. I do not know about it and I can not answer your question.

Mr. LONGWORTH. Would you see any logic in keeping a duty on wool if they took the duty off of sugar?

Mr. BENNETT. Absolutely no. If they take it off sugar, I say to take it off wool. But reasoning the other way, whether you should take it off sugar if you do take it off wool, I do not know.

Mr. HILL. Do you ask for a single rate of duty on all grades of woolen cloth?

Mr. BENNETT. Absolutely; yes, sir.

Mr. HILL. In the Wilson bill they had a distinction——

Mr. BENNETT. (interrupting). That did not amount to anything. It was about 50 cents a pound and 40 cents on below 50 cents a pound. I do not think that distinction was of any consequence.

Mr. HILL. You realize that 50 per cent duty on a cheap piece of low-grade cloth is a great deal more in the difference in the cost of production and the conversion cost than in a high-grade piece of cloth?

Mr. BENNETT. I do not know about that. I think I could call on some of the gentlemen here who would tell you that the percentage of labor in the cheap clothes is higher than in the high-priced clothes.

Mr. HILL. Would you apply the same principle?

Mr. BENNETT. To cotton? No; I do not think so.

Mr. HILL. Why not?

Mr. BENNETT. I would have to take a little time to answer that question.

Mr. HILL. Is there not far more labor in sorting, coloring, dyeing, weaving, and in designs and patterns in ordinary woolen cloth for daily use than there is in cotton?

Mr. BENNETT. I think I would say in a general way that the labor cost on the very cheap fabric—that the percentage of labor cost—is greater than on the high-priced fabric in woolens and worsteds. It is the high-priced dyestuffs and the high-priced machinery that makes the high prices in woolens and worsteds. I think I would say—and there is no manufacturer here that would not agree with me—that the percentage of labor cost in the cheaper fabric is greater than in the higher-priced fabric.

Mr. HILL. You would not say that in regard to blankets, would you?

Mr. BENNETT. No, sir.

Mr. HILL. (continuing). Which are practically all wool, and on which there is very little labor.

Mr. BENNETT. No, sir; I do not think so.

Mr. KITCHIN. With regard to cotton, the proportion, of course, would not be as great. In wool you can make the cheap piece of

PARAGRAPHS 360-369—RAW WOOL.

fabric out of a very cheap grade of wool; but the cotton all sell for practically the same, and you make sometimes the cheapest product from the very best cotton—short staple cotton, I mean.

Mr. BENNETT. Yes, sir.

Mr. KITCHIN. You make the finest goods out of 12-cent cotton and the commonest goods out of that cotton, while in wool the cheap products are made out of the very lowest-priced wool. Therefore, your proportion of labor cost would be quite different.

Mr. BENNETT. That is largely true. That will be denied. Where the cotton has been quoted at 12 cents they have been paying 18 cents for it—

Mr. KITCHIN (interposing). That is on long-staple cotton.

Mr. BENNETT. Not especially long; $1\frac{1}{8}$ -inch and $1\frac{1}{16}$ -inch.

Mr. KITCHIN. A very small proportion of long-staple cotton is used anyway.

Mr. LONGWORTH. If your proposition is adopted of free wool and 50 per cent for the manufacturer, how much do you think the price of cloth to the ultimate consumer will be decreased?

Mr. BENNETT. I think it will be decreased somewhat. You understand that this \$1.45, or what not, that they have been giving as the cost of wool in a suit of clothes under the tariff, and all that—you understand that is multiplied all the way through. If it is \$1.45 for the wool in the grease, it takes a great deal more when you get through. The other expenses are multiplied in proportion, and it would cost more in the fabric. But the great objection to the duty on wool is that it hampers selection.

Mr. LONGWORTH. You are speaking, now, from the manufacturers' standpoint, and I am speaking from the consumer's standpoint.

Mr. BENNETT. From the consumer's standpoint?

Mr. LONGWORTH. Yes.

Mr. BENNETT. Well, it would be appreciable.

Mr. LONGWORTH. How appreciable?

Mr. BENNETT. I am not prepared to say.

Mr. LONGWORTH. Let us take a concrete example. Let us take a \$7.50 suit of clothes that one of the witnesses had on yesterday. In your proposition how much do you think the retail price of that suit would be reduced to the consumer?

Mr. BENNETT. I do not know, but I do not think it is important.

Mr. LONGWORTH. You are only considering the interests of the manufacturers and not of the consumers.

Mr. BENNETT. No; I am considering the consumers, which are the people of the great American public.

Mr. LONGWORTH. Let us take this concrete example: Would that suit of clothes sell for \$5 instead of \$7.50?

Mr. BENNETT. I am sure I do not know.

Mr. LONGWORTH. Do you think it would?

Mr. BENNETT. I should think so; yes, sir. They are working down all the time. They are working the prices down all the time.

Mr. LONGWORTH. Do you think that particular suit of clothes under your proposition would sell for \$5?

Mr. BENNETT. I should not be surprised if it did.

Mr. LONGWORTH. Do you think it would sell for \$4?

PARAGRAPHS 360-369—RAW WOOL.

Mr. BENNETT. I should not think so.

Mr. LONGWORTH. Would it sell for \$4.50?

Mr. BENNETT. No; I should not think so.

Mr. LONGWORTH. For \$5?

Mr. BENNETT. I should think so. I do not know of a \$5 suit manufactured at the present time. There is a \$6.75 suit which is a regular standard, and there are \$6 suits, but I would not be surprised if they should get out a \$5 suit.

Mr. LONGWORTH. Let us take the \$6 suit. What would that sell for under your proposition?

Mr. BENNETT. The \$6 suit?

Mr. LONGWORTH. Yes.

Mr. BENNETT. I do not know. I am not considering it from your aspect at all.

Mr. LONGWORTH. I know; but I want to consider it from the consumers' aspect.

Mr. BENNETT. I consider the consumer is the great American public and he is interested in prosperous industries. He is not getting the greatest possible results from the least expenditure of energy and he does not want the energies of the American people diverted into unprofitable channels or into artificial channels. He wants to make the goods in this country and he wants to make them with the least expenditure of money and of energy. That is my argument.

Mr. LONGWORTH. Then he is not interested in the price?

Mr. BENNETT. Yes; he is interested in the price, too.

Mr. LONGWORTH. But only incidentally. His main desire is to see the industry conducted profitably.

Mr. BENNETT. Yes, sir; to see it prosperous.

Mr. LONGWORTH. And he does not care what he pays for a suit of clothes.

Mr. BENNETT. Yes; he does.

Mr. LONGWORTH. How will he benefit under this \$6 suit of clothes? How much?

Mr. BENNETT. I do not think that is where the real benefit is.

Mr. LONGWORTH. But you say there is bound to be a benefit.

Mr. BENNETT. I do not think that is where the great benefit is.

Mr. LONGWORTH. Then you think, under your proposition that the extent of the reduction in the retail price is a secondary consideration?

Mr. BENNETT. It is one consideration. I do not think it is the whole consideration.

Mr. LONGWORTH. But it is not the primary consideration.

Mr. BENNETT. No; it is not the primary consideration.

Mr. LONGWORTH. If it was the primary consideration, then you would have definite views on the price.

Mr. BENNETT. Yes, sir.

Mr. LONGWORTH. You have no definite views on the benefit from the reduction of the retail price?

Mr. BENNETT. I have definite views in a large way in regard to the whole business, but I have not any specific definite views in regard to a particular suit of clothes.

Mr. LONGWORTH. You advocated a certain proposition and I wanted to take it up from the retail price standpoint.

PARAGRAPHS 360-369—RAW WOOL.

Mr. BENNETT. Yes.

Mr. LONGWORTH. You reduced the duty on wool 100 per cent.

Mr. BENNETT. Yes.

Mr. LONGWORTH. And you say that in your opinion that will not reduce the price of wool.

Mr. BENNETT. I do not think it will, absolutely.

Mr. LONGWORTH. You know it did.

Mr. BENNETT. No; I did not know anything of the kind.

Mr. LONGWORTH. Do you mean to say that the price of American raw wool did not decrease in price?

Mr. BENNETT. In a series of years?

Mr. LONGWORTH. During the time of the Wilson bill.

Mr. BENNETT. Oh, we have had ups and downs in the market all the time. If there is any little flurry—you know very well that when you think the stock of a railroad is going to soar up, just then it goes down—

Mr. LONGWORTH (interposing). The tariff has no effect on the price, then?

Mr. BENNETT. The tariff has no effect on the price?

Mr. LONGWORTH. Yes.

Mr. BENNETT. Over a long series of years I do not think it has.

Mr. LONGWORTH. Well, it did have, certainly, according to the statistics.

Mr. BENNETT. I do not think it has.

Mr. LONGWORTH. In 1895 and 1896 the wool was a great deal below what it has been.

Mr. BENNETT. Everything was less along that time. The panic of 1893 was followed by another panic of 1895, and another panic of 1896. Right along there we had a period of industrial depression.

Mr. LONGWORTH. You just said that there was great prosperity.

Mr. BENNETT. Yes, sir; there was, in between. I have tried to make myself plain. In between, in September, 1895, we were on the high road to prosperity. In November, 1895, along came the Venezuela message; we all got frightened and everything tumbled down a little.

Mr. LONGWORTH. It was the Venezuela message that depressed wool and not the reduction of the tariff?

Mr. BENNETT. Well, I suppose that participated with everything else.

Mr. LONGWORTH. We have gotten to this point, that your proposition was that a reduction would not reduce the price of wool.

Mr. BENNETT. In a series of years, no. At the moment, as I illustrated by the railroad stock a moment ago, the wise, judicious, beneficial speculators may get wool up a little or get it down a little. They take advantage of an event to do that.

Mr. LONGWORTH. Let us confine ourselves just to this line. We have got to the point where wool is put on the free list and no reduction in price takes place. Then the manufacturers—

Mr. BENNETT (interrupting). I do not consent to that just as you put it.

Mr. LONGWORTH. You have said it repeatedly.

Mr. BENNETT. All right.

Mr. LONGWORTH. What did you say?

PARAGRAPHS 360-369—RAW WOOL.

Mr. BENNETT. I tried to make myself plain. I said in a series of years under free wool that wool would be no lower.

Mr. LONGWORTH. Well, I am speaking of this one benefit.

Mr. BENNETT. That is what I mean. I am trying to make myself plain.

Mr. LONGWORTH. And I am trying to understand you. I am speaking simply about putting wool on the free list. Will or will not that reduce the price of raw wool in this country?

Mr. BENNETT. In a period. In a reasonable period it will not.

Mr. LONGWORTH. Well, in a year?

Mr. BENNETT. I do not know whether it will in a year or not. Those things adjust themselves more quickly some times than they do at other times.

Mr. LONGWORTH. In a period of two years, what do you think the effect on the price of raw wool would be by putting it on the free list?

Mr. BENNETT. In a period of 10 years it would not make a particle of difference.

Mr. LONGWORTH. In two years?

Mr. BENNETT. Well, that would depend on a great many other things. I could not say.

Mr. LONGWORTH. Do you think it would be reduced?

Mr. BENNETT. In a period of two years?

Mr. LONGWORTH. Yes.

Mr. BENNETT. I would not think so.

Mr. LONGWORTH. You do not think so?

Mr. BENNETT. No; I would not think so.

Mr. LONGWORTH. The manufacturer would be precisely in the same position as he is to-day?

Mr. BENNETT. No; he would not at all, because his selection is thereby hampered.

Mr. LONGWORTH. We would pay the same price?

Mr. BENNETT. He would pay the same price?

Mr. LONGWORTH. Yes.

Mr. BENNETT. He would pay the same average price for all kinds he bought.

Mr. LONGWORTH. He would pay the same or a greater price if it were not reduced?

Mr. BENNETT. Mr. Chairman, I want to answer these questions. I am trying to be candid, and I do not want to appear to be fencing at all. I want to be candid, and I want to appear to be so.

Mr. LONGWORTH. If anybody in this committee can understand what your proposition is, I would be glad to know it.

Mr. BENNETT. If I am not making myself plain, that is not the fault of my intention.

Mr. LONGWORTH. Well, am I or am I not right in assuming your position to be this, that the reduction of the tariff on wool, or the placing of wool on the free list, in a two-year period, will have no effect on the price?

Mr. BENNETT. I would prefer to say in a 10-year period.

Mr. LONGWORTH. I am asking about 2 years, because we are not assuming that free wool is going to last for 10 years.

Mr. BENNETT. My answer would be, for the most part, in the affirmative, but that would depend on a great many things.

PARAGRAPHS 360-369—RAW WOOL.

Mr. LONGWORTH. Can you answer yes or no whether the price of wool will be reduced—yes or no?

Mr. BENNETT. During a period of two years?

Mr. LONGWORTH. Yes.

Mr. BENNETT. Because of that duty? It might be reduced for other reasons.

Mr. LONGWORTH. I am talking about the effect of putting wool on the free list. Would or would not that, in a period of two years, reduce the price of wool? Can you not answer that yes or no?

Mr. BENNETT. That particular influence would not.

Mr. LONGWORTH. It would not?

Mr. BENNETT. But it might be reduced from other influences.

Mr. LONGWORTH. That would not do it?

Mr. BENNETT. If general business was depressed, the price of wool might go down at the same time, but I think we get near enough together when I say absolutely that in a period of 10 years wool would not be lowered by being put on the free list.

Mr. LONGWORTH. Would it in a period of two years?

Mr. BENNETT. In two years? It might or might not.

Mr. LONGWORTH. Well, if it does not—

Mr. BENNETT. What?

Mr. LONGWORTH. If the price of wool is not reduced—

Mr. BENNETT. Yes.

Mr. LONGWORTH. Then, the manufacturer is in the same position, so far as the cost of his material is concerned, as he is to-day?

Mr. BENNETT. Have I not answered that two or three times, Mr. Chairman? Have I not said he is obstructed in his selection?

Mr. LONGWORTH. I am talking about his price. You can answer that or not.

Mr. BENNETT. I am answering it.

Mr. LONGWORTH. You are not answering it.

Mr. BENNETT. Yes, I am, too.

Mr. LONGWORTH. Well, answer it.

Mr. BENNETT. I have answered it. I say that he is obstructed in his selection.

Mr. LONGWORTH. I am not talking about his selection; I am talking about his price. Now, answer that or not.

Mr. BENNETT. If you know anything about business at all, you know that the price is affected by the selection the manufacturer desires.

Mr. LONGWORTH. Would his price be reduced or not?

Mr. BENNETT. Would his price be reduced?

Mr. LONGWORTH. Yes.

Mr. BENNETT. Well, I can not give you a general understanding of the mercantile situation in a few minutes. I could give you some facts.

Mr. LONGWORTH. I am not asking for information on the general mercantile situation. I am asking your information on a subject upon which you assume to have knowledge.

Mr. BENNETT. Yes.

Mr. LONGWORTH. And it is a perfectly simple question, and you can answer it, yes or no.

PARAGRAPHS 360-369—RAW WOOL.

Mr. BENNETT. You have to assume knowledge in order to ask me a question, don't you?

Mr. LONGWORTH. I assume enough knowledge, at least, to ask you that question.

Mr. BENNETT. Yes.

Mr. LONGWORTH. If you have not the knowledge to answer it, you may refuse to do so.

Mr. BENNETT. I do not refuse.

Mr. LONGWORTH. Then answer it.

Mr. BENNETT. I would be glad to give you all the information your experience—

Mr. LONGWORTH. I am asking you a simple question now.

Mr. BENNETT. Gives you ability and intelligence to comprehend.

Mr. LONGWORTH. Can you answer that yes or no?

Mr. BENNETT. I have answered that question.

Mr. LONGWORTH. You have not answered it.

Mr. BENNETT. But I can not furnish you business experience, my friend.

Mr. LONGWORTH. No; you can not furnish me any experience that I covet.

Mr. BENNETT. Any more than I could furnish you experience to dance a cotillion, because I do not know anything about it.

Mr. LONGWORTH. I think you probably know as much about that as you do about the question I am asking you.

Mr. BENNETT. That is your opinion.

Mr. LONGWORTH. Or else you would not refuse to answer it.

Mr. BENNETT. I am glad to answer you candidly.

Mr. LONGWORTH. You have not answered the question.

Mr. BENNETT. I think the gentleman is trying to grill the witness.

Mr. LONGWORTH. No; I am trying to get facts. I am asking you about the price of wool.

Mr. BENNETT. Yes.

Mr. LONGWORTH. I want to know whether your proposition is going to reduce it?

Mr. BENNETT. No.

Mr. LONGWORTH. If it does not reduce the price of raw wool, and the manufacturer pays the same for his raw material, where is the reduction going to come in?

Mr. BENNETT. If I have said it once I have said it ten times, that it is going to afford him the necessary selection of wool.

Mr. LONGWORTH. But I am speaking of the cost to the retail buyer.

Mr. BENNETT. Yes.

Mr. LONGWORTH. If he does not get a benefit on the price of raw wool, where does he get the benefit?

Mr. BENNETT. Well, I will see if I can make a different answer from what I have made eight times already.

Mr. LONGWORTH. You have not answered it yet.

Mr. BENNETT. Where is who going to get the benefit—the consumer?

Mr. LONGWORTH. Yes.

Mr. BENNETT. It is going to reduce the cost to him, sir. I said that before.

PARAGRAPHS 360-369—RAW WOOL.

Mr. LONGWORTH. I know you have; but you have not said where.

Mr. BENNETT. Where?

Mr. LONGWORTH. Yes.

Mr. BENNETT. Everywhere, in the cost of manufacture—why, I know a lot of men who run a cotton mill, who say——

Mr. LONGWORTH. I am talking about wool.

Mr. BENNETT. Well, a woolen mill, who say that the whole story is this: Improve the product and cut the price. That is the whole theory of woolen manufacture—improve the product and cut the price, and that is in a great measure the philosophy of woolen manufacturing and worsted manufacturing and every other textile manufacturing.

Mr. LONGWORTH. Under a 50 per cent duty, the manufacturer is going to cut the price?

Mr. BENNETT. Of course. He is doing it all the time.

Mr. LONGWORTH. He is doing it now, is he?

Mr. BENNETT. He is all the time reducing the cost of manufacture and reducing the cost of clothing, and reducing the cost of every textile fabric. You know that, and everybody knows that.

Mr. LONGWORTH. I am asking you, under your theory, how much the manufacturer is going to cut it?

Mr. BENNETT. That is one step in the right direction.

Mr. LONGWORTH. Well, I am unable to get the information I want.

The CHAIRMAN. Gentlemen, the chair would like to proceed with the other witnesses.

Mr. HILL. Without expressing any opinion as to the duty on wool, would not the effect of free wool and the opening of this market and the injecting of the competition of 90,000,000 American people into the European market raise the price over there, and consequently tend toward an equalization?

Mr. BENNETT. Yes, sir; absolutely.

Mr. FORDNEY. Mr. Bennett, just a few words. You came before the committee this morning to answer what you say was a question put my me, as to whether or not there would be a different effect, as I understand you, upon the price of wool in this country, by a 20 or 29 per cent reduction?

Mr. BENNETT. I do not think that was the question.

Mr. FORDNEY. What was the question?

Mr. BENNETT. The question was: Would 20 per cent divert sheep husbandry into less unprofitable channels than 29 per cent. I understand that to be the question.

Mr. FORDNEY. Well, that is the same thing.

Mr. BENNETT. It seems to me a little different.

Mr. FORDNEY. I do not believe I asked you that direct question, because my opinion is that every one of these rates will destroy the industry in the United States. That is my candid opinion.

You say, Mr. Bennett, that this is an industry that ought not to be protected, that is, the wool industry?

Mr. BENNETT. Yes.

Mr. FORDNEY. Do you know that the Tariff Board's report shows the difference in the cost of producing wool in Australia and in the Western States of the United States to be 12 cents a pound?

Mr. BENNETT. I presume so.

PARAGRAPHS 360-369—RAW WOOL.

Mr. FORDNEY. About that.

Mr. BENNETT. I presume it is so. I do not remember the figures.

Mr. FORDNEY. Then, if we were to have free trade, the Australian wool people would be willing to sell their wool on our markets at the same price as they are to-day?

Mr. BENNETT. There would be more sheep in the United States than there are now.

Mr. FORDNEY. Under free trade, the industry would be encouraged?

Mr. BENNETT. Yes, sir.

Mr. FORDNEY. You stated yesterday that there would be more land devoted to that purpose under free trade than under protection?

Mr. BENNETT. Yes, sir.

Mr. FORDNEY. You even pass over the chance that a lower rate of duty or free trade would slaughter the flocks or reduce the flocks, so that you are willing to kill the mother, and increase the income?

Mr. BENNETT. I think you will find that raising the tariff would decrease the flocks also, if that were the reason; but that is not the cause, in either instance. They are simply incidentals.

Mr. JAMES. Is it not true that there are fewer sheep now in the United States by 2,000,000 than there were two years ago?

Mr. BENNETT. Yes, sir; more than that.

Mr. JAMES. If a protective tariff on wool encourages the sheep industry, how is it that there has been a decrease of 2,000,000 sheep in two years?

Mr. BENNETT. If you will get the facts and figures up to date on sheep, I think you will be amazed at the reduction that has taken place within the last three months. Wool has shot up in price. According to the argument of my friend you would think, from the result of the last election, that the price of wool ought to have fallen off.

Mr. FORDNEY. What is the price of wool to-day?

Mr. BENNETT. It is from 8 cents to \$1.08.

Mr. FORDNEY. What was it before election? That does not answer my question.

Mr. BENNETT. What was it before election?

Mr. FORDNEY. What was it on some day before the election, when you say it shot up like a skyrocket?

Mr. BENNETT. I think the advance was 3 to 5 cents a pound in the grease.

Mr. FORDNEY. And it is now from 8 cents to \$1?

Mr. BENNETT. Yes.

Mr. FORDNEY. Oh!

Mr. JAMES. That was caused by Mr. Wilson's election?

Mr. BENNETT. No; I do not think so. It was caused by scarcity of beef and pork.

Mr. JAMES. If the price had been reduced our friends at the present time would have claimed that it had been caused by the election?

Mr. BENNETT. Sure thing, and the Democrats will probably say it was raised by Wilson's election.

Mr. FORDNEY. Is it not true that those temporary advances that follow are due to the scarcity of meat and food supply and a greater demand?

Mr. BENNETT. Very often.

PARAGRAPHS 360-369—RAW WOOL.

Mr. FORDNEY. And that has affected it in the last few years, if anything has affected it?

Mr. BENNETT. Yes; surely.

Mr. FORDNEY. Mr. Bennett, are you authorized to speak for any manufacturers; and if so, whom?

Mr. BENNETT. I do not think so; no. I would not say I am.

Mr. FORDNEY. You do not represent any manufacturing institutions in the wool industry here?

Mr. BENNETT. No.

Mr. FORDNEY. Whom are you representing here, Mr. Bennett?

Mr. BENNETT. I represent the same person I represent when I go to vote. If I am a public-spirited citizen, I do not go to vote for my own interest. I go to vote for the Nation as a whole, but——

Mr. FORDNEY. Then you do not represent anybody before this committee but yourself?

Mr. BENNETT. Well, I——

Mr. FORDNEY. Except as a representative citizen?

Mr. BENNETT. I do not represent any special interests as against the public interests; no.

Mr. FORDNEY. Do you represent the public interest here by authority from anybody? If so, have you powers of attorney, or are you here as the result of a resolution or instructions?

Mr. BENNETT. Nothing of the kind; no, sir.

Mr. FORDNEY. Then, you represent the special interests as much as you do the public, do you not, because the special interests are a part of the public?

Mr. BENNETT. Yes; to that extent.

Mr. FORDNEY. That is what I thought. Now, you spoke about the world's supply of wool. If, Mr. Bennett, we are now producing in the United States about three-fifths of the wool consumed in the United States, by putting wool on the free list and getting a greater proportion of free wool, which, in the opinion of a great many men, would destroy the wool industry in this country, so far as the production is concerned, do you believe the world's supply of wool to the woolen manufacturers in this country would be higher or lower or would be changed?

Mr. BENNETT. We would produce more wool in the United States.

Mr. FORDNEY. Suppose it would have the opposite effect, then what?

Mr. BENNETT. It will not have the opposite effect.

Mr. FORDNEY. Suppose it would?

Mr. BENNETT. It will not.

Mr. FORDNEY. Suppose we had the same situation we had in 1905 and 1906, would that be followed by a lowering of the price?

Mr. BENNETT. Then it would meet the reduction by an increase in the number of sheep.

Mr. FORDNEY. After the tariff had been restored?

Mr. BENNETT. Without any tariff being restored. The minute sheep went down, the law which I do not believe Mr. Bryan would want to repeal, the law of supply and demand, would bring it up again.

Mr. FORDNEY. You stated yesterday that when the Wilson bill went into effect, that immediately prosperity come into this country, and that threw a damper on your whole argument.

PARAGRAPHS 360-369—RAW WOOL.

Mr. BENNETT. Yes; some people were amused, but look at the facts.

Mr. FORDNEY. The value of the entire property of the United States shrunk about 50 per cent during that time.

Mr. BENNETT. Yes; but due to what? The Silver Purchase Act was in at that time.

Mr. FORDNEY. In 1896 they spoke out as to what they thought.

Mr. BENNETT. What did they speak out about in the election of 1896? What elected Mr. McKinley? Was it the tariff alone?

Mr. FORDNEY. I think so.

Mr. BENNETT. Not by a long shot.

Mr. FORDNEY. Was it not?

Mr. BENNETT. No, sir.

Mr. FORDNEY. What was it?

Mr. BENNETT. The fear of 16 to 1 idea, as to which Mr. Bryan was perfectly honest in his mind; but you take a New England community—

Mr. FORDNEY. And perfectly right, in his mind.

Mr. BENNETT. Take a New England community to-day, and you can not get up any more enthusiasm on the tariff, but whenever it is a question of dishonest money, you can create moral enthusiasm.

Mr. JAMES. The result in 1896 was caused by a bolt in the Democratic Party?

Mr. BENNETT. Yes.

Mr. JAMES. And if there had been a change of 20,000 votes, the Democratic Party would have elected its candidate?

Mr. BENNETT. Yes.

Mr. JAMES. Notwithstanding that there was a bolt in his own party?

Mr. FORDNEY. Well, there has been a bolt since that time.

Mr. JAMES. I am very glad of it, too.

The CHAIRMAN. Gentlemen, we will not discuss that issue before the committee.

Mr. FORDNEY. I will not discuss the question whether or not a tariff would lower or raise the price of wool in 1896 any further; but you spoke of Mr. Goldman a few moments ago as giving information very valuable to you yesterday.

Mr. BENNETT. Very what?

Mr. FORDNEY. Valuable information.

Mr. BENNETT. Did I say "valuable"?

Mr. FORDNEY. Well, that was it, substantially.

Mr. BENNETT. He presented the most absurd proposition here. Did I say "valuable"?

Mr. FORDNEY. Well, if that is your opinion of his statement, I wish to apologize.

Mr. BENNETT. Sure.

Mr. FORDNEY. I misunderstood him.

Mr. BENNETT. Sure.

Mr. FORDNEY. Mr. Goldman yesterday showed that on a capital invested in machinery and plant of \$50,000 and \$3,000,000 capital—

Mr. BENNETT. He—\$3,000,000?

Mr. FORDNEY. His firm.

Mr. BENNETT. Well, I am surprised. Cohen & Goldman—did he say \$3,000,000 capital?

PARAGRAPHS 360-369—RAW WOOL.

Mr. FORDNEY. Yes.

Mr. BENNETT. Let us emphasize that and get it out of the public.

Mr. FORDNEY. \$150,000 capital and \$3,000,000 worth of business.

Mr. BENNETT. Let us emphasize that and get it out of the public, too.

Mr. FORDNEY. No; he said he had \$50,000 invested in his plant, and that he had \$1,500,000 invested in the business, with \$3,000,000 worth of business and that he made a fraction less than 9 per cent. He did not say, and I forgot to ask him, how many times he turned the capital per year, but I imagine many times during the year. Do you know any man in the manufacture of wool or in the growing of wool that has made any such enormous profits? If so, I would like to have you point him out.

Mr. BENNETT. Well, there are some mills that are monuments of tremendous earnings.

Mr. FORDNEY. Some of them are monumental wrecks.

Mr. BENNETT. Wrecks; yes. But I do not want you to think that anything presented here by Mr. Goldman was done as a well-considered proposition of anybody, because it was not; and while I do not represent any manufacturers here, I am somewhat like the diplomatic agent in those stories of Yorke Norroy, which have been running in the magazines at different times—if I am killed, I am disclaimed—but I am talking about and know what the manufacturers want.

Mr. FORDNEY. Mr. Goldman stated, as I have stated to you, and the Tariff Board report shows, that in manufacturing ready-made clothing there was eight hundred and some sixty million dollars' worth of business done in 1911, on which Mr. Goldman says there was a profit of a fraction less than 9 per cent; but he did not say how many times in a year, because, if he turned the capital several times a year, there would be \$270,000,000 of profit in that business, as I figure it, without taking the time to figure it with pencil.

Mr. BENNETT. Yes.

Mr. FORDNEY. There has been no such profit made in the manufacture of anything that I know of in this country. Do you know of anything?

Mr. BENNETT. I know of a few mills that have been prodigies.

Mr. FORDNEY. I am speaking of the general industry.

Mr. BENNETT. No; 5 and 6 per cent.

Mr. FORDNEY. So he comes here and asks for a lower rate on raw materials and an increased duty on clothing, as I understand it.

Mr. BENNETT. He is silly enough to ask for 20 per cent on wool, too. He absolutely does not know anything about it.

The CHAIRMAN. I would like to be allowed to go ahead. This is irrelevant.

Mr. FORDNEY. Just one question further, Mr. Chairman. The question was asked, or you made the statement here that the farmer got the benefit of the tariff on wool. Did you put it that way?

Mr. BENNETT. Yes; I am perfectly willing to let that go.

Mr. FORDNEY. The Tariff Board's report shows that for 1911 the farmer received for the average wool in the United States 16 cents per pound on the farm.

PARAGRAPHS 360-369—RAW WOOL.

Mr. BENNETT. Yes.

Mr. FORDNEY. Where he sells to the groceryman or the jobber or wool buyer, or whoever it may be, and that the woolen manufacturer paid 23 cents a pound for that wool; 7 cents a pound got away from the farmer as between the farmer and the manufacturer, either in profit, freight, or commission, or whatever it may be; but when Australian wool can be produced without any cost to it and brought to this country, do you not believe the American farmer would get some benefit if he got 16 cents for his wool?

Mr. BENNETT. Your ideas are all wrong. If there is one year when there is a nine-tenths margin between the grower and the manufacturer, there are other years when the margin is the other way and the grower gets more than the manufacturer pays; the factor in between suffers a loss, and it simply evens up in a series of years. Now, the woolgrowers in Australia go into small holdings there, and they are spending a lot of money in Australia, but they do not get wool there that costs nothing. They teach us lessons every day in regard to putting up wool, in regard to breeding, selection, and sorting, and the manner in which the wool is brought in here, so that a man can go and say that "I want some of that G long, SXD or XXM that I bought five years ago," and he gets precisely the same thing. Such a thing is not known in this country.

Mr. FORDNEY. I refer to the Tariff Board's report as authority, where they say that, because of the price received for mutton and other proceeds that come from the flock in Australia, the wool cost is practically nothing.

Mr. BENNETT. Well, I have never seen that. It is not true. I do not believe it.

Mr. FORDNEY. If you will read the Tariff Board's report, you will find it.

Mr. BENNETT. That the cost is practically nothing?

Mr. FORDNEY. That the cost is practically nothing on wool; that is, it is practically a profit.

Mr. BENNETT. That is what I have been saying, is it not, that where you turn your attention to mutton and lambs, then you have established the industry on the right basis. That is what I have been saying. That is true in this country.

Mr. FORDNEY. Wait a minute. The Tariff Board, in their report on the cost of production of wool in this country, credits wool with exactly the same proceeds or receipts from the flock as they do in Australia, and show that the cost here is 12 cents a pound for producing wool, whereas in Australia it is nothing.

Mr. BENNETT. There is not any—

Mr. FORDNEY. Under free trade, do you think they can exist?

Mr. BENNETT. In this country?

Mr. FORDNEY. If those statements are true, if that report is true.

Mr. BENNETT. I have already said that I think with free wool the number of sheep in the United States would increase.

Mr. FORDNEY. Then, I do not want to ask you any more.

The CHAIRMAN. That is all.

Mr. BENNETT. Thank you, Mr. Chairman.

PARAGRAPHS 360-369—RAW WOOL.

Mr. PETERS. Mr. Chairman, as the witness has been asked relative to the effect of a tariff on the number of sheep and sheep raising, I would like to submit, and have it go into the record, a table showing the number of sheep in Australia from 1890 to date.

The table referred to by Mr. Peters is as follows:

Number of sheep in Australia, 1890 to date.

1890.....	97, 881, 221	1900.....	70, 602, 995
1891.....	106, 421, 068	1901.....	72, 040, 211
1892.....	103, 272, 068	1902.....	53, 668, 347
1893.....	99, 539, 889	1903.....	56, 932, 705
1894.....	100, 411, 461	1904.....	65, 823, 918
1895.....	90, 689, 727	1905.....	74, 403, 704
1896.....	90, 615, 847	1906.....	83, 687, 655
1897.....	82, 643, 578	1907.....	87, 650, 263
1898.....	79, 237, 002	1908.....	87, 043, 266
1899.....	72, 347, 509	1909.....	91, 676, 281

This shows also that the sheep in Australia with no duty have increased enormously from 1901 to 1909, while they have decreased from 59,757,000 in 1901 to 57,216,000 in 1910 in the United States, though protected by a heavy duty.

Mr. FORDNEY. If that goes into the record, Mr. Chairman, I would like to quote a few lines out of the report of the Tariff Board, on page 11, volume 1, as follows:

That in New Zealand and on the favorably situated runs of Australia it seems clear that at the present range of values for stock sheep and mutton the receipts from other sources than wool are carrying the total flock expense.

Mr. HARRISON. And if the gentleman from Michigan will conclude the reading of that paragraph he will find that it says as follows—

Mr. FORDNEY. I will read it. I have not read it, as Mr. Hill just handed this to me. I will read it:

So that taking Australasia as a whole it appears that a charge of a very few cents per pound lies against the great clips of that region in the aggregate.

Is that what you want me to read?

Mr. HARRISON. It is, and it is an exact instance of the Tariff Board's report, prepared by two different sets of persons, each of them giving opposite opinions in the same paragraph, which may be found to run through the whole Tariff Board report.

Mr. FORDNEY. But it is a unanimous report, Mr. Chairman.

FEBRUARY 3, 1913.

Mr. DANIEL G. ROPER,
Clerk Ways and Means Committee.

MY DEAR MR. ROPER: Finding that I was mistaken as to Mr. William Goldman's testimony before the Ways and Means Committee, I desire to withdraw all of my remarks upon page 4135 and have that paragraph read as follows:

"Mr. BENNETT. But 20 per cent on wool and 20 per cent on goods is not a proper balance. It would cause the tariff law to be all ripped open again two years hence. If you want to do something permanent, do not listen to it for a moment. With 20 per cent on wool and 40 per cent on goods, the balance would be all wrong."

Then on page 4147 I would like to withdraw all of my testimony, beginning where Mr. Fordney says: "But you spoke of Mr. Goldman a few moments ago as giving information very valuable to your testimony." I want to cross out all my reference to Mr. Goldman, if possible, down to page 4149 and preceding the following:

"The CHAIRMAN. I would like to be allowed to go ahead. This is irrelevant."

The trouble is that I was misinformed respecting the character of Mr. Goldman's testimony. I have received from him a letter, of which the inclosed is a copy, and have replied to him as per the accompanying copy.

Very truly, yours,

FRANK P. BENNETT.

PARAGRAPHS 360-369—RAW WOOL.

STATEMENT OF JOHN P. WOOD, PRESIDENT NATIONAL ASSOCIATION OF WOOL MANUFACTURERS, BOSTON, MASS.

The witness was duly sworn by the chairman.

Mr. WOOD. Mr. Chairman, the association which I represent has prepared this statement [exhibiting papers] in full, and I will deliver it to the clerk. To that statement I have nothing to add except to say that on behalf of the association I am desirous of giving any information either now or after the committee has had the opportunity of reading it and examining it fully. I represent an association in which the membership covers a very varied industry, and I can not undertake to speak, of my personal knowledge upon all phases of it, nor to give definite statistics with respect to the various branches, but any information which the committee considers pertinent I will endeavor to procure and supply in a supplemental brief.

Further than that I have nothing to say, Mr. Chairman.

Mr. HILL. Mr. Wood, I would like to ask you the same question I asked Mr. Stevens. Do you think there is good and sufficient reason, regardless of whether the duty is specific or ad valorem, that there should be a graded system of duties on woolen cloth, or would it be, in your judgment, fair to the manufacturer and fair to the Government alike that there should be one duty only?

Mr. WOOD. I speak, of course, from the point of view of a protectionist. The duty to protect the difference in conversion cost between other countries and the United States would necessarily have to vary for different cloth, whether in specific or ad valorem form.

Mr. HILL. And you think there should be the same system of graded duties on woolen fabrics that there is now on cotton fabrics, and that the respective bills that were introduced in the last session carried on such fabrics?

Mr. WOOD. I am not familiar enough with the cotton schedule to make any comparison.

Mr. HILL. There were six different rates, if I recollect correctly, on cotton fabrics, and one on woolen cloth. You are not prepared to express any opinion as to what, in your judgment, the rate of duty on woolen cloth should be, are you?

Mr. WOOD. The statement which we have submitted contains a recommendation with respect to both cloths and other products.

Mr. HILL. But you will not express any opinion about the fact that they should be graded?

Mr. WOOD. We so believe, and so recommend.

Mr. HILL. What kind of a rate do you recommend, ad valorem or specific?

Mr. WOOD. We recommend a specific rate with respect to certain cloths, and where it is impossible to recommend a minimum, we recommend a compound duty.

Mr. HILL. On both the raw material and the finished product?

Mr. WOOD. No, sir; on finished products or cloths. On the raw products we make no recommendations.

Mr. HULL. Are you connected with the American Woolen Co.?

Mr. WOOD. No, sir.

Mr. HULL. Or with the president of that company?

PARAGRAPHS 360-369—RAW WOOL.

Mr. WOOD. In no way, by business or relationship.

Mr. HULL. I was going to ask you about an opinion which he expressed on that point.

Mr. WOOD. Of course you will not expect me to be responsible for his opinion?

Mr. PALMER. How much of a reduction of the rates do you suggest?

Mr. WOOD. Mr. Palmer, our statement has to do only with the net duties, irrespective of what the wool duty may be. Our general statement is that the protective duties, apart from the compensatory wool duty, can not be lowered except by very greatly reducing the amount of manufacture in this country. How much you want to reduce it depends upon how much increased competition is desired.

Mr. PALMER. I understood you to say that you had suggested in your statement that you submitted to the committee a schedule of rates.

Mr. WOOD. We have, and those rates are, so far as the protective rates are concerned, irrespective of the compensatory wool duty, which we pay no attention to, substantially the same as are now in force.

Mr. PALMER. You are suggesting no reduction then in the rate?

Mr. WOOD. Not in the protective rates. We have nothing to say about compensatory duties.

Mr. PALMER. And you have nothing to say about the compensatory duties?

Mr. WOOD. No, sir.

Mr. PALMER. That is, you are not considering the question of duties on raw material?

Mr. WOOD. None whatever.

Mr. PALMER. What would you say, as a matter of fact, about the duties on the raw material that carry into the finished product; are they more than compensatory now?

Mr. WOOD. In respect to many classes of goods they undoubtedly are.

Mr. PALMER. To what extent?

Mr. WOOD. They vary greatly. The tariff report, for instance, shows that in respect to certain samples they are probably 100 or more per cent in the aggregate ad valorem equivalents.

Mr. PALMER. They are double as much as they ought to be to be purely compensatory?

Mr. WOOD. That is in the aggregate of both duties. It is difficult, in the case of those fabrics, to separate that part which is protective and that part which is compensatory, because the tariff deals with the aggregate duty.

Mr. PALMER. What would you say, from your experience and knowledge with regard to the tariff—take, for instance, 40 per cent on cloth, with 20 per cent on wool—what is the actual protection to the manufacturer in that rate?

Mr. WOOD. That would vary, Mr. Palmer, very greatly, in this way: The compensatory rate necessary would be in proportion to the amount of raw material that was subject to duty in the finished product. Now, in some cases, for instance, 60 per cent of the total cost of manufacture would be raw material. In that case the exactly

PARAGRAPHS 360-369—RAW WOOL.

necessary compensatory duty, if you used a 20 per cent ad valorem duty, would be 60 per cent of 20 or 12 per cent. That would apply only to the class in which the material cost was 60 per cent of the whole cost. There are many cloths in which the material cost is 30 per cent. There are others in which it would be still different. The variation is very great. That is to say, the conversion cost to the whole cost varies from about probably 40 per cent to over 70 per cent. You can not apply any single rule to the ad valorem duty on wool, which would determine the exactly correct amount that would apply to all those cases.

The rate that you adopt will be a rate for all of the cloths which would have that proportion of raw material stated. For instance, you assume that 60 per cent of the cost is raw material, then 12 per cent would be the proper compensatory ratio for a 20 per cent ad valorem duty on wool; but that would be right only for those particular products in which 60 per cent was the proportion of the raw material cost.

Mr. PALMER. Is there no way of telling what the average would be?

Mr. WOOD. No, sir; there is no way at all. Efficiency is too indefinite. They are made by too many different manufacturers. There are no available statistics; and if you did succeed in getting the average, it would still be true for the average only—for example, 50 would be the average between 1 and 100; but as you depart from 50, the average would not be properly applicable.

Mr. PALMER. You have left all that out of consideration in your schedule?

Mr. WOOD. Entirely.

Mr. PALMER. Yet you recognize that fact that if the committee is to establish any average at all we must take it into consideration?

Mr. WOOD. That is so, and I have expressed my opinion as to the general principle. We know nothing of the rate that you propose. We can only state what we believe to be necessary in protective duties for the various branches of manufacture. We assume that with all the representations that are made by the other witnesses coming before the committee the committee will be able to determine the proper rate on material and what is the proper compensatory rate.

Mr. PALMER. And those rates you think, from your judgment and from your association, ought to continue the same as they are in the present law?

Mr. WOOD. Compensatory rates?

Mr. PALMER. Yes.

Mr. WOOD. Oh, no. I have understood that——

Mr. PALMER (interposing). Not the compensatory rates, but the——

Mr. WOOD (interposing). Protective rates?

Mr. PALMER. The protective rates.

Mr. WOOD. Yes, sir.

Mr. PALMER. Well, that means the same.

Mr. WOOD. Yes, sir.

Mr. PALMER. But do you not realize that that statement from you, or that request to this committee, a Democratic committee charged with the duty of carrying out the Democratic platform, is an invita-

PARAGRAPHS 360-369—RAW WOOL.

tion to us to break our promise to the people to reduce this wool tariff?

Mr. WOOD. Mr. Palmer, my answer to that is that I have no responsibility for the promises of your party. You have asked for my judgment as to what is necessary for my particular industry. We are not here to dictate nor to supplicate. We can only give our opinion, and my opinion as to what is necessary can not possibly be varied by the fact that you have a certain duty imposed upon you.

Mr. PALMER. But you are here making certain suggestions to us as to rates, knowing that we are about to write a tariff law.

Mr. WOOD. Yes, sir.

Mr. PALMER. I ask you for a moment to put yourself in our place. Would you, under those circumstances, write any such rates as you are now suggesting?

Mr. WOOD. I do not see how I can very well put myself in your place. All my experience would forbid that I should put myself in your place.

Mr. PALMER. What was that last?

Mr. WOOD. I say that all my experience would forbid that I should put myself in your place. I say that with all respect, Mr. Palmer. You have asked the question.

Mr. PALMER. I understand.

Mr. WOOD. I do not want to say anything uncivil at all.

Mr. PALMER. But you are here to cooperate with us, I take it, in a reduction of the tariff.

Mr. WOOD. I do not think that I can say that.

Mr. PALMER. You are here at least to offer suggestions which you think will be useful to us as public servants in writing a law for the benefit of the American people, are you not?

Mr. WOOD. And in continuing the industry as it now exists and under the conditions under which it can be carried on. We do not feel any obligation upon us to recommend a different economic system. We do not deny that you have that obligation.

Mr. PALMER. Exactly; so you can understand, in view of the recent happenings in the country that as to the wool schedule, if as to no other, there is an obligation upon us to make some very considerable reduction in the rates, can you not?

Mr. WOOD. Mr. Palmer, I would very much rather not discuss this from a political point of view, and I trust you will forgive me if I, under your questioning, make an answer which may not be entirely satisfactory.

Mr. PALMER. I do not want to discuss it from a political point of view. I do not think the question of whether we shall write a bill which will protect the American manufacturers or whether we shall write one for purely revenue purposes is a question to be discussed at all between this committee and witnesses here.

Mr. WOOD. I think not.

Mr. PALMER. It is ancient history, the verdict has been entered and we are here to enter judgment upon that verdict; therefore, I ask you, as an American manufacturer, coming here with knowledge of that verdict, whether you think you are really helping us as public servants to write into law the will of people, to invite us to break our

PARAGRAPHS 360-369—RAW WOOL.

pledges to the people by retaining the present rates in the wool schedule?

Mr. WOOD. Mr. Palmer, we neither invite nor ask anything. We are only explaining our position and expressing our opinion as to what conditions are necessary to continue these industries as they are now operating.

Mr. PALMER. You are expressing that opinion with the intention of helping us write this law?

Mr. WOOD. To let you know what from our experience is necessary, and we leave it to your good judgment as to whether you wish to accept that opinion and be guided by it.

Mr. PALMER. And you refuse to say, then, whether you, if you were in our place, would accept that opinion or not?

Mr. WOOD. Simply because I can not put myself in your place conceivably.

Mr. KITCHIN. Mr. Wood, you have suggested in your brief schedule of rates and ask us to adopt them—

Mr. WOOD (interposing). We do not.

Mr. KITCHIN (continuing). It is a matter of habit with your association, as it has been writing tariff schedules since 1867; and, of course, it is natural for you to ask us to let you do it?

Mr. WOOD. Mr. Kitchin, on the contrary, I distinctly disclaim that we ask you to do anything. We simply submit certain information within our knowledge and we leave it to you to do yourselves.

Mr. KITCHIN. I am agreeing with you against my friend Palmer. I am not criticizing you for asking it. It is a fact that the woolgrowers and manufacturers since 1867 have dictated the tariff schedule on wool and wool manufactures, is it not?

Mr. WOOD. You make that statement?

Mr. KITCHIN. No; I ask you if it is not a fact?

Mr. WOOD. No, sir; it is not.

Mr. LONGWORTH. Can you not speak as to the Wilson bill?

Mr. WOOD. Let me answer Mr. Kitchin.

Mr. KITCHIN. Let me get through with him. I have some few questions to ask.

You say that the woolgrowers and wool manufacturers did not first write this schedule in 1867, and from 1867 down to the present time?

Mr. WOOD. Do you mean they suggested the rates or did they write it?

Mr. KITCHIN. Did they not suggest the rates that went into the bill?

Mr. WOOD. They did, sir.

Mr. KITCHIN. They did; and frequently. The Bulletins issued in Boston by your association has referred to the fact that your association, or—that is, this association or combination of woolgrowers and manufacturers, did write or suggest the rate or schedule?

Mr. WOOD. Did suggest; yes, sir.

May I answer that so as to save a little time? We refer to that in our statement and give the whole history of the circumstances. The facts are, very briefly, that they suggested, as we suggest now. The proceedings of the conference of growers and manufacturers at which these rates were arrived at were public, they were stenographically

PARAGRAPHS 360-369—RAW WOOL.

reported; that they were communicated to a commission of the United States Government; they were printed as a public document at that time, which has been reprinted by order of the Senate since that time, every word that every woolgrower and every manufacturer said upon that subject at that time has been a matter of public record equally available to the advocates and opponents of Schedule K. That is the whole story. Nothing more can be made of it.

Mr. KITCHIN. The fact is that the Finance Committee of the Senate asked the woolgrowers and manufacturers to go out and agree upon a schedule.

Mr. WOOD. I think not. I think it was a revenue commission, sir.

Mr. KITCHIN. Mr. North really wrote that schedule, did he not?

Mr. WOOD. No, sir; not in 1867. I think Mr. North was quite a young man at that time.

Mr. KITCHIN. He has been writing it since then, has he not?

Mr. WOOD. I think not.

Mr. KITCHIN. Have you read the bill that was introduced by the minority members of this committee at the last session, or the substitute for the Underwood bill?

Mr. WOOD. I did at the time; yes, sir.

Mr. KITCHIN. Was that bill satisfactory to you and your association?

Mr. WOOD. Absolutely not.

Mr. KITCHIN. Would that bill have destroyed or materially crippled your industry?

Mr. WOOD. Very greatly.

Mr. KITCHIN. You know that that bill was the measure that your party indorsed and voted for?

Mr. WOOD. I have not stated what my party is, Mr. Kitchin.

Mr. KITCHIN. Well, I mean the Republican Party. I do not blame you for not confessing that you are a member of that party now, but really I mean the opponents on this committee.

Mr. WOOD. The gentlemen here are better qualified to answer that than I.

Mr. KITCHIN. You really think that that bill if enacted into law would really seriously cripple your industry?

Mr. WOOD. Certain branches of it would have been entirely ruined.

Mr. KITCHIN. It would entirely ruin some and cripple most all other branches of it?

Mr. WOOD. I stand by my own statement.

Mr. KITCHIN. Would you mind telling what portion of the industry that bill would have crippled or destroyed?

Mr. WOOD. I can not do that. It would be impossible. Certainly it would have been most serious to the combing and worsted yarn spinning.

Mr. KITCHIN. You do not make any worsted, do you?

Mr. WOOD. I am here only as a representative of this association, not in an individual capacity.

Mr. KITCHIN. But practically, from what you knew about that bill, it was a reduction, and therefore you opposed the reduction on the ground that a reduction would cripple your industry?

PARAGRAPHS 360-369—RAW WOOL.

Mr. WOOD. That is not my statement. We opposed it because it was not well balanced and would have been very injurious; that it placed a rigid, inflexible specific on the clean contents of wool and then left a narrow margin of protection on some of the other intermediate stages insufficient to cover the fluctuations in foreign prices.

Mr. KITCHIN. I believe you and your association were very strong for the Tariff Board, were you not?

Mr. WOOD. No, sir; we neither advocated it nor opposed it.

Mr. KITCHIN. But you were very anxious that no bill should be written or passed until the Tariff Board made their report, were you not?

Mr. WOOD. I can not recall any statement of that kind upon the part of the association or myself.

Mr. KITCHIN. Did the Tariff Board send any representative to your mill?

Mr. WOOD. Yes, sir; to the various mills of the association which I represent.

Mr. KITCHIN. You represent the Arlington—what is the real mill you are interested in?

Mr. WOOD. Until recently I was connected with the Pequea mills in Philadelphia.

Mr. KITCHIN. Did the Tariff Board come to your mill and visit your mill?

Mr. WOOD. They visited the mill I was then connected with; yes, sir.

Mr. KITCHIN. Did it make a thorough examination?

Mr. WOOD. Quite.

Mr. KITCHIN. Did you read the Tariff Board's report on the woolen industry, with relation to the present tariff?

Mr. WOOD. Yes, sir.

Mr. KITCHIN. Did you agree with it?

Mr. WOOD. I prefer to answer that by making a general statement regarding the Tariff Board.

I always believed that a tariff board or commission or bureau of the Government was a useful thing to this committee in gathering information and statistics. When the commission or the board was appointed I realized, and so stated at the time, that for men who had no technical knowledge of the industry to undertake to first familiarize their subordinates and selves with the industry, and then make a technical examination and report upon all its many branches in a period of about eight months would be quite impossible. I believe that the board did very excellent work, but the report is very incomplete, and, like any great work of that kind, if the authors of it had the opportunity I have no doubt that they would bring out a revised edition and make many amendments and corrections. They have already signified, as I understand it, that in respect to several things corrections of more or less minor nature are necessary. The report varies in its completeness. With respect to some parts of the industry it is fairly complete; with respect to others it is not complete, although the information that they have given is useful and interesting, but, like any work of that kind, prepared very hastily, by a large number

PARAGRAPHS 360-369—RAW WOOL.

of persons, without adequate opportunity to revise and correct it, no one can safely quote from it and say that this is right and that is wrong. I am not prepared to either indorse or dispute the conclusions excepting as they will be supported by my own experience.

Mr. KITCHIN. Do you think the Tariff Board adopted the proper methods in ascertaining the cost of production?

Mr. WOOD. Well, it adopted two or three methods, as I understand it. One of them was to take specific articles and endeavor to find the conversion cost in this country and others; and another method, I think, was to take the efficiency of operatives on the same kind of work in different countries and measure that efficiency in terms of labor cost. Both would be useful methods, one checking the other.

Mr. KITCHIN. You have read the report rather thoroughly. Do you think, and, in your opinion, would you say that they adopted the proper methods of ascertaining the cost of production here and the cost of production abroad?

Mr. WOOD. So far as the conversion cost is concerned, I think that they adopted methods which were proper, but not the only methods which might have been used.

Mr. KITCHIN. You say you read the bill which they introduced as a substitute for the Underwood bill?

Mr. WOOD. I did.

Mr. KITCHIN. Do you think that bill was based upon the report and written in accordance with the report of the Tariff Board, as they claim at the time they wrote it and introduced it?

Mr. WOOD. I have no doubt that it was written with that intention.

Mr. KITCHIN. Do you think they accomplished—

Mr. WOOD (interposing). I do not.

Mr. KITCHIN. You do not think that bill was really written in conformity with the Tariff Board's finding, do you?

Mr. WOOD. I think it was an effort to do so.

Mr. KITCHIN. You think it failed woefully, do you not?

Mr. WOOD. I think that they failed with respect to certain protective rates.

Mr. KITCHIN. What associations do you represent? I mean how many mills in the association which you represent?

Mr. WOOD. I think there are upward of 100. I do not just remember the membership now.

Mr. KITCHIN. And the annual output is how much per year?

Mr. WOOD. I really can not tell you from memory.

Mr. KITCHIN. About?

Mr. WOOD. If you desire that information, I would be glad to supply it.

Mr. KITCHIN. You could give within a few millions, could you not?

Mr. WOOD. Absolutely not.

Mr. KITCHIN. Do you have any idea whether it would be a hundred million or fifty million, or more than that?

Mr. WOOD. I must decline entirely to express any opinion.

Mr. KITCHIN. You won't express any opinion?

Mr. WOOD. If you desire that information I will file it.

Mr. KITCHIN. I wish you would; we want that; the annual output.

Mr. WOOD. I will give it as accurately as possible.

PARAGRAPHS 360-369—RAW WOOL.

Mr. KITCHIN. What mill did you say you were connected with?

Mr. WOOD. Pequea mills, at Philadelphia, until recently.

Mr. KITCHIN. What is the capital stock of that mill?

Mr. WOOD. It has no capital stock. It is owned by a private partnership.

Mr. KITCHIN. Do you know anything about the American Woolen Co., or the Arlington mills?

Mr. WOOD. In a general way only, as I would know them through the trade.

Mr. KITCHIN. They belong to your association?

Mr. WOOD. Yes, sir. I have no occasion to know anything of their affairs in an association of this kind. It is very much like a board of trade. It is no part of my duty to know that.

Mr. KITCHIN. In what capacity are you serving the association—president or—

Mr. WOOD (interposing). Yes, sir; president.

Mr. KITCHIN. Do you know the capital stock of the American Woolen Co.?

Mr. WOOD. I do not remember it, excepting as I have seen it in the papers. My impression is that the total capital stock is something like fifty million, but that is only such information as you might have from the papers.

Mr. KITCHIN. Do you know or do you have any information that would enable you to form a reasonable opinion as to how much water is in that stock?

Mr. WOOD. None whatever, except as I have heard it discussed by gentlemen of the trade who are familiar with values.

Mr. KITCHIN. What do they say?

Mr. WOOD. I heard a discussion the other night among several mill owners of experience, in which they expressed the opinion that there was none.

Mr. KITCHIN. Do you know how many times they have issued stock dividends in the last 15 years?

Mr. WOOD. To the best of my knowledge, never.

Mr. KITCHIN. And to the best of your information that \$50,000,000 represents \$50,000,000 actual money paid or of property—its equivalent?

Mr. WOOD. Yes, sir; that is the best of my information.

Mr. KITCHIN. Do you know anything about the Arlington mills?

Mr. WOOD. Very little, excepting what I read.

Mr. KITCHIN. What is their capital?

Mr. WOOD. I can not answer that. I do not happen to know. It has not been discussed publicly like the American Woolen Co., so has never made any impression.

Mr. KITCHIN. Do the American Woolen Co. and the Arlington mills advertise or put their stock on the stock exchange?

Mr. WOOD. I can not answer that. I think that I have seen the American Woolen Co.'s stock quoted on the New York Exchange. I do not recall ever seeing the Arlington.

Mr. KITCHIN. A large proportion of the labor employed in these mills are foreigners, are they not?

Mr. WOOD. Quite largely, in some parts of the country.

PARAGRAPHS 360-369—RAW WOOL.

Mr. KITCHIN. Do you know much about the labor conditions in these mills at Lawrence, Mass.?

Mr. WOOD. Mostly what I have read in the testimony before the Rules Committee of your House of Representatives and in the report of the Federal Government.

Mr. KITCHIN. Have you ever visited those mills in person yourself, in the last 8 or 10 years?

Mr. WOOD. I went through one of them about three years ago one day; visited Lawrence and was taken through one of the new mills just to see its equipment.

Mr. KITCHIN. The evidence or testimony given before the Rules Committee was about correct as to the labor conditions there, so far as your information goes?

Mr. WOOD. Mr. Kitchen, it would be foolish for a man who made a visit of about two hours to say.

Mr. KITCHIN. I said so far as your information goes.

Mr. WOOD. No; I could not answer that. You might just as well ask me if it was inaccurate, so far as my information went. I do not know anything about it.

Mr. KITCHIN. You read those hearings, did you not?

Mr. WOOD. I read portions of the testimony.

Mr. KITCHIN. Did you ever talk with any of the owners or managers or stockholders or directors or officers of any of those mills about it?

Mr. WOOD. No, sir.

The CHAIRMAN. Are you familiar with the general line of the industry of the woolen business?

Mr. WOOD. I am familiar with it as one who has been identified with one branch of it all his life.

The CHAIRMAN. I want to ask you whether the lower grades of woolen or cloth have any competition from abroad?

Mr. WOOD. None whatever.

The CHAIRMAN. And it is the higher grades of woolen cloth that have foreign competition?

Mr. WOOD. Yes, sir; the very highest grades have very keen competition.

The CHAIRMAN. About where, if you can explain it to me, does the line of prohibitive rates cease and where does the line of competition begin?

Mr. WOOD. Much as I would like to answer that directly and frankly, it is quite impossible, Mr. Underwood, because the variety of fabrics is so great and the various fabrics of the same value, say, of \$1 per pound or \$1 per yard, do not have a common proportion of conversion to cost of material.

The CHAIRMAN. Mr. Wood, I think you understand that this committee is desirous of writing a reasonably competitive schedule all along the line. Have you any suggestions that you can make to us as to how we can ascertain the facts to that?

Mr. WOOD. I have not, and I do not think you can. The only suggestion as to that which I would make for your very serious consideration is this: I have heard the chairman's statement to other witnesses about the desirability of creating competition on the commodities covered by the various schedules. In the woolen schedule

PARAGRAPHS 360-369—RAW WOOL.

the difficulty that you will encounter is this: That any change of rates you will make will not create a moderate foreign competition all along the line of products of different values, but will eliminate American manufacture of certain classes of woolen products without perhaps adding anything to the foreign competition with others. You can lower rates in various degrees, and to whatever point you decide to lower the rate on a given class you will give the whole domestic market to the foreign articles in that class for which the rate is not protective and will still exclude foreign competition as to those articles in the class for which the rate is protective. The domestic manufacturer of the things for which the rate is not sufficient will be put out of business, while the one whose products the rate does not cover will not be directly affected. The difficulty of classification will prevent you from creating just that moderate amount of competition you seem to desire on all products and it simply depends on how far down you put the rate as to how many mills will be put out of business and how many you will leave with just as much immunity from foreign competition as they enjoy to-day. This is the practical difficulty that you will—

The CHAIRMAN (interposing). Is there no dividing line according to values?

Mr. WOOD. No sir; because the dividing line—there can be a dividing line, according to value, of course, but the dividing line at any value will not leave above that line goods in all of which the ratio of foreign conversion to total cost is identical or substantially identical. It will vary greatly. If you fix your line at 70 cents or 60 cents or any other amount, the foreign conversion cost and the labor cost in the fabrics above that line will vary very greatly, and the amount of duty necessary to exactly equalize the conditions abroad and here will vary correspondingly, so that while you may have what you desire, a competitive tariff in respect to some, it would be prohibitory still in respect to others. There is the practical difficulty you will be confronted with; and also, as the proposal is to make the duty in ad valorem form, if you make the rate based on the foreign values, and you intend that that shall be just exactly competitive for some in the group of products—if the prices, prices of raw material abroad, which form a considerable factor, rise materially above the present level, it will again be prohibitive, none will come in. In the case of decline of material, you will increase your competition much above whatever may have been in your mind when the rate was fixed. That is our answer, Mr. Chairman, to all the objections that have been made to the existing law.

The CHAIRMAN. But still the question of whether a prohibitive rate should be adopted, or a competitive rate, according to the verdict that has been found, the committee would be glad to have any assistance in providing a rate that is only reasonably competitive, if you can give it any.

Mr. WOOD. I was only pointing out, recognizing the obligation upon you, the difficulties that will confront you in doing that, the difficulties that have confronted your predecessors, and I do not think you can. That is not a disputatious statement.

PARAGRAPHS 360-369—RAW WOOL.

The CHAIRMAN. I am asking you as an expert to get information of value to the committee, for the guidance of the committee. Suppose we revise these rates to what we conceive to be somewhere near reasonably competitive, realizing that some of them will not probably be competitive, can we use any reasonable language that will direct the customs bureaus to so classify those imports as to let us know what goods are coming and what are not coming in?

Mr. WOOD. No, sir.

The CHAIRMAN. No classification can be made?

Mr. WOOD. No, sir.

The CHAIRMAN. Then, we have simply got, in your judgment, to sail out in the dark and try to save the patient, if we can?

Mr. WOOD. Exactly.

Mr. JAMES. Are you in favor of free wool?

Mr. WOOD. I do not wish to express any opinion with regard to the wool duty, at all.

Mr. JAMES. Have you not expressed any in a brief you have filed?

Mr. WOOD. No, sir.

Mr. JAMES. Are you unwilling, then, to give the committee your opinion about whether wool ought to be free or taxed?

Mr. WOOD. Quite unwilling.

Mr. JAMES. Do you know what the price of wool is abroad, as compared with the price here?

Mr. WOOD. It is infinitely various. There are scores of varieties, and the prices vary accordingly. Wool circulars that come over here every week from London require column after column of prices to give the quotations on wool.

Mr. JAMES. Take the same sort of wool—

Mr. WOOD (interposing). There is no same sort.

Mr. JAMES. They do not have different sheep over there, do they, than what they have here?

Mr. WOOD. But climatic conditions make differences in the wool of the same sheep.

Mr. JAMES. It is impossible, then, for you to give the committee any idea about the difference in prices here and abroad?

Mr. WOOD. Quite impossible. You can compare approximate qualities. That would be entirely possible.

Mr. JAMES. Well, do that for us.

Mr. WOOD. I can not do it from memory. I will file that with the other matter Mr. Kitchin asked for.

Mr. JAMES. I wish you would.

Mr. WOOD. Have you any particular qualities in mind?

Mr. JAMES. No; just the general difference.

Mr. WOOD. The finer wools or the coarser wools?

Mr. JAMES. Both; abroad and at home.

Mr. WOOD. Any particular range? You know wools are classified by their fineness.

Mr. JAMES. Well, I am not a manufacturer of wool.

Mr. WOOD. I only want to get at your desire.

Mr. JAMES. Well, my desire is to get at the difference in the cost of wool in this country and abroad.

PARAGRAPHS 360-369—RAW WOOL.

Mr. WOOD. To make a comparison of that kind would be a rather voluminous statement, and I thought if we knew what was in your mind that might simplify it very much.

Mr. JAMES. They have been telling the farmers that they get very much more for their wool here than abroad, and I want to know if that is the fact.

Mr. WOOD. I would prefer to leave that to the gentlemen who have made that statement, to justify it. I have not made any such statement.

Mr. JAMES. I know; but the business in which you are interested is getting a compensatory revenue tariff upon the theory that it benefits the producer of wool in this country, and now, as a manufacturer, you come here and are unwilling to give us any opinion upon the very thing that your people are to have the benefit of. You can not expect this committee to arrive at any intelligent understanding of the matter unless you people who know the facts are willing to place us in possession of them.

Mr. WOOD. Mr. James, I would suggest that you invite the farmers and the woolgrowers here, and get that information from them.

Mr. JAMES. You know that the farmers and woolgrowers know very little about the prices abroad. I presume a manufacturer here ought to know more about the prices of wool abroad than a farmer out here on a Kentucky hill.

Mr. WOOD. In answer to that, I want to say that the woolgrowers have an association, and they publish a paper, and I have seen in that publication within a month a discussion of the prices here and abroad.

The CHAIRMAN. What arrangement have you with that association?

Mr. WOOD. None whatever.

Mr. JAMES. You have no connection—your manufacturers' association—with the shepherds' association?

Mr. WOOD. Absolutely none.

Mr. JAMES. No subterranean passage at all?

Mr. WOOD. None whatever; nor celestial.

Mr. RAINEY. You want the same degree of protection you have been getting?

Mr. WOOD. Yes; the protective duties.

Mr. RAINEY. For what reason? In order to preserve your profits as they are now, or in order to keep up the wages of your labor at their present scale?

Mr. WOOD. I have gone into that matter quite thoroughly in my statement.

Mr. RAINEY. Well, that is hardly fair; the committee can not examine you on that statement now.

Mr. WOOD. I have also said that the committee can examine that statement, and I will come before you again at any time for the purpose of being examined about it.

Mr. RAINEY. Well, you can tell me briefly why you want this protection, whether for the purpose of protecting your capital or for the purpose of continuing to pay the present scale of wages to your labor?

Mr. WOOD. The purpose is to enable the industry to continue to be conducted here, and that involves, of course, continuing the present

PARAGRAPHS 360-369—RAW WOOL.

scale of wages and the payment of whatever reward is necessary to induce men to continue in the business.

Mr. RAINEY. You want to protect your employees from the cheaper labor of Europe?

Mr. WOOD. I have not put it that way.

Mr. RAINEY. In substance, that is part of it, is it not?

Mr. WOOD. If you prefer to put it that way, I will accept it.

Mr. RAINEY. How many employees are there in the woolen and worsted mills in the United States?

Mr. WOOD. Again, I must say my memory for statistics is not good, but I think a little over 200,000 directly.

Mr. RAINEY. How many of them are women?

Mr. WOOD. I can not answer offhand. If you desire that information, I will procure it for you.

Mr. RAINEY. About half of them?

Mr. WOOD. I can not say. I do not know offhand.

Mr. RAINEY. How many of them are foreign born?

Mr. WOOD. I can not answer that.

Mr. RAINEY. Is it not true that nearly all of them are foreign born, except in the Southern States?

Mr. WOOD. It is not.

Mr. RAINEY. Is it not a fact that at least two-thirds of them are foreign born?

Mr. WOOD. It might be in some places.

Mr. RAINEY. Well, up in New England?

Mr. WOOD. I do not know. I have no familiarity with that.

Mr. RAINEY. Where is your mill?

Mr. WOOD. Philadelphia, as I have three times said.

Mr. RAINEY. I know that is where you live, but where is your mill?

Mr. WOOD. In Philadelphia.

Mr. RAINEY. What is the name of it?

Mr. WOOD. Pequea Mills.

Mr. RAINEY. Thank you.

Mr. WOOD. You are welcome.

Mr. RAINEY. What have your dividends been?

Mr. WOOD. They do not pay dividends, sir.

Mr. RAINEY. Why do they not?

Mr. WOOD. Because it is a private partnership.

Mr. RAINEY. What are your profits?

Mr. WOOD. I decline to answer that because I am not now actively connected with the business. My connection was lately severed, and I do not represent that mill here, and I have no authority from its owners to speak concerning its business.

Mr. RAINEY. Well, have you any authority to speak for any mill as to the profits it makes?

Mr. WOOD. None whatever. I have no familiarity with any others than the mill I was identified with.

Mr. RAINEY. You realize that is quite an important matter for us to know?

Mr. WOOD. Yes.

Mr. RAINEY. And you came here without any of that information at all?

PARAGRAPHS 360-369—RAW WOOL.

Mr. WOOD. I do not know how important it is. It did not occur to me that it was important.

Mr. RAINEY. How many of these mills in your association have selling agencies attached to them?

Mr. WOOD. I could not tell you. Quite a good many of them.

Mr. RAINEY. Is it not true that nearly all of them have?

Mr. WOOD. No. Formerly, probably 20 years ago, nearly all of them did. The tendency has been in the last 20 years for more and more of the mills to sell their goods directly.

Mr. RAINEY. And how many of them have been issuing stock dividends in the last—

Mr. WOOD (interposing). Might I just say a word about the selling proposition? I thought probably you were going to pursue that further. I would like to state what the arrangements with the selling agents are.

Mr. RAINEY. I thought you just said you did not know anything about it.

Mr. WOOD. No, I did not.

Mr. RAINEY. All right. What are the arrangements?

Mr. WOOD. The selling agents of the woolen mills are usually located in New York, with branch offices in other cities. As a rule, they have no connection with the mills. Their business is to employ salesmen and pay their salaries and traveling expenses; conduct warehouses and loft rooms in New York, where the goods are assembled, and delivered, very frequently, from those warehouses.

Mr. RAINEY. And it happens that usually the directors of the woolen mills are large stockholders in the selling agencies, does it not?

Mr. WOOD. It is most unusual.

Mr. RAINEY. What profits are there in the agency business?

Mr. WOOD. I could not answer. It varies as to whether they wait upon a few customers, or many large ones. The selling commission varies from 4 or 4½ to 7 per cent, probably. Out of that they have the expenses to which I have already alluded. I have no idea what the profits are, but I presume they are about the same as commission agents in any other business, like cotton, for instance.

Mr. RAINEY. Have you anybody connected with your association who could give us that information?

Mr. WOOD. I should think the only people who could give that information would be the selling agents themselves, in New York. They are all well-known houses.

Mr. RAINEY. We would have to call each one of them separately?

Mr. WOOD. No; I should think most anyone of them could give it to you.

Mr. RAINEY. Where can we get the information as to the profits of the mills?

Mr. WOOD. I should say the reports to the Bureau of Corporations, for the assessment of the Federal tax, would give you that very exactly.

Mr. RAINEY. You know that is not accessible to us, do you not?

Mr. WOOD. I supposed it was, for this purpose, but if it is not, I suppose it could be made so by action of Congress.

Mr. RAINEY. They would not tell us unless they had to.

PARAGRAPHS 360-369—RAW WOOL.

Mr. WOOD. I suppose Congress probably has the authority to make them.

Mr. RAINEY. Well, when we get a Democratic President we may get some of that information.

Mr. WOOD. We have expressed the hope that you do that, sir, in our statement.

Mr. RAINEY. That is all.

Mr. PALMER. Are you the Mr. Wood who wrote an article in the Philadelphia Public Ledger a week or so ago with reference to the hearings?

Mr. WOOD. No, sir.

Mr. PALMER. I saw such a communication and cut it out, but I do not have it with me. It was signed by a gentleman by the name of Wood.

Mr. WOOD. Not I. I have not even seen it.

Mr. PALMER. You did not write it?

Mr. WOOD. No, sir.

Mr. PALMER. Just one more question, Mr. Wood. You say in your memorial, which you submit to the committee, that the existing tariff rates on some articles do exceed the requirements of protection under the present law?

Mr. WOOD. That is what I stated in reply to a question by Mr. Kitchin.

Mr. PALMER. I suppose you are perfectly willing that we shall reduce the rates on those articles?

Mr. WOOD. Perfectly willing, if you can do it.

Mr. PALMER. Why, we can do it all right.

Mr. WOOD. That is something this association has endeavored to do.

Mr. PALMER. What you mean is, if we can do it and still give you all the protection you need?

Mr. WOOD. If you can do it without disturbing other products that necessarily come under the same classification, which require that amount of duty. If you can so classify those products, Mr. Palmer, that you will apply to each one just the right amount of protection, we will subscribe to that as an entirely proper schedule, and we will be glad to see all this excess protection eliminated. The whole difficulty is now and has always been in so classifying these diverse products that you can write a tariff that will be exactly correct and applicable to each in proper degree.

Mr. PALMER. Well, suppose we took out all of this excess protection, which you yourself say is excess—

Mr. WOOD (interposing). Yes.

Mr. PALMER (continuing). As closely as we could get to it; we will say, the difference in the cost of production, which you admit is less than the present rate—

Mr. WOOD (interposing). In respect of certain articles.

Mr. RAINEY. Yes. If we did not exactly hit it in every case, the result would be some increased competition over what there is now, would there not?

Mr. WOOD. You mean increased competition for the whole industry or for the particular industry that produces that article?

PARAGRAPHS 360-369—RAW WOOL.

Mr. RAINEY. To the extent that our rates should be less than the difference in cost of production, there might be some foreign competition.

Mr. WOOD. Well, I think I explained to the chairman, Mr. Palmer—

Mr. PALMER (interposing). Would there not?

Mr. WOOD (continuing). That there would be such increased competition on some things as would entirely put the domestic producers of those particular articles out of business, and with respect to others there probably would be no increase of foreign competition at all.

Mr. RAINEY. Well, if, in taking out this excess of protection, we exactly hit upon the rate which would equalize the difference in the cost of production here and abroad, the foreign manufacturer and the American manufacturer would start upon an equal race?

Mr. WOOD. Yes.

Mr. RAINEY. And there would be competition, would there not?

Mr. WOOD. As long as the prices abroad upon which the ad valorem rates were applied, remained the same.

Mr. RAINEY. And when the prices varied, there might sometimes under some conditions be no competition and under other conditions there would be more competition, and such a rate, therefore, would be a fairly competitive rate?

Mr. WOOD. It would be fairly competitive, when the price upon which the ad valorem rate was predicated was effective, and it would not be fairly competitive at any other time.

Mr. RAINEY. What you mean by that is that under some conditions we would get competition and under other conditions and at other times in a different state of the market we might not get competition?

Mr. WOOD. And at other times excessive competition.

Mr. RAINEY. Yes; and at other times too much competition, from your point of view?

Mr. WOOD. From my point of view, yes.

Mr. RAINEY. What you want to do is to maintain these rates which you admit cover an excess above the differences in cost of production, in order that you may be absolutely on the safe side?

Mr. WOOD. No, sir. I have already said to the chairman, and I stated in the beginning of your inquiry, that if you can classify these products so that you can eliminate that excess protection, and can establish just and equal competitive conditions, we shall not raise any objection to that at all. The difficulty is yours; not ours.

Mr. RAINEY. And because you think we can not do that, you ask for the present excess duties to remain?

Mr. WOOD. Not because we think that, but because we know you can not do it, we ask for the present duties to remain.

Mr. RAINEY. Although you know that they are above any possibility of competition?

Mr. WOOD. In respect to some of them, yes—foreign competition.

Mr. RAINEY. Foreign competition, of course. And although you

PARAGRAPHS 360-369—RAW WOOL.

admit that we could write a rate which, under some conditions, at some times, would result in competition?

Mr. WOOD. No; I deny that you can.

Mr. RAINEY. I thought you just told me we could.

Mr. WOOD. No; I said "if you could." You now say you can, and I deny that you can.

Mr. RAINEY. Now, as to all of these samples, we will call them—portions of the product as to which the Tariff Board has made a careful examination as to cost, assuming that the result of its examination is correct, we could write a competitive rate, could we not?

Mr. WOOD. No: because I do not think you can classify and define them. That is only an opinion. You are probably going to try it, and we will see whether you can. I do not think you can. I speak now not in a political sense at all, but growing out of my technical experience and growing out of my own efforts in collaboration with others to try to overcome this very difficulty of which you speak, and the whole difficulty hinges upon making a classification that will have a rate that exactly fits each article.

Mr. RAINEY. Have you made a suggested classification in your memorial?

Mr. WOOD. Our only classification is one of value, and that is open to the same difficulties that now exist, except in less degree. We have endeavored to narrow the difference by making more classifications.

Mr. RAINEY. Still you did not try to get down to a competitive rate?

Mr. WOOD. We have tried for years to do so and our efforts have resulted unfavorably, just as I think yours will.

Mr. RAINEY. You really, then, tried to write a competitive tariff and failed, and came back to the old harbor of refuge—the excess rates?

Mr. WOOD. To the system which we now suggest.

Mr. KITCHIN. Under the tariff schedule which you suggest in your brief—how much more importations would there be than under the present schedule?

Mr. WOOD. I am no prophet.

Mr. KITCHIN. Well, in your judgment?

Mr. WOOD. I could not tell at all, sir.

Mr. KITCHIN. Do you think there would be any more importations under that schedule?

Mr. WOOD. I do not know.

Mr. KITCHIN. And did you not make the suggestion with the idea that there would not be any more than at present?

Mr. WOOD. We have endeavored to cover what we believe to be the difference in the conversion cost. We have endeavored to do that in the nearest and most exact way that we can.

Mr. KITCHIN. Well, we imported last year about \$15,000,000 of woolen articles. Do you think the schedule which you suggest would cause more importations or less importations?

Mr. WOOD. I am inclined to think it would increase the importations substantially, but I have no means of knowing.

PARAGRAPHS 360-369—RAW WOOL.

Mr. KITCHIN. We produce annually—our woollen manufacturers—between \$500,000,000 and \$600,000,000, do we not, in this country?

Mr. WOOD. My impression is that it is a little over \$500,000,000.

Mr. KITCHIN. And now the importations, excluding fine carpets and rugs, are less than 3 per cent, are they not?

Mr. WOOD. Yes, sir; 3 per cent.

Mr. KITCHIN. That is, out of every \$100 worth sold and consumed in the United States, the American manufacturers sell more than \$98. Now, do you not think that an industry that produces—that sells to ninety millions of American people all but 2 per cent, can stand a reduction of the tariff, so that we can increase those importations to as much as 3 or 4 per cent, at least?

Mr. WOOD. Mr. Kitchin, our points of view are wholly apart on that. From my point of view, that is a merit; from yours, it is a demerit.

Mr. KITCHIN. Anyway, do you think, as a whole, that the woollen industry in the United States would be seriously crippled if there should be 3 or 4 per cent of the consumption in the United States imported, which would allow the home man to sell \$96 or \$97 out of every \$100?

Mr. WOOD. If that per cent were, as it probably would be, a single class of production, and it would enable that class of production to come in here much below the domestic cost, it would certainly cripple the mill in which that one kind of product was made. If, Mr. Kitchin, you can so adjust your rate that each manufacturer will only have 5 or 2 or 10 per cent or some other amount of competition on each class or commodity, they certainly would be able to stand it, and I do not think they would raise any objection.

Mr. KITCHIN. Do you not know that neither you nor I nor this committee can write a tariff bill that would give exactly the same benefits to each individual manufacturer, but, in your judgment, do you not believe that this industry which has been protected for a hundred years now, could, on the whole, while there might be some little needed readjustments here and there, stand competition with a 50 per cent tariff?

Mr. WOOD. I have already explained both to you and to the chairman that you can reduce the rate to any given degree you want and there will be industries here that will still continue without any foreign competition, and to any degree that you reduce the protective rate, apart from the compensatory rate, you will affect some of that industry. That is the only answer I can make. I can only discuss this from the point of view of one who is a believer in maintaining the utmost protection for this industry here. Now, I do not believe it would be profitable for a layman like myself to go into a general discussion of the theory of protection and a tariff for revenue on this occasion. I think all you want is my best judgment on this question as to the kind of rates, and what would probably happen. That I have given in this statement and I am willing to amplify it as far as I am able. I do not believe in discussing it from the point of view of the two schools of economic thought. That would be a waste of time.

The CHAIRMAN. We desire to adjust this tariff on a basis where it will be reasonably competitive all along the line. We have instruc-

PARAGRAPHS 360-369—RAW WOOL.

tions to do that, and all we want from the manufacturers, if they can help us arrive at a reasonable basis, we would like to have it.

Mr. WOOD. And all my testimony has been to give you my opinion on that subject.

Mr. HILL. Have you one of your schedules? This schedule is put up here purely on the question of the cost of production?

Mr. WOOD. Yes.

Mr. HILL. And you recommend that the duty should be compounded?

Mr. WOOD. On cloths.

Mr. HILL. On cloths?

Mr. WOOD. Yes.

Mr. HILL. And in case a duty was put on the wool—a specific duty—it would be added to the specific duties which you have shown here—the compensatory?

Mr. WOOD. Yes.

Mr. HILL. The allowance for the wool duty—

Mr. WOOD (interposing). Would be added to that.

Mr. HILL. Would be added to the compensatory?

Mr. WOOD. Yes.

Mr. HILL. And you state that it is impossible to make a compensatory that would be accurate in every case?

Mr. WOOD. Absolutely impossible.

Mr. HILL. Now, you state that there is no competition in the low grades. I suppose you referred to the present rates of duty and not to what you suggest?

Mr. WOOD. Entirely so.

Mr. HILL. Would this allow competition in the lower grades?

Mr. WOOD. No, sir.

Mr. HILL. It would tend to competition, according to your schedule?

Mr. WOOD. Well, it is impossible for me to answer that question, Mr. Hill.

Mr. HILL. Well, I suppose it is, absolutely; but, substantially, at \$1 a pound or above or below it?

Mr. WOOD. I should say that probably the goods valued at \$1 a pound would come in more freely than they do now, and that some more goods would come in below \$1 a pound, going down toward 70 cents. It is entirely problematical and hypothetical and I would not undertake to answer it.

Mr. HILL. I call attention then to the \$1 and above in your schedule. You have 95, \$1, and to \$1.25. Would the rates made in the bill supported by the Republican side of the House be destructive or in any way injurious to that class of goods above \$1 a pound?

Mr. WOOD. I do not know that I can answer that definitely, without looking into it, but my impression is they would not be.

Mr. HILL. They are within 2 or 3 per cent or 4 per cent of the rates made you, are they not?

Mr. WOOD. Yes. My reference to that bill had more particularly to do with the intermediate stages of manufacture, and on some of the lower priced plain pure worsted goods, like serges.

PARAGRAPHS 360-369—RAW WOOL.

Mr. HILL. You are aware, of course, that the compensatory rates in that bill—where there was a fraction, the fraction was omitted—

Mr. WOOD (interposing). A little below the amount necessary for compensation.

Mr. HILL. It was the Tariff Board report, as far as it could be applied.

Mr. WOOD. On the wrong side.

Mr. HILL. In the compensatory duties?

Mr. WOOD. Yes; the compensatory rates were a little too low.

Mr. HILL. The Tariff Board was too low, you mean?

Mr. WOOD. I think that was an interpretation of the Tariff Board schedule.

Mr. HILL. I want to call your attention to the fact that the compensatory rates in the bill were a little bit higher than the Tariff Board report.

Mr. WOOD. In respect to tops, I do not think they were.

Mr. HILL. No. I am saying the compensatory rate on clothing.

Mr. WOOD. Probably that is true, but I do not remember the rates now.

Mr. HULL. Mr. Wood, you are familiar with the history of the wool growers' association and the manufacturers' association or organization?

Mr. WOOD. Only as I know it as a matter of history, and it is contained chiefly in a Senate document, printed a few years ago.

Mr. HULL. Well, it is true, is it not, that during most of the time since 1867 or soon thereafter, the organization of the wool growers and that of the manufacturers have kept up or cooperated in a working arrangement or understanding for the purpose of securing tariff recognition from Congress?

Mr. WOOD. On the contrary; I think the records show that there were several times there when they were in complete disagreement.

Mr. HULL. While they disagreed in some minor respects, they have come here and united—

Mr. WOOD (interposing). At times, they undoubtedly have.

Mr. HULL. They had some radical disagreements during the nineties, did they not, when the manufacturers, many of them asked for free wool?

Mr. WOOD. I think the first disagreement was earlier than that, but there may have been at that time, too.

Mr. HULL. Well, when did those cooperative relations, to the extent they did exist—when did they entirely cease?

Mr. WOOD. I know of none whatever, during my own activities, except that some four years ago a conference was held between committees of both associations, in which the question was raised as to what their judgment was of the then impending tariff questions, and it was decided that the interests of both branches of the industry were as they were in 1867, alike in the interest of the protective policy for both the wool grower and the wool manufacturer.

Mr. HULL. This occurred at a banquet, did it not?

Mr. WOOD. No, sir; it occurred at a business meeting in Chicago.

PARAGRAPHS 360-369—RAW WOOL.

Mr. HULL. Each side agreed that to the extent they had differed they had made a mistake and that in the future——

Mr. WOOD (interposing). No; there was no discussion on that subject at all. The meeting, as I remember it—I was not present——

Mr. HULL (interposing). Anyhow——

Mr. WOOD (interposing). Do you want me to answer the question or do you wish to withdraw it?

Mr. HULL. I thought you had concluded.

Mr. WOOD. No. A resolution was passed covering exactly the position of the two associations. That resolution was communicated to the Ways and Means Committee at that time as a matter of record. The very understanding they had is contained in that resolution. There is nothing beyond it, behind it, beneath it, or above it.

Mr. HULL. Well, what do you say—if you have stated, I did not hear you—what did you state about the method of levying the duty on wool? Did you express any opinion in your examination with reference to the scoured content and the specific duty?

Mr. WOOD. No, sir; I declined to express any opinion on that, in answer to a question which you propounded.

Mr. HULL. Does not your association purchase wool both here and abroad?

Mr. WOOD. Not as an association.

Mr. HULL. The members of your association do?

Mr. WOOD. Some of them. Some use exclusively domestic wools, while some use both.

Mr. HULL. Well, what is the judgment, so far as you have absorbed it, of the manufacturers you represent with respect to the merits of specific rates on the scoured content, as recommended by the tariff board?

Mr. WOOD. We have no opinion on that. It is a novel proposition. It certainly seems to be attended with very great administrative difficulty and we are in grave doubt as to its practicability. We do not undertake to say it can not be done. If this committee can be persuaded it is practicable, we have no criticism to offer. We do not advocate it. We know nothing about it.

Mr. HULL. It is true that a large number of the manufacturers have expressed their serious doubt as to its practicability?

Mr. WOOD. I think individually probably quite a number have. On the other hand, I think there are some who have believed it might be done. It is a very novel and unique proposition and there are just those doubts existing that would naturally exist among different men regarding a unique and novel proposition.

Mr. HULL. You were speaking of the effect of the present rates on imports. Now, it is true, is it not, that the present rates—under the present rates practically no imports of any of the medium or cheaper classes of cloth or ready-made clothing or women's and children's dress goods——

Mr. WOOD (interposing). You are going a little too far. If you want me to answer it accurately you had better deal with them separately.

Mr. HULL. Well, separately, women's and children's dress goods and hats and knit goods—please state to the committee about what

PARAGRAPHS 360-369—RAW WOOL.

amount of the medium and cheaper goods in each class come in under the present tariff rates?

Mr. WOOD. I will simply accept the figures which are contained in the manual prepared for the committee—you have them before you—as entirely correct.

Mr. HULL. You do not want to put them in the record?

Mr. WOOD. I would be perfectly satisfied to have you do so.

Mr. HULL. The fact is then that about the only conclusion you have reached in the brief you have presented here is that the rates which you suggest are such as are prohibitive on the cheaper classes of these goods?

Mr. WOOD. I think not, sir; and I think that when you have read the statement you will agree that that is not the only conclusion.

Mr. HULL. Well, since you do not care to state it as a fact, I desire to get it in the record that of the medium and cheaper classes of these goods to which I have referred, comparatively none come in under the existing tariff rates.

Mr. WOOD. I think I have already admitted that, in general. My only objection was to giving figures which I did not have in my memory, when you had them exactly before you. I have already made the statement it is entirely prohibitive on the medium and cheaper kinds of goods, excepting in some of the women's dress goods, and there an entirely different situation exists.

Mr. HULL. I have not been able to read your brief. I do not know what is in it. I would like to ask you some questions.

Mr. WOOD. I will place myself at the disposal of the committee at any time it wishes me to come before it.

Mr. HULL. The committee does not have time to recall each witness.

Mr. LONGWORTH. I would like to ask a question or two about the method of selling woollen cloth in this country. The mills have selling agents, and to whom do those selling agents sell, as a general rule?

Mr. WOOD. I did not understand.

Mr. LONGWORTH. To whom do the selling agents of the American mills sell the cloth?

Mr. WOOD. Probably the largest proportion of it to the garment manufacturers—the wholesale makers of clothing, ready-to-wear clothing, and in lesser quantity to the jobbers, who sell to the merchant tailors.

Mr. LONGWORTH. That is what I wanted to know. You say the larger proportion goes to the manufacturers?

Mr. WOOD. I have not any figures, Mr. Longworth, but I should say very much the larger proportion. Most of the clothing of the people is bought ready to wear.

Mr. LONGWORTH. But a large proportion goes to jobbers?

Mr. WOOD. Oh, yes; a very considerable proportion.

Mr. LONGWORTH. Who sell to the tailors?

Mr. WOOD. Yes.

Mr. LONGWORTH. Now, do you know whether that is the custom in England.

Mr. WOOD. I think practically the same condition, except that the manufacture of ready-to-wear clothing has been more highly de-

PARAGRAPHS 360-369—RAW WOOL.

veloped here. The American ready-to-wear clothing is very much superior to that of Europe, and people of much greater means use ready-to-wear clothing here than they do abroad.

Mr. LONGWORTH. My information has been that in England the mill sells direct to the tailor almost invariably.

Mr. WOOD. I would not like to deny that of my own knowledge, but I think not.

Mr. LONGWORTH. Does it go through the hands of the jobbers as it does here?

Mr. WOOD. I think so. The units of purchase by the merchant tailor are so small that it would be impracticable for the mill to do that.

Mr. LONGWORTH. Are you familiar at all with the prices of clothes in their finished condition?

Mr. WOOD. Oh, just about as any citizen would be. I have no special or expert knowledge of the value of clothing.

Mr. LONGWORTH. And the relative prices of clothes here and in England?

Mr. WOOD. No.

Mr. LONGWORTH. It must, perforce, be admitted that the prices of good clothes are much higher here than they are in England—the prices of custom-made clothes?

Mr. WOOD. Well, Mr. Longworth, I do not really feel competent to say that. I have not enough experience.

Mr. LONGWORTH. Let us admit it for the sake of argument, as to a fairly good class of clothes. The kind of suit that was exhibited to us here this morning, that retails at \$7.50, will that suit sell for less in England than it will here—a suit of that kind?

Mr. WOOD. I do not know, Mr. Longworth. I should think it would.

Mr. LONGWORTH. Have you heard of prices lower than that?

Mr. WOOD. Not in clothing. I have no familiarity with the clothing branch of the industry, but I would say there were suits of clothing at less than that. In fact, there are in this country.

Mr. LONGWORTH. Well, at anywhere nearly that grade?

Mr. WOOD. Oh, no; it would be distinctly inferior. It would contain an appreciable proportion of cotton.

Mr. HILL. Mr. Wood, when working on this schedule last year, I went to the appraiser's office in New York and saw a case of goods, and asked him to show me the method of appraisal. It was a case of cut-up pieces, probably half a dozen pants patterns, and a great variety of styles. In view of the question Mr. Longworth asked you, I would like to know whether the custom of the mills in England is to drum the trade for that class of orders, or whether it comes from the jobbers in England? The country evidently had been drummed; a man had gone into a tailor's shop and ordered a half a dozen pants patterns of this kind, and half a dozen of another.

Mr. WOOD. I understand there have been two or three foreign—English concerns who have sent representatives to this country to take orders for individual suits of clothing.

Mr. HILL. Is that the mill men or the jobbers?

Mr. WOOD. I should imagine they were tailors, engaged in business in rather a wholesale way.

PARAGRAPHS 360-369—RAW WOOL.

Mr. HILL. Oh, no. This was cloth.

Mr. WOOD. Oh, I do not know about that.

Mr. HILL. This was a case of cloth, not of clothing, and the appraiser told me that the percentage was increasing of orders being taken in that way. Now, what I want to know is does it come from the mill or does it come from the English jobber?

Mr. WOOD. I should think it would come mostly from the mill, such as is sold here. There are one or two mills who have their own agencies in this country, making the finer class of goods, and then, of course, there is a great deal of such cloth brought over here by jobbers who have houses both in this country and in England, and who do an English business as well as an American business. A great deal of imported cloth for merchant tailors' use is no doubt brought into the country by cloth jobbers who have an international business.

Mr. HILL. So that all possibility of losing by carrying over stock is eliminated in that way?

Mr. WOOD. Yes, sir.

Mr. FORDNEY. A question has been asked the witness, which I think is a little bit unjust or unfair, and I want to get it right, as nearly as I can, as I see it. The question was asked the witness if it were not true that representatives of the woolen industry—wool manufacturers—had written the rates of duty as fixed in the various tariff laws since 1866. Now, it is true that the committee calls for people to come here and express their views for or against certain rates, and I will not do the committee the injustice now to say that because in making up this tariff rate, if they happen to fix some rate suggested by some witness here, that that witness wrote the tariff law on that particular article. The committee have called men representing every industry from all over this country, to get their views, and from those views and their personal knowledge to make up the tariff law and fix rates as appeared to them to be most equitable and just, and if they write in the law some rate recommended by this witness or any other man they must not be accused of having had that man write the tariff law.

Mr. WOOD. Mr. Fordney, I was about to answer, when asked another question, that I have too much respect for the integrity and the honor of the members of the Ways and Means Committee in Congress to ever suppose that any interest can dictate the rates of the tariff upon either one side or the other, and I no more believe that the woolen manufacturers and wool growers could dictate the rates than do I believe the importers will dictate the rates to the gentlemen on the other side.

Mr. FORDNEY. I think that is fair.

Mr. PALMER. I think, in view of the fact that you have suggested rates to a Republican committee to write its bill on a protective tariff theory, you ought, out of your abundant information and expert knowledge, be as loyal to us, and suggest rates based upon a revenue or competitive theory.

Mr. WOOD. We have done that. We have suggested rates that we believe will produce revenue to the extent of about the third largest schedule.

PARAGRAPHS 360-369—RAW WOOL.

Mr. PALMER. But you told me you left all the protection which is now in the schedule in your rates?

Mr. WOOD. The schedule now produces a very large share of the revenue.

Mr. PALMER. I do not complain about your helping our Republican friends so much as I do about your refusing to help us.

Mr. RAINEY. Speaking of the mills comprising your organization, do you agree with the statement made by parties who advocate protection that this schedule is the very keystone of the whole protective arch?

Mr. WOOD. No.

Mr. RAINEY. You do not agree with that?

Mr. WOOD. No.

The CHAIRMAN. That is all, Mr. Wood.

MEMORIAL OF THE NATIONAL ASSOCIATION OF WOOL MANUFACTURERS.

To the Committee on Ways and Means, House of Representatives, Washington, D. C.:

Accepting in good faith and with full confidence in its sincerity the assurance of the new administration that no legitimate business will be injured by the contemplated revision of the tariff, the National Association of Wool Manufacturers appears before your committee to urge a counsel of caution by indicating the conditions under which the woolen industry has been developed in the United States and the impossibility of its continuance unless the rates of duty and the method of their application are such as will, under all the varying conditions of trade and fluctuations of values, permit the domestic manufacturers successfully to meet the competition of their foreign business rivals.

It is to be noted in passing that the woolen industry is essentially, and in a very unusual degree, a legitimate business; its product is among the prime necessities of life—food alone outranking it in the natural importance—and this reason, if no other, should induce conservation of an existing instrumentality that can supply without dependence upon foreign sources all the woolen clothing required by the country either in its civil life or under the exigencies of military defense. But in another sense the woolen industry claims its place among the legitimate businesses of the people, for it was brought into existence in consequence of various Federal laws enacted for the express purpose of developing that business in this country. Its existence has been possible only because of such laws, and the operations and conduct of the business have been in strict conformity with law, the domestic woolen trade having been in an unusual degree free from complaint of lawbreaking.

Moreover, thousands of persons who were in no way responsible for the enactment of these laws have since given years of their lives to acquire the necessary training and experience to make a vocation of this business, while vast amounts of capital, including great sums from abroad, have been invested in the business, and those who have thus invested their time in obtaining technical training, as well as those who have invested capital, have done so upon the faith of laws duly enacted by the Congress of the United States. For all these reasons the woolen trade must be regarded as essentially a legitimate business, and therefore entitled in the fullest degree to avail itself of the assurance that no harm will be done to such in the revising of the tariff.

HOW THE INDUSTRY DEVELOPED.

When the protective tariff was first instituted in the United States the purpose was not to offset an *existing* difference between wages here and in Europe, for at that time wages on this side were not materially higher than those prevailing in Great Britain, then the chief source of supply of manufactures. The primary purpose of the protective tariff at that time was to induce capital and enterprise to establish domestic manufactures by providing the opportunity for attractive returns. The far-seeing statesmen who advocated this policy well knew that as soon as the obstacles which must first be overcome by the pioneers of new industry were successfully surmounted, competing establishments would promptly arise and thereby the advantages would

PARAGRAPHS 360-369—RAW WOOL.

would accrue to the whole people. And their wise purpose has been fully realized, for the industries made possible by the tariff, competing for labor not only among themselves but with other kinds of employment, have progressively raised the rates of wages until they have attained the present great excess over those paid for like employments in other countries.

Simultaneously with the competition for labor there was created, by the increasing productive capacity, a competition in the sale of products that has steadily reduced the margins of profit, until now in the case of the woolen industry the normal manufacturing profit is probably less than that of any of the other domestic industries, and is certainly as little as in the woolen industry of Great Britain or the other manufacturing countries of Europe. The foreign capital that has come here for investment in the woolen manufacture has come not because of any higher profits to be made here, but because the American protective tariff, as the industry has developed, has made it more and more difficult for European mills to sell goods in this market. One of the principal representatives¹ of foreign capital who has come here states distinctly that the profits of American woolen and worsted mills "are not higher but rather lower than those of similar European enterprises." The ultimate result of the protective policy so far as it relates to woolen manufacture has been that the country possesses an industrial equipment capable of fully supplying its people with all its requirements in woolen products of every kind and quality, in peace or war, and the realizable benefits of the tariff are now, as they have been for many years, absorbed in the higher wages and higher costs of supplies.

Stated in simplest terms, toward a reduction in the price of woolen commodities the manufacturers can yield nothing but the factor of profit, which averages a rate much below that of almost any other branch of business in this country, is certainly no more than that earned in the same industry abroad, and does not average for the efficient and capably managed establishments more than from 5 to 7 per cent on the value of sales,² with which a comparison is invited of the profits of general mercantile and commercial business. It is not expected that this statement will be accepted without verification; we invite and urge Congress to make the most thoroughgoing investigation to ascertain whether these assertions are or are not well founded, and we pledge our earnest and a sincere cooperation to that end.

Verifying data can quickly be had by a tabulation of the returns made by woolen manufacturing corporations for the assessment of the Federal corporation tax; as also from the reports of all mills to the Census Bureau; or, if Congress is willing to appoint a commission to ascertain the facts independently of the figures already gathered by various bureaus and boards of the executive departments, every facility will be afforded to the representatives of Congress to obtain the information at first hand.

Meanwhile we assert with the confidence of intimate knowledge that the elimination of the entire margin of manufacturing profit will have no appreciable effect upon the prices paid for woolen clothing by the consumers, and even if it is conceivable that the mills would continue to operate indefinitely without profit, any material change in prices of woolen clothing effected by tariff reductions can be secured only through corresponding reductions in the wages, not only of woolen operatives, but also of all those who are engaged in the production of the supplies required by the woolen mills and by the operatives employed therein.

The wool manufacture is not one of the industries that have developed a considerable export trade. Our total exports of manufactures of wool for the fiscal year 1912 were valued at \$2,534,901, or about one-half of 1 per cent of the total output of the American industry. On the other hand, the imports of wool manufactures from abroad in the same fiscal year 1912 amounted to a value of \$15,182,694, representing a duty-paid value of \$27,781,940. The American manufacturer supplies most of the American market, but so far as the cloth manufacturer is concerned, he has practically no market abroad—the chief items of our exports being ready-made clothing shipped to the near-by markets of Canada and Mexico. Wool manufactures in general can not be largely exported because of the higher cost of labor, machinery, mill construction, and supplies in the United States. Of all this, labor is the chief determining factor.

¹ Julius Forstmann, president, the Forstmann & Huffmann Co., "The Wool Manufacture in America and Europe," p. 26.

² Official investigation has already ascertained that the manufacturer's profit on the cloth in certain typical kinds of clothing averages but 1.9 per cent of the selling price of such garments (see Tariff Board report, Vol. II, pp. 883-891) and those familiar with the business know that in respect to a large part of the clothing of the people the rate is distinctly less than this rate.

PARAGRAPHS 360-369—RAW WOOL.

WAGES IN WOOLEN MILLS.

The earnings of employees in the domestic woollen trade, when compared with the wages of those engaged in identical work in other countries, afford abundant evidence that the first and immediate benefit of the protective tariff is realized by the wage-earners. Prior to the investigation of this subject by the Tariff Board, a committee was appointed to obtain for this association dependable data concerning wages in the woollen trades of England and the Continent, for comparison with wages paid in this country in corresponding employments. The committee was made up of men who, by reason of their personal experience in wool manufacturing in other countries, possessed the knowledge of trade conditions abroad and had the connections necessary to obtain the desired data and test their accuracy. The results of the investigations of this committee are presented as Appendix II to this memorial.

To avoid even the appearance of exaggeration in the compilation of these wages, much care has been exercised to omit comparison of extreme differences, so that the figures submitted are rather those of averages. But average comparisons do not justly gauge the full benefit to the worker in the domestic mill. The Government may provide opportunity, but it remains for the individual worker to avail himself of the possibility which the law has given. A fair comparison of the wages in different countries is not one of average rates, but should be one of actual earnings of the most efficient. Only the earnings of the competent and industrious workers are a fair index to the wages of labor in the respective countries. One or two examples will illustrate this, and will at the same time indicate how free from exaggeration the comparisons of wages submitted in the appendix are. The latter gives the following as average wages for weavers:

	Per week.
America.....	\$13. 00
England.....	9. 00
Continent.....	6. 50

But for a more accurate comparison of the advantages enjoyed by American labor we would take, for instance, the actual earnings of, say, 10 men weavers and 10 women weavers in similar mills here and abroad. To illustrate: On page 760 of the Tariff Board report a statement is given of the actual earnings of each weaver in a German mill. From this statement we take the figures for the 10 men and 10 women who had the largest earnings, and set them down in comparison with the actual earnings of 10 men weavers and 10 women weavers having the highest earnings in a similar American mill:

	German mill.		United States mill.	
	Hour.	For 55 hours.	Hour.	For 55 hours.
	<i>Cents.</i>		<i>Cents.</i>	
10 men, highest average each.....	12. 89	\$7. 09	31. 25	\$17. 19
10 women, highest average each.....	8. 68	4. 77	27. 50	15. 13

On page 758 of the Tariff Board report the earnings of weavers in another German mill are given, and of these the report says: "A more significant pay roll could not have been selected in Germany." This statement does not distinguish between men and women, but a comparison of the 10 highest earnings with the 10 highest, irrespective of sex, in a similar American mill follows:

	For 55 hours.	
	German mill.	United States mill.
10 weavers having highest earnings, average for each.....	\$7. 12	\$17. 34

PARAGRAPHS 360-369—RAW WOOL.

These, it is to be noted, are the highest earnings; the Tariff Board report cites the earnings of German women weavers for full time as low as \$2.05 per week, and on page 761 the report says:

"So far, then, as concerns the actual earnings of German weavers aside from the rate per yard, it is very clear that the average for men is between 9 and 11 cents per hour of actual time worked. While it is not uncommon for a weaver to earn \$1.25 or \$1.30 and while earnings of \$1.50 or even \$1.75 are not unknown in rare individual cases, yet 95 cents to \$1.10 is the usual earnings per day for German male weavers and 70 cents to 80 cents for women."

Against the rare individual cases of \$1.50 to \$1.75 in Germany, as mentioned in the quotation just cited, we can submit innumerable instances of woolen weavers in the United States whose average earnings exceed \$3.50 per day.

For France the Tariff Board gives the earnings of weavers in the making of 16 different fabrics, from which it appears that the highest rate was under 93 cents, the lowest 62½ cents, and the average 81.77 cents per day. (Tariff Board Report, p. 761.)

For England the Tariff Board gives the earnings of weavers as:

	Per week
Men on worsteds.....	\$4. 98- \$6. 56
Women on worsteds.....	2. 55- 3. 89
Men on woolens.....	5. 47- 6. 68
Women on woolens.....	3. 16- 4. 86

with the significant note that very few men weavers are employed. (Tariff Board Report, pp. 814, 817, 826.)

And another investigator for the Federal Government, Mr. W. A. G. Clark, of the Department of Commerce and Labor, reported¹ average earnings of weavers in the Bradford district of England as: Men, \$4.86 to \$6 per week; women, \$3.60 per week, and he quotes the figures given by an English investigator as: Yorkshire (average), \$3.16 to \$4.13 per week; Yorkshire (best), \$7.29 per week; and this latter (English) authority further states that American weavers, as a whole, average three times as much as Yorkshire weavers.²

Earnings of weavers have been quoted because they are always regarded as typical. Like differences exist for other occupations; for example, the following figures of the British Board of Trade were recently quoted in the Manchester (England) Courier for the English woolen and worsted trade.

Full time, per week, average:

	Per week.
Men.....	26s. 6d. (\$6.26)
Lads.....	8s. 10d. (\$2.14)
Women.....	13s. 10d. (\$3.32)
Girls.....	8s. 4d. (\$2.00)
Average, all classes, per week.....	15s. 9d. (\$3.78)

These we understand to be official figures of a department of the British Government.

Other occupations than weaving show similar differences. As for loom fixers, the Tariff Board reports foreign rates ranging from \$4.52 per week (p. 830) to \$9.73 (p. 819), and Mr. Clark in his report states the standard rate for Bradford as \$8.40 for 24 broad looms, while in the United States rates of from \$20 to \$24 for 20 looms commonly prevail.

For warping the Tariff Board reports German earnings per week of 60 hours as for men, \$3.64 to \$6.43; for women, \$2.14 to \$4.32 (pp. 830, 834), and English rates for 56 hours as for men, \$6.53 to \$8.26; for women, \$3.65 to \$4.38; while the average for all warp dressers as taken from a recent American pay roll was \$22.10 for 55 hours.

For drawing-in the Tariff Board reports earnings in Germany as \$3.57 to \$4.28 per week of 60 hours, against which we quote from recent American pay rolls actual earnings of \$12 to \$15 for 55 hours. (Tariff Board report, pp. 830-834.)

The purpose of making these comparisons here, it will be remembered, is merely to indicate the care which was used in preparing the comparative figures submitted in the appendix herewith, which figures were compiled before the data contained in the Tariff Board report were available. The publication of the latter report not only

¹ Manufacture of Woolen, Worsted, and Shoddy in France and England (W. A. G. Clark), p. 50.

² Manufacture of Woolen, Worsted, and Shoddy in France and England (W. A. G. Clark), p. 48.

PARAGRAPHS 360-369—RAW WOOL.

justifies the differences given in the association statement, but shows them to be most conservatively stated.

If your committee desires further evidence upon this subject, we are prepared to submit it in unlimited quantity for every kind of employment in the woolen manufacture. But what is given in the accompanying exhibits will probably be regarded as sufficient, for no one who has seriously studied the subject questions the fact that wages in the woolen industry in the United States are, for the various kinds of work, from two to four times as high as for the same employment in other countries.

WAGES AND THE COST OF LIVING.

In an effort to dispose of the incontrovertible fact that the American wages are so much higher, opponents of the protective policy have alleged three things, viz:

First. That wages in the woolen mills are lower than those in certain other employments.

Second. That the efficiency of the operatives here is so much greater as to offset the difference in wages.

Third. That the cost of living is so much greater in the United States as to offset the higher earnings.

With respect to the first allegation, it is sufficient to say that comparisons can properly be made only between like employments in different countries. The same reasons which, for example, make the average wages of textile employees less than the wages of those engaged in the building trades in England are equally operative here. They are too palpably evident to require explanation. Such comparisons are as inapt and meaningless as a comparison between the salary of a Member of Congress and that of a high school teacher.

In respect to efficiency, it is only necessary to say that the operations of woolen manufacture are nearly all performed by machinery; that the machinery in use in the mills of the United States is practically identical with that used in Europe, and that the limits of productive efficiency are largely those imposed by the requirements of the manufacturing process rather than such as are due to the personality of the operative. But in respect even to the equation of personal efficiency, the report of the Tariff Board has confirmed what was already well known to all manufacturers who have had practical experience both in Europe and the United States; viz: That the advantage is entirely with the older countries, and that from the fact that many of the employees there have inherited technical experience through the persistent continuity of the same occupation in successive generations of the same family. Not only do the efficiency studies of the Tariff Board experts show conclusively that the American mills have no advantage in the personal efficiency of workers; but the rates of earnings of employees who are paid by the piece afford corroborative evidence upon this point; and there is further confirmation in the particulars for conversion cost which are given for identical products.

Only in respect to the last of these contentions is there a semblance of actuality. It is probably true that the cost of living is somewhat more in the United States, and to whatever extent this is so some offset is properly to be made against the advantage of higher wages. It is therefore pertinent to ascertain how much more has to be paid here for the same kind of living than in other countries. And upon this subject there is a wealth of authoritative evidence proving that the advantage in wages far exceeds any countervailing disadvantage in living expense. From this abundant testimony we quote a few typical examples, chosen as illustrations because the sources from which they emanate can not by any possibility be regarded as partial to the interests of woolen manufacture in this country.

First we have the official figures from a department of the British Government which states that while wages in the United States are two and four-tenths times those in the same occupations in England, the cost of living here is but one and fifty-two hundredths times what it is in England. The figures for the cost of living are of course generally applicable, but the wages compared did not include the woolen trade, in which, from other data adduced, the comparison would be more nearly as 3 to 1.

Next we have the testimony of Mr. Samuel Gompers, president of the American Federation of Labor, who made a personal study of the subject, with facilities for observation that few others could have in equal degree. From his letters we quote the following significant expressions:

"In no city in Europe did I find rents any cheaper, wages considered, than they run in Philadelphia, Baltimore, Louisville, or in the New England towns not having a boom, or even in many cities of the Mississippi Basin. What strikes the American is how little the European renting wageworker gets for his money.

PARAGRAPHS 360-369—RAW WOOL.

"Mentally contemplating the many cities I visited, and having in mind the conversations I had with workmen who had lived both in Europe and America, I believe I may assert that whether the cost of living in Europe or America is greater to the workman depends entirely on the standard of living he adopts while in America.

"Living is cheap to the wageworker in Europe only because he does without what in America soon becomes a necessity to him—food in good quantity and quality, presentable clothes among his aspiring fellow workmen and their families, and a comfortably furnished home in quarters responding to his awakened desires for equality with his American neighbors, and in general a larger and freer life.

"In the United Kingdom the poor dress in much the same clothing in summer and winter, the large proportion of the people in shabby clothes on the streets of Dublin, Manchester, or London giving an impression to the American observer of prevalent poverty."

And then we invite attention to the statements of Mr. William R. Hearst in a recent article sent by him while abroad to the New York American:

"The false statement that living in England is cheaper than in America has been made so often that it is believed by those who have not taken the trouble to learn the facts. Living is not cheaper in England than in America. If anything, it is dearer. Food is much dearer in England than in America. Luxuries like fruit and many vegetables are entirely beyond the reach of the average individual."

In dismissing this subject of the comparative cost of living, we ask thoughtful consideration of the statement upon this subject which is contained in the report of the United States Revenue Commission of 1866, to wit:

"Abundant national or individual supplies are not to be realized by the fact of cheapness. The ability to purchase depends not on the cheapness of the commodity, but on the means of payment. It is well known that the countries in which commodities are cheapest are not those where the inhabitants are most amply supplied; and it is equally notorious that the people of this country, where commodities are at higher prices than prevail elsewhere, are more fully supplied and in more full enjoyment of the comforts and luxuries of civilized life than any population in the world."

Nearly half a century has elapsed since that observation was written, but in the lapse of time the fact has but become more impressively true as everyone knows who can, from personal knowledge, contrast the living conditions and comforts of the wage earners then and now.

THE FORCE OF DOMESTIC COMPETITION.

The earnings of workers in the woolen trade being evidently so much higher here than in foreign countries, and the advantage of the higher wages when measured by purchasing power being clearly established, a revision of the tariff rates by which these earnings have been made possible can not but place upon those who undertake such a revision a momentous responsibility. It has already been stated that as an industry the woolen manufacture enjoys no excess of profit out of which the effect of tariff reductions can be taken without influencing the prevailing rates of wages.

At the present time under existing tariff laws the greatest industrial activity prevails that this country has ever known.

Wages are much the highest ever paid, not only absolutely, but relatively to the measure of the necessities and comforts of life which they will produce. The demand for labor exceeds the supply and creates a competition for help that insures the highest wages which the selling prices will procure. In view, therefore, of the limiting influence of the tariff rates on selling prices, it must be evident that any reduction of tariff rates on a given commodity below that part of the existing rate which is actually availed of in the domestic price, must of necessity at once either correspondingly reduce the rates of wages or narrow the existing opportunities for employment.

It is doubtless true that the existing rates on some articles exceed the requirements of protection; but the Tariff Board after thorough investigation ascertained that, in respect to these products upon which the duty might seem excessive, no advantage of this excess is realized by the domestic manufacturer; which confirms what has been repeatedly alleged, namely, that with a productive capacity of woolen manufactures in excess of the entire requirements of the country, domestic competition regulates the prices of all products within approximately the same narrow limits of profit. If any one class of woolen goods by reason of excess of protection offered a larger profit, so much machinery would at once be concentrated upon the production of that commodity as to cause a great excess of supply and a lowering of price down to, or more

PARAGRAPHS 360-369—RAW WOOL.

probably even below, the common parity of profit. Only in the case of an industry which has failed to attain a development equal to domestic requirements does this tendency to equalization of profit, through internal competition, fail to operate.

The question then naturally arises: If on some commodities the duty is more than necessary and not availed of in domestic prices, why not reduce these rates to the limits required for protection? To this there could be no possible objection if that could be done without at the same time reducing the duties on other commodities far below the line which would permit their manufacture in this country. The reason for this is that there is such a vast variety of woolen goods, and the differentiation is so infinite, that it is impracticable so to classify and define them that each shall be subject to a rate of duty just sufficient and no more than sufficient. The objection and the difficulty of overcoming it have been frankly admitted and explained whenever a revision of the tariff has been under consideration by Congress.

The woolen industry has been sincerely desirous of eliminating all such instances, for while such inequalities exist merely in theory and not at all in actual operative effect, their elimination would obviate much of the criticism of the woolen schedule upon the part of those who discuss it academically without the slightest knowledge of its practical working. But the difficulty of overcoming these theoretical objections has thus far been found insurmountable. Meanwhile the laws of trade, more inexorable than those established by statute, effectively prevent the realization of any excessive profit. To illustrate: Of two fabrics subject to the same specific duty, one made wholly of a superior material permits a net profit to the cloth manufacturer of 5 cents a yard; the other using a cheaper raw material would theoretically allow a margin of let us say 15 cents a yard, but if the latter 15 cents could be realized, none of the better goods would be made here; all the mills would, as has already been stated, engage in the manufacture of the cheaper cloth, requiring less capital, less skill, less risk, and at the same time affording much greater profit.

But the facts prove the contrary; all grades of goods are freely made according to the market demand for the respective kinds and qualities, and there must necessarily be an approximate parity of profit on the different sorts, or a disproportionate share of the productive capacity would be attracted to the sorts yielding the larger profit. But the lesser expense for capital, the reduced risk, and the lower degree of skill required in the making of the cheaper varieties all operate to make competition on these more intensive and profit margins therefore less.

If the duty should be adjusted to the requirements of the cheapest products, then, as was so clearly stated by an able exponent of this subject in the Congressional debates of nearly a generation ago:

"We should determine by our legislation that the manufactures of this country shall be confined to the lower grades of goods. That would be to affix the permanent brand of inferiority upon our woolen manufactures."

It is a matter of common knowledge not only to those identified with the trade, but also to all others who have given any study to the subject, that no greater opportunities for profit exist in the making of goods upon which there is a seeming excess of protection. If there were, no one would now be engaged in the manufacture of the finer qualities, the production of which has so greatly increased during the past 15 years, because under favorable tariff rates improvement of technical skill has been developed, and the increasingly intense competition in the field of cheaper products has attracted a larger interest in the finer kinds.

It is often alleged that the application of the tariff exclusively in ad valorem form would result in obviating all inequalities and assure equal and exact results. But this is notoriously untrue, for the labor or conversion cost of many of the cheaper fabrics is as great as for similar goods of higher value, the difference in cost being due solely to the difference in the value of the raw material. An example of this kind is shown in Appendix IV by two cloths of similar structure and weight, one being composed wholly of wool and the other having a cotton warp and wool weft. The clothmaker's cost for making these two fabrics is identical, but the finished values differ very much because of the widely different cost of the raw materials.

The amount of protective duty required for both cloths is the same; an ad valorem rate sufficient to produce that amount of duty when computed on the cheaper goods, would, when applied to the value of the more expensive cloth, produce an amount in excess of the required protection. On the other hand, if the rate be such as when applied to the higher-cost cloth will produce the required amount of duty, that rate when applied to the lower-priced goods would yield less than the required amount. Both these cloths are meritorious products, each intrinsically worth its cost. The cheaper one made partly of cotton is as durable and as thoroughly excellent at its price

PARAGRAPHS 360-369—RAW WOOL.

as the one of higher cost. If the manufacture of both is to be continued in this country, the ad valorem rate must be high enough to protect the cheaper cloth; and to offset the apparent inequality dependence must be placed upon the abundant domestic competition, just as has been the case under existing forms of duties which have been in effect for 18 of the last 22 years on low-cost cloths.

SPECIFIC OR AD VALOREM DUTIES.

This incidental reference to one of the defects of an ad valorem duty leads us to a further consideration of that form of tariff rates.

A duty to afford protection to an industry must equal the difference between the foreign and the domestic conversion cost. That difference is, in respect to any given article, a constant factor.

The only duty that will always equal such difference must therefore be a "constant" also; and the only form of duty that meets this requirement is one that is specific in form; i. e., one that is assessed at so much per unit of quantity, as for example, per pound, per square yard, per gallon, or per cubic foot, according to the nature of the commodity.

If the duty is in ad valorem form, i. e., assessed as a percentage of the value of the commodity, the amount of the duty is a variant, fluctuating constantly with changes in the cost of the raw material of which the commodity is made.

To illustrate this, assume that the foreign cost of conversion of a given article is 20 cents per pound and the domestic cost of conversion (i. e., labor and expense) is 40 cents; the difference, or 20 cents per pound, represents the amount of duty required to protect the domestic manufacture of such article. Let us further assume that the cost of the raw material required for its manufacture in Europe is at the present time 30 cents—the total foreign cost being 20 plus 30 equals 50 cents.

The necessary duty can be laid either at the ad valorem rate of 40 per cent or the specific rate of 20 cents per pound, and at the moment either form will yield the required 20 cents protection.

But suppose the cost of the raw material declines from 30 to 15 cents, so that the total cost becomes for raw material 15 cents, conversion 20 cents—total 35 cents. In such a case a specific duty of 20 cents per pound is still adequately protective, while the ad valorem rate of 40 per cent yields but 14 cents duty, or 6 cents per pound less than necessary to continue the domestic manufacture.

On the other hand, suppose the cost of the raw material advances from 30 cents to 40 cents; the whole cost will then be 40 plus 20 equals 60 cents, and an ad valorem duty of 40 per cent on this cost would yield 24 cents, or 4 cents per pound more than necessary to protect the domestic manufacture. But with a specific duty of 20 cents the protection still remains constant as needed to bridge the difference between the foreign and domestic conversion cost.

Low prices of raw material are usually coincident with depressed business; and at such a time, when competition is most severe, profits disappear, the decreasing duty under an ad valorem rate invites new and killing competition to the domestic producer; and the fall in domestic prices, being accelerated by a simultaneous and proportionate fall in the amount of duty, causes increased distress to merchants through the greater loss in the liquidation of their stocks of merchandise.

Per contra, rising prices of raw material are usually coincident with active business and abundant demand. At such times competition is reduced to a minimum, for there is enough trade for all. Under such circumstances the rise in prices is apt to be stimulated beyond the increase in cost of raw material by augmented profits; and it is under such conditions that increased competition is needed to protect the buyer from exorbitant advances. If, however, the duties are in ad valorem form, competition is more effectively barred than ever, for the higher the raw material goes the greater the foreign cost, and so the more is the amount of duty produced by the ad valorem rate. Then it is that the domestic producer receives not merely the protection normally needed, but has the protective duty enhanced so that, with the active demand then existing it may enable him to augment his normal profit. The effect of the specific duty is quite the reverse, for remaining as it does at the one level, if domestic prices tend to advance too much the doors to foreign competition automatically open, and an effective check is at once imposed upon any increase in domestic prices beyond that made necessary by increased cost of raw material.

It is also to be noted that specific duties are more satisfactory to the importer, because his foreign purchases will always be enhanced by the same amount of duty, and the amount of duty paid by himself and his competing importer on identical

PARAGRAPHS 360-369—RAW WOOL.

importations will be the same, while under ad valorem rates the differences in prime cost which occur through fluctuations in the foreign market are still further increased by the variance of the duty.

From the point of view of the Government, specific rates are greatly to be preferred, the important desideratum being that its revenue should be stable and dependable. We have already noticed that low prices are coincident with dull business. Consequently at the very time when the volume of importations and the revenue produced thereby are greatly reduced, because of a depressed condition of business, the revenue is still further depleted because the duty has to be computed as a percentage upon low prices.

Under opposite circumstances, when business is most active and imports are large, prices are high. The Government is not only enjoying large revenue because of a large volume of imports, but the revenue is further increased by being computed as a percentage upon higher prices. The revenue becomes redundant—large amounts of circulating medium are locked up in the Treasury at a time when needed in the channels of trade to finance the increased operations of business.

Whether considered as a matter of protection to domestic manufacturers or as one of Government revenue, ad valorem duties are so susceptible to the fraud of undervaluation as to be highly objectionable. It is undoubtedly true that customs frauds have been perpetrated in respect to commodities that were subject to specific duties, but such frauds involve connivance upon the part of persons engaged in the customs service and a proper vigilance upon the part of Government officials ought to make such collusion nearly impossible. Moreover, such frauds of collusion are just as possible with ad valorem duties as with specific, while through undervaluation, without participation by any agents of the customs, ad valorem duties permit vastly greater frauds in addition to such as may be effected by corruption.

Because of the serious objections to ad valorem duties, practically every Secretary of the Treasury for the last half century, irrespective of party, has at one time or another advocated the use of specific rather than ad valorem rates. In Appendix III we take leave to quote some of the opinions officially expressed by Treasury officials. Honest importers have been equally urgent in opposing the use of the ad valorem form in any cases where the specific could be applied; we subjoin also some notable opinions from this interest.

So objectionable from every point of view have ad valorem duties been found that other Governments have adopted it as a settled policy that, whenever practicable, import duties should be laid in specific form. A recent investigator of this subject has written:

"In Austria, Switzerland, Italy, Belgium, France, Germany, and England the duties are specific. The French tariff has 800 numbers, of which 9 are ad valorem. The German has 946 numbers, all specific."

Only recently a dispatch from Brussels reported the purpose of the Belgian Government to change some of its few ad valorem rates to specific because of the growth of undervaluations by importers which the ad valorem rates made possible.

MERITS OF COMPOUND DUTIES.

There are, however, some kinds of manufacture to which it is not practicable to apply a purely specific duty. But for many of these it is possible to employ a compound duty—that is, one partly specific and partly ad valorem.

For classes of commodities which vary greatly in their units of value and in the ratio of labor cost to material cost; and which can not be so grouped that purely specific rates can be applied with even approximately equal incidence, the compound duty is most suitable, obviating in a considerable degree those features of purely ad valorem duties which have made them objectionable, not only from the protectionist point of view, but equally to the Government and the honest importer. The compound duties are especially applicable in the case of cloths in which the ratio of labor or conversion cost to total value increases as the value of the raw material decreases, as in the samples shown in Appendix IV. The cloth containing the cheaper raw material needs less compensatory duty but requires a larger ad valorem rate to produce (when computed on its lower value) the same factor of protection. This deficiency is automatically offset by absorbing part of the specific rate which is not required as compensatory duty.

This principle applies particularly in respect to dress goods, upon the cheaper forms of which the ad valorem rate, sufficient for more costly goods, would produce a sum altogether inadequate to cover the difference between the cost of manufacture here and abroad.

PARAGRAPHS 360-369--RAW WOOL.

Opponents of the present wool schedule habitually discuss the specific duties as though intended always and only as compensatory for the raw material duty; and in those cases wherein the specific duty is obviously more than necessary to compensate for the wool duty, the rate is criticised as excessive and unwarranted. Whereas for many sorts of goods, and particularly those composed of the cheaper kinds of material, it was thoroughly understood when the law was enacted that the ad valorem rate was not in itself protective because of the low values upon which it was computed and the high ratio of manufacturing cost. As to such goods the specific portion of the compound duty was known to be partly protective.

There are many compound duties in the tariff law upon commodities in which the raw material is free of duty and upon which no compensatory rate is necessary, and in these the whole of the specific portion of the compound duty is protective, just as it is partly protective in the cases of cotton warp cloths and other goods which are made in part of the cheaper kinds of material.

THE WOOL DUTY AND ITS PART IN THE TOTALS.

We have in this general statement endeavored to indicate first the conditions under which the woolen industry has been developed, and then some of the complicating factors which must necessarily be taken into account in the determination of rates of duty on the products of wool.

Of the latter the most important remains to be noted; that is, the wool duty. Whether this duty be levied for the purpose of protecting the industry of wool growing, or with no other object but that of raising revenue, neither result can be attained unless the manufacture of wool can be profitably carried on in this country. Unless the home-grown wool can be used here, it must be sold in the world's market at the free-trade price less transportation cost to Europe. If the growers of wool are to be advantaged in any degree by the tariff on wool, or if the Government is to derive any revenue from a duty on imported wool, the wool must be used in American mills. And for either or for both purposes an amount must be added to the protective duty on all imports of woolen articles, sufficient to equal the duty that would have been levied on the wool required to make them if the raw wool had been imported.

The American mill must, independently of any protective duty, be placed upon an equality with its foreign competitor in respect to the cost of raw material. This can be accomplished only by levying upon manufacturers of wool a so-called compensatory duty equal in amount to what would have been charged on the quantity of wool necessary to make the imported article, if the wool had been imported and manufactured here. So much of the whole duty as correctly represents the wool duty on the wool required to make the article is merely compensatory and is in no way protective to the manufacturing industry. If woolen goods could be made as cheaply in this country as elsewhere and there was no need of a protective tariff, it would still be necessary to have this compensatory duty on woolen goods if wool were subject to duty. It is very necessary that this fact should be understood and that it should never be obscured, for most of those who discuss the wool tariff with superficial knowledge refer to the whole duty on woolen goods as though it was all for the benefit of the wool manufacturing industry. Whereas, in point of fact, the actual protective duties on wool manufactures are generally no more than those laid upon other textiles for which no compensatory duty is necessary because the raw materials thereof are not subject to duty.

This association enters no objection to a duty on wool: if necessary to the continuance and further development of wool growing in this country, or for the raising of governmental revenue, we, as protectionists, approve it. We merely emphasize the fact that neither Government nor wool growers can derive any advantage from a duty on wool unless the wool can be used in American mills, and it will be possible to use it in American mills only if the aggregate duty on woolen products includes full compensation for the wool duty and an adequate protective duty fully to cover the higher costs of manufacture. In any comparisons of the duties of the woolen schedule with others it is to be noted that the woolen trade is the only textile industry in this country that has a duty upon its raw material, and that the only wool duty paid upon foreign woolen manufactures is the compensatory rate paid upon their import into the United States.

When due account is taken of these facts, much of the unjust and false criticism that has been directed against the wool schedule becomes pointless, for the net protection realized by the woolen trade is quite comparable with that of most of the other industries which exist in this country by reason of a protective tariff. The net protection actually availed of in the rates on woolen products is unassailable unless the fundamental principles of the protective system itself are wrong.

PARAGRAPHS 360-369—RAW WOOL.

SOME DEFINITE SUGGESTIONS.

The domestic industry having been developed to a point where it is capable of supplying the requirements of the country in woolen products with but normal, or less than normal, realizable profit margin (wages and all other conversion costs being so much higher than abroad, and productive efficiency here no greater), it must be evident that the limit to reduction of duties without injury to legitimate business and without causing curtailment to wages of labor is at the amount of the existing duties that are actually availed of in the prices of domestic products.

If there are any articles of domestic manufacture for which the whole present duty is not needed, it can be safely asserted that in respect to such articles the excess is not availed of and there can be no objection to a reduction by the amount of such excess, provided these articles can be so grouped or classified for duty purposes that the reduction will apply to them without affecting other articles for which the present protective duty is fully necessary, and provided the reduced rates are made in such form that a decline in foreign values will not still further reduce the amount of duty until it is below the line necessary for protection.

The infinite variety of articles embraced in the woolen schedule makes it quite impossible to specify the exactly proper rate for every group, and so to define each group that it would include only such articles as the rates for that group properly and exactly apply to. We have already pointed out that ad valorem rates wholly fail to meet the requirements of the case. The nearest to a general statement that can be made is that the present ad valorem rates in addition to whatever compensatory allowance is necessary to cover the wool duty are in most cases the least that would be sufficiently protective to continue the industry in its present proportions, and with its present rates of wages, that in the case for which it is not practicable to devise duties wholly in specific form, the rates should be compound with at least half of the total sum specific, that for yarns and tops the rates should be specific, and they can readily be levied in that form with more exact justice to all interests than by any other method. In the case of some of the cheaper forms of dress goods and cloths the present ad valorem rates would not be protective, because, as has already been explained, the conversion cost does not decrease in the same ratio as the raw material cost; hence a percentage of total value that would be adequately protective for goods of medium value when applied to those of low value would not produce amounts proportionate to the difference in manufacturing cost of the cheaper goods. Under the present tariff, as has always been thoroughly understood by those who have given the subject more than superficial attention, the deficiency in the ad valorem rate on low-priced goods is made up in the specific rate, which for such goods is and was always intended to be partly compensatory and partly protective.

We subjoin in Appendix I some particulars relative to the protective requirements of tops, yarns, cloths, and dress goods.

AS TO THE PROPOSED BILLS.

We do not know whether or not the wool bills acted upon during the last two sessions are under consideration at this time or whether it is the purpose of your committee to frame an entirely new bill. We shall not, therefore, enter into any detailed discussion of those proposals further than to express our confident opinion that the manufacture of wool from its raw state to finished fabrics would have been utterly ruined by the enactment of either the House bill in its original form, the Senate substitute, or the compromise bill agreed upon in conference, which was finally passed by Congress.

No argument from us should be necessary to support this opinion. The committee which introduced the original bill clearly understood that such would be the effect, for in the accompanying report it estimated that under the proposed bill importations of wool manufactures would be increased to the amount of nearly \$41,000,000 foreign value, which according to the committee's data would be equal in present domestic value to over \$77,000,000 additional imports. As the American mills are now capable of fully supplying the home market, and as here is no other outlet possible for their products than in our own market, it is evident that at least, if the case is no worse than the committee estimates it, \$77,000,000 worth of annual domestic production must be cut off entirely if that bill were enacted.

This alone would throw out of work upward of 35,000 employees now directly engaged in the manufacture of the goods that would be displaced, not to mention the

PARAGRAPHS 360-369—RAW WOOL.

vast additional number required to provide all the mill and other supplies absorbed in this manufacture. But beyond this the introduction of so large an increase of foreign goods and the consequent stoppage of machinery would of necessity create such competitive conditions that it would be impossible to make even the remainder of the goods except at a great loss which must ultimately cause the discontinuance of operations and general liquidation of the business of woolen manufacture.

This is upon the assumption that the committee's estimate of increased importations is correct. But we can see no reason to expect that if additional imports of the present domestic value of nearly \$80,000,000 could be imported, the quantity would be limited to that amount. On what theory is it to be supposed that if the conditions are made so much more favorable to the foreign manufacturer that a quantity so large but no larger would be imported—why so large an amount, but no more? If the new rates will permit the displacement of \$80,000,000 of present value, why not practically all? Where is the line of demarcation—upon what principle of exclusion would the rates of the House bill keep out a quantity sufficient to supply the remainder of the domestic consumption of wool goods?

The compromise or conference bill, while increasing the rates on both wool and manufactures of wool, maintained substantially the same difference between the rates on raw wool and goods, so that the net resulting difference in duty was so small that in respect to most cases the difference would have little or no significance; and the committee's estimate of importations under the original bill may be safely taken to apply with just as much accuracy to the conference bill as finally passed.

In any reduction of the tariff a sufficient period should be allowed between the taking effect of the new duties on raw materials and the taking effect of the new duties on the finished products. Otherwise the manufacturers of the United States will be seriously discriminated against by American lawmakers in favor of the manufacturers of Europe. The woolen business is a business of two distinct seasons, and any new tariff ought not to be put into effect in the midst of either, but rather should become operative at the end of one season and the beginning of the next. The soundness of this principle of legislation was acknowledged by Chairman Wilson and the other Democratic authors of the Gorman-Wilson tariff law, which as to free raw wool went into effect on August 27, 1894, and as to manufactured products on January 1, 1895. This plan left an interval of transition of more than four months, in which American manufacturers could gradually dispose of goods produced on a relatively high level of wool values, and could also begin the fabrication of goods produced on the lower level of wool values which free wool had introduced. That plan was fair to American mills and fair to the public. It softened the shock of changing economic policies, and enabled American manufacturers to meet on more nearly equitable terms the intensified competition of their rivals abroad. Chairman Wilson said of the expedient, that it "was a matter of very great importance, and one to which the majority members of the committee have given as much anxious investigation as to any question connected with the whole tariff bill."¹ Mr. Wilson added that "the committee seemed to be relentlessly driven to the conclusion" outlined above. This action affords good authoritative precedent for the present Committee on Ways and Means.

One severe handicap upon American wool manufacturers of which no cognizance is taken in the proposed bill is the higher cost of mill buildings and equipment in the United States. The Tariff Board in the course of its inquiry had estimates prepared by leading mill architects in this country and in England for buildings of the same size and construction and equipped with machinery to produce similar goods. The board found that the cost of building and equipment in this country for a carded woolen mill was 49 per cent; for a wool preparing and combing mill about the same figure; for a worsted spinning mill 67 per cent, and for a worsted weaving mill 43 per cent greater than in England. There is a duty of 45 per cent upon imported textile machinery, to which packing and shipping charges add 20 per cent and the cost of freight and erection from 7½ to 10 per cent additional. The cost of buildings alone in the United States is between 45 and 51 per cent greater than in England. The higher cost of buildings and equipment compels the American manufacturer to pay from 43 to 47 per cent more than the English manufacturer for his working plant, requiring, of course, a larger capital and imposing heavier fixed charges on the business, including the inevitable allowance for depreciation.

UNJUST CRITICISMS OF THE EXISTING LAW.

It is not within the purpose of this presentation to reply to the many misleading and often altogether false statements relative to the existing schedule which have been made by some of its opponents. Such statements are in large part of so contradictory a character as to be self-answering. But there were some statements made by the authors of the recently pending House wool bill that are so palpably erroneous that we are constrained to refer briefly to them, because the rates contained in that bill were justified upon these premises which if proved unsound necessarily make the rates fundamentally wrong that were predicated thereon.

One such statement asserts that the labor cost in the manufacture of woolen goods in the United States is but 20 or 21 per cent of the whole cost. As proof of the alleged fact figures were quoted from the census returns to show that the total wages paid bear about the percentage mentioned to the total reported value of woolen manufactures. Those who have had experience in the study of industrial statistics know that, valuable as such returns may be when used with a full knowledge of their qualifications and limitations, without such knowledge they are worse than valueless because grossly misleading.

The trained statistician knows that in making the census returns each establishment reports wages paid by it, and that those wages are returned by no others as wages; but that in reporting the value of its product each establishment includes as raw material the cost of the wages of every preceding stage of manufacture; hence there are as many duplications of the prime cost of the raw material as there have been separate stages of manufacture reported. Thus, then, the whole sum of wages appears without any duplication, while the total value of finished products contains one, two, three or more duplications of all the wages but those of the last stage, and an equal number of duplications of the prime cost of material. To illustrate:

A buys raw material costing.....	\$50
Adds labor costing.....	10
Adds expenses costing.....	2
Adds profit.....	3
<hr/>	
Sells to B as finished product for.....	65
B adds labor costing.....	20
Adds expenses costing.....	10
Adds profit costing.....	5
<hr/>	
And sells the product to C for.....	100
C adds labor costing.....	30
Adds expenses costing.....	15
Adds profit.....	5
<hr/>	
And sells the product to D for.....	150
D adds labor costing.....	50
Adds expense costing.....	20
Adds profit.....	10
<hr/>	
And sells his product for.....	230

When these transactions have been converted into industrial statistics they take on this form:

Return by—	Raw material.	Labor.	Ex-penses.	Profit.	Value of product.
A.....	\$50	\$10	\$2	\$3	\$65
B.....	65	20	10	5	100
C.....	100	30	15	5	150
D.....	150	50	20	10	230
Total.....	365	110	47	23	545

PARAGRAPHS 360-369—RAW WOOL.

From which it would seem that the ratios of labor to raw material are as 110 to 545, or about 20 per cent, when in this illustration it is in truth as 110 to 230, or about 47 per cent.

In the statistics for wool manufacture just such duplications are made. A combor buys wool as raw material, makes it into top which the spinner buys and turns into yarn, this in turn is bought by the weaver, who fabricates it into cloth, which may then be sold to a factor for whom it is dyed and finished as the final product of wool manufacture. The wages paid by each are reported as wages but once, but the values each report as finished product and as raw material contain duplications in a sort of geometrical ratio.

In the woollen industry the subject is complicated because some establishments perform all the processes from raw wool to finished fabric, and the returns from such would afford reliable data for the computation of the percentage of labor cost so far as concerned the particular products of such mills, but not for other kinds of goods. Some mills both comb and spin; some do not comb, but spin and weave; and many others carry on but one of the several branches of top making, yarn spinning, and weaving.

There are no available statistics by which the average labor cost of woollen goods can be determined. The proportion of labor to material cost differs widely in different fabrics; for example, in very heavy cloths made of the costliest stock the proportion of labor cost must obviously be very much less than in cloths of very light weight made of equally fine stock. There is such an enormous diversity of woollen products that no one could possibly form a reliable estimate as to average ratio of labor cost, and if it could be done it would still only be an average, therefore valueless in respect to any conclusions regarding the labor cost in other than average goods. We believe, however, it is well within the truth to say that for a large amount of woollen goods the conversion cost is fully 40 to 50 per cent and for a considerable portion as much as 60 per cent.

Since the rates in the House wool bill were justified upon a theory that the labor in woollen goods was but 20 to 21 per cent, those rates are utterly irreconcilable with the preservation of the present scale of wages, when the ratio of labor cost proves to be vastly in excess of the percentage so mistakenly assumed.

Then there was an argument based on the reasoning that if statistics showed the labor cost of woollen goods in English mills to be a certain per cent of the whole, and statistics here showed the American labor cost to be the same rate per cent, then the industry in the United States was at no disadvantage in respect to labor and needed no protection. It would not be worth wasting time over such a statement were it not that it was seriously presented to prove that the rates of the House bill would not be prejudicial to labor engaged in wool manufacture. A simple example in arithmetic will show upon how false an hypothesis that argument was founded:

	In the United States.	In England.
Suppose the total cost of a certain article is	\$1.00	\$0.50
And that the labor cost in the respective countries is40	.20

Then in each case the labor cost is 40 per cent of the total cost, and, according to the inventor of the argument under criticism, there would be no handicap to competition upon the part of the manufacturer in the United States. But just plain sense shows that notwithstanding the similarity of percentage, the labor cost in this example is just twice as much in the United States as in England.

Another fallacy is the assumption, often made, that the American price is always and necessarily equal to the foreign price plus the duty. We have already pointed out that if this were true the profit upon many of the cheaper sorts of goods would be so much larger than on the better qualities that domestic production would all be diverted to these less expensive kinds of manufacture. But besides this obvious fact, and the knowledge of common experience, there is the evidence obtained by the Tariff Board, as, for example, that given on page 14, Volume I, of the board's report on the wool tariff which completely refutes this false dictum; and shows by way of example that for 16 varieties of cheap fabrics the domestic price exceeds the foreign by an average of only 36 per cent of the total duty.

PARAGRAPHS 360-369—RAW WOOL.

A companion error is the one which alleges that the whole duty on woolen goods inures to the benefit of the manufacturer, ignoring the enhancement in cost of raw material by the wool duty, the greater cost of labor, of machinery, and of all kinds of supplies, which in the aggregate absorb nearly all of the duty that can be availed of in domestic price, leaving to the manufacturer a profit generally less than that obtained in woolen manufacture abroad or in any of the other great industries of this country. This error has been made by implication by one who so well knew the flaw in the reasoning that upon a different occasion when justifying a rate on raw wool advocated by him, rather than a higher rate, he said:

"The reason for not maintaining the high tax * * * on raw wool was that if raw wool was taxed, as a matter of justice, not as a matter of protection, there must be a tax on the finished product as a compensation."

With this clear conception of a simple elementary truth, it is inconceivable that any one should continue persistently to imply that the entire duty on wool products was for the benefit of the manufacturer.

It has also been said that a great reduction ought to be made in the duties on woollens because the industry is controlled or dominated by a "trust." So far is this from being true that upward of 900 separate and independent establishments are constantly engaged in the most active and acute competition. The largest single organization produces less than an eighth of the total output; and by its rivals its influence is recognized chiefly as a factor making for lower, not higher, prices. Upon this question the testimony of business rivals should be conclusive; but if corroborative evidence is desired, it is suggested that the customers of the woolen mills be interrogated upon the subject. So confident are we that there is not now and that there never has been any combination in restraint of the most intense domestic competition that we solicit a searching investigation of the facts. In contrast to this situation in the domestic industry we invite attention to the very extensive amalgamation of previously competing establishments that has taken place in various branches of the English woolen trade.

The foregoing are but a typical few of the arguments by which it has been sought to show that the rates of the House bill would permit the American woolen industry as now developed to continue without diminution of the wages paid its employees. The obvious errors in the reasoning must be convincing as to the unsoundness of the conclusion.

It is appropriate upon this occasion to take note also of a misrepresentation of another kind, which has repeatedly had official indorsement from those who have not considered it necessary to verify the statements of sensation mongers before adopting them as their own. It is said that the form of the present wool tariff was agreed upon at a conference between manufacturers and growers in the year 1866. The effort is made to convey to the public mind that this was the work of some dark and wicked conspiracy or combine. This happened so long before any of those who are now active in the industry had a voice in its counsels that we might be under the necessity of believing this calumny, had not those who participated in the conference been so innocent of wrong that they had the proceedings of the conferences (for there were several of them) all stenographically reported, and copies of these verbatim reports of everything said and done were transmitted to the United States revenue commission. The commission incorporated them with its own report when printed as a public document. During various tariff debates throughout many subsequent years the printed account of the proceedings of the conferences between the growers and manufacturers was familiar to public men and freely quoted. And during the debates of the last enacted revision (1909), at the instance of those who advocated adequate protection to the woolen industry, that part of the report of the revenue commission which contained the full proceedings of the conferences between growers and manufacturers was reprinted as a Senate document and made available alike to advocates and opponents of the wool schedule.

The effort to convey an impression that there was anything irregular or improper about the conference between woolgrowers and manufacturers is unwarranted by facts and is most unjust. The conference was held by official invitation of a representative of the Federal Government; the purpose was to aid the Government in formulating a tariff that would prove a practicable revenue measure and at the same time develop both branches of the industry. The experience of nearly half a century since elapsed has proved how successfully that purpose was accomplished, for the woolen schedule has been one of the most productive of the Government's sources of customs revenue, and the domestic woolen manufacture has been developed from comparative insignificance until it is now able to supply all the woolen goods of every kind required by

PARAGRAPHS 360-369—RAW WOOL.

the greatly increased population of the United States—the growth of wool manufacture having much exceeded the increase of population.

And what more natural or more sensible than that the technical skill of those having practical experience in these industries should be employed to recommend a method of applying the duties? In European countries (notably in Germany) this is done as a matter of course. Only here and now have a technical knowledge and practical experience come to be considered a bar to public usefulness with respect to anything related to the subject of such knowledge or experience.

As an appropriate summary of our case, we conclude with the following quotation from a statement recently made by one long identified with the industry:

“Those engaged in the woolen industry ask no special privilege, seek no advantage but that of equal opportunity, neither possess nor desire any beneficence of Government that is not freely available to all citizens. They are in no sense beneficiaries of the tariff except as they share the benefits for the common advantage of all.

“There are no mysteries about the conduct of the woolen industry; every essential fact is accessible.

“It invites the most searching investigation and comparison as to the returns it makes to capital, the wages of its labor, the acuteness of its competition, and the facility with which those of limited financial resource can engage in its various branches under conditions favorable to success.

“It depends upon no secret processes, no controlled patent rights, nor upon exclusive franchises.

“In no branch of the woolen business, from the production of the wool to the distribution of the finished clothing, is there any trust or combination in restraint of trade. No individual nor corporation, nor group of either, exercises a controlling influence in the industry.

“Nor do we know of any instance in which our trade has been concerned in violations of the Federal laws relating to interstate commerce. Although the transactions of the American woolen manufacturers with the United States Customs Service involve amounts of great magnitude, they have been singularly free from even the suspicion of undervaluation frauds.

“It is noteworthy that none of the great accumulations of wealth in this country have been made in the woolen trade.

“Vast individual fortunes have been acquired in transportation, banking, mining, real estate; in wholesale and retail trade; in the use and development of natural resources; in the construction of public utilities; in the publishing of newspapers, and in many other kinds of business, including some few varieties of manufacture; but none such in the woolen trade, though many of its establishments have had a continuous existence of from 50 to 100 years, and were preexistent to the beginnings of most of the great American fortunes.

“The products of the woolen industry are not transported at Government expense. Its properties are not improved and enhanced in value by expenditures of public funds. It is not assisted in the solution of its technical problems by experiment stations and research laboratories conducted by the National or State Government; all of which advantages are enjoyed by other classes of our fellow citizens.

“Believing in the system of protection for the good of the whole people, the woolen manufacturers cheerfully acquiesce in the application of that principle to the raw material they use. They have not presented the spectacle of advocating adequate protection on their finished products while opposing such rates on the products of others which they require.”

NATIONAL ASSOCIATION OF WOOL MANUFACTURERS,
JNO. P. WOOD, *President*.

APPENDIX I.

REPORT OF THE COMMITTEE ON TOPS AND YARNS.

In considering duties on combed wool or tops, which represent the first stage of manufacture between scoured wool and worsted yarns, several conditions surrounding the industry abroad exist which, for the most part, are lacking in this country and exert an influence in any comparison of costs between this country and abroad. These conditions are largely as follows:

In Europe the top trade is generally subdivided between the merchant, who owns the raw wool and is known as a top maker, and the wool comber, who owns the

PARAGRAPHS 360-369—RAW WOOL.

machinery by which the wool is washed, carded, and combed and delivered back to the top maker for a certain fee per quantity, the expenses of interest upon material, buying, sorting, clerical hire, warehousing, etc., falling upon the merchant, while those of labor in plant, necessary supplies, interest on plant, and other overhead charges are borne by the wool comber.

These combined expenses of the top maker and wool comber, while they bear relationship to each other here and abroad, yet in any country will vary on the different qualities of wool, principally on account of length of staple and fineness of fiber. So gradually do these differences of quality and length of staple blend themselves into one another that it is impossible to make for duty purposes different classes of tops, so it has been universally conceded that by considering the costs at home and abroad of combing the fine or merino tops and arranging duties which will care for this difference, such duties would amply cover the difference in conversion cost of medium and coarse wools into tops. An examination into the costs of wool combing abroad reveals the fact that in Bradford the commission fee for combing merino tops is $4\frac{1}{2}$ cents, and we believe that a safe estimate of 2 cents per pound would embrace the expenses of the merchant, making a total cost of conversion from raw wool into finished tops of $6\frac{1}{2}$ cents per pound. In our country abundant testimony is at hand to show that in the woolen trades conversion costs are 100 per cent above those of Europe, so that to equalize by duties the increased cost of combing raw wool into tops, considering solely the merchants' and wool combers' expenses and eliminating enhancements which may be incident to a duty on raw wool, a rate of 7 cents per pound would be required to accomplish this object.

As previously stated, tops are the first resting place in the process of converting wool into worsted goods, and consequently the conversion cost of the same represents the minimum of expenditure in the total cost comprehended in the several necessary operations, and is, with but slight variations from year to year, in this country as well as abroad, a fixed amount. Wool, on the contrary, is a commodity of wide variation in values, and consequently a duty to be effective under all the varying changes of market conditions without being excessive in periods of high values of wool or insufficient when wool is selling at a low price should be levied in specific form. To illustrate the effect which the fluctuations occurring in raw wool have upon the necessary duty levied on tops of 7 cents per pound in specific form, we direct attention to the accompanying table, showing the wide range of prices which has occurred in the last 12 years in combed wool or tops and the variation in ad valorem equivalent which a duty of 7 cents per pound upon the foreign values of tops produces:

Quality of tops.	Low price.	Price.	High price.	Price.	Ad valorem duty required to equalize conversion cost of 7 cents per pound.	
					Low price.	High price.
	<i>Date.</i>		<i>Date.</i>		<i>Per cent.</i>	<i>Per cent.</i>
60s.	Apr., 1901	\$0.33	Oct., 1907	\$0.59	21.21	11.86
64s.	May, 1901	.37	...do.....	.60 $\frac{1}{2}$	18.91	11.57
70s.	Apr., 1901	.40	...do.....	.62	17.05	11.29

We also direct attention to the fact that under the Gorman-Wilson law of 1894-1897, with wool upon the free list and an ad valorem duty of 20 per cent on combed wool or tops, with merino tops selling at 35 cents abroad, a competitive market for the product of our combs with the product of the combs of Bradford and the Continent existed. During the fiscal years of 1895, 1896, and 1897 and part of 1894, 9,223,788 pounds of tops were imported into this country, paying a duty of \$610,713 in revenue to the Government.

Worsted yarns.—Any consideration of a duty on worsted yarns having for its purpose the continuance of the industry in our country under conditions of employment as general as exist at the present day will, as in the case of worsted tops, have to take into account the manner in which this industry is established abroad in order to form a proper judgment of manufacturing costs there as against American conversion costs.

PARAGRAPHS 360-369—RAW WOOL.

In England and upon the Continent the business is largely subdivided between the merchant, who owns the combed wool or tops, and the commission spinner, who spins the worsted yarns for a fixed fee per quantity. The merchant, as in the case of tops, has to bear the interest on the materials, the warehousing and transportation demands, and the clerical and office outlays incidental to this business. The spinner in turn takes care of the wages expended about his plant, with necessary supplies for its operation, light and power, insurance, interest, and the general overhead charges incident to this kind of mechanical operations.

The costs of commission spinning for various sizes and counts of worsted yarns are thoroughly established in Bradford, and we would quote on standard sizes in twofold yarns to-day:

Quality.	Cost (per pound).
24s.	\$0.08
32s.	.10
36s.	.11
40s.	.12
50s.	.16
60s.	.24

These commission prices carry with them a profit to the spinner, which profit, it might be fairly said, would be an amount sufficient to embrace the merchant's charges before referred to, so that the net cost of converting combed wool or tops into finished worsted yarns of standard sizes could be reckoned upon the commission charge for various counts based on the conditions just named.

Taking the manufacturing cost in this country as double those of Europe, a duty of these amounts on these specific numbers or such subdivision of the same as to count or size would be necessary to safeguard the American market against the product of foreign machinery.

In the spinning of yarns we have eliminated a factor which we previously referred to as having a marked influence upon costs in the combing of wools, and that is the question of quality and length of fibre. In the converting of tops into the sizes of worsted yarns to which they can economically be spun, the conversion cost varies but little between a fine and a coarse quality of stock; therefore the difference between conversion costs abroad and here can be closely approximated in a constant figure from year to year. To meet this requirement we propose an arrangement of duties on yarns as follows:

The word number appearing in this paragraph, whether applied to woolen or worsted yarns, shall be the number of hanks per pound, a hank being a measure of 560 yards of single yarn or roving.

On tops advanced by process of manufacture to any number of sliver or roving or single yarn up to single 12s, the duty shall be 12 cents per pound.

On all numbers exceeding single 12s and up to and including single 40s, the duty shall be 12 cents per pound plus two-tenths of a cent per number per pound on all numbers in excess of single 12s.

On all numbers exceeding single 40s and up to and including single 60s, the duty shall be 18 cents per pound plus four-tenths of a cent per number per pound on all numbers in excess of single 40s.

On all numbers exceeding single 60s the duty shall be 26 cents per pound plus six-tenths of a cent per number per pound on all numbers in excess of single 60s.

On all rovings and yarns advanced beyond the condition of singles by grouping or twisting two or more rovings or yarns together up to and including number 12s, the duty shall be 2 cents per pound in addition to the foregoing duties on single yarns.

On all numbers exceeding 12s and up to and including 40s the duty shall be 2 cents per pound, plus one-tenth of a cent per number per pound on all numbers in excess of number 12s, in addition to the duties on single yarns of corresponding numbers.

On all numbers exceeding 40s up to and including 60s the duty shall be 5 cents per pound, plus two-tenths of a cent per number per pound on all numbers in excess of number 40s, in addition to the duties on single yarns of corresponding numbers.

On all numbers exceeding 60s, the duty shall be 9 cents per pound, plus three-tenths of a cent per number per pound, on all numbers in excess of number 60s, in addition to the duties on single yarns of corresponding numbers.

PARAGRAPHS 360-369—RAW WOOL.

On all of the above when bleached, dyed, colored, stained, or printed the duty shall be 5 cents per pound in addition to the other duties prescribed in this paragraph; and if singed or gassed there shall be a further addition of 3 cents per pound.

For the purpose of showing the influence these necessary rates, reflecting difference in conversion costs between our country and abroad, would have if transformed into ad valorem equivalents, taking yarn prices at the high and low figures in Bradford which they have reached during the past 12 years, we insert below a schedule extended in ad valorem equivalent:

YARN DUTIES.

Statement showing variation of ad valorem equivalent upon high and low values of yarns, 1901 to date when specific duties proposed are applied.

Count.	Low-price date.	Price.	Specific duty.	Ad valorem equivalent.	High-price date.	Price.	Specific duty.	Ad valorem equivalent.
2/24.....	Jan., 1902	25½	17½	69.01	May, 1906	53½	17½	32.9
2/32.....	do.....	32½	20	61.54	do.....	63	20	31.7
2/36.....	July, 1901	42	21½	50.5	do.....	67	21½	31.6
2/40.....	Apr., 1901	45	22½	49.8	Oct., 1907	76	22½	29.5
2/48.....	May, 1901	52	27½	53.5	do.....	81	27½	38.5
2/60.....	Apr., 1901	61	35	57.4	do.....	91	35

Before leaving the subject of combed wool and yarns it might be well to add that the industry in our country, due to existing revenue laws, has developed to substantially the full requirements of the American people for both tops and worsted yarns, and that conversion costs, established and used in figures quoted above, are predicated upon full employment of machinery. Any substantial importations from abroad would lessen this employment, with the effect of correspondingly enhancing unit costs of production and making correspondingly less effective any figures upon conversion costs which have been used in these computations.

REPORT OF THE COMMITTEE ON CLOTHS.

Eliminating the compensatory duty required for such duty as may be placed on wool, we arrive at the duty necessary to protect American manufacturing costs in the following manner:

It must first be noted that we have to deal with fabrics of marvelous diversity, both in material and in construction, and consequently great variation in the proportion of conversion cost to total cost. What are the facts as to the excess of our conversion costs over the English?

In Volume III of the Tariff Board report, page 692, we find the American and English conversion costs of 46 fabrics classified as to character. The average excess of the American costs in each group is as follows:

	Per cent.
Staples and piece dyes.....	105
Serges.....	123
Fancy woollens.....	131½
Fancy worsteds.....	145
Women's wear, all wool.....	111
Light weight women's wear, all wool.....	116½
Cotton warps.....	108

This statement indicates that we need a protection of from 105 to 145 per cent of the conversion cost to place us on the same basis as our English competitors, but as it would be impracticable to classify fabrics and apply a different rate to each class, we must adopt one rate for all. A fair average would be 125 per cent, and this would be slightly more than necessary on some classes and less than the required amount on others.

In order to apply this amount of protection on the conversion cost it is necessary to determine what per cent the conversion cost is of the total cost. An examination of the costs of a great diversity of fabrics shows that this percentage varies from 30 to 70 per cent, and there are some fabrics made of very cheap material in which the conver-

PARAGRAPHS 360-369—RAW WOOL.

sion cost is even higher than 65 per cent. The average of all is certainly not less than 45 per cent, and applying the rate of 125 per cent before mentioned to this, we have 56 per cent as the minimum rate on the total value required for protection on the average fabric. We are, however, certain that a rate of 60 per cent, with the addition of all possible safeguards against undervaluation, will not unduly protect any class of fabrics, and it is evident from the foregoing figures that there are some which would lack the necessary protection.

It is quite generally believed that the lower the value of a fabric per pound the lower is the rate of ad valorem duty required to protect. As a rule the reverse is the fact, because the percentage of conversion cost in a low-grade fabric is greater than in the high grade.

We believe that a schedule on cloth similar to that hereto attached, in which compound duties about one-half specific and one-half ad valorem are applied to graded values, would assist in preventing undervaluation and be vastly preferable both from a revenue and protective standpoint to a single ad valorem duty:

On cloths, flannels, felts, and all fabrics made wholly or in part of wool not specially provided for in this section, valued at not more than 20 cents per pound, the duty shall be 6 cents per pound, and in addition thereto 25 per cent ad valorem.

Valued at—

- More than 20 cents, not over 25 cents per pound, 7 cents and 25 per cent.
- 21 cents, 7 cents and 25 per cent (equals 58½ per cent).
- 25 cents, 7 cents and 25 per cent (equals 53 per cent).
- More than 25 cents, not over 30 cents per pound, 8 cents and 25 per cent.

- \$1.40, 35 cents and 30 per cent (equals 55 per cent).
- \$1.50, 35 cents and 30 per cent (equals 53 per cent).

REPORT OF THE COMMITTEE ON DRESS GOODS.

The committee on dress goods, as a result of close consideration of this branch of the woolen manufacture, is convinced that the dress-goods industry requires for its continuance in this country a rate of tariff duty somewhat higher than is necessary on heavier woolen goods.

It is estimated in the report of the cloth committee that the conversion cost—that is, labor, general expense, and fixed charges—is from 30 to 70 per cent of the total cost of cloths and averages from 45 to 50 per cent. But in certain dress goods, notably cotton-warp fabrics, the conversion cost represents a much greater proportion of the total cost than is the case on the average with cloths. This higher proportion of con-

PARAGRAPHS 360-369—RAW WOOL.

version cost to the total cost of such dress goods is due to the relatively small proportion of this total cost that is represented by raw material.

That is, the conversion cost of dress goods being greater in proportion to the total cost than is the case with cloths in general, the dress-goods manufacture is on a more distinctively competitive basis even under the present tariff duties—a fact that is readily demonstrated by the importations of these lighter fabrics.

To prove that the present tariff rates on these light-weight dress goods are no more than adequate, the Tariff Board states (vol. 1, p. 13), "Women's dress goods weighing 4 ounces or under per yard are still imported in large quantities." Again the Tariff Board (vol. 1, p. 150) states, "Unlike other paragraphs of Schedule K, the very cheapest dress goods dutiable under these paragraphs show a large importation." Again the Tariff Board (vol. 1, p. 151) states, "The total value of the imports under the dress-goods paragraph is generally higher than on the imports under any other paragraph providing rates on manufactures of wool."

Under the Gorman-Wilson law of 1894-1897, which granted free wool and provided a duty of 50 per cent on most of the dress goods imported, the imports of dress goods in 1896 went up to \$19,494,268, foreign valuation. If that was the result under 50 per cent and free wool the effect of any such rate as 45 per cent, with wool dutiable at 20 per cent, could not be but disastrous to the dress-goods manufacture of America.

Imports of dress goods under existing rates of duty are very large, as shown by the following records of the Department of Commerce and Labor—in order to express the total imports in square yards it has been arbitrarily assumed by us that the goods weighing over 4 ounces per square yard average $5\frac{1}{2}$ ounces to the square yard:

	107,837,000	26,530,000
Total.....	247,056,000	98,722,000

It is manifest from the above tables that in the fiscal year 1910, a year of large domestic production, the imports of dress goods amounted to more than one-sixth of the total quantity of dress goods produced in the United States.

The distinction between cloths and dress goods, due to the proportionately larger conversion cost of the latter fabrics, has been recognized for many years in United States tariff legislation. The Dingley law of 1897 and the Aldrich-Payne law of 1909 contained special paragraphs covering dress goods designed to assure adequate protection, and the proposed bill bearing the name of the present chairman of the Committee on Ways and Means sets the duty at 40 per cent on cloths and at 45 per cent on the lighter weight goods that, as the figures of imports show, are on a more markedly competitive basis. Such importations can be attributed only in small part to the demands of fashion or any preference for "exclusive" foreign goods. It will be observed from the statistical statement above that a very great part of the imports consists of dress goods valued at not exceeding 15 cents per square yard—low-priced fabrics of simple construction. These goods are imported not because wealthy and fashionable purchasers require them, but because they are being produced abroad so cheaply by low-wage labor that American mills, even under existing duties, find it very difficult to compete.

The peculiarly competitive character of the dress-goods business in this country is frankly and justly acknowledged in the report of the chairman of the Committee on Ways and Means in placing his proposed bill before the Sixty-second Congress. The chairman in his report estimates that the probable imports of dress goods, etc., under the reduced duties which he recommends would be nearly three times the present importations. If this prediction is fulfilled, it will amount to the turning over of practically one-half of the American dress-goods market to foreign manufacturers, the crippling or closing of many American mills, and the idleness and distress of thousands of their working people. We respectfully protest against this as a grave injustice to an industry which, as the facts and figures cited above abundantly prove, is already on a basis of the sharpest competition with the manufacturers of foreign nations.

APPENDIX II.

WAGES IN AMERICA AND EUROPE.

[A report of a committee of the National Association of Wool Manufacturers.]

A special committee of the National Association of Wool Manufacturers, composed of gentlemen who had had personal experience in the manufacture on both sides of the Atlantic or had connections giving them the requisite information, made an investiga-

PARAGRAPHS 360-369—RAW WOOL.

tion in 1911 of the comparative wages in American and European woolen mills. The report of the committee as transmitted to the president of the association was as follows:

APPENDIX III.

SPECIFIC OR AD VALOREM DUTIES.

In Hon. Daniel Manning's report, as Secretary of the Treasury, on the revision of the tariff, dated February 16, 1886, Mr. Manning quotes the opinion of his distinguished predecessors as follows:

Secretary Gallatin, 1801, said: "Without any view to an increase of revenue, but in order to guard as far as possible against the value of goods being underrated in the invoices, it would be eligible to lay specific duties on all such articles, now paying duties ad valorem, as may be susceptible of that alteration."

Secretary Crawford, 1818, submitting to Congress 24 amendments, all of which were embodied in the tariff act of 1818, said: "Whatever may be the reliance which ought to be placed in the efficacy of the foregoing provisions, it is certainly prudent to diminish, as far as practicable, the list of articles paying ad valorem duties. The best examination which circumstances have permitted has resulted in the conviction that the following list of articles now paying ad valorem duties may be subjected to specific

PARAGRAPHS 360-369—RAW WOOL.

duties." (Mr. Crawford specifies over 100 articles, the list of which is printed in his report, whereon he advised that the rates be changed from ad valorem to specific.)

Secretary Forward, 1842, said: "With a view to guard the revenue against fraudulent undervaluations which can not be entirely prevented by the existing schemes of ad valorem duties, specific duties are proposed in nearly all cases when practicable. The operation of the system of specific duties may not be perfectly equal in all cases, in respect to the value of the articles included under it. But this inconvenience is more than compensated by the security of the revenue against evasions, and by the tendency of specific duties to exclude worthless and inferior articles, by which purchasers and consumers are often imposed on."

Hon. John Sherman, Senator from Ohio for many years, and Secretary of the Treasury from 1877 to 1881 under President Hayes, said, in a speech at Columbus, Ohio, in 1875: "In every case where the nature of the article will allow, the duty should be specific."

Secretary Manning adds: "It will be observed from the historical review which has been attempted of the tariff legislation of the country from the organization of the Government down to the present day, that increasing severity of legislation to prevent custom frauds has come down to us side by side with the raising of the rates of duty and with an enlargement of the application of ad valorem rates. The true inference to be drawn from that fact can not, I think, fail to appear.

"One advantage, and perhaps the chief advantage, of a specific over an ad valorem system, is in the fact that under the former duties are levied by a positive test which can be applied by our officers while the merchandise is in the possession of the Government and according to a standard which is altogether national and domestic. That would be partially true of an ad valorem system levied upon 'home value,' but there are constitutional impediments in the way of such a system which appear to be insuperable. But under an ad valorem system the facts to which the ad valorem rate is to be applied must be gathered in places many thousand miles away and under circumstances most unfavorable to the administration of justice.

"One hears it often said that if our ad valorem rates did not exceed 25 or 30 per cent, undervaluation and temptation to undervaluation would disappear, but the records of this department for the years 1817, 1840, and 1857 do not uphold that conclusion. Of course I am very far from advocating the universal application of specific rates, but I do believe it to be possible for the more experienced and conscientious of our appraising or examining officers in different parts of the country and for the experts in this department to prepare a plan for the prudent enlargement of specific rates which will greatly promote the welfare of the Government and of the country."

OPINIONS OF IMPORTERS.

Secretary Manning, in his report, quoted the opinions of American merchants and importers, nearly all earnestly in favor of duties.

A. G. Jennings & Sons, silk laces, trimmings, etc., New York, said: "The only remedy is specific duties, at least for all textile fabrics. This is the general opinion of honest importers as well as that of various manufacturers."

Peter Wright & Sons, earthenware, pig iron, tin plate, salt, etc., Philadelphia, said: "Frauds upon the revenue, while no doubt much greater upon goods subject to ad valorem duties, are not unknown to goods subject to specific duties, though in the latter case they require collusion with the weigher."

Codman & Hall, soap, olive oil, Boston, said: "We believe in having specific duties wherever it is possible, as it is a safeguard against dishonesty."

James A. Hayes & Co., fruits and vegetables, Boston, said: "Fixed specific rates tend to the bringing of a sounder and better quality of commodities to this country."

Phelps, Dodge & Co., metals, New York, said: "We are convinced of the great advantage to the Government and to the importers of simple specific duties on all metals. They are easily collected and can not be evaded except by direct fraud in weight."

William F. Reed, silks and cloths, Philadelphia, said: "An ad valorem rate of duty can hardly be safely levied on products having well-known and clearly established foreign market value, while on goods extending over a wide range of prices produced by various countries and liable to all shades of quality it must always offer a premium for fraud, making fairness an impossibility and causing the just to be speedily driven out of the traffic by the unjust."

Marshall Field & Co., dry goods, Chicago, said: "Our endeavor has been to substitute specific for ad valorem rates, especially on such merchandise as we have suffered injury on because of undervaluation."

PARAGRAPHS 360-369—RAW WOOL.

Arnold, Constable & Co., dry goods, New York, said: "In the present tariff the duties are almost entirely of ad valorem rates, and where double duties are collected the ad valorem is so high as to give the foreign manufacturer a large profit in undervaluations; this has driven the honest importer entirely from the market in many articles, such as silks, velvets, and dress goods, compelling him to have his goods delivered here in dollars and cents by the agents of the foreign manufacturers."

APPENDIX IV.

The conversion cost of these two samples (on file) is practically the same, though one is all worsted and the other is half cotton and half worsted.

Owing to the difference in total value of the cloth an ad valorem rate that would give sufficient protection on the all worsted would be inadequate for the cheaper cloth when applied to its lower cost; while an ad valorem rate that would be sufficient on the lower value would yield more protection than necessary when applied to the higher cost fabric.

TESTIMONY OF F. A. ELLENWOOD.

Mr. ELLENWOOD. Mr. Chairman and gentlemen of the committee, I do not wish to take up too much of your time. We have prepared quite a lengthy brief here which I wish to file, but there are one or two points that I would like specially to call to your attention.

The woolgrowers of the United States find themselves in accord with some of the declarations of those who will control the policies and acts of the incoming Democratic Congress. We agree with President-elect Wilson when he declares no legitimate industry in the United States should or need fear the forthcoming tariff revision, for we feel that the woolgrowing and the wool manufacturing industry must fall within the classification of "legitimate industries." At Pittsburgh, on October 18, during the progress of the recent, campaign the President elect expressed himself as follows:

I welcome the opportunity of stating what I believe to be the well-considered position of the Democratic Party with regard to the tariff. It is absolutely essential that we should be entirely frank with one another in the discussion of this fundamental question.

The business men of the country owe it to themselves to face the facts as they are and to meet them in a spirit of accommodation which has no touch either of radicalism or of more theoretical reconstruction in it.

The Democratic Party does not propose free trade or anything approaching free trade. It proposes merely a reconsideration of the tariff schedules such as will adjust them to the actual business conditions and interests of the country.

We desire to discuss this matter with entire frankness, as suggested by the President elect, and are willing to abide by the results of any consideration of the tariff schedule under discussion as will adjust themselves to our actual business. We agree with the Speaker of the House of Representatives, Mr. Clark, in his recent utterance to the effect that no industry should seek or will receive any benefits, direct or indirect, beyond those which will flow from the application of the theory of a competitive tariff.

We feel in perfect accord with the statement made by the chairman of the Ways and Means Committee, Mr. Underwood, to the effect that no industry should be discriminated for or against in any tariff adjustment that may be made. In other words, as your honorable chairman has stated, as long as it is necessary to levy import duties

PARAGRAPHS 360-369—RAW WOOL.

for the purpose of providing the necessary revenue for this Government, just so long should such duties be equitably distributed in such a manner that each and every industry should receive its proportional amount of that indirect protection which must necessarily follow the imposition of such duties.

It is a matter of common knowledge that the wool-growing and wool-manufacturing industries have been built up and capital invested in them under the legitimate provisions of the law of the land. Notwithstanding our desire that no harm shall come to any legitimate enterprises through the readjustment of the tariff, it is a fact that more or less disturbances must necessarily follow the changes that will be made. Therefore in the name of justice and consistency we plead with your committee to bear in mind the following plank taken from the Baltimore platform:

We recognize that our system of tariff taxation is intimately connected with the business of the country, and we favor the ultimate attainment of the principles we advocate by legislation that will not injure or destroy legitimate industry.

In line with the thought embodied in this plank we respectfully urge that in the "ultimate attainment by legislation" of the purposes sought by the tariff revision that sufficient time be given for an adjustment of our industry and the changed conditions which it must meet. We feel that any act passed should not take effect within a year nor in any event prior to January 1, 1914. In the interim there will be given an opportunity to those interested to so adjust their business affairs as to meet the changed conditions with a minimum amount of shock.

It is not for the woolgrower to state what protection should be given him under the law, but the report of the Tariff Board makes it clear that the difference in the cost of producing 1 pound of scoured wool in this country and Australia, without including interest, is 24 cents; therefore if it shall be the purpose of Congress to place our grower upon the same basis as the man with whom he has competed in the past, 24 cents per pound scoured pound would accomplish this. Undoubtedly some will think this too high, and it has been suggested that our tariff be 18 cents per scoured pound. At the present time the duty on scoured wool is 33 cents, and if it were reduced to 18 cents it would mean a reduction of 45 per cent in the compensatory duty. It is this duty that concerns the consumer, for it is this that he pays because of the tariff upon wool. We therefore hope that in a readjustment of the schedule that your committee may see its way clear to grant a specific duty on the scoured content of imported wool of not less than 18 cents a pound. Such a rate would give a competitive tariff.

Now, Mr. Chairman and gentlemen of the committee, in addition to reading that, I scratched down a few notes since the adjournment at 6 o'clock here, and I would also like to add jut a few remarks about the legitimate industry, etc.

If the policy as outlined by the Baltimore platform and President-elect Wilson, your chairman, Mr. Underwood, and the Speaker of the House, Mr. Clark, is to be pursued by this committee, to the effect that no legitimate industry is to suffer, then I am sure no wool grower has cause for alarm, for our industry as now conducted is certainly

PARAGRAPHS 360-369—RAW WOOL.

most legitimate, highly honorable, important, and worthy of your most earnest consideration.

At one time stock men, both sheep and cattle, did roam over the Government land of the West almost at will with but little investment in either land or improvements and with much less cost than to-day. That day has long since passed, for now most western sheep men own farms or ranches where they put up hay for winter feeding and pay a Government fee for grazing in summer upon the national forests, where they are allotted a certain limited area over which they may graze.

Some there are who own but little land, but these will be found buying hay from the farmer when easily accessible, or if not they buy corn shipped from the Middle West, or others prefer cotton seed to corn. For these reasons we feel that our industry along with others is entitled to a competitive tariff. And I trust no member of the committee would think of placing wool upon the free list as suggested by some of the gentlemen who have preceded me. If, as has been suggested to this committee that wool should be placed upon the free list for the benefit of the consumer, who is the only one considered, evidently, in that case, then, I would suggest that it would be still more beneficial to him to place cloth and manufactured clothing on the free list also, as raw wool is the smallest part of the cost. We hope, however, that will not be done, and trust this committee will provide sufficient duty on manufactured goods to enable the American manufacturer to compete with the foreigner.

Just a few words in regard to the present law. At the time the basis of this law was first framed, 1867, it was agreed that the duty on scoured wool of class 1 should be 33 cents. At that time the wool in the United States and foreign countries did shrink from 60 per cent to 70 per cent, and 66 $\frac{2}{3}$ per cent was taken as the basis which would make the duty on wool in the grease 11 cents per pound, and as it took about 1 $\frac{1}{2}$ pounds of scoured wool to make a pound of cloth, the compensatory on cloth was placed at 44 cents.

Conditions began to change, the demand for mutton began to increase, facilities for handling dressed meat were improved, and growers began to produce a mutton type of sheep which meant a crossbreed and a wool of lighter shrinkage. Importers soon took advantage of this changed condition and began selecting the wools of lighter shrinkage. In addition to that, the skirting clause was added to the law, which gave them an additional advantage by still more reducing the shrinkage, until to-day the average shrinkage on imported wools for clothing is only about 40 per cent, thus reducing the duty cost per scoured pound to 18 or 20 cents instead of 33 cents. As it is this 33 cents on scoured wool that concerns the consumer, we agree with this committee and the Tariff Board that the wool duties should be reduced, but we also ask that the method of assessing the duties be changed. We ask that they be assessed upon the scoured content. The reason for that is because the scoured content is less subject to these inequalities and would come nearer providing the wool grower the amount of protection that the law intends that he should have. The ad valorem rate of duty, under any rate, as has been stated before, would be a varying quantity, always high when

PARAGRAPHS 360-369—RAW WOOL.

wool is high and lowest when wool is lowest, and affording the wool grower less protection when most needed, and most protection when he needs it least.

The CHAIRMAN. Your time has expired, Mr. Ellenwood.

Mr. HULL. Which branch of the industry do you represent, Mr. Ellenwood, most particularly?

Mr. ELLENWOOD. I have never been connected with any branch except the growing of wool. I represent the National Wool Growers' Association and am also secretary of the California Wool Growers' Association.

Mr. HULL. Do you think the scoured content as the basis for specific duty is the most practical and the fairest method that can be devised?

Mr. ELLENWOOD. Yes, sir; by all means.

Mr. HULL. You also think that when you get to cloth, a specific duty on the wool content of the cloth would be the most practical and the fairest method of assessing that portion of the tariff?

Mr. ELLENWOOD. Well, by that I suppose you mean the compensatory duty on the cloth?

Mr. HULL. Well, a bill was offered here during last year proposing a specific duty on the wool content. It would not make any difference whether it was compound or what character of duty it was; it was supposed to be levied on the wool content of the cloth.

Mr. ELLENWOOD. Well, as far as we are concerned, we are not particularly posted on the cloth end of it, but that bill is satisfactory to us, so far as we are concerned. Just how it affected the manufacturer, I am not prepared to say, because I am not posted on that branch of the subject.

Mr. HULL. Well, getting back to the scoured content proposition, that you are most directly interested in, when was that method first suggested?

Mr. ELLENWOOD. If I remember correctly, I think in the tariff hearings of 1909, where some manufacturer, I think, suggested that as the right method. As far as the woolgrowers are concerned, I think the first time it was ever suggested by the woolgrowers was in our paper and in a letter that I wrote to our Congressman, Mr. Raker, and which letter appeared in the Congressional Record, I think it was August 22—yes, August 22, 1911.

Mr. HULL. The price of scoured wool varies probably from 10 to 60 cents, does it not, according to the quality?

Mr. ELLENWOOD. It varies considerably; yes, sir. I do not know that any of it is as low as 10 cents, but it varies considerably.

Mr. HULL. Well, if you fastened a flat rate of specific duty of 18 cents a pound to 60 cents a pound scoured wool, and then compared that with the same rate on 10 or 15 or 20 cents a pound scoured wool, it would constitute a great inequality, would it not?

Mr. ELLENWOOD. From that viewpoint it would; yes, sir. But the right way to overcome that, I think, that this law should be framed so it should be as near fair as possible in every respect, I think that is the only possible objection that I know of that can be offered against the scoured pound, and to remedy that I would suggest that an ad valorem rate limit be placed, at which the scoured pound rate

PARAGRAPHS 360-369—RAW WOOL.

would not exceed an ad valorem equivalent of so much, whatever this committee might think was right.

Mr. HULL. Would it not be better just to fix an ad valorem in the first place?

Mr. ELLENWOOD. No, sir; because that would hurt the wool-growers first, very materially, on account of undervaluation. The undervaluations would be very great, and the value of the wools imported on an ad valorem method of collecting duties would not be anywhere near what they are to-day, in my opinion, and the wool-grower would not receive in the way of protection, in my judgment, more than 50 or 60 per cent of the amount that would be levied under the ad valorem basis. For instance, if it were 20 per cent, as has been suggested by this committee, the wool-grower would not receive more than 12 per cent in the way of protection.

Mr. HULL. Well, he does not receive a satisfactory degree of protection at all under the present rate, does he, in certain respects?

Mr. ELLENWOOD. Well, in certain respects, no. We have stated our objections to the present law and the reasons for them, as I have stated here, are owing to the changed conditions. At the time that law was framed I think it was perfectly just and right to the wool-grower and to all branches of manufacturing, perhaps, but owing to changed conditions and the demand for mutton, as I have stated, the growers began to produce a mutton type of sheep, which meant crossbreed or light shrinkage wool, and then the importers began to select that very lightest of light shrinkage wool, and then also there was the skirting clause which reduced that still more.

Mr. HULL. There are a hundred or more different kinds and qualities of wool, are there not?

Mr. ELLENWOOD. Yes, sir; a great many. I do not know just how many.

Mr. HULL. The difference is in fineness and rank and texture and fiber, according to climatic and other conditions?

Mr. ELLENWOOD. Yes, sir.

Mr. HULL. Well, when our large wool manufacturers go to Boston, or go to the world's market, London, are their buyers able to distinguish between the different kinds and qualities of wool when they go to purchase it and bid on it?

Mr. ELLENWOOD. They certainly are. I do not think they would keep a man very long who would not be capable of doing that.

Mr. HULL. Then they are able to distinguish it with considerable-accuracy—the different qualities and the values of it?

Mr. ELLENWOOD. Yes, sir.

Mr. HULL. Then why can we not with the same accuracy at the customhouse assess an ad valorem duty on it without any undervaluation or permitting any undervaluation?

Mr. ELLENWOOD. It might be possible for the Government to secure a man who could so determine that, but if an importer came to the port of entry here, to that official, and showed him his statement from the man where he bought this wool, that the price he paid was so much, then I do not care how expert this man might be, I think that statement from where he bought this wool would determine the value.

PARAGRAPHS 360-369—RAW WOOL.

The CHAIRMAN. You are mistaken about the law, Mr. Ellenwood.

Mr. ELLENWOOD. Is that so?

The CHAIRMAN. Yes. The law requires the customhouse official, regardless of the invoice, to assess the valuation of goods at the market value of the country from which it was imported at the time of the importation, regardless of the invoice, and there is nothing better known—no commodity better known in the markets of the world than raw wool, and the prices on it, because it is a commodity that is sold in the open market.

Mr. ELLENWOOD. Well, I just want to say in that respect that the way the undervaluation and the evading of the duty could be done—not saying it would—the same as it is now; when a man purchased a million pounds of wool in Australia or South America and paid the price of 15 cents, as it comes from the sheep, he could sort that wool and skirt that wool the same as he does now, and increase the value very materially.

The CHAIRMAN. Not with an ad valorem rate.

Mr. ELLENWOOD. Well, he could do all that in the country—in the place where he bought it. He could ship the skirts and the poorer grades of the wool where there was no duty at all, the same as is done now.

The CHAIRMAN. I do not think you need worry about the under valuation.

Mr. ELLENWOOD. I do not think the woolgrower would ever receive, under any system of the tariff—even under the scoured pound—if it were 18 he would not receive 18 in the way of protection, so far as that is concerned, the same as it is 33 now, and he does not receive much over one-half of that.

The CHAIRMAN. Any further questions?

Mr. FORDNEY. The Tariff Board's report shows that the cost of producing South American wool is from 4 to 5 cents a pound. They further show that the cost of Australian wool is practically nothing, after crediting up to the flock the moneys received for the sale of sheep for food purposes. That being true, and that being the great wool-producing country, if wool were on the free list it would not be possible for you to compete with Australian wool and succeed in the production of wool in this country, would it?

Mr. ELLENWOOD. No, sir.

Mr. FORDNEY. Therefore, you must have a measure of protection against that class of cheaper wools or you can not succeed?

Mr. ELLENWOOD. Yes, sir.

Mr. FORDNEY. It is true that there is no market in the world for your wools except the woolen mills in this country?

Mr. ELLENWOOD. Yes, sir.

Mr. FORDNEY. And unless adequate protection is given to the products of the woolen mills of this country, which are your only market, so that the manufacturers of woolens are prosperous, you suffer immediately?

Mr. ELLENWOOD. Yes, sir.

Mr. FORDNEY. Because, as I have said, they are the only purchasers of your wool?

Mr. ELLENWOOD. Yes, sir.

PARAGRAPHS 360-369—RAW WOOL.

Mr. FORDNEY. Therefore, it is very important that you should, in asking for protection on your wool, ask for protection also to the buyers of your wool, which are the manufacturers of the woolsens?

Mr. ELLENWOOD. Mr. Fordney, if you will permit me—

Mr. FORDNEY. Yes.

Mr. ELLENWOOD. In our brief we did that, and I also did that in my few remarks that I scratched down after 6 o'clock.

Mr. FORDNEY. Yes; but I wanted to bring it out clearly that those two industries must go hand in hand. That is to say, the woolen manufacturers of this country could survive without you, by getting their material from other parts of the world, but you can not survive without the woolen manufacturers of this country to sell your products to?

Mr. ELLENWOOD. No, sir; we can not.

Mr. FORDNEY. Therefore, it is very important that the woolen manufacturers have adequate protection in order to protect you?

Mr. ELLENWOOD. Yes, sir.

Mr. FORDNEY. Now, the gentleman speaks of undervaluation. I am afraid that the chairman might be mistaken about the possibility of undervaluation. As an illustration—

The CHAIRMAN (interposing). I think there are cases of undervaluation, but what the chairman stated was that wool was less subject to it than any other commodity we have.

Mr. FORDNEY. Yes; I understood that. I think, however, Mr. Chairman, that there could be undervaluations there. For instance, I know of a case of chinaware that came into this country under the ad valorem duty, and the gentleman, after investigation—I saw that gentleman in the room to-day—he testified before this committee four years ago that upon careful investigation he had found on \$9,000,000 in round numbers in the valuation of chinaware—tea sets had come into this country at a valuation on the invoices and paid duty on the invoices on four and one-half million dollars valuation; therefore this Government was robbed out of one-half the duty on these goods. If that is true on a tea set, it ought to be pretty clear that the value—that if it is possible to undervalue such articles that are staple goods, well known as to their value in the market, it should be possible to undervalue wool, if put upon an ad valorem basis.

Mr. ELLENWOOD. Much more easy, in my opinion.

The CHAIRMAN. Are you through, Mr. Fordney?

Mr. FORDNEY. Yes, sir; I just wanted to bring out that point. I am not disputing the chairman, but I still think there is a possibility of it.

Mr. HULL. How long have you been secretary of the National Wool Growers' Association?

Mr. ELLENWOOD. I am not secretary of the National Wool Growers' Association. Dr. McClure is secretary. I said I was a member of the National Wool Growers' Association, and in addition to that I am executive committeeman from California; I am secretary of the California Association.

Mr. HULL. How long has the National Wool Growers' Association and the National Wool Manufacturers' Association been going hand in

PARAGRAPHS 360-369—RAW WOOL.

hand, to use the language of Mr. Fordney, in conducting their tariff propaganda?

Mr. ELLENWOOD. I am sure I do not know they have been going hand in hand at all, but I know positively for the last three years they have been going right the other way, absolutely.

Mr. HULL. Is that the fault of the manufacturer?

Mr. ELLENWOOD. I do not know whose fault it is, but I know the wool growers have realized the changed conditions that have taken place and have realized that the old method of assessing duties was not what they thought it was or what it should be, while most of the manufacturers claim that it is.

Mr. HULL. The wool growers have been of the opinion for some time that they were not getting their share of the profit under the tariff arrangement?

Mr. ELLENWOOD. Yes, sir.

Mr. HULL. As compared with the benefits the manufacturers receives?

Mr. ELLENWOOD. Yes, sir.

Mr. HULL. What is the price of wools in the London market now as compared with similar wools in the Boston market?

Mr. ELLENWOOD. We sent some wools over there to test that absolutely by taking the fleece of wool so there would be no chance as to grade and climatic conditions, etc., and sent one-half of the same fleece to Boston and one-half to London, and the difference on that would run from 5 to 6 cents.

Mr. RAINEY. When did you send that over there?

Mr. ELLENWOOD. Secretary McClure has been sending samples at different times in the last year.

Mr. RAINEY. Is the Commercial Bulletin, of Boston, a good authority on wool matters?

Mr. ELLENWOOD. I really do not know.

Mr. RAINEY. Here is an editorial which they sent out to some papers throughout the country on the 29th of November last, in which they advised newspapers all over the country as follows:

The Commercial Bulletin will say of the wool market to-morrow:

"There has been a dearth of large sales in the market this week, but a steady trade in small lots is reported, with fancies firm and unchanged. Boston is undoubtedly the cheapest wool market relatively speaking in the world, all foreign markets showing a steady advance."

Mr. ELLENWOOD. That might all be, but that would mean, comparatively speaking, because the price here mentioned has always been more than in any foreign country for a similar grade of wool.

Mr. FORDNEY. Is Mr. Bennet, who was here to-day, the editor of that paper?

Mr. RAINEY. I do not know.

The CHAIRMAN. You may be excused, Mr. Ellenwood.

WOOL GROWING AND THE TARIFF.

Any comprehensive review of wool growing in the United States takes us back to the days of Columbus, for he it was who first brought sheep to our shores. History records that when Columbus sailed on his second voyage to this country he stopped at the Canary Islands where he took on a number of sheep that were later landed at *Isabella* on the new continent. This is how the sheep came to us, for it was not a native

PARAGRAPHS 360-369—RAW WOOL.

of the Americas. After this initial shipment in 1493 almost every boat that landed on this continent left a considerable number of sheep. So that the sheep of the early colonists were soon able to supply most of the colonists' needs for woolen clothing. This was fortunate and necessary for in the absence of a domestic supply of wool our forefathers must have depended upon flax or the skins of animals for their clothing. Wool was then highly treasured by foreign countries, and its exportation was punishable in many instances by death. It is unnecessary to here review in detail the vicissitudes that surrounded the early sheep breeder. But history records that the wolf, the panther, and the bear all took their daily toll from among these early flocks. So serious was the menace of these predatory pests that in the year 1648 the court of Massachusetts placed a bounty upon predatory animals, which provided that for every wolf killed during the ensuing four years an Englishman was entitled to at least 30 shillings and an Indian to 20 shillings. This was the first wild-animal bounty. In addition to this bounty law nearly all of the early colonies promulgated similar laws and issued various orders to encourage the breeding of sheep, even to the extent of prohibiting their sale or the exportation of their wool.

Coming down to the early days of the Nation, we find that the Revolutionary War had devastated the sheep industry, and especially had it shown the positive necessity of a larger supply of domestic wool. Thus, Washington, Franklin, Jefferson, and Madison, as well as other prominent men of that early day, urged the enactment of Federal and State legislation to foster and protect woolgrowing. Jefferson, in 1809, violated the law of Spain by sneaking a few merino sheep out of that country, two of which later became his property. However, he excused his action on the ground that our need of wool must be greater than our respect for law. But in spite of the fostering laws enacted by the several States woolgrowing did not prosper. The War of 1812 again demonstrated the need of wool. The demand for it at that time may best be illustrated by the fact that in 1814 pure merino wool sold in Boston at \$3 per pound. In order to increase wool production a tariff of 15 per cent was placed on imported wool in 1816. This was our first wool tariff, the entrance, as it were, of the American sheep into national politics. This early tariff did not sufficiently foster woolgrowing; therefore, in 1824, the tariff was raised to 20 per cent; in 1825, to 25 per cent; and in 1826, to 30 per cent—10 per cent more than was offered us last year by the House Ways and Means Committee. We can not here review the various changes of the wool tariff or the causes that led up to them. Suffice it to say that nearly every presidential campaign from 1816 to the present time found the sheep in politics, much against its owners' will. The result of this continual agitation of the wool tariff has been that from 1816 to 1912, a period of 96 years, the wool tariff has been revised 18 times, allowing an average duration of each tariff of but five years and four months. Each of these revisions has been attended by more or less bitter political discussions which have alarmed the man with his money invested in sheep and offered the wool buyer an opportunity, which he did not lose, to purchase our wool on a free-trade basis. However, an examination of the tariffs existing previous to 1861 creates the suspicion that they could not have meant any great benefit to woolgrowing, because of the fact that their schedules were poorly balanced. In some the duties on wool were high and the corresponding duties on manufactures were low; in others, the wool duties were too low, which in either case deprived the grower of the full benefit of the tariff.

With these early tariffs we have but a moderate interest, and shall pass to the year 1865 as the time when the basis for our existing tariff was first devised. The Civil War found our armies in need of clothing, a need that could not be supplied entirely from domestic products, and as wool became a contraband it was obtained with much difficulty, a difficulty which would have been insurmountable had the war been fought in a colder climate, or our enemy been better supplied with warships. The relation of war to wool may be here illustrated. In the four years preceding 1861 our average annual importation of wool was 27,000,000 pounds. From 1861 to 1865 our average annual importation was 60,000,000 pounds. Washington's army at Valley Forge was decimated for want of woolen clothing. Napoleon's winter campaign in Russia was greatly retarded by a lack of woolen clothing. Wool is as essential to war as food, and in such times only the domestic supply is available. The close of the Civil War found the sheep industry languishing and the Federal Treasury depleted. Therefore, as has been the custom of this Government, the sheep was to be called on to again return prosperity to the land and funds to the Federal Treasury. In pursuance of this policy the revenue commission then in existence asked representatives of the woolgrowers, as well as representatives of the Manufacturers' Association, to meet and devise a scale of duties that would raise revenue and encourage wool growing and wool manufacturing. Such a meeting was held in Syracuse, N. Y., in December,

PARAGRAPHS 360-369—RAW WOOL.

1865, and as a result of this meeting and subsequent meetings, the present basis of wool duties was agreed upon. These two interests recommended the form of law which seemed to them best suited to the occasion to the revenue commission, which in turn recommended its adoption by Congress, a recommendation which Congress carried out in 1867 by the passage of the Morrill bill. While the law enacted in 1867 has been repeatedly changed, the principle upon which it was based remains unchanged. As this is the principle that has been so vigorously attacked it is worthy of close attention.

The meeting between grower and manufacturer in 1865 was marked by intelligent discussion upon both sides. Fortunately an accurate record of the meetings between these two bodies is available, and doubt therefore as to the intent of the framers of this law may be dismissed. In 1865 we had in the United States approximately 25,000,000 sheep of all ages. Of this number more than 75 per cent were located in those States where the merino flourished, east of the Mississippi River. In fact, at that time the merino held the field against all comers and the great bulk of our wool was merino. Not the light shrinking merino of the rambouillet type, but the heavy, dense fleece of the Vermont type. In addition to the merino we produced some coarse common wool, of fairly light shrinkage, but of low value.

The record of the Syracuse meeting clearly shows that in 1865 most of the wools of this country shrank on an average 60 to 70 per cent. At about this date South America, Australia, and Africa were the great wool producing nations. The wool produced in Australia was very like ours both in quality and character, and little of it had as yet been imported. The Australian wool then shrank from 60 to 70 per cent, according to best available data. The situation in South America was somewhat different. The merino and the native sheep of that country had been crossed, yielding a cheap, heavy wool which shrank from 60 to 70 per cent, the same as our own wool. However, in addition to this merino wool South America produced a considerable quantity of what was known as native carpet wool. These native wools shrank at that time around 50 per cent, but they were coarse, poor in character, and so filled with burrs that they were considered very inferior wools and not looked upon as a competitor to be guarded against. It was the heavy merino wool that was to be excluded. After considering these facts the conference between grower and manufacturer resulted in the conclusion that the average shrinkage of all desirable wools of the merino type, both in this and in foreign countries, averaged 66 $\frac{2}{3}$ per cent, and upon this basis the entire law was predicated.

It has been asserted that the Syracuse convention intended to place the duty upon the grease basis. This assertion, however, is not in accordance with the facts, for the entire line of reasoning pursued by these conferees recognized scoured wool as the important material to be taxed, and they clearly provided that wool imported in the grease should pay the same relative duty upon its scoured content as it would pay had it been imported scoured. However, as a matter of convenience in the collection of the duty; the tax was placed upon the grease pound along with its equivalent upon the washed and scoured pound. Therefore, in accord with the recommendations of this conference, Congress, in 1867, levied a duty upon all merino wools imported in the grease of 10 cents per pound, plus 11 per cent ad valorem. If washed, double the grease duty; and if scoured, treble the grease duty. Thus we see that the intent was to place the duty on the scoured wool obtained and not upon the grease and dirt. If further proof be desired as to the shrinkage of wool in 1865, or to the actual protection which the law presumed the woolgrower would get, it will be found in the fact that in levying a compensatory duty, which that law gave to the manufacturer to compensate him for what he had paid because of the tariff upon wool, this compensatory was levied on the basis of 4 to 1; that is, the compensatory duty assumed that 4 pounds of grease wool were required to make 1 pound of cloth; that is, it takes 1 $\frac{1}{4}$ pounds of scoured wool to make 1 pound of cloth because of the wastes which occur in the process of manufacturing, and the duty on sufficient scoured wool to make a pound of cloth would be 44 cents. However, such a ratio as this is correct only when wool shrinks 66 $\frac{2}{3}$ per cent, and the fact that it was placed upon this basis is of itself evidence that the law supposed the shrinkage of imported wool to be 66 $\frac{2}{3}$ per cent.

The law of 1867 discriminated against the grower of coarse wool, in that it admitted such wool when washed at the same duty as if it were imported unwashed. The washing of these wools reduced their shrinkage from 20 to 40 per cent, materially increasing the yield of scoured wool obtained for the duty. This has long been referred to as one of the "jokers" of Schedule K, but in reality it was not at that time a "joker." It only became such after it was continued in the law of 1890, at which

PARAGRAPHS 360-369—RAW WOOL.

time our coarse wools should have been protected. In 1867, when this law was passed, our production of long-combing wool was limited, and the supply used by our manufacturers came either from Canada or England. These class 2 wools are used by the worsted manufacturer. In 1867 worsted manufacturing had not been long established in this country. Therefore, to encourage it, this concession in the duty was made. Again, these class 2 wools came from countries where practically all the wool was washed, and to have doubled the duty upon them would probably have been burdensome to this new manufacturing industry. This favor to the worsted manufacturer of course retarded the development of mutton sheep in this country, but as the law gave the worsted manufacturer a compensatory duty based not on what he paid, but nearly two and one-fifth times greater, worsted manufacturing prospered, and it still continues to do so.

As we have stated before, our protection must be measured not by the duty on the grease pound but by the duty paid to obtain sufficient wool to make a pound of scoured wool. Since in 1867 domestic and foreign wool of class 1 was of the same shrinkage our growers had the full protection of the law regardless of whether the wool was imported in the grease or in the washed or scoured condition. Under the stimulus of this law our wool production rose from 160,000,000 pounds in 1867 to 337,500,000 pounds in 1884, at which time our protection was considerably reduced. Of course in 1872 the wool duty was reduced 10 per cent, but this was restored in 1875. The wool tariff, however, became the subject of general revision in 1883, when an important reduction in the duty was made. The law of 1867 had placed the duty at 10 cents per pound plus 11 per cent ad valorem. In 1883 the average value of Port Phillip fine wool was $24\frac{1}{2}$ cents per pound. Our protection against this then was $12\frac{1}{2}$ cents per pound. The average price of Australian crossbred wool was then 18 cents per pound and our protection against it 12 cents per pound. The law of 1883 reduced the tariff to 10 cents per pound, which, in effect, reduced our protection from 2 cents to 3 cents per grease pound. Under this reduction our wool clip fell until in 1889 we produced but 293,500,000 pounds.

In 1890 the tariff was again revised and the duty on wool raised 1 cent per grease pound. In accordance with this increase in duty wool production likewise increased so that by 1893 we produced three hundred and forty-eight and one-half million pounds, or the greatest amount in the history of the industry. Then came an election and wool was placed upon the free list. In response to this our production fell from three hundred and forty-eight and one-half million pounds in 1893 to 259,000,000 pounds in 1897, a reduction of eighty-nine and one-half million pounds in four years. Then the wool tariff was again revised and a duty of 11 cents per pound given to grease wool. Production again increased from 259,000,000 pounds in 1897 to three hundred and eighteen and one-half million pounds in 1911. I anticipate that the 1912 clip will be less than the 1911 clip, but this reduction is largely attributable to the tariff, for be it remembered that in 1911 we had a special session of Congress from which a very low wool bill was sent to the President for his veto. This, coming at a time when all our wool was on the market, enabled the buyers to purchase our clip at free-trade prices, which forced many growers to give up the sheep business.

All of the foregoing makes it evident that there exists an intimate relation between wool growing in this country and the tariff. And it must further be apparent that in the absence of less actual protection than we now have a large decline in wool production must inevitably follow. This of course brings up the question of our actual protection at the present time. Two important events have occurred since 1867 to influence the actual protection which American wool growers have received under the law. The law placed the duty on grease wool. The importer at once saw that the only way he could reduce the duty was by reducing the shrinkage of the wool he imported. No other avenue was open, for if he imported washed or scoured wool the duty was relatively just as high as if he imported it in the grease. Therefore, the importer early in the 70's set about the purchase of light shrinkage wool. He began to pay a premium on light wools. The foreigner began to pack his light wools separately in response to this premium.

However, it must be evident that to change the shrinkage of a nation's wool is a slow process, and this was a slow process. How slow it was is not a matter of record, but the best available data seems to show that up to 1880 imported wools shrank about as much as our domestic wool. So that for many years after 1867 we had practically the full protection of the law. About 1880 an event occurred that was destined to materially reduce our protection. This was the permanent establishment of the frozen meat trade. The first attempt at the exportation of frozen mutton from Australia to Europe was in 1861, but it was a failure. Repeated efforts met

PARAGRAPHS 360-369—RAW WOOL.

with no better success, and it was not until 1879 that the exportation of frozen mutton was successfully established. Then began a change in the wool production of South America and Australia. The heavy shearing merino had reigned supreme throughout the world, except in parts of Europe. Now the road had been paved for the sale of mutton, and consequently a change in the type of sheep was demanded. Therefore, in South America and New Zealand the merino began to give way to the crossbred, and the production of light crossbred wool necessarily followed. In our own country the carded industry that used our heavy merino wool was failing, just as it was doing abroad. This left our short clothing wool in less demand. Thus, by 1883, even before the tariff was reduced, our actual protection had been reduced by reason of the increased clean yield of imported wool. Add to this the tariff reduction of 1883, and we have the cause of the decline in wool production that followed until 1890. Along in the eighties the skirting of foreign fleeces had become general, and our importations were largely skirted wools, even before this iniquitous feature was added to the McKinley bill. As we approach the present date the causes which I have here given as operating to reduce our protection have become more and more intense, so that where we had the full protection of the law from 1867 to about 1883, these influences have now reduced our actual protection to but little more than one-half of what it originally was and what the law and the country suppose it is to-day. That this gradually decreases protection has been the active factor in retarding wool production in this country, seems to me evident, for when we had the full protection, from 1867 to 1883, our wool production increased at the rate of 11,000,000 pounds per year. But from 1897 to 1911, under the decreasing protection of the present law, our average increase has been but 4,500,000 pounds per year.

While we have shown that as time went by more and more scoured wool could be imported for the same amount of money expended in duty, until the duty on a pound of scoured wool to-day is but little over one-half the rate specified in the law, this fact does not and can not enter into a revision of the tariff at this time. So far as the consumer is concerned and so far as those who have urged revision is concerned the duty on a pound of scoured wool is 33 cents. That is what the law provides. The compensatory duty on the cloth is 33 cents on every pound of scoured wool contained therein, which equals 44 cents on the $1\frac{1}{3}$ pounds of scoured wool required to make a pound of cloth. It is this compensatory duty that is paid by the consumer and it has not been falling in conformity with the wool duty. The consumer was repeatedly told in the last campaign that the duty on wool made the compensatory duty on cloth of 44 cents per pound. Not in a single instance have those who have attacked the tariff told the consumer that the wool grower did not get the full benefit of the wool duty, therefore in any revision of the tariff that proceeds with fairness to the wool industry and the consumer 33 cents must be taken as the duty on scoured wool and a readjustment of rates made from this basis.

We would here call the attention of this committee to the fact that under no form of wool duty can the wool grower be benefited to the full extent of that duty. To determine this fact we have during the past season sent many fleeces of wool to London, where we obtained the London price. In every instance it was found that domestic wool failed to equal the London price plus the actual tariff paid to import a competing wool by a considerable amount. The average for all wool shows that we failed to obtain 22 per cent of the actual duty paid. This would be more true under an ad valorem than under the present specific law. The House bill provided 20 per cent on wool, but in operation this law could not be expected to advance the price of our wool but 12 or 14 per cent, if it did that much. This committee must not forget that the wool grower has formed no trust or combination for the control of his products, and until he does he will not be benefited to the full extent of the tariff.

All of the foregoing has had to do with the effect of the tariff upon woolgrowing, but there are those who assert that our woolgrowers do not need a tariff and the industry is not worth protecting. The need of a tariff is best illustrated by the statistics I have here given showing a decided increase in wool production when the tariff was increased and a decided decrease in production when the tariff was removed or reduced. Such figures are the best arguments. We may draw an excellent illustration from the present condition of woolgrowing in Canada. Canada is an ideal country for wool production. Her soil and climate contain every advantage to be found in North America. She is peopled with a race who are natural shepherds, coming as most of them have from the sheep-breeding counties of Great Britain. Yet in spite of these natural advantages Canada has failed dismally in the production of wool and in the manufacture of cloth. At the present time her sheep number 2,000,000 head, and her wool manufacture is insignificant. Five States in our Union

PARAGRAPHS 360-369—RAW WOOL.

have each more sheep than are to be found in all of Canada. Why this failure? The single reason for it is the fact that the Canadian people have failed to adequately protect wool manufacturing and woolgrowing. Canada has a tax upon some grades of wool which she produces of 3 cents per pound, and on her manufactures of wool her tax is but 30 per cent. The result of this policy has been that wool manufacturing could not prosper in Canada under this low protection, and the woolgrower, having no home market for his product, has done the wise thing and ceased to produce wool. If those now charged with the responsibility of revising our tariff will but examine the records, they will find a fatal similarity between the House bill of last year and the bill which has brought destruction to the wool industry of Canada.

Germany once had 30,000,000 sheep, and at that time placed wool upon the free list. Consequently wool growing has declined until to-day the German flocks number scarcely 7,000,000 sheep. The German Government now recognizes its error in destroying wool production, for it has resulted in giving Germany the highest priced meat of any nation in the world, and more important still, it has placed the German people in absolute dependence upon the colonies of Great Britain for their supply of wool. However, Germany is now trying to make amends for its shortsightedness, and at an enormous expense is endeavoring to establish wool growing on her own soil in German East Africa.

England is pointed to as the great free wool country, but in reality she gives her woolgrowers a higher protection than is given by any nation in the world. For more than 100 years she has not allowed a live sheep to come within her borders, her laws requiring that they be slaughtered on arrival at the dock. This has placed her sheepmen in possession of her Irish mutton market, with the result that where our lambs sell for \$3 an Englishman gets nearly double this for his; therefore, he does not need a tariff on wool.

Our sheep industry is one of the most important pursuits of the Nation measured from any angle. Our sheep at the last census were worth \$231,000,000. The land and equipment needed to maintain our flocks represent an investment of \$350,000,000. Thus our sheep industry represents a total investment of \$581,000,000, or more than is invested in all forms of wool manufacturing. The last census shows sheep on 610,000 farms. These farms are situated in every county in the land. Our woolgrowers annually pay to labor to care for their flocks \$47,580,000. They pay to the farmers of this country for forage each year \$23,400,000, and this item is yearly increasing. The taxes on our sheep alone are \$2,600,000 per annum. The freight on our wool is annually \$4,000,000. The actual cost of maintaining the 52,000,000 sheep in this country amounts to \$137,000,000 per year. Surely such an enormous sum as this can not be disturbed without disturbing the general welfare of the Nation. The charge is made that beneficiaries of the tariff have not passed a fair share on to labor. This charge can not be defended against the woolgrower. He is paying to labor to-day a higher wage than is paid to similar unskilled labor anywhere in the world. In the Northwestern States the average sheep labor charge is \$60 per month per man. Certainly no one could justify a higher wage than this. Here we have an industry that gives to labor its full benefit from the tariff, yet it seems this fact is not to be considered. If under these circumstances the income from wool is lessened, it is inevitable that labor cost must likewise be reduced.

Our immense supply of sheep has furnished the markets with 800,000,000 pounds of mutton per year, a supply so great that mutton is the cheapest of all American meats, and in the absence of this enormous supply other meat would advance to prohibitive prices. The sheep have settled and developed nearly all of the Western States and are to-day using lands which are practically worthless for other purposes. They have been our great soil fertilizers, and have contributed immensely to our annual supply of grain crops. In addition, they are to-day the most effective fire fighters in the Nation and preserve range and forest from this destructive force. Not only have many of our Western States been settled by the sheep but they are to-day being supported by the sheep. The West is new and as yet but partially developed. Her great drawback is lack of home markets. High freight rates make outside markets inaccessible. Under these circumstances without sheep millions of acres of irrigated farms must be abandoned. Alfalfa must be the first crop to tame the desert after irrigation is established, and in the West the range sheep furnish the only market for the products of the soil. To-day, in the State of Idaho more than 1,000,000 sheep are eating hay at the farmers' stacks. This hay is costing the sheepman about \$6 per ton and each sheep is consuming 4 pounds daily. In this manner the farmers are marketing 2,000 tons of alfalfa to-day right on their own ranches in Idaho alone. What is true of Idaho is equally true of other Western States. In the absence of the

PARAGRAPHS 360-369—RAW WOOL.

sheep these farmers would be driven out of business because of no markets, and if a reduction of the wool tariff impairs the buying power of the western woolgrower the farmers of some 11 Western States will feel the blow almost as keenly as the sheepman himself. Not alone is the sheep supporting the farmer but the railroad, stores, banks, and manufacturing enterprises all through the West are being supported largely by the business created by the sheep industry. Unlike the fruit or grain farmer, the woolgrower has a heavy labor cost throughout the entire year, then does the community receive a permanent income from his business. These facts place our sheep industry among the most important industries in the land, and entitles it to protection if any industry is to receive it.

All the protection our woolgrowers ask is the difference in cost of production between this country and Australia, the nation that makes the world's wool prices; but he asks that this difference be given in such form that he can get it. In other words, he asks a competitive tariff. The Tariff Board has determined that this difference in cost is $9\frac{1}{2}$ cents per pound of grease wool, and no one has as yet successfully disputed the findings of that board. This difference is largely made up of labor cost, a cost which all political parties presume to protect. The labor cost here per sheep is 82 cents against 7 cents in Australia. The average forage cost here is 45 cents against 8 cents in Australia. The average western interest charge is 9 per cent against 5 per cent in Australia. However, after all the differences in costs have been taken into consideration, except cost of transportation and interest charges, there remains a charge of $9\frac{1}{2}$ cents more against a pound of our wool than against Australian wool. If the purpose, therefore, be to place our woolgrower on the same footing as the Australian, this $9\frac{1}{2}$ cents must represent our tariff, but in order for our grower to obtain it it must be levied on the scoured basis.

Would it pay the Nation to reduce its supply of sheep? Not, we think, if it considers the future. A tax upon wool is the most equitable of all taxes. If it benefits the producer that benefit is spread broadcast into every country in the land. If it increases the cost of clothing that increase is borne by all the people, but more particularly by the rich. A reduction in our supply of wool means an advance in the price of the world's wool; not, however, until our grower has hopelessly given up business. Do not forget that the world's greatest clip of clothing wool was back in 1895. More important to the Nation at large than the advance in the price of wool will be the inevitable advance in the price of all meat foods. Any important reduction in our wool tariff means a reduction of 50 per cent in our supply of sheep. This means an annual loss of 400,000,000 pounds of dressed lamb and mutton, and this loss must be reflected by a decided advance in the price of other meats. If our sheep stock ever becomes depleted it can not be rebuilt in a generation, for there will be no sheep from which additional stock may be obtained. Do not lose sight of this fact.

Is the tariff on wool a burden to the multitude of the people? This must be answered in the negative, for it is probable that a tariff upon wool is the least burdensome of all tariffs. For illustration, take the khaki-colored suit worn by the officers of our Army. These suits are of medium weight and made, under Government supervision, of the best half-blood wool. No cotton, shoddy, or wool waste enter them. Three and one-fourth pounds of scoured wool is all that is required to make the $3\frac{1}{2}$ yards of cloth needed for the average man's suit. The grower received for this wool about 53 cents per pound, or for all the wool in the suit about \$1.72. The tariff upon wool has advanced the cost of wool in this suit about 48 cents. However, if you purchase the suit from your tailor it costs from \$30 to \$40. The storekeeper retails it from \$25 to \$30, yet the woolgrower with all his tariff gets but \$1.72 out of it. Would your storekeeper or tailor have sold this suit to you for 48 cents less if wool had been on the free list? Such has not been their custom in the past. The man who made this cloth was not responsible for the high price at which the suit sold. The manufacturer sells such cloth around \$1.30 per yard. Three and one-half yards to the suit brings him \$4.55 for all the cloth in the suit. Out of this he paid \$1.72 to the woolgrower for the wool, and about 35 cents to the railroad and commission firms for handling the wool. This left him \$2.48 on the suit out of which must come the entire cost of converting the wool into finished cloth. Thus, we find that the woolgrower and manufacturer combined got \$4.55 out of a suit that sells at \$25 to \$40. The balance went to the tailor and middlemen. It would go to them just the same if wool and cloth were on the free list for the tariff does not affect the storekeeper or the tailor. They charge you whatever they please regardless of it. Please remember that with or without a tariff the consumer could not import his clothing. That must still pass through the same hands that now fix the price—the middleman. Yet we find that the woolgrower and manufacturer have become the subjects of bitter political attacks. Not a voice

PARAGRAPHS 360-369—RAW WOOL.

has been raised against the dealers; not a scheme has been proposed that would reduce their prices. Yet it is true that they receive 80 per cent of all the consumer pays for his clothing. Let the American people then understand that any important reduction in the duties upon wool, while injuring the woolgrower, will bring no reduction in the price of clothing. You hear it charged that the manufacturer is robbing the people, but generally speaking that is not true, for his efforts in that direction have largely been devoted to the woolgrower. What the manufacturer may justly be blamed for is permitting a lot of nefarious middlemen to step in between him and the people and make the price of clothing high. They should sell direct.

Those who oppose the tariff on wool find satisfaction in the assertion that wool has been protected for many years and we still fail to produce an adequate supply for our domestic needs. The fact is we are producing about 70 per cent of the clothing wool consumed in this country, and not a wool-consuming nation in the world produces 40 per cent as much as we produce, and in some kinds of wool we are producing more than can be consumed in this country. The reasons we do not produce more are because wool has been continually attacked by one of our great political parties, which attacks have made the success of the industry so uncertain that thousands of men have given up wool growing permanently. No fair man can examine our wool tariffs from 1816 to the present time without understanding that under them our wool grower could have had but a part of the protection the law presumed to give him, the only exception to this being the tariff from 1867 to 1883, and under it wool growing prospered immensely. Another cause is the fact that the wool manufacturer in late years has absorbed about 50 per cent of the tariff intended for the wool grower.

If then it be granted that the wool grower is entitled to protection, in what form should he have it? Our experience with the tariff upon the grease pound has not been satisfactory. Such a tariff makes the compensatory duty impossible of ascertainment and discriminates against the importer of heavy wool. It leads the country to believe that the wool grower's protection is about double what it actually is, and therefore makes him the continual subject of political forces which seriously disturb his business. Therefore, such a tariff is unscientific.

It has been suggested that the tariff should be ad valorem. Such a tariff leads to undervaluation of imports, deprives the grower of his protection and the Government of its revenue, and tends to drive the honest importer out of business. Such a tariff gives the greatest protection when the least is needed and the least protection when most is needed. It encourages the importation of inferior wools, thereby reducing the standard of American garments. Ad valorem has been abandoned by most other progressive countries and should not be taken up by this one. It is neither a protective tariff nor a revenue producer. Under it all is uncertainty.

We have left, then, but one form of duty and that is a specific duty on the scoured content of imported wool. Such a duty is fair to all woolgrowers. It gives one manufacturer his wool at the same duty as another. It encourages the importation of the best grade of wools. It determines accurately what the compensatory duty should be on imported cloth, and it is this compensatory duty that needs revising most at this time. It assures the Government of a stable revenue and the woolgrower and wool manufacturer of honest and fair protection. Such a duty imposes no administrative difficulties, reduces the liability of fraud, and places the revenues of the Government upon the same sound basis upon which rests the business of the wool manufacturer. It is therefore the only sound and equitable basis for wool duties and should have been enacted into law in 1909.

The last session of Congress saw five wool bills presented for its consideration. First, the bill representing the views of the Democratic Ways and Means Committee. This was an ad valorem measure placing a duty of 20 per cent on wool and 40 per cent on cloth. In determining the net protection to the manufacturer on an ad valorem basis we must subtract from his duty about 60 per cent of the duty on wool. This left the manufacturer a net protection under this bill on most lines of cloth of 28 per cent. Even a casual examination of the Tariff Board's report shows that our manufacturers must have a net protection ranging from 35 to 55 per cent. The Democratic bill therefore fell short of the difference in cost of wool manufacturing from 7 to 27 per cent. This meant that the manufacturer, after using all his protection, as well as all that which the law presumably gave the woolgrower, would still in most lines be unable to compete with the foreign producer without a considerable reduction in labor costs. We hear it asserted that 20 per cent on wool is as much actual protection as the woolgrower has been receiving. Let us examine the facts. Coarse or braid wools are selling in London at 28 to 32 cents per clean pound. Under the Democratic bill the duty would be 5.2 to 6 cents per scoured pound. These same wools now pay 14 to 16 cents in duty.

PARAGRAPHS 360-369—RAW WOOL.

The Oregon fine wool which I sent to London sold there at 42½ cents scoured. The duty on this at 20 per cent would be 8½ cents per scoured pound. Under the present law this wool pays 18½ cents per scoured pound. The fine Ohio wool sold at 50½ cents in London, and under a tariff of 20 per cent it would pay a duty of 10 cents per scoured pound. The duty under the present law is 21½ cents per scoured pound. This shows the theoretical protection at 20 per cent ad valorem. However, our actual protection would not be this great, for I have previously shown that we lose 22 per cent of the actual duty paid. This would certainly be as true under ad valorem as under the present law, and probably more so. Deducting 22 per cent from the 20 per cent, we find that our actual protection under the Democratic bill would have been 15.6 per cent instead of 20 per cent, a degree of protection about equal to that under which woolgrowing in Canada has failed. The framers of our tariff law should keep in mind that, regardless of the form of law, the woolgrowers will not be benefited to the entire extent of the duty.

We have heard much criticism of the fact that the woolgrower has been interested in the tariff on manufactured woolen goods. I ask you, Why should he not be interested in that tariff, for upon that tariff the market for his wool depends. If the American manufacturer of woolen goods is not adequately protected the American woolgrower, regardless of the tariff he has upon wool, will have to seek a foreign market for his product. On the other hand, without a duty on wool no amount of protection on manufacturers of wool will benefit our woolgrower. It is therefore just as important from the standpoint of the woolgrower to see that the manufacturer has adequate protection as it is that wool has adequate protection. Protection to one without the other is worthless. Regardless of the just criticisms that may be lodged against the American manufacturer of wool, it is the duty of the American woolgrower to see that the manufacturer is given honest and fair protection. Recently we have noticed some of the great textile papers of the East, whose advertising pages are patronized by both worsted and woolen manufacturers, coming out for free wool. In fact, in most of the eastern press there has been conveyed the intimation that the manufacturer of wool, in order to get more protection for himself, would seek to have wool placed on the free list. Undoubtedly this narrow view pervades the opinion of many manufacturers, but on the other hand some of the most conservative manufacturers are in favor of protection to woolgrowing. These are the men who are prompted by a broad spirit of justice. To the manufacturer who seeks free wool let us say that there should be no free wool in this country unless it carries with it free cloth. One industry is just as important as the other. If the American woolgrower, representing 610,000 individuals, must go abroad to find a market for his wool, he will demand the privilege of going abroad to buy his clothing.

The great prosperity of wool manufacturing in this country has been due, not to the protection that the law gave to manufacturers of wool, for the Wilson bill gave almost as much as the present law, but to the additional protection that these manufacturers have been able to take from the woolgrower, largely in the form of a compensatory duty. However, let us hope that the manufacturing industry is fair enough and broad enough to see the justice and necessity of a tariff upon wool, even after that tariff has been placed upon a basis that does not afford them concealed protection. The woolgrower feels that the manufacturer is entitled to protection, and hopes that it will be given to him. The report of the Tariff Board shows the degree of protection needed, and that should be the guide so far as the manufacturer is concerned.

The woolgrowers of the United States find themselves in accord with some of the declarations of those who will control the policies and acts of the incoming Democratic Congress. We agree with President-elect Wilson when he declares no legitimate industry in the United States should or need fear the forthcoming tariff revision, for we feel that the wool growing and the wool manufacturing industry must fall within the classification of "legitimate industries". At Pittsburgh, on October 18, during the progress of the recent campaign the President elect expressed himself as follows: "I welcome the opportunity of stating what I believe to be the well-considered position of the Democratic Party with regard to the tariff. It is absolutely essential that we should be entirely frank with one another in the discussion of this fundamental question.

"The business men of the country owe it to themselves to face the facts as they are and to meet them in a spirit of accommodation which has no touch either of radicalism or of more theoretical reconstruction in it.

"The Democratic Party does not propose free trade or anything approaching free trade. It proposes merely a reconsideration of the tariff schedules such as will adjust them to the actual business conditions and interests of the country."

PARAGRAPHS 360-369—RAW WOOL.

We desire to discuss this matter with entire frankness, as suggested by the President elect, and are willing to abide by the results of any consideration of the tariff schedule under discussion as will adjust themselves to our actual business. We agree with the Speaker of the House of Representatives, Mr. Clark, in his recent utterance to the effect that no industry should seek or will receive any benefits, direct or indirect, beyond those which will flow from the application of the theory of a competitive tariff. We feel in perfect accord with the statement made by the chairman of the Ways and Means Committee, Mr. Underwood, to the effect that no industry should be discriminated for or against in any tariff adjustment that may be made. In other words, as your honorable chairman has stated, as long as it is necessary to levy import duties for the purpose of providing the necessary revenue for this Government, just so long should such duties be equitably distributed in such a manner that each and every industry should receive its proportional amount of that indirect protection which must necessarily follow the imposition of such duties.

It is a matter of common knowledge that the woolgrowing and wool-manufacturing industries have been built up and capital invested in them under the legitimate provisions of the law of the land. Notwithstanding our desire that no harm shall come to any legitimate enterprises through the readjustment of the tariff it is a fact that more or less disturbance must necessarily follow the changes that will be made. Therefore, in the name of justice and consistency, we plead with your committee to bear in mind the following plank taken from the Baltimore platform:

"We recognize that our system of tariff taxation is intimately connected with the business of the country, and we favor the ultimate attainment of the principles we advocate by legislation that will not injure or destroy legitimate industry."

In line with the thought embodied in this plank we respectfully urge that in the "ultimate attainment by legislation" of the purposes sought by the tariff revision that sufficient time be given for an adjustment of our industry and the changed conditions which it must meet. We feel that any act passed should not take effect within a year nor in any event prior to January 1, 1914. In the interim there will be given an opportunity to those interested to so adjust their business affairs as to meet the changed conditions with a minimum amount of shock.

It is not for the woolgrower to state what protection should be given him under the law but the report of the Tariff Board makes it clear that the difference in the cost of producing one pound of scoured wool in this country and Australia without including interest, as 24 cents, therefore if it shall be the purpose of Congress to place our grower upon the same basis as the man with whom he has competed in the past, 24 cents per pound scoured would accomplish this. Undoubtedly some will think this too high and it has been suggested that our tariff be 18 cents per scoured pound. At the present time the duty on scoured wool is 33 cents and if it were reduced to 18 cents it would mean a reduction of 45 per cent in the compensatory duty. It is this duty that concerns the consumer for it is this that he pays because of the tariff upon wool. We, therefore, hope that in a readjustment of the schedule that your committee may see its way clear to grant a specific duty on the scoured content of imported wool of not less than 18 cents per pound. Such a rate would give a competitive tariff.

NATIONAL WOOLGROWERS' ASSOCIATION.

S. W. McCLURE, *Secretary*.

Submitted by FRED A. ELLENWOOD.

TESTIMONY OF RICHARD OLNEY, 2d, BOSTON, MASS.

Mr. OLNEY. Mr. Chairman and gentlemen of the committee, I am going to try not to exceed the ten minutes allotted to me. I do not think I will go over my time; anyway, not more than a minute or so. I thank you for the courtesy of allowing me to take the other gentleman's place in order that I may take the train to Philadelphia.

I am only going to speak in generalities and not specifically. I believe no question will be asked, but I will be happy to answer any questions that may be put to me.

I believe, Mr. Chairman, that a bill presented to the Sixty-third Congress will be a bill to suit all purposes, if a gradual revision of the tariff

PARAGRAPHS 360-369—RAW WOOL.

is proposed. I am an old-fashioned Democrat, and in 1893 I was about casting my first vote.

I have always believed that the panic of 1893 was due primarily, fundamentally, and principally to an almost bankrupt Treasury inherited by the Democratic administration from Secretary Foster. I do think perhaps that anticipation of a change in the tariff may have had something to do with the panic of 1893, but just because we had a panic in 1893, as disastrous as the panic of 1873, I think it does not follow that we must have a panic every 20 years.

Our Republican friends have often argued that under a high protective tariff system our flocks of sheep would appreciate. As a matter of fact there were, in 1900, 61,000,000 sheep in the United States, and after 10 or 12 years of uninterrupted protection to-day, or rather a year ago—January 1, 1912—we find 52,000,000 sheep in the United States. These produced about 350,000,000 pounds of grease wool, which, on a scoured basis, represents about 150,000,000 pounds, and it is necessary to import each year 129,000,000. This gentleman, Mr. Fordney, was thoroughly right when he said that we had to import about two-fifths as much as we raised in this country.

Mr. FORDNEY. I made that statement.

Mr. OLNEY. Yes, you did; and you were correct about it, because last year we imported 129,000,000 pounds of wool, which on a scoured basis represented something like 90,000,000 pounds of scoured wool. Of course you realize that a great deal of that wool is wool that the worsted manufacturers use in their manufactured products.

I do not appear here for any individual, but I am here to argue as efficiently and humbly as I can for the majority of the people. If this proposed tariff bill goes through and if affects my pocketbook to even a considerable degree, I do not care if it benefits the majority of the people. But I do belong to a little band of men called the Carded Woolen Manufacturers' Association and the most of them think—and I am in sympathy with them—that they have been discriminated against to a certain extent by the worsted manufacturers, who have been enabled to get their wools in as Class 1 and Class 2 wools on the 11 and 12 per cent basis.

It has always seemed to me to be eminently unfair that wools shrinking from 60 to 75 per cent should be taxed on the same basis as wools that shrink from even 15 to 20 per cent to 45 or 50 per cent as the worsted wools do.

Wherever the tariff is placed, I think it should be proportional and be equitably figured upon, so that the woolen manufacturers can more successfully compete with the worsted manufacturers.

I believe that the proposed bill is a splendid bill, but I think if it was enacted five years from now it would accomplish more and be more efficacious, perhaps, and give the American manufacturers an opportunity to find their depth. That is, I think you could take off just even ever so little now. I think a 29 per cent reduction in wool is not too much by any means, but I think perhaps the manufacturer might need a little more protection than is proposed under the past two bills.

My father was a woolen manufacturer, a manufacturer of white flannels, and there are to-day in our concern 800 or 900 cases

PARAGRAPHS 360-369—RAW WOOL.

of woollen goods unsold. I do think that many manufacturers have grown exorbitantly rich, perhaps, under a high protection, but I think there are differences in degrees of efficiency, because I do know of a number of mills which are running close to the wind, so to speak. As far as white flannels are concerned, they are about going out of existence in this country, on account of the fact that white flannels are not used in underwear as they used to be.

I shall not take up much more time, but before reading a few extracts from a prepared statement, I wish to state that if the politicians of the day would stop talking panic, I think it would be a wonderful thing for opportunity and business. But when men like our President, Mr. Taft, predicts a disastrous panic in case of Democratic victory, and in a later speech states that the Democrats shall disappoint their constituency; when Senator Boies Penrose of Pennsylvania says to be prepared for the worst, I think statements like these do create panic, and I think talking panic creates panic.

I will read just a few sentences which I would like to leave with you, and I hope to impress upon you.

To quote from a distinguished Roman statesman, "If I have any influence and I know how small it is," it would be my earnest desire to exert a portion of it on the Ways and Means Committee of the Sixty-third Congress. I do not anticipate that statements made here by various witnesses in the interests of the wool and woollen industry of America will counteract or change the minds and opinions of the distinguished members of this committee, at least to any considerable degree, who, if common gossip can be credited, have already determined to submit to the next Congress a tariff measure, similar in type to two previous bills which passed the lower House of Congress.

However, as a Democrat, engaged in the wool business and who has an interest in the Olney White Flannel Mill of Massachusetts, which manufactures white goods, I doubtless will receive from you the courtesy and attention which the average witness receives, and I ask no further favor.

A candidate for Congress before the primaries in the Fourteenth Massachusetts congressional district, I expounded Democratic doctrines, urging strongly a reduction in the tariff, especially on the common necessities of life, and I advocated a tariff ad valorem in preference to a specific duty on all articles imported into the United States. Alexander Hamilton, the father of protective tariff in the United States, probably never expected that it would become a bone of contention between two great parties; a football, so to speak, to be kicked and tossed about by opposing factions. His idea was to protect and help upbuild infant American industries which seemed necessary in our early industrial life. Privileged interests have become exorbitantly wealthy through protection, while trusts were born, have fattened and become arbitrary and obnoxious to Government and people, as well as burdensome.

Gentlemen of the committee, in preparing this bill I humbly beg you to write carefully, consistently and equitably. In order to punish a few malefactors, possibly large contributors to campaign funds, who have hoped for and expected favor from the party in power, do not take away all props or support from busy industry immediately.

PARAGRAPHS 360-369—RAW WOOL.

You will keep faith with the people and your pledges to Democracy by a gradual reduction of the tariff.

If there is a cintilla of doubt that a big reduction of the tariff may cause distress in business, why precipitate the country into business chaos? The working people in the majority will feel a cessation of business more than capital.

Why not first find our depth, reduce the tariff in general, gradually, except on some real necessities of life, which perhaps can stand a liberal reduction.

By reducing the tariff gradually from year to year, we can eventually throw away our crutches; literally, we will be learning to walk and will soon rival England, Germany, and France in export trade. This course of procedure may take five years. Why attempt to change in a single year and by a single stroke, somewhat experimental, a tariff principle, which no matter how wrong or unjust has been a part and parcel of our industrial life for nearly a hundred years?

Should it prove to be a beneficial measure to have a "tariff for revenue" law in the United States within, say, two years, will it not be almost as remedial for us to gradually lead up to such conditions, even if it takes five years to adjust ourselves to the change in conditions? There are men here to-day in the interests of the millmen, too, I think, who advocate free wool and 50 per cent protection on manufactured goods; this course, while welcomed by many manufacturers, would not seem proportionately consistent. Give us 25 to 30 per cent reduction in wool and 55 per cent protection on goods in your first year's bill, and we say Godspeed.

When we have learned the art of exporting and our ranchmen have become adapted to raising sheep for a food product, marketing the wool as a by-product, as the English farmers do, and as we can do in a few years, we can say "free wool" to you. But let us become adapted to changes in the tariff equitably and gradually. I know plenty of mills, largely capitalized, who are either running close to the wind or who are not paying exorbitant dividends on their capitalization. I do not believe that you as practical and sensible men will advocate a sharp cut in duties on those articles of production which actively compete with the foreign market, at least without thorough and wise investigation.

I am not here as a defender of the American Woolen Co. I do believe Mr. Wood's statement, when he says that his profit on a single suit of clothes is about 30 cents. Whether or not the American Woolen Co. is overcapitalized I do not know, but I really believe when they bought the Washington Mills in their first project that they paid a pretty big sum for it. As I recollect it was \$5,000,000. But that was a fault that might have been remedied under legislation of to-day. This happened something like 15 or 20 years ago, when many concerns were perhaps overcapitalized. Since then the American Woolen Co. has bought plants at more reasonable rates. They are here, and they are here to work out their existence. I do not doubt that Mr. James is correct when he says "How about the wages in Lawrence, Mass.?" I happened to write an editorial for the Boston Globe at that time, concerning the situation at Lawrence, and I found out that pitably low wages were being paid at

PARAGRAPHS 360-369—RAW WOOL.

Lawrence. The population there is largely unskilled labor, made up from southeastern Europe, Servians, Lithuanians, and others who came into this country with glowing prospects and who found that the purchasing power of a dollar here is very low. What we must do is to increase the purchasing power of the dollar, which I think can be done and will be done eventually under a general revision of the tariff.

I thank you.

At a later date the following communication was filed by Mr. Olney:

BOSTON, MASS., *January 30, 1913.*

HON. OSCAR UNDERWOOD,

Chairman Ways and Means Committee, Washington, D. C.

DEAR MR. UNDERWOOD: I thank you for your courtesy to me at the hearing in Washington on Schedule K. In my haste I omitted to refer to two or three rather essential points which I had intended to bring into my argument, among which were that during the three years' operation of the Wilson-Gorman tariff bill the average amount in business failures was \$183,000,000, while under the operation of the McKinley tariff law the average amount in the business disaster was \$210,000,000. Furthermore, in spite of free wool under the Wilson-Gorman bill and with one or two other articles of consumption on the free list there was only an average difference of about 8 per cent between the two bills. I am of the opinion that a bill to restrict immigration would be more beneficial to labor than almost any other form of legislation. Labor, outside of union labor at least, seems to be like any commodity purchasable at the cheapest price obtainable, the only exception probably being in the domestic service.

I am prompted to speak of this matter from what Mr. James, of your committee, said to one of the witnesses concerning poorly paid labor in Lawrence. The large portion of this laboring class in Lawrence emigrates from southeastern Europe, and by flooding the United States with a large surplus population it creates a superfluity in the labor market such that can be bargained for at almost any auction price by capital.

Hoping that I have not wearied you with this dissertation on the labor problem, I am, gratefully, yours,

RICHARD OLNEY (2d).

TESTIMONY OF JOSEPH D. HOLMES, NEW YORK, N. Y.

The witness was duly sworn by the chairman.

Mr. HOLMES. Mr. Chairman and gentlemen, I am here only to make some general statements bearing on this subject; I will be brief and not burden you with statistics.

In considering this matter since I finished the brief which I have filed with the committee, it has struck me——

Mr. FORDNEY (interposing). Won't you please tell us what paragraph you are speaking to?

Mr. HOLMES. I am speaking to Schedule K.

Mr. FORDNEY. The whole schedule?

Mr. HOLMES. The whole schedule. My suggestion is there are practically four schedules to be considered in connection with the duties on wool. The wool schedule, in making up a tariff bill, is practically an agricultural schedule, and, as Mr. Bennett has shown, has relation to the supply of meat in the shape of mutton. The protection of woollen cloth is essentially a manufacturing proposition and forms the raw material for the garment makers, the makers of men's and women's clothing. The clothing schedule, which is brought in here and becomes subject, according to my experience, for the first time to foreign competition, is a manufacturing industry and has its raw material in the finished product of the woollen mills,

PARAGRAPHS 360-369—RAW WOOL.

the industry that I represent, or that I am interested in. The fourth branch, the hosiery and knit-goods department, is an entirely different proposition in that the manufacturer in the mill turns out a finished product or garment ready for wear.

These are hardly closely related, and my suggestion is that in future legislation they might be put in different schedules.

I am going to refer only briefly to the wool department, because it is going to be exhaustively treated here, in addition to what has been said. I simply suggest that roughly speaking, in the last four years there has been consumed in this country 500,000,000 pounds of wool, of which 300,000,000, roughly speaking, is domestic and 200,000,000 imported product. I have the figures here from the Department of Commerce and Labor.

In that connection, I wish to suggest it is a difficult, precarious industry, and if so treated as to be discouraged it would increase our dependence on foreign supplies, which are variable. Our dependence on foreign supplies might in time of war become subject to attack; and also in relation to the price of meat, which, of course, we understand now is high enough.

I pass to the manufacture of cloth, the industry which is practically under fire here. I wish to state it is, to my knowledge, one of the most, if not the most, competitive industry in the country; that the prices of woollen cloth are fixed with a view to making full production, the entire capacity, for instance, of a mill; that those prices are fixed, as you probably know, without conference or combination, and it is practically a cutthroat business.

Every man engaged in the manufacture of woolens wants to sell his product without relation to the effect his prices will have upon anyone else. To do this, he must make his price in the first of the season so low that he will stand a chance in the competition, and on account of the number of processes through which that wool has to pass in the course of manufacture a falling off of production through any accident or other disarrangement in the several departments will cause a falling off in the total production and cause the manufacturer a loss instead of the profit which he is figuring on, which, as a rule, is a very small one.

I want you to consider, then, the amount of cloth entering into clothing. The manufacture of clothing has grown to be a tremendous industry. The garment industry is the largest industry in the State of New York. The manufacture of clothing has become a most scientific industry. On account of the demands of the average retail dealer the clothing has to have every detail completed in the most exacting way.

I have exhibits here which could be submitted, and I hope the committee will look at them. I instance a suit of boy's clothing made of a worsted serge. Such a suit would have sold some years ago for \$2.50. The suit to-day sells at wholesale in large quantities for \$3.50. The cloth costs no more per yard, but the suit contains about half a yard more of cloth. The suit has to be made larger in every way, more full, more details of manufacture, of trimming, of finish, and in every respect. All those things have increased and become so exacting that this suit of clothes at \$3.50 pays less to the

PARAGRAPHS 360-369—RAW WOOL.

manufacturer than it did when it sold at practically the same size, a 12-year-old suit, at \$2.50.

I have also an instance here of a cloth made in the largest mill in the world, costing about 90 cents a yard, a piece of worsted cloth, 14 ounces, durable and fast color. The cloth in this suit is costing to-day \$2.70. The suit is sold at wholesale for \$6.50, and with two pairs of pants sold for \$8.25. Such a suit is retailed at all the way from \$12.50 to \$15, according to the liberality or necessities of the retailer who handles it.

Such a suit which sold at retail at \$10 was the subject of controversy here some months ago. I have shown with the overhead charges being added to the \$8.25, which was paid for this suit, that the retailer lost \$1 a suit and simply used it as an advertisement.

Anyone can see the small relation of the cost of the wool or cloth in that suit to the price at which the suit is sold at retail. The same would apply, of course, to women's garments, and accordingly the reduction of the tariff can only result in bringing in foreign competition. There is no way in which our costs or our selling prices can be lowered except we have cheaper raw material or reduced costs in labor.

It would be almost impossible at this time to reduce the labor in the woolen mills. We reduced 10 per cent after the Gorman-Wilson tariff went into effect. Since then it has been increased 30 to 35 per cent. The hours of labor have been reduced nearly 10 per cent, and to-day we are in no position to stand any increased competition in this business.

Mr. HULL. What rate would you suggest; the retention of the present rate on raw wool or on the manufactured product?

Mr. HOLMES. It would depend entirely on what your intention was, whether to increase or decrease the production of wool here, or to encourage the manufacturer of cloth and clothing at the expense of the wool industry. I have suggested that the raising of wool here is a difficult and precarious business. I know personally that after the Gorman-Wilson bill was passed a great many farmers gave up raising sheep, that the price of wool went down, and it became unprofitable. Whether that would occur or not I do not know; but I throw it out as a suggestion to the committee that it is a danger to disturb the industry.

Mr. HULL. You think 40 per cent on cloths is too low?

Mr. HOLMES. With what duty on wool?

Mr. HULL. Twenty per cent.

Mr. HOLMES. That would depend again on what competition you wished to draw in here from the other side.

Mr. HULL. What would be the effect on those two rates, in your judgment?

Mr. HOLMES. The effect of those two rates at first would be almost paralyzing to the wool industry, the manufacturers of cloth, because it would draw in here now cloths which are not in competition with ours at all.

Mr. HULL. It is true is it not that no cloths made out of wools of great shrinkage come in here now or have come in for years, on account of the way the specific or compound duty works?

PARAGRAPHS 360-369—RAW WOOL.

Mr. HOLMES. You mean wool or cloth?

Mr. HULL. Cloths made out of wools of large shrinkage.

Mr. HOLMES. Cloths made in this country of wools of large shrinkage are made from wools grown here.

Mr. HULL. I understand. But is it true that this kind of cloth has been absolutely prohibited?

Mr. HOLMES. No; the cloth has not been prohibited with any regard to the duty on wool. The only prohibitory action with relation to duties on cloth is where the duty on cloth more than compensates for the difference in labor. As you will find in the statement that I have sent to every member of the committee, the increase in the labor cost is the determining factor. As a piece of cloth is made finer, as it is spun finer, as more yarns go into it, the labor cost becomes the important determining factor. Where there is 15 yards to the pound there is a great deal less cotton in a yard of cloth, but the reason that 15 yards costs more than 4 yards to the pound formerly did is it costs so much more to manufacture. It is simply a labor proposition. It rises and falls according to the amount of labor.

Mr. HULL. Then, according to your view, the present rates on cloth of all kinds are low enough to permit of reasonable importation?

Mr. HOLMES. On piece goods.

Mr. HULL. Only on piece goods?

Mr. HOLMES. Yes, sir; only on piece goods. It is a tariff now on luxuries.

Mr. HULL. Then none of the low-grade cloth can come in?

Mr. HOLMES. Because the 44 cents a pound duty is prohibitory. The competition is here among ourselves. The cloths here are cheap enough.

Mr. HULL. How high does that prohibitory rate run, as estimated by the value of the cloth?

Mr. HOLMES. I could not give you exact figures. Cloths have come in here and sold as low as \$1 a yard, fine worsted dress goods, and if we can get a lively demand here our prices are fairly profitable. There is an average from twenty-five to thirty million dollars' worth of woolen worsted cloths imported into this country now every year under this prohibitory tariff.

Mr. HULL. It is only the more costly goods, however, that people of means are able to purchase?

Mr. HOLMES. Those are the only people who wear imported goods; yes, sir.

Mr. HULL. And the coarser woolen cloth that is universally consumed is absolutely prohibited from importation?

Mr. HOLMES. Those are made here. The importation of them is prohibited; but the duty bears no relation whatever to the prices at which they are sold.

Our low-grade cloths here are better than the cloths of similar grade made abroad. They are past masters there in the use of shoddy; their product is not as good on the cheap cloth. I have had to do with the importing of cheap cloth and I know what kind of plunder they make.

PARAGRAPHS 360-369—RAW WOOL.

Mr. HULL. Your idea is to keep the prohibitory rates up as they are?

Mr. HOLMES. If the wool industry is to be protected, yes. I make that as a suggestion.

The CHAIRMAN. That is all.

Witness excused.

The brief filed by Mr. Holmes is as follows:

GENTLEMEN: I ask a few minutes to consider some phases of the problem before you which are, in my opinion, generally overlooked in their discussion. I speak from an experience of over 30 years in the handling of woolen cloth in New York City. This has brought me into relation with both the woolen manufacturer and the manufacturing clothier, whose interests, with those of the consumer, are so much affected by any action you may take. If there is time, I will be pleased to answer any questions suggested by what I will say.

I speak first in relation to the duties on wool. Roughly speaking, there is consumed in the United States about 500,000,000 pounds of wool per annum. Of this, roughly speaking, an average of 200,000,000 pounds is imported; in other words, we only produce about three-fifths of the amount necessary for our manufacturers. The question, therefore, as to what duty, if any, shall be placed on raw wool, is a most serious one. There are two relations in which it affects the question which you should consider. If, by the reduction or removal of the duty on wool, the raising of sheep is discouraged in the United States, it will affect not only this product but also the price of mutton, used as meat. Why in the United States we only produce 300,000,000 pounds of wool, when Australasia produces over 800,000,000 pounds and Europe nearly as much, is something that you should consider. It is the fact that sheep raising is a most precarious, irksome, and generally an unprofitable business. Why England and Scotland, with an area about equal to that of Connecticut and Massachusetts, should produce as much wool as is grown in America East of the Mississippi, tells its own story. Favorable climate and low-priced labor must be the reason. Sheep are difficult to manage, readily yield to disease, and require constant attention; even in such countries as Australia and the Argentine they require constant watching and treatment for their various ailments.

If, as has happened in the past, the number of sheep raised in this country should decrease in any large percentage, it would affect not only the supply of the staple for clothing, blankets, and underwear, but would also decrease the supply and increase the already high price of meat. Another fact bearing on the discussion, is that our sheep are seldom allowed to attain the mutton size, on account of the preference of the American people for lamb. The consequence is, sheep are slaughtered not later than the yearling age, producing only one or at the most two, fleeces for the wool market. I again call your attention to the fact of our dependence on this supply, in case of falling off of that from foreign countries, or in the chance of its being interdicted in time of war.

Referring to Schedule K, I call your attention to the peculiar classification whereby certain English, Irish, Scotch, and Canadian long wools are called class 2, are fleecewashed, and are dutiable at only 12 cents per pound. All other clothing wools, fleecewashed, are dutiable at 22 cents per pound. This clause was put in the tariff in 1867. The reasons for so doing at that time as propounded by the manufacturers of that day were that, as these particular wools were not grown in this country, consequently, it would not hurt any farmer if they were allowed to come in at the same duty practically as unwashed wool.

Of these long wools of class 2, the imports run from 16,000,000 as high as 30,000,000 pounds, and being very light shrinkage wools, averaging about 24 per cent, the clean pound duty paid on them would be less than one-half of that paid on many other fleecewashed wools suitable for clothing purposes.

I would offer for your consideration the fact that wool, more largely than nearly any staple, is sold in the open market, and therefore, if an ad valorem duty were placed upon it, would be less liable to undervaluation than almost any other item of importation.

I now come to the consideration of woolen manufactures, employing about 180,000 persons in this country, representing something near 900,000 people dependent on the industry. It is a highly protected industry, most complicated in its processes, and one of the serious arguments in favor of its protection is the fact that it renders us independent of foreign producers in time of war or other difficulties in obtaining a foreign supply of cloth for clothing.

PARAGRAPHS 360-369—RAW WOOL.

It is a fact that the average duty assessed on such woolens as are imported, probably exceeds 100 per cent, and through the use of the specific, in addition to the ad valorem duty, the rate is rendered prohibitory on the medium and lower grades. That this works no hardship to the consumer may surprise you, but will be explained when I come to the third part of my remarks concerning the manufacture of clothing. I refer you to a printed memorandum which I have furnished each of your members entitled "The Tariff and the Textile Trades." I wish to say at his point, however, that the cloth made in our mills is better in quality than cloths of the same grade made abroad, and is adapted as a result of experience to the demands of our manufacturing clothiers, and the needs of our population. Comment has been made on the reduction in the average weight of cloth in the last 20 years, and it has been said that this is to the disadvantage of the consumer. The fact is that this decrease in weight is the result directly of the demands of the trade probably owing to the better-heated dwellings of the present generation, or it may be to their more robust condition owing to the increase of outdoor exercise and athletic sports.

Comment has also been made on the use of cotton and shoddy taking the place of wool in cloths made for clothing. It can readily be seen that 500,000,000 pounds of wool afford only a little over 5 pounds to each of our population, and when the amount used in carpets, felts, and underwear is deducted there is not sufficient wool per capita for blankets and clothing, and the large use of substitutes resulting from these conditions keeps down the average price while it makes possible a supply of durable clothing and comfortable blankets within the means of the poorest consumer.

Even in the lowest grades our woolen cloths for cheap clothing are far superior in quality, durability, and color to those furnished to the poorer classes in Europe.

I call your attention to the matter of costs, as entering into comparison between similar cloths made in the mills of Europe and the United States.

Costs vary considerably with production. There are six or seven departments in a woolen mill, such as dyeing, carding, spinning, weaving, finishing, etc., each with an overseer, or sometimes two, on fixed pay. These constitute an overhead charge; that, with other expenses, engineer, coal, insurance, office help, and so on, make a constant item of costs figured per yard of cloth. It can therefore be seen that at times of slack production, through sickness or other causes, the cost of manufacturing may increase to nearly double the normal. For instance, a mill makes 6,000 yards of cloth per week. If half the looms are stopped, the production is 3,000 yards. The saving in labor costs is only the actual piece work expense on the yardage reduction, while all the fixed expenses go on, so the cost of manufacture may be nearly double per yard. It is therefore almost impossible to make exact cost calculations. Prices are figured on a full production, and many times a profit is turned to a loss by unforeseen stoppage or loss of production. I call your attention also to the fact that this industry is liable to sudden changes of style of cloth in demand, and also is greatly affected by climatic conditions, such as a mild winter or a late spring. This makes the business a precarious one, and few large fortunes have been made in it, while the failures have been many.

I also refer briefly to the American Woolen Co. This is not a "trust" or "holding" company, but is a manufacturing concern operating directly its 40 mills, and marketing the product through its own salerooms. It is in no sense a monopoly, making only about a fifth of the product in its own lines in this country. It pays no dividend on its common stock, and can not be called a watered corporation. I can not see that it affects the cloth market adversely, as it enjoys no undue advantage over its competitors, either in buying or selling.

The wages paid in the woolen industry are lower than in most of the protected or skilled trades, although almost double those paid abroad. However, as stated by the Commissioner of Labor in his report on the Lawrence strike, often many of the workers are in one family, so that their joint income admits of a comfortable living and an opportunity for saving. This is especially so in the smaller mill villages, where many operatives own their own houses, as is also largely the case in Philadelphia.

I now come to the clothing industry, which has grown in our lifetime to be one of the greatest industries in the country. In New York State, the manufacture of men's and women's garments exceeds in size that of any other industry, and is nearly double that of any of the three following: Agriculture, steel, or brewing. I call your attention, first to the fact not generally discussed, that clothing manufacturing will be subjected for the first time to foreign competition if a serious reduction is made in the tariff. Schedule K, as amended in the bill vetoed by President Taft, places clothing and other woolen garments in the same category as woolen cloth. At the time

PARAGRAPHS 360-369—RAW WOOL.

of the Wilson bill of 1894, the manufacturing clothing industry abroad hardly existed, nearly all clothing, except the coarsest, being made there by tailors "to measure." Since that time a large industry in ready-made clothing has grown up in England, and the average wages paid are little over one-third of those paid here in similar work. The manufacture of cloaks also, especially in Germany, is a very large one, and in this trade, also, a very low wage scale prevails. The cloth used is inferior to that made here in the same grade for durability, but is so manipulated as to present a good appearance.

I now take up the question of the cost of clothing. The average suit of clothing sold at retail at \$15 to \$20 contains only 3 yards of cloth at an average wholesale cost of from \$1 to \$1.25 per yard, so that there is only \$3 to \$3.75 worth of cloth in a suit. Such clothing is sold at wholesale at from \$7.50 to \$9, and much of the cost of manufacture goes into what is known as "make." It is the fact that clothing to-day contains less proportion of value in cloth than formerly, the higher price being in the trimming, fitting, etc., in which there has been an enormous improvement. This work is done by highly paid skilled labor, but is demanded by the consumer, whose wants are studied and supplied. Then the retailer, charging from 60 to 100 per cent advance on a suit or overcoat, is compelled to do so by the increased cost of store rent and furnishing; also advertising and clerk hire, which, added to his losses on clothing out of style, leaves him but little margin on a year's business. I call your attention to this point. Where the American, buying at retail, loses for his want of cooperation, 20 or 50 men, joining together as a club or company, could order one pattern of clothing, such as a serge suit, or melton overcoat, and save from 30 to 40 per cent. Our American, buying at his local store, wanting a particular style, pays for his individuality and lack of cooperation. Just so a man bought potatoes in Stroudsburg, Pa., last October, for 70 cents a bushel, when his retail market charged 20 cents a half peck. It must be evident that the tariff duty on a few pounds of wool, or 3 yards of cloth, is going to make very little difference in the retail price of a suit of clothes or an overcoat. In fact, as is well known in the trade, such a suit or overcoat will be sold in different retail stores at prices varying all the way from \$12 to \$18 for the identical garments, the difference being based on the necessity, expense account, or liberality of the retail dealer. Take off all the duty and you may ruin a great industry, but you will never be able to show the average consumer any saving or give him any greater value in his or his wife's clothing.

To sum up, I would advise an ad valorem duty on wool, sufficient to protect our sheep industry from loss and discouragement; for we must raise all possible of our own sheep for both wool and mutton. In addition, a duty on woollen cloth, that will protect the manufacturer, while it encourages competition. A specific, as well as an ad valorem duty on manufactured garments, to shut out the cheap "slop shop" products of Europe.

What these figures should be I am not competent to decide, and I think your committee should make no decision without the advice of unbiased experts. If any of you gentlemen were elected to the office of assessor in your home city, you would have practically in your hands the apportioning of everyone's taxes, including your own. Would you take the field books of your predecessor and copy his figures without investigation? Would you scale them up or down on an arbitrary plan? Would you not rather, go over the ground, and the map, block for block, and ascertain, with the help of the best judges of real estate that you could find, what were the just values of the land?

You have examined during this month the schedules affecting all the great industries of the country. I doubt if you feel confident to pass upon any of the more important of them. Millions of dollars in invested capital, hundreds of thousands of working people, will be affected by your decisions. This should not be made a matter of party politics or promises but, like the marriage contract, you should make your decision "reverently, discreetly, advisedly, soberly, and in the fear of God."

Exhibit A. Wool in the grease and its scoured contents.

Exhibit A1. Greasy; heavy shrink.

Exhibit A2. Class 2; light shrink.

Exhibit B. Amoskeag serge, at 74 cents per yard, 54 inches wide.

Exhibit C. Boys suit of same; wholesale price, \$—.

Exhibit D. Wood Mills. A. W. Co.'s serge, at \$1 per yard, 54 inches wide.

Exhibit E. Men's suit of same; wholesale price of same, \$—.

Exhibit F. Rovings of shoddy, wool, and cotton.

Exhibit G. Cloth of same, 34 ounces, 56 inches wide, tensile strength, 50 pounds to inch, at \$1.02½ per yard.

PARAGRAPHS 360-369—RAW WOOL.

BRIEFS ON SCHEDULE K, SUBMITTED BY MAX LOWENTHAL,
ROCHESTER, N. Y.ROCHESTER, N. Y., *January 24, 1913.*

To D. C. ROPER, Esq.,

Secretary Ways and Means Committee, Washington, D. C.:

This brief is offered by a knit-goods manufacturer of 40 years experience, who is on record as a lifelong advocate of a downward revision of the tariff.

ALTERNATIVE PLANS VERSUS: (1) WOOL FREE, (2) WOOL, 20 PER CENT.

Paragraphs 360 to 371, wool.—Two plans are submitted to replace existing duties on wool, yarns, and knit fabrics. Plan 1, on basis of free admission of foreign wools; the duty on yarns ought to be 25 per cent ad valorem; on knit fabrics, 50 per cent. Plan 2, on basis of 20 per cent tax on foreign wool, as per tariff bill now before Congress; the duty on yarns ought to be 40 per cent; on knit fabrics, 60 per cent.

PLAN 1, FAVORING FREE WOOL.

Plan 1, i. e., the free admission of wool is favored because of our country's inability to supply the domestic product in quantity sufficient to meet the needs of our people. The reason for this condition is plain; our population increases while the number of sheep raised decreases. This falling off has been continuous in sections of our country other than the sparsely settled portions, and in these the plow drives out the sheep when the farms replace ranches and free grazing lands. In 1910 the number of sheep of shearing age was reported as 41,999,500; in 1911 as 39,761,000, a falling off of over 2,000,000 head. In the same years the population of the United States is reported as 92,174,515 and 93,792,509, respectively, showing 1,617,994 more people needing wool clothing and blankets with a lessened home supply of the raw material, which can be added to from foreign sources only, insuring lower cost for these prime necessities of life. The protective doctrine as applied to increasing our wool supply has utterly failed and must continue to fail, being opposed by our agricultural development.

WOOLGROWERS FEARS BASELESS.

The fears of woolgrowers as to the results of the free entry of foreign wools into our markets, are unwarranted. Every domestic fleece is and will be needed at good prices, probably increasing ones, as the world's supply of wool is proving inadequate to clothe increasing populations. This year is a particularly favorable one in which to introduce the much-needed change in admission of foreign wools, for clips are short in all producing countries, and prices paid for wool average high in consequence.

PLAN 2. PROPORTIONAL TAXES.

Plan 2, based on the 20 per cent tax on wool proposed in the bill before Congress, would require 40 per cent for yarns and 60 per cent on knit goods. The reason for this requirement is that the domestic yarn spinner, under this plan starts with a 20 per cent handicap as against his foreign competitor, in the enhanced cost of his raw material, the knitter's burden being the 20 per cent tax on wools plus the additional 20 per cent on yarns. In the bill now before Congress 20 per cent tax is levied on wool, 30 per cent on yarn, 40 per cent on knit goods—this is an inversion of vital economic needs, giving the greatest incidental protection inherent in even revenue taxes to the simpler form of the industry. If enacted into law, these provisions, while failing to benefit the woolgrower, who can not adequately furnish the wants of our people, would greatly injure, possibly fatally so, the spinner and knitter. No objection is made to a revision downward properly adjusted, but no one familiar with underlying industrial conditions can admit that the rates now before Congress meet the actual needs of established industries.

PARAGRAPHS 360-369—RAW WOOL.

CANADIAN TAXES.

Canada admits raw wool and noils free, except wools similar to those grown in that country, which are subject to a tariff tax of 2, $2\frac{1}{2}$, or 3 cents a pound, being minimum, British preferential, and maximum rates. Knitted fabrics are taxed at 45 per cent duty, with a British preferential of $12\frac{1}{2}$ per cent, under which rates by reason of free admission of wool, Canadian knitters are enabled to control the major part of their market, subject to a very active British competition.

FALSE STATEMENT ABOUT TAX NEEDED, IF WOOL IS TAXED.

Paragraph 377, yarns.—Under the existing tariff, the import of yarns is practically prohibited by compensatory duties, based on the false assumption that 4 pounds of wool are needed for 1 of yarn, together with 40 per cent ad valorem. Necessarily, the tax on yarn is to be based on the way foreign wools are treated in the bill under consideration. Given free wool, the worsted yarn spinner should hold the largest share of the domestic market, accepting cost figures for his operations given by the tariff board, under a tariff tax of 25 per cent.

The avowed purpose of the present plan of tariff legislation is to lighten the burdens of the consumer and not to harm established industries. Therefore, equity requires that whatever rate of duty be levied on raw wool, a compensatory one be granted the spinner.

IMPORTANCE OF INDUSTRY.

Paragraph 378, knit fabrics.—The 1909 census classifies the hosiery and knit goods industry as follows: Establishments, 1,374; capital invested, \$163,641,000; salaries paid, \$7,691,000; wages paid, \$44,740,000; materials cost, \$110,241,000; value products, \$200,143,000.

The 1909 census reports the value of knit sweaters produced as \$22,430,817; of gloves and mittens, as \$7,296,887.

These figures, while showing the importance of the industry, make no distinction between establishments using wool only, cotton only, or both fibers. Under the existing tariff, knit fabrics are taxed with a compensatory wool duty of 44 cents a pound (based on the erroneous claim that 4 pounds of wool equal 1 pound of yarn), and 60 per cent ad valorem. Should the Congress decide on the free admission of foreign wool, the compensatory wool duty would, of course, be omitted alike for yarns and knit fabrics.

LABOR COST IN KNIT GOODS.

The labor cost for knit goods is stated by the Tariff Board to be 30 per cent of the cost of the finished product. This figure, by experience, proves to be a fair average. Similarly, it can be stated as the result of personal investigation that the wages paid are more than double those for like labor in Germany, which is a leading competitor in this class of goods. The overhead charges are also notably higher in this country than in England or the European Continent.

ERROR IN TARIFF BOARD REPORT.

The Tariff Board arbitrarily set off overhead charges from the items entering into the cost of the finished product and assigned them to selling expenses. This distinction is unwarranted in fact. The manufacturer that omitted to add his overhead charges when calculating costs would find himself in the bankruptcy court in short order.

HANDICAP IN TRADE CUSTOM.

The domestic manufacturer is additionally burdened by trade customs, which form a handicap for him as against the yarn spinner and the foreign knitter. Both these classes require cash or, at best, short-time payments, whereas our knit-goods industry operates under a system which grants its customers credit for the greater part of the year. This makes necessary the employment of an amount of capital much larger in proportion to the volume of its trade (being a one-season business), than in lines having two seasons per annum, or selling the year around. Consequently, the interest charge is a heavy one; in a balance sheet furnished to the writer it amounts to 2 per cent on the output.

PARAGRAPHS 360-369—RAW WOOL.

COMPETITIVE BASIS.

The increased cost of labor and overhead charges in our country notwithstanding, the undersigned is of opinion that with free wool and 25 per cent on yarns, our knit goods industry would compete with the foreign product under a 50 per cent duty.

Schedule K has no doubt received from the members of the Committee on Ways and Means the study its importance demands. No other has been the subject of more discussion and complaint with charges of unfair provisions—only too deserved.

BASIS OF ARGUMENT.

The arguments above submitted are given from personal knowledge of a lifetime as to gloves, mittens, sweaters, and similar fabrics—based on inquiry and study as to wool and yarns. They are dictated in a spirit of absolute fairness to the branches of the wool industry discussed.

INVERTED PYRAMID.

Tariff rates of 20 per cent of wool, 30 per cent on yarns, 40 per cent on knit goods, would be attempting to rest a pyramid on its apex instead of its base. Revenue taxes when applied to goods produced in this country afford incidental protection when so laid as to place the domestic maker on an even footing with his foreign competitor; if otherwise, they must prove detrimental. That the more complex forms of an industry, employing most of labor and capital, need most of such incidental protection would appear to be self-evident.

NO FAVORS ASKED—ONLY EQUITY.

No favors are asked, only scientifically correct and equitable treatment in the decision on the paragraphs governing the life of the knit goods industry.

MAX LOWENTHAL.

LABOR COST IN KNIT GOODS.

Working hours in knitting industry.—United States, 54 hours; Germany, 61½ hours in summer, 60½ hours in winter (vide Shadwell, *Industrial Efficiency*, 1906).

Weekly wages for females in American mill.

	High.	Low.	Average.
Forewomen.....	\$18.00	\$13.00	\$14.66
Knitters.....	12.50	6.00	8.80
Machine finishers.....	18.00	8.00	10.50
Hand finishers.....	12.50	6.00	8.40
Spoolers.....	12.50	5.00	8.35
Menders, cutters, examiners.....	14.00	5.00	7.60
Boxers, etc.....	12.00	5.00	7.25

Weekly wages for females in Chemnitz mill.—Average, 10 English shillings; i. e., \$2.40 (vide *Industrial Efficiency*, Shadwell, 1906).

N. B.—Home finishing of hosiery by women at a wage which rarely exceeds 5 shillings a week; i. e., \$1.20 (vide *Work and Wages*, by Lord Brassey, 1904).

Rates of weekly wages in industrial countries.

{Report of Commissioner of Labor, 1900.}

	Low.	High.
1889: Germany—Foremen hosiery and knit goods, men.....	\$6.42	\$7.14
1898: France—Knitters, female.....	1.56	2.34
France—Knitters, female..... hours per week..	.51	.63
1887: Germany—Machinists.....	3.60	11.88

PARAGRAPHS 360-369—RAW WOOL.

Later foreign statistics, not here available, would doubtless show some advances over those given.

The items of nonproductive labor, like superintendent, salesman, bookkeeper, stenographers, it is known will show an equal difference in cost to American mill over any European one.

MAX LOWENTHAL,
Of MAX LOWENTHAL & SONS.

ROCHESTER, N. Y., *February 10, 1913.*

ROCHESTER, N. Y., *July 29, 1912.*

HON. OSCAR UNDERWOOD,
House of Representatives, Washington, D. C.

DEAR SIR: Since, according to latest dispatches, there appears a likelihood of a revision of Schedule K, I take the liberty of submitting certain views on this subject for your consideration.

Firstly, then, the unprejudiced observer can not but admit that all measures of legislative protection have failed to stimulate the production of wool in the United States in quantity sufficient to meet the wants of its people. Next, it is plain that this deficiency in the supply of wool will constantly increase with the growth of population, the disappearance of free grazing lands and the cutting up of ranches into farms. Incidentally, it is to be remarked that overstimulation of industry by excessively high tariff rates has accentuated the tendency to crowd the native young as well as the immigrant into towns, as consumers, abstracting them from the land, where they would have been producers.

These facts being incontestably true, it becomes evident that our countrymen will need, in addition to every pound of domestic wool, more of the foreign product as the years go by. While, therefore, a tax on this fiber for the purpose heretofore had in view, namely, to insure a sufficient domestic supply, must be acknowledged as futile, yet every revenue tax inevitably acts as a bounty to the domestic producer, as his sale price will equal or approximate closely the foreign price plus duty.

A revenue tax, then, being purposed, the equitable method is to levy the same on a uniform ad valorem basis, ignoring all classifications heretofore in use. Such a tax would give to American manufacturers of woolen goods the use of every grade of their raw material, from the coarsest to the finest, enabling the production, in combination with the domestic clip, of every variety of needed product, to suit the wants and the purses of our large and so rapidly growing population. Only an ad valorem tax will produce so desirable a result, whereas a specific one must necessarily exclude the lower and cheaper grades from entry. The objection that an ad valorem basis will lead to undervaluations is of the least conceivable weight as argued in this connection, for not only is the price of foreign wool fixed in open market, by competitive bidding, but its value is known and its cost can be accurately determined by the many expert buyers, from whom the Government can select its appraisers.

Finally, as to the rate of duty, it can not fail of consideration that while it is the expressed object of the Democratic Party to enact tariff laws for revenue, it is equally pledged to have them effect a lightening of the burdens of the people by lessening the high cost of living. Both these objects, then, need to be kept in view when determining the wool duty, for as it is fixed it automatically carries with it the necessity of fixing a proportionate rate on the manufactured foreign product. While not venturing dogmatically to insist on one specified rate as the only possible and allowable one, under which the American producer, alike of wool and woollens, can manage to thrive, it needs to be emphasized that, in order to be just to all concerned, there ought to be a definite proportion in such respective duties, with due regard to the capital invested and wages paid in each branch. Thus, in the at present improbable contingency of 10 per cent being agreed upon as the rate on raw wool, 35 per cent might not inaptly be considered as a minimum for the finished wool product, and so 20 per cent for wool would imply 50 per cent, or possibly 45 per cent, for woollens—the latter, by the way, the Canadian rate on American goods, with a preferential rate for British.

The reported Senate proposal of 40 per cent on raw wool can not be considered as a measure of tariff revision and a relief to the consumer—in fact, would be but another of the shams with which the American people have been deluded on this matter these many years past. It is not conceivable that, in the light of known and easily

PARAGRAPHS 360-369—RAW WOOL.

verifiable facts bearing on this subject, a Democratic majority in the House of Representatives will allow itself to be so turned from its avowed purpose.

To sum up, what the country needs is (1) a lower rate of duty on wools and woollens; (2) that the rate be ad valorem; (3) that in fixing the rates due consideration be given to the proportion in which capital and labor is interested in the production, respectively, of raw wool and the finished product, to the end that, while the consumer is benefited, there be no harmful upsetting of existing conditions.

In conclusion it should be said that the writer speaks as a convinced tariff reformer, with whatever knowledge of the subject 40 years as a maker of woollen goods has given him.

Very sincerely, yours,

MAX LOWENTHAL.

BRIEF BY THE TATTERSFIELD CO., PHILADELPHIA, PA.

PHILADELPHIA, *January 13, 1913.*

HON. OSCAR W. UNDERWOOD,

Chairman Ways and Means Committee, Washington, D. C.

DEAR SIR: This letter is for the consideration of your committee in connection with the proposed revision of the tariff, and especially that part of it known as Schedule K.

Our company is engaged almost entirely in importing and the selling of imported wools. We import these from various parts of the world, but principally from India, Russia, China, Turkey in Asia, and in Europe. Most of our wools are what are known as "third-class" wools or carpet wools. We also import to a limited extent wools of the "first" and "second" class from Australia, South America, and the British Islands. We also import large quantities of camel's hair from Russia and from Asia. Our annual importations amount to about 10,000,000 pounds.

We sell very few domestic wools; that is, wools grown in the United States of America. Nevertheless, we write this letter to urge upon your committee that in this—one of the most important schedules of the tariff—you should bear in mind the vital importance of so arranging new rates of duty, both upon the raw product, the partly manufactured, and the manufactured product, that there will be no diminution in the production of wool in the United States.

Without any intention of suggesting to your committee that the woolgrowers of the United States require consideration from your committee, we would draw your attention to the fact that the interests of the people of the United States require that there should be as much wool produced in this country, if not more, than there is at present in order to prevent very serious consequences, if not actual disaster. To accomplish this, it is not only necessary to discriminate in favor of American wool by putting duties upon foreign wools, but it is of still more importance that the greatest care should be exercised in so protecting manufacturers of wool in the United States that they will be able to use all of the present product and more besides; that is to say, it is a vital matter that there should be a home market and a profitable market for all the wool this country can produce, so that the supply will not in any way diminish.

Any legislation which discourages the woolgrower—as, for example, the tariff law commonly known as the "Wilson bill" of 1894—tends at once to diminish the production of wool and to turn the attention of the woolgrower to the raising of cattle or even the turning of his land into agricultural purposes of different kinds, such as the raising of grain or fruit. The Wilson bill resulted in a serious reduction in the production of wool in many of the Eastern States, and when the duties were placed again on wool the farmers and former woolgrowers did not resume the raising of sheep, because meantime they had found it more profitable to use the land for raising other products.

Unfortunately there is no substitute whatever for wool. Food can be varied, and if a supply of one kind of meat is scarce another can be substituted. If there is less meat, more grain can be eaten. But if the wool supply is diminished there is absolutely nothing else from which warm winter clothing can be produced. Not only this, but if certain varieties of wool are scarce they can not be substituted by any other kind. This is something that seems to have been lost sight of by many writers on the subject of Schedule K. They seem to think that a crossbred wool can be used to replace a Merino, or that a short wool can be used in place of a long wool, or that if a fine wool is scarce, a coarse carpet wool can be substituted therefor. This

PARAGRAPHS 360-369—RAW WOOL.

is practically an impossibility, and as a result it means that if any kind of wool is scarce the price of the article manufactured therefrom has to be raised accordingly, or else the manufacture itself has to stop.

It has been urged, however, that it is not necessary to stimulate the production of wool in the United States, because sufficient can be procured in other countries to meet every possible demand. Unfortunately this is absolutely untrue. Twenty to twenty-five years ago it was probably correct. In other words, at the time of the Wilson tariff, and before that, there was a surplus of wool produced in foreign countries. Exactly the reverse is the case to-day. The reasons are very simple and they are briefly as follows:

First. The population of that part of the world which lies within the Temperate Zones has increased very rapidly the last 20 years, with consequently very much enlarged consumption on that account.

Second. Countries which 20 years ago were scarcely considered as consumers of wool are to-day very large consumers. For example, Japan is now a very important factor in the purchase of Australian wool. China is beginning to be a factor in that also. Turkey is consuming almost all its own wools, whereas 20 years ago the greater part of it was available for export. Russia, which had a tremendous supply for export 20 years ago and only a limited number of mills, is now a consumer of the greater part of its own wools and is a very large importer of wools also. Reference is made to this matter further on in this letter.

Factories have been started in Australia for the consumption of part of their tremendous supply, and in such countries as India and Persia woolen factories have been started where 20 years ago they were unknown.

Third. The production of wool in almost all foreign countries has rapidly decreased. The shortage in this season's Australian clip is estimated at some 300,000 to 350,000 bales, or about 130,000,000 pounds—almost one-half the amount produced in the United States.

South America, particularly the Argentine Republic, shows also a very marked decrease in supply. Every recent year shows a large reduction from its predecessor and the tendency there is continually downward. The reasons for the decrease in Australian wools are partly due to socialistic conditions and partly to drought, but no serious increase can ever be expected again from that country. In the Argentine Republic it is competition with cattle raising and with wheat growing that has a tendency to reduce the production of wool; the very same reasons which tend to reduce the production in the United States.

In South Africa there was for a year or two an increase in the production of wool, but not enough to offset the diminution in South America. This season, however, the supply is considerably less, due to unfavorable climatic conditions.

In Russia the decreased supply of wool has become such a serious matter that it has been taken up very earnestly by the Russian Government itself to see if they could devise ways and means to cooperate with the manufacturers in Russia and with the farmers for the purpose of bringing the production back to the quantity of former years.

On this subject there is a very valuable article recently published in the Consular Reports issued by the Department of Commerce and Labor, and written by the Hon. Mr. Snodgrass, the very able American consul general at Moscow, in which he clearly shows how seriously the Russian Government have taken up this subject and how much concerned they are at the shortage in the supply of wool. Perhaps they realize more than any other country how vital it is to them that the supply of wool be not diminished. The consumption of wool in Russia has increased enormously. This is not only due to the increased population there, but to the fact that the conditions of the Russian peasant have greatly improved, and his purchasing ability and desire for better clothing is enhanced thereby. So that Russia, although still growing large quantities of wool, has become a very serious importer of Australian, South American, and other foreign wools.

In the Continent of Europe the story is exactly the same. In Turkey the supply of wool is diminishing as well as local consumption increasing. France shows less production of wool, England the same, and in Germany certain wools are almost now unprocureable which formerly were in large supply there, and all over the rest of the world the same conditions exist. Even in Asia, although the central part of this great continent is only in a semicivilized condition, the supplies are rapidly diminishing. All through Asia the decrease in the number of sheep and the supply of wool is due to the advance of civilization where the former nomadic tribes are settling down

PARAGRAPHS 360-369—RAW WOOL.

and becoming agriculturists instead of sheep herders, as they find it more profitable and less arduous.

With these conditions existing throughout the world, it seems nothing less than suicidal to take any steps which would decrease the world's supply of wool. Your committee, therefore, is requested to earnestly consider this point in any steps they may take for the revision of Schedule K.

We do not intend to suggest any rate of duty. We made some suggestions to the late Tariff Board on this point in a report which we gave them at their request, on carpet wools. They published in their report the most of what we said but ignored this vital question entirely. We do not know that they were called upon to consider it—at least they did not do so.

It may be that a high duty on wool is not necessary, but it is at least necessary that the American sheep grower, if he is to be encouraged, should find such a market for his wool that will be to him a profitable one and make him satisfied to continue in the business.

It has been suggested to us that instead of an import duty there should be given to the wool grower a bounty for each sheep that he raises. This is given to you for your consideration.

On one other point we respectfully address your committee. That is, on the question of the duty upon tops.

As said before, we are importers and if your committee made the duty upon tops a very moderate one, it would be a very simple, and possibly a profitable business for us to go into, but we think that there should be a sufficient margin between whatever duty your committee thinks should be upon wool and the duty upon tops to enable the mills of this country fitted for the production of this article, to be run at least without loss. Under the bill which was submitted to the President last year, there was only 4 per cent difference between the duty upon wool and the duty upon tops, they being, respectively, 29 per cent and 32 per cent. Such a duty would be utterly inadequate to cover the difference required and would have resulted in such a large importation of tops into this country as to make their production here impossible.

In the Wilson law, above referred to, wool was free and tops were subject to 20 per cent duty ad valorem. Even under that law we imported very large quantities of tops of the finest grade. We do not say that there should be 20 per cent difference in the duty upon wool and the duty upon tops—that is to say, we would not advocate 49 per cent duty on tops if there was 29 per cent duty on wool.

We think your committee can obtain from the large top manufacturers of the country—such as the Arlington Mills, Lawrence, Mass.; Messrs. Pearce & England Co., Philadelphia; and other large mills—what is the minimum amount of duty that is required to enable them to run their mills and pay the present rates of wages. Our opinion is at least 15 per cent difference is required—thus if the duty upon wool were 20 per cent there should not be less than 35 per cent duty upon tops.

We inclose herewith a memorandum extracted from the annual review of the wool trade in 1912 of the Weekly Wool Chart and Private Business Report, published by C. F. Mallett, Bradford, England. This is one of the leading authorities in England on the wool market. The original is at your service, if required, as well as other statistics taken from various trade papers.

Yours, faithfully,

TATTERSFIELD CO.,
PERCIVAL TATTERSFIELD,
President.

[Extract from the weekly wool chart and private business report December 27, 1912.]

THE POSITION OF RAW MATERIAL.

The relationship between raw material supplies and the world's demand is now of supreme interest, especially in view of the estimated decrease of 300,000 bales in the Australian merino clip for the current season. There is no promise of any appreciable increase in the New Zealand clip, whilst the South American supplies are estimated to show a shortage on the preceding season equivalent to about 65,000 Australasian bales. Bearing on this question it may be noted that Messrs. Dalgety estimate that as an after effect of the drought in Australia there was a loss of 5,000,000 sheep, and that the yield of wool per fleece is about half a pound less. Then, again, we learn from the same source that the expansion of flocks in Australia and New Zealand is checked by the more extensive use of land for agricultural and dairy farming purposes

PARAGRAPHS 360-369—RAW WOOL.

and by the heavy slaughter of sheep for the mutton trade. Another point to be considered in this connection is the possible effect of the lowering of the wool tariff in America on home production. It is said that American wool growers have found it difficult to make a satisfactory margin of profit under the existing tariff in competition with colonial imports, and it is considered not unlikely that the lower tariff will militate against American woolgrowing. It is, of course, a matter of speculation as to what will be the actual development in this direction, but it is a fact that during the free-wool period of 1894-1897 the production of wool fell by over 88,000,000 pounds. The Tariff Commission appointed by President Taft reported that it cost more to grow wool in the United States than in any other country in the world.

The appearance of Japan as a keen competitor in the primary markets is also an interesting feature. The total amount purchased by the Japanese was only a small percentage of the whole, but their operations must be regarded as a sign of the times. There is reported to be a rapidly growing demand in Japan for woolen in preference to cotton garments, whilst China is following in the same direction and using increased quantities of wool in clothing the army and navy. These factors, coupled with the higher standard of living, especially in the western countries, go a long way toward accounting for the present raw material situation.

BRIEF PRESENTED BY E. H. VAN INGEN & CO. OF NEW YORK.

Our views regarding the downward revision of the tariff are fully expressed in the booklet hereto annexed, entitled "Schedule K, wool and woolens," which was published throughout the country. We have not changed the opinions therein expressed.

We are comparatively indifferent, however, as to the rates of duties which may be imposed. We are greatly interested as to the date when they shall become operative. We most earnestly urge upon the committee that January 1, 1914, shall be the earliest date for reduced duties on manufactures of wool.

If any earlier date be named, the change will come in the middle of a business season. Terrible confusion, enormous losses, and country-wide disaster will certainly result.

Woolen merchants, clothiers, and all others dealing in woolen goods place their orders, with foreign and domestic manufacturers, for the autumn and winter seasons in the preceding months of November, December, January, and February. All the goods are to be made after the orders are given.

Deliveries are made by manufacturers in April, May, June, and July. Salesmen are dispatched to all parts of the country, and, in March, April, and May orders are taken from tailors, retail clothiers, and dry-goods merchants. Shipments of such orders are made to retail merchants between the 15th of June and the 1st of August.

Unless prices can be established for the season, great embarrassment must ensue. Merchants could not order domestic goods with reductions equal to more than all their profit staring them in the face. American manufacturers would not be able to run half their machinery during the period antecedent to the lower duties on wool. There would be months of practical chaos among manufacturers, wholesale clothiers, and woolen merchants.

Few retail merchants can wait until September or October to lay in their fall stocks. Business opens up early in August, and they must be ready for it.

Every merchant, wholesale and retail, should have the whole of the last half of the year to get ready for the reductions which would become operative January 1. A very widespread, angry feeling will result if this clear act of justice be refused.

But if the reduced tariff rates on manufactures of wool should go into effect on January 1, 1914, American manufacturers ought to be allowed a reasonable time to meet the changed foreign competition. Whatever reduced rates on wool may be adopted, they should go into effect at least two and a half months before the lower duties on manufactures become effective.

All of which is respectfully submitted.

E. H. VAN INGEN & Co.

PARAGRAPHS 360-369—RAW WOOL.

WOOL AND WOOLENS.

Before the McKinley bill was enacted, in October, 1890, the duty on wool of the better sorts was 12 cents per pound. The duties on woolen goods of the foreign value of over 80 cents per pound were 40 per cent ad valorem and 35 cents per pound.

By the McKinley bill the duty on first-class wools was placed at 11 cents per pound and the duty on woolen goods costing abroad over 40 cents per pound at 50 per cent ad valorem and 44 cents per pound.

The Wilson bill made wool free and woolen goods costing over 40 cents per pound 50 per cent ad valorem.

As a result of foreign wools coming in free the prices of American wools fell off about one-half, so that woolgrowers found the value of their product disastrously reduced. Many cheap, strong, foreign wools upon which the duty had previously been absolutely prohibitory now arrived in great, indeed, excessive quantities and were eagerly taken by manufacturers. Good, honest, low-grade fabrics were made and sold at lower prices than had been known in this country during the previous 40 years. The better grades of American goods were also much reduced in price.

The manufacturers were well satisfied; the woolgrowers were not. They were immediately "up in arms," formed themselves into a strong fighting organization and forced the manufacturers to join them. "If you do not help us to restore the duties on foreign wools, we will cut in two your protective duties on woolen goods," was the effective threat employed. An alliance, offensive and defensive, was agreed upon, which still lives. It wields enormous power, can control the votes of several States, could have defeated McKinley, Harrison, or Taft for the presidency, and is extremely aggressive and insistent. Owing to its overwhelming influence, the Dingley bill (following the Wilson bill, which was in operation only from Jan. 1, 1895, to Oct. 1, 1897) not only restored the McKinley rates, but increased the duty on woolen goods from 50 per cent ad valorem and 44 cents per pound to 55 per cent ad valorem and 44 cents per pound.

Again, under its masterful and not overscrupulous management, the influence of this fighting organization, having behind it untold millions of money, dictated the framing of the present Payne bill so far as Schedule K (wool and woolens) was concerned. That was left undisturbed. "Downward revision" was not applied to that nor even seriously talked of. Why? The duties remained as established by the Dingley bill—viz, 55 per cent ad valorem and 44 cents per pound on goods costing in foreign countries over 70 cents per pound, with 11 cents per pound on the better sorts of wool. These rates covered all the goods used by merchant tailors and practically excluded from the country all such low grades as are used by ready-made clothiers.

The 55 per cent was to "protect" the American manufacturer against the cheaper labor and materials obtainable by his foreign competitor. The 44 cents per pound on cloth was to "compensate" him for the 11 cents per pound duty on those foreign wools which he would be compelled to buy if he would make any of the numerous fabrics for which, in whole or in part, such wools were absolutely necessary.

The 55 per cent ad valorem was more than ample protection. Forty per cent ad valorem would be generously sufficient. It is claimed that 4 pounds of greasy wool are required to produce 1 pound of finished cloth. That is not true. Probably 3½ pounds would be a liberal estimate.

If the present duty of 11 cents per pound on wool were reduced to 6 cents or 7 cents per pound, then 35 or 40 per cent ad valorem and 21 cents or 24 cents per pound on cloth would fully "protect" and "compensate" the American manufacturer, while 6 cents or 7 cents per pound would give all the "protection" to the woolgrower which he ought in reason to ask for.

If the Wilson bill had established such rates, and had been allowed to stand long enough to permit woolgrowers, manufacturers, and merchants to adjust themselves to the new conditions, it might have stood unchanged to this day—and the country have escaped great disturbance and loss. But that unwise bill left untouched the excessive "protection" which the manufacturers had enjoyed and took away all the "protection" from the woolgrowers. It was too kind to the former and too harsh to the latter. It gave to the woolgrowers plausible and even real grounds for complaint, while furnishing them with a weapon which they have mercilessly used and are still using to coerce manufacturers and both of the political parties.

Only the wool of the sheep can be advantageously used for making clothing fabrics. In that, especially and remarkably, each fibre is covered with projections, or pointed scales, tough, elastic, and pliable, which easily clutch and interlock with each other

PARAGRAPHS 360-369—RAW WOOL.

under moisture and pressure. When saturated with fuller's soap and rubbed or pounded together, the fibres of wool will mat themselves into a solid mass, making an unwoven fabric known as felt. That is used for cheap rugs, horse cloths, and many other articles. But it bulges easily under slight pressure and is entirely unfit for clothing.

After the wool has been made into yarn, in which process the fibers have been partly interlocked, and after the yarn has been woven into cloth, the fabric, filled with fuller's soap to make it work smoothly during the operation, is placed in a "fulling" machine and, in effect, pounded together. The fibers quickly and further interlock and a thin, sleazy, flannely fabric will be worked into a firm, compact cloth, of almost any weight.

But there is a wonderful variety of difference in the "fulling" qualities of different wools. The points, or scales, as many as 2,800 to the inch in some fine merinos, may be less than 500 in some other wools. Hence, to make a given cloth some wool may be superior to any other, since practically no two wools are exactly the same in their shrinking, fulling, and other qualities.

The best of the merino wools grown in Australia are the finest in the world. To make a very fine cloth only those can be used. Our Ohio wools are of the same character, but not so good, and are much used in conjunction with Australians. They are also used for many of the high second-class fabrics. For a very fine dress coating, only Australian wool would be used. Australians and Ohios combined make a handsome medium-grade cloth, and a great many of the better and more dressy Americans are so constructed.

Scotch, Irish, and English wools are different in many and varying respects from others grown elsewhere.

Certain of our wools, known in a general way as Kentucky wools, have unique and special qualities. Fabrics are made from them, strong and handsome, which can be produced from no other wools obtainable, elsewhere, by European manufacturers. The same is true of many other wools, having great and peculiar merits, grown in this country and unknown in Europe.

American manufacturers must be able to obtain any or all the wools grown throughout the world if they are to produce the multiplicity of fabrics needed to satisfy the requirements of ninety millions of people.

If freer access to all the wools of the world were allowed to our manufacturers, the prices of many foreign wools would be enhanced by their purchases, and an approximate equality of values might soon be established as between those wools and our own. Foreign makers might soon be taking certain American wools in order to produce those desirable fabrics which can be made from them but from no other wools.

To reproduce exactly the same wools, possessing the same peculiar qualities, as that grown in some certain given country or section of a country would require—

First. Exactly the same breed of sheep;

Second. Exactly the same climate as regards conditions, degrees and seasons of moisture, heat, and cold;

Third. Exactly the same soil; and

Fourth. Exactly the same food, chemically analyzed.

Those are conditions impossible of attainment and explain why a particular cloth can only be exactly made from some certain wool, grown in some certain place.

The wools of the whole world are essentially needed by any country which would manufacture every kind of woolen goods. Every kind, to greater or less extent, is wanted and demanded in this country.

There are no more expert manufacturers anywhere than the best of those in this country. They are wonderfully quick to catch ideas, to modify, alter, improve, and to meet quickly the ever-changing demands of fashion and fancy. They produce as great a variety of woolen cloths as can be found in the whole of Europe together.

The fine and medium grades of the woolen cloths made here are generally better than those of equal quality to be obtained in any other country. American colors are as a rule better, clearer, and more lasting than those of similar foreign-made fabrics. The designing talent in America is quite equal to any in Europe.

Europe excels only in the finer or finest grades. Such are not made in America, but easily could be except for the fact that the small quantities of the very best wools consumed in any one country would fail to justify the establishment of the complex and highly capitalized plants which would be necessary. England could not maintain its finest industries if it had only its home market. The whole world must be available. As before stated, a very small percentage of the people of any country use the very best. English manufacturers have six hundred millions of people as customers. We have ninety millions.

PARAGRAPHS 360-369—RAW WOOL.

Our best goods must be imported. But in sound medium grades—as this exhibit demonstrates—Americans are not only better but much cheaper than similar foreign goods of the same qualities.

The duties on goods imported by our house (reducing the compound rates to an ad valorem equivalent) range from 70 to 125 per cent, the average being 90 per cent. In a few special cases the duty will run up to 135 and 150 per cent.

Thus, 1 yard of a cloth the cost of which in England may be \$1 will cost, after paying duties, \$1.90, and to this must be added freights, insurance, and other important items of expense.

The finer the goods, the lower the duty. The cloth weighing 16 ounces to the yard, costing abroad \$1, will pay 55 per cent ad valorem and 44 cents weight duty. The latter is 44 per cent on cost, so that the total is equal to 99 per cent ad valorem.

A cloth of same weight as above and costing abroad \$2.50 will pay 55 per cent ad valorem and 44 cents per pound. But the weight duty will only be $17\frac{1}{2}$ per cent on cost and the total be equal to $72\frac{1}{2}$ per cent ad valorem.

This seems like a discrimination in favor of the rich, but, of course, was not so intended. It is not easy to avoid placing a higher tax on low goods than is paid on the fine goods. The specific or weight duty is the Government's only safeguard against undervaluation. The ad valorem portion can be evaded in part. The weight duty can not be dodged unless by collusion with officials.

If all the duty were specific, the discrimination against the poor man's goods would be greater than now. If all the duties now levied were in the form of weight duty and 99 cents per pound were the rate, then, on the goods costing abroad \$1 the duty would still be 99 per cent. But the goods costing \$2.50 would pay 99 cents, which would be the equivalent of only 40 per cent. Therefore the low goods would pay 99 per cent and the fine goods 40 per cent, as against 99 per cent and 73 per cent, respectively, as now.

If the whole duty were made ad valorem, say 99 per cent, all grades would pay the same—which would seem just. But undervaluation would flourish and smuggling become a fine art. The Government, using all its powers to stop it, would have but indifferent success. The higher the ad valorem rate, the more lucrative and extensive will be the undervaluations.

If duties of 6 cents per pound on first-class wools, with 35 per cent and 21 cents per pound on goods—or 7 cents per pound on wool, with 40 per cent and 24 cents per pound on goods—should be levied by a new tariff law, we believe the whole country would be satisfied and such a law stand undisturbed for many years. Of course the fighting organization of the woolgrowers would cry "More! More!" whatever the rates.

If 35 per cent and 21 cents per pound were adopted, goods costing abroad \$1 would pay the equivalent of 56 per cent ad valorem instead of 99 per cent, as now. Goods costing \$2.50 abroad would pay 43 per cent ad valorem, instead of 73 per cent, as now.

If 40 per cent and 24 cents per pound were established, goods costing abroad \$1 would pay the equivalent of 64 per cent ad valorem, instead of 99 per cent, as now. Goods costing \$2.50 abroad would pay 50 per cent ad valorem, against 73 per cent, now.

It is our business to supply the better and highest classes of merchant tailors with such reliable fabrics as they require, and with which they can maintain the superiority of custom-made garments over ready-made clothing. In the production of the latter, low price is the first consideration, and expert cheapening in every way is the rule. We do not supply the inferior stuff which they consume to that trade, nor to the cheap tailors, whose garments are no better than, if so good as, the ready-made.

Hence our general remarks deal almost entirely with the wools paying 11 cents per pound, and the goods paying 55 per cent ad valorem and 44 cents per pound. The lower grades, which pay 50 per cent ad valorem, and 33 cents per pound, do not concern us or our customers, being more or less in the nature of rubbish.

The difference in the wages paid in any two countries does not necessarily represent the difference in the cost of production in those countries. The same kind of loom, running at the same rate of speed and with the weaver, in each case, paid by the piece, will produce more yards of cloth, in a given time, in the United States than in Great Britain. The man here works quicker, as when he is obliged often to stop and restart his loom he is more alert in everything and all the time. Every detail, such as taking out a completed piece, putting in a fresh warp, etc., is more quickly accomplished here. The same celerity of operation is observable in every department of of the mill. Probably 15 per cent, at the least, may fairly be added to the scale of English wages to allow of a fair comparison in estimating the relative cost of production in England and America.

PARAGRAPHS 360-369—RAW WOOL.

Exaggerated ideas prevail as to the effect upon the prices of custom-made garments in the event of a downward revision of Schedule K. The saving to the tailor would be on the cloth only. His trimmings, labor, and general expenses would probably cost as much as now.

If 40 per cent and 24 cents per pound were made the rates he could abate, say, \$3 on a suit, not more. If the rates were made 35 per cent and 21 cents per pound, he could allow \$4 or \$5 per suit from the present prices.

The statements in this paper, which we believe to be irrefutable, are made primarily for the information and benefit of our customers. As our business has to do with both foreign and domestic goods, it is of small consequence to us whether duties be high or low, excepting that whatever policy will best conduce to the general prosperity of the country will be most advantageous to us.

[Copied from the American Wool Reporter, p. 1161, issue of Dec. 19, 1889.]

To the honorable Senate and House of Representatives in Congress assembled:

The undersigned, being each and all of us engaged in growing, manufacturing, or dealing in wool, respectfully petition that the duties on raw wool may now be removed or greatly reduced for the benefit of our domestic woolgrowers and woollen manufacturers alike. At a recent meeting of woollen manufacturers in Boston it was correctly stated "that the wholesale introduction into the United States of foreign wools in the form of finished fabrics, thereby displacing American wool, which would otherwise be consumed in American mills, is due to the unjust and illogical arrangement of the tariff. While the imports of clothing and combing wools have not materially increased, and the American production is materially decreasing of late years, notwithstanding the rapid growth in our population and the increasing per capita consumption of wool by this increasing population, the quantity of foreign wool introduced into this country, in the shape of goods and yarns, has increased to the enormous total of 141,474,144 pounds in 1888, equaling 44 per cent of our total home production of wools of all descriptions. The wholesale market value of our annual importations of manufactured wool exceeds by nearly 50 per cent the value of our annual wool clip."

As the only civilized country in the world, so far as we are informed, which levies a duty on raw wool, we ask that American industry may be relieved of this unnatural burden, and that our domestic wool interests may now be put upon the same wholesome basis as the cotton manufacturing industry, with free raw material.

GREYSTONE MILLS,

Greystone, R. I., November 19, 1912.

Mr. G. F. O'SHAUNESSY,
Providence, R. I.

DEAR SIR: In laying before you the following facts relative to the effect the Underwood bill will have, should it become law, on the mohair and alpaca manufactures of Greystone Mills, we wish to say that we have spent millions of dollars in practically bringing a new industry to United States of America from England. We are now

PARAGRAPHS 360-369—RAW WOOL.

the largest users of domestic mohair in this country, having been able to manufacture it into articles which were never thought of before we transplanted some of our machinery in 1904, consequently the farmers and goatmen are now reaping advantages which were formerly impossible.

We have mills in England making identically the same 16 qualities as those we refer to on separate statement. The same raw alpaca and mohair is used, the same class of machinery is employed, and the same class of workers are engaged in producing the same goods in England and America, and the qualities of cloth are interchangeable.

The calculations are made absolutely on the same basis, no profit has been added, and the prices are net for goods delivered in New York from England and Greystone.

We are willing to show our English and American calculations from the fleece to the finished cloth, should the results we give be questioned.

We understand you support the Underwood bill as passed by the House of Representatives, and we beg of you to kindly consider the statements which we herewith present to you.

It will be seen that if the Underwood bill becomes law the importer of yarns and the finished cloth will have such a serious advantage over the American spinner and manufacturer that there can be but one result, viz, the closing down of the mills. The advantages to the importer, as shown by us in the accompanying statement, do not embrace any which may be derived by unscrupulous importers.

Kindly note the results of these calculations show that tops, single and two-fold yarns, can be imported under the Underwood bill at lower prices than they can be made in the United States of America, if the present rate of wages is paid.

Also that all qualities of cloth, whether made in United States of America from the imported fleece, imported tops, or imported yarns, can not be produced at the prices of the imported cloths, if the present rate of wages is paid.

We are perhaps fortunate in having English mills, where we shall manufacture the same cloths as we now make here and ship them to this country if the Underwood bill becomes operative, but we feel it is rather hard to see the results of a lifetime, as exemplified in these mills, in jeopardy.

We trust you will give this serious letter and statement your earnest consideration.

We remain,
Yours, truly,

JOSEPH BENN & SONS (INC.),
HARRISON BENN.

JOSEPH BENN & SONS (INC.),
Greystone, R. I., November 23, 1912.

Mr. GEORGE F. O'SHAUNESSY,
Providence, R. I.

DEAR SIR: In accordance with my promise, I herewith inclose duplicate copies of the cost of cloths made in the United States of America from imported fleece, imported tops, and imported yarns and identically the same qualities imported in the finished state, all delivered, net New York.

Also I give you the cost of yarns made from imported fleece and imported tops, and also the cost of the same yarns imported, all delivered, net New York.

The basis of these calculations is what has been known as the Underwood bill, namely, 20 per cent ad valorem duty on wool, 25 per cent ad valorem duty on combed wool, 30 per cent ad valorem duty on yarns, and 45 per cent ad valorem duty on cloths.

I might remark that this Underwood bill appears to be drawn up by importers, because it favors them in every line and every particular.

You asked me if I knew of a tariff which would be satisfactory to us, and I referred you to a bill which Senator Lippitt had been the means of preparing. I am not sure who introduced it at the last part of the session in the Senate, but that bill, I think, would be satisfactory. If you can obtain a copy, I think you will find a great many reductions have been made on the Payne-Aldrich bill.

I again assure you that it would be impossible to continue working these mills if the Underwood bill, with provisions as stated above, were enforced.

I return to England to-day, and any communication you may wish to make I shall be very pleased to consider if you will address me at Becksides Mills, Great Horton, Bradford, Yorkshire, England. I hope to be here again the early part of March.

Thanking you for your courtesies in granting me the interview I had with you, I remain,

Yours, truly,

HARRISON BENN.

PARAGRAPHS 360-369—RAW WOOL.

BRIEF OF WILLIAM C. HUNNEMAN, BOSTON, MASS.

60 CONGRESS STREET,
Boston, Mass., January 30, 1913.

HON. OSCAR W. UNDERWOOD,
Chairman Committee on Ways and Means,
Washington, D. C.

SIR: After having carried on for four years a campaign for ad valorem duties on the products covered by Schedule K, it is cause for profound satisfaction on my part that this principle is to be recognized as a basis for the revision of the wool schedule by the administration that comes into power on the 4th of March.

So far as the Underwood and the Underwood-La Follette tariff bills provided for uniform ad valorem rates on the respective products they have my unqualified approval. I believe, however, that the rates named in these bills are not such as should be adopted in the revision of Schedule K.

In making suggestions to your committee as to the rates under the new law to be enacted by the Sixty-third Congress, I do not feel called upon to make any recommendation for the rates to be imposed on raw materials. It has been decided that these rates shall be ad valorem.

Fixing the rates on manufactures of wool necessarily depends on judgment. They can not be calculated by any general formula, such as that based on the difference between the domestic and foreign cost of production.

As experience is the principal guide in fixing tariff rates we should first consider the experience this country has had in connection with the wool tariff. For nearly 50 years the present Schedule K, with the exception of a brief interval, has been in force. The experience with that schedule has been so unsatisfactory, its abuses have been so serious, the special privilege and discrimination under it have been so flagrant, and the schedule has been so thoroughly exposed as to bring upon it the overwhelming condemnation of the public. The only experience this country has had during the last half century with an ad valorem tariff on wool products was during the period under the Wilson bill. While the woolen and worsted business was very unsatisfactory during the time the Wilson bill was in force, it is undoubtedly true that the depression at that time was due to other factors than the change in the tariff. The bill was in force about three years, and when it was repealed the woolen and worsted industry was becoming fairly well adjusted to its provisions.

While the Wilson bill provided fairly adequate protection to the manufactures of wool, any lower rates than those provided by that law would at that time and would now work serious and permanent injury to the industry.

The Wilson bill provided for free raw materials for wool manufactures. It is assumed that the bill to be enacted will place a tariff on wool and wool by-products to provide adequate protection to the producers of these raw materials, and such protection is unreservedly approved. The only suggestion in this connection is that the same ad valorem rate shall be placed on all kinds of wool and wool by-products regardless of condition.

On manufactured goods the Wilson bill provided for a duty of 40 per cent ad valorem on goods valued at not more than 50 cents a pound and 50 per cent ad valorem on goods valued at more than 50 cents a pound. Such a system of graduated duties is objectionable because it makes undervaluation easier and more profitable under certain conditions. For example, a reduction of the valuation of the fabric from 51 to 49 cents a pound results in a reduction of the duty from 25½ to 19½ cents a pound, the difference in duty being equal to three times the difference in the valuation. Moreover, there is no good reason for placing a lower ad valorem duty on low-priced goods than is placed on high-priced goods. As a matter of fact, if the object is protection, the rate should be higher on the low-priced goods, because the proportion of manufacturing cost is usually greater on low-priced goods. The variation, however, is not such as to call for any graduation of the duty, and therefore I recommend one uniform ad valorem rate on each class of partly or wholly manufactured wool goods.

Because of the facts already given I recommend that the rate on partly and wholly manufactured woolen and worsted cloths shall approximate as closely as possible the rates under the Wilson bill. That measure provided for two rates, 40 and 50 per cent. I suggest that the rate in the new bill be fixed at 45 per cent ad valorem, in addition to such amount as may be necessary to equalize or balance the tariff that is placed on raw materials.

The calculation of the duties on wool goods to compensate for an ad valorem duty on raw wool is very simple. In practice the proportion of raw material in the cost of wool

PARAGRAPHS 360-369—RAW WOOL.

goods seldom falls below 50 per cent or rises above 65 per cent. It follows, therefore, if 60 per cent be taken as the proportion of raw material in the cost of goods in calculating the compensatory duty, such duty will be ample to compensate for the raw material tariff on practically all kinds of goods. If the cost of a foreign fabric consists of 60 per cent for raw material and 40 per cent for manufacturing, and there is a duty of 35 per cent on the raw material, it follows that the raw material duty will be equal to 21 per cent of the foreign cost of the goods. In other words, it will be necessary to place a duty of 21 per cent on the finished cloth to compensate the domestic manufacturer for the tariff on raw material. This 21 per cent is 60 per cent of the raw material duty, 35 per cent. With such a compensatory duty on cloths the foreign and domestic manufacturers will be placed on equal terms as far as raw material is concerned.

Assuming only for illustration that the tariff on raw material is 35 per cent ad valorem, it follows that the recommendation already given means the placing of 66 per cent on the finished wool goods, this rate consisting of the 21 per cent necessary to compensate for the duty on the raw material and the 45 per cent which is recommended to make the duty on finished goods equal to the average duty under the Wilson bill, which provided for free wool.

After the rates on raw materials and finished goods have been fixed the rates on partly manufactured materials, such as tops and yarns, shall be graduated to correspond with the approximate cost of manufacturing the respective products.

The 66 per cent recommended for finished goods, assuming for illustration a raw-material duty of 35 per cent is as low as it can safely be placed in beginning the revision of Schedule K.

I also suggest that the new tariff bill provide that the new rates on manufactured goods shall not go into effect until six months after the duties on raw material become effective.

Respectfully,

WILLIAM C. HUNNEMAN.

BRIEF OF FRANCIS WILLEY & CO., BOSTON, MASS., CONCERNING TARIFF ON WOOL.

BOSTON, MASS., *January 31, 1913.*

SCHEDULE K.

Schedule K is that division of the tariff which treats of wool and the manufactured products of wool, and whether one believes in the doctrine of protection to the American industries or not does not affect the necessity of raising a revenue by tariff duties. The revenue derived from Schedule K has amounted in latter years to an average of \$30,000,000, and at present the amount of duty is protective by a very large surplus to the American manufacturer of wool textiles. It is now proposed to reduce these duties either to a purely revenue basis, as is the belief of the Democratic Party, or to a basis of revenue and protection by an amount which equalizes the difference in the cost of manufacturing here and with our lowest foreign competitor. The United States produce yearly approximately 300,000,000 pounds of wool, which is equivalent to 140,000,000 pounds of scoured wool. There is an average annual importation of foreign-grown wools of about 110,000,000 pounds of class 1 and 2 wools suitable for the manufacture of wearing apparel. This will represent about 75,000,000 pounds of scoured wool. The present duty on tops and yarns makes them prohibitive, but in the form of completely manufactured articles—woolen and worsted cloths, dress goods, blankets, ready-made clothing, etc.—there is a further 8,000,000 pounds of wool imported or a total annual consumption by the American people of 223,000,000 pounds, or 2½ pounds per capita, and this demand can be considered as pretty accurately standardized. The 140,000,000 pounds of scoured wool grown in American then represents 63 per cent of the demand, and as it costs more to grow wool in this country than any other country in the world, this wool must necessarily find its market in the American machinery, so that it is not the 63 per cent of our demand with which the tariff deals particularly but the other 37 per cent which is imported.

There are three possibilities open for the method in which a duty on wool and the manufactured products of wool can be assessed:

First. A specific duty on the grease weight as at present. This method prohibits the importation of any heavy shrinking wools, for the 11 cents duty includes a duty on waste, such as grease, sand, and dirt, and therefore would appear to be an erroneous method of levying duty although the simplest to operate and it would have the advan-

PARAGRAPHS 360-369—RAW WOOL.

tage of being constant no matter at what price the commodity. It would be definite, enabling the accurate determination of values and would be also simple and admitting of the least opportunity for fraud. All things considered, that in as much as any form of assessing duty will have grave faults, this method would without doubt be the most satisfactory.

A second method would be a specific duty levied on the scoured content of wool. The practical difficulties in determining the amount of shrinkage in a given lot of wool would make this expensive and difficult to carry out; and further, as the rate is specific it would mean that on the finer qualities of wool worth a high value the duty would be proportionately less than on wools of inferior quality, throwing the burden of duty to be paid on that class of people least able to pay it; for example: Fine Australia merino wools at a shilling a pound in the grease, shrinking 50 per cent, would mean that the wools would cost 50 cents per pound and a duty of 20 cents a pound would be a duty of 40 per cent on the value of the wool. On the other hand, crossbred wools worth 10 d. per pound, shrinking 33 per cent, would be worth 30 cents per scoured pound, and the same specific duty of 20 cents would represent an ad valorem duty of 67 per cent, which principle is opposed to justice.

The third method of assessing duties is an ad valorem duty which offers the opportunity of an undervaluation by importers and difficulty in determining its actual value at all times; a high rate of duty when prices are high and a low rate of duty when prices are low, which are directly contrary to the needs of the people at the time; and, further, a governmental revenue fluctuating with the price of the commodity and, therefore, of the greatest inconsistency; but one of the three forms must be adopted and it would appear that an ad valorem basis is the only consideration of the new Congress.

Starting then with an ad valorem duty on wool, and in order to follow out the future calculations to assume that it has been decided that 20 per cent would be sufficient to keep the American woolgrowers in business, we will investigate the amount of duty required on the further processes of manufacture predicated on a 20 per cent duty on raw wool. Generally the manufacture of cloth can be divided into three divisions: First, top making or the combing of wool; second, spinning or the converting of tops into yarn; third, weaving or the converting of yarn into cloth. These subdivisions may be carried on all in one mill where raw wool is completely converted into cloth, or they may be subdivided into particular industries, both of which exist to-day in the United States. If the top-making industry were protected by an amount of duty in excess of the duty on wool, to so enable them to convert wool into tops cheaper than to import the equivalent top from abroad, no tops would be imported. If yarns were protected likewise, no yarns would be imported unless it were some few very special yarns made for a very particular purpose. Then the total importations would come in either in the form of raw product or finished goods. Further, if the top-making industry were not protected, it would appear that tops would be imported, but the importation of tops would depend on the protection afforded yarn, and if this were not sufficient no tops but rather yarn would be imported; and, again, if the conversion of yarn into cloth were not sufficiently protected, no yarns would be imported but rather the cloth. On such a duty we can conceive that the total importation would then be in finished goods. In order that there may be both wool and tops and yarn and cloth imported into this country, it would be necessary to offset the difference in the cost of conversion between any two of the above stages, and this should be protected by an amount which would equalize the cost of importing the equivalent object from abroad; and in this way only will there be an active competition between America and her foreign competitors both in tops, yarns, and goods. To find what this amount in each branch of industry would be in excess of the previous stage will be the object of this investigation, which will allow of no protection but will show the per cent amounts required to enable the process of manufacture to be carried on to meet competition from abroad.

ANALYSIS OF COST OF TOPS AND COMPENSATORY DUTIES.

The cost of converting wool into tops may be divided into four general headings: (1) Preparation of wool for combing—sorting; (2) loss by noilage and other by-products of combing; (3) cost of mechanical operation of combing; (4) cost per pound of top apportioned to carrying on the business.

These headings will cover the costs in whatever countries manufactured, and by an analysis of each one and a duty based on the sum of what is necessary in each case to offset the greater cost in America, will give the amount of duty which will place America and England on a basis of equality and open competition.

PARAGRAPHS 360-369—RAW WOOL.

(1) When wool is sorted preparatory for combing the value of the matchings so made is increased over the original value of the wool by an amount which includes the labor cost of sorting the wool and the loss due to removing parts of the wools of inferior value.

The labor cost in England for sorting wool ranges from 50 per cent to 60 per cent of the cost of doing the same thing here, and the loss due to the less value of the inferior parts of the wool will be 20 per cent more here, as wool will be that much more valuable here because of the 20 per cent duty imposed on it.

Now, if the extra amount of duty assessed on matchings, represented by the increase of the value of the matchings over the original wools, will compensate for the increased cost of making the matchings here, then raw wool will be imported and the sorting done here, but as this compensation is only 20 per cent of the increased value and it costs 50 per cent more to do it here than in England, it is reasonable to suppose that wool will be imported as matchings ready for combing by all who are able to have this done in England. Therefore, as the cost of preparing the wool is identical, the wool can be considered as in the form of matchings and the first heading can be neglected in so far as it affects the difference in the cost of making tops. However, it creates a hardship to the American sorters, depriving them of 33 per cent of the raw material which is now available.

(2) In combing scoured wool, the principal product recovered is called top and generally there is 80 per cent of the weight of scoured wool so recovered; noils constitute on an average 15 to 18 per cent and the balance is made up by minor wastes. Of this 20 per cent other than tops it may be said that they are generally worth one-half as much as the top and so a recovery is made of 90 per cent of the value of the top. This ration will hold pretty closely in either country; so a compensation will be required to offset the 10 per cent loss in value of product recovered of 10 per cent of the duty on wool which has been assumed at 20 per cent. Therefore, we must allow 10 of the 20 per cent duty, which equals 2 per cent for the increased loss due to the combing by-products in America.

(3) The cost of combing wool depends not on its value but rather on the quality. The comparative costs per pound of top combed in England and America are about as follows:

	England.	United States.
	Cents.	Cents.
36-44, prepared.....	0.0215	0.05
44-46, carded crossbreds.....	.0267	.055
50, crossbreds.....	.0325	.06
56-58, fine crossbreds.....	.0350	.0675
Merinos.....	.0430	.075

an amount equal to from 3 to 4 cents greater in America. To find the ad valorem equivalent of this specific amount, it is necessary to ascertain what percentage of the value of the top is attributable to the cost of combing. Based on to-day's value that percentage of the value of the top made in England, which is attributable to the cost of combing, ranges from 7 to 9 per cent, irrespective to the quality. Supposing the wool to be imported and combed here, the top would be increased in value by the excess cost of combing in America; on that percentage of the value of the top due to combing in America would be from 14 to 16 per cent—an average difference between that portion of the English top and the United States top, which relates to combing or which is necessary to compensate the increase of cost of combing in the United States of 7 per cent on to-day's value. Figuring in this way—the highest prices of which we have record for tops the difference would be 6 per cent and the lowest 15 per cent, and the general average 9 per cent. As we must allow for low values, as well as high or average values, it would appear that did we assume this difference at 11 per cent we would be reasonably safe, and, therefore, can assume this 11 per cent to be requisite to about equalize the protection required for the increase in cost of combing in America.

The fourth heading which relates to the cost of doing business in America being greater than in England would be practically eliminated when English tops were to be marketed in America.

Therefore, to assemble the duty necessary to equalize, we have shown 2 per cent for loss in combing by-products, which should be levied on the material, i. e. the wool, and 11 per cent for the cost of combing to be levied on the top.

PARAGRAPHS 360-369—RAW WOOL.

The value of a top is composed of the wool in it plus the cost of conversion. The conversion cost will represent from 15 to 25 per cent of the total value of the top and 20 per cent will be a fair average, or 80 per cent on an average will be the value of the wool in the top.

On the assumption that there is to be a duty of 20 per cent on raw wool, we have endeavored to show that this should be increased by 2 per cent to compensate for the wool in the top and therefore the duty on the top should be 22 per cent for the wool in it (which equals 80 per cent of the value of the top) plus 11 per cent compensating duty for excess cost of combing here, or a total duty of 22 per cent (80 per cent) plus 11 per cent equals 17.6 per cent plus 11 per cent equals 28.6 per cent, or say 28½ per cent on tops when there is 20 per cent on wool.

YARNS.

In the conversion of tops into yarns we are again concerned with three of the same general headings as under tops:

(1) Loss of a portion of the top in the spinning operation; (2) cost of the mechanical operation of spinning; (3) cost per pound of yarn apportioned to carrying on the business.

This latter will again be neglected when Europe markets the yarns under the same condition that we do, and we are concerned in offsetting the increased cost of America covered by loss of material and the operation of spinning, and in order to find the amount of an ad valorem duty in excess of the duty on tops required to equalize the American costs with her European competitors, we will resolve the percentage of cost of the value of the yarn due to conversion in America and compare this with the percentage of cost which the conversion in England amounts to when based on the cost of making the yarn here from tops imported free, and then find what duty on yarn is required to offset this difference when there is a duty on tops of 28½ per cent.

(1) The operation of converting tops into yarns will include: (a) Drawing, or the reduction in the size of the top sliver; (b) Roving, or the preparation of the sliver to an even weight per yard most suitable for spinning; (c) Spinning the yarn into the desired counts or number of yards per pound; (d) Twisting two or more spun threads into one yarn; (e) Preparation of the yarn so made for the market, such as examination, winding on warp spools, or making into skeins.

In each of the above operations there is a loss of material which will amount in the entire process to from 8 to 10 per cent of the weight of the top. These wastes are recovered and sold for less than the value of the yarn; and it may be stated that the 10 per cent of wastes are worth approximately one-half the value of the yarn, so that the recovery from the top will be 90 per cent in yarn and 10 per cent of waste worth one-half as much as the yarn, or 95 per cent is the value of the recovery. Therefore, there is a 5 per cent loss of material. This loss will be the same in Europe as America but the material will be 28½ per cent more valuable here because of the duty on it, and therefore we desire 5 per cent of the 28½ per cent increase in the value of the American top, which equals 1.425 per cent, to compensate for our increased cost of the top, which, to simplify, call 1½ per cent.

(2) The cost of the mechanical operation of making yarn out of top will be made up of the mill costs: labor, supplies, fixed charges, power, etc., apportioned to the number of pounds of yarn made. The number of pounds which can be made in a given time depends on the weight per yard or the number of yards per pound, and these are designated as counts with a unit of 560 yards. A 2/40s yarn then would mean that there would be two strands twisted together and there would be 40 by 560 yards of each per pound. There is a definite limit of counts to which any given top can be spun and as the conversion costs will be greatest when the top is so spun to its limit, we will compare the percentage of costs due to conversion on the assumption that the tops will be spun to their limit. Between the counts of 16s and 40s the spinning costs in America will be pretty close to one-half cent per count and similarly in England they will be one-fourth cent per count; and in the finer counts, whereas it will cost more than one-half cent per count to convert the top, it can be authoritatively stated that the cost of spinning will be 100 per cent more in America than in England.

The value of yarns depends on the price of top, the spinning costs remaining constant. On to-day's top values, yarns in England will have approximately 18 per cent of their cost attributable to the cost of spinning. As it costs twice as much to spin here as in England, the percentage of cost of making yarn from imported tops would then be 36 per cent of the value of the yarn here, or a difference required to compensate

PARAGRAPHS 360-369—RAW WOOL.

America of 18 per cent of the value of the yarn. To find what this difference requisite to America would be by analogous reasoning of the lowest, highest, and average top values of the last decade, we find that there should be 28 per cent for the lowest, 16 per cent for the highest, and 20 per cent for the average to compensate the increased cost in America; or to allow for a reasonable compensation there should be a compensatory duty of 22 per cent of the value of the yarn to allow for the existence of the United States spinner based on the supposition that the raw material or top was obtained free. If now, however, a duty of 28½ per cent is placed on tops, 1½ per cent of the value of the top is required to compensate the American spinner for his higher cost of top, and the material of which his yarn is made will be 30 per cent more valuable than in England.

Our duty on yarn, when there is 28½ per cent on tops, should then be 30 per cent on that portion of the yarn's value represented by the material in it plus 22 per cent of the value of the yarn or when, as will be the case, the entire duty is levied on the yarn, it is only necessary to find what portion of the value of the yarn is made up by the top from which that yarn is made; multiply this portion by 30 per cent and add the 22 per cent spinning compensation. We showed that 20 per cent of the cost of yarn was represented by the spinning cost and 5 per cent of the cost was represented by loss in material or 25 per cent of the cost of yarn is due to conversion; therefore, the remaining 75 per cent must be the material from which it is made. This is: a top on an average is worth three-fourths as much as the yarn made from it, and our duty then can be stated as 30 per cent of three-fourths of yarn plus 22 per cent of yarn equals 22.50 per cent plus 22 per cent equals 44.50 per cent, or in round figures, a duty of 45 per cent on yarn will be the desired equivalent duty with wool at 20 per cent and tops at 28½ per cent.

FRANCIS WILLEY & Co.
Per JOHN R. MUNN.

[Enclosure.]

Should there be free wool, there would be no necessity of any compensatory duties for the wool contained in tops and yarns and the entire duty would then be what is requisite to offset the increased labor costs in the United States. On tops this was shown to be 11 per cent. On yarns this increased labor cost was shown to be 22 per cent and the duty on yarns should then be 11 per cent of 75 per cent (for the compensatory duty on tops) plus 22 per cent increased labor cost = 8.25 per cent + 22 per cent = 30¼ per cent with wool at 15 per cent; tops 16½ per cent (80 per cent) + 11 per cent = 24.2 per cent; yarns 25½ per cent (75 per cent) + 22 per cent = 41 per cent; with wool at 10 per cent, tops 11 per cent (80 per cent) 11 + per cent = 19.8 per cent; yarn 21 per cent (75 per cent) + 22 per cent = 37.75 per cent.

	Per cent.	Per cent.	Per cent.	Per cent.	Per cent.

BRIEF OF THE FORINO CO. (INC.), BOSTON, MASS.

BOSTON, MASS., *January 30, 1913.*

Hon. OSCAR W. UNDERWOOD,
Chairman Ways and Means Committee, Washington, D. C.

SIR: Sometime ago I did send you a list of the different wools and by-products which should be taken in consideration if a duty on wool should be levied. To-day I took the liberty to send you by parcel post eight samples to support my previous statement and to support why only an ad valorem duty should be levied on wools.

I would not have sent those samples if I had not seen the Wool Growers' Association was before your committee and supported 18 cents per pound on the clean basis for all wools; this would be the same as it is now and only good wools and the best of them could be imported. The samples I sent represent mostly pulled wools, which are barred from this country on account of the foolish tariff we have now. Pardon me for my expression, but no milder expression should be used. The manufacturers claim so long as there is not a specific duty maintained on wool they can not exist; this also is mildly said to belong under foolishness.

The wool growers claim all wools should pay at least 18 cents a pound on a clean basis. Take my sample I sent you, No. 3, which is an absolutely clean scoured wool, and sells

PARAGRAPHS 360-369—RAW WOOL.

to-day at 15½ cents per pound, delivered United States ports (let me state that is an absolutely pure new wool, and is the undersorts of so-called pulled wools, and can easily be used for felting and such purposes, and is a class 1 wool because it comes from South American and Australian skins); if we would follow the sheep growers and put 18 cents a pound clean basis on wool, the duty on that wool would be over 100 per cent, and on lot 6, which represents best Australian clothing scoured, the per cent of duty would be a good deal lower, because that wool costs about 60 cents in to-day's market in the United States, in bond.

Take sample No. 7, a Cape wool, class 1 to-day—that wool would cost laid down here to-day about 20 cents scoured; in bond the duty would be pretty near 100 per cent.

Take samples 1, 2, 4, and 5: Those wools represent large lines of pulled wools; at least more than 100,000,000 pounds a year are made of those wools, in coarse and in fine, in white, gray, and black; but none of those can be imported to-day on account of our prevailing tariff. We think there are more than 100,000,000 pounds of pulled wools made up through Europe to-day which are absolutely barred to the United States on account of the tariff wall against wool.

We could engage an extra car for samples of the different wools which are to-day barred from the United States, and would not go to this great trouble, but the few samples we sent you will show as well as if we had sent a good many more.

Samples 114 and 125 were also offered very recently to us from Hamburg, and they show that if all the different items are not taken care of it will lead to very much trouble for the importer, and it should be settled once and for all, so we will not have to tend to so many details as we have to tend to now on any importations we make. One hundred and fourteen and 125—one is torn threads but dyed over one color, and if anybody can read German you will see what it says on the sample, and also in the inclosed letter, which is the original offering of a Hamburg house, and you can see what they state. One hundred and twenty-five is black dyed and carbonized; 114 is olive dyed and carbonized, and in the new tariff bill those items should be taken care of.

Tops.—It has often been mentioned what the difference is to make wool in tops. We took the pains to find out from the most honest man in this country, and he claims it takes about 19½ per cent of the cost of wool to make tops and about 35 per cent of the cost of wool to make yarn. Tops also can be dynamited, as they use the expression for silk, with oil or steam; most of the tops which are offered carry from 2 to 8 per cent of oil, and if tops are made dry, that is to say, without any oil in, and if packed in bales, can be put through steam without damaging, and the tops will gain from about 5 to 8 per cent without detecting off-hand.

Pray, dear sir, do not think me obtrusive, but I have read in the papers only the statements which are made to you, and I thought it better to send you those samples to convince you why only an ad valorem duty should be levied, and not duty on a clean basis. This would lead to the most corrupt actions which could be mentioned, because out of any lot of grease wool we could draw a sample which would shrink at least 15 per cent more than the wool actually shrinks.

Sometimes when we talk on an article somebody might like to know what we know, and I beg leave to state I was born in the wool business; I am 52 years old, and when I was 14 years old I bought the first lot of wool, and there is not a kind of wool in existence to-day which I have not seen or handled.

I, for myself, would surely support Mr Bennett than anything else, but what we should have on all importations is an ad valorem duty, manufactured goods or raw materials, so far as a duty should be levied. This would help the importer a good deal because he would not need an office force to figure on every article so much.

The facts in this letter I can prove.

Yours, most respectfully,

HERMANN WEINBERG.

Hiervon sind regelmässig Quantitäten bis zu 15,000 Kilos lieferbar f. o. b. Hamburg, netto Tara, Emballage gratis, 3 Monatsbankrembours, freibleibend.

Obgleich wir die besten Farbstoffe verwenden, können wir eine Garantiewegen Echtheit der Farben nicht übernehmen, weil uns Ihre Ansprüche nicht genügend bekannt sind.

In der Hoffnung recht bald wieder einmal für Ihre w. Firma beschäftigt zu sein, zeichnen,

Hochachtungsvoll,

F. O. W. BECKER & Co.

Wir bestäigen noch Ihr w. Schreiben vom v. pts.

MEMORANDUM SUBMITTED BY EDW. W. ATKINSON, BOSTON, MASS.

BOSTON, MASS., *January 31, 1913.*

HON. OSCAR W. UNDERWOOD,
Chairman, Ways and Means Committee, Washington, D. C.

Schedules I and K.

DEAR SIR: I realize that you are an extremely busy man and in a position of great responsibility in connection with the tariff. However, I hope that you will read the inclosed short memorandum on labor in textile mills, which appears to me to be the most vital question of all.

For the past 30 years, I have been engaged in supplying textile mills both with the imported raw material and imported equipment. I want to see the tariff on their equipment reduced and the tariff on their product reduced but not so drastically as to ruin their business.

The facts are that the labor in textile mills in this country is not, by a long way, as skillful as the labor in similar mills abroad. Highly skilled labor at high wages means the lowest cost of production and the possession of this highly skilled labor by the foreign textile manufacturers at a lower wage than is paid for labor in this country which is not as skilled, puts the American textile manufacturer to a double disadvantage, and this state of facts, I believe, should receive the most careful consideration of your committee in their efforts to reduce the duties on textile goods.

Respectfully submitted.

EDW. W. ATKINSON.

P. S. I am referring to labor conditions in the New England States. I am not posted on southern labor conditions.

[Inclosure.]

PROTECTION AFFORDED TO FOREIGN MANUFACTURERS BY OUR EXISTING LAWS.

Our tariff laws protects the manufacturer. Our contract labor law injures him and protects his competitors abroad. Therefore, reduce the first but repeal the last. The contract-labor law was passed to prevent the padrone system. It has utterly failed. It was not passed to close to this country the skilled labor markets of the world. Its chief effect, however, has been this very thing. It is a failure. It is of greater importance to have skilled labor than to have either protection, revenue, tariff, or free trade. Skilled labor means intelligence, thrift and good citizenship, high wages, and the lowest cost of production. As you say, the tariff law dams in the would-be exports. The contract-labor law dams out the would-be skilled, intelligent immigrants, and, what is worse, has a large hole in it through which the undesirable immigrants can come in endless numbers.

Why? Intelligent and skilled labor abroad is employed. Employment abroad, even at the so-called "pauper wage," is more highly prized by foreign skilled workmen than an ocean voyage to an unknown country with nothing certain and fixed at the journey's end. The inducement of fixed and certain employment at a higher wage is the only thing that will move skilled labor to this country. This means contract, now forbidden by law. Per contra, ignorant and irregularly employed labor abroad has nothing to lose and everything to gain by coming to this country. It comes en masse. It is aided by steamship companies and undesirable foreigners already here. In reality it evades the contract-labor law wholesale. It is the only labor that our manufacturers can recruit from. It is unskilled, excitable, it makes bad citizens, it puts a heavy expense on schools and jails, it increases the cost of production because

PARAGRAPHS 360-369—RAW WOOL.

it is unskilled, it is not worth having. If it has a real or imaginary grievance when employed here it needs but the fiery speech of the agitator to cause a miniature French Revolution in industrial cities. The only effective method of immigration restriction is free immigration subject to sanitary conditions, but free immigration coupled with free access to the skilled labor markets of the world. Under these conditions the best immigrants will come and make the best citizens. The poorest will stay away because they can not secure work. The present contract-labor law is immigration restriction of the very worst type.

The manufacturer abroad.—Our laws keep him abundantly supplied with skilled labor forbidden to come here. He can thus keep his wages on a lower plane. We give him this weapon as a present to use in competing with us. Repeal our laws and his wages go up on the same skilled labor. His cost of production goes up accordingly and he can not compete as well.

The manufacturer here.—He must employ ignorance. He must control violence. He must submit to the agitator or shut down his plant. His cost of production must be high because the law compels it. Hence he must have some measure of protection to live. Give him access to the skilled labor markets of the world and the result is plain.

Labor unions.—The intelligent labor union man is beginning to think. Intelligent labor will not work to-day in the same room with ignorant, imported, and physically unclean people, if it can avoid it; but it can not avoid it yet.

Conclusion.—We are unconsciously building, in all of our industrial towns, volcanoes the eruptions of which will be more frequent and more violent as time goes on unless the contract-labor law is changed.

J. N. BRODSKY WRITES CONCERNING THE DUTY ON WOOL.

CHICAGO, February 1, 1913.

HON. OSCAR UNDERWOOD,
Chairman Ways and Means Committee,
Washington, D. C.

DEAR SIR: Sickness prevented me from being before your committee on the 27th in reference to Schedule K. I have been in the wool pulling business for 16 years, and previously to that I was born and raised in the woolen line. My duty now with Messrs D. Strauss & Co. is buying all the raw material, which takes me all over the United States and Europe. I noted carefully all the remarks which the manufacturers had to say about duty on wool, tops, yarns, and manufactured goods. None of them were fair enough to tell the truth for fear that it might hurt their business. We have at present a very large stock of wool on hand, and if the duty shall be removed from wool at present, there is no doubt but that it would sustain in a great loss to us. But at the same time I would take my losses before I would make a statement contrary to my real belief. The two bills which were passed before and vetoed by President Taft were entirely wrong. For instance: A duty of 29 per cent on raw wool and 49 per cent on manufactured goods would mean about 20 per cent protection on manufactured goods. But really it would mean 39 per cent on raw wool and 10 per cent protection on manufactured goods. As the average manufacturer buys wool here from the dealer on 60 and 90 days' terms, and the dealer adds to the actual cost his 10 per cent profit, where on the other side every manufacturer goes to the London auction sales and buys his month's production of wool at the same sales where our dealer buys. Everybody overlooked this item in their explanations before your committee and the 10 per cent which our manufacturer as protection the difference in labor from this side and the other side would easily overbalance. So we would hardly give our manufacturer any protection at all. The best bill and the fairest would be free raw wool and about 40 or 50 per cent on manufactured goods. I know the growers from the West will fight for protection on raw wool, but if they knew the real truth they would not have to fight at all as wool has been advancing on the other side for the last six months, and before you pass any bill I think the market there will be as high as it is here and will equalize the same. My real belief is if you will take all the duty from raw wool, inside of six months we will see wool higher here than it is to-day. It will be just the same as it was with hides. When the New England tanners were complaining about the duty on raw hides and said that they were at the mercy of the Chicago packers, you removed the duty from hides and since then hides have been higher than they ever were before. They have been pretty near as high as they were during the Civil War, and it would be just exactly the same thing with wool.

But whatever you do, put as little duty on wool as possible, and give more protection to manufactured goods. This is the only thing which will make the Democratic

PARAGRAPHS 360-369—RAW WOOL.

Party strong and fair before the people, as we need protection to protect our labor. The last time that I visited England I went through Manchester, Yorkshire, and Bradford, and I watched conditions in the mills pretty closely. I found boys and girls 16 to 18 years of age working for 10 and 12 shillings a week, while the same work in this country was paying from \$7 to \$12 a week. I could give you a good deal more information if I would have a chance to appear before you personally. At present I am going to the Pacific coast for business and expect to be home about the 15th of this month. I expect to sail for England on the 22d, and if you desire any information I shall be glad to gather it for your honorable body when I am abroad, and will be very glad to do it without any charges, as I always aided our special agent at Washington and gave him all the information without any charges. Also our custom-house people whenever there was any dispute about different grades of wool or skins they always sent for me and I explained them everything and anything I could in the right way.

Hoping that this information may be of a benefit to your honorable body, with best regards,

I remain, very respectfully, yours,

J. N. BRODSKY.

ADJUSTMENT OF TARIFF ON WOOL.

VIEWS OF C. E. BROWN, TALPA, TEX.

TALPA, TEX., February 19, 1912.

HON. OSCAR W. UNDERWOOD, M. C.,

Chairman Ways and Means Committee, Washington, D. C.

DEAR SIR: I am writing you concerning the revision of the wool tariff. I am a wool grower and am interested in an early adjustment of the wool schedule. I have no suggestions to offer as to the manner of the adjustment. As you know, it is only a short time until shearing will begin, and wool growers will then want to know what their product is going to bring on the market, and if Congress is still hanging fire on the matter the market will be unsettled and those growers who need money will have to sacrifice on the price.

I would like to call your attention to the January number of *The American Sheep Breeder*, published at Chicago, as voicing the sentiment of the sheepmen and also the wool trade in general. A great many sheepmen are awakening to a realization of the fact that there is no protection in Schedule K, when Australian wools are selling in Melbourne and Sidney for more money than similar wools bring in the American markets (see *Sheep Breeder*, Jan., 1912, p. 51, Australian letter as to American market quotations, p. 38), and not having the advantage of any foreign buyers to take our domestic wools in competition with the American buyers, some sheepmen are coming to think possibly there may be an understanding between the woolen manufacturers and some Members of Congress who are responsible for the delay in acting upon the woolen schedule.

Since I am a Democrat I feel more at liberty to trespass on your time than if you were not. The wool and woolen industry, as you know, is the most peculiar of any of our industries. It is well organized, and the different organizations of the industry are good financiers. You are also aware that for a number of years it has been a most valuable adjunct to the Republican Party. By reference to the first pages of the *Sheep Breeder* before mentioned, you will get the idea that early action by Congress upon Schedule K is desired. From sheepmen in this country I have it that they want immediate action. They want the agitation stopped before the wool goes to market. Early action is the slogan, and the sentiment is unanimous and strong. You may be interested to know that coupled with this is something that is fraught with dangers to Democratic success. "The Democrats have an opportunity now," and "Will the Democrats allow the woolgrower to sacrifice his wool again?" "Will they make a political football of the woolen industry to gratify political ambition?" All this goes with the speedy action idea.

I believe it is safe to say that the majority of the sheepmen in the United States are Republicans. They are sincere in desiring speedy action on the woolen schedule, but the leaders are not going to call this matter up in Congress. They do not care if the grower loses 5 to 10 cents per pound. They intend to trust their ability to show that the Democrats permitted the woolen manufacturer to reap a rich harvest through an understanding to delay action.

Now, Mr. Chairman, I am not presuming to know how to direct the affairs of your committee, but do know sheep and understand sheepmen. Personally I do not care

PARAGRAPHS 360-369—RAW WOOL.

whether it's high tariff, low tariff, or free wool. As long as wool sells for more in the foreign markets than it does here, no reasonable tariff will benefit the American sheepman. While this is my opinion, there are thousands of sheepmen who have been told that old lie so often and long that they believe the sheep industry of this country will languish and finally die unless it has "adequate" protection, and through the various organizations of the industry the Republican Party has been able to tax nearly every sheep in the United States for campaign funds. Their heaven has worked so well and the protective idea is so firmly fixed in the minds of so many sheepmen that I believe if you fail to report a bill out of your committee at an early date a tax will be laid on every sheep in the United States. Not living in a sheep country, it would surprise you with what alacrity this tax is paid for the purpose of defeating Democratic Congressmen.

I have stated my personal opinion in regard to the protective tariff idea, and now, with your indulgence, I would like to offer a suggestion that you, if possible, prepare the Democratic members of your committee to accept the Wool Growers' Association's basis—24 cents the scoured pound for wools of the first and second class—for the revision of that portion relating to raw wools. By accepting the association's basis, I believe it would contribute largely toward Democratic success this fall. I do not pretend to say that that is the exact figure that it should be, but the association seems to think that is about right, and most sheepmen have concluded that is about right, and I believe the Democrats can afford to make allies instead of enemies of the sheepmen.

I trust I have made myself clear without tiring you. Personally I do not care how it is disposed of, so it is done at once.

With highest personal esteem, I am, yours, truly,

C. E. BROWN.

—

VIEWS OF P. B. WORRALL, NEW YORK, N. Y.

NEW YORK, *May 11, 1911.*

HON. WALTER I. MCCOY,
House of Representatives, Washington, D. C.

MY DEAR MR. MCCOY: I was duly in receipt of your favor of the 8th, but have been too busy to reply, and even now I have not the time to go into the matter as deeply as I should like.

You ask my views in regard to the effect under the Wilson bill of placing wool on the free list. The effect then was to drive the Democratic Party from power, and if the same thing is again indulged in, in the creation of a new tariff, the effect will be political suicide. This may seem to you a very strong statement, but I believe it just as I believe the sun will rise to-morrow morning.

In the first place, there certainly seems to be no sense in putting wool on the free list and at the same time protecting the manufacturer of woolen and worsted goods. Placing wool on the free list, to my mind, is very much like flying in the face of Providence. The Democratic Party to-day have the confidence of the country, and from my standpoint have acted wisely so far; but you very well know what a tremendous advantage our opponents would have if such a course were pursued.

The ideal duty on wool, in my opinion, would be 25 per cent ad valorem on all kinds of wool. It would create a large revenue, and inasmuch as the value of wool can so readily be determined at any given time there would be no trouble in fixing the value for dutiable purposes.

I have talked with very many people who are much wiser than I am regarding this matter, men both in and outside of the trade, and I have found their views on this wool duty very much the same as my own.

To provide a specific or compensating rate of duty on merchandise based on a duty of 25 per cent on wool I know would be a rather difficult proposition, and as far as I am concerned I should not like to tackle it, but still I believe it could be done and done fairly. This specific duty would be in the nature of a compensatory duty to the manufacturers. On top of this specific duty I would place a duty on pieces of woolen and worsted goods for men's wear of 35 per cent ad valorem up to the value of 70 cents a pound, and beyond that value a duty of 40 per cent. I do not believe our Republican friends could find very much to find fault with in a duty of this character (except, of course, the old-fashioned standpatter), and it would be eminently fair in every respect.

You must always remember that manufacturing is a thing of the past, and that "machineufacturing" has taken its place. When there is no tariff under discussion

PARAGRAPHS 360-369—RAW WOOL.

the American manufacturer will tell you what splendid machinery he uses and how adaptable his work people are to its use, but once a tariff discussion is started, then he pleads all kinds of things, many of which are untrue, and hence harmful.

I remember having said to you that I believed that the cost of the clothing of the men, women, and children in this country, made partly or entirely of wool, was at least \$100,000,000 greater than the entire value of our domestic wool clip. You know the number of people there are in this country, and multiply that by three and you get somewhere in the neighborhood of \$275,000,000; and our entire wool clip, if I am informed rightly, amounts to about \$150,000,000. This is the base of my argument in this matter, and I think it is nearly correct.

As you know, I go abroad as a rule in midsummer of each year for four or five weeks, as we have a warehouse in Bradford in Yorkshire, England, and in addition to which I want to get away for the heated term, as I am so much better for the following season's work. As a rule, I buy about three suits of clothes in England, which three suits cost me in the neighborhood of \$75 net. This clothing I buy in Bradford from a very good tailor, and if I were to buy a corresponding suit here, in fact, the last suit I did buy here was from a not very swell tailor, but it cost me \$80 less 5 per cent, \$76. This will show you something of the difference in the cost of clothing between the United States and England.

I forgot to say above that one of the reasons why I should endeavor to make the compensatory duty a specific one, would be so that the ad valorem duty, which would be the protective duty to the American manufacturer, would not be over 35 per cent, and this because any duty over 35 per cent ad valorem seems to provoke undervaluation. Everything should be done that can be done to prevent that. The present compensatory duty to American manufacturers is ridiculously high, and I have no doubt that Mr. Underwood knows just about how much of each kind of wool it takes to make a pound of cloth. One of the glaring inconsistencies of the present tariff is that of mohair, which pays 11 cents a pound in the grease, and the manufacturer gets 44 cents a pound as a compensatory duty. My information from Bradford is, that out of 100 pounds of good ordinary mohair, from 70 to 75 pounds of tops are obtained, to say nothing of the noils. Our good friend, Mr. Whitman, worked this matter to the queen's taste, and succeeded in robbing his allies, the mohair growers in this country, besides creating an enormous rate of duty on mohair fabrics.

Regarding the duty on goods made of cotton warp and worsted, wool or mohair weft, I should endeavor to put also a compensatory specific duty on these goods, which would compensate the manufacturer for the duty on wool, and up to a cost per square yard of 20 cents I should assess a duty of 35 per cent, and beyond that cost a duty of 40 per cent. Under this division I should say that 75 per cent of the goods that come here from Yorkshire would come in at a 35 per cent duty.

Regarding the pound weight duty on goods of this character, that is, goods made of cotton warp and worsted, wool, or mohair weft, I should obliterate the pound weight duty entirely, except on goods weighing 6 ounces or more per square yard. In the present tariff these goods pay, as you know, when they are over 4 ounces to the square yard, the same rate as is assessed on goods made of all wool or worsted, and the duty runs up to somewhere in the neighborhood of 110 per cent, including, of course, the compensatory duty and the protective ad valorem duty to the manufacturer.

I have been hoping for an opportunity to get down to Washington and have a talk with Mr. Underwood, provided he thought I could be of any practical assistance to him. As you know, we have behind us an experience of 73 years, and for 40 of those years I have had to do entirely with these tariff matters for our house.

Speaking again of free wool. I really believe that if the Democratic Party in 1894 had assessed a duty such as I propose on wool, the Wilson tariff bill would have been in operation to-day.

There is one thing that I would like to tell you, and which I wish you would in turn tell Mr. Underwood when you get an opportunity, and that is, during the last two years of the operation of the Wilson tariff bill, the American manufacturers, particularly of worsted and woolen goods for men's wear, never made so much money in their lives, nor were conditions ever so satisfactory, and you will remember that with free wool in that bill there was assessed a duty on woolen and worsted goods of 40 to 50 per cent, according to the original cost of the goods.

This letter is not just exactly as I should like to have written it, as I have not had time to go into the matter thoroughly, but I trust you will understand what I mean, and hope it will be of some assistance to you.

Trusting to have the pleasure of seeing you when you come over to New York, I remain, yours very truly,

P. B. WORRALL.

PARAGRAPHS 360-369—RAW WOOL.

BRIEF OF W. N. COWDEN, QUAKER CITY, OHIO.

QUAKER CITY, OHIO, *January 25, 1913.*The WAYS AND MEANS COMMITTEE,
Washington, D. C.

GENTLEMEN: I appear before you as a representative of the Tri-State Wool Growers Association. This association represents the wool growers of eastern Ohio, western Pennsylvania, and northern West Virginia, the section of the United States where the majority of the delaine wool of the United States is produced. This class of wool is everywhere known as the highest priced wool and most difficult to produce because of the skill and care needed in its production. As wool growing is the only profitable line of stock breeding we can follow on account of our hilly land we are vitally interested in the tariff law you may formulate. I assume that every one who has investigated the cheapness with which wool is grown in Australia and South America, our chief competing countries, will not wonder at our interest in the laws you may enact. We know that our life or death depends on your conclusions. We assume that the policy of the Government in the future, as in the past, will be to raise the greater part of its revenue from a tariff on imported products. It is assumed also that in the coming revision of the tariff downward, to which all parties were pledged in the last campaign, will not discriminate against any useful industry. The American farmer is fully convinced that the present tariff law does not afford him the protection the importance his occupation deserves. To prove this statement we need not go farther than Schedule K. We refer only to the wool growers' part of Schedule K. As the wool manufacturers have steadily gained in rates and Treasury decisions until they have practically the entire market without competition, while the production of wool has not kept pace with the growth of population. The only reason for this condition that the price has steadily decreased until the clips of 1910, 1911, and 1912 were sold on a free-trade basis, as anyone can see that will look at the sales of wool in London or Melbourne, where wool was often sold as high and sometimes higher than we sold the same grade in the United States.

Someone greatly deceived our good President about Schedule K, leading him to believe that the crookedness that secured the rates of the Dingley law was the work of the wool growers, and he proclaimed from Wynono to the Atlantic and Pacific that Schedule K was indefensible. Later, I am glad to say, he exonerated the wool growers from any crookedness in the passage of that bill. The cards were again stacked against us in the passage of the Payne-Aldrich bill. The Tri-State Association sent a delegation to meet this committee, instructed to ask for some changes in Schedule K, but when we got to Washington we were everywhere told that we must not open up Schedule K or we would be put on the free list. We afterwards learned that a few wool manufacturers had called a meeting in Chicago of some ranchmen and persuaded them that the Dingley rates must be left alone or we would lose all. The above in connection with the "skirting clause" that has taken one-half of the 11 cents per pound we were promised, and provisions concerning wastes and noils, etc., with the more recent introduction of class 3 wool to be used for carpets alone as originally intended by the tariff of 1867 but to be used for all purposes (these wools come in at from 4 to 7 cents, mostly 4 cents), with other considerations, has convinced us that we have not had a square deal, and we look to you for redress. Our association, in common with the national association, believes that redress is only found by changing the classification of Schedule K. The present classification was first adopted in the tariff law of 1867, and was well adapted to the conditions then existing, but in the changes in the quality of wool all over the world and especially the inventions in manufacturing machinery by which almost any fleece can be now combed has rendered that classification obsolete.

We believe that the scoured pound should be the unit of value instead of the grease pound. This is not a radical change as all wool now whether in the growers wool house or in the commission warehouse is bought and sold on the estimated scoured pound. It need not be objected that we have no experts estimate the per cent of loss, because it is common knowledge that our experts seldom miss the correct scoured pound content more than 1 or 2 per cent. Neither can it be objected that such a plan is expensive to the Government as less than \$2,000, will install a scouring plant to be used in case of disagreement. Such classification brings the whole transaction to an honest basis and would be an advantage to importer, manufacturer, and grower. The Treasury reports that the wool grower receives 45 per cent protection is known to be incorrect by

PARAGRAPHS 360-369—RAW WOOL.

every wool grower when he feels his pocket book, and may be found incorrect by anyone that will make the calculation. If we received the promised 11 cents per pound straight it might be something near correct, but I have shown that we only get 11 cents per pound on paper. During the life of the Wilson bill which some of us Democrats distinctly recollect, we had in connection with it a panic and a drought that taxes us to the utmost to winter our stock and still with all these discouragements Justic, Batement & Co., of Philadelphia, report that the lowest price at which they sold delaine wool was 17½ cents per pound. Our last three clips sold at an average of 22 cents per pound. Where is the 11 cents per pound protection?

A consideration that should have great weight in deciding the tariff problem is that our markets are the result of our high civilization made by our taxes and modes of life, and we are thus handicapped if the semicivilized nations enter our markets on an equality with us. Another consideration is that in the nature of things the American farmer can only be protected on a few of his products and it is only fair that where protection will apply he should have as much as the most favored industry.

In conclusion gentlemen, we only ask for a square deal. We ask no more and will be satisfied with no less. We are ready to go on the free list when all others go there, but so long as we pay tariff to every other industry, we want the same tariff in return. As announced in the platform of the Farmers National Congress we will oppose with our influence and punish with our votes any man or party that discriminates against us in the new tariff law.

Respectfully submitted.

W. N. COWDEN.

RESOLUTIONS OF THE CALIFORNIA SHEEP & WOOL GROWERS' ASSOCIATION.

[Passed at the fifth annual meeting held in San Francisco, Dec. 14, 1912.]

RESOLUTION No. 1.—*Our national organization.*

Whereas the National Wool Growers' Association has recently accomplished much for the betterment of the sheep business, particularly concerning the reduction of freight rates on wool, the great educational fight for a specific duty on wool based upon the "scoured content" and the publishing of the National Wool Grower: Therefore be it

Resolved, That we, the California Wool Growers' Association, do heartily indorse the work done by the National and urge the reelection of the same efficient officers at the next annual meeting in Cheyenne, Wyo.

RESOLUTION No. 2.—*Forest Service.*

Whereas it is the policy of the Forest Service to conserve the timber and other natural resources and to permit grazing of live stock upon the national forest under a permit system, therefore be it resolved that the California Wool Growers' Association do heartily indorse said principle of conservation, and whereas in the execution of this principle many rangers are employed who, being prejudiced against the sheep men, make false reports to higher officials concerning the movement of sheep and sheep men within the national forest: Therefore be it

Resolved, That we, the California Wool Growers' Association, urge upon the forest supervisors, district foresters, and other officials the need of other and more reliable evidence before action is taken by them in adjusting lines or changing permits.

RESOLUTION No. 3.—*Bureau of Animal Industry.*

Whereas the Bureau of Animal Industry by maintaining a field force in all our Western States has practically eradicated the scabies, but unless careful inspection is made semiannually the disease may soon spread until every flock is infected: Therefore be it

Resolved, That we, the California Wool Growers' Association, ask that sufficient appropriation be made by Congress to continue such portion of the field force as may be necessary for such inspection.

PARAGRAPHS 360-369—RAW WOOL.

RESOLUTION No. 4.—*State veterinarian.*

Whereas the State veterinarian, working in harmony with the Bureau of Animal Industry, has practically eradicated the scabies in this State, and whereas the field force of the Bureau of Animal Industry may be reduced at any time, thus placing all the responsibility and expense upon the department of the State veterinarian: Therefore be it

Resolved, That we, the California Wool Growers' Association, urge upon our State legislature the need of sufficient appropriation for the successful prosecution of this work by the State veterinarian.

RESOLUTION No. 5.—*Urging Federal control of the unappropriated semiarid grazing land.*

Whereas we believe that the public grazing lands of the arid and semiarid West are being overfed by the present indiscriminate methods of grazing: Therefore be it

Resolved by the California Wool Growers' Association, That we strongly recommend the early passage by Congress of a bill providing for Federal control of these unappropriated public grazing lands, and a just and reasonable method of leasing such lands.

RESOLUTION No. 6.—*Indorsing the work of the Department of Agriculture.*

Whereas the basis of our national prosperity rests in the intelligent development of our agricultural resources in the raising of meat food animals; and

Whereas the Department of Agriculture has been of incalculable benefit to the farmers and stock raisers of this country, and has become one of the most important bureaus of our National Government: Therefore be it

Resolved by the California Wool Growers' Association, That we heartily commend the very capable work of the Department of Agriculture in all its branches, and we urge upon Congress that sufficient appropriations be made for the thorough carrying on of all needful work in connection with the development of the agricultural and live-stock industries of the United States.

RESOLUTION No. 7.—*Tariff question.*

Whereas the Tariff Board has made a full and complete report as to the difference in costs of producing wool in the United States and competing countries: Therefore be it

Resolved by the California Wool Growers' Association, That we urge the enactment of a law by Congress revising Schedule K in accordance with this report imposing a specific duty upon the "scoured content," whether imposed as a protective measure or for revenue only.

And be it further resolved, That we recommend the maintenance of a nonpartisan tariff commission.

RESOLUTION No. 8.—*Resolution on free meat.*

Whereas the cost of grazing and feeding live stock for slaughter has been gradually increasing: Therefore be it

Resolved by the California Wool Growers' Association, That we demand the retention of sufficient duties on imports of live stock and its products and all farm products of this country as will be equal, fair, and just to the industry which we represent, compared to the import duties on other products, whether those duties shall be levied for protection or for revenue only.

PARAGRAPHS 360-369—RAW WOOL.**RESOLUTION No. 9.—*Transportation of live stock.***

Whereas much loss on live stock in transportation is due to inadequate railway service:

Therefore be it

Resolved by the California Wool Growers' Association, That we urge upon Congress the enactment of a law giving the Interstate Commerce Commission the power to prescribe a minimum speed limit for stock trains to suit the conditions in different localities.

RESOLUTION No. 10.—*Bounty law.*

Whereas the stock men, poultry raisers and sportsmen of our State suffer great loss each year from the depredations of wild animals, and

Whereas the loss to the State in revenue derived from the stock interests are considerable, and

Whereas the game and fish commission are now and for some years past have been importing different varieties of game birds and distributing same throughout the State, we believe that they should have the support of every true sportsman in asking that a State law be enacted for the protection of same, and believing that a reasonable bounty would ultimately result in the eradication of such animals:

Therefore be it resolved by the California Wool Growers' Association, That we appeal to the State Legislature to enact a bounty law and that the executive committee of this association take steps to bring this resolution to the attention of the governor and legislature. We recommend that a bounty of \$2 be placed upon coyotes and wolves, and that uniform rules and regulations be prescribed for the marketing of pelts.

And be it further resolved, That we urge the enactment of a law by Congress placing a bounty on all predatory animals.

RESOLUTION No. 11.—*The Panama Exposition.*

Whereas a world's fair, celebrating the opening of the Panama Canal is to be held in San Francisco from February to December, inclusive, in the year 1915, at which place there will be one of the greatest sheep shows ever held in the United States, and whereas, the National Wool Growers' Association never has held a convention in California:

Therefore, be it resolved by the California Wool Growers' Association, That we do hereby invite the National Wool Growers' Association to meet with us in 1915.

RESOLUTION No. 12.—*Resolution of thanks.*

Whereas many have done much to assist in making this meeting a success: Therefore, be it

Resolved that we, the California Wool Growers' Association extend a vote of thanks:

To President C. A. Kimble for his untiring efforts in behalf of our State and national organizations.

To Secretary Ellenwood for his efficient work at Washington during the past year regarding the proposed revision of the wool tariff, and the investigation of the proposed law concerning the disposition of the arid and semiarid Government lands of the West; for the suggestions and benefits derived from his long and careful study of conditions existing in the Eastern woolen, worsted, and shoddy mills; and for his calling the attention of the Western Growers to needed efficiency in the sheep business by his written articles such as "Report on trip to Washington" and "Preparing wool for market."

To John H. Hattan, associate district forester, for his excellent paper on "Disposition of semiarid and unappropriated grazing land."

To Dr. H. H. Hicks for valuable paper read on Government inspection of meats.

To Dr. Keane, State veterinarian, for his remarks and suggestions offered.

To the management of the Palace Hotel for the use of the hall.

PARAGRAPHS 360-369—RAW WOOL.

BRIEF SUBMITTED BY JULIUS FORSTMANN, PRESIDENT
FORSTMANN & HUFFMANN CO., PASSAIC, N. J.PASSAIC, N. J., *January 27, 1913.*The WAYS AND MEANS COMMITTEE,
Washington, D. C.

GENTLEMEN: I take the liberty of submitting to you herewith a statement regarding what are, in my opinion, the lowest possible rates for the various items in paragraphs 360-378, 380, and 381 of Schedule K, of the present tariff law, which would compensate the various factors uniting to form the cheaper productive cost of Europe, and which would at the same time place American manufacturers upon the keenest competitive basis with European manufacturers—the avowed purpose of the contemplated tariff revision. My statement is accompanied by several tables and charts which I hope will serve to make matters clearer.

ESTIMATED IMPORTS AND REVENUE UNDER PROPOSED RATES.

In accordance with the committee's instruction for filing briefs I have prepared, for those items which are covered by paragraphs of the act of 1909 referred to above, a statement showing the present imports of wool and manufactures of wool, with the customs revenue derived therefrom; also the estimated amount of imports of each item under the rates suggested by me and the duties which would be collected on such estimated imports under the rates proposed. For the sake of greater clarity, and also for the purpose of comment and comparison with my own figures, I have inserted in the said table the estimates of imports and revenue under the rates of H. R. 22195 (the Underwood bill), made by the Ways and Means Committee in their report recommending that bill.

ESTIMATES CONSERVATIVE, BASED ON NORMAL BUSINESS CONDITIONS.

It is naturally quite impossible to make an absolutely exact estimate of the importations under the rates proposed by me. The best I can do is to take as a guide those items—(1) wool and (2) fine goods over 70 cents per pound—in which there has so far been considerable importation and foreign competition, and regarding which I can therefore form a fairly accurate estimate; and then, with my knowledge of trade conditions here and in Europe, to form a similar estimate for those articles which have hitherto been practically excluded from the United States, but which, under the rates proposed by me, would all be put on a competitive basis.

The figures given in the estimates of the accompanying table are conservative and are based upon normal business conditions. They are rather too low than too high, and under favorable conditions the actual imports would probably exceed my estimates. This is clear, from a comparison of my estimates with the figures of actual imports for the fiscal year 1909-10, which represent the imports under the present tariff in a year of good business. The figures given by me can undoubtedly be taken as a reliable basis for the computation of revenue. Should my estimates for one item prove too low others may prove too high, so that under normal conditions the average will be correct.

WEAK POINTS OF UNDERWOOD BILL AND ACCOMPANYING ESTIMATES.

From the point of view of a practical manufacturer I should say that the principal weak points of the Underwood bill and the accompanying estimates are as follows:

1. The duties on partly and wholly manufactured products are placed entirely too low, especially as compared with the duty on wool, thus favoring the importation of the former instead of raw wool. This would not alone diminish domestic manufacture to that extent, but would also displace a corresponding portion of American wool, as the American wool grower can not profitably dispose of his wool in the open markets of the world. Even with free wool the duties on manufactures would be insufficient to maintain competitive equality between here and Europe.

2. The placing of a flat ad valorem duty on all grades of partly and wholly manufactured products ignores the fact that such a flat ad valorem rate is either too high for the cheap goods, thus making dearer the cloths used for the clothing of the masses, or is too low for the fine goods, which are used for the apparel of the well-to-do, and which are imported no matter what the duty. Too low a rate for fine goods needlessly sacrifices revenue.

PARAGRAPHS 360-369—RAW WOOL.

3. The estimated increased imports of raw wool and manufactures of wool are mutually contradictory. As a matter of logic, the two propositions are quite opposed. An increase of domestic consumption sufficient to take care of the estimated increase of imports of wool and of manufactures is not to be expected, and therefore if the wool imports increase to the extent estimated, the manufactures can not, and vice versa. Consequently I think my estimate of wool imports is much more nearly correct, and there will therefore probably be a loss of revenue on wool imports under the rate of 20 per cent. The only way to make up for this is to keep the present duties on finer products on a sufficiently high level.

4. It has been stated that the object of the Underwood bill is to place all items of the tariff on a keenly competitive basis, and yet the estimates given in that bill are only \$890,535 for the imports of noils and waste, \$732,508 for tops, a very important article of commerce, and \$1,373,937 for all counts of yarn. The reduction of the hitherto practically prohibitive duties on these articles to 20 per cent, 25 per cent, and 30 per cent, respectively, as proposed in the Underwood bill, would undoubtedly increase enormously and beyond all expectations the importation of noils, waste, shoddy, etc., and most especially tops and yarns. This would, indeed, have to be the case, if the bill, with respect to these items, is to justify the claim that it is a competitive tariff. For these items I have estimated, under the rates proposed by me, imports of \$1,500,000, \$6,300,000, and \$8,400,000, respectively.

EXPERIENCE.

In further pursuance of the instructions given by the committee, I beg leave to say that I have all my life been engaged in woolen and worsted manufacturing, as were my ancestors for over a century. I was formerly a manufacturer in Germany, and in 1903 came to Passaic, where I established the Forstmann & Huffmann Co., for the manufacture of fine woolen and worsted yarns and fabrics. In addition to my manufacturing experience I have traveled in all the principal countries of Europe and have also visited Australia and Argentina, so that I am well acquainted with conditions affecting the whole industry, from wool growing to the marketing of the finished merchandise. My experience has covered all grades of products, but as my former European house and our American company have always made a specialty of the manufacture of the finer products, I consider myself especially qualified to speak in behalf of them. In our mills at Garfield and Passaic, N. J., we employ to-day 2,200 people, and our business is so organized that we buy our wools, through our own agents, in the primary markets of Australia and Argentina and similarly in the domestic wool-growing centers; spin our own woolen and worsted yarns; and weave, dye, and finish our own goods, carded woolen as well as worsted, and sell them direct to the trade. Our activity, therefore, covers all phases of the industry.

WITH AD VALOREM RATES STRONG ADMINISTRATIVE ACT NECESSARY.

In regard to instruction No. 5 of the committee, I would say that I consider the most essential part of any ad valorem tariff a very strong administrative law which will minimize, as far as possible, the weakening of the law by undervaluation. I have always advocated specific duties, as adopted in preference to ad valorem rates in all countries of continental Europe. They have been found superior to ad valorem duties because they prevent undervaluation, do not fluctuate with market values, and do not entail a staff of customs officials with such a high technical training. This is especially true of raw materials and many partly manufactured products. As it is the avowed intention of the Democratic Party to adopt a straight ad valorem system of duties, I have made up the accompanying schedule of proposed rates entirely on the ad valorem principle.

PAPERS ACCOMPANYING THIS BRIEF.

The tables and charts herewith submitted are:

A. Digest giving present rates, under the act of 1909, on wool and manufactures of wool, so far as they affect woolen and worsted yarn and cloth manufacturing; also rates proposed by me on the same articles.

B. Charts showing, in graphic form, the ad valorem percentage of the rates, both present and proposed, mentioned under A, viz: (1) Greasy wool and by-products; (2) tops; (3) woolen yarn; (4) worsted yarn, single; (5) worsted yarn, twist; (6) woolen and worsted cloths and dress goods.

PARAGRAPHS 360-369—RAW WOOL.

C. Chart showing total imports in dollars of woolen cloths and dress goods for the fiscal years ending June 30, 1911 and 1912, customs revenue derived therefrom, and the ad valorem percentage of duty to imports; also same figures for fine woolen cloths and dress goods having a foreign value of over 70 cents per pound.

D. Table showing present imports of wool and manufactures of wool, with the revenue derived therefrom, together with the estimated amount of imports of each item under the rates suggested by me and the duties which would be collected on such estimated imports under the rates proposed.

ELEMENTS OF PRODUCTIVE COST.

In arriving at adequate rates of duty, four principal factors have been kept in mind: (1) Cost of construction, installation, and equipment of plant and necessary higher capitalization, 50/60 per cent more in the United States than in Europe, entailing much higher overhead charges.

(2) Cost of maintenance (repairs and renewals) much higher in the United States, and allowances for depreciation, which are 50/60 per cent higher than in Europe, in proportion to the higher investment; all these items also increase overhead charges.

(3) Wages: $2\frac{1}{2}$ times higher in the United States than in Europe; salaries even higher.

(4) Raw material, supplies, etc.: If imported, price increased by amount of duty; if domestic, price about equal to foreign value plus duty.

These four elements combined are the principal causes of the much higher cost of production in the United States.

GREATER COST OF CONSTRUCTION, INSTALLATION, AND EQUIPMENT IN UNITED STATES.

From my own experience I am able to state most positively that the cost of constructing and installing two practically identical plants, one in the United States and one in Europe, is in the ratio of 150/160 : 100. Woolen and worsted machinery, for the greater part, especially for finer goods, must be imported, subject to a duty of 45 per cent, with an extra charge of 10/15 per cent for packing, insurance, freight, etc. This excess cost of plant and equipment in the United States increases with the fineness of the products manufactured. While many other industries have the advantage of better American machinery, in the woolen and worsted industry just the reverse is true.

GREATER CAPITAL NECESSARY IN AMERICA.

The higher cost of construction, installation, and equipment in the United States, as compared with Europe, for a mill of the same capacity, and the resultant higher fixed capital, cause a considerable increase in expense burden. In consequence of dearer raw material and enhanced value of product in all stages of production, a much larger working capital is also necessary for a mill in the United States than for one in Europe of the same capacity. This also adds to the expense burden. The combined fixed and working capital of a mill situated in the United States may conservatively be placed at 50 to 60 per cent higher than the combined fixed and working capital for a mill of the same capacity erected in Europe.

HIGHER OVERHEAD CHARGES—INTEREST, DEPRECIATION, REPAIRS, RENEWALS, ETC.

The higher costs of construction, installation, and equipment are of importance because they operate to make the items for interest and depreciation—two of the most important items in overhead charges—very much higher in the United States than abroad, and form one of the principal causes of dearer domestic production. Furthermore, the rates of interest are mostly higher in the United States than in Europe. Especially on the floating indebtedness of a woolen and worsted mill, i. e., on that part of its capital necessary to carry the fluctuating items of material, goods in process of manufacture, etc., are the rates a good deal higher here than abroad. The overhead charge due to depreciation is at least 50 to 60 per cent more than in Europe, as it must be reckoned on that much greater investment. In addition to the items mentioned, come those of repairs and renewals, in the case of which a greater excess cost exists than for the original construction and equipment work. Then comes the amount of dutiable supplies, such as oil, chemicals, dyestuffs, etc., and numerous miscellaneous general expenses, which when totaled up form a considerable aggregate. Taken all in all, the overhead charges of a woolen and worsted mill in the United States, of the same size and producing the same quantity, may safely be given as from 70 per cent to 90 per cent higher than in Europe.

PARAGRAPHS 360-369—RAW WOOL.

AMERICAN COSTS NOT REDUCIBLE BY HIGHER EFFICIENCY.

All this additional burden must be spread over the same output, quantitatively, as is produced by the European mill with a smaller investment and consequent lower expenses. European mills operate with high efficiency, and, despite claims to the contrary, American woolen and worsted mills can not attain any greater efficiency than those of Europe. My experience has rather shown that in this respect the older European mills have the advantages over those in America, owing to the fact that their workers stick to woolen and worsted manufacturing from generation to generation and thus acquire an experience and proficiency not found in the same measure among similar workers in the United States, because the industry in this country is much younger.

Whatever is true regarding the possibility of increasing efficiency in the case of industries with simpler products and greater mass production is not true of the woolen and worsted industry, with its more complicated product and limited possibilities of wholesale production. Our industry, with its ever-changing fashions and styles, is, more than any other, an industrial art rather than a science, and its products can not be turned out in such an automatic way, nor can it benefit by the mass production due to purely automatic processes.

HIGHER OVERHEAD CHARGES HEAVIEST ON FINE GOODS.

The higher overhead charges, a most important factor in cost, fall more heavily on the finer than on the coarser manufactures of wool. For finer yarns and fabrics more expensive machinery and greater length of processes are necessary, causing relatively greater indirect expenses for the manufacturer of them; and as the finer products can not by far be produced on such a large scale as the cheaper products, the overhead charges per unit of manufacture are still further increased. For these reasons the rates of duty must be graded so as to properly compensate the American manufacturer of fine woolen products for his additional costs. A fair scale of rates to compensate American manufacturers for their increased overhead charges of all kinds, as compared with Europe, would be from 18 to 32 per cent on the European value, varying with the fineness of the products. In this connection it must be borne in mind that the present ratio of American overhead charges is based upon the present American output. If that American output is lessened by increased importations, it will mean a corresponding increase in the ratio of overhead charges here and decrease of the ratio abroad.

HIGHER WAGES AND SALARIES IN THE UNITED STATES.

In the manufacture of those goods which are made of all new wool and the dearer by-products, the wages paid to workers in Europe constitute from 15 to 25 per cent of the total cost of the product, according to character of fabrics. As American wages have been shown beyond question to be fully 2½ times higher than European wages, a duty of from 19 to 32 per cent of the foreign value of imported products must be imposed to compensate for the higher wages paid in America. The highest wages are naturally paid in the manufacture of the finest products, and for this reason these rates also should be graded according to the fineness of the goods. It may here be mentioned that despite the higher wages paid in the United States, there is a great lack of experienced labor here, and this is especially felt in the fine-goods manufacture, where all imperfections in the work must be remedied at great expense or many pieces oftentimes be sacrificed as seconds at considerable loss. Since wages, on the basis of the proposed rates, would be maintained at the same level under a new lower tariff, while the present value of the product would be considerably reduced by foreign competition, it is a foregone conclusion that the present proportion of wages to product in the United States would be considerably increased.

It may be added that all salaries for the better positions are very much higher than in Europe, the excess for these over abroad being much greater than in the case of operatives' wages, on account of the fact that a very much smaller number of people with experience in woolen and worsted manufacturing are available here than in Europe.

COMPENSATORY DUTY FOR RAW MATERIAL.

In arriving at the compensatory rate to be adopted for raw material, it must be borne in mind that, as a rule, the value of the material plays a much more important part, as compared with other items of cost, in the cheap goods than in the finer goods.

PARAGRAPHS 360-369—RAW WOOL.

The coarser all-wool fabrics represent a relatively higher cost of material and lower labor cost, while the more finely constructed all-wool goods consume, per yard, less value of material while entailing much greater costs of conversion. The proportion of material to the total value thus varies inversely with the fineness of the product, amounting to 60 per cent in the case of the cheapest goods and to only about 40 per cent in the finest fabrics. With a rate on raw material of 20 per cent, this would give a compensatory rate of 12 per cent for the cheapest goods.

EFFECTIVE DUTY HIGHER ON FINER FABRICS.

But with regard to the compensatory rate for raw material on fine fabrics it is important to remember that wool is not at once scoured after being imported. It must first be sorted. In sorting raw wool for the manufacture of fine products, a large proportion of the raw wool falls into the lower qualities and off sorts. These lower qualities and off sorts can not be used in the finer woolen and worsted manufacture and must be disposed of at low prices to be utilized in the manufacture of cheaper goods. As the accompanying charts show, by the lowering of the duty under the proposed schedule the value of these lower qualities and off sorts will be lower than ever, entailing a loss of revenue for the fine yarn and goods manufacturer and enhancing the cost of material actually retained in the products. The effective duty on the material actually available for manufacture, therefore, as against the primary duty paid on the raw material, would surely in the case of fine yarns and fabrics be much greater than 20 per cent. When it comes to the actual manufacturing processes the same thing holds true.

In the carding, combing, drawing, and spinning processes much waste ensues, the amount of waste increasing with great rapidity in the manifold and intricate fine-yarn processes. In weaving and finishing the same holds true throughout. And in all cases the value of the by-products is enormously decreased through the lowering of the tariff rates on raw material. With a nominal proposed duty of 20 per cent on raw material, then the effective duty on the material which actually remains in the finer finished products is fully one-half higher, making the total compensatory material rate for the finest goods about 12 per cent.

FINER PRODUCTS BENEFIT LESS BY REDUCTION OF WOOL DUTY.

It will also be seen from the accompanying charts that the reduction of duty in the case of the finer raw material entering into the manufacture of the finer yarns and fabrics is much less than in the case of the cheaper raw material used for cheaper products. It would therefore be illogical and unfair to place the same ad valorem rates on the finer yarns and fabrics, which will receive less benefit from the reduction of wool duties as on the cheaper products which will benefit by very much lower duties on wool and even still cheaper rates on the substitutes—shoddy, waste, etc.—used in their manufacture.

FOREGOING FIGURES JUSTIFY PROPOSED SLIDING SCALE OF DUTIES.

The foregoing figures are based on years of manufacturing experience and represent an average covering all possible cases for a long period of time. To give in detail the figures from which these averages are compiled would involve an enormous amount of work and would, on account of complexity, be confusing rather than explanatory. Experience has shown, however, that the total costs of production in the United States—material, labor, and overhead charges—are from 49 per cent for the cheapest goods to 76 per cent for the fine goods higher than in Europe. These figures are the justification of the sliding scale of duties in the accompanying schedule, compensating for the dearer material and higher conversion costs, compared with European material and conversion costs, actually incurred by the manufacturers of fine woollens and worsteds in the United States, and with all items of the tariff—wool, tops, yarn, and fabrics—carefully and correctly adjusted with respect to each other. Without such graded compensation the latter would not be on a competitive parity with the European manufacturers; and the fine-goods industry, which has only in late years been successfully established in America, could not continue its successful development. Former tariffs, whether protective or revenue tariffs, have all failed to provide sufficiently higher duties on the finer manufactures—a principle which is accepted and carried out in all foreign tariffs. If the new tariff is to be really a competitive tariff, it must be one which without question permits of competition between American and

PARAGRAPHS 360-369—RAW WOOL.

European manufacturers in all stages of manufacturing from raw wool, tops, and yarn to the finished fabric. And I do not hesitate to assert most positively that with rates below those proposed the American woolen and worsted mills could not compete with those abroad.

PROPOSED RATES COMPETITIVE AND COMPENSATORY, NOT PROTECTIVE.

The rates proposed are not protective and represent only the compensation necessary to place the American manufacturer on a competitive parity in the American market with European competitors as regards his higher overhead charges, higher wages, and dearer materials and supplies. It can not be too strongly emphasized that the competitive feature of the rates applies solely to the enabling of European manufacturers by American legislation to compete with American manufacturers on an equal footing in the United States. As long as the present economic system exists here, however, with its all-prevalent higher standard of values, no tariff legislation will enable American woolen and worsted manufacturers to compete at all in the open markets of the world. Under these competitive rates, therefore, Europeans will have the advantage of being able to decrease their productive costs by the increased output made possible by their ability to compete in the American market, and in times of industrial depression in Europe, to unload their surplus products here, and thus still further accentuate the competitive feature of the tariff; while manufacturers in the United States will be absolutely unable to decrease their productive costs by increased output due to foreign sales, or in times of domestic slackness to seek relief by disposing of their products abroad.

BASIS OF PROPOSED RATES IS 20 PER CENT WOOL DUTY OF UNDERWOOD BILL.

The proposed rates are based upon a flat ad valorem rate upon wool of 20 per cent. Should a lower or higher rate be adopted, the rates for partly and wholly manufactured products would be lowered or raised accordingly, any change in the rates for material being felt less and less, proportionately, as the processes of manufacture become more and more advanced and more complicated, where the labor and overhead charges outweigh more and more in importance the raw material.

In drawing up my schedule of proposed rates I do not feel justified in attempting to fix a rate of duty necessary to compensate American woolgrowers for the cheaper costs of woolgrowing in other countries. Therefore I have simply accepted the rate of 20 per cent contained in the Underwood bill, and on this have based all rates for manufactures of wool. At the same time I wish to state it as my most positive conviction that the rate on wool should be such as will properly compensate the American grower and place him upon a competitive equality with the growers of other countries. This I do not so much in the interest of the woolgrower himself as in the interest of the industry as a whole and of the wool-wearing public. Although woolgrowing is not as large as many other American industries, yet the American clip ranks third among the wool clips of the world and is only surpassed by those of Australia and Argentina, so far almost wholly pastoral countries, where woolgrowing is one of the chief industries. The world's production of wool has reached its maximum, and the woolgrowing industry of the United States should therefore be encouraged by proper compensatory rates rather than discouraged by inadequate rates of duty on wool.

DIFFERENCE IN COST OF PRODUCING FINE AND CHEAP GOODS GREATER HERE THAN ABROAD.

The objection may be made that the finer products already receive a higher compensation than the cheaper goods, owing to their higher foreign value. This objection is not justified, because the cost of producing the finer yarns and goods in the United States increases, with a strongly cumulative effect, as the yarns or goods grow finer. The finer the woolen products that are made in this country the more intense become all the elements of increased cost—dearer direct labor and supervision, higher machine cost due to better and more expensive machinery, and greater cost due to need of keeping same in absolutely perfect condition. Greater length of time is also necessary with fine goods for the various processes, as they can not be rushed through the mill at the same rate as cheaper goods, thus increasing the overhead expenses per unit of manufacture, and so on. Furthermore, the market for fine goods is a much more limited one, so that the possibility of decreasing cost by increasing output is much less in the case of the fine goods than for the cheaper ones. In short, more an l

PARAGRAPHS 360-369—RAW WOOL.

more are all the disadvantages felt under which the manufacturer of fine yarns and goods in the United States labors as compared with his European competitor. In plain and clear words, the cost of producing wool manufactures in the United States rises, with the advance in value of the product, in more rapid progression than does the cost and value of the product in Europe.

FOR GOODS CONTAINING CHIEFLY COTTON AND SHODDY, RATIO OF MATERIAL TO TOTAL COST NOT SO GREAT.

It has sometimes been denied that the cost of conversion, including the labor cost and overhead charges, forms a larger proportion of the total value in the case of finer than with cheaper goods. The examples submitted by way of proof, however, are drawn from that class of goods in the manufacture of which cotton and shoddy play an important part. While it is of course true that in these cases the cost of material can not represent the same ratio to conversion cost that exists in the case of goods made entirely of new wool or the dearer by-products, yet it is manifest that in their case the minimum rate on cloth, which in the attached schedule is placed at 55 per cent, is almost wholly a compensatory duty on manufacture—labor and overhead charges—as they require little or no compensation for their extra outlays for material, cotton being free and shoddy being so cheap that the ad valorem duty is almost a negligible quantity. Material used for shoddy is to-day cheaper in America than in Europe, and the material from which shoddy is made—rags, tailors' clippings, etc.—is exported from the United States to the other side, while for the fine merino wool used in the manufacture of fine goods the highest prices have to be paid. And whatever the ratio between material and conversion costs, the fact remains that, as already explained, the conversion costs—labor as well as overhead expenses—on finer products must always be much higher, in a cumulative degree, than on the cheaper manufactures.

Being a manufacturer of both cloth and dress goods, I have combined these articles in one item, with the same rates, as the present varied classification is a survival of conditions which no longer exist.

REASON FOR HIGHER AD VALOREM RATES ON HARD-TWISTED YARNS THAN ON FINE FABRICS.

* Exception may also be taken to the fact that a higher ad valorem rate is suggested for hard-twisted and singed yarns than for the finest finished fabrics. Such higher ad valorem rates, however, are calculated on the foreign value of this yarn, and the duty actually collectible thereunder does not necessarily mean a higher duty per pound than on the finished cloth unless the yarn is as valuable or more valuable than the cloth, in which case the higher duty is justified. Furthermore, the compensatory rates proposed for this yarn must not be compared with those proposed for cloth, but with the cost of the former as existing in Europe, which bears a very much lower ratio to the cost of normal twisted yarns than it does in the United States.

HARD-TWISTED AND GASSED YARNS A NEW INDUSTRY AND ARTICLE OF LUXURY.

With especial reference to the extra compensatory duty on hard-twisted and singed yarns, it may be said that these yarns are used only in very fine, high cost manufactures, such as silk, etc., and thus belong entirely in the luxury class. Their manufacture is an industry of recent origin, entirely new here, having been introduced into this country by our company and a few other worsted spinners in our vicinity. Even under the present tariff relatively much of this kind of yarn is imported, and in the forming of new rates it should receive more consideration than normal twisted yarn. In spite of the youth of this industry it is making rapid progress, silk mills are using hard-twisted worsted yarn more and more, and with fairly competitive rates of duty the business is susceptible of much greater development.

In the manufacture of hard-twisted yarns a great deal of extra twist is necessary, involving additional expensive machine time and operatives' time, thus increasing the general expenses and lessening the output of the machinery by that much, so that the burden of expense per pound of yarn is much greater for hard-twisted yarns than for normal twisted yarns; and as all expense items are in themselves higher in the United States than in Europe, the increase of expense per pound of hard-twisted yarn manufactured in the United States would be correspondingly greater than the increase of cost of production of the same yarn abroad.

PARAGRAPHS 360-369—RAW WOOL.

The waste in the production of hard-twisted yarns, both here and in Europe, is greater than in the case of ordinary yarns, chiefly because the waste from the former, having received such a hard twist and in many cases having been gassed or singed, can not be reprocessed and utilized again and is almost entirely without value. Owing to the higher value of material and the greater cost of conversion in the United States, the increased loss by waste in the case of hard-twisted yarns, as compared with normal twisted yarns, is correspondingly greater in the United States than in Europe.

RATES ON FINE YARNS AND FABRICS ARE TAX ON LUXURY AND ADD TO REVENUE.

The highest rates for the finest yarns and fabrics are further justified by the principle recognized by all parties that articles of luxury are a proper subject of taxation. The whole agitation for a reduction of the tariff has been based on the necessity of cheapening the clothing of the masses, which can only be done by reducing the rates for cheaper products, but with which the rates of finer manufactures have nothing whatever to do. Fine goods are not made in great quantities for general consumption in everyday wearing apparel, but are articles of luxury used for fashionable attire. In their case all economic considerations are against any radical reduction of rates. The manufacture of such finer products is still comparatively a new industry in the United States and as such is deserving of ample compensation by fairly competitive duties, especially when such duties do not fall into the category of a tax upon necessities, but as a tax upon luxuries are quite consistent with the principles of a revenue tariff.

PRESENT IMPORTATIONS OF WOOLEN FABRICS AND REVENUE THEREFROM CONSIST ALMOST ENTIRELY OF FINE GOODS.

Fine woollen goods, even with the present tariff rates, are imported in proportionately large quantities, showing that these articles can very well stand the present rates. That is so because they are a luxury and would be imported no matter what the duty. From the point of view of a tariff for revenue only, the rates proposed for the finer qualities of woollen fabrics are fully justified. In the fiscal year ending June 30, 1912, there was imported into the United States $4\frac{1}{2}$ million dollars (foreign value) of woollen and worsted cloths valued at over 70 cents per pound, with an average duty of 93.23 per cent, aggregating about $4\frac{1}{2}$ million dollars revenue; and of dress goods valued at over 70 cents per pound about $2\frac{3}{4}$ million dollars worth (foreign value), at an average duty of 98 per cent, aggregating about $2\frac{3}{4}$ million dollars revenue. For the year ending June 30, 1911, the imports of woollen cloths and dress goods valued at over 70 cents per pound were about 10 million dollars in all, with an aggregate revenue of the same amount in round figures. The revenue from fine goods alone was in 1912 26 per cent and in 1911 34.4 per cent of the entire revenue, including raw wool, from Schedule K, and in 1912 90 per cent and in 1911 86.6 per cent of the entire customs duties collected on all cloths and dress goods.

PRESENT CONSUMPTION OF CHEAP AND FINE WOOLEN AND WORSTED GOODS.

The present average annual consumption of woollen and worsted goods may be placed at \$450,000,000, and this value will, by competition due to the revised tariff, be reduced to about \$400,000,000. Assuming that the reduced values will increase demand—a debatable point—we can not expect that such increased demand will do more at best than make up for the reduced values, bringing the total again up to \$450,000,000. This total consumption may be taken as being roughly divided as follows: 60 per cent cheap goods, 25 per cent medium goods, and 15 per cent fine goods, or 270, 112 $\frac{1}{2}$, and 67 $\frac{1}{2}$ million dollars, respectively.

FINE GOODS IMPORTS NOW REPRESENT ABOUT 30 PER CENT OF DOMESTIC CONSUMPTION OF FINE GOODS.

As the present imports of goods over 70 cents per pound average \$10,000,000 annually (foreign value), or \$20,000,000 duty-paid value, it is clear that fine goods, with an importation amounting to 29.6 per cent of their domestic consumption, are already subject to a very fair share of foreign competition.

Furthermore, the rates for fine goods proposed by me are, as a matter of fact, a great reduction over existing rates and would of themselves even still further increase the imports of those goods and the consequent competition, so that lower rates than those proposed by me would be absolutely unjustifiable on any ground whatsoever. As

PARAGRAPHS 360-369—RAW WOOL.

goods over 70 cents per pound are now imported at an average duty of 98 per cent, and as a great quantity of this class, to my knowledge, are imported around 75 per cent duty, it is clear that a large proportion is imported at a duty considerably over 100 per cent. When this portion of the fine goods class comes in at even the highest rate of my schedule, 75 per cent, it will mean a considerable reduction in revenue on those goods which are now imported at the higher rate, but this reduction would be somewhat more than counterbalanced by the increased importations. The more the rate drops below 75 per cent, the greater is the reduction of present revenue and the lesser the possibility of the larger importations compensating therefor.

FINE GOODS, OWING TO HIGH VALUE, RICHER AND SURER SOURCE OF REVENUE THAN CHEAP GOODS.

There will of course be a great increase in the importations of cheap, heavy goods, such as overcoatings, and of cheap and medium serges, chevots, etc., which have so far been excluded. It must be remembered, however, that the larger quantities of cheap goods imports, which would tend to regulate the domestic market, would nevertheless aggregate a much smaller total value and therefore be a less satisfactory source of revenue, in proportion to quantity, than the fine goods.

Although I do not appear as the advocate of a reduction of duties on cheap goods, I do maintain that, as long as duties are to be reduced, it is illogical to reduce to the same extent the rates of fine goods, which are already on a keenly competitive basis with foreign goods, as on the cheaper goods and medium goods, which are at present practically excluded from the American market. The raising of the greatest possible revenue on fine goods is an absolute fiscal necessity, to make possible and compensate for the lower duties on cheaper goods which are used for the clothing for the masses and also to make up for the probable lower revenue from raw wool. Failure to recognize and apply this principle is, in my opinion, one of the most serious mistakes of the Underwood bill.

NECESSITY OF AMPLE TIME BETWEEN ENACTMENT OF LAW AND OPERATION OF SAME.

The Underwood bill, both times it was passed in the House, provided about six months between its passing and its going into effect. As the bill did not pass the Senate until much later, this time was considerably reduced, so that if the President had signed the bill, it would have gone into effect almost immediately. This would have been most harmful to woolen and worsted manufacturing and also to all branches of the industry. Any new law should provide that as regards wool it does not become operative until at least three months and as regards manufactures of wool until at least six months after its final enactment. This will free manufacturers and merchants from uncertainty and enable them to make their commitments with as little risk as possible. For instance, woolen and worsted manufacturers are now confronted, on the one hand, with the necessity of purchasing their raw material to be used in the manufacture of goods to be delivered during the latter part of the current year, and, on the other hand, of fixing their selling prices for all fabrics for the fall season. In order to make their calculations properly, it is necessary for them to know definitely that no tariff changes will go into effect before the close of that season. As the tariff rates which it is expected will be adopted in the new Congress can not be foretold with any accuracy, it is impossible to make any calculations in advance based on them. Ample time should therefore be allowed between the passing of the law and its operation for all parties interested to adjust their business to the new rates. This is necessary not only for the sake of business interests but also and more especially for the sake of the hundreds of thousands of workers in the employ of woolen and worsted mills and the allied branches of the trade, who during the tariff uncertainties of the last two years suffered great irregularity of employment and consequent financial loss. In their interest it is of great importance that no tariff changes be put into effect without ample time being given to the industry to adjust itself to such changes as gradually as possible without sudden or radical alterations either in number of employees or in hours of employment. All this is perhaps not to the advantage of the importing interests, but they form such a small proportion of the industry in general that their interests should not be allowed to outweigh those of manufacturers and merchants and their employees.

PARAGRAPHS 360-369—RAW WOOL.

RÉSUMÉ.

In conclusion permit me to sum up the statements made by me in the foregoing pages:

1. The elements of productive cost—material, labor, and overhead charges—are all higher in the United States than in Europe, the difference in productive costs between cheaper and finer yarns and fabrics being greater in the United States than in Europe, varying from 49 per cent more for cheap goods to 76 per cent more for fine goods.

2. A corresponding graded scale of compensatory duties is therefore justified.

3. The rates proposed by me are solely compensatory, not protective, designed only to place manufacturers in the United States upon a comparative parity with those of Europe.

4. The manufacture of fine yarns and fabrics is a comparatively new industry in the United States, and these fine products are articles of luxury. Higher duties are, therefore, fully justified from standpoint of revenue tariff.

5. Importations of fine goods are already about 30 per cent of their domestic consumption, and yield a revenue of 100 per cent on the foreign value. This shows that no reduction of rate is necessary to increase foreign competition in fine goods, and any reduction of rate is only needless sacrifice of sure revenue.

6. Estimates submitted by me show that committee's former estimates of imports of wool and manufactures of wool can not both be correct, and that in my opinion the estimated imports of wool and the revenue therefrom are too high. As it is not desired to retain too high rates on cheaper products, the only way to make up revenue is to retain sufficiently high duties on the finer products.

7. To minimize as much as possible the derangement of business due to changes in the tariff, the new bill should provide that its provisions will not go into effect, so far as regards wool, until at least three months and so far as regards manufactures of wool until at least six months after the bill becomes a law.

Very respectfully,

JULIUS FORSTMANN,
President Forstmann & Huffmann Co.

PARAGRAPHS 360-369—RAW WOOL.

BRIEF SUBMITTED BY RUDOLF KLEINJUNG, GENERAL MANAGER
NEW JERSEY WORSTED SPINNING CO., GARFIELD, N. J.GARFIELD, N. J., *January 23, 1913.*COMMITTEE ON WAYS AND MEANS,
Washington, D. C.

GENTLEMEN: Responding to your solicitation addressed to merchants and manufacturers engaged in the trading of wool and its products to present their views regarding the contemplated downward revision of Schedule K, I have carefully prepared and herewith submit several tables showing the present rates of duties, together with a proposed schedule of duties, the object of the proposed schedule being to place the American manufacturer on an equal basis with their European competitors and also to fulfill its purpose of reducing the present rates of Schedule K.

The tables referred to are dealing only with the rates on raw wool, scoured wool, tops and yarns, constituting those branches of the wool industry which I consider myself to be a competent judge of.

In order to prove this assertion permit me briefly to mention that my experience in matters pertaining to wool extends over a period of 33 years—that is, 25 years in Europe and 8 years in this country.

As head of several of the largest concerns in Germany engaged in the scouring, combing, and spinning of wool, and having business connections with the principal countries of Europe, Australia, and South America, it was possible for me to gather an intimate knowledge of the industry in all its branches from the raw product to the finished yarn.

Previous to settling permanently in this country I traveled extensively in the United States for the purpose of studying their economic conditions, and I was so impressed that I decided to emigrate to and become a citizen of this country.

Eight years ago I conceived and completed plans for the building and installing of a worsted, scouring, combing, and spinning plant, which was erected in Garfield, N. J., and is since running, giving now employment to about 1,400 people. As general manager of this plant I have gained a thorough knowledge of American business conditions concerning the wool industry during a period of eight years.

The foregoing shall serve only and will suffice to establish my claim of being a competent judge on matters relating to wool as embodied in the tables hereto attached.

Tables A to D are showing my proposal of the following rates of duty: Raw wool, 20 per cent; scoured wool, 25 per cent; top, 35 per cent; yarns, 47 per cent to 83 per cent, which constitute in my opinion the very lowest basis for an American manufacturer to exist on.

The tables further show reductions of the present rates from 17 to 60 per cent. No further elucidating comments are necessary.

Table E is illustrating the cost of manufacture in Europe compared with that of America, and showing the cost to be two and one-half times greater than in Europe.

The figures for this table are based on exactly equal conditions prevailing here and in Europe, one of the largest establishments in Europe serving the European side of the argument and the Garfield mill representing the American side.

The slight margin shown on these tables in favor of the American product is justified for the reason that the figures are based on normal business conditions with an average output thereby still enabling the European manufacturer to compete successfully with the American product.

In the event of any disturbing factor tending to reduce the output of the American mill the cost of the product will be so considerably advanced that competition against the European manufacturer will be impossible.

I refer to this Table E as a sufficiently strong argument in favor of my proposed scale of duties and need add no more.

Respectfully submitted for your consideration.

R. KLEINJUNG,
General Manager, New Jersey Worsted Spinning Co.,
Garfield, N. J., U. S. A.

BRIEF ON WOOL, FILED BY OELRICHS & CO., NEW YORK CITY.

NEW YORK CITY, *January 25, 1913.*

The COMMITTEE ON WAYS AND MEANS,
House of Representatives, Washington, D. C.

GENTLEMEN: We address you, as importers and dealers in wools. We urge the retention of the ad valorem system of wool duties adopted by this committee in the recent House bill. We strongly favor the abolition of the present specific duty system in part based on value. Some of the objections are obvious. A specific rate operates arbitrarily without regard to the condition of the wool, i. e., the percentage of foreign matter it contains. This has the effect of making the heavier low-class wools containing substantial percentage of grease and dirt (which wools are largely used for goods consumed by the masses) pay precisely as much duty as the lighter high-class wools, which are much freer from grease and dirt and which are used in the manufacture of expensive goods. Thus, to illustrate, a pound of wool of class 1 containing 50 per cent of clean wool would pay 11 cents a pound under the present system, while a pound of the same kind of wool containing only 35 per cent of clean wool would also pay a duty of 11 cents a pound. This is manifestly unjust.

Especially iniquitous and oppressive is the present provision representing class 3 wools. This is particularly the case with those wools which are bought in the foreign market under what is called the "low duty limit" of 12 cents per pound (duty 4 cents), and which either rise in value in the country of origin between the date of purchase and date of shipment, or are considered by the appraising officials to be valued at more than 12 cents per pound. Sometimes the value has been finally determined to be in excess of 12 cents per pound by just the merest fraction of a cent, with the result that the importers have sustained very heavy losses by reason of the penalties which automatically accrue on account of the shift in duty from 4 to 7 cents. There is no valid reason for the existence of such an arbitrary dividing line of value, and it should be wiped out.

The imposition of a flat ad valorem rate is, we consider, the only equitable way. It taxes the wools according to their value, which value is determined by the quality of the wool as well as by its condition, and such method does not in effect bear so injuriously upon the less wealthy class of consumers. We would favor a uniform rate of duty on all three classes of wools as was proposed, we believe, in the recent House bill. But if any distinction is to be made it should certainly be made in favor of wools of class 3, which are not grown in this country, which consequently must be imported, and which would yield greater revenue to the Government if the conditions were less restrictive.

We are strongly opposed to any so-called duty on scoured wool. It is impracticable, if not impossible, to establish the real scoured contents of wool. It could only be done approximately by testing establishments at every port of entry, which would not only be expensive, but be a source of constant disputes, inasmuch as different bales from the same shipment would show different scouring tests. All this would entail a great delay and expense both to the Government and importers. It would certainly work to the disadvantage of the smaller and independent manufacturers who have no testing plants of their own. Furthermore, a specific rate of duty upon a scoured pound of wool is open to the same objections that apply to a specific rate on the greasy pound. It would bear as heavily upon wools of lower value, used for goods consumed by the masses, as upon the wools of higher value, used for more expensive

PARAGRAPHS 360-369—RAW WOOL.

goods. Thus, a scoured pound of wool valued at 40 cents would pay the same duty upon a specific basis as a pound of scoured wool valued at 80 cents.

In a word, we trust that this committee will adhere to the plan it has so recently adopted. All of which is respectfully submitted.

Very respectfully,

OELRICHS & Co.

**MEMORIAL OF THE OREGON WOOL GROWERS' ASSOCIATION,
VALE, OREG., JANUARY 4, 1913.**

Economic thought teaches and business experience proves that proper protection must be given to every American industry based on the difference in cost of production at home and abroad.

Reverses under reduced tariff rates on wool in 1893 absolutely demonstrated that a too radical reduction in rates meant the stagnation if not the ruination of the industry.

To the end that rates on wool be not only adequate, but absolutely fair, maintaining a proper parity between the raw material and the manufactured article, and that full but impartial justice be done every branch of the industry, we reaffirm our indorsement of a nonpartisan tariff board as the proper medium for determining the difference in the cost of production at home and abroad and the establishment of a just and sufficient rate.

In as much as our product in all markets is valued on a scoured basis, common justice suggests, and we insist that the present system of levying duties on the grease basis is wrong in principle and unfair in practice, and that a specific scoured basis is not only scientifically correct, but is the only system that insures an equitable and permanent adjustment of the tariff question as applied to wool.

The growing of wool is a business in and of itself, and for tariff purposes should be so considered, but we favor proper protective duties for the manufacturer.

We are not supplicants for special favors, but in the strength of American citizenship representing our industry, involving enormous capital in lands, flocks, and equipment, bearing constantly heavier expenses for labor and supplies, giving of our industry, energy, and our best business effort in the production of a necessity of life.

We urge that our industry be treated from a business and not a political standpoint and that any revisions of the tariff be placed on sound, economic principles rather than that of mere sentiment.

JOHN G. HOKE.

STATEMENT BY W. K. DANA, WESTBROOK, ME.

WESTBROOK, ME., *January 25, 1913.*

HON. OSCAR W. UNDERWOOD,
Washington, D. C.

SIR: Some of my reasons for not wanting the tariff changed are that in the Payne-Aldrich law the average ad valorem reduction brought the duties down from an average of about 24 per cent on all imports to about 20 per cent, so that the duties collected under it were $\frac{4}{5}$ per cent less in 1912 than if the duties had been collected under the Dingley bill. In addition, a large number of items were added to the free list.

Although the average reduction was considerable, the margin of safety, except in a few instances, was not endangered. A further reduction, however, would place a serious handicap on manufacturing in this country. The Payne-Aldrich law is justifying itself.

Business was never better than it has been under our present tariff. Exports have increased wonderfully and imports have also increased. The amount of business done has consumed the biggest cotton crop that was ever raised, and at advanced prices.

Woodrow Wilson's History of the United States records that during the period of 1890 the population increased 30 per cent, the wealth increased 45 per cent, and that the railroads increased from 52,914 miles to 93,671 miles. Under the Gorman-Wilson Act the Westbrook Manufacturing Co., in this town, was destroyed, and this was a greater blow to us than any disaster that has ever occurred in Cumberland County, except the great fire in Portland in 1866.

At the close of the Revolutionary War the South equaled the North in population, wealth, and commerce. The tariff law enacted by Thomas Benton, of Missouri, and John C. Calhoun, of South Carolina, and opposed by Henry Clay and Daniel Webster, of the North, built up Massachusetts and the North so that in 1860 the population of the North was two to three times that of the South and the wealth and commerce of the North many times exceeded that of the South.

PARAGRAPHS 360-369—RAW WOOL.

This comparison of the growth between the North and the South has been duplicated by the effect of the tariff in Germany, causing it to increase in wealth, commerce, and population over England.

The result of a protective tariff has always been overwhelmingly to the good. Domestic production has greatly increased, more wage earners have been employed, and wages have been advanced. Any policy which results in a curtailing of American production will prove injurious.

Respectfully,

W. K. DANA.

BRIEF OF THE ANDREW J. SOLIS & CO., BOSTON, MASS.

BOSTON, MASS., *February 18, 1913.*

HON. OSCAR W. UNDERWOOD,

Chairman Ways and Means Committee, Washington, D. C.

MY DEAR MR. UNDERWOOD: I did not appear before your committee because I believed I had already expressed my views more or less fully on Schedule K. As I have before stated, I believe in protection to American industry, but I want the law applied fairly and I want the rates honest. I have been reading the testimony before your committee and with one or two exceptions it is disgusting.

The whole problem, as I view it, is in the rates you impose on the partially finished products and on raw wool. The present schedules are very much out of proportion and unbalanced, with the duty on yarn and tops excessive and thereby securing the greatest percentage of protection, although having the least labor cost, as compared with the finished product, and out of all proportion to the duty imposed on cloth. This gives those owning the worsted combs of the country their chance to control the woolen industry (because the basis of any industry is the engine which is its basis of production), and the condition brought about by this unbalance is responsible for the highly concentrated condition it is in, and is the reason why these monopolistic powers are moving "heaven and earth" to retain these conditions of unbalance.

The American Woolen Co., for instance, and kindred concerns, will immediately lose their grip on and the supremacy of the American market against the smaller manufacturers of America if you adjust this schedule fairly.

Out of the 1,500 or 1,600 combs in the United States, I can prove that 38 manufacturing units, mostly under corporate management, and one \$60,000,000 combination, control 90 per cent of the output from combed wool in the United States. I can give you the whole of them if you desire them, but let me now call your attention to the American Woolen Co. Combs in the United States, say less than 1,600, on clothing cloths. American Woolen Co's ownership (443 combs), and these units above mentioned control 90 per cent, leaving only 10 per cent for the rest of the industry to live on. I believe that if you establish a competitive basis on yarn and tops, and if you will endeavor to favor the finished product, you will make your law a success.

My own idea is for you to stand by your guns on your yarn and top schedule, without a compensatory duty, but on your finished product have your rate as now, plus a compensatory duty of 10 per cent. That would make the compensatory duty what it should be, because taking cloth as a unit of, say, 100 per cent, 50 per cent is raw material, 50 per cent is labor.

Thus 10 per cent on the selling price will equal the compensatory duty of 20 per cent, if only assessed on the raw material in the cloth.

I hope when you put the law into effect you will have it go into operation in two sections—the material on passage of the bill and the finished production January 1, 1914. The reason for this is that manufacturers buy their material six months ahead of the time the cloth gets in the hands of the consumer, and if you do this it will enable the domestic manufacturer to get the benefit of the lower priced raw material when the law goes into effect on the finished product. I want to see the smaller mills and small producers prosperous, because the small producer is of the people, and is the brains and the manufacturer of to-morrow. The men who have made this country great in every walk of life are the pioneers—the men of brains but not necessary of wealth. If you legislate so as to drive young blood away from an industry, in time you make it the industry of a privileged class, such as the woolen industry is becoming at the present time.

I hope you will pardon my writing you, but I am very much interested, and I want to see you successful in your undertaking.

Very respectfully,

ANDREW J. SOLIS.

PARAGRAPH 368—MOHAIR.

F. S. TURNBULL WRITES CONCERNING TARIFF REVISION.

ROGERS PEET CO.,
New York, November 22, 1912.

The Hon. WILLIAM C. REDFIELD,
141 Broadway, City.

DEAR MR. REDFIELD: Schedule K of the new tariff bill, when introduced by the new administration at the extraordinary session of Congress, will without doubt be revised downward, and at the time of its introduction we will know just what the bill will be. But unless we have a definite date for the enactment of this new tariff bill, there will still be that uncertainty which will hurt business, and should be avoided from the standpoint of the manufacturer, the merchant, and the consumer.

Personally, I think that the bill when introduced should state that it would take effect by the 1st of September, 1913. This will enable the manufacturer and the merchant to buy for the season of spring, 1914, with the assurance that they are benefited in their purchases of raw material and manufactured cloth by the provisions of the new bill.

Mr. Wilson did a fine thing when he came out promptly and stated that he would call an extraordinary session of Congress.

Mr. Underwood would do as clever a thing if he would intimate, at this time or shortly, that the new tariff bill, particularly as relating to Schedule K, would go into effect after passage at a specific date.

This would give everyone time to get their house in order in preparation for the new conditions that must arise.

Schedule K, effecting as it does, the raw material as well as the manufactured cloth, and the fact that the manufacturer and the merchant must operate months in advance of the selling time for their merchandise, it would seem but just and fair that a breathing space be given them between the time of the passage of the bill and its enactment as a law.

It is to my mind only right and proper that the manufacturer, the merchant, and the consumer should benefit by the enactment of this new tariff as nearly as possible at the same time.

If you indorse my views on this matter, won't you kindly pass the word along?

With kindest regards, I am, yours, sincerely,

FRANK S. TURNBULL.

MOHAIR.

TESTIMONY OF JOHNSTON ROBERTSON, OF DEL RIO, TEX.,
ON THE SUBJECT OF MOHAIR.

Mr. ROBERTSON. Like the others who have preceded me, Mr. Chairman, I have a few samples of my product. I represent the raw material, the Angora goat, which is the producer, as you know, of raw material, with which this committee is perhaps familiar.

Mr. Chairman, I would like to have the privilege of filing my brief a little later before this committee.

The CHAIRMAN. Mr. Robertson, these hearings will be open until the end of the week. You have the privilege at any time until the end of this week to file your brief. Of course, you can file it at any time, but in order for it to be printed with these hearings you will have to get it in by the end of the week. You may have that privilege up to that time.

Mr. ROBERTSON. In the first place I will say, Mr. Chairman, that I feel somewhat embarrassed coming before this committee which is Democratic, I being a Democrat myself, and asking for a revenue upon our products. But I believe that we have good reasons for the request.

PARAGRAPH 368—MOHAIR.

In the first place, the product of the Angora goat is highly competitive, about 6,000,000 pounds being produced in the United States and about 6,000,000 pounds being imported into this country. Our product is raised in a country that is fitted especially for the raising of Angora goats and it is not fitted for the raising of anything else hardly. Of course we raise some sheep, some cattle, and some horses, but the chief product of the country that I represent is Angora goats. There are several reasons why we come before this committee asking that a revenue, either ad valorem or specific, be placed upon the importation of mohair. In the first place, as I have stated, it is highly competitive. You understand that the mohair is imported from Turkey largely and also from South Africa. Those countries have heretofore furnished us with the blood that has made the foundation of the Angora goat industry. We have depended upon Turkey and we have depended upon South Africa for the real blood that has been infused into our flocks in this country and which has produced beautiful mohair. But, Mr. Chairman, Turkey, looking across the sea, saw that she was helping a competitor and she shut out the importation of the Angora buck, the male animal of the Angora species. The Sultan made it a death penalty for anyone to export an Angora goat for breeding purposes from his domain.

In the meantime, however, South Africa, being a country that could produce Angora goats cheaply and well, had imported into our country large numbers of Angora goats from Asia Minor, but Turkey also prohibited the exportation to that country. South Africa became a large raiser of mohair, but she, gazing at the strides that had been made in this country in the production of mohair and the raising of Angora goats, turned a jealous eye toward us, and she placed an export duty of \$500 upon the male animal that should be exported from her country.

A few years ago a man from my county, or near my county, desired even to pay the large sum of \$500 for a few Angora bucks, and then the Government of South Africa decided that she would prohibit absolutely the exportation of Angora goats for breeding purposes. So you see, gentlemen of the committee, that we are shut up within our own resources so far as Angora breeding is concerned. We can not get new blood from South Africa or from Turkey.

However, the spinners and manufacturers of mohair need the goods, and so they have to import into this country 6,000,000 pounds of mohair. We raise about 6,000,000 pounds, and so we feel, gentlemen, that this being a highly competitive business, that we ought to be protected in a way. We ask that you give us a small tariff upon mohair. We ask for 12 cents a pound specific duty, just as it is in the Payne bill.

We desire, also, Mr. Chairman, that mohair be separated from wool. It has been stated before this committee by Mr. Wood and others that it is impossible for this Ways and Means Committee to fix a tariff that will be fair and equitable and not hurt the business. After thinking over that proposition it is true, I believe. But, if you will separate these different products that come into this country under the head of Schedule K, I believe it will be possible for

PARAGRAPH 368—MOHAIR.

you to arrange a schedule that will be fair. For example, mohair is nothing like wool. The only comparison is that it grows upon an animal. It is no more like wool than cotton is. Different products are made from it. But you have placed it in the same schedule under the same heading. We ask that it be separated from the wool. It is probably certain almost that wool will be reduced. We feel that that is true, but I want to show you, Mr. Chairman, that mohair, being a product that is different from wool, that it ought to be separated from wool.

The CHAIRMAN. I understand what you mean, Mr. Robertson. But here is the question. There is no doubt, I think, in the mind of the committee, or in the mind of anybody else, that both wool and mohair are competitive products. The tariff now is competitive and in some instances it is highly competitive. But, of course, it is raw material of a great industry, and if we put a high tax on the raw material it must be carried down, and the ultimate result would be to make a much higher charge to the American people. There must be a reasonable line where you divide it between revenue for the Government and the charge that must rest on the American people. The committee in its last bill which passed the House put a 20 per cent ad valorem tax on mohair. I do not think it is necessary to discuss the question of whether or not it ought to be ad valorem or specific. That is academic.

Mr. ROBERTSON. Yes, sir.

The CHAIRMAN. If you have anything to say about the reasonableness of the 20 per cent tax that we have put on the raw material, we will be glad to hear you.

Mr. ROBERTSON. The point is just this. Mohair is a luxury; wool is not. Mohair is made into automobile tops and into ladies' dress goods; it is made into plush that adorns your Capitol and the palace cars that you ride in. One of the greatest boons that we have ever had was when the Teddy bear was in high repute. We got 35 cents a pound. That shows that our product is not a necessity, but that it depends upon the whims of society, and it is a luxury and something that the rich and the well to do ought to pay for.

That is my argument, Mr. Chairman, and the argument that we place before you to get this article separated from wool. We believe that it is a luxury. I appreciate the fact, Mr. Chairman, that the Democratic Party and the Ways and Means Committee has gone before the American Nation and promised that they will reduce the tariff; but, Mr. Chairman, the President elect and the chairman of the Ways and Means Committee have also promised that they will not cripple any industry. They have committed themselves also that they will raise revenue to support this Government. This revenue must be raised from something. You say it ought not to be raised from the articles that the poor need, and that they must have such articles as wool, cotton, and things like that. But we come before you and say that mohair does not go to the poor, but it goes to the rich, it goes to the well-to-do and those who can well afford it, and that it ought to sustain revenue for the Government. That is one of our arguments.

PARAGRAPH 368—MOHAIR.

The CHAIRMAN. If we separate mohair from wool, we must follow that policy all the way down the line, in the finished products as well—

Mr. ROBERTSON (interposing). That is what we want you to do, Mr. Chairman, and that is what you ought to do.

The CHAIRMAN. If we do that, we have a difficult proposition, although I understand that wool and mohair are never mixed, and that mohair in some respects is a luxury. But it is every day becoming a necessity. There is really no better summer suit in a hot country for a man to wear than a mohair suit. You recognize that?

Mr. ROBERTSON. Yes; it is cheap.

The CHAIRMAN. It is cheap and it is cool.

Mr. ROBERTSON. It is becoming more and more a necessity. I realize that, but at the present time it is a luxury and it ought to be taxed. The rich ought to be made to pay for these things, and the Government must be sustained.

Mr. KITCHIN. If we reduce the tariff on it it may soon become a necessity, because it will be a little cheaper.

Mr. ROBERTSON. No; that is wrong.

Mr. KITCHIN. Why?

Mr. ROBERTSON. I will tell you why. This country can only produce so much mohair and foreign countries can only produce so much. All that has been grown so far has been used. If you lower the tariff it will cut the producers of this country out of the business, and I have the statistics to show you why it will do that.

I have before me here, Mr. Chairman, figures that will prove to you that it costs about \$1.15 to raise an Angora goat; that is, to run an Angora goat for 12 months. I am talking from the standpoint of a producer. I am a mohair grower, and I know what I am talking about, and I have consulted with others along this line. We have come to the conclusion, and the figures show, that it costs 31½ cents to produce 1 pound of mohair.

Mr. KITCHIN. What do you get for it?

Mr. ROBERTSON. 32 cents to 32½ cents—from 30 to 34 cents, depending upon the mohair.

Mr. KITCHIN. Then you only make 2 or 3 cents a pound.

Mr. ROBERTSON. According to those figures we only make 1 cent a pound.

Mr. KITCHIN. How many pounds of mohair will one of those goats produce?

Mr. ROBERTSON. About 3 pounds.

Mr. KITCHIN. Then you only make 3 or 4 cents a goat?

Mr. ROBERTSON. Yes, sir.

Mr. KITCHIN. Most of the Angora goats are in Texas, are they not?

Mr. ROBERTSON. Yes; most of them in the United States are in Texas.

Mr. KITCHIN. Of course, I meant in the United States. How large is your flock?

Mr. ROBERTSON. We have about 3,000 goats; about two flocks.

Mr. KITCHIN. How much have you increased your flocks in the last five years?

PARAGRAPH 368—MOHAIR.

Mr. ROBERTSON. Five years ago we had 5,000 goats; to-day we have only about 3,000 goats.

Mr. KITCHIN. How much have they increased in Texas in the last five years?

Mr. ROBERTSON. In Edwards County, three years ago, we had 250,000 goats. To-day we have the same amount. Two years ago we had a great death. That is one of the things, Mr. Chairman, that you have to consider. The Angora goat is a delicate animal. Immediately after shearing, if a cold rain comes upon that animal it dies; it chills them down and they die. We lost 525 in one night in October, 1911. A hundred thousand goats in another county within 10 miles of me died during the same spell. The consequences are that our bankers are absolutely forcing us and refusing to loan us money to carry on our business unless we build sheds. That is not true with the sheep business. Consequently, thousands upon thousands of dollars have been spent in our county in building sheds. In making this calculation, I have not taken that into consideration.

Mr. KITCHIN. Would you say in the last five years that it has been a growing industry or a languishing industry?

Mr. ROBERTSON. It has been a growing industry from the standpoint of the manufacturer, but for the producer and raiser of mohair it has been a losing business, because we have had adverse circumstances to contend with. You understand that I am from Texas, and in our country we have had a three-year drought. Of course, the Ways and Means Committee has nothing to do with that.

Mr. RAINEY. But it will be charged to the Democratic Party later on.

Mr. ROBERTSON. No, I am a Democrat myself.

Mr. RAINEY. You would not do it, but somebody else will. Mr. Fordney, over there, for instance.

Mr. FORDNEY. You are one of the Democrats who believe in protection?

Mr. ROBERTSON. Yes, sir.

Mr. FORDNEY. I agree with you.

Mr. ROBERTSON. And I believe we will get it. I believe this Ways and Means Committee will consider our cause. I believe that they will give us a specific duty of 12 cents a pound, and I believe that we can present to the Ways and Means Committee, if not just at the present time, later on, facts and figures that will demonstrate and prove to you beyond the shadow of a doubt that you have no idea and can get no idea under your present law of how much mohair is produced—

Mr. KITCHIN (interposing). Twelve cents per pound is about 40 per cent ad valorem?

Mr. ROBERTSON. Yes.

Mr. KITCHIN. You are cognizant of the fact that the 16 Texas Representatives and the two Texas Senators voted for this reduction last year on mohair?

Mr. ROBERTSON. Yes, sir; I am.

Mr. KITCHIN. Were they acquainted with the facts relative to your industry?

Mr. ROBERTSON. I think not. Even if they were—grant that they—we people are in too small a minority; we are very small.

PARAGRAPH 368—MOHAIR.

Mr. KITCHIN. Do you mean that your voting strength is not as big as the cattle raisers' voting strength?

Mr. ROBERTSON. No, sir.

Mr. RAINEY. What you really want down in Texas is protection from the cold October rains and the Texas drought.

Mr. ROBERTSON. No, sir; we want protection from Turkey and from South Africa.

Mr. RAINEY. Building sheds for your goats might be a better protection than a tariff wall.

Mr. ROBERTSON. There is no use for us to build sheds if we can not sell our products. Not only that, gentlemen, but I plead also, not from a selfish standpoint, but for the manufacturers. I do not come like some of those who have come to you and said give us free raw material, but I plead in behalf of the manufacturers as well. We have no market for our product outside of the United States.

Mr. KITCHIN. In other words, you believe in having a protection of 12 cents a pound on your raw material, which is leaving it the same as it is in the Payne-Aldrich Act, and that the manufacturers, who buy your raw material and produce goods from them, ought to have the same protection they now have.

Mr. ROBERTSON. Certainly I do; they must have it.

Mr. KITCHIN. You are not like some of these men who want their stuff protected and the other fellow's stuff not protected?

Mr. ROBERTSON. No. It is necessary if they are to prosper.

Mr. FORDNEY. I think you ought to move up to Michigan.

Mr. ROBERTSON. No. If I moved up to Michigan I could not raise Angora goats.

Mr. FORDNEY. But you would be a Republican all right.

Mr. ROBERTSON. I am viewing the proposition from a Republican standpoint somewhat now, and yet I am a Democrat, and I am pleading for revenue.

Mr. KITCHIN. You are a Democrat from habit and not from principle.

Mr. ROBERTSON. No, sir.

Mr. KITCHIN. I think you are consistent, Mr. Robertson.

Mr. ROBERTSON. I believe that the Representatives from Texas and the Senators did right, because, as I say, we are a small minority up yonder in the hills. They did not know that we were in existence. Some of them, perhaps, have never seen an Angora goat. They are among the farming class and the cotton-raising class. If I should cut off a lock of this Angora hair, some of them would think it was cotton. If I should put it in a boll they would say "That is beautiful cotton; it must be Egyptian cotton."

Mr. FORDNEY. You are now speaking of your Texas neighbors?

Mr. ROBERTSON. I am speaking of our Representatives from Texas.

I realize, gentlemen, that we are a small minority out yonder in the hills, away out yonder on the bleak hills, where we can not water our stock. We do water our stock when the wind blows and the wind-mills are in good condition.

Mr. RAINEY. They water their stock up in New England.

Mr. ROBERTSON. Yes; but ours are different. But I say because we are a small minority I do not think it is just to us, as producers of real wealth, as the creators of a product that is becoming popular

PARAGRAPH 368—MOHAIR.

and that the rich man can enjoy and that the Representatives and Senators of our Nation appreciate as a luxury—I do not believe because we are a small minority out there in a corner of the earth that we ought to be strangled any more than the men upon my right, who represent the cause of the minority, should not be heard.

Mr. FORDNEY. I came in late, my friend. Perhaps you have made this statement, but I would like to ask you for my own information. How much of the Angora goat wool that is used in this country is produced in the United States? What proportion of it?

Mr. ROBERTSON. About one-half; 6,000,000 pounds in round numbers.

Mr. FORDNEY. That is, 6,000,000 pounds consumed and about 3,000,000 pounds produced in this country?

Mr. ROBERTSON. Six million pounds produced and consumed in this country. It is all consumed here. We have no market outside.

The CHAIRMAN. I think you do not understand exactly what you said to Mr. Fordney. You said that there were 6,000,000 pounds imported and 6,000,000 pounds produced here?

Mr. ROBERTSON. Yes, sir.

Mr. RAINEY. In other words, in its last analysis, your position is this: You want the Government to protect you and you want the Government to protect the manufacturers of your product. You want a kind Providence to protect the revenues of this Government and an Omnipotent God to protect the other 100,000,000 of our population.

Mr. ROBERTSON. No, not at all. I am pleading for revenue for this Government. I came to present this argument to you gentlemen—

Mr. RAINEY (interposing). I thought you wanted it placed so high that we would not get any revenue.

Mr. ROBERTSON. You certainly get revenue from the six million pounds that are imported.

The CHAIRMAN. You are asking for the maintenance of the present duty?

Mr. ROBERTSON. Yes, sir.

The CHAIRMAN. If we keep up the duty on the raw material, we can not materially lower the duty on the finished product without doing serious injury. We must look at it from that standpoint as well as the other standpoint. It is a fact that this article is producing a good deal of revenue.

Mr. ROBERTSON. Yes.

The CHAIRMAN. But we must look at it from the other standpoint.

Mr. ROBERTSON. Yes.

The CHAIRMAN. But we will give consideration to what you have to say.

Mr. ROBERTSON. I would like to have the privilege of filing my brief a little later.

The CHAIRMAN. You may file it before the end of the week.

Mr. FORDNEY. If I understand it, there are 6,000,000 pounds of Angora goat wool or Angora hair produced in this country and about 6,000,000 pounds imported.

Mr. ROBERTSON. Yes, sir.

Mr. KITCHIN. He is mistaken about the imports. There is not as much as that imported.

PARAGRAPH 368—MOHAIR.

Mr. FORDNEY. I thought he was mistaken in the quantity. But whatever it is, of what we consume, one-half is imported and the other half produced here?

Mr. ROBERTSON. I think I am nearly right.

Mr. FORDNEY. I believe, Mr. Chairman, that no more fair rate of competition than that could exist. One-half of the amount that we consume is imported. If the Democratic Party wants revenue for the Government and wants reasonable competition, I think a rate of duty that permits the importation of one-half that we consume is the most equitable adjustment of the tariff that I can think of.

Mr. ROBERTSON. I think so.

The CHAIRMAN. If this was the finished product; if nothing else depended on it, and one-half was coming in, I think the committee would be disposed to agree with you. But it is not the finished product, and we can not look at it from that standpoint. However, we will give careful consideration to what you say.

Mr. ROBERTSON. I thank you.

The witness also furnished the following brief:

To the Chairman and Members of the Ways and Means Committee, House of Representatives, Washington, D. C.

GENTLEMEN: I represent the producers of mohair. We respectfully ask that mohair in Schedule K be given a separate and special classification with a specific duty on all importations of the raw material, of 12 cents per pound, and a corresponding duty on the manufactured product, for the following reasons, namely, on the basis of revenue and as an article of luxury.

Relative to these two features we wish to say that on the basis of revenue to the Government the industry as it now stands is highly competitive, inasmuch as there are about 6,000,000 pounds of the hair produced in the United States and about six to seven million pounds imported. On the duty of 12 cents per pound the Government is now collecting \$720,000 in revenue. If this duty were reduced to 20 per cent, as proposed by the Underwood bill, as the foreign value is from 20 to 25 cents, it would pay a duty of approximately 5 cents per pound, and as the entire consumption in the United States at the present time is approximately twelve to thirteen million pounds, the amount of duty collected, in case all the hair used in the United States was all imported, would, under the proposed Underwood rate, be \$650,000, or 10 to 15 per cent less than it is at the present time.

Now, besides getting a less amount of revenue, you would drive out the entire goat raising industry in the United States, and as our country's production of this mohair is a factor in keeping prices down here—if you kill this goat industry the price of mohair will unquestionably advance to a point as high—and experts predict even higher—than it is at the present time. Furthermore, the present duty of 12 cents is highly competitive; it is now raising the highest amount of revenue to the Government, and any cut in this duty would, of necessity, as shown above, raise a less amount of revenue to the Government.

The cost of production of mohair in this country to-day is 31½ cents per pound. The cost of a similar grade of hair abroad, owing to the cheaper wages and cheaper conditions existing in Turkey and South Africa (the countries raising this mohair), is from 20 to 25 cents per pound. We herewith present figures showing actual cost, based on 4,500 acres of land and a run of 1,500 goats, to prove this cost of 31½ cents, namely:

Cost of raising Angora goats and producing mohair, 4,500 acres of land required to run 1,500 goats and their increase. Value of 4,500 acres of land, at \$3 per acre, \$13,500.

Expenses for one year.

Interest on land, at 5½ per cent.....	\$742. 50
Interest on value of goats, at 8 per cent.....	360. 00
Herding one flock one year, two flocks six months, at \$25.....	450. 00
Shearing—1,500 twice, 1,200 once, at 10 cents.....	210. 00
Rustling flocks—horse feed, at \$35.....	420. 00
Kidding 1,200, or 80 per cent, at 25 cents each	300. 00

PARAGRAPH 368—MOHAIR.

Taxes.....	\$97.50
Freight on mohair and salt.....	75.00
Loss in flock, 10 per cent.....	450.00
	<hr/>
	3,105.00
	<hr/> <hr/>

Profits for one year.

1,500 goats' shear, 3½ pounds mohair, at 32 cents (5,250).....	\$1,682.00
1,200 head of kids' shear, 1½ pounds mohair, at 33½ cents.....	500.00
Sale of kid crop, at \$1.50.....	1,800.00
	<hr/>
	3,982.00
	3,105.00
	<hr/> <hr/>

Profits..... 877.00

It costs \$1.15 to run one goat one year.

It costs 31½ cents to produce 1 pound of mohair.

The selling price of mohair in Texas in the last year or two has fluctuated from 28 to 34 cents. At the present time it is 32 to 33 cents, so that our net profit is less than 2 cents per pound.

Furthermore, we wish to call the committee's attention to the discrimination by the Governments of the mohair-raising countries of the world against the United States industry, namely, by the Governments of Turkey and South Africa. Turkey and then South Africa put, first, an almost prohibitory duty on exports of male or female Angora goats, and finding that even with a tax of \$500 per animal some were exported from their countries for breeding purposes, they thereupon issued a proclamation to the effect that no Angora goats should be exported from their countries.

In Turkey a violation of this decree or law is punishable by death. We do not here ask that our Government retaliate against these foreign governments for this discrimination against us, but we do ask why should our Government, in view of this discrimination, propose to so lower the duty as to destroy our industry and at the same time, as we have shown above, reduce the revenue of the Government to the extent of 50 per cent or more. Knowing the attitude of the committee, we presume that their object is to raise revenue, and to raise that revenue as much as possible on articles of luxury, at the same time endeavoring to reduce the high cost of living to the consumer. If a duty of less than 12 cents per pound is placed on our raw material, it will positively kill our industry, which at the present time is so highly competitive (fully 50 cent of the actual United States' consumption being now imported at this rate). Once we are driven out of this industry it will give those governments which are discriminating against us by prohibitory decrees on the exportation of animals the entire field; and then the growers in these foreign countries will have accomplished the results which they desired, and which they aimed at when they issued these prohibitory decrees, namely, driving out our competition and obtaining a monopoly of the entire market for themselves. Therefore, the consumer, instead of buying the products manufactured of this raw material at lower prices, will positively pay a higher price than they do at the present time.

In view of these facts, i. e., the revenue now being collected by the Government on our hair, and the discrimination by the aforementioned foreign countries, we think that your committee should continue the present duty on raw mohair.

Furthermore, we sell all of our mohair to the United States spinners and weavers and it goes without saying that unless these spinners and weavers of mohair fabrics are able to continue manufacturing their products, they can not buy our raw material and we wish to emphasize again to the committee that the articles produced from mohair are almost exclusively articles of luxury, namely railroad car plush, pile fabrics, including all kinds of imitations of natural furs (the latter industry consumes a very large proportion of the total quantity of raw mohair used in this country), also tops for automobiles and carriages, and all mohair fabrics for men's wear and women's wear. All of these goods are exclusively articles of luxury, with the exception perhaps of the mohair suits for men, but as the greater cost in producing cloth exists not in the raw material of which the garment or suit is made, but in the manufacturer's and retailer's profit, the advance in that one direction would not be a serious matter, in fact, I doubt if it would be an advance at all, because if our industry is driven out the price of mohair will positively, in a very short time, be equal to or higher than at the present time. The above-mentioned articles, being luxuries, are consumed by

PARAGRAPH 368—MOHAIR.

large corporations and wealthy people, and as such we ask your committee to place sufficient tariff for revenue purposes on the raw mohair and also such a tariff on the mohair yarn and products of the manufacturers as to enable these manufacturers to continue buying the mohair from the United States growers.

Furthermore, there should be a separate classification under Schedule K for raw mohair and mohair fabrics.

The shrinkage on this mohair is quite different than on wool. It is used for entirely different purposes, and a separate classification should be made both for the mohair, the tops, yarns, and weaver's product. By making this separate classification the Government will, in the future, be able to tell just how competitive the rates of duty really are. The Government is now unable to do this on account of all the imports being classified now under wool and manufactures thereof.

Recapitulating, we would say we believe we have proven:

1. That a reduction of the present duty of 12 cents a pound on raw mohair will not increase but, on the other hand, materially decrease the Government's revenue on said mohair.

2. That a reduction of the present duty of 12 cents a pound on mohair will positively not decrease, except possibly for a very short time, the price of mohair products to the consumer; on the other hand, they will be, if anything, advanced, due to the destruction of the United States goat-raising industry, and thereby creating an absolute foreign monopoly.

3. If this industry is destroyed, not only will it hand over the mohair importations to an absolute monopoly but a monopoly created and fostered by decrees of foreign governments.

4. If in your new bill you impose a duty of 12 cents per pound on raw mohair, it is futile unless you also place a proportionate competitive duty on the mohair yarns and manufactured products in order to enable the spinners and weavers to continue, as they are now doing, making their purchases of mohair from the American goat raisers.

Do this and you will materially increase the raising of mohair here, as in the State of Texas alone we can raise many times the amount of hair that is now being raised there.

Now, our association, of which I am spokesman, does not believe that your honorable body is going to destroy our industry in order to hand it over to an absolute foreign monopoly fostered by governmental decrees, the violation of which is actually punishable by death in Turkey, particularly so that when by so doing you will materially reduce the revenue of the Government and also in a very short time materially increase the price of mohair products to the consumer.

Respectfully submitted.

JOHNSTON ROBERTSON,

For the Edwards County Angora Goat Association of Texas.

TESTIMONY OF F. E. KIP, OF NEW YORK.

Mr. Kip was duly sworn by the chairman.

Mr. KIP. Mr. Chairman, I did not intend to appear here, but I heard Mr. Robertson from Texas speak, and I wish to say a few words relative to his testimony.

I am interested, however, in mohair as a manufacturer and not as a grower, and as a large importer of raw products he has testified that there are about 6,000,000 pounds produced. It is estimated that there are from six to seven million pounds of mohair produced in the United States; that Texas produces between three and four million pounds of that, and that the other States, some of them adjacent to Texas, and Oregon and California produce the rest.

Now, there is a 12 cent duty collected to-day, and Mr. Robertson asked that it remain on the basis of revenue only and as a luxury. Therefore, if these figures be correct, and I believe them to be, the duty collected by the United States Government is \$1,200,000 on raw mohair coming in. Furthermore, that is the same amount as is

PARAGRAPH 368—MOHAIR.

grown, and it is therefore proven absolutely that it is competitive on the raw material.

Now, I did not come here for the purpose of presenting this, but I happen to have a letter which was given to me just before I left New York, which is dated Constantinople, January 10, and I will quote to you from that letter:

Because of recent purchases, we are making a rough calculation of the average cost of our last 130,000 pounds of purchases, which we have advised to you at from 13½d. to 14½d. We hope that the average will not be over and probably under 13½d., and we trust that this will be satisfactory to you. Shipments per steamship *Cypria*; we are shipping you about 1,460 bales.

That amounts to about 290,000 pounds of mohair in one shipment.

We, as importers of this hair, knowing what we have to pay in duty, and knowing that Mr. Robertson's statement is correct, know that if the duty on mohair is reduced to 20 per cent, which is only 5 cents per pound, the growers of mohair in this country will be driven out of business.

The cost of mohair similar to the Turkey hair has been on an average in the last few months or a year about 24 to 25 cents. To-day it is a little higher on account of the demand.

Mr. Robertson's testimony shows that he is selling mohair to-day at 32 cents, and that he has been selling mohair from 30 to 34 cents in the last year or two. Therefore the foreign value, 24 cents, added to the duty of 12 cents, makes 36 cents.

I wish to state that this class of mohair is more beneficial to the manufacturer than Texas hair, inasmuch as it produces more pounds of yarn per pound of hair, and that 36 cents for European or Turkey mohair is equivalent to about 33 cents for Texas mohair, on account of the fact that Texas mohair produces fewer pounds of yarn, in that proportion, than the Turkey; so that Mr. Robertson and his growers are now receiving the full benefit of the tariff on that article.

I wish to state, in my opinion, what I think would happen to the mohair industry or the growers if the duty were reduced to 20 per cent. I do not know anything about the wool end of it; at least, I do not wish to say anything here. I am only speaking now of mohair. If the duty were reduced to 20 per cent, or much below, or any below, 12 cents on mohair, the mohair industry of Texas and the other States would be positively driven out of the business. Now, what would happen? The consumer in two years' time would pay more for his mohair than he does to-day, for the simple reason that to-day there is no great quantity of surplus material; in fact, there is an absolute shortage all over the world to-day. It would drive out the 6,000,000 pounds of mohair produced in the United States, and within a very few years the price of mohair, even if you put it on the free list, would be higher than it is to-day.

Therefore, I supplement Mr. Robertson's plea before this committee that, as far as mohair is concerned, the growers of mohair be accorded the present rate of duty, and I wish to also supplement his plea that there be a special schedule for mohair and its manufactures. In the first place, Mr. Wood told the committee here yesterday that they could not frame a tariff which would adequately take care of the conflicting manufactures under Schedule K, making it competitive, and not drive out a great many men and reduce the wages of a great

PARAGRAPH 368—MOHAIR.

many operators. I believe that to be absolutely true, and the reason why it is true is that there are many articles put in Schedule K that ought not to be there, and mohair is positively one of them.

The CHAIRMAN. I suppose that statement is really made by the gentlemen who are interested in Schedule K in the full belief that it is so, but the iron and steel men have come here, every time a cut has been made in their schedule, since the Civil War, and that schedule has been cut every time there has been a tariff revision, and they have made the same statement. Notwithstanding that, the industry has grown and developed, and it is the greatest and strongest industry in the United States to-day.

Mr. KIP. Well, the iron and steel industry, Mr. Chairman, is quite a different proposition from the textile industry. They have enormous investments in capital for machinery, and enormous outputs which their inventions have reduced the price of. Now, when you come to the textile industry, it is quite a reverse. I know whereof I speak, because I am in that line of industry. Take the operatives in Germany and France—by the way, I also have a mill in France, so I also know what I am speaking about when I say that—when you take the operatives in Germany, France, and England you will find that they have been trained in that walk of life from childhood. Some of them have even wound yarns on hand reels, and they are very expert. When you take our operatives, you have to teach them. Many of them are from foreign countries like Hungary and Slavonia and Italy, and they never saw a loom, while the operatives in Germany on the same machinery are far more proficient than the class of labor we have to employ.

Now, I wish to state along those lines—

The CHAIRMAN. Your time has expired, Mr. Kip.

Mr. KIP. Well, can you—

The CHAIRMAN. The committee has some other work to do this morning.

Mr. KIP. All right, sir.

The CHAIRMAN. But if you can finish what you have to say in five minutes we will allow you that time.

Mr. KIP. I can do that very easily.

Along those lines I wish to ask the committee whether they think that such articles which are exclusively articles of luxury should be classed in Schedule K with such materials as woolen and worsted goods? I wish to show the committee samples of articles which are used as car plushes and imitations of skins, which are exclusively luxuries, and I would ask whether they should be classed with woolen goods and like fabrics, weighing from 3 or 4 ounces up to 20. It is utterly ridiculous. A child can see that they should not be.

The CHAIRMAN. Of course, the classification has been the same for a great many years, Mr. Kip, but if you will—

Mr. KIP. I can prove to the committee that it is absolutely a mistake.

The CHAIRMAN. If you will file with the committee a suggestion for a change of classification we will give it careful consideration.

Mr. KIP. Thank you, sir.

The CHAIRMAN. Is that all?

Mr. KIP. That is all. Thank you.

PARAGRAPH 368—MOHAIR.

Mr. PALMER. Is this made of mohair [referring to sample]?

Mr. KIP. Absolutely. There is not a sample there that is not made of mohair?

BRIEF SUBMITTED BY FREDERIC E. KIP, OF NEW YORK CITY, ON THE SUBJECT OF MOHAIR, AND MANUFACTURES THEREOF, PRESENTING ARGUMENTS FOR SEPARATE CLASSIFICATION AND DUTIES ON THE HAIR OF THE ANGORA GOAT, ALPACA, AND OTHER LIKE ANIMALS, ALSO ON THE RESULTANT PRODUCTS THEREOF, AS DIFFERENTIATED FROM WOOL AND ITS PRODUCTS.

JANUARY 29, 1913.

The CHAIRMAN AND MEMBERS OF
THE WAYS AND MEANS COMMITTEE,
House of Representatives, Washington, D. C.

GENTLEMEN: I desire to add to my remarks, which were spoken on the spur of the moment, before the committee yesterday, and to call their attention to a few highly important facts, which will undoubtedly prove to the committee why, if they are to be consistent and follow out the avowed principles of the Democratic Party, they *must*, in the pending "Underwood bill," make a separate classification for hair of the Angora goat, alpaca, and other like animals, and place a duty, entirely different from the duty on wool, on the raw hair, tops, yarns, pile fabrics and cloths produced from said hair.

In order that you may know that I am an expert on the matter of which I speak and that I am posted from start to finish relative thereto, would say that I am president of the Griswold Worsted Co., of Darby, Pa., who are large purchasers of domestic mohair, also extensive importers of foreign mohair, and converters and spinners of same into mohair yarns (together with other yarns such as worsted, etc.). I am also president of The Salt's Textile Manufacturing Co., which has its principal mills at Bridgeport, Conn., accredited to be the largest pile fabric manufacturers in the United States, making very extensively pile fabrics from mohair, silk, cotton, artificial silk, etc.

The following are my reasons why, if you are to be consistent with the avowed principles of the Democratic Party, you can not do otherwise than make a separate classification for the hair of the Angora goat, alpaca, and other like animals.

First. The Democratic Party is certainly not considered by the people as standing sponsor for trusts and monopolies; on the contrary, they look to that party to curb these conditions wherever possible, yet, if you do not give a duty of 12 cents per pound to the domestic growers of mohair, you will destroy this industry and deliberately hand it over to an absolute monopoly. It would seem only necessary to prove this condition of affairs to your satisfaction, to make it impossible for you to hand over this *highly competitive* and growing industry to an absolute monopoly. In order to prove this we must go back some few years. In 1848 the Sultan of Turkey requested of the President of the United States that some suitable person be sent to his country to conduct some experiments in the raising of cotton. Dr. James B. Davis, of South Carolina, was selected to perform this important service. After Dr. Davis returned from Turkey to America the Sultan sent him, in appreciation of his services, a herd of the best blooded Angora goats. These goats were sent from South Carolina to Texas, Oregon, and California. From this original shipment has sprung the American Angora goat-raising industry, which now exists principally in the following States:

Texas
California
New Mexico
Oregon
Nevada
Idaho
Wyoming
Arizona

To the extent of a production of 6,000,000 to 7,000,000 pounds annually.

Spinners and weavers.

Would the Democratic Party hand over the present highly competitive goat-raising industry into the hands of governmental monopoly?

Origin of the American goat-raising industry.

PARAGRAPH 368—MOHAIR.

This American goat-raising industry, so established, grew rapidly in a short space of time, so much so that Turkey, with a view of destroying our industry, put an almost prohibitory duty on the exportation of any Angora goat, namely, a duty of about \$500 per animal (for a goat worth only a few dollars). Notwithstanding this, the American goat raisers, to keep up the standard of their flocks, imported in 1876 a number of best stock Angora goats from Turkey, paying said tax of \$500 on each goat, and they continued importing the goats at these prohibitory rates until 1880.

Turkey and South Africa issue edicts absolutely prohibiting exportation of Angora goats.

In 1880 the Sultan of Turkey issued an edict prohibiting the further exportation of Angora goats from Turkey, under any conditions, and imposing very severe penal punishment for any violation thereof. Since that time therefore no importations from Turkey have been possible.

South Africa also followed in Turkey's wake and prohibited exportation of the Angora goat from there, so that since 1880 it has been impossible to obtain these goats from any country outside of the United States.

Notwithstanding this highly discriminating action on the part of both Turkey and South Africa, backed up by governmental protection, they were unable to destroy the then firmly rooted American goat-raising industry. You gentlemen have it within your power, however, to bring about the destruction of this industry which these governments were unable to accomplish even with their drastic prohibitory decrees. If, however, you do destroy same you must do so with the *full knowledge* that you are destroying a highly competitive industry (6,000,000 pounds being raised here and 6,000,000 to 8,000,000 pounds being imported annually), having no combination or trust control of any sort or description—to literally hand same over to a monopoly fostered and abetted by the Governments of Turkey and South Africa.

Will you turn a competitive industry over to a monopoly?

Now that you are cognizant of these extraordinary existing facts, any such action on your part would seem to us entirely inconceivable and impossible, in view of it being so directly contrary to every avowed principle of the Democratic Party.

Goat raising more expensive than sheep raising; more land required per capita; great mortality; no mutton to reduce cost.

The raising of goats is more expensive than the raising of sheep. This is due to many conditions, among others the following: It takes very much more land to support one goat than it does to support one sheep. The goats feed only on the bushes, and hence require a very much larger range of land per capita.

At shearing time, if weather conditions are not just right, there is large mortality amongst the goats. In fall 1911 150,000 goats died within one week at shearing time, due to unusual weather conditions. Again, the goat raiser has not the profit from the sale of mutton such as the sheep raiser has, and therefore there is no reason whatsoever why the hair of the Angora goat should not have a separate duty classification from wool. Besides all that, on account of the difference in shrinkage between this hair and wool (as will be clearly seen later), a duty of 12 cents per pound on said hair is only equal to a duty of 6 to 7 cents per pound on wool.

This hair is entirely different from wool, and conditions are entirely different; hence requires different rate of duty than wool. Besides, a duty of 12 cents per pound on this hair is only equal to duty of 6 to 7 cents per pound on wool.

If from these facts your committee is convinced that there should be a separate classification—and we do not see how you can help but be—it then only remains to determine upon the rate.

Now, relative to determining the rate, we wish you to bear in mind the fact that we are *very large importers of this hair*, that we do not own directly or indirectly, nor do we expect to own or have any connection with the raising of any domestic Angora goats, and in suggesting a rate which the growers should have, we are doing so with the sole purpose of not reducing or cutting off our sources of raw material supply, and therefore our suggestion of a rate should have very much more weight with you than any request or suggestion from interested growers. *Emphatically*, we wish to point out the fact that any legislative action that will curb, reduce, or shut off raw-material supplies of the country producing same, is under any circumstances highly injurious to the best interest of that country.

PARAGRAPH 368—MOHAIR.

Therefore, as importers and also users of this raw domestic material we must, in all fairness, admit that we do not believe that any rate less than 12 cents per pound will allow the American goat-raising industry to properly continue. Any rate less than this will cripple them and a rate of 20 per cent, or any rate near it, will, in our opinion, absolutely destroy them, and will hand this highly competitive industry over to a foreign monopoly for all future time—losing to the manufacturers and consumers of these hair products not only their present raw material supply of 6,000,000 pounds, but, as we believe, a loss for all future time of what would eventually be double or quadruple this amount if this industry were now given a sufficient duty to allow it to continue and grow. It is perfectly apparent that once the Angora goat-raising industry is destroyed, it can never be reestablished, owing to the Turkish and South African prohibitory governmental decrees. Furthermore, the very fact that this industry is at the present time so highly competitive (namely, 6,000,000 pounds of domestic hair being raised and 6,000,000 to 8,000,000 pounds of foreign hair being imported) must of its very self prove to you that the duty of 12 cents per pound is absolutely necessary, particularly when you take into consideration that a duty of 12 cents per pound on this hair is only about equal to 6 or 7 cents per pound duty on wool (as shown later). We therefore unqualifiedly recommend, as large importers and large users of this raw material, that the duty in the Underwood bill on the hair of the Angora goat, alpaca, and other like animals shall be 12 cents per pound.

Rate of duty on hair of the Angora goat, alpaca, and any like animals should be 12 cents per pound.

Second. From the Democratic principle of "tariff for revenue only" the duty on mohair should be 12 cents per pound, inasmuch as that duty is to-day raising the highest possible revenue to the Government. A few figures will prove this.

Proof on basis of Democratic Party's principle of "tariff for revenue only."

On account of mohair being classified under "Wool" there are no absolute Government figures to show the actual duties paid. I personally know of one firm which pays duties of \$250,000 this year on hair of the Angora goat, alpaca, and other like animals, and I believe without a doubt that the total duties paid on this class of hair will this year amount to at least \$1,000,000. Experts, however, have estimated the imports of this hair at 7,000,000 pounds, and I will therefore take this figure, which, at 12 cents per pound duty, would amount to \$840,000 revenue in duties.

7,000,000 pounds,
at 12 cents.... \$840,000

The total present consumption in the United States of mohair, both domestic and foreign, is estimated at 13,000,000 pounds (foreign value of such hair is 20 to 25 cents per pound). A duty of 20 per cent would be not over 5 cents per pound, or a revenue of \$650,000, in case all of the hair consumed in the United States was all imported. Even this would make a loss of revenue to the Government of \$190,000.

13,000,000 pounds
at 5 cents..... 650,000
Or a loss in revenue of..... 190,000

Therefore, such a reduction would wipe out this industry, hand it over to a foreign governmental monopoly, and at the same time entail a loss in revenue to the Government of a considerable amount.

Third. From the Democratic principle of reduction in price to consumer, the duty on the hair of the Angora goat, alpaca, and other like animals should be 12 cents per pound, because it is only the existence of our present domestic goat-raising industry (with its production of 6,000,000 to 7,000,000 pounds annually) which keeps the prices down to their present limits. A lower rate of duty which would wipe out this industry would simply hand it over to the foreign monopoly, and we all know from our experience with monopolies (as is at present well

Proof on basis of Democratic Party's principle of "price protection to consumer."

PARAGRAPH 368—MOHAIR.

evidenced by the high prices of the anthracite coal monopoly) that same always tends to raise and never to lower the price to consumers. Therefore this is a case where a reduction in the duty would not lower the prices to the consumer (except possibly for a very short period), but, on the other hand, though a governmental monopoly, would be sure to raise prices to the consumer.

Case where lower duty would advance prices to consumer.

Proof on basis of Democratic Party's principles:

"Trust control,"

"Tariff for revenue."

"Price protection for consumer."

Duty on the hair of 12 cents per pound is highly competitive. Competitive rates should also be placed on resultant tops, yarns, pile fabrics, and cloths.

Proof showing why a separate classification from wool is required on the raw hair and resultant tops, yarns, pile fabrics, and cloths.

Duty of 12 cents per pound on hair is only equal to 6 or 7 cents per pound duty on wool, on account of shrinkage on hairs 10 to 15 per cent; shrinkage on wool 15 to 75 per cent.

We feel that we have *absolutely* proven, and that your committee, after knowing these facts, will be convinced, that from the three principal Democratic standpoints of—

Trust control,

Tariff for revenue only,

Price protection for consumer by preventing monopolies control, the goat-raising industry of the United States should not be driven out. Now, it is just as necessary (as the domestic goat raiser sells all of his product to the spinners and weavers of the United States) that the spinners of yarn and the weavers of cloths, including pile fabrics made of the hair of the Angora goat, alpaca, and other like animals, be accorded compensatory competitive duties to enable them to continue buying their raw-material supplies from the American mohair goat raisers, and in this connection we would be very glad to offer our services to the committee to help them make also competitive rates on tops, yarns, pile fabrics and cloths, and we are fully competent so to do, knowing thoroughly the foreign values (having mills abroad as well as here), foreign costs and all details relative to this industry.

Fifth. We unqualifiedly assert that there should be a separate classification for the hair of the Angora goat, alpaca, and other like animals, tops, and yarns, cloths, and pile fabrics made therefrom, and we will now enumerate absolute reasons therefor:

There have been many articles thrown into Schedule K on account of the duties thereon being known to be high. Whenever the plan of grouping too many articles under one heading can be avoided, it is highly desirable to do so, because it segregates the items so that the Government can furnish Congress with data as to imports, manufactures, etc., and thereby shows to Congress just how competitive tariff-duty rates are. Therefore, on all articles which admit of such a separate classification should by all means be established, and only such articles which are so interwoven as to make a separate classification undesirable, due to confusion or inability to classify, should be included in one classification. The raw hairs, tops, yarns, pile fabrics, and cloths are so readily discernible from wool and wool products that they never should have been classified together with wool, and should now be classified by themselves. The raw hairs themselves are entirely different in appearance and character from wool. Besides, the shrinkage in wool varies from 10 to 75 per cent, and even in the same classes of wool, grown in different districts, the shrinkage is not at all uniform, whereas with mohair the shrinkage is from 13 to 15 per cent and is practically similar in all countries of the world.

We desire to call your particular attention to the significant fact that on account of this low shrinkage in Angora hair (15 per cent highest on hair as against 75 per cent highest on wool) a duty of 12 cents per pound on said hair is, in scoured contents, only equal to a duty of 6 to 7 cents per pound on wool. This proportionate shrinkage we would gladly prove by actual tests of wool and mohair, we using both largely, as shown on the books of our company at Darby, Pa., for 20 years past.

Congress will certainly, before the present wool schedule becomes a law (whether the rate be made ad valorem or specific), impose a duty on wool equal at least to 6 or 7 cents per pound, and hence the Angora goat raisers are only asking what you gentlemen are unquestionably going to grant the woolgrowers. Surely, gentlemen, you are not here to discriminate against these goat growers, particularly when by so doing you are killing an industry to hand it over to foreign governmental monopoly. This is simply impossible. The difficulty has been that you haven't known the facts, but now that you do know them and know that 12 cents per pound duty on hair of the Angora

PARAGRAPH 368—MOHAIR.

goat, alpaca, and other like animals is only equal to 6 or 7 cents per pound duty on wool, we feel confident that you will grant the goat growers their reasonable request and make the duty on said hairs 12 cents per pound, and compensatory duties on the tops, yarns, pile fabrics, and cloths produced therefrom, so the goat growers may continue to sell their hair in the United States.

We understand that some worsted manufacturers have expressed the opinion that the mohair pile-fabric industry is not sufficiently large to warrant a separate classification or paragraph. Such remarks could only emanate from parties who are not at all cognizant of the actual facts. We can, beyond peradventure, immediately prove that quite the contrary are the real, existing facts and that the animal hair "pile-fabric industry" is far more important than some of the schedules that now have separate classification, viz:

Cotton pile fabrics. (Par. 325.)

Silk pile fabrics. (Par. 399.)

Hatters' plush pile fabrics. (Par. 477.)

Flax pile fabrics. (Par. 353.)

In conclusion we wish to emphasize particularly the following:

The rate of duty on the hair of the Angora goat, alpaca, and other like animals should be 12 cents per pound.

The rates of duty on the tops, yarns, cloths, and pile fabrics can be very materially reduced from the existing rates, and a separate classification and paragraph should be made for the hair, yarns, and products thereof.

At such rate it is highly competitive, more than half of the total United States consumption being imported, and is only equal to a duty on wool of 6 to 7 cents per pound. Any lower rate will destroy the American goat-raising industry, to hand it over to foreign governmental monopoly.

We would be glad to cooperate with the committee and furnish expert information, with facts and figures, to enable the committee to make a competitive tariff, as well on the yarns and products thereof as on the raw hair itself. On account of our foreign mills we are in position to furnish costs and particulars, both domestic and foreign.

Erroneous idea of nonimportance of the mohair pile-fabric industry.

This rate is only equal to a duty on wool of 6 to 7 cents per pound.

Rate on tops, yarns, pile fabrics, and cloths should be in compensatory ratio. Same can be materially cut down from present rates.

Respectfully submitted.

FREDERIC E. KIP,

*President of Griswold Worsted Co., Darby, Pa., and
President of the Salt's Textile Manufacturing Co., Bridgeport, Conn.*

MEMORIAL OF THE WOOL GROWERS' CENTRAL STORAGE CO., SAN ANGELO, TEX.

SAN ANGELO, TEX., *January 15, 1912.*

HON. ALBERT S. BURLERSON, M. C.,
Washington City, D. C.

DEAR SIR: We, the representatives of fully 300 actual producers of wool and mohair in Texas, respectfully request that you, as a Representative in Congress from Texas, urge and vote for a tariff bill at this session of Congress, as we have experienced during the last year a great loss, running into the millions to the sheep and goat men in Texas alone, due to the unsettled conditions brought about by the tariff agitation.

In view of this fact we ask that the tariff on wool and mohair be settled at this session of Congress; and respectfully state that we think that in order for this great industry to continue to exist that we should have a specific duty of 24 cents per pound on wool on a scoured basis, for our average shrinkage in Texas is 66 per cent, which would only give us around 7½ cents duty on the grease wool.

Our section produces at least one-half of the wool in the State, and our organization is composed of the representative sheep and goat men who reside in this part of the State, and all our directors are actual producers of wool and mohair.

PARAGRAPH 368—MOHAIR.

Our company alone handles one-third of the wool in Texas and with other concerns in San Angelo makes said point one of the largest wool shipping stations in the United States, handling in all around 5,000,000 pounds of wool annually.

The greater portion of our sheep and goat men own their own ranches and many are wolf-proof fenced and the report as made by the tariff commission in regard to the cost of producing wool in Texas was misleading, for under no circumstances can we produce wool in Texas and live for less than 16 cents per pound in the grease.

We therefore present this memorial and urge you in behalf of the sheep and goat men to act as per our suggestion as near as you can at this session of Congress and give this great industry rest.

Respectfully,

ROBERT MASSIE, *President.*
W. B. SAYERS, *Secretary.*

TELEGRAM OF EDWARDS COUNTY (TEX.) ANGORA GOAT ASSOCIATION.

DEL RIO, TEX., *February 21.*

HON. OSCAR W. UNDERWOOD, M. C.,
Washington, D. C.:

The mohair producers respectfully request that you make a separate classification for mohair and the products thereof under Schedule K, and that you place a 12-cent duty on the raw mohair and a corresponding duty on the manufactured products. The average shrinkage on mohair is 12½ per cent, while wool shrinks 60 per cent, hence 12 cents on mohair is equal to 6 or 7 cents on wool. Also, it costs more to produce mohair than wool, besides there is no profit on the mutton goats as on sheep, with present duty of 12 cents. Fifty-five per cent of all mohair consumed in the United States is imported, thereby giving the Government the highest possible revenue and the home producer the minimum protection guaranteeing his existence. No trust combination or understanding exists in the United States between producers and manufacturers, whereas a foreign monopoly fostered by governmental control exists in Turkey and South Africa. Mohair can not be produced for less than 31 or 32 cents per pound, hence to continue our young and promising industry we must have 12 cents duty.

EDWARDS COUNTY ANGORA GOAT ASSOCIATION.

STATEMENT OF WILLIAM BROWN & CO. (INC.), SALEM, OREG.

SALEM, OREG., *February 22, 1913.*

GEO. C. CHAMBERLAIN, *Washington, D. C.:*

Separate classification from wool required for mohair. Average shrinkage wool about 60 per cent. Average shrinkage mohair about 12½ per cent, hence duty on wool of 6 to 7 per cent per 100 would equal duty of 12 cents per pound on mohair. Mohair costs more to raise than wool. There is no profit on sales of mutton. Fully 55 per cent of all mohair used in the United States is now actually imported, giving Government highest possible revenue. No trust or semblance thereof exists in United States with growers, spinners, or weavers, whereas there is a foreign raw mohair monopoly fostered by governmental control on Turkey and South Africa, only other countries producing mohair. Less duty than 12 cents per pound will wipe out United States industry, to hand it over to these governmentally controlled monopolists. The goat raisers of the United States therefore respectfully request that you make a separate classification from the wool and that you place a duty of 12 cents per pound on the hair of the Angora goat, alpaca, and other like animals, and compensatory duties considerably reduced from present duties on products thereof, such as tops, yarns, fabrics, and clothing.

WM. BROWN & Co. (INC.).

PARAGRAPH 368—ALPACA.

ALPACA.

BRIEF OF A. J. McINTIRE, HOLYOKE, MASS.

HOLYOKE, MASS.

Mr. O. W. UNDERWOOD, *Washington, D. C.*

DEAR SIR: No better illustration of the abuse of the present tariff than the Farr Alpaca Co. Here you have special privilege and arrogant monopoly and corporate greed plundering the people and dividing people into classes, which is one of the causes of the unrest that exists in this country to-day. If you know anything about the political situation in Massachusetts, you know this. This corporation had the brazen nerve to make the statement two years ago that if he (Foss) was elected they would shut down their works. He made this the issue (tariff), and proved their attitude to be dishonest and insincere (carried Massachusetts, also the very city of Holyoke), and exposed the enormous profits they have piled up by special privilege of the Government of this country. By combination and manipulation they simply dispose of their goods by allotment without competition, making enormous profits. This company had a strike several years ago. The operatives struck for 10 per cent. They scolded them and increased the wages 5 per cent, then secretly declared 50 per cent dividend after buying new machinery, new building, and sinking fund, perhaps to corrupt legislation at Washington. My authority for above is a respected attorney living at Holyoke, Mass., who was a candidate for lieutenant governor on Democratic ticket in Massachusetts about eight years ago, do not recall his name at this writing. The victims (customers) of this special privilege will not dare to testify against this corporation at your hearing as they are afraid their business will be ruined by the Farr Alpaca Co. in case they are not checked by reduction of tariff. The Farr Alpaca Co. have just raised their prices, which will net them thousands of dollars extra profit, a farewell extortion, perhaps. The Farr Alpaca Co. manufactures alpaca and mohair linings for lining clothing.

A. J. McINTIRE.

[The Springfield (Mass.) Daily Republican, Tuesday, Jan. 28, 1913.]

FARR ALPACA EARNS 45 PER CENT—FIRST WOOLEN MILL REPORT FOR 1912 SHOWS NET PROFITS OF \$1,100,000 FOR HOLYOKE CONCERN.

For the year ended December 31 the Farr Alpaca Co. earned net profits of close to \$1,100,000, says the Boston News Bureau. According to the balance sheet the big Holyoke concern rolled up earnings of \$1,090,000, making 1912 easily the best year, with the exception of 1909, in the company's history. As this is the first woollen mill report that has come to hand this year, it is evident that 1912 will prove to be one of the banner earning periods for all the woollen mills.

On its \$2,400,000 stock these estimated earnings of Farr Alpaca are equal to 45 per cent, which compares with 28 per cent, the current dividend rate, now in existence for three years. A comparison of the balance sheets of Farr Alpaca for the past few years will show that the company has managed consistently to earn over 40 per cent on its stock. At the same time it has been adding to and keeping its plants in the most modern condition, so that to-day it is estimated that the property behind Farr Alpaca could hardly be duplicated for less than \$5,000,000.

The concentrated earning power of Farr Alpaca, which has been mainly due to managing ability, can best be appreciated by the fact that Amoskeag, the biggest cotton mill in the world, seldom earns over \$1,100,000, while Arlington, the biggest independent woollen mill in the country, will show net this year of under that figure. With a gross business of under \$9,000,000, Farr Alpaca is able to show profits equal to those secured by the biggest mills on twice the volume of business. It should be borne in mind, of course, that Farr Alpaca's operations largely cover the specialized fields of mohair and worsted dress goods, and therefore it is not, strictly speaking, a woollen mill.

The sturdy manner in which the profit and loss surplus has continued to pile up has been one of the striking features of Farr Alpaca's financial progress. With twice the amount of outstanding stock of 1909, the present aggregate of surplus and reserves

PARAGRAPH 370—CARPET WOOLS.

is still twice that of four years ago. The following tabulation of capital stock and surplus items of Farr Alpaca will, in conjunction with the amount of dividends distributed, give some idea of the company's wonderful earning power:

	1912	1911	1910
Capital.....	\$2,400,000	\$2,400,000	\$2,400,000
Reserves.....	2,104,211	1,590,191	1,347,730
Dividends.....	576,000	576,000	576,000

In 1909 the reserve was \$1,247,151, and the dividends were \$1,680,000, including a 100 per cent stock dividend.

PARAGRAPH 370.

On wools of the third class and on camel's hair of the third class the value whereof shall be twelve cents or less per pound, the duty shall be four cents per pound. On wools of the third class, and on camel's hair of the third class, the value whereof shall exceed twelve cents per pound, the duty shall be seven cents per pound.

CARPET WOOLS.**BRIEFS ON BEHALF OF CARPET MANUFACTURERS—CARPET WOOLS.****The COMMITTEE ON WAYS AND MEANS:**

In view of the frequent and thorough discussions of the subject of carpet wools and carpets during the past few years, we will not again present the figures and statistics that have been presented in former briefs.

For a long time the American woolgrower was made to believe that the importation of wools of the third class displaced a like quantity of domestic wools. If the agitation of this question during the last few years has accomplished nothing more, it has certainly resulted in setting the American woolgrowers right on this question, and they, as well as our legislators, now understand that imported carpet wools compete with nothing produced in this country. This point may be summed up by the following quotation from the "Views of the minority," presented by Mr. Simmons, from the Committee on Finance, at page 33 of Senate Report 840, part 2, as follows:

"On the authority of the board it may be stated that the production of third-class wools in this country is so limited as to be a negligible quantity, and the necessity for protection may therefore be disregarded."

It follows, then, that if no carpet wools are raised in the United States, the duty levied upon them should be for revenue only.

Wools of the third class, as defined by all our tariff laws since 1867, are becoming scarcer every year as the semicivilized peoples who raise the native sheep learn to cross them with merino or English blood. This they are gradually doing all over the world, and the moment a trace of merino or English blood is found, the wool is at once taken out of third class and put into first class, and this change subjects it to a prohibitive duty.

Because of this growing scarcity the price of these wools is steadily growing, and the quantity of such wools coming into the United States at the high duty is rapidly increasing. This scarcity has been intensified because certain carpet wools were taken out of class 3 and put into class 1 when the Dingley law was enacted. These wools had always been classed as carpet wools, and were used for no other purpose, and since the reclassification referred to have not come into this country, with the result that the Government has been deprived of the revenue and the carpet manufacturer has been deprived of the wools. They have sold in the foreign market since the reclassification at lower prices than they brought when they were admitted to the United States as carpet wools, showing conclusively that their chief value abroad was as carpet wools.

If the committee concludes to establish more than one classification for all wools, we respectfully urge that wools of the third class, which under the Dingley law were

PARAGRAPH 370—CARPET WOOLS.

transferred to class 1, be restored to class 3. These wools are Bagdad, China lamb's, Castel Branco, and Adrianople or butcher's wool.

Wools of a coarse, strong fiber are needed for carpets. They are generally grown in cold climates or in semicivilized or barbarous countries. As civilization spreads to these countries it leaves its first mark on carpet wools, and the quantity grown everywhere decreases as the standard of living advances. The sheep are bred up by crossing the varieties whose fleeces command higher prices. For this reason the carpet manufacturers have long apprehended an ultimate shortage in wools suitable for their purposes. The growing deficit from other countries has only been partially met by the opening up of certain parts of China through improved transportation facilities.

It is absolutely necessary, and the carpet manufacturers should be allowed to draw from the markets of the world their supplies of wools, just as the manufacturers of worsteds and woollens are now permitted to do.

We therefore urge your committee to establish one classification for all wools.

The present duty on third-class wools being specific, with a dividing line in value, places a premium upon fraud and dishonesty, and we believe this has been the experience of our Government in administering the law. We are informed that a greater number of entries of third-class wool have been advanced and penalized than in first and second classes combined. How can it be otherwise when we know that dishonest importers, by undervaluing only a fraction of a penny per pound, escape an advance of 3 cents per pound in the duty? A saving of 3 cents per pound is equal to about 25 per cent on the cost of the wool.

If we had ad valorem duties no importer, however dishonest, would take the chance of a penalty by understating the cost of his wool, for the difference in the duty would be very slight. If his wool now costs him 12 cents per pound, he pays 4 cents per pound duty, but if it costs him $12\frac{1}{2}$ cents per pound, he pays a duty of 7 cents. On 1,000,000 pounds (which is but an ordinary purchase) this difference in duty would amount to \$30,000, quite a sufficient inducement for a dishonest man to attempt to defraud the Government; whereas if the wool cost him $12\frac{1}{2}$ cents per pound, and he paid an ad valorem duty, the difference in the amount of duty would be too small to be a temptation to undervalue.

Statistics show that the Government collects more revenue under an ad valorem duty on wools than it does under specific rates, and there is less undervaluing.

So it may be said of all classes of wool, that a specific duty per pound of wool in whatever condition it is imported, is as unscientific as it is unjust, and the only duty equally fair to the Government and the manufacturer is an ad valorem duty, for the condition and quality of the wool determine its value, and the ad valorem duty follows the value either up or down.

Where is the justice of assessing the same duty per pound on wool yielding only 40 pounds of clean wool out of 100 pounds in the grease, as on wool yielding 75 pounds of clean wool out of 100 pounds in the grease, thus practically doubling the duty per pound to the manufacturer who brings in wool yielding only 40 pounds?

England, France, and Germany admit all wools free, and with such a duty as now exists on carpet wools, it is plain to see under what a handicap the American carpet manufacturer labors when he competes in the markets of the world for his raw material. The dividing line in cost under our tariff places him absolutely at the mercy of his foreign competitor on third-class wools, and he is obliged to stand aside until the wants of the foreign manufacturers have been supplied. Our manufacturers can bid against them up to 12 cents, but there they must stop, or have an additional duty of 3 cents per pound charged against the purchase. An ad valorem duty would remove this restraint on business and result in increased imports of the better grades of carpet wools, thus insuring increased revenue to the Government.

If carpet wools are to be classified separately, a purely revenue duty could be placed upon wools of the third class, including the wools taken from this class in 1897, and which should now be restored, without doing the least injustice to any industry in the United States, and would result in cheaper carpets to the public.

Believing, however, as we do, that all sorts and conditions of wools should be available alike to all users of wools, we respectfully urge your committee to impose a flat rate not to exceed 20 per cent ad valorem on all wools. Such a duty would be scientific and at the same time would do equal justice to all branches of the industry.

We do not ask low duties on our raw materials and high duties on our manufactured products. We expect the duty on our manufactured goods to be reduced proportionately with any reductions made upon our raw materials, which, as the committee will understand, are not confined to wool.

We submit, however, that in the carpet industry the proportion of labor to the cost of production, as well as the skill necessary and the capital required, are not exceeded

PARAGRAPH 370—CARPET WOOLS.

by any other branch of the worsted and woolen industry, and that carpet manufacturers should be given on their fabrics the maximum duty given any branch of manufacturers of wool.

In the manufacture of chenille floor coverings fully 75 per cent of the cost is for labor, and it may be said of all other woven floor coverings manufactured in this country that nearly, if not quite, one-half of the total cost is for labor.

The carpet manufacturers of this country have invested in the industry more than \$75,000,000, and employ more than 40,000 operatives, most of whom are skilled; the business has been singularly exempt from mergers, and there is not now, nor has there ever been, a combination or trust in the industry.

Respectfully submitted.

CHARLES F. FAIRBANKS,
Treasurer Bigelow Carpet Co., Boston, Mass.

GEO. MCNEIR,
Vice President W. & J. Sloane, New York City,
Committee on Behalf of the Carpet Manufacturers.

The COMMITTEE ON WAYS AND MEANS,
House of Representatives, Washington, D. C.:

On behalf of most of the carpet manufacturers in the country we beg to submit a few observations on the subject of third-class wools, commonly known as carpet wools.

Certain facts with regard to these wools stand admitted by all men with any knowledge of the subject, and are as follows:

No third-class wool is raised in the United States, and none has been raised here for many years.

That as no carpet wools are raised in the United States, the duty thereon should be considered for revenue.

That all carpet wools brought into the United States are used for making carpets and rugs, except a very small percentage, not to exceed 2 or 3 per cent, used for making horse blankets and felt boots; that a very trifling quantity, if any, is used in making clothing.

That wools of the third class, as defined by all our tariff laws since 1867, are becoming scarcer every year as the semicivilized peoples who raise the native sheep (from which carpet wools must come) learn to cross them with Merino or English blood. This they are gradually doing all over the world, and this at once takes the wool out of the third class and puts it in either first or second class.

That because of this growing scarcity the price of these wools is steadily increasing, and the cost of such wools coming into the United States at the present high duty is growing greater each year.

That the scarcity referred to has been intensified because certain carpet wools were taken out of class 3 and put into class 1 when the Dingley law was enacted. These wools had always been classed as carpet wools and were used for no other purpose, and since the reclassification referred to have not come into this country, with the result that the Government has been deprived of the revenue and the carpet manufacturer has been deprived of the wools. They have sold in the foreign market since the reclassification at lower prices than they brought when they were admitted to the United States as carpet wools, showing conclusively that their only value abroad was as carpet wools.

That the duty on these wools being in effect only a revenue duty (there being no industry of the kind in this country to protect), the duty is included in the cost of the manufactured goods and becomes a part of the price to the consumer. Any reduction of the duty on these wools would immediately result in lower prices on carpets and rugs.

The carpet business, which has invested in it more than \$75,000,000 and employs more than 40,000 operatives in normal times (mostly skilled), is still conducted in the old-fashioned way, and each manufacturer is independent of the other. There is not now, nor has there ever been, a combination or trust in the industry.

It is not our purpose to haunt the Halls of Congress, or importune the various members of the committee on this subject. We refer you to the arguments made before the Payne committee, which are as sound to-day as they were then, and which show, as we believe, that we are entitled to the relief we ask.

We do not ask for lower duties on raw materials and high duties on our manufactured products, for we expect the compensating duty on our manufactured goods to be reduced in the same proportion as the duties are reduced on our raw materials.

We presented to the Payne committee reliable and accurate figures showing how carpet wools are consumed, and that only a nominal percentage of the total imports

PARAGRAPH 370—CARPET WOOLS.

can possibly be used outside of carpet and rug factories. These figures were secured at the request of the committee and have never been disputed.

The present duty on third-class wools being specific, with a dividing line in value, places a premium upon fraud and dishonesty, and we believe this has been the experience of our Government under the Dingley law. We are informed that a greater number of entries of third-class wool have been advanced and penalized than in first and second classes combined. How can it be otherwise when we know that dishonest importers, by undervaluing only a fraction of a penny per pound, escape an advance of 3 cents per pound in the duty? A saving of 3 cents per pound is about 25 per cent on the cost of the wool.

If we had ad valorem duties no importer, however dishonest, would take the chance of a penalty by understating the cost of his wool, for the difference in the duty would be very slight. If his wool now costs him 12 cents per pound, he pays 4 cents per pound duty, but if it costs him $12\frac{1}{2}$ cents per pound, he pays a duty of 7 cents. On 1,000,000 pounds (which is but an ordinary purchase) this difference in duty would amount to \$30,000, quite a sufficient inducement for a dishonest man to attempt to defraud the Government; whereas if the wool cost him $12\frac{1}{2}$ cents per pound and he paid an ad valorem duty, the difference in the amount of duty would be too small to be a temptation to undervalue.

Statistics show that the Government collects more revenue under an ad valorem duty on wools than it does under specific rates, and there is less undervaluing.

So it may be said of all classes of wool that a specific duty per pound of wool in whatever condition it is imported is as unscientific as it is unjust, and the only duty equally fair to the Government and the manufacturer is an ad valorem duty, for the condition and quality of the wool determine its value, and the ad valorem duty follows the value either up or down.

Where is the justice of assessing the same duty per pound on wool yielding only 40 pounds of clean wool out of 100 pounds in the grease as on wool yielding 75 pounds of clean wool out of 100 pounds of wool in the grease, thus practically doubling the duty per pound to the manufacturer who brings in wool yielding only 40 pounds?

England, France, and Germany admit all wools free, and with such a duty as now exists on carpet wools it is plain to see under what a handicap the American carpet manufacturer labors when he competes in the markets of the world for his raw material. The dividing line in cost under our tariff places him absolutely at the mercy of his foreign competitor on third-class wools, and he is obliged to stand back until the wants of the foreign manufacturers have been supplied. Our manufacturers can bid against them up to 12 cents, but there they must stop, or have an additional duty of 3 cents per pound charged against the purchase. An ad valorem duty would remove this restraint on business and result in increased imports of the better grades of carpet wools, thus insuring increased revenue to the Government.

A purely revenue duty could be placed upon wools of the third class, including the wools taken from this class in 1897, and which should now be restored, without doing the least injury to any industry in the United States, and would result in cheaper carpets to the public.

If it is thought best to fix a lower ad valorem rate on wools of the third class than on wools of the first and second classes, we respectfully ask that the wools of the third class, which, under the Dingley law of 1897 were transferred to class 1, be restored to class 3. These wools are Bagdad, China lamb's, Castel Branco, and Adrianople or butcher's wool.

We should be glad to furnish your committee with any information in our possession, to appear and answer any question propounded to us, and prepare, if desired, a schedule showing reductions on manufactured goods to correspond with any reductions made on raw wool.

Respectfully submitted.

PARAGRAPH 370—CAMEL'S HAIR.

CAMEL'S HAIR.

TESTIMONY OF J. J. CULBERTSON, CHAIRMAN INTERSTATE
COTTONSEED CRUSHERS' ASSOCIATION.

The witness was duly sworn by the chairman.

The CHAIRMAN. To what paragraph do you speak, Mr. Culbertson?

Mr. CULBERTSON. This embraces an argument on the matter of press cloth and its manufacture—

The CHAIRMAN (interposing). That comes under paragraph 382, cloth, does it not?

Mr. CULBERTSON. Under paragraph 370 of Schedule K, paragraph 378, and our contention more especially is paragraph 445.

The CHAIRMAN. This is not in this schedule; it is under "Sundries."

Mr. CULBERTSON. It is under "Sundries," but our contention is that it should not be placed under the paragraph in which the Government authorities have placed it.

The CHAIRMAN. Do you not think you had better come in when the sundries schedule comes up?

Mr. CULBERTSON. It relates to camel's hair, which comes under the woolen schedule.

The CHAIRMAN. All right. Proceed. You want to discuss camel's hair as well as press cloth?

Mr. CULBERTSON. Yes, sir.

The CHAIRMAN. Proceed.

Mr. CULBERTSON. As representing the Interstate Cottonseed Crushers' Association of the United States, and as reflecting as well, the general desire of the entire cottonseed-oil industry, I beg to submit for the consideration of your honorable committee the certain facts relative to present tariffs on materials for the manufacture of press cloth and on the finished article of press cloth.

Camel's hair and wool, which are used, either separately or in combination, in the manufacture of press cloth, are dutiable—when the value exceeds 12 cents per pound—at 7 cents per pound under Schedule K, paragraph 370 of the Payne-Aldrich law.

Hair press cloth—used to a very large extent in the cottonseed-crushing industry, as well as in the linseed and other oil-producing industries—whether made of camel's hair or other hair, or a mixture of such hairs and wool, is now dutiable, under present construction of existing law, under Schedule K, paragraph 378, at a rate four times the rate assessed on the wool or hair, and an additional ad valorem based on the value of the cloth.

The American industry of manufacturing press cloth used in the various oil-crushing industries is of some importance. As compared, however, with the magnitude of the cottonseed and other oil-producing industries, or either, it is of far less importance, either from standpoint of capital invested or labor employed.

Of the press cloth made in this country the cottonseed-oil industry is probably the purchaser and user of four-fifths, leaving the other one-fifth to the other oil-producing industries. The question therefore of the cost of press cloth is of four times the importance to the cottonseed-oil industry as to all the other industries in which it is used.

PARAGRAPH 370—CAMEL'S HAIR.

The cost of American-made hair-press cloth has advanced in the past five years from an average of 61.6 cents per pound in 1908 to 66.06 cents in 1912. And the average cost to the cottonseed-oil mills of the South per ton of seed crushed has increased from 22 cents in 1908 to 30 cents in 1912, an increase of about 36½ per cent in this item of manufacturing expense.

During the last year there were produced 16,000,000 bales of cotton. From these there were produced, approximately, 8,000,000 tons of seed. It is estimated that of this 8,000,000 tons of seed about 70 per cent—5,600,000 tons—were crushed for oil-producing purposes. It is estimated that during the last year the cottonseed-oil industry used approximately 262,500 (making due allowance for the use by certain of the mills of press cloth made of other material) square yards of press cloth, all manufactured in this country. At the average weight of the American cloth per square yard, namely, about 8 pounds, this would represent 2,100,000 pounds of press cloth.

Inasmuch as only 3,693,542 pounds of camel's hair dutiable at 7 cents per pound—which grade of camel's hair is used in the manufacture of press cloth—was imported during the year, and counting the average 50 per cent waste from raw material in the manufacture of the finished cloth—claimed recently by American manufacturers as attending their operations—this could have made but 1,846,771 pounds of camel's hair press cloth. At 8 pounds per square yard, this would represent 230,844 square yards of camel's hair press cloth, assuming that all of the camel's hair of the class in question was used in the manufacture of press cloth. This assumption is probably incorrect, since some of the hair probably went into other fabrics for other purposes. The square yardage, therefore, of camel's hair press cloth produced from the amount of raw materials imported was 31,636 square yards, less than was required in the cottonseed-crushing industry alone (making the same allowance as above for the mills which use cloths made from other materials), to say nothing of the needs of the other industries in which hair press cloth is used.

From this it is clear that the oil-crushing industries in the United States—in view of the wastage claimed by the manufacturer—are not getting pure camel's hair press cloth, since there is manifestly not enough raw material imported to produce the quantity used in the oil-producing industries. It follows, therefore, that the American oil-producing industry, which pays 138 per cent more for its American press cloth—which is not made of pure camel's hair—than it could buy press cloth for from the English manufacturer, who guarantees that his press cloth is made purely of camel's hair.

What is said by the American manufacturer to be pure camel's-hair press cloth—but which, as a matter of fact and as shown by the figures above, can not be so—is selling in the American market to-day at \$5.60 per square yard. What is guaranteed by the English manufacturer to be pure camel's-hair cloth of similar tensile strength is at the same time selling at \$2.15 per square yard, f. o. b. Liverpool.

The duty on foreign-made press cloth, as the present law is constructed—we believe wrongfully—is practically prohibitive whether the press cloth is made of camel's hair purely or of admixtures of camel's hair with other hair or with wool.

PARAGRAPH 370—CAMEL'S HAIR.

In view of all these facts the representatives of cottonseed-oil-producing industry feel that they are entirely justified in asking for the entire abolition of the duty on press cloth used in the oil-crushing industry, for the reason that they feel that a precedent has been established for such claim in the fact that silk bolting cloth "when used for milling purposes" is entered free, and is an evident instance of the intention on the part of Congress to foster and enlarge the manufacture of flour in this country. If, therefore, such is correct in one case, why is it not reasonable to ask the same consideration for our own business? We believe our industry should be placed on an equitable plane with others that are enjoying these advantages; and we think that such can only be accomplished by permitting the free entry of press cloth made of hair, wool, or any other material when used for milling purposes.

The contention that it is unreasonable for finished goods to have lower duty than that of the raw material is not necessarily a good one, because Congress has the power in its wisdom to place such duties as it sees fit; and especially on such articles as tend to increase the manufacture of American products in American factories; or where it benefits certain industries, as Congress has done in the case of bolting cloth for the milling industry, or in the case of agricultural implements and machinery which come in at 15 per cent ad valorem, while some other machinery not for agricultural purposes is taxed under Schedule C at from 30 to 45 per cent ad valorem.

The representatives of the cottonseed-oil industry do not believe that press cloth used in the oil-producing industry and made of hair of whatever description is dutiable, under a fair construction of the existing law, under paragraph 378. They do believe, per contra, that it is fairly dutiable, and was intended to be so dutiable, under paragraph 445, which specifies "hair press cloth" at 20 cents per square yard. There is no other press cloth used in any industry in this country which, so far as is known, is made of camel's or any other hair except that used in the oil-producing industry. The representatives of the industry, therefore, maintain that it was the original intention of Congress to admit "hair press cloth" made of any hair whatsoever at 20 cents per square yard. As showing the basis for this belief, we will hand to the stenographer, and respectfully ask the committee to print it in connection with our remarks, a statement showing the history of efforts to import into this country "hair press cloth," and secure its entry under paragraph 445, at 20 cents per square yard.

Reiterating the claim that we believe that the oil-producing industry of this country, and particularly the South, is as much entitled to free entry for the press cloth used in that industry for its milling purposes as is the distinctively Northern flour-milling industry entitled to free bolting cloth, the representatives of the cottonseed-oil industry suggest that if, in the wisdom of the Ways and Means Committee, there appears to be just reason for discrimination in favor of one industry and against the other, and if the committee does not see fit to give to the Southern industry of cottonseed-oil producing free press cloth, then certainly this much relief should be afforded the industry which is manifestly being discriminated against, namely, the ambiguity of the present law should be cleared up, and press cloth

PARAGRAPH 370—CAMEL'S HAIR.

used in the cottonseed-milling industry should be specifically made dutiable at 20 cents per square yard, or its ad valorem equivalent. In the bill covering the woolen schedule passed by the Senate at the last session, it was proposed to include hair press cloth at 30 per cent ad valorem. This proposal was undoubtedly originally intended for afford the cottonseed-oil industry relief from the present prohibitive rate of duty on imported press cloth, this with the understanding—as is natural under the present construction of the existing law—that such press cloth is dutiable at 44 cents per pound and 50 per cent ad valorem. In view, however, of what the industry believes to be the fact, namely, that hair press cloth is entitled to entry under paragraph 445 at a duty of 20 cents per square yard, it is submitted that the proposal in the bill in question as it passed the Senate, instead of affording relief to the industry, would very materially increase the duty on hair press cloth if the existing law were properly construed.

The cottonseed-oil industry is not unmindful of the fact that the press-cloth manufacturing industry in the United States, while not comparable with its own in volume of business done or of capitalization represented, is, nevertheless, entitled to proper consideration. The cottonseed-oil industry recognizes, likewise, that if Congress should see fit either to entirely abolish the duty on press cloth used in the cottonseed-oil industry or to clear up the ambiguity of the present law and make the cloth dutiable at 20 cents per square yard, the result would be that the press cloth manufacturer—unless he has compensating reductions in his raw materials—would necessarily have to go out of business.

To that end, therefore, and in its desire to be fair to another American industry, the cottonseed-oil industry is prepared to heartily indorse any and all efforts on the part of press-cloth manufacturers in this country toward securing the entire abolition of duties on the raw materials used in the manufacture of the cloth, or, as an alternative, the lowest possible rate of duty thereon.

Mr. HARRISON. You desire to import hair press cloth at 20 cents per square yard. What is that ad valorem equivalent? Is it about 4 per cent?

Mr. CULBERTSON. It would be about 4 per cent.

Mr. LONGWORTH. Is there any article that you use in making your finished product that you do not want put on the free list?

Mr. CULBERTSON. If we confine ourselves to this particular article—

Mr. LONGWORTH (interposing). You were before the committee the other day asking for free trade on cotton, and I want to know whether you might come under the next schedule and ask for something else free?

Mr. CULBERTSON. If it is used in our industry, and we find discrimination has taken place, I think it is only right and just that we should endeavor to secure for our industry the same benefits that seem to be accorded to others.

Mr. LONGWORTH. You want every raw material that you use put on the free list, do you not?

Mr. HARRISON. Everything you manufacture is on the free list now, is it not?

PARAGRAPH 370—CAMEL'S HAIR.

Mr. CULBERTSON. Everything; yes, sir.

Our contention in this particular case, sir, is based on an article that stands about the same with us as it stands with that particular industry which enjoys duty rates or free entrance of that particular material.

Mr. FORDNEY. Mr. Culbertson, the American farmer produces 60 per cent of all the short cotton consumed or produced in the world. We consume in the United States 25 per cent of the cotton consumed in the world, and while we produce 60 per cent of all the cotton that is produced in the whole world, we do not fear competition from any other part of the world. Therefore, that article is on the free list, and many of the by-products are there as well, because there is no competition. But the things which you use, the raw materials which you use, enter into the finished products, and you are asking for free trade on those things?

Mr. CULBERTSON. I do not think the case is a parallel case, because in our own particular business—and I speak of that because I pretend to know something of it—we feel if we are discriminated against, which we do feel in this particular case we are, why should we not be justified in asking at least to be placed on the same parity with our northern neighbors, or our northern manufacturers?

Mr. FORDNEY. Because their article is a competitive article, and the thing you produce is not. That is the difference between the two, in my judgment, and that is why I object to your plan for your finished product, when it is your raw material—

Mr. CULBERTSON (interposing). I will answer that, sir, by stating that European countries do manufacture cottonseed oil and European countries do manufacture other oils that come into this country free of duty the raw material in which same article is taxed. Oleaginous seeds come under a duty of 25 cents per bushel. Soy beans come under a duty of 45 cents a bushel, which is prohibitive, but the European countries from which those particular beans come are at liberty to make, and do make, soy bean oil that comes into this country and in competition with us.

Mr. FORDNEY. It has been the contention of our Democratic friends on that side of the House that when any industry in this country controls 60 per cent of the entire output it is a monopoly, and therefore when we produce 60 per cent of all the cotton seed produced in the world we certainly must have a monopoly in that industry, but you do not fear competition, then. I do not agree with my friends over there on that score, however.

Mr. CULBERTSON. I do not like that word, sir. It may partake of such, because we are so situated that, by virtue of the situation, we are able to raise this material, but the Lord knows that the foreign countries have endeavored to secure places in which to raise the same thing.

Mr. FORDNEY. And the Lord knows he did not provide the soil anywhere else for them except in the United States.

Mr. CULBERTSON. And that is the only reason they do not do it.

Mr. KITCHIN. You say you have not any competition in this oil production or in the sale of oil? Is it not a fact you have competition with every nation of the world, here and abroad, and that your oil price is fixed in the markets of the world in competition with the

PARAGRAPH 370—CAMEL'S HAIR.

world, and that you can not charge the American consumer of oil a penny more than he could get it for in any other market of the world? The very minute you put it above the world's price, as fixed by the world's markets, that minute they will begin to come into this market and undersell you?

Mr. CULBERTSON. Yes, sir.

Mr. KITCHIN. And millions and millions of gallons of oil out of that other 40 per cent of cotton seed from Egypt and India are produced in other countries?

Mr. CULBERTSON. Yes, sir.

Mr. KITCHIN. Therefore, do you not meet the competition here and all over the world?

Mr. CULBERTSON. Absolutely, sir.

Mr. FORDNEY. With 60 per cent of all that is produced, you meet the other fellow, and you "raise Ned" with him, too.

Mr. CULBERTSON. Besides that, we produce in this country more cottonseed oil than we can really consume. Naturally we have to seek foreign markets, and in those foreign markets we come up against foreign tariffs, and in some instances prohibitive tariffs. As Mr. Underwood knows in relation to Austria-Hungary, there is absolutely a prohibitive tariff against American cottonseed oil.

Mr. FORDNEY. You run up against that abroad in foreign countries?

Mr. CULBERTSON. Yes, sir.

Mr. FORDNEY. Can you not compete with the other fellow abroad there?

Mr. CULBERTSON. We can not.

Mr. FORDNEY. But you do?

Mr. CULBERTSON. We do not. On American cottonseed oil we have no business with Austria-Hungary by virtue of the fact they have succeeded in keeping up that tariff, notwithstanding the promise that was made at the time our trade relations were fixed that the prohibitive tariff would be properly adjusted, which has not been done.

Mr. FORDNEY. Do you sell any of your products abroad?

Mr. CULBERTSON. At times; yes, sir.

I think you want to give the impression that we wanted everything in free that we use, and that in selling our goods we could dispose of them in any of the markets that we might see fit. But to show you some of the disadvantages under which the business labors, when we come into the European countries, American cottonseed oil is taxed for the purpose of protecting the home manufacturer of the oils that they make as against our own.

Mr. FORDNEY. I would like to help you in that respect, but I can not.

Mr. CULBERTSON. Somebody has to help us with the Austria-Hungary business.

Mr. FORDNEY. You will have to go to Austria-Hungary for it.

Mr. CULBERTSON. No, sir; we do not have to go there.

Mr. FORDNEY. The American Congress can not fix the rates of duties that Austria-Hungary charges you.

The CHAIRMAN. I understand your contention is this: Our friends over here, in writing the tariff, put on the free list the silk that the

PARAGRAPH 370—CAMEL'S HAIR.

millers use to grind wheat with to make flour. He was going out to compete in the markets of the world with his flour. You are making cottonseed meal—

Mr. CULBERTSON (interposing). And oil.

The CHAIRMAN (continuing). And oil, and you ask that the same kind of a piece of cloth, except made out of a different material, be put on the free list so you can stand on an equality under the same circumstances?

Mr. CULBERTSON. That is my contention exactly, Mr. Chairman.

Mr. LONGWORTH. You are also asking that camel's hair be put on the free list?

Mr. CULBERTSON. I have not asked that.

Mr. FORDNEY. You would like to have it?

Mr. CULBERTSON. We are coming to it. I want to say we are not interested directly in free raw materials.

Mr. LONGWORTH. I think it is a good thing to ask for what you want, and all I want to know if there is anything else you do not want put on the free list.

Mr. CULBERTSON. As a Southern man, I think we would be entitled to it, after the 16 years of work that has been going on.

Mr. FORDNEY. Working to get a majority of the Democrats in Congress, you mean? [Laughter.]

Mr. CULBERTSON. Thank God, we succeeded. [Laughter.]

The CHAIRMAN. That seems to be all, Mr. Culbertson. You may be excused.

BRIEF IN SUPPORT OF THE CONTENTION OF THE COTTONSEED-OIL INDUSTRY THAT "PRESS CLOTH" IS PROPERLY DUTIABLE UNDER PARAGRAPH 445 AT 20 CENTS PER SQUARE YARD.

The contention that press cloth is properly dutiable under paragraph 445 of the existing law, regardless of the kind of hair of which it is made, was made in case 3894 of *Caldwell v. United States* in the United States Circuit Court, Southern District of New York, in 1905, wherein the decision of the Board of United States General Appraisers that such articles should come under paragraph 366 of the tariff act of 1897, on which duty was assessed at 33 cents per pound and 50 per cent ad valorem, was reversed.

Judge Townsend, in his decision, says:

"The merchandise in question consists of cloth made of hair adapted to be used in hydraulic presses. It is in fact a hair-press cloth. It is so known commercially and was so invoiced and sold. The Board of General Appraisers, however, apparently basing its decision upon evidence taken in another case as to other merchandise, adopted the language of their opinion therein and assessed the article at 33 cents per pound and 50 per cent ad valorem, under paragraph 366 of the act of 1897, as a manufacture of wool not specially provided for. The importers protested on the ground that the cloth was dutiable *eo nomine* as hair-press cloth at 20 cents per square yard under paragraph 431 of said act.

"The Government introduced no testimony in this case before the board. Paragraph 431 provides specifically for hair press cloth '*eo nomine*.' The construction given to these words by the board would seem to deprive their specific provision of all effect, inasmuch as the mats made of horsehair and cattle hair appear to be included under a separate designation. The assessment by the board would operate to impose an ad valorem duty on this cloth of between 300 and 400 per cent.

"The decision of the Board of General Appraisers is reversed."

Secretary of the Treasury Shaw ruled that if such cloth was made of horse hair, goat hair, other than Angora, alpaca, or mohair (which it was not) the decision was evidently correct. If the goods contain camels hair or dutiable goats hair of any description the decision in his opinion is incorrect and should not be followed.

PARAGRAPH 370—CAMEL'S HAIR.

Issue was taken to this ruling by the attorneys for the plaintiffs in the following words:

"The statement that 'no case has thus far been presented to the United States circuit court on the hair press cloth issue' is incorrect. 'The hair press cloth issue' can only mean the classification under the tariff act of the well-known hair press cloth used in pressing oil seeds, which is composed of camel's hair or a mixture of camel and goat hair. The issue in the Caldwell case involved this kind of cloth. It was clearly presented to Judge Townsend that the cloth was made of camel's hair and goat hair and this fact was shown by the record, and not disputed. The opinion of the General Appraisers published by the Treasury Department, in T. D. 26489, stated this fact. Judge Townsend did not state what kind of hair it was, because it made no difference. As long as it was 'hair' of any kind, it was 'hair press cloth.' It might properly be said that the issue was to be presented again with new evidence, or with new argument, but it can not properly be said that the issue has not been presented. The provision for 'manufactures of wool not specially provided for in this act' is broad enough to include this hair press cloth, since it is defined by law as including manufactures of hair of the camel, goat, or other animal, but it only covers such manufactures when not specially provided for, and hair press cloth is specially provided for at 20 cents per square yard. It is absolutely immaterial whether the raw material was horse hair or common goat hair, which would be free in the raw condition, or Angora goat hair or camel hair which would be dutiable in the raw condition. They would all be included, if made into press cloth, at 20 cents per square yard."

Congress uses the word "hair" alone as including camel's hair in paragraph 410 of the tariff, which provides for hair pencils in quills or otherwise. The Secretary of the Treasury decided as far back as 1878 that the provision for "hair pencils" included camel's-hair pencils, with tin and wood handles or quill handles.

The act of 1909, under paragraph 423, reads:

"Brushes, brooms, and feather dusters of all kinds and hair pencils in quills or otherwise," etc. This indicates that the claim that the nature of the material surrounding any article *eo nomine* should partake of such like kind or nature is not well taken. A parallel is pointed out in paragraph 445 in the act of 1909.

When the Treasury Department acquiesced in the decision of the circuit court it did not attempt to differentiate between press cloth made of nondutiable goat hair, or goat hair subject to tax, as is shown in Assistant Secretary Reynolds's letter to the collector of the port at New York:

"The merchandise in suit consisted of cloth made of hair adapted for use in hydraulic presses, known as hair press cloth. Duties were assessed thereon as manufactures of wool, at the rate of 33 cents per pound and 50 per cent *ad valorem* under paragraph 366 of the tariff act of July 24, 1897. The importers protested, claiming the merchandise to be dutiable at the rate of 20 cents per square yard as hair press cloth under paragraph 431 of the same act, which claim was sustained by the United States circuit court in this case on the evidence presented.

"The Attorney General advises the department that no further proceedings will be directed in this case. You are therefore hereby authorized to forward the usual certified statement for refund of the duties exacted in excess in settlement thereof.

"It was only after the domestic manufacturers of press cloth began to besiege the department that the ingenious device of differentiating between various kinds of press cloth was discovered. For many years the department has accepted the principle that the most specific designation of the tariff shall govern the classification of any imported article, and the departure from that practice in this case shows a yielding to pressure on the part of the Secretary that is much to be regretted."

In the revision of the tariff act 1897, in 1909, paragraph 445, relating to hair press cloth carrying a duty of 20 cents per square yard, was passed by the House and referred to the Senate which inserted in that paragraph the words "any of the foregoing *not* composed of wool," which was stricken out in conference and the paragraph as originally made was passed. It was evident that the Senate committee desired to indicate that such "hair press cloth" was not to contain wool as accepted and as recognized in the act. The fact that in conference the clause was stricken out would indicate that it was intended that hair press cloth could contain wool or anything coming under the wool classification, and still belong to that paragraph. There is no other hair press cloth manufactured and commonly known to the trade as hair press cloth unless containing camel's hair or other hair; and no power can compel a manufacturer to make an article of any other material than that commonly used, even if it is inserted in a hair paragraph. It is *eo nomine* hair press cloth had been inserted in the

PARAGRAPH 371—WOOLS ON THE SKIN.

silk schedule, and nothing can change it, and we believe that the last revision intended to give it the benefit of the 20 cents per square yard duty, or else why were not the words "any of the foregoing not composed of wool" permitted to stand?

J. J. CULBERTSON,
Chairman Legislative Committee
Interstate Cottonseed Crushers' Association.

WASHINGTON, D. C., *January 27, 1913.*

PARAGRAPH 371.

The duty on wools on the skin shall be one cent less per pound than is imposed in this schedule on other wools of the same class and condition, the quantity and value to be ascertained under such rules as the Secretary of the Treasury may prescribe.

WOOLS ON THE SKIN.

**TESTIMONY OF PATRICK MCGRAW, ON BEHALF OF THE
MCGRAW WOOL CO., PITTSBURGH, PA.**

Mr. McGraw was duly sworn by the chairman.

Mr. MCGRAW. Mr. Chairman and gentlemen of the committee, I wish to say a few words in regard to wool on the skin business, in which we are interested, wool pullings, as it is usually called.

Under the present tariff we do not think it has a fair share of protection, so we hope in your bill you will take care of it a little better than it has been in the past.

We find that the pulling of wool here costs us about 7 cents per pound, and we know from information we have that this work can be done for half the cost in foreign countries. Consequently, in order to equalize things, we feel that we ought to have about 4 cents per pound differential in duty between the wool on the skin and the wool off the skin. We think that would equalize it. Now, if you fix an ad valorem duty it would depend a good deal on what the price of wools is abroad at this time. If the price of wools was high, of course a great deal less of an ad valorem duty would do than would be required if the price was very low; but, as I understand it, this bill may last for a good many years, and while wools are high abroad at the present time, we can not tell that they will always remain so. If the duty was such as to protect us at all times, it would need to be fixed on a comparatively low foreign price.

The CHAIRMAN. The bill in that particular will probably be written on an ad valorem basis. If you have any suggestions along that line, we will be glad to hear from you.

Mr. MCGRAW. We believe that an ad valorem basis has a tendency to create—

The CHAIRMAN. I do not mean to put the question to you as to whether it should be a specific or an ad valorem, but as to what it should be if it is on an ad valorem basis.

Mr. MCGRAW. If it is on an ad valorem basis on 20-cent wool, 20 per cent of a differential would be equal to 4 cents per pound. That is about the value of wools; but I have seen those wools sell for half that price, and if such a duty were levied on half that price, it would be only 2 cents.

Mr. LONGWORTH. Do you want to double your present duty?

PARAGRAPH 371—WOOLS ON THE SKIN.

Mr. MCGRAW. The present duty is only 1 cent a pound.

Mr. LONGWORTH. You want to quadruple it?

Mr. MCGRAW. We want to quadruple it.

Mr. LONGWORTH. You are a brave man.

Mr. MCGRAW. I am glad to have you say so.

Mr. FORDNEY. It takes a brave man to be honest, does it not?

Mr. MCGRAW. It does so.

The present duty is no protection whatever. The present duty of 1 cent a pound is more than offset by the fact that wools off the skin are tagged, and skirtings taken off, and imported in that condition. When we import on the skin we have to pay for everything, tags and skirtings and everything else, and that 1 cent is more than offset by the conditions under which we have to import it. We practically have no protection whatever at the present day.

Mr. HARRISON. Would you not be in a better position in that respect by the adoption of ad valorem duties?

Mr. MCGRAW. How do you make that out?

Mr. HARRISON. Because they rise or fall with the value of the article.

Mr. MCGRAW. They rise and fall with the value of the article, surely, but that does not help us any. When the article is high, we have a high protection, and that is the very time we do not need it. We need it worse when the article is low in the foreign countries.

Mr. HARRISON. But at any given specific time the ad valorem duty covers the difference of the value of the article when it is on the skin and when it is not on the skin.

Mr. MCGRAW. The cost of pulling remains the same all the time. For instance, when wool is worth 20 cents a pound and you have a 20 per cent ad valorem duty, you have a protection of 4 cents a pound. Suppose it is worth 10 cents a pound, and you have a 20 per cent ad valorem duty, you have only 2 cents a pound protection. If the difference is only 4 cents, then we only have half enough protection against our foreign competitor.

Mr. HARRISON. You do not have to go to foreign sources to discover the cost of production, because the market price will afford a basis of the assessment of the ad valorem duty, and that will rise or fall with the market, and will cover the difference of the wool when pulled and when on the skin.

Mr. MCGRAW. The man we have to contend with is the foreign wool puller. It costs him 4 cents a pound less to do that labor than it does us. Consequently, whether wool is high or low, that labor cost is very little different per pound. The labor cost remains practically the same. That is the reason an ad valorem duty is not as good as a specific duty, unless you make that ad valorem duty high enough, and we have all the protection we need when the article is very low, and then we have entirely too much when it is very high.

I have taken the item of tops, and I have seen 40 tops selling at 6.5 pence, and I have seen them selling at 18.5 pence. In other words, the fluctuation abroad is greater in price. This specific tariff that we had here had a tendency to steady prices in this country. Our fluctuations have not been as great as those abroad. The

PARAGRAPH 371—WOOLS ON THE SKIN.

fluctuations are the worst feature about this whole business, and anything that will prevent fluctuations will be a benefit to the whole industry.

The CHAIRMAN. Are there any further questions?

Mr. PALMER. What do you mean by the expression "all the protection we need?"

Mr. LONGWORTH. He is a brave man.

Mr. MCGRAW. I mean protection enough to cover the difference in the cost of production here and abroad. That is the protection we need. If we are to compete with the foreign wool puller, we feel that the protection needed is such as to enable us to equalize the difference in the cost of doing the work here and abroad.

Mr. PALMER. Just the difference in the labor cost at home and abroad?

Mr. MCGRAW. No, sir; not the labor cost. It is a fallacy to talk about the labor cost. All your items enter into that. It costs you more for money, it costs you more for your factory, and it costs you more for everything you do in connection with it. The labor cost in our factory is less than half of our expenses, but all of those expenses are double what they are to the man on the other side, and all of those expenses must be taken into account if you want to equalize the thing as it should be equalized.

Mr. PALMER. What is the present ad valorem equivalent of the specific rate on the articles you are talking about?

Mr. MCGRAW. On to-day's market price, 20 per cent ad valorem would be the equivalent of what I am asking for; but if the prices are lower, it would not be that; if they were higher, it would be more than that.

Mr. PALMER. Would 20 per cent equalize the difference in the cost of the production of these articles?

Mr. MCGRAW. Yes; 20 per cent on 20-cent wool is equivalent to 4 cents.

Mr. PALMER. Would that be sufficient in your judgment?

Mr. MCGRAW. That is what we would require.

Mr. FORDNEY. Based on to-day's price?

Mr. MCGRAW. Based on to-day's price. Of course, those prices are high to-day. Of course, we do not know what the prices will be in the future, as there may be a break a year from now or two years from now.

The CHAIRMAN. That is all.

Mr. MCGRAW. Another item that we are interested in is that of tops. We make tops as well as pulling wool, and in your last bill I think your differential on tops was only something like 6 per cent ad valorem. That would not anywhere nearly equalize the difference between making tops in this country and making them abroad. Of course, the present duty on tops is entirely too high, and is not at all necessary. The one that was included in the last bill would not be anywhere nearly high enough.

The CHAIRMAN. The Tariff Board report happened to confirm our rate on tops.

Mr. MCGRAW. They confirmed your rate?

The CHAIRMAN. Yes, absolutely.

PARAGRAPH 371—WOOLS ON THE SKIN.

Mr. HILL. Let me see if I understand you correctly, Mr. McGraw. Your idea is that the duty on wools on the skins should be 80 per cent of the duty on wools off the skins?

Mr. MCGRAW. It should be 4 cents a pound.

Mr. HILL. Well, it would be 80 per cent. If this bill should be written on an ad valorem basis, I understood the chairman to ask you what ad valorem you would suggest on wool on the skin.

Mr. MCGRAW. Well, in this bill—

Mr. HILL. It would be eight-tenths of the wool duty—20 cents a pound.

Mr. MCGRAW. Suppose it was 30 per cent, as it practically was in the last bill—29 per cent—then, what I would ask for would be that the duty on the wool on the skin would be only 10 per cent, a difference of 20 per cent in the two prices. That is, if it was going to be an ad valorem duty; if it was to be a specific, the difference I ask for would be 4 cents per pound.

The CHAIRMAN. That is all, Mr. McGraw.

PITTSBURGH, PA., *January 21, 1913*

COMMITTEE ON WAYS AND MEANS,

House of Representatives, Washington, D. C.

GENTLEMEN: Top making as a distinct and separate part of the worsted industry is growing in this country, as it has done in England. Here in the past almost all of the processes of making worsted goods have been housed in the same mill and under the same management. Lately there has been a growing tendency to take advantage of buying top for special uses, and this has given rise to the industry. In England top making is almost entirely a separate industry and is in the hands of several great concerns. If we wish to build up a top-making business in this country, we must be protected from the competition of the great English mills, who can manufacture their top at a much lower figure.

In the present Payne-Aldrich tariff top is not specifically mentioned as such, but is assessed as manufactures of wool not specially provided for and is given a duty equal to three times the duty on the raw wool plus an ad valorem charge of 50 per cent. This, of course, simply prohibits the importation of English top into this market, but does not by any means give the American manufacturer the margin that is apparent on a superficial reading.

As a matter of fact the profits in the business are very close on account of the hard domestic competition. At the present market price of 40's top in Bradford, about 15d., the above duty would equal about 49 cents, or almost as much as the top is bringing in this country. However, as stated, the present duty simply serves to exclude the foreign manufacturer and leaves our market open to domestic competition.

While the rates of last bill look excessive they are, as is seen, misleading, but they do not, nor can they benefit the home top maker any more than to give him his home market. In the bill passed at the last special session of Congress, known as the Underwood-La Follette bill, top was allowed a differential of only 6 per cent over wool, which, at the present values of 40's top in England, means only about 1½ cents per pound. This is absolutely insufficient to protect the American manufacturer, and if enacted into law would allow his English competitor to drive him from the business. We admit that the rates of the last bill in regard to top are much larger than are necessary and could stand quite a reduction, but a differential of at least 4 cents per pound is absolutely essential to the continued success of the industry.

The price of making low top in England does not amount to over 4 cents per pound, whereas in this country the charges are at least 7 cents, and as the grades become finer the difference increases. In a separate brief relating to the wool-pulling industry, we have shown where the difference in costs arises, and this is, of course, true to even a greater extent in the present case.

In order to arrive at an ad valorem charge, which will take care of this difference, we must bear in mind the fluctuations of the English market, and the prices of the different grades. It must be remembered, too, that when prices are low competition becomes keenest, and protection is most needed.

PARAGRAPH 371—WOOLS ON THE SKIN.

The Bradford market has shown a wonderful range of prices, 40's top having been as low as 6½d. and 7d. in 1901, 8½d. in 1908, and reached the very high price of 18¾d. in 1906. From the above it is seen the present price of 15d. is very high and would not make a proper basis for figuring, as it is not a normal time. Assuming that the average price of such top is 10 d., it would require a duty of 20 per cent to equal the 4 cents which we claim. However, in asking you for a duty of 20 per cent on top we do not wish to place ourselves on record as being in favor of an ad valorem method of levying duty charges. This system can be of little value to those who must depend upon the tariff for protection, since under it protection is least when most needed, namely, in a period of low prices, and most when prices are high. Besides, one of the great drawbacks of the wool business has been a speculative element, due to the violent fluctuations of the commodity. With an ad valorem scale of duties this would be greatly increased. A specific duty tends to stabilize prices, as is witnessed by the fact that fluctuations of wool and its manufactures are much less here than in free-trade England. In our estimation specific duty should be levied on a scoured basis with specific differentials added as the product is carried further forward in the manufactured state.

In view of the above facts, and principally because top making, as a separate part of the worsted business, may be really termed "an infant industry," which, as such, is having a very precarious existence and is yielding but small profits, due to intense home competition, we reassert that it is badly in need of a protection such as will exclude our foreign competitor from our market, as we are denied his, or such, at least, as will minimize the advantages he undoubtedly possesses. This being the case, we recommend this industry to your kind consideration and trust that it will receive at your hands the treatment its importance and present status call for.

Yours, very truly,

P. MCGRAW WOOL CO.,
PATRICK MCGRAW, *President.*

PITTSBURGH, PA., *January 21, 1913.*

Committee on Ways and Means, House of Representatives, Washington, D. C.

GENTLEMEN: In our present brief we wish to draw your attention to that part of Schedule K relating to wool on the skin, a subject which we believe has never received proper consideration. The wool-pulling industry in this country is comparatively small and is practically in the hands of the large packers, who handle pretty nearly all the sheep killed here. Their only competitors are a few small pullers who buy the take-off from the small butchers of their neighborhood, and ourselves, and a few others, who, owing to the restricted home supply, are forced into the foreign market for our raw material.

Here it is that we come into direct competition with the foreign puller, with whom we are not on an equal basis under existing conditions. Thus it happens that he is able to absolutely control that market and to buy its entire output. The percentage that we are able to procure for import to this country is so small that it is hardly felt by the foreign concern. In Mazamet, France, the industry has grown to immense proportions, and that one town does almost twice as much in this line as does the whole United States.

In 1910 there were imported into Mazamet about 120,000,000 pounds of skins and shipped out about 55,000,000 pounds of wool. The pulled wool production of this country is estimated at about 30,000,000 pounds. We believe that a more equitable adjustment of the duties on wool on the skin would result in a large increase in the industry in this country.

We maintain that the present differential of 1 cent per pound between wool shorn from the sheep and wool on the skin is not sufficient, and we shall try to prove that it should be at least 4 cents. We find that when our plant is running to its capacity the cost of pulling is 20 cents per skin, and considerably more than this when our production is reduced. This does not include interest on capital, which is equivalent to 5 cents per skin additional, making the total cost of pulling 25 cents. This work in England does not cost half of this amount and is still cheaper in France, where the work is largely done by women, who receive 45 cents per day as against two to three dollars paid men in our own factory and elsewhere in this country. Thus in France and England the cost is from 12 to 15 cents per skin less than here. As the average amount of wool per skin will not exceed three pounds, covering the whole year from shearlings to full-wooled skins, it requires a differential of at least 4 cents per pound to place the wool pullers of this country on an equal footing with their foreign competitors.

PARAGRAPH 373—SHODDY.

In discussing the cost of production here and abroad, it is frequently stated that it is only necessary to take into account the difference in the cost of labor entering into the production of the article. This we think is not a fair view of the matter, as not only labor, but also every other item that enters into the cost of production is higher here than elsewhere. This is true of every single item, such as interest on capital and on borrowed money, rents, salaries, machinery, repairs, buildings, etc. Buildings and machinery would not cost over half there what they do here, and as the Continental puller does not have to pay duty on his raw material, the difference in the cost of pulling above referred to is conservative. The present differential of 1 cent per pound is more than offset by the fact that wool imported on the skin contains tags and skirtings, whereas all tags and skirtings are removed from wools imported off the skin, so that under present tariff the wool puller has no protection whatever.

Trusting that we have been able to throw a little light on a subject long unjustly treated, and that you will give it the attention it deserves when it comes before your honorable body, we are,

Very truly, yours,

P. MCGRAW WOOL CO.,
PATRICK MCGRAW, *President*.

PARAGRAPH 372.

Top waste, slubbing waste, roving waste, ring waste, and garnetted waste, thirty cents per pound.

See National Association of Wool Manufacturers, page 4191; Francis Willey & Co., page 4250.

PARAGRAPH 373.

Shoddy, twenty-five cents per pound; noils, wool extract, yarn waste, thread waste, and all other wastes composed wholly or in part of wool, and not specially provided for in this section, twenty cents per pound.

SHODDY.**TESTIMONY OF CHANNING SMITH, ON BEHALF OF THE VALLEY WOOLEN MILL AND THE CHAPEL MILLS MANUFACTURING CO., CHERRY VALLEY, MASS.**

The witness was thereupon duly sworn by the chairman.

Mr. SMITH. Mr. Chairman and gentlemen of the committee, I have hesitated to come here and talk on the matter of shoddy, and I shall hesitate to take your time to-night very long, but I have prepared a brief, which I would like to read.

The undersigned, proprietor of the Valley Woolen Mill and treasurer of the Chapel Mills Manufacturing Co., Cherry Valley, Mass., representing 18 sets of cards, with 460 looms and a capital of \$400,000, presents the following brief in regard to the tariff rates in paragraphs 373, 374, and 478 of Schedule K of the tariff act of 1909.

To qualify as a petitioner of some judgment in the matter, will state that the undersigned is the third generation of his family in the woolen business, having begun active work in the mills at 18 years of age, a graduate of the Philadelphia Textile School, and operates up-to-date mills—as well-equipped low-grade mills as there are in the United States, and mills with as low legitimate labor cost as any.

We manufacture cotton-warp shirtings and low-grade suitings, using, I am frank to say, shoddy, that much-abused ingredient of many lines of goods. I think "wool substitute" would be a more dignified name to us.

The public can never bring themselves to the point of believing that shoddy in its best sense is a godsend to them and without it we would all go more scantily clothed from the cradle to the broadcloth-covered box of our last earthly house, the grave.

PARAGRAPH 373—SHODDY.

Our business is on an active home competitive basis and I ask for the right to maintain an existence, to conserve our capital invested, and to keep at their present level the wages of our employees without jeopardizing it with a low ad valorem duty.

Our products, the lower grade of goods, I maintain, carry a larger percentage of labor cost than the most expensive goods and should have an equal, if not greater, measure of protection against the cheaper labor of England and the still cheaper labor of Germany, than the more expensive grade? These countries can still give us lessons in the manufacture of low-grade goods. As to the duties to be assessed upon our raw materials under paragraphs 373 and 374 of the tariff act of 1909, I believe they should be specific and materially lowered, as they are the by-products of other industries and do not represent the principal product of those industries. As to the duty to be assessed upon our finished product under paragraph 378m, I feel that there being such a great chance of undervaluation, the best experts being unable, I believe, to judge the value of such imports, within a range of 5 to 10 cents per yard on goods running in value to from 15 to 50 cents per yard.

I ask that whatsoever duty be determined upon, be so assessed as to prevent undervaluation, and would urge a specific duty of at least 55 per cent above that on raw materials. If a straight specific duty is not adopted, then I ask that part of the duty be made specific at a square-yard rate on goods valued at not more than 40 cents per pound. My idea in asking for part of the duty specific at a square-yard rate or a compound rate is for two reasons: First, to protect our labor and insure our mills a reasonable profit; second, keep out of the United States the not bad, but rotten, stuff for clothing we saw imported under the Wilson bill of 1893. I have said above, Germany and England can still teach us in the manufacture of low-grade goods, and I repeat this statement to impress the fact that their low-grade stuff is made from the lowest grades of stock—lower than we can use, owing to their ability in handling it, making a slightly, but tender piece of goods. I take pleasure in submitting samples, not only of shoddies, but manufactured goods.

I take pleasure in submitting samples of shoddy and ready-made garments. I come here, Mr. Chairman, in an educational way, if I can, as well as in an instructive way, regarding duties on our class of goods.

I believe that the matter of shoddy is not understood by the people of the United States. I do not think they know what it is. I have a couple of mystery boxes here. I do not want the members of this committee to feel that I am appearing here in a spirit of antagonism, but I believe there is not a member of this committee, either Republican or Democrat, who can choose from among the samples a sample of wool that is contained in these specimens. I would like to submit these samples. I have prepared these samples for the information of the committee, and I would like them to see them.

The CHAIRMAN. Do you want to leave them with the committee? If you do, we will take pleasure in examining them. Of course, we recognize that there is shoddy and then there is shoddy.

PARAGRAPH 373—NOILS.

Mr. SMITH. Well, Mr. Chairman, I know there is shoddy and shoddy, but certain grades of shoddy can not be used, and is not used in this country in making cheap stuff.

Mr. FORDNEY. If you use good raw material you can make good shoddy, but if you use cheap rags, you can not make good shoddy. Am I right about that?

Mr. SMITH. You are right about that, I suppose; yes, sir.

Mr. FORDNEY. Sir?

Mr. SMITH. I say you are right about that, sir.

Mr. FORDNEY. Thank you.

Mr. SMITH. There have been certain samples shown here to-day. I have a suit of clothes here, a boy's imitation worsted suit, which retails for \$1.98.

The CHAIRMAN. Is that all wool?

Mr. SMITH. No, sir, there is not any wool in it at all. [Laughter.] I have here a pure Democratic shirt, with a Princeton label on the yellow and black, and there is not a pound of wool in it, and I maintain that shirt is good enough for anybody to wear. In fact, I am having some made for my own boys to wear at school now.

The CHAIRMAN. What is it, cotton?

Mr. SMITH. Cotton warp with a shoddy filling. These shirts retail from 75 cents to \$1.50 apiece. There is one there [indicating] that is as good a shirt as there is for anybody to wear.

The CHAIRMAN. We will give consideration to those. Is there any further question, gentlemen? [No response.] That is all.

NOILS.

TESTIMONY OF EBEN S. STEVENS, OF WEBSTER, MASS.

The witness was duly sworn by the chairman.

Mr. STEVENS. Mr. Chairman and gentlemen of the committee, I appear before you asking that the articles represented in section 373 of the present tariff and section 374 be placed upon the free list. I think I shall occupy but a very few moments. Much of what I have to say will be simply supplementary to what Mr. Bennett said, and I shall refrain from touching upon wool for the reasons that I have specifically designated the articles that I wish to call to your attention in favor of the free list.

This schedule is so complex it might well be divided into five different sections or schedules: First, I should say wool; second, worsted or combed wool goods; third, carded all-wool goods; fourth, knitted fabrics; and, fifth, popular price men's and children's wear goods, made from wool substitutes.

Under division 5 are goods made up from by-products of all of the first four subdivisions, and are both cheap and substantial, to the working classes giving weight and warmth at low cost.

I refer you to the report of the Tariff Board, volume 1, page 72, for an explicit statement of this fact. And as this is a lateral question under the discussion of wool and woolen goods, and as you may find difficulty in appreciating all that is meant by this discussion, I want

PARAGRAPH 373—NOILS.

to say to you gentlemen that I appear before you in a suit of clothes of our own production. It was not a selected piece, not a specially made piece, but taken at random from the goods that were passing through our finishing room a few days ago. If you desire, and with your permission, I would be very glad to send this suit of clothes to the committee, in order that in considering these sections you may have a specific sample before you as to what we do accomplish with wool substitutes.

This class of manufacturers ask for a change in paragraphs 373 and 374 to free entry of all these by-products, namely, noils, wastes, and rags. We ask this primarily, that we may have access to the world's markets for material which has been, except under the bill of 1894, prohibited by excessive protection; and at the same time to prevent the wide fluctuations in prices due to the control of the market by domestic producers and manipulators.

During 1912 there were exported 22,000,000 pounds of woolen rags to Europe, while an import duty existed equivalent to an average duty of 100 or more per cent. I might say incidentally there that the decrease in the price of these articles of merchandise in England was such that the English mills were stimulated to operate, many of them, night and day, while our raw material was taken from us.

Since 1909 one-quarter blood noils have fluctuated 78 per cent, while B super wool varied 37 per cent. This is a matter I emphasize very strongly to show you the wide fluctuation in the price of our raw material, due to excessive protection and hampering us in producing goods that we desire to produce.

The effect of these fluctuations is still better shown by the fact that on December 10, 1909 (this date was simply obtained by accident from memoranda made at that date), there were idle 1,279 looms within 20 miles of the city hall in Worcester, where this industry centers; and to-day of that number 891 have been permanently abandoned and broken up, and since 1904 no new mill or machinery has been established in this line.

A duty on by-products protects the fabric by cheapening the net cost of raw material of the high-grade goods, while enhancing the cost of the fabric of which the by-product becomes the raw material. This will be vigorously combatted by all who produce those by-products, but every argument they put forth only makes more evident their desire to retain the profit or advantage to their by-product and continue to hold the purchaser in their iron grip, as they have in the past.

Figures will doubtless be presented to show that noils have sold or do sell here as cheaply as in England, but such conditions are exceptional, just as the export of American rags to England in recent years is exceptional and furnishes no lasting basis for tariff building.

There is no question that, were it not for the natural and praiseworthy tendency to conserve "by-products" the cost of clothing to our humble citizens might lead to their arrest through indecency.

Furthermore, those substitutes on the free list in no wise disturb the revenue because the present prohibitive tariff has closed our ports to them for half a century. I call attention again to the tariff report, volume 1, page 75.

PARAGRAPH 373—NOILS.

Should it be argued that free substitutes are an injustice to taxed wool—I am simply supposing that there may be taxed wool—we can only reply that the injustice would not equal what we have labored under for the last half century, with prohibitive duties on the by-products.

And again, no adjustment of tariffs as between the different branches of the cloth trade would induce the opulent consumer to purchase a suit of workingmen's clothes—such as I wear—while any favors in tariff building in favor of the workingmen would be keenly appreciated.

Should your study of this complex problem lead you to grant this petition you may feel called upon from a revenue standpoint to classify imported goods in such a way as to prevent undervaluation. You could easily find a line of demarcation at 50 cents value per square yard, below which the duty might be less than above it if there existed a difference in the duty on raw materials.

The experience under the bill of 1894 was that raw materials in this line in England were greatly enhanced to the British manufacturer when American buyers appeared there, and after the first importation of their goods to this country the quality was so much inferior in strength of fabric that the trade returned to the well managed American mills, with the result that fair prosperity resulted.

Gentlemen, I trust I have made myself clear upon this question.

Mr. LONGWORTH. There is only one point I am not sure about. Do you think that these by-products should be put on the free list, regardless of whether the duty remains on wool or not?

Mr. STEVENS. I leave that to the committee to decide.

Mr. LONGWORTH. Well, are you asking for free wool?

Mr. STEVENS. I am not discussing the question of free wool.

Mr. LONGWORTH. Suppose the duty is left on wool, would you still desire that these products should come in free?

Mr. STEVENS. Yes, sir.

Mr. LONGWORTH. I will ask you another question. What is the factory's cost of your suit of clothes?

Mr. STEVENS. What is the factory cost?

Mr. LONGWORTH. The factory cost.

Mr. STEVENS. About \$2.10 worth of cloth in the goods, I am told.

Mr. LONGWORTH. What do you sell it for?

Mr. STEVENS. We sell it for 60 cents a yard.

Mr. LONGWORTH. What do you sell the suit of clothes for?

Mr. STEVENS. We do not sell the suit of clothing; we sell the yard goods.

Mr. LONGWORTH. I thought you told us the suit was made in your factory?

Mr. STEVENS. It was made of the cloth made in our factory. I may not have been explicit in that respect.

Mr. LONGWORTH. \$2.60?

Mr. STEVENS. \$2.10.

Mr. LONGWORTH. Is that the value of the cloth?

Mr. STEVENS. That is the cost of the cloth in the suit, I am told.

Mr. LONGWORTH. What does that suit retail for?

PARAGRAPH 373—NOILS.

Mr. STEVENS. I am told—this is only hearsay—that it retails for \$7.50.

Mr. HILL. What percentage of wool—I do not mean shoddy, or waste, or noils, or rags, or anything of that kind—but of all wool, is in that suit of clothes?

Mr. STEVENS. About 15 per cent of raw wool.

Mr. HILL. What percentage of shoddy?

Mr. STEVENS. I could not tell you the exact percentage. The classifications under the paragraph that I mention include shoddy, and they all come in together as substitutes.

Mr. HILL. Do you know what the percentage of cotton is?

Mr. STEVENS. There is no cotton introduced into these goods in the manufacture. In the use of the by-products there may have been a small percentage that could not be eliminated except by carbonization, and in this suit—this piece of goods—the carbonization was not resorted to, and there may be not to exceed 4 per cent of cotton.

Mr. HILL. But there was no intention to put in cotton?

Mr. STEVENS. No intention whatever.

Mr. HILL. Then it would be either wool or wool substitute?

Mr. STEVENS. Yes.

Mr. HILL. You think these substitutes should go on the free list?

Mr. STEVENS. I see no reason why they should not.

Mr. HILL. If they were put on the free list—I am not expressing an opinion here as to whether they should be or not—if they should go on the free list, and if wool should go on the free list, in either case, whether they both or only one of them went on the free list, what do you think would be the proper duty on the cloth?

Mr. STEVENS. Forty per cent in excess of whatever duty was put onto the raw material.

Mr. HILL. Forty per cent in excess?

Mr. STEVENS. Yes.

Mr. HILL. If it was free your duty would be 30 per cent?

Mr. STEVENS. Yes.

Mr. HILL. Then you are just 20 per cent different in your ideas from the bill that was adopted by the House at the last session.

The CHAIRMAN. Do not take the gentleman's statement as representing the position of this end of the committee.

Mr. HILL. I do not propose to be called upon, Mr. Witness, by the chairman or anyone else to verify by facts and figures, and to produce the papers, to substantiate any question which I ask the witness. We might as well understand that. The bill first passed at the last session carried 20 per cent on wool. It was modified and carried the 29 per cent as it went to the President. I will ask you—

The CHAIRMAN (interposing). I hope the gentleman will allow me to state my position.

The gentleman is correct in his statement that the bill carried 40 per cent on cloth, 20 per cent on raw material, but this end of the committee contends that 1 per cent of the ad valorem rate that the duty going into the raw material, one-half of the duty levied on the raw material only counted against the finished product, and the manufacturer really got 30 per cent protection.

PARAGRAPH 373—NOILS.

Mr. HILL. I have not the slightest idea in asking you, Mr. Stevens—for I know you are an experienced and competent manufacturer—to go into the mysteries of the duty. I want to know what, in your judgment, should be the duty on the finished product of that class of goods, which, I take it, at a foreign valuation, would be less than 50 cents a pound.

Mr. STEVENS. Yes, sir.

Mr. HILL. What should be the duty on that class of goods coming into this country, provided wool substitutes were free?

Mr. STEVENS. The same duty that was imposed under the Wilson bill.

Mr. HILL. Yes. Now, then, I would like to ask you this other question: Would you be willing, as a manufacturer of that class of goods, to have the bill now pending in Congress providing for stamping and marking the contents of the cloth to become a law, as to the contents, as to the ingredients, or the materials from which it was made?

Mr. STEVENS. I do not think it would make any material difference.

Mr. HILL. You would not have any objection to that bill becoming a law?

Mr. STEVENS. I do not know that I should.

Mr. HILL. And you would not have any objection to requiring that the import of the foreigner should be stamped before it was received in this country as to the quantity of shoddy or by-products that were in the wool, and how much was pure wool?

Mr. STEVENS. I do not know that I should have any objection.

Mr. LONGWORTH. You stated that according to your best information the suit of clothes you have on would retail for about \$7.50. Now, suppose wool was on the free list and by-products went on the free list, what do you think would be the retail price of it?

Mr. STEVENS. It would be impossible for me to tell.

Mr. LONGWORTH. You have some idea?

Mr. STEVENS. I have never gone into that question. It would depend on a great many different things.

Mr. LONGWORTH. Of course that is true, but at least you ought to have some idea as to how much the consumer would be benefited.

Mr. STEVENS. The cost would either be undoubtedly less, or the cloth would be very much superior. We are now very much hampered to obtain the proper facilities or raw material to form a blend which will produce the best results.

Mr. LONGWORTH. You are not prepared to say, then, that free wool would make any substantial decrease in the retail price?

Mr. STEVENS. I think it would affect either the price or the quality.

Mr. LONGWORTH. I am confining my question entirely to the price. Are you prepared to say how much that would be reduced, if it would be reduced at all—the retail price—how much the retail price would be reduced?

Mr. STEVENS. I am not prepared to answer that, because I do not know anything about the position that dyestuffs would take under a new bill.

Mr. LONGWORTH. Assume that the present chemical bill would be passed.

PARAGRAPH 373—NOILS.

Mr. STEVENS. I am not familiar enough with it to discuss it.

Mr. LONGWORTH. I think Mr. Harrison can give you that information; it would be a reduction of about 50 per cent.

Mr. STEVENS. I could not answer that question. It is too complex. It is a hypothetical question, which always puts a witness in a hole.

Mr. LONGWORTH. I do not intend it at all as a hypothetical question. I am merely asking it from you as an expert on values, as to what, in your judgment, the taking of the duty off of wool and the placing of the by-products on the free list would have on the retail price?

Mr. STEVENS. I am a competent manufacturer, but not an expert on values.

Mr. LONGWORTH. Then you are not prepared to say that it would reduce the price?

Mr. STEVENS. Beyond a doubt it would.

Mr. LONGWORTH. It would certainly reduce the price, you think?

Mr. STEVENS. I do.

Mr. LONGWORTH. Well, then, to what extent?

Mr. STEVENS. I can not say as to that.

Mr. LONGWORTH. Would it reduce it to \$5?

Mr. STEVENS. I can not say.

Mr. LONGWORTH. \$6?

Mr. STEVENS. I am not expert enough to solve such a complex problem; it is dependent upon too many different conditions.

Mr. LONGWORTH. You think it would reduce the price somewhat, but you have no idea how much?

Mr. STEVENS. No, sir.

Mr. FORDNEY. Mr. Stevens, what class of raw material is that class of goods made of? Is it what we call live or new wool or from rags, shoddy—this \$7.50 suit of clothes?

Mr. STEVENS. I do not know that I understand your question.

Mr. FORDNEY. I want to be simple and am. What material is that cloth made out of that you have been talking about—that suit that retails at \$7.50?

Mr. STEVENS. It is made out of as many of the by-products that are mentioned in this section as we are able to obtain.

Mr. FORDNEY. Principally rags, is it?

Mr. STEVENS. No, sir.

Mr. FORDNEY. What then?

Mr. STEVENS. Noils, thread wastes, various articles that are mentioned there, and for shoddy, entirely new rags.

Mr. FORDNEY. And so that if the duty was less on wool and rags put on the free list the poor man can buy more clothes made out of rags?

Mr. STEVENS. No, sir; he can buy goods that have more of the better by-products. We shall not be forced to use as many of the lower by-products but can use more of the higher by-products. It is the high products that are controlled.

Mr. FORDNEY. Mr. Stevens, if I am correct in my information, of which I have not the figures here, but it is in my memory, rags were on the free list from 1894 to 1897, and the importation of rags greatly increased, and far exceeded then the importations now at 10 cents

PARAGRAPH 373—NOILS.

per pound. Those rags went into the production of clothes for the use of American people, did they not?

Mr. STEVENS. Undoubtedly.

Mr. FORDNEY. Whereas to-day a better material is going into cloth?

Mr. HARRISON. At that time the duty was 15 per cent ad valorem.

Mr. FORDNEY. Rags, I am speaking of. Fifteen per cent ad valorem as compared with 10 cents per pound is not a very wide difference.

Is it not true that the present rate of duty of 10 cents per pound practically prohibits the importation of rags, and that the American people are getting a better class of goods than they did when there were more rags imported?

Mr. STEVENS. My experience would lead me to say no.

Mr. JAMES. Just let me ask you whether or not as a manufacturer of cloth you would have any objection to a bill that requires cloth to be stamped as to whether it has a shoddy in it at all, and whether you would favor a bill that requires clothes that were reimported to be so stamped. I was just wondering whether or not you would have any objection to stamping on the cloth the amount of tariff the consumer is paying, so that he will be thoroughly advised.

Mr. STEVENS. I do not think so, sir.

Mr. LONGWORTH. What would you put on that suit?

Mr. STEVENS. I do not carry that in my mind, sir.

Mr. LONGWORTH. No; but you agree with Mr. James.

Mr. STEVENS. I only agree to this extent, that whatever is done generally, what is the general custom, any custom which affects the whole trade alike is going to be no injury to the individual.

Mr. FORDNEY. What rate of duty would you stamp, then, on these 16 samples set forth in the Tariff Board report, on which they say the duty is 184 per cent, but the benefit that the manufacturer is getting is about 69½ per cent? What rate of duty would you stamp on that class of goods, the rate fixed in the law or the difference the consumer pays over the foreign cost?

Mr. STEVENS. I have not seen the samples.

Mr. JAMES. I imagine you would stamp on that, if that were true, why the manufacturer wanted 184 per cent protection.

Mr. FORDNEY. To establish the industry which that rate of duty did, enabling them to compete with the foreign manufacturers and lower the cost of the article to the American consumer.

Mr. JAMES. That is the only article that I ever heard of that your tariff ever lowered.

The CHAIRMAN. That is all.

Mr. LONGWORTH. One more question.

Mr. HILL. I would like to ask another question.

Provided the duty on that sort of cloth was made 40 per cent, as you say you think it should be—I state you correctly, do I not?

Mr. STEVENS. Yes, sir.

Mr. HILL. Do you think the same rate of duty ad valorem should be made on cloth that is worth \$1.50 to \$2 a yard?

Mr. STEVENS. I am not discussing that; I am not here prepared to answer. I am not prepared to make any comparison between my goods and anybody's else. I have been confining my attention to my own line of goods.

PARAGRAPH 373—NOILS.

Mr. HILL. And you do not make any high-grade goods?

Mr. STEVENS. No, sir.

Mr. HILL. You have no opinion on that, whether the duty should be more or there should be a graded system?

Mr. STEVENS. I leave that to somebody else.

Mr. HILL. I know; but you are a manufacturer of large experience, and I asked the question thinking I would get an expression of your judgment on that question.

Mr. STEVENS. I have no judgment on it, sir, because I have no experience in that line.

Mr. LONGWORTH. Do you know what that suit of clothes would sell for in England?

Mr. STEVENS. No; I have no idea.

Mr. LONGWORTH. You have no idea at all? Do you know what the cloth would sell for?

Mr. STEVENS. No.

Mr. LONGWORTH. Do you know how the factory cost would compare with your factory cost?

Mr. STEVENS. No, sir.

The CHAIRMAN. That is all.

The following brief was filed by the witness:

Relating to raw material—

(1) To enable manufacturers to produce better goods at same price or less for the benefit of the consumer and enlargement of the trade.

(2) There have been no importations under 373 and 374 because of prohibitive duties. (See Vol. I, p. 72, of the Tariff Board report.)

Paragraph 378. Goods changed to 40 per cent guarded against false or under valuation.

Same as bill of 1894.

LETTER AND PETITION FILED BY HON. WILLIAM J. BROWNING, OF NEW JERSEY.

HOUSE OF REPRESENTATIVES, UNITED STATES,
Washington, D. C., January 17, 1913.

COMMITTEE ON WAYS AND MEANS,
House of Representatives, Washington, D. C.

GENTLEMEN: My attention has been called, by the firm of Eavenson & Levering, of 217 Atlantic Avenue, Camden, N. J., to a discrepancy in the present tariff law with regard to noils which they are desirous of having brought before your committee, in the belief that it is only necessary to bring the matter to the attention of the committee in order to obtain proper readjustment.

Noils, as you know, are the short fibers removed from combing wool in the operation of combing and contain a great deal of dirt and vegetable matter. Our business consists very largely of carbonizing these noils, thereby removing all vegetable defect, such as shives, burrs, etc., and rendering the noils fit for use in fine felts, ladies' and children's underwear, hosiery, and woolen dress goods.

In the operation of carbonizing the noils lose in weight from 10 to 30 per cent, and in some cases even higher than 30 per cent. The present law calls for a duty of 20 cents per pound on noils regardless of whether the noils are imported in the original or carbonized states. This appears to us to be a weakness in the present law, for the principle of imposing a greater tax on clean stocks than on stock containing grease, dirt, etc., has been clearly established in paragraph No. 366 of the present act. This paragraph recites:

"The duty on wools of the first class which shall be imported washed shall be twice the amount of duty to which they would be subjected if imported unwashed; and the duty on wools of the first and second classes which shall be imported scoured shall be three times the duty to which they would be subjected if imported unwashed.

PARAGRAPH 873—NOILS.

The duty on wools of the third class, if imported in condition for use in carding or spinning into yarns, or which shall not contain more than eight per centum of dirt or other foreign substance, shall be three times the duty to which they would otherwise be subjected."

The principle applied to wool in this paragraph of the present act should apply to noils, for the situation is exactly parallel. There appears to be no reason for permitting a clean, carbonized noil to enter at the same rate of duty as a grease noil.

A failure to recognize the principle that the clean stock should bear a heavier duty than the stock containing vegetable matter, dirt and grease, will induce all importers to bring in carbonized noils in preference to noils in the original state and in this way a considerable portion of the duty is evaded.

Noils will shrink in the process of carbonizing on the average of 20 per cent and their value is increased to the amount of shrinkage plus the cost of the operation of carbonizing, which cost in England is about one and one-quarter pence or 2½ cents and in this country is about 3½ cents per pound. The average price of noils in this country is about 35 cents per pound.

We do not desire to put ourselves on record as advocating any special duty on noils; but we do claim that our business is entitled to protection, at least to the extent that we can afford to maintain our present standard of wages.

The duty of 20 cents per pound on noils in the present act does not admit of the importation of noils in either the original or carbonized states; but the provision of 20 per cent as provided in the Underwood bill which recently passed the House, or 25 per cent as provided in the La Follette bill as passed by the Senate, or 29 per cent as provided in the conference bill as passed by both the Senate and House of Representatives, and vetoed by President Taft, will permit of enormous importation of noils. None of these bills made a provision for a higher duty on carbonized noils than on noils in the original state and, consequently, all of the noils which would be imported will be carbonized noils and on this basis it is inevitable that our plant must close down.

Yours, very truly,

WM. J. BROWNING.

[Petition.]

CAMDEN, N. J., December 31, 1912.

HON. WILLIAM J. BROWNING,
House of Representatives, Washington, D. C.

DEAR SIR: We, the undersigned employees of Eavenson & Levering, Camden, N. J., engaged in the business of scouring, carbonizing, and combing of wool, and being voters in the first district of New Jersey, earnestly request that you use your influence to prevent the enactment of legislation prejudicial to our interests.

We feel that the passage of a bill with provisions as severe as the recent Underwood bill will certainly close the plant in which we are employed. A condition which deprives us of our occupation or which renders impossible the maintenance of our present standard of wages we hold to be an injustice, and we appeal to you for support and consideration.

Yours, very respectfully,

A. L. ROHMER
(and 213 others).

BRIEF OF W. WOLF & SONS, BOSTON, MASS.

BOSTON, MASS., February 20, 1913.

The Hon. OSCAR W. UNDERWOOD,
Chairman the Ways and Means Committee, Washington, D. C.

DEAR SIR: We beg to call your attention to one paragraph in the existing tariff act, which is causing importers of cotton waste considerable expense and trouble. We are referring to paragraph No. 373, reading as follows:

"Noils, wool extract, yarn waste, thread waste, and all other wastes composed wholly or in part of wool, and not specially provided for, 20 cents a pound."

This same provision was in the Dingley tariff of 1897.

This paragraph is applied on importations of cotton waste arriving over here, which at times contain a small percentage of thread waste made from shoddy rags and other cheap substitutes for both cotton and wool coming from the mungo mills in Europe.

PARAGRAPH 373—NOILS.

Every cotton and woolen appraiser in the customs department knows for a certainty that this stock can not either as a whole or in any part be used as wool waste or as a substitute for wool waste. This stock is used in the manufacture of wiping waste—that is, waste for cleaning engines and machinery, and bought by railroads, machine shops, and other similar industries. The value of the material is about 4 cents per pound when any of these mungo threads are in the material, and about $4\frac{1}{2}$ to $4\frac{3}{4}$ cents when the stock is all pure cotton, free from mungo threads, so you can see that the presence of these mungo threads in the material is a detriment. It is impossible, however, to sort these mungo threads out, and it is equally impossible for the mills who make this waste to keep the pure cotton separate from the mungo, as the stock is merely a refuse of yarn from their weaving department. The stock can not be shoddied and used for spinning purposes, as the staple on it is too short, but the appraisers say that on account of paragraph No. 373 they have no choice, but must assess duty at the rate of 20 cents per pound, which is, approximately, 500 per cent of the value of the stock.

If the mungo threads are discovered early enough in the material, the stock can be reexported; that is, if it has not left the custody of the Government. If it should have left the custody of the Government when the mungo threads are discovered, the importer is forced to pay the outrageous duty of 20 cents per pound on a material which is worth 4 cents a pound. This material, being of such low value, is handled in Europe in a rather careless way; that is to say, the people who collect it from the pants factories there can not afford to waste much time and energy on a careful examination of it to see whether it is pure cotton or whether there are some mungo threads in it, and it is practically impossible to get the stock free from mungo threads at any and all times. In other words, the importer buys cotton waste in good faith and expects cotton waste and instead of this may receive a sprinkling of mungo threads and other material, without having any recourse on the party from whom he buys it.

We do expect slight variations in quality in our business, as we are not handling the product of factories, but solely the refuse of these factories, and the refuse in all factories is handled more or less carelessly, notwithstanding the fact that it has a certain value.

The difference in the price of material which is free from mungo and that which contains mungo is not very big, and one might overlook an occasional shipment which contains some mungo threads, as far as the quality of the stock is concerned, but the hardship is caused by the customs officials assessing a duty of 20 cents per pound on the material.

There have been several decisions under this act. One was merchandise composed of $91\frac{1}{2}$ per cent cotton waste and $8\frac{1}{2}$ per cent wool waste. This material was found dutiable at 20 cents per pound under T. D. 21409. In another case (T. D. 26519) sweepings from cotton and wool mills containing not more than 1 per cent of wool sweepings, of no commercial value as wool, were assessed 20 cents by the customhouse, but after several years' litigation the importers recovered the duty paid.

We ourselves had a case last fall where a shipment of 130 bales arrived here. We expected it to be pure cotton waste—had sold the stock and gave orders to have the stock weighed and shipped. One car was loaded by the railroad company and shipped, when it was discovered that there was some of this mungo material in it. We tried to get the one car back from the railroad company, but it had already left Boston, but we gave immediate orders to hold the rest of the stock on the dock. The car eventually came back to Boston under the original unbroken seals, but at first permission was denied us to export this car, as it had technically left the custody of the Government. After considerable negotiations with the department in Washington we finally, through our attorneys, secured permission to export the merchandise. All of it was exported except two bales, which, apparently, were lost or stolen from the dock, and we had to pay about \$400 duty on these two bales, notwithstanding the fact that we never got any of the bales. The expense of handling this matter and getting the goods back to Europe was over \$1,000 on an importation which was worth not quite \$4,000 to start with.

Now, it seems to us that Congress never intended that cotton waste, costing about 4 cents, should be subjected to this provision of law, and we believe the matter has never been properly presented to your committee. It seems to us that the paragraph should read as follows:

“Noils, wool extract, yarn waste, thread waste, and all other wastes composed wholly or in chief value of wool, and not specially provided for.”

Then the customs officers would realize that this material is meant to be admitted free of duty, and there is no doubt in our minds at all but that no manufacturers, importers, exporters, dealers, or consumers of wool waste would have any objections to

PARAGRAPH 374—WOOLEN RAGS.

having this material admitted free of duty, as it is known, bought, and sold as cotton waste, and does not enter into the manufacture of anything which is known as wool waste.

The Government does not derive any revenue from this article, as the duty is absolutely prohibitive, and when an importer finds that he has received a shipment of this kind the only thing he can do is to strain every effort to get permission to re-export the merchandise, and we respectfully recommend this matter to your careful consideration.

Yours, respectfully,

W. WOLF & SONS,
OTTO BACHMANN,
Assistant Manager.

PARAGRAPH 374.

Woolen rags, mungo, and flocks, ten cents per pound.

WOOLEN RAGS.**TESTIMONY OF SMITH E. ALLISON, ON BEHALF OF THE GENERAL ROOFING MANUFACTURING CO., YORK, PA.**

Mr. Allison was duly sworn by the Chairman.

Mr. ALLISON. Mr. Chairman and gentlemen of the committee, it seems that the business which I represent is what is left over after you get through with all the rest of the gentlemen here.

We believe that when a large business interest has a request to make that the most successful way would be to lay the facts before the proper authorities and show the merit of our request, and then hope for effective action.

Therefore we wish to advise that the manufacture of felts for our line of business requires a tonnage of rags which the United States can not supply in sufficient quantities, and the present laws governing importation of rags suitable for this purpose are so restricted that we can not bring in enough of the foreign rags available. The duty prohibits the importation of the best grades of rags for use in the manufacture of roofing and saturating felts, because the highest price paid for rags used for this purpose in the history of the business is 1½ cents per pound, and even this price has only obtained once in a period of 10 years. It can be seen from the chart attached, showing the fluctuation in the price of rags used in making roofing and saturating felts, that this average high price was reached last October. You will also note from the attached chart the remarkable fluctuation in the average price of rags used for this purpose during the past several years. You will note that the fluctuation in price shows a remarkable range during each of the years shown in the chart. This unusual fluctuation in the price of raw material is due to the fact that not enough rags are available in the United States to supply the roofing and saturating felt manufacturers, as above stated.

We attach a classification of rags under which we do our buying as far as possible, and the better classes of the rags specified in this classification can not be brought in from other countries. There are large quantities of rags collected in European countries which should be used in making felts and which contain wool, and which can not be imported into the United States for the manufacture of roofing and saturating felts on account of the duty on it of 10 cents per pound. If these rags could be imported into the United States, it would enable the manufacturers to increase their production and distribution of

PARAGRAPH 374—WOOLEN RAGS.

their products to a considerable degree, and at the same time enable them to make a better product than they can now do with the cotton rags they are permitted to import duty free. You will readily see that our line uses rags which are not usable for any other purpose and which are not good enough for other lines. We practically take the refuse in rags, and when rags are good enough for other purposes they are much too expensive to be used in our line.

The manufacture of roofing and saturating felts started in this country, and practically all of the material of this nature manufactured is made in the United States, there being only a few small manufacturers of these materials located in foreign countries. As the law stands to-day, we are permitted to import only soft cottons, and the European market is cleaned of these lower-grade rags because of the American demand, and the European manufacturer is left undisturbed in possession of all the best-grade rags, so that he will soon build up his little business and surpass our American manufacturers, who have done all the experimenting and paved the way to the successful use of these goods throughout the world. There are at least seven roofing or felt manufacturers in the United States exporting these lines, and some of them export to all well-known countries and should remain in possession of this trade, which has been started at great expense.

Germany bids fair to become very active in this line, and we have recently received overtures to accept German financial backing and manufacture our goods in Germany, not only for the German trade, but for shipment from there throughout the world. Under the present law the foreigner is going to get much more encouragement for his manufacture for foreign markets on account of these conditions than the American can get. We think this is wrong.

As the tariff act now reads, woolen rags, mungo, and flocks are assessed at 10 cents per pound, while all other rags not otherwise especially provided for and used chiefly for paper making come under the free list.

No rags for our line can pay such a duty, so none are imported which are subject to duty, for our purpose, so this proposed change in the law will not reduce the revenue.

To meet these conditions it would seem that the tariff act relating to rags should be so amended as to allow such rags as used in the manufacture of felts and paper be admitted free, and that could be done by amending the present Payne tariff law as follows: Eliminating from section No. 374 the words "woolen rags" and "flocks"; also eliminate from section No. 644 the following "(other than wool)"; with no change necessary on article No. 660.

Therefore it appears to us that it would be fair and proper if the law could be changed so that any rags, which will be used in our line of business and which cost not more than 2 cents or 3 cents per pound—if such restriction is desired—shall be permitted to come in free of duty instead of as the present law stands, which practically admits soft cottons only. It is our understanding that the reason duty is assessed on rags containing wool is due to the desire to protect shoddy clothing manufacturers in the United States, as shoddy clothing is made from old wool garments broken down and shredded,

PARAGRAPH 374—WOOLEN RAGS.

and woven into new cloth. We are told that rags containing less than 50 per cent of wool do not warrant the shoddy manufacturers breaking them down and converting them into shoddy cloth, because this is done by chemical processes which destroy entirely all of the material other than the wool which they contain, the loss on which makes the process prohibitive.

The rags only contain a very small per cent of higher-grade stock, and after assortment it leaves the foreign manufacturer with the higher-grade stock and we get the lowest grade of rags, and we need the other grades to use in connection with the low grades received.

Our information is that a law changed as suggested above would give us a very substantial increase from the collectors in the foreign field, as little manufacturing is done in our line in any foreign countries. Germany, England, and France are just producing in a small way in these lines, as above stated. We should have a fair show to hold the trade we have started in all foreign fields.

There is one particular feature that we would like to place before the committee prominently, and that is, that the United States is not receiving any revenue on this class of rags now, and never will as long as a tariff is on them, so that their permitting roofing rags to come in free of duty will not cut the Government out of any revenue, and will undoubtedly benefit anywhere from perhaps 20 to 50 manufacturers of this line of material and the people of the United States as well.

We therefore respectfully submit the above for your consideration, and if you find it consistent to remove the duty from rags containing wool we believe that you will be doing the manufacturers of these materials in the United States, and the whole people of the United States, a valuable service.

The CHAIRMAN. The clothing made out of these rags is all-wool clothing, is it?

Mr. ALLISON. I do not know whether it is or not, but, as I understand it, clothing can not be made out of them.

The CHAIRMAN. You can not tell?

Mr. ALLISON. No; but I am sure no clothing can be or is made out of them.

Mr. HARRISON. Mr. Allison, the present rate of duty upon rags is 10 cents a pound?

Mr. ALLISON. For that class of rags with more than 10 per cent wool.

Mr. HARRISON. There is but a small amount of it that comes in, which works out at about 32 per cent ad valorem. The committee is in favor of having a lower rate if we would get a good deal of revenue. Suppose the committee did not wish to put it on the free list, what would be the figure you would suggest at which these rags should be imported?

Mr. ALLISON. They would not be imported at all.

Mr. HARRISON. Do you think under 20 per cent duty—

Mr. ALLISON. It would be impossible.

Mr. HARRISON. That would still be prohibitive?

Mr. ALLISON. Absolutely.

Mr. HARRISON. At 3 cents a pound?

PARAGRAPH 374—WOOLEN RAGS.

Mr. ALLISON. It would be just sufficient to cut us out of that line of business entirely.

Mr. HARRISON. Suppose we adopted a 10 per cent rate?

Mr. ALLISON. It would not stand a cent.

Mr. HARRISON. That sounds a little unreasonable.

Mr. ALLISON. I believe, when you consider the price of 1 cent to a cent and a half per pound, we are paying now, it does not sound unreasonable.

Mr. HARRISON. A 10 per cent ad valorem duty on rags worth 3 cents per pound is three-tenths of a cent per pound, is it not?

Mr. ALLISON. That is sufficient to kill it. This business is not coming in now, and it will not come in unless it is free.

Mr. KITCHIN. Rags would be as cheap here as anywhere in the world if a 10 per cent or a 5 per cent duty would be prohibitive.

Mr. ALLISON. They are.

Mr. KITCHIN. Then, what do you want them to come in free for?

Mr. ALLISON. Because we want more. It is not a question of price. It is a question of quantity.

Mr. HARRISON. Do we not have a large export trade in rags?

Mr. ALLISON. No, sir.

Mr. HARRISON. You are certain about that?

Mr. ALLISON. I am very certain.

Mr. HARRISON. We do have export?

Mr. ALLISON. Not in rags.

Mr. HARRISON. Not in rags?

Mr. ALLISON. No, sir.

The CHAIRMAN. Some of the witnesses testified that there were large exports.

Mr. ALLISON. Not in that class of rags.

Mr. FORDNEY. I think the statistics showing exports show they do have protection on your finished product, roofing, do they not?

Mr. ALLISON. Not that I know of.

Mr. FORDNEY. What sort of roofing do you make? Where, in the tariff law, is your finished product found?

Mr. ALLISON. It is not found there at all. I do not think it is classified there at all.

Mr. FORDNEY. Paragraph 371.

Mr. KITCHIN. How much of a tariff do you want on your finished product?

Mr. ALLISON. I am not asking for anything in that respect at all.

Mr. KITCHIN. You are willing to have those go on the free list, are you?

Mr. ALLISON. Yes.

Mr. LONGWORTH. Is your product roofing felt?

Mr. ALLISON. That is one of the raw products, yes, sir; but it is roofing when it is completed.

Mr. FORDNEY. But the material is roofing felt out of which you make your tar paper?

Mr. ALLISON. No: asphalt roofing.

Mr. FORDNEY. What is the roofing felt?

Mr. ALLISON. That is one of the bases.

Mr. FORDNEY. There is a duty of 10 per cent on that?

PARAGRAPH 374—WOOLEN RAGS.

Mr. ALLISON. Coming in?

Mr. FORDNEY. Yes.

Mr. ALLISON. I have not looked that up.

Mr. FORDNEY. That is one of your products, and you ought to look that up when you ask for free trade on your raw materials.

The CHAIRMAN. I understood him to say he had no objection to his finished products being put on the free list.

Mr. FORDNEY. Yes; because they have competition abroad and do not have it here.

Mr. ALLISON. Either way. We are willing to fight it either way with or without 10 per cent protection on felt. We have more competition here than most any other business I know of. We did not look to see if we had protection on roofing because we were willing to compete with the world on it, but we don't want the world to have an advantage over us on rags.

Mr. FORDNEY. When that article is used in the manufacture of clothing it comes into competition with wool, and goes into clothing that is called the poor man's clothing, and that cheap grade of clothing goes to a man at a low price. Of course, that is an imposition upon him in many cases. I have felt that this prohibitory duty on rags is a mighty good thing for the poor people of this country, because they are getting a better class of clothing than they would if they were getting more goods made out of those rags.

Mr. ALLISON. No; these rags have no bearing whatever on clothing. They are not used for the manufacture of clothing, as we understand it. It is refuse after everything else is taken out. They will not come in with a tariff, and you will not lose any revenue by having them come in, if they are made free. They can not be made up into cloth or anything else; it is utterly impossible. As I stated in this brief, when there is less than 50 per cent of wool, as we understand it, it does not pay the man who makes the shoddy clothing to break those rags down. After that they will become worthless for any other purpose but ours.

The CHAIRMAN. How do you classify your rags as against wool rags that a manufacturer will import and make clothing out of? How do you differentiate between the two?

Mr. ALLISON. Well, I do not know what they would call theirs. I am not conversant with their class of rags. I do not pay any attention to theirs; but ours are called roofing rags. They are absolutely the refuse after everything else is sorted out of them that can be used for any other purpose.

The CHAIRMAN. Do you think if we would designate them as "roofing rags" in the bill that the customs officials would understand and distinguish between them and the others?

Mr. ALLISON. Very easily. There is a big wide gap there that could not be mistaken.

The CHAIRMAN. That is all.

Mr. FORDNEY. If you could designate them as "roofing rags," and enact some law that would prohibit their use for clothing, that would be one thing.

Mr. ALLISON. It would be impossible to use them for clothing.

Mr. FORDNEY. They use them in shoddy by blowing them into the web?

PARAGRAPH 374—WOOLEN RAGS.

Mr. ALLISON. Not that grade of rags.

Mr. FORDNEY. They can blow anything?

Mr. ALLISON. No; not that. They can not do it with those rags as we understand it.

Mr. FORDNEY. All right. Thank you.

The CHAIRMAN. That is all.

No. 2. Pants, coats, vests, mixed linsies, seams, stockings, shirts, large cotton rags, and women's garments.

The above shall be dry and clean, and free from old papers, felt boots, hats, corsets, suspenders, oilcloth, matting, leather, rubber, gunny, bagging, canvas, mackintosh clippings, window shades, rope, strings, pasted stock, wood, stones, metal of all kinds, and any and all materials unsuitable for the manufacture of paper.

No. 3. Linings, rag carpets, and small cottons.

The above shall be dry and clean, and free from old papers, felt boots, hats, corsets, suspenders, oilcloth, matting, leather, rubber, gunny, bagging, canvas, mackintosh clippings, window shades, rope, string, pasted stock, wood, stones, metal of all kinds, and any and all materials unsuitable for the manufacture of paper.

No. 4. Brussels and hard-back carpets.

The above shall be dry and clean, and free from old papers, felt boots, hats, corsets, suspenders, oilcloth, matting, leather, rubber, gunny, bagging, canvas, mackintosh clippings, window shades, rope, strings, pasted stock, wood, stones, metal of all kinds, and any and all materials unsuitable for the manufacture of paper.

No. 5. Tailor rags.

The above shall be dry and free from metals, tin cans, wood, glass, bottles, ashes, bones, stones, excelsior, shoes, window shades, leather, corsets, suspenders, hats, and not to contain to exceed 10 per cent of old papers.

From and after this date (July 10, 1908) all orders for rag stock will be specified by grade and classification as above.

In the event that shipments do not conform to grades specified and the classification as stated herein, the stock will be accepted and used at the value of the actual grade shipped as indicated above, but any bale containing stock of lower grades will be accepted only at the classification of the lowest grade packed therein.

When stock of an inferior grade is shipped, and that fact is apparent without opening packages, notice will be promptly given by our receiving departments in order that an examination may be made by shippers. We can not, however, agree to hold shipments of inferior grades for adjustment, assorting, or reshipment, as our warehouse facilities and unloading platforms are of such limited capacity that it is impossible to store defective goods sent us. We want only the grades ordered and of the classification stated herein, but when shippers send us other grades than those specified we require that settlement be accepted on the basis of the grades stated herein. Bales containing prohibited material as mentioned above will not be accepted at any price.

Should stock shipped us, which appears to be of grade billed, prove, on opening the packages, to be of an inferior grade, we reserve the right to charge and collect the difference in value when the defect is discovered.

Marks: It is necessary that each shipment, and every package of each shipment, be tagged with a distinguishing mark, in order that it can be positively identified on arrival at the mill. Such marks should be clearly noted on each invoice.

Invoices: Separate invoices, accompanied by bill of lading, should be rendered invariably for each consignment, or carload, with notation of order number, marks, total number of packages, grade and total weight and car number, and a list of weights of each grade.

Shippers of stock must assume all risk of loss or delays when invoices, bills of lading, and marks are not sent us as requested above.

On and after July 10, 1908, this classification cancels all former classifications.

PARAGRAPH 374—WOOLEN RAGS.

BRIEF OF THE NATIONAL ASSOCIATION OF WOOL FIBER MANUFACTURERS.

Granting that such a thing as free raw material must be accepted as a concrete expression, "woolen rags" come as close to such a definition as any material that is used as a basis for manufacture. It is a well established axiom in political economy that with a protective duty on a raw material, the article of manufacture made from this raw material must carry a compensatory duty to offset the tax on the raw material before the manufactured article can be said to enjoy any tariff protection.

And yet in section No. 2, H. R. bill 11019, "woolen rags" the raw material are classified with the manufactured products "shoddies, wool extracts, and mungoes," which are made from woolen rags, and all raw material and manufactured products together are set down at 20 per cent ad valorem.

Whether woolen rags require any duty at all considering that a large exportation to all parts of Europe is now going on, we will leave to your judgment; but we do know that wool shoddies, wool extracts, and mungoes need more than 20 per cent ad valorem, unless you want to close our factories down and import the inferior European shoddies.

On account of an erroneous statement made by the Tariff Board last year, to the effect that "shoddies," or "pulled rags," were being exported to England, we then corresponded with the United States consul at Bradford, who consulted Government officials, harbor masters, dealers, and manufacturers of England; they all deny that such was a fact. Incidentally, a Mr. Fox, who deals in this class of materials in England as well as in the United States, states in his letter that "exportation of American shoddies to England is impossible, because he knows that it costs twice as much to pull rags here from what it does in England." (See Exhibit A.)

Exhibit B is taken from the Government census of 1909 (the latest census that was available to us), showing that with the number of shoddy mills declining from 105 in 1899 to 88 in 1909, and no two combining, domestic competition regulated matters so that their invested capital of \$6,887,000 has only earned \$581,037, or less than 8½ per cent, and this is making no allowance for wear and tear on machinery and plant.

Although the Englishman, Mr. Fox, in Exhibit A, acknowledges that it costs us twice as much to manufacture as it does in England, we do not ask for that extent of protection, but would be content to remain on a competitive basis, as per Exhibit C.

Mungo:

Cost of—	Cents.
Raw material..... per pound..	2. 00
Cleansing and carbonizing (process removes all cotton and dirt), per pound.....	1. 50
Shrinkage of material, 30 per cent.....	1. 50
Shoddying, including oil.....	3. 50
Cost of the shoddy (see sample No. 1).....	<u>8. 50</u>

Old worsted shoddy:

Cost of—	
Raw material..... per pound..	4. 00
Cleansing and carbonizing (process removes all cotton and dirt), per pound.....	1. 50
Shrinkage of material, 30 per cent.....	2. 50
Shoddying, including oil.....	3. 50
Cost of the shoddy (see sample No. 2).....	<u>11. 50</u>

New worsted shoddy:

Cost of—	
Raw material..... per pound..	16. 00
Cleansing and carbonizing (process removes all cotton and dirt), per pound.....	1. 50
Shrinkage of material, 12 per cent.....	2. 00
Shoddying, including oil.....	3. 50
Cost of the shoddy (see sample No. 3).....	<u>23. 00</u>

PARAGRAPH 374—WOOLEN RAGS.

The above demonstrates that on mungo, with a raw material value of 2 cents and a manufacturing cost of 6½ cents, 20 per cent protection as per the Underwood bill would be useless in face of the acknowledgment of the English manufacturer "that they can manufacture for one-half of what it costs us." In other words, 20 per cent protection would be no protection until we get up to the higher priced shoddies in the neighborhood of 20 cents.

[Copy of letter.]

EXHIBIT A.

AMERICAN CONSULAR SERVICE,
Bradford, England, April 1, 1912.

FRED RAWITSER, Esq.,
National Association of Wool Fiber Manufacturers.

DEAR SIR: Referring to my letter of March 16, in regard to American pulled woollen rags being imported into England, I beg to say that I am just in receipt of a letter on the subject that may interest you. It is from Mr. H. M. Fox, rag merchant, Carr Bridge Mills, Batley Carr, Dewsbury, who, according to his letterhead, is the "largest importer in England of American rags" and represents M. Fox, 650-656 Clinton Street, Buffalo.

After explaining that his delay in replying to my letter of inquiry was due to his illness, Mr. Fox says:

"As I am the largest importer in England of American rags, I can safely say that very little pulled rags enter England (if any).

"I have imported nearly 20,000 bales of rags in the last 15 months weighing 7,000 to 8,000 tons, and in all this stock I may say there was only about 2 tons of pulled rags, and that was of a very low grade.

"I do not understand at all how the English trade statement makes such an account, as there is not one-half per cent of pulled rags. It is puzzling to me.

"Another reason why I know and am positive that pulled rags are not imported into England is that it would not pay the American shoddy manufacturer to pull his rags in America and then ship them here. It costs just half to pull rags in this country that it does in the States.

"It is true that nearly all rags come via Liverpool and Hull, and as long as I have seen rags at these ports, I never yet have seen pulled rags.

"I handle all kinds of rags (every grade that is imported), and if there was any pulled rags imported, I surely would know about it."

Very truly, yours,

AUGUSTUS E. INGRAM, *Consul.*

(P. S. Pulled rags are what we call shoddy in the United States.)

EXHIBIT C.—Schedule as adopted by us and which we still consider highly competitive with Europe.

Top waste, slubbing waste, roving waste, ring waste, garnetted waste, noils, yarn waste, thread waste, carbonized wools and noils, card waste, burr waste, and all other wastes, composed wholly or in part of wool and not specially provided for in this section, 30 per cent ad valorem.

Shoddy, wool extracts, and mungo, 30 per cent ad valorem above rag duty.

Woolen rags and flocks, if any duty, 10 per cent ad valorem.

FRED RAWITSER, *Secretary.*

R. BOOMFIELD.

J. S. CORDINGLEY.

T. H. GRAY.

PARAGRAPH 375—WOOL TOPS.

PARAGRAPH 375.

On combed wool or tops, made wholly or in part of wool or camel's hair, valued at not more than twenty cents per pound, the duty per pound shall be two and one-fourth times the duty imposed by this schedule on one pound of unwashed wool of the first class; valued at more than twenty cents per pound, the duty per pound shall be three and one-third times the duty imposed by this schedule on one pound of unwashed wool of the first class; and in addition thereto, upon all the foregoing, thirty per centum ad valorem.

WOOL TOPS.

TESTIMONY OF WILLIAM J. HOLT, OF MANAYUNK, PHILADELPHIA, PA.

The CHAIRMAN. The next witness on the calendar is Mr. William J. Holt, of Philadelphia. Is Mr. Holt present?

Mr. HOLT. Yes, sir.

The witness was duly sworn by the chairman.

The CHAIRMAN. You may proceed, Mr. Holt.

Mr. HOLT. Mr. Chairman, I have not prepared a brief. I came here really in the general interest of wool and worsted yarns, spinning, with the idea that we want wool to be put on an ad valorem basis, and that any impost in an ad valorem way that was not made high enough on the goods would simply mean that we would be wiped out.

I could make a brief statement, Mr. Chairman, but my particular preparation would best enable me to answer questions.

The CHAIRMAN. You may go ahead and make your statement. You are recognized for 10 minutes.

Mr. HOLT. We are bringing in to-day, of all the wools being used in the country, 60 per cent scoured, and we are paying from 30 per cent to as high as 70 per cent above the world's price. The argument was put up by some of these gentlemen who preceded me that before they could bring their cost down to a competitive basis they would have to get wool at something like a competitive world's rate. As I understand it, we have had a tariff on wool for almost 100 years, and we have had about 26 changes in the bill. In spite of that fact we are to-day only growing something like 40 per cent of the scoured wool, and we have fluctuations here entirely independent of the fluctuations abroad. At times these fluctuations are very considerable, such as we had two years ago, when we were exporting some wool in spite of the tariff.

We can not compete unless we have a protection that will equalize our costs with the costs abroad. If there is any impost on the wool, we should certainly have a sufficient compensation to protect us in the difference of our labor and other costs above those of the foreign manufacturers.

The particular item in the proposed bill which occurred to me to be wrong was the impost on tops, which was only something less than 6 per cent above the impost upon the wool. It used to be recognized that in order to get the tops you must scour the wool, and the average shrinkage on all wools alike would be 50 per cent, and certainly if we are only going to get a change to the extent of the difference between

PARAGRAPH 375—WOOL TOPS.

28 per cent and something like 33 per cent, we could not stand it at all. It would simply wipe us out in this country.

The CHAIRMAN. You know we did not altogether underwrite the Tariff Board, but on that particular item you are talking about they happened to agree with us exactly, and that seemed to indicate that our increase on tops above the raw wool was all right.

Have you read their report on that question?

Mr. HOLT. If I have, I have not agreed with it.

The CHAIRMAN. If we place a duty on raw wool of 20 per cent and on tops of 25 per cent, you do not think 5 per cent additional ad valorem is sufficient?

Mr. HOLT. Absolutely I do not, Mr. Chairman. For instance, if the wool would shrink half, which it will in all wools alike, it would immediately jump the cost of the scoured wool up to 40 per cent. To get tops you have got to scour the wool, and, more than that, you have got to put a certain amount of labor on it which would easily equal 5 cents a pound as our charges go.

The CHAIRMAN. The ad valorem rate advances the value as well as the rate.

Mr. HOLT. I do not quite understand you.

The CHAIRMAN. If you had a pound of wool valued at 25 cents and had a tax of 20 per cent—

Mr. HOLT (interrupting). Are you speaking of unscoured wool now?

The CHAIRMAN. Yes. At 20 per cent you have a tax of 5 cents a pound. When that wool goes into a top how much is the wool in the top worth?

Mr. HOLT. You must scour it to get it into a top. Do you mean how much is the wool worth in a top? If the wool costs in the grease 25 cents a pound and the impost would be 5 cents a pound, that would make it cost 30 cents.

The CHAIRMAN. What is a pound of top worth?

Mr. HOLT. You might as well ask me what is a man worth.

The CHAIRMAN. Take the same class of wool.

Mr. HOLT. Tops are usually worth, speaking offhand, 10 cents a pound above the cost of the scoured wool. That is a quick way of arriving at it.

The CHAIRMAN. Then if the wool is worth 25 cents, your top would be worth 35 cents and your original 20 per cent on that raw wool has increased from 5 cents per pound to 7 cents per pound; you have made 2 cents there besides the increase in the ad valorem rate.

Mr. HOLT. You haven't given credit to the fact that if you were putting that impost of 20 per cent on the scoured wool then it would be all right. But it is not on the scoured wool; it is on wool in the grease.

The CHAIRMAN. In our bill it is the same on scoured wool as it is on wool in the grease.

Mr. HOLT. The same on scoured as it is on wool in the grease?

The CHAIRMAN. Yes.

Mr. HOLT. Then I have not read it right. If it is the same flat amount on scoured, it is all right, and I agree with you.

The CHAIRMAN. Then you and the Tariff Board and ourselves have all got together.

PARAGRAPH 375—WOOL TOPS.

Mr. HOLT. Yes.

The CHAIRMAN. Is there anything further, Mr. Holt?

Mr. HOLT. No, I suppose I have gone far enough.

BRIEF OF CHRISTIAN BEHNSEN, PASSAIC, N. J.

PASSAIC, N. J., *January 14, 1913.*

I herewith beg to submit a brief on a proposed tariff on woolen and worsted goods coming under classes 1 and 2 of the present classification of Schedule K.

In submitting same I beg to state that my propositions are based on my practical experience in manufacturing and also on my experience as an importer of this class of goods for over 20 years.

At the outset it is my opinion that specific duties are preferable to ad valorem duties for the following reasons:

Specific duties based on yardages, pounds, or measures tend to a more honest way of appraisement and collecting of the proper duties.

Undervaluation, even unintentional undervaluation or overvaluation, will be greatly eliminated by same, and only gross fraud in giving wrong weights, yardages, or measurements would be left open for a dishonest importation of merchandise.

For obvious reasons based on economic conditions existing in the United States a purely specific duty can not be applied to merchandise as comprised in above-mentioned classification of Schedule K.

In my proposal submitted herewith I have therefore made classifications and groups of the various products of woolens and worsteds. This method in my opinion comes nearest to supplant the desideratum of specific duties.

Such classification will render more revenue to the Government and will also be more justifiable to the honest importer and give more encouragement to importation wherever and whenever foreign goods come into competition with our domestic manufacture. No appraiser can judge the value of wool or its products within 5 per cent and in many instances, especially where high-priced fabrics are concerned, within 20 per cent or more, even if being the most efficient man that could be obtained for this work. I can not conceive of a method by which purely specific duties could be levied justly under the economic conditions existing in the United States, and for this reason only I beg to submit a plan for levying duties ad valorem, based on classifications of merchandise coming under class 1 and 2 of Schedule K.

In the administrative act, I advocate that no penalty should be imposed if goods are not invoiced at the exact value which the appraisers may put on them, providing the invoice price is within 10 per cent of the appraised value. Naturally, with classifying merchandise into groups there will be a tendency to import goods at prices just near the highest price of the group in order to have the benefit of the duty of this group, but such a tendency on the part of the importer can easily be detected by the appraisers, and if for good reasons the appraisers then advance the price of merchandise to make market value same would come into the higher group or class and the penalty for the importer will then be large enough without imposing any special penalty. For this reason the levying of duties by groups and classifications will tend to more honesty in importations and therefore higher revenue from importations.

In order to classify the various groups the duty on wool in the grease is of basic nature, and I propose that this duty should be 25 per cent ad valorem. In arriving at this figure I take into consideration that the raising of wool in this country would suffer incalculably if the labor employed in raising sheep is not properly taken care of. It would be disastrous to the United States in this branch of its industries. If conditions should come to pass when the raising of sheep would diminish in a similar way, as it did after the passing of the Wilson bill in 1894, the result would be that our farmers and sheep raisers would neglect raising their stock. The last bills advocated by the Democratic Party in Congress proposed duties of 20 per cent and 29 per cent, respectively, on raw wool. The reason in my to-day's proposal advocating 25 per cent is that it is a medium between those two rates, and furthermore, that it works out well to leave this duty of 25 per cent as a basic duty for all manufactures of wool, and to add to same an additional ad valorem duty for manufactures. The duty of 25 per cent for wool in the grease would also be adequate for scoured wool, noils, waste, rags, etc.

Tops.—I made two classifications of tops, valued at 50 cents and less and tops valued above 50 cents, for the reason that the cheaper kind of tops require less labor on account of greater amount of production than the fine tops made out of shorter wools. On the

PARAGRAPH 375—WOOL TOPS.

accompanying list 1 you will find rates of duty which should be levied, based on 25 per cent ad valorem for wool in grease.

Yarns.—This product I have classified according to English count of thread into various groups, viz:

Single thread 10's, 30's, 50's, 70's, and all classes above. The different rates of duty in these groups result from the difference of cost of labor and overhead charges entailed in making these yarns. Previous rates of duty, not alone under the Payne-Aldrich bill but also under the Dingley bill, Wilson bill, etc., never took these differences of cost into consideration in levying duties. It would be absolutely unjust to have one rate of duty for yarns, if it is the intention of the Government to levy duties for revenue and at the same time to compensate for higher-priced domestic labor and overhead charges, so that the domestic product would come into active competition with foreign production. This is one of the main points in submitting my proposition based on groups and classifications as shown in my list 2 under yarns. A duty of 50 per cent ad valorem would be adequate for single 30's yarn, it would be inadequate for single 70's. Without any doubt if the duty of 25 per cent ad valorem is levied on wool in the grease and a duty of less than 65 per cent ad valorem would be levied on the single 75's yarn, for instance, then not a pound of this fine 75's yarn would or could be made in this country in normal times and under normal conditions, and such yarn would all be imported from Europe. On the other hand, on the single 30's, 50 per cent is sufficient to establish competition between here and Europe and any higher duty would be prohibitive for importation in normal times. Twisted yarns and fancy yarns should pay an increased duty from single yarns on account of greater cost of labor, and I propose the classes as stated in this list, based on knowledge of the work necessary to produce these different yarns in the different classes.

On manufactures of wool or part wool and worsted goods above yarn I have again made classes or groups as stated on list 3. For the same reasons as stated with respect to yarns, it would be absurd to have one rate of duty for all such goods, if it is the intention of the Government to reduce duties to the lowest possible figure on the bulk of consumption in woolen and worsted fabrics. Under the present tariff low-priced wool goods are absolutely excluded from import and high-priced fabrics, practically the only class of goods which are to-day imported under the present rate of duty, do not carry a duty which is too high. It is all a matter of labor and wages, overhead charges, and higher cost of machinery and buildings in this country which necessitates various rates of duty in proportion to the rate at which these items enter in the manufacture of goods. Former tariffs, as well as the present tariff, have only taken this state of affairs into very inadequate consideration. Under the Wilson bill of 1894 with free wool and 50 per cent ad valorem on goods the country was flooded with cheap shoddy and wool goods, and for this reason on my list 3 I propose a tariff which will practically be prohibitive for these very low-priced undesirable goods. They are not in demand at the present time, and I believe it absolutely not in the public interest that the importation of such goods should be encouraged. They are made up of cotton and shoddy wool of the poorest kind and only manufactured to deceive a trusting buyer. Such goods have the poorest wearing qualities, and importation of same should be discouraged in every way possible. I start this class with goods costing 30 cents per pound or less and advocate 55 per cent ad valorem. It is well known by me that this rate of 55 per cent would be too high in competition with Europe if the very cheapest kind of goods as mentioned above come into consideration, but I strongly advocate for reasons above stated that importation of these cheapest kind of goods, which are only made to deceive the public, should be discouraged.

The various other classes as stated on list 3 are based on labor cost, overhead charges, cost of machinery and buildings in this country, etc., in the same way as stated with regard to the cost of yarns. I have taken into consideration that outside of wool, other materials used in goods under a new tariff will also be reduced materially—not less than 30 per cent—such as chemicals, starches, soaps, various dyestuffs, etc.

In conclusion allow me to state that in making this proposal for a new tariff same is based on the principle that in every instance competition with Europe would be established where the domestic manufacturer should demand and ask a higher profit than is required by manufacturers of same goods in Europe. In the same way, if the rate of duties should be lowered under the same economic conditions which exist in this country now and which probably will exist after a new tariff has gone into effect, a lowering of rates of duty to a level below the figures stated by me would necessarily do either of two things—destroy such part of the industry which would be affected, or necessitate reduction of wages to such a level as to make the domestic goods competitive with Europe.

PARAGRAPH 375—WOOL TOPS.

I am very sorry that I can not attend the hearings on Schedule K, which are to occur on the 27th of January, as I will be absent from this country at that time, and for this reason I respectfully submit a brief in this form for your consideration.

Very respectfully,

CHRISTIAN BEHNSEN, *Passaic, N. J.*

LIST 1. DUTY ON TOPS.

- (a) Duty on wool in grease, scoured wool, noils, waste, rags, etc., 25 per cent ad valorem.
 (b) Duty on tops:
 Foreign value 50 cents per pound and below, 32½ per cent ad valorem.
 Foreign value above 50 cents per pound, 37½ per cent ad valorem.

LIST 2. DUTY ON YARNS.

PROPOSED DUTY BASED ON 25 PER CENT AD VALOREM ON WOOL UP TO TOPS.

Up to and including number 10's, English count, 42½ per cent ad valorem.
 Up to and including number 30's, English count, 50 per cent ad valorem.
 Up to and including number 50's, English count, 55 per cent ad valorem.
 Up to and including number 70's, English count, 60 per cent ad valorem.
 Over 70's, English count, 65 per cent ad valorem.

In addition:

If twisted 2 or more ply 18 and less turns per inch, 10 per cent ad valorem.
 If twisted 2 or more ply more than 18 turns per inch, 15 per cent ad valorem.
 If fancy yarns like nubs, boucle, etc., 25 per cent ad valorem.

LIST 3. DUTY ON MANUFACTURES OF WOOL ABOVE STATE OF YARN.

PROPOSED DUTY BASED ON 25 PER CENT AD VALOREM ON WOOL.

Foreign value 30 cents per pound and less, 55 per cent ad valorem.
 Foreign value 45 cents per pound and less, 60 per cent ad valorem.
 Foreign value 60 cents per pound and less, 65 per cent ad valorem.
 Foreign value 75 cents per pound and less, 70 per cent ad valorem.¹
 Foreign value 90 cents per pound and less, 75 per cent ad valorem.¹
 Foreign value over 90 cents per pound, 80 per cent ad valorem.¹

PARAGRAPH 376.

Wool and hair which have been advanced in any manner or by any process of manufacture beyond the washed or scoured condition, not specially provided for in this section, shall be subject to the same duties as are imposed upon manufactures of wool not specially provided for in this section.

PARAGRAPH 377.

On yarns made wholly or in part of wool, valued at not more than thirty cents per pound, the duty per pound shall be two and one-half times the duty imposed by this section on one pound of unwashed wool of the first class, and in addition thereto thirty-five per centum ad valorem; valued at more than thirty cents per pound, the duty per pound shall be three and one-half times the duty imposed by this section on one pound of unwashed wool of the first class, and in addition thereto forty per centum ad valorem.

See National Association of Wool Manufacturers, page 4192; Francis Willey & Co., page 4252.

¹ Luxuries.

PARAGRAPH 378—WOOLEN AND WORSTED CLOTH.**PARAGRAPH 378.**

On cloths, knit fabrics, and all manufactures of every description made wholly or in part of wool, not specially provided for in this section, valued at not more than forty cents per pound, the duty per pound shall be three times the duty imposed by this section on a pound of unwashed wool of the first class; valued at above forty cents per pound and not above seventy cents per pound, the duty per pound shall be four times the duty imposed by this section on one pound of unwashed wool of the first class, and in addition thereto, upon all the foregoing, fifty per centum ad valorem; valued at over seventy cents per pound, the duty per pound shall be four times the duty imposed by this section on one pound of unwashed wool of the first class and fifty-five per centum ad valorem.

See National Association of Wool Manufacturers, page 4194.

WOOLEN AND WORSTED CLOTH.**TESTIMONY OF O. M. STAFFORD, VICE PRESIDENT OF THE BROADWAY SAVINGS & TRUST CO., CLEVELAND, OHIO.**

Mr. STAFFORD. Mr. Chairman and gentlemen of the committee, I notice in the program for to-day that I am listed as vice president of the Broadway Savings & Trust Co. While that is true, I do not come here in that behalf at all, as I am president of the Cleveland Worsted Mills Co.

I would like to preface what I have to say by just a word or two on the question of profits. I think we will all agree that the general prosperity of this country to a very large degree is bound up in the prosperity of the manufacturing industries. Without any apology for it, I think I can safely say this: That in addition to a fair cash dividend the profits should be sufficient to provide for the replacement of worn-out machinery, should provide for the replacement of machinery where invention has brought about a state of affairs where the present machinery has become inefficient, and in addition to that give to the industry enough to pay the demands that the public makes in the way of taxes. The presence of you gentlemen on this committee here this afternoon is evidence that you have shared in that general prosperity.

How did these marvelous public buildings in our Nation's Capitol which are at once the pride and property of all our people, as if by magic come into being? Simply because of the prosperity of the American people. You are projecting vast improvements here. How do you expect to pay for them except by the continued prosperity of the people?

If every man, woman, and child in this country could be absolutely free to pursue to the best of his or her ability that course of life which would be free from the domination of any group or groups of men in combination against them; if you will protect energy, honesty, intelligence, and brain; if by law that can be brought about, the functions of our Government would be gloriously fulfilled, and you would have laid a foundation upon which we can build up a prosperity greater than we can now conceive.

Now, there are two things that I have come here to talk about in Schedule K—Schedule K, the storm center of the tariff. One gentleman here this morning asked the question whether it was not the

PARAGRAPH 378—WOOLEN AND WORSTED CLOTH.

keystone of protective duties. It is certainly the storm center of tariff agitation. There are two facts that I desire to lay before you:

The first is the effect of the present rates of duty under Schedule K on the prices obtained by the cloth manufacturers. That is one proposition.

The second is, When should the application of the law that is to be passed take effect?

If we understand the demand for tariff revision, it is because of the fact, or the supposed fact, that the rates of duty under Schedule K are being utilized by a small group of men in compelling the great mass of the people to pay a very much higher price for cloth than conditions justify. If such a condition does not exist and the people can be made to understand it, the demand for tariff revision falls. In coming before you gentlemen I have no apologies to offer for the industries covered by Schedule K. If there is an industry in the United States that can come to the Halls of Congress with absolutely clean hands, without a vestige of a combination of any sort governing prices, without any gentlemen's agreement or shadow of it, the industry covered by Schedule K is such an one.

We have to say that there is not the slightest vestige of combination to control or affect prices, nor the remotest suspicion of it. The struggle for trade and for existence has become so pronounced as to bring about the most bitter personal antagonism between many of the manufacturers or the managers of the various mills.

There are only three factors practically which control the price of the manufactured product:

The first is the cost of the raw material; the second, wages paid the employees; and the third, the administration or distributional expense. The question of profit has for many years been practically eliminated, with the result that there is scarcely an industry in the United States that shows anywhere near so large a proportion of disastrous failures to the capital employed as the industries affected by Schedule K.

The business itself is divided into several groups: The wool merchant, the wool scourer, the top manufacturer, the yarn spinner, the weaver, and the dyer and finisher. There are hundreds of firms, employing thousands of operatives, scattered throughout the country whose sole business consists in performing the work of one or the other of the above divisions, their only profit being the margin they obtain on doing the one thing in their particular line. There are others, like the Cleveland Worsted Mills Co., that I represent, who combine practically all of the different factors of the business and take the raw wool and carry it forward through all of its processes to the finished product.

There are only two ways in which Congress can possibly reduce the price of manufactured cloths: First, by taking off the entire duty on wool, which in my opinion would be disastrous to the best interests of our country.

And second, to reduce the rates of duty on cloth to a point which would enable the importation of the lower and medium grades.

Should the latter be done—that is, taking off the duty on the lower and medium grades of cloth to a point which would permit their

PARAGRAPH 378—WOOLEN AND WORSTED CLOTH.

importation—either the mills must close down or the wages of the employees must be reduced to a point to enable the manufacturer to compete with the wages of England, Germany, and France.

We can give you absolute proof that every statement I have made here is true, and the proof we offer is direct and positive.

We are desirous that the Committee on Ways and Means shall select expert accountants to examine into every detail our books, our records and all the ramifications of our business, and by such an examination we will demonstrate absolutely that no such thing as a combination or trust has existed or does exist. These accountants will find that every statement we have made regarding it is true beyond question.

All we stipulate is that the accountants shall be of the highest grade, men whose report will command the belief and respect of the country. There are many such representative firms whose services can be obtained. And further, that the committee shall use it impartially and with no other purpose in view than to get at the actual conditions. We will stand or fall by the result of such an examination.

We have implicit confidence in the fairness of the gentlemen composing this committee. We do not fear what action you will take if you once get possession of the actual facts. Such investigation as is suggested and offered can readily be made within the next 60 days.

Personally, we know that there exists the keenest competition among the top makers, for we have been frequently in the market for the purchase of tops. We know that the keenest competition exists among the yarn spinners for we are frequently in the market to buy yarn. We know that the keenest competition exists among the cloth manufacturers themselves.

Each season we have refused orders on many grades of cloths in competition with other mills because of our inability to produce them at the prices at which they were placed on the market by other manufacturers, in many instances the price named being less than our cost, irrespective of the fact that we believe that our facilities for manufacturing are good as any in the country. Had abnormal profits been made, the wrecks of some of the oldest concerns in the business could not have occurred.

Our company owns three outside mills, one in New England, one in New York, and one in Pennsylvania, and each one of these mills was bought all the way from 25 per cent to 35 per cent of what they had cost a few years before.

Mr. HARRISON. Your time has expired, unless some members of the committee desire to ask you questions.

Mr. HULL. I would like to ask him one or two questions.

Mr. STAFFORD. This morning a gentleman was allowed three-quarters of an hour—

Mr. HARRISON. Not by the chairman. His time was extended by members of the committee asking questions.

Mr. KITCHIN. How much longer will it take you to finish?

Mr. STAFFORD. About four or five minutes.

Mr. HARRISON. Then you may proceed.

PARAGRAPH 378—WOOLEN AND WORSTED CLOTH.

Mr. STAFFORD. I submit herewith to you—which I will hand to the clerk—a list of the failures in our line of business during the last few years. Can any fair-minded man of average intelligence believe that if there was a monopoly and if the rates of duty were utilized to gouge the American public, that these old, respected, and long-established manufacturing plants could have failed as they have done?

With these actual conditions clearly understood and clearly proven to the members of this committee, we feel sure that, in considering the reduction of the rates of duty in Schedule K, you will be careful not to make the reduction sufficient to injure the industry.

When should the law go into effect after its passage?

First, whatever reduction on wool is made, it should not attach until at least six months after the passage of the bill. Whatever reduction is made on tops and yarn should not take effect until nine months after the passage of the bill, and the revised duties on manufactured cloth should not apply until one year thereafter. Why?

The business is divided into two seasons, the light weight and the heavy weight. We are making contracts during January for the furnishing of cloth which will not be actually sold to the people who wear the clothing until December, January, February, and March next. To protect ourselves we have to buy the wool.

In order to obtain good results in manufacturing, it is necessary that the top and yarn should cure after being made and before being put into the spinning frame or into the loom for at least from two to four months. Our own company, which is a small factor, has to keep on hand all the time about two million and a quarter dollars in value of wool, top, and yarn. A material reduction in the duty on wool, say, of 5 cents per pound, would mean bankruptcy to hundreds of small concerns and an immense loss to the larger, who might be able, in some instances, to stand the strain.

The policy outlined by President-elect Wilson and by your honorable chairman is to the effect that the Democratic party does not intend to injure legitimate industries, nor to throw out of employment, nor to lessen the wages of the American artisan. This being true, no hardship will be placed upon anyone by giving sufficient time to work off the stocks on hand and to enable the business to adjust itself to the new conditions.

The clothing manufacturers have to make their contracts. They have to spread over each six months the manufacture of clothing for each season's output. It would be impossible for them to get all the clothing needed manufactured in a month's time. It would require an army of workmen five times as great as that which is now employed and would mean that this great army would be idle 10 months out of the year and employed but 2—a situation manifestly impossible.

The dealers in clothing must make their arrangements ahead; the retailers as they purchase must do the same.

Already there is an indisputable going down in our line of business. The orders are much smaller. There is a great deal of hesitation. Our customers are coming to us and asking a guaranty against loss through tariff reductions. In other words, they are willing to place their orders and go forward, providing we, as manu-

PARAGRAPH 378—WOOLEN AND WORSTED CLOTH.

facturers, are willing to guarantee to refund to them any shrinkage in price. We understand that some mills have already made such a bargain.

If sufficient time is given, it would enable everyone to go on with certainty and make contracts for a complete season and allow time to adjust conditions for the following season without great loss and without interruption to the trade itself, thus guaranteeing constant employment to the operatives.

No one can be the gainer by an abrupt application of a law shortly after its passage. It is but fair that sufficient time, as was the case when specie payments were resumed, be given for adjustments to be made with as little jar and loss as possible.

Mr. RAINEY. I may not have understood you correctly, but your position is that all who are interested in Schedule K or have been interested come before this Congress with absolutely clean hands, cleaner than anybody else?

Mr. STAFFORD. No; I did not say that. I said that we came before this committee without the slightest vestige of combination of any kind affecting prices; that if any industry can come here with clean hands, we are one of those industries.

Mr. RAINEY. I just want to remind you of some of the history connected with Schedule K.

On October 1, 1890, the McKinley bill was passed by a Republican Congress, increasing the duty on woolen goods. The duty on worsted tops, manufactured by William Whitman, president of your association, was made equal to the duty on finished cloth. On August 27, 1894, the Wilson bill, which had been passed by a Democratic Congress, became a law, and this Schedule K was revised on the free-wool basis, with an ad valorem duty on goods.

In May, 1897, S. N. D. North, who was secretary of the National Association of Wool Manufacturers, was admitted to the secret sessions of the Senate Finance Committee, during the framing of the Dingley bill, and on April 4, 1897, he writes a letter to William Whitman saying, "I am the only person whom the committee allows in its meetings." On June 2, 1897, William Whitman wrote to Secretary North, who was still attending the tariff sessions of the Finance Committee, "We all depend upon you to watch closely our interests." On July 10, 1897, William Whitman wrote Secretary North, who was still attending sessions of the Finance Committee as an expert before that committee, "We depend on you—dress goods, yarns, and tops."

On July 25, 1897, the Dingley law, with Schedule K practically unchanged, became a law, and in 1898, the next year, the National Association of Wool Manufacturers presented to S. N. D. North \$5,000 for his services in connection with the revision of the tariff.

That, in brief, is some of the history connected with the attempted revisions of Schedule K.

Under those circumstances do you still think you all come in with clean hands?

Mr. STAFFORD. Absolutely, sir. What you have just read has no reference, directly or indirectly, to the manufacturers of this country, so far as any combination to control price is concerned. That is the point I am trying to make.

PARAGRAPH 378—WOOLEN AND WORSTED CLOTH.

Mr. HARRISON. Do you not believe that the combination between the wool growers and the woolen manufacturers affected prices?

Mr. STAFFORD. There is no such combination.

Mr. HARRISON. That combination fixed the rates of this schedule in 1897, and they have been kept in force pretty much ever since.

Mr. STAFFORD. There is absolutely no combination of that kind. I have been connected with this business 35 years. I can not speak for what transpired before that, but during those 35 years there was no more vestige of combination between the manufacturers of cloth, or anything under Schedule K, than there is a combination between your honorable self and myself—absolutely none.

Mr. HARRISON. You do not claim that you and I agree on this tariff, do you?

Mr. STAFFORD. I would not attempt to say that. I simply say there is no relation whatever between the tariff rates now existing and the prices of goods, except just one thing—

Mr. FORDNEY (interposing). For the benefit of the committee, Mr. Witness, I will say that the witness has expressed himself as to the rates he desires, but the gentleman from New York has not. So we do not know whether there is a combination or not.

Mr. HARRISON. I voted for a number of bills reducing the rate on tops to 25 per cent ad valorem. That probably is not in accordance with the desires of the witness.

Mr. JAMES. Do you advocate that the tariff rates now in the Payne bill shall remain as they are?

Mr. STAFFORD. No, sir.

Mr. JAMES. Do you think they ought to be reduced?

Mr. STAFFORD. I have tried to make that clear, sir. They can be reduced considerably without affecting the price whatever. But when you do reduce them to a point where it will affect the price of goods, that moment you let in goods from abroad and if the American manufacturers continue in business at all they must cut the wages of their men to meet the outside competition.

Mr. JAMES. In other words, you are willing for them to reduce the tariff just to that point where it will not let in importations?

Mr. STAFFORD. I am perfectly willing that they should reduce the tariff where it will let in importations if this committee and this Congress is prepared to assume the responsibility for the reduction in wages to the American artisan.

Mr. JAMES. That would hardly be possible at Lawrence, Mass., would it?

Mr. STAFFORD. Yes, sir.

Mr. JAMES. Do you think so?

Mr. STAFFORD. Yes, sir.

Mr. JAMES. What is the difference between a man who advocates a tariff that will prohibit importations and the position you now take before the committee?

Mr. STAFFORD. I do not know that I quite catch your question.

Mr. JAMES. You want the tariff to remain so high that it will keep out importations. Yet you say we could reduce it to where it would not let in importations.

Mr. STAFFORD. I did not take that position.

PARAGRAPH 378—WOOLEN AND WORSTED CLOTH.

Mr. JAMES. Well, what is your position?

Mr. STAFFORD. I explained it to you just now. The position I take is this: If this committee wants to reduce the price of cloth to the American consumer, the only way possible for them to do it is either to cut the duty on wool off and then reduce the duty on cloths to a point that will permit the wages of the Englishman to compete with the wages of the American; that is all.

Mr. JAMES. This tariff permits you to charge the American consumer more for your product than you would otherwise be able to do if it were not for the tariff?

Mr. STAFFORD. This tariff permits American conditions to continue, absolutely.

Mr. JAMES. Have you examined the Tariff Board reports?

Mr. STAFFORD. Not fully; no, sir.

Mr. JAMES. What is the reduction advocated in this schedule in the Tariff Board report?

Mr. STAFFORD. I do not know.

Mr. JAMES. Do you not know that it is about 30 per cent?

Mr. STAFFORD. On what?

Mr. JAMES. On cloth, manufactured goods.

Mr. STAFFORD. As a flat reduction, as a flat per cent?

Mr. JAMES. That would be the average of it.

Mr. LONGWORTH. The bill that was made as nearly in accordance with that report as the Republican members of this committee could make it, put a duty of 18 cents a pound on scoured wool and reduced the present duty of 33 cents a pound to 18 cents a pound. The other duties were based on that. Of course, that will make a difference in your answer to that question.

Mr. STAFFORD. I am going to be perfectly frank in my answer to that if I can. I have not studied the voluminous report of the Tariff Board. What I have studied leads me to believe this, that those gentlemen were not by any means given sufficient time or sufficient money, during the limited time that they had to make a sufficient investigation, for them to make a report which would be thoroughly scientific. The members of the board themselves say that is true; that they were forced to reach a conclusion and make a report before they were willing and ready to do it.

Mr. JAMES. Do they say that they did not have money enough and time enough to make this report as to wool, Schedule K?

Mr. STAFFORD. I do not know that they themselves said it.

Mr. JAMES. You just stated that.

Mr. STAFFORD. I do not think I did. I simply say they did not have time enough, and that is my own opinion.

Mr. JAMES. Did you not just say they had said themselves they did not have time enough or money enough, and that they admitted that themselves?

Mr. STAFFORD. I think not.

Mr. JAMES. I believe you stated that; although I may be wrong.

Mr. STAFFORD. I certainly did not state it.

Mr. JAMES. I hope you have not, because if that is true they ought not to have made a report without stating that in their report.

Mr. STAFFORD. I did not say that.

PARAGRAPH 378—WOOLEN AND WORSTED CLOTH.

Mr. JAMES. All right, then. What is your position, or the position of your association, with regard to this Tariff Board?

Mr. STAFFORD. I am not a member of the association.

Mr. JAMES. You know, perhaps, what their position has been?

Mr. STAFFORD. On what?

Mr. JAMES. What has been your position heretofore? Have you not been an advocate of the Tariff Board?

Mr. STAFFORD. The first time I ever had anything to do with tariff matters will be four years ago next June.

Mr. JAMES. Did not you advocate a Tariff Board to investigate into this question and report before the tariff was reduced?

Mr. STAFFORD. Yes, sir; and I advocate it now.

Mr. JAMES. After that report is made you find fault with it and you are unwilling to abide by its finding?

Mr. STAFFORD. I think that that is not a fair way to put it.

Mr. JAMES. Well, put it in your own way.

Mr. STAFFORD. I say this, that this industry, with its ramifications and with its life of centuries, is altogether too difficult a question to either be settled by such an examination as we are now having to-day, or to be settled by the appointment of a board, with the limited time those gentlemen had—gentlemen who had not been familiar with the business at all, and could not, because of physical conditions, so as to arrive at a point where they could give a complete and full scientific report.

Mr. JAMES. But yet you tell us that these gentlemen who made the Payne-Aldrich tariff law, who did not give one-tenth the labor nor the investigation to the question that the Tariff Board did, made a tariff bill that is the very acme of tariff legislation and protection.

Mr. STAFFORD. Can you find such a statement in my testimony?

Mr. JAMES. But that is your position.

Mr. STAFFORD. Can you find such a statement in my testimony?

Mr. JAMES. You say you are satisfied with this bill as it is, and that it is all right?

Mr. STAFFORD. I did not say that.

Mr. JAMES. Then you want it revised?

Mr. STAFFORD. It can be revised, certainly. I wish you would be perfectly fair, now, sir, in the statement of the case. It seems to me I have made myself so clear that I need not again repeat it. But the simple facts are these: That if the rates of duty to-day were five times as much as they are it would not affect price; and it is equally true that you can cut off a whole lot without affecting price.

Mr. JAMES. So you are willing for that to be done?

Mr. STAFFORD. We are willing to have you do whatever you are pleased to do.

Mr. JAMES. I want your position about it.

Mr. STAFFORD. My position is this: If you desire to keep the American workmen, who are in this line of business to-day, working steadily and at the same wages, or better than they are now getting, you can not reduce the tariff below a certain point. That is what I say.

Mr. JAMES. Then the Tariff Board that has made this investigation and reported that this Schedule K can be reduced 20 per cent and

PARAGRAPH 378—WOOLEN AND WORSTED CLOTH.

these wages still paid to the laboring people that are now being paid, and even better wages—are they mistaken?

Mr. STAFFORD. Let us take one illustration, and you can figure it for yourself. I did not read it because the then chairman thought my time was up. But in that statement that I have submitted to you, you will find one simple illustration which tells the story so far as we are concerned.

A man went to England on a visit and we sent a piece of one of our cloths with him with the request that he get the English price on that cloth. The English manufacturer did not know for whom or why the information was desired. He sent back a price which would have permitted that particular cloth to have come to the doors of the New York Customhouse at 54 cents a yard.

The present rate of duty under Schedule K, taking the specific per pound and the ad valorem, would have permitted us to have asked in competition with England, and sold it, \$1.11 per yard. As a matter of fact we have sold hundreds of thousands of yards of that identical cloth, all through this last six months, for \$1.7 cents per yard.

And the difference between the 54 cents on English goods coming to the port of entry at New York, and our price, is made up of the duty on wool, the difference in wages of the American workingmen, and some decent profit for us.

That tells the whole story.

Mr. LONGWORTH. In other words, the tariff has not added to the retail price?

Mr. STAFFORD. Absolutely not and never has.

Mr. JAMES. Let us see about that decent profit. How much is it?

Mr. STAFFORD. My dear sir, right there in my handwriting and over my signature—and I have talked with other manufacturers whom I am satisfied will do the same—we give you the opportunity of finding out everything you want about us by having accountants at your own will and sending them there, and we will give them every bit of information you want.

Mr. JAMES. Did the Tariff Board not investigate your factory?

Mr. STAFFORD. They did.

Mr. JAMES. They saw all these books?

Mr. STAFFORD. They did.

Mr. JAMES. They made this thorough investigation?

Mr. STAFFORD. Yes.

Mr. JAMES. They have made a report here.

Mr. STAFFORD. Very well.

Mr. JAMES. Advocating a reduction of 25 to 30 per cent. You say it can not be done?

Mr. STAFFORD. I did not say that. I have given you the illustration. It is more than that in that particular instance.

Mr. JAMES. But this Tariff Board report here, with the standard from which you speak, says this tariff can be reduced and that the laborers will be permitted to get these wages that they are now receiving, and that the consumer will be permitted to have fair play—

Mr. STAFFORD. He is having it.

Mr. JAMES. And that the reduction can be from 25 to 30 per cent.

PARAGRAPH 378—WOOLEN AND WORSTED CLOTH.

Mr. STAFFORD. I have not figured per cents. I do not remember what that is, but you can figure it yourself. The difference between \$1.7 and \$1.11 is pretty nearly 26 cents, is it not?

Mr. JAMES. Yes.

Mr. STAFFORD. That is beyond any 30 per cent reduction. That answers it.

Mr. JAMES. Now, as to that decent profit. Let us get to that. How much is that?

Mr. STAFFORD. I have simply offered you the full information, and I am not going to stand here, sir, and state one thing out of its proper proportion. I can not do better than I have suggested. I can not do any better than for you gentlemen to appoint a set of accountants of your own and go and get every bit of the information you desire.

Mr. JAMES. That does not answer the question, if you will allow me to say so.

Mr. STAFFORD. I can not answer it any better.

Mr. JAMES. Here is what I want you to tell me. You have stock in that concern, have you not? I want to know what dividends they are paying, what profits they are making, what you are doing with the profits, whether you are making a profit in selling off, whether you are laying off so much to overhead charges, what you are doing with it, just directly and indirectly what you are making out of it.

Mr. STAFFORD. I can answer but one part of that question. We have no interest in any selling agency and no selling agency has any interest with us.

As to the balance of those questions, my dear sir, the answers are all at your hands in the proposition under my own signature which I have made to you.

Mr. JAMES. What is that?

Mr. STAFFORD. You can investigate and have all of that information you want.

Mr. JAMES. That is hardly fair to the committee.

Mr. STAFFORD. That is absolutely fair.

Mr. JAMES. Not at all. You come here and ask us to give you the right to tax the American people——

Mr. STAFFORD. I do not.

Mr. JAMES. And make your industry prosperous, and yet you are unwilling to tell this committee how prosperous you have been, but tell us to send agents and examine your books.

Mr. STAFFORD. I have said nothing of the kind; I have not asked or made one request of this committee, not one.

Mr. JAMES. But you are saying——

Mr. STAFFORD (interposing). I beg your pardon. I have simply come here to you, and I say this for your information: I simply say there are two ways that you can reduce prices of cloth, and only two. If you go beyond a certain point, you reduce wages. That is all. I have not asked anything.

Mr. JAMES. I merely asked you to state what your profits are.

Mr. STAFFORD. And that I decline——

Mr. JAMES (interposing). Did not you state to me that we could send agents on and look at your books?

Mr. STAFFORD. Yes, sir.

PARAGRAPH 378—WOOLEN AND WORSTED CLOTH.

Mr. JAMES. You are an interested party in this concern, and you come here and take an oath to advise this committee as to what you think should be the proper rate——

Mr. STAFFORD. I took an oath to tell the truth.

Mr. JAMES. You took an oath to tell the truth.

Mr. STAFFORD. Yes, sir.

Mr. JAMES. Why is it you say to this committee we should send agents down there to investigate? Have you not the knowledge you can give us? We are willing to take your word for it. Tell us.

Mr. STAFFORD. Simply this: Certain information can be given in connection with all other facts that tell a truthful story. There are certain kinds of information given which, standing alone, do not tell the truth. Do not forget what I said, that the most destructive competition exists in this business. We are in competition with every other manufacturer. We do not propose to open up right here alone every fact connected with our business. What we do is far more substantial, far more to the point. If this committee really desires information, it can appoint its agents and its accountants, and there are plenty of them. If we decline to answer a question, or shut a book, all you need to do is to get that report.

Mr. JAMES. Can you tell me what dividends you get on your stock?

Mr. STAFFORD. What do you mean—cash dividends?

Mr. JAMES. Yes.

Mr. STAFFORD. Certainly. I am perfectly willing to tell you. We get 8 per cent cash dividends out of it.

Mr. JAMES. How much is carried to surplus?

Mr. STAFFORD. Now, then, you can come and get what information you want. [Laughter.]

Mr. JAMES. I know; but do you not know?

Mr. STAFFORD. Sir?

Mr. JAMES. You know, do you not?

Mr. STAFFORD. I know a great deal about our business; yes. [Laughter.]

Mr. JAMES. I know you do; you know all about your business, and I want you to tell us how much you carry to surplus.

Mr. STAFFORD. I must beg you to excuse me from telling anything further than that, in the light of what I have just offered you.

Mr. JAMES. So that then you say to the committee you do not want to tell us how much you set aside as surplus?

Mr. STAFFORD. It varies, year by year.

Mr. JAMES. Let the variations come. [Laughter.]

Mr. STAFFORD. I know, but I have not brought the balance sheets of our books for the last 10 years.

Mr. JAMES. I do not mean you shall be so accurate as all that. Just give us approximately what it is, year by year. You very willingly told us it was an 8 per cent dividend; you very willingly said to us you had no selling agency, but when we ask you what you set aside as a surplus, year by year, you do not want to tell the committee.

Mr. STAFFORD. All I can say is this, about that, we were drawn into the business.

Mr. JAMES. I know——

PARAGRAPH 378—WOOLEN AND WORSTED CLOTH.

Mr. STAFFORD. Wait a minute. If I am going to answer any question—

Mr. JAMES. I will give you all the time you want.

Mr. STAFFORD. If I am going to answer any questions, I am going to answer them so that they will convey what I mean to convey. The facts are these. We were obliged, another gentleman and myself, to buy the mill that we now are operating, because it failed, and it owed the bank of which I am the manager about \$80,000, with nothing to pay.

Rather than to lose that, we organized it. For seven or eight years not one dollar of dividends was taken out. Then for the next few years 6 per cent, then for two or three or four years more 7 per cent, and for the last two years 8 per cent.

That is every dollar of money we have taken out, and in the meantime we have put in a million dollars and a half of cold cash into it.

Mr. JAMES. I know that is what you have taken out, but what have you put in the surplus?

Mr. STAFFORD. I am going to just repeat what I stated. You can have all the information you ask for by simply coming and getting it. [Laughter.]

Mr. JAMES. That is, you will not answer the question?

Mr. STAFFORD. I do not think you have any right to put it that way.

Mr. JAMES. I do.

Mr. STAFFORD. I do not.

Mr. JAMES. I will ask you now this question: Do you know what it is?

Mr. STAFFORD. Year by year, no.

Mr. JAMES. Give me an answer for last year. Take the last year.

Mr. STAFFORD. I think I do.

Mr. JAMES. Will you tell us?

Mr. STAFFORD. No.

Mr. RAINEY. During the seven or eight years you did not pay any dividends the company was paying off its debt to your bank, was it not?

Mr. STAFFORD. No, sir. It never paid off the debt at all. I paid it myself and put it as capital into the company.

Mr. RAINEY. You just took that out in stock?

Mr. STAFFORD. No, sir; I paid it myself.

Mr. RAINEY. Then you took the mills?

Mr. STAFFORD. Certainly.

Mr. RAINEY. During that seven or eight years when they did not pay dividends, they were paying you off?

Mr. STAFFORD. No, sir; they never paid me off.

Mr. RAINEY. They paid you off when you took the mills?

Mr. STAFFORD. No, I took it in stock.

Mr. RAINEY. That paid your debt, did it not?

Mr. STAFFORD. If you want to put it that way. I made an investment in the property.

Mr. RAINEY. How much is that stock worth now?

Mr. STAFFORD. The stock itself?

Mr. RAINEY. Yes.

PARAGRAPH 378—WOOLEN AND WORSTED CLOTH.

Mr. STAFFORD. I think the last quotation I saw in the paper was \$125 a share.

Mr. RAINEY. How many shares?

Mr. STAFFORD. What is the capital stock?

Mr. RAINEY. How many shares; what is the amount of the shares?

Mr. STAFFORD. The amount of the shares is \$100 a share.

Mr. RAINEY. How many shares are there?

Mr. STAFFORD. We had a capitalization of \$3,000,000.

Mr. RAINEY. \$3,000,000?

Mr. STAFFORD. Yes, sir.

Mr. RAINEY. How much did you give for the plant when it failed?

Mr. STAFFORD. Those are details that I do not recall, but every one of those details can be obtained in the information I have offered you now by your accountants.

Mr. RAINEY. You could guess within a million dollars of it, could you not? About how much?

Mr. STAFFORD. My dear sir, I am simply going to decline to be led into any such line of testimony, because of the statement I have made that I offer the whole thing to you without reserve.

Mr. RAINEY. You paid \$80,000 for it, did you not?

Mr. STAFFORD. That was just the shares that I bought myself.

Mr. RAINEY. Who else went in with you?

Mr. STAFFORD. There were others in the same situation.

Mr. RAINEY. How much did the others pay?

Mr. STAFFORD. There was the same indebtedness I have explained on the other.

Mr. RAINEY. Oh, then, there are several in on this \$80,000 capitalization; is that it?

Mr. STAFFORD. It is a long story. There were a great many others in it.

Mr. RAINEY. It would not be very long if I had to answer that, because I could say yes or no.

Mr. STAFFORD. You could say what?

Mr. RAINEY. I could say yes or no to that question.

Mr. STAFFORD. To what question?

Mr. RAINEY. These seven or eight others who were interested originally in the purchase of this factory. Did they contribute to this \$80,000, or did they put something else in besides that?

Mr. STAFFORD. You have forgotten the statement that was made. I told you there were two banks interested, and an indebtedness of about an equal amount to each of those.

Mr. RAINEY. \$160,000 for both of them?

Mr. STAFFORD. Yes.

Mr. RAINEY. And then the two banks took the plant?

Mr. STAFFORD. No. The old proprietors were in it. There were about a half dozen other people in it.

Mr. RAINEY. How much interest in it did the two banks get for their \$160,000?

Mr. STAFFORD. I do not recall that. The banks got nothing.

Mr. RAINEY. They took stock, did they not?

Mr. STAFFORD. No, sir.

Mr. RAINEY. What did they get for the \$160,000?

PARAGRAPH 378—WOOLEN AND WORSTED CLOTH.

Mr. STAFFORD. As an individual I paid the banks out of my own pocket and took the claim, and took it in stock, and the same was true of the other.

Mr. RAINEY. Then as an individual you paid off this \$160,000 that was due both banks?

Mr. STAFFORD. Yes, sir; as an individual.

Mr. RAINEY. Then as an individual you got the plant?

Mr. STAFFORD. No; we got part of it.

Mr. RAINEY. What part of it did you get as an individual for this \$160,000?

Mr. STAFFORD. I do not recall.

Mr. RAINEY. Did you get most of it?

Mr. STAFFORD. No, sir. I think the old proprietors have about half. But at any rate those are facts that I have not clear in my own memory, and if you will do as I suggested to you, every particle of it can be drawn out and the whole history can be ascertained from the beginning to the end.

Mr. RAINEY. These hearings will end this week, and you can suggest that with perfect safety.

Mr. KITCHIN. We have had more than 500 firms or corporations represented here by spokesmen, or perhaps a thousand, and that proposition has been made by several gentlemen and made in their briefs. Suppose we were to accept their proposition. It would be 10 years before we could get around to all of them. These propositions are simply bluff.

Mr. STAFFORD. Not at all.

Mr. KITCHIN. If we accept your proposition, a man over here in the steel business will say, "Why don't you accept my proposition?" A man in the cotton business will say, "Why don't you accept my proposition?" Another in another business will say, "Why don't you accept my proposition?" And so it would be, as I say, 10 years before this committee could get around to this bill. It would be impracticable for the committee to attempt it.

Mr. STAFFORD. Not at all; it would not be impracticable. I want to say this, here and now—

Mr. KITCHIN (interposing). We can not take up your proposition unless we take up the others. We have to rely on you gentlemen who know all about it.

Mr. STAFFORD. All I can say is this, that any statements we might make here to-day unsupported by such an examination as I have suggested would be discredited the moment we stated them.

Mr. RAINEY. To be perfectly frank with you, when you state your dividends are 8 per cent, you convey to us by your evasion and refusal to answer questions that your profits are much more than 8 per cent on the amount you have invested in this mill.

Mr. STAFFORD. They are more than 8 per cent; certainly.

Mr. RAINEY. How much more are they?

Mr. STAFFORD. That is a question I say should properly come in the investigation I am talking about. I prefaced what I said—

Mr. RAINEY (interposing). If you know you can answer.

Mr. STAFFORD. I do not wish to answer.

Mr. RAINEY. We understand that you do not.

PARAGRAPH 378—WOOLEN AND WORSTED CLOTH.

Mr. STAFFORD. Not at all.

Mr. RAINEY. And we do not think you are coming before us fairly or with clean hands in any particular.

Mr. STAFFORD. I want to make myself perfectly clear and understood about that. I prefaced what I said, that every industry must, in addition to paying its cash dividends, earn enough to do other things. Now, as I have explained to you, that is right at your hands, to ascertain without let or hindrance.

Mr. KITCHIN. Why do you want us to go to the trouble and expense of finding out what you know in your own mind and can tell us in two minutes?

Mr. STAFFORD. Simply because taking two or three items out of their proper relationship would be misused or misconstrued.

Mr. KITCHIN. I believe you and myself can get together on this proposition, and get some information.

What time did you buy this plant out? When was it?

Mr. STAFFORD. It failed shortly after the Wilson bill went into effect. [Laughter.]

Mr. KITCHIN. What year?

Mr. STAFFORD. In the latter part of 1893.

Mr. KITCHIN. The latter part of 1893. Well, and the Wilson bill was not introduced until 1894 and was not enacted until August, 1894. And yet, under oath, you are attempting to attribute its failure to the Wilson bill. Are you not ashamed to make such a statement as that? [Laughter.]

Mr. STAFFORD. I do not know, sir, but what has that—

Mr. KITCHIN (interposing). The truth about the business is you wanted to get off something on the Wilson bill.

Mr. STAFFORD. I may be mistaken.

Mr. KITCHIN. This failure and purchase in 1893 when the McKinley bill was in effect, over a year before the Wilson bill was talked of, or even introduced.

Mr. FORDNEY. And the Democratic party was in power promising free trade. [Laughter.]

Mr. KITCHIN. You are just mistaken about that. are you not?

Mr. STAFFORD. Wait a minute; let me get it straight, because you do not desire to twist me up—

Mr. KITCHIN. No; not a bit.

Mr. STAFFORD. Nor do I desire to twist any facts. The facts are these.

Mr. KITCHIN. Now we are going to get the facts.

Mr. STAFFORD. I know you wish to get the facts. Now, I was mistaken about that. It failed and went into bankruptcy, or rather went into the hands of receivers in December, 1893. It was operated by the receivers for about a year before we took it. That is the situation.

Mr. KITCHIN. So you just were mistaken about the Wilson bill?

Mr. STAFFORD. Yes; I was thinking of the date of the sale of the plant rather than when it failed.

Mr. KITCHIN. It operated a year and then you people bought it; that is, the two banks. You were interested in one bank and some other gentleman was interested in the other. You people who were

PARAGRAPH 378—WOOLEN AND WORSTED CLOTH.

interested in the banks took the stock yourselves and then paid the banks.

How much did that concern cost you and the stockholders at that time when you bought it from the receivers? How much was it valued at?

Mr. STAFFORD. How much was what valued at?

Mr. KITCHIN. When you bought it from the receivers? You say it was operated under the receivers about a year, and then you and the others purchased it. At what was it valued when you purchased it then?

Mr. STAFFORD. You mean that was the appraised value?

Mr. KITCHIN. Yes; the appraised value.

Mr. STAFFORD. I have forgotten.

Mr. KITCHIN. Was it not about \$320,000?

Mr. STAFFORD. How much?

Mr. KITCHIN. About \$320,000, was it not?

Mr. STAFFORD. That I do not recall. If you have the figures there you can jog my memory.

Mr. KITCHIN. Let me jog your memory a little. I think I can. You and the party interested in the other bank got within about five shares of the majority of stock. The old stockholders kept just a slight majority, and it cost you and the others interested in the banks \$160,000. That is about what you paid for a half interest in it, was it not, you and the other people interested in the banks?

Mr. STAFFORD. That is not the fact.

Mr. KITCHIN. That is what you said awhile ago, practically.

Mr. STAFFORD. I did not say that.

Mr. KITCHIN. You said it cost you \$80,000 and the other bank \$80,000. That is \$160,000. And that the old stockholders kept hold of a slight majority of the stock.

Mr. STAFFORD. No; I did not say majority.

Mr. KITCHIN. What did they keep? You said awhile ago about half.

Mr. STAFFORD. I said they kept an interest. I do not recall what the interest was.

Mr. KITCHIN. Is it not the fact that you and the other bankers got a majority of the stock, that you would not agree to buy it or go into it at all until you held a majority?

Mr. STAFFORD. Not at all. It was sold out under a foreclosure sale.

Mr. KITCHIN. Ah! Now we are getting at it. How much did it bring, then, under foreclosure sale? You know about what it did cost. You were one of the purchasers.

Mr. STAFFORD. Not at all.

Mr. KITCHIN. How much did it bring?

Mr. STAFFORD. To state that would not answer the question at all.

Mr. KITCHIN. How much did it bring at the foreclosure sale?

Mr. STAFFORD. Will you let me say this?

Mr. KITCHIN. Yes.

Mr. STAFFORD. I have simply told you the fact that the total money they owed those two banks was paid in actual cash to the banks. That was the cost so far as I was concerned, and so far as the other

PARAGRAPH 378—WOOLEN AND WORSTED CLOTH.

gentleman was concerned, the cost to us. That was the interest we had in it.

Mr. KITCHIN. This \$160,000, which was the interest you and the other parties in the bank had in it, was the majority of the stock—was a controlling interest?

Mr. STAFFORD. There was no stock at all.

Mr. KITCHIN. I say, it was the controlling interest in the property, was it not?

Mr. STAFFORD. That we controlled it?

Mr. KITCHIN. Yes. Did not you buy a controlling interest in the property?

Mr. STAFFORD. I think we did.

Mr. KITCHIN. Now, we have it. You got over half of that property for \$160,000. When you reorganized, how much stock did you issue?

Mr. STAFFORD. I do not recall.

Mr. KITCHIN. Did you issue any new?

Mr. STAFFORD. Certainly.

Mr. KITCHIN. You just issued it to those representing this \$160,000?

Mr. STAFFORD. Not at all. There was a lot of new money put in at the time, and that is just what I am trying to make out, that the way to get at it is to go to the records and find out.

Mr. KITCHIN. Did you and the other parties interested in the other bank put into it any new money?

Mr. STAFFORD. Certainly.

Mr. KITCHIN. How much more new money did you put in it besides this \$80,000? You know that.

Mr. STAFFORD. It has been over a series of years.

Mr. KITCHIN. I am talking about when you started out with the business, after you took charge. Do you not know your capital stock then actually paid in was less than \$350,000?

Mr. STAFFORD. Not at all.

Mr. KITCHIN. How much was it?

Mr. STAFFORD. That I do not recall.

Mr. KITCHIN. You know it was less?

Mr. STAFFORD. That is just what I say; that is exactly what I say. You are trying, if I understand you, to sort of—

Mr. KITCHIN (interposing). I am just trying to get at about what you all put in that company when you established it and began to operate. You know, Mr. Stafford, that we gentlemen know that you must have some definite idea—not definite in exact dollars and cents, but approximately.

Mr. STAFFORD. If I were to tell you what I recall I would say a half a million dollars in actual money was put in. That is what I would say.

Mr. KITCHIN. When did you capitalize it at \$3,000,000?

Mr. STAFFORD. That I do not recall.

Mr. KITCHIN. When was it, since the Wilson bill or the Dingley bill or the Payne bill was enacted?

Mr. STAFFORD. The capital has been increased by the putting in of money several times, three distinct times. The years I do not recall.

PARAGRAPH 378—WOOLEN AND WORSTED CLOTH.

Mr. KITCHIN. Do you swear on oath that you started in with \$500,000, and since then have added new capital, actual money, to the amount of \$2,500,000?

Mr. STAFFORD. Not at all.

Mr. KITCHIN. Then the difference is represented by stock dividends?

Mr. STAFFORD. Not at all. A little of it was.

Mr. KITCHIN. How much of it?

Mr. STAFFORD. I do not remember.

Mr. KITCHIN. You know about.

Mr. STAFFORD. I can only repeat that every bit of that information is at your disposal, and you can find it.

Mr. KITCHIN. But we want to get it right here. We have got a little ways. You say a little of it was stock dividends. What do you call a little? Here is a capital of \$3,000,000. You started with \$500,000. There is a difference of \$2,500,000, and you say a little of that is represented by stock dividends. What do you call a little?

Mr. STAFFORD. I said a little while ago that as near as I can recall it, since the time we organized it, we have put in a million and a half new money. That would make about \$2,000,000.

Mr. KITCHIN. Stock dividends, you say?

Mr. STAFFORD. Not at all. In money.

Mr. KITCHIN. In money?

Mr. STAFFORD. Absolutely.

Mr. KITCHIN. Was there as much as \$500,000 in stock dividends?

Mr. STAFFORD. There may have been that much.

Mr. KITCHIN. There may have been that much. Do you not think it is a little more than \$500,000? [Laughter.] Just think. You are one of the owners of that company. You are the president of it. You know a great deal more about it than I do. I have never been there in my life. Do you not think that that really was a million dollars of stock dividends that you have issued since you organized—at least a million dollars?

Mr. STAFFORD. I know there has been nothing like that issued.

Mr. KITCHIN. You said it was about \$500,000.

Mr. STAFFORD. I did not say even that.

Mr. KITCHIN. You said you thought perhaps about \$500,000, did you not? It might be that much, you said.

Mr. STAFFORD. It may have been that much.

Mr. KITCHIN. I understand. Might it not have been a little bit more than that?

Mr. STAFFORD. I can not answer that question.

Mr. KITCHIN. You have a sinking fund for contingencies, do you not?

Mr. STAFFORD. No, sir.

Mr. KITCHIN. How much are the assets of your company now, in the last statement you made; about how much were the assets?

Mr. STAFFORD. That question can be answered just as I have explained it.

Mr. KITCHIN. I know. I do not want it definitely. I can go there and get dollars and cents, as shown on your books. But I ask you now if the assets above your liabilities, including your stock, your

PARAGRAPH 378—WOOLEN AND WORSTED CLOTH.

capital, are not more than three and a half million, and do not your books show it?

Mr. STAFFORD. I simply have to say to you that you can find that information yourselves by going there.

Mr. KITCHIN. I know, but I want to get it from you now. It does not appear to be fair to us—

Mr. STAFFORD. I want to say this, that I do not think it is fair to us that just because there has been money made, to have it held up here as a monstrosity under Schedule K.

Mr. KITCHIN. I am not trying to do that.

Mr. STAFFORD. That is exactly just what you are trying to do.

Mr. KITCHIN. Not at all.

Mr. STAFFORD. That is the way it seems to me.

Mr. KITCHIN. You started this very argument by saying you were going to talk about maintaining profits. We have the right to know what profits you want this tariff to maintain for you. We want to know the facts, and then we can draw our own conclusions.

Mr. STAFFORD. That is why I say to you, send your accountants there and study it a little and get the accurate facts.

Mr. KITCHIN. We are going to get the facts, I believe. I have gotten a little from you; I have gotten \$500,000 from you since I have been talking to you. [Laughter.]

Now, about your surplus. I ask you now if it is not a fact that your books show that you have a surplus above your \$3,000,000 capital of over \$500,000?

Mr. STAFFORD. I think that if the proper charge has been made to depreciation, the surplus would not be anywhere near that.

Mr. KITCHIN. I am asking you if you do not carry over \$500,000 surplus on the books.

Mr. STAFFORD. That is exactly what I said a little while ago; if you will have the books examined, you can find all this out.

Mr. KITCHIN. But I am asking you. I can get the books and see what it is, whether it is \$600,000 or \$700,000; but I am asking you now if it is not as much as \$500,000 surplus on your books.

Mr. STAFFORD. I have tried to explain that two or three times. The only way for you to get a fair knowledge of that you are after—and your very question indicates that—is to follow out and accept the suggestion which I have made in perfect good faith.

Mr. KITCHIN. We do not want a very accurate statement, but we want something approximate your opinion. I ask you if you do not know, and you are under oath now, if you do not have reason to believe, that your books show you have a surplus of over \$500,000?

Mr. STAFFORD. Let me just tell you—

Mr. KITCHIN. No; answer the question, yes or no.

Mr. STAFFORD. No; I will not answer it by yes or no, because yes or no would not tell the truth.

The CHAIRMAN. The witness stated the stock was worth \$125.

Mr. KITCHIN. Yes, but that may be a part water, too.

Mr. STAFFORD. There is not a penny of water in that stock.

Mr. KITCHIN. Anyway there is that \$500,000 of stock dividends you think was added; so that some of the profit you put in the stock, instead of issuing dividends you issued stock?

PARAGRAPH 378—WOOLEN AND WORSTED CLOTH.

Mr. STAFFORD. I explained that in the first six or seven years there was not a dollar of cash dividends paid.

Mr. KITCHIN. No; but later you paid about \$500,000 in stock dividends, and you have a surplus of about \$500,000.

Mr. STAFFORD. I did not say we paid \$500,000 in stock dividends. Let me say this. I want to be open——

Mr. KITCHIN. You have shown us to-day that you want to be very open and candid.

Mr. STAFFORD. I have said I would like to be very open, and I submit in all fairness that has been evidenced when I offered to this committee that they send accountants to go through our books from one end to the other. If anybody can be more open than that, I do not know what to say.

I am going to say this right now. The reason I can not and do not answer your question yes or no, or by figures, is that from the beginning of our business to this minute we have never charged off one item for depreciation, and the figures shown on our books would not show what the surplus would be fairly.

Mr. KITCHIN. I know about "fairly," but I want what your books show, fairly or unfairly.

Mr. STAFFORD. That is exactly what I say, that a statement of figures would not tell the truth.

Mr. KITCHIN. All right. What I want to know is what your books tell.

Mr. STAFFORD. That is the very thing I say.

Mr. KITCHIN. I ask you if your books do not show you have a surplus of over \$500,000?

Mr. STAFFORD. I just told you I can not answer that question by yes or no, and the only way it can be answered is for you to come and examine the books for yourselves.

Mr. KITCHIN. You took an oath awhile ago, did you not?

Mr. STAFFORD. I did.

Mr. KITCHIN. You are president of that company?

Mr. STAFFORD. I am.

Mr. KITCHIN. And you are an intelligent man, so considered?

Mr. STAFFORD. That I have nothing to say about. I think I know what I am talking about.

Mr. KITCHIN. Do you believe that you are telling the truth, the whole truth, and nothing but the truth when you say that you do not know whether or not your books show a surplus of more than \$500,000?

Mr. STAFFORD. I absolutely say that, and I say that I am telling the truth when I say that an answer to that would not tell the truth. The only way you can get at it is to do just exactly as I have frankly attempted——

Mr. KITCHIN (interposing). Did you ever have your bookkeeper make up a statement of your assets and liabilities?

Mr. STAFFORD. Certainly.

Mr. KITCHIN. Then they draw a balance, do they not?

Mr. STAFFORD. Certainly.

Mr. KITCHIN. How often do you have that balance or statement made up?

PARAGRAPH 378—WOOLEN AND WORSTED CLOTH.

Mr. STAFFORD. Every month.

Mr. KITCHIN. Now then, just tell me what that balance showed the last month that you remember looking over it.

Mr. STAFFORD. That is the very question I declined to answer a dozen times.

Mr. KITCHIN. You just decline to answer it?

Mr. STAFFORD. Certainly.

Mr. KITCHIN. You know about what it is?

Mr. STAFFORD. I do not know exactly.

Mr. KITCHIN. I do not care for them exactly, but about.

Mr. STAFFORD. I simply say that a statement of those figures does not tell the whole truth.

Mr. KITCHIN. You have already told us that the figures on your books lie.

Mr. STAFFORD. No; I did not.

Mr. KITCHIN. You said they did not state the facts.

Mr. STAFFORD. I did not say anything of the kind.

Mr. KITCHIN. Yes; you did. But you did testify that your stock was worth \$125.

Mr. STAFFORD. I did not say it was worth \$125. I said the last quotation I saw was it was sold for that.

Mr. KITCHIN. Did it sell for more than it was worth or less than it was worth?

Mr. STAFFORD. I do not know.

Mr. KITCHIN. What do you value your stock at?

Mr. STAFFORD. I do not know.

Mr. KITCHIN. I will get at it this way. How much corporation tax did you pay last year?

Mr. STAFFORD. You mean to what?

Mr. KITCHIN. Corporation tax to the Government.

Mr. STAFFORD. That I do not remember. The figures will show. You have them.

Mr. KITCHIN. No; I haven't. How did this stock that sold for \$125—how was it sold? At public auction?

Mr. STAFFORD. I have not heard of any being sold at public auction.

Mr. KITCHIN. You said you know of some being sold.

Mr. STAFFORD. All I know is I saw a quotation in the stock reports in our Cleveland paper that it sold for \$125. That is all I know.

Mr. KITCHIN. Have you any idea whether it is worth \$125 or not?

Mr. STAFFORD. That would depend entirely on what you gentlemen do.

Mr. KITCHIN. I am asking you to give your opinion of it.

Mr. STAFFORD. I am unable to do so. I do not know.

Mr. KITCHIN. You are president of the company and do not know what your stock is worth?

Mr. STAFFORD. I might say this, that no living man can tell what it is worth until you gentlemen have finished your work here.

Mr. KITCHIN. What would it be worth if the Payne-Aldrich Act remained continuously on the statute books?

Mr. STAFFORD. That I can not answer.

Mr. KITCHIN. So you do not know what it is worth?

PARAGRAPH 378—WOOLEN AND WORSTED CLOTH.

Mr. STAFFORD. I would not say that.

Mr. KITCHIN. Why is it, if you have not got a big surplus, that your stock is selling above par, \$25 above par?

Mr. STAFFORD. I can not answer that question.

Mr. KITCHIN. You can not tell that?

Mr. STAFFORD. You can answer that just as well as I can.

Mr. KITCHIN. How much stock do you own—how many shares?

Mr. STAFFORD. That you can find out in the same way.

Mr. KITCHIN. Well, but do you not know that?

Mr. STAFFORD. I do.

Mr. KITCHIN. How much?

Mr. STAFFORD. I decline to answer that.

Mr. KITCHIN. You decline to answer that question?

Mr. STAFFORD. Yes, sir.

Mr. KITCHIN. You know, do you?

Mr. STAFFORD. I do.

Mr. KITCHIN. How much salary are they paying you as president?

Mr. STAFFORD. I decline to answer that.

Mr. KITCHIN. Do you know?

Mr. STAFFORD. I do.

Mr. KITCHIN. How many directors or active officers in your company; that is, active managers, for instance?

Mr. STAFFORD. Two.

Mr. KITCHIN. Do you know what salaries the other man gets?

Mr. STAFFORD. Yes.

Mr. KITCHIN. How much?

Mr. STAFFORD. I decline to answer.

Mr. KITCHIN. You decline to answer that? Do you own as much as a third or a quarter of the stock?

Mr. STAFFORD. I decline to answer.

Mr. KITCHIN. Will your books show how much you own?

Mr. STAFFORD. They will.

Mr. KITCHIN. Do you and this other gentleman who is helping you manage that business, own a majority of the stock?

Mr. STAFFORD. No.

Mr. KITCHIN. You do not? Awhile ago in your speech you spoke about a decent profit, and you said we ought to leave this tariff so that these industries can make a decent profit. Would you mind letting us have your opinion of a decent profit in your line of business—in your mills? What would you say a decent profit is?

Mr. STAFFORD. I do not know as I would like to express an opinion on that.

Mr. KITCHIN. Why are you asking us to give a tariff that would insure you a decent profit when you are afraid to tell under oath what a decent profit is?

Mr. STAFFORD. I have not asked you to give us a decent profit. I simply said this, and I will repeat it, that if the Democratic Party desires that the people engaged in that business shall continue in their employment they can not cut the rates of duty below a point which will permit the importation of the grades of cloth that are made in this country without equally cutting the wages of the employees.

PARAGRAPH 378—WOOLEN AND WORSTED CLOTH.

Mr. KITCHIN. What kind of cloth do you manufacture?

Mr. STAFFORD. Various kinds of worsteds.

Mr. KITCHIN. About what is the annual output of that kind of cloth in the United States, in dollars and cents?

Mr. STAFFORD. The estimates that I have seen would indicate the total under Schedule K of about \$500,000,000.

Mr. KITCHIN. Of the kinds you make, less than 1 per cent comes into this country?

Mr. STAFFORD. Of the kind of goods we make, I think none comes in.

Mr. KITCHIN. The tariff is so high on the class of goods you make that it does not come in at all?

Mr. STAFFORD. I have explained that no attention whatever is paid to tariff rates in fixing prices. The present tariff does do this—it does protect the American workingman in his present rate of wages, and unless you change the rates of tariff to a point that will affect that, you will not affect the price.

Mr. KITCHIN. Mr. Stafford, now I am going to make a very fair proposition to you. You have been just as fair as you could be with this committee. I want to make this proposition: If you will send your bookkeeper up here from your mills to-morrow, tell him to draw up a statement of how your business stands, your assets and your liabilities, and wages paid, etc., the committee will be very glad to examine him and to take that statement and put it into the hearings.

Mr. STAFFORD. I have no doubt of it.

Mr. KITCHIN. Showing all of your assets and your stock, who owns the stock, and the salaries of the officers, from the beginning, the amount of stock dividends that have been issued, and all—just put it in a statement, and we will just take it and put it in the hearing. Is not that a fair proposition?

Mr. STAFFORD. Just a minute. Suppose that were done——

Mr. KITCHIN. Are you going to let him do it? Are you going to let him come?

Mr. STAFFORD. Suppose he did do it. I want to be understood here, and I want to know what you are driving at. Suppose he did do it. What effect would that have on the rates that you gentlemen propose to put in the tariff?

Mr. KITCHIN. What did you come here for? You came here to give us information, and now you state it is all on your books and you have made a proposition for us to go down there, and now I ask you to send your man up here who will know all about it. This would be much easier than for us to go there.

Mr. STAFFORD. Let me say that this is a very vital subject, and I do not see why this concern should be made the scapegoat here, as Schedule K has been made the scapegoat in this tariff agitation. There does come in a question of efficiency. There does come in a question of ability, that enters into this thing, and it is not proper to pick out some one thing, as certain particular things have been picked out, with no due correlation to the rest. There are other factories that are willing to do that same thing. You can not ascertain the truth from one simple statement without making an investigation of the details of this statement. The tariff rates existing to-day have no effect whatever on the prices, except when it comes to a question of

PARAGRAPH 378—WOOLEN AND WORSTED CLOTH.

wages. I am here to say that. They do not, and I am here to say that an investigation of wages will prove that.

Mr. KITCHIN. I suppose your bookkeeper when he comes finally will bring the pay roll, the amount you pay your wage earners, the different classes, and who they are, how many men, how many women, how many children, and how many foreigners in your mills.

Mr. STAFFORD. If you will go to the Tariff Board report you will find that. You will find that fully given. They got it all.

Mr. KITCHIN. Are you going to send your bookkeeper up here with that statement?

Mr. STAFFORD. Not that I know of.

Mr. KITCHIN. Is it not true the reason you will not send him is because you know that the statement that you take off of your books will show that you have been making a great profit and that you have not been candid with the committee?

Mr. STAFFORD. No, sir.

Mr. KITCHIN. An exorbitant profit?

Mr. STAFFORD. No, sir; absolutely not.

Mr. KITCHIN. We just want you to understand that we are willing to have you send your bookkeeper up to make a statement.

Mr. STAFFORD. And I want you to understand that I am willing that this committee and the gentlemen on it are free to make any investigation you want.

Mr. RAINEY. I just want to ask one or two questions; I know you can answer and will answer. This factory in which you are interested was originally a local concern for which a great many different people subscribed?

Mr. STAFFORD. No; it was a concern that originated in Jamestown, N. Y., by one man, an Englishman by the name of Joseph Turner. He went from Jamestown, N. Y., to Kent, Ohio, and by that time two of his boys had grown to manhood. He finally died and these two boys, with their mother, owned the entire plant.

Mr. RAINEY. Is it not true that the foreclosure proceedings there, the appointment of this receiver, and the sale which was finally made for such a small amount was simply an effort on the part of yourself, assisted by the banks, to squeeze out that family?

Mr. STAFFORD. Absolutely not. The man was hopelessly involved to the tune of nearly half a million dollars. I finally succeeded in compromising his debts for him and lending him money to pay his debts, and he got a very large block of stock in the company after he was bankrupt, for nothing.

Mr. RAINEY. How much did he get?

Mr. STAFFORD. The books will show.

Mr. HARRISON. So far as I have been able to ascertain from your singularly candid and communicative testimony, you and your friends about 19 years ago put either or thereabouts a million and a half dollars cash into this plant. It has now a capital stock of \$3,000,000; that it is worth on the market \$3,750,000; that you are paying 8 per cent dividends on \$3,000,000, which, upon the original cash investment, amounts to double that, or 16 per cent; and that you are adding a considerable amount to your surplus every year.

PARAGRAPH 378—WOOLEN AND WORSTED CLOTH.

Mr. STAFFORD. Under those circumstances; but that is not—

Mr. HARRISON. Let me finish and you can correct me afterwards.

Under those circumstances do you not think it is unbecoming for you to come before this committee and threaten the country with a reduction in the wages of your workmen without considering whether the manufacturer might not spare a little bit out of the dividends?

Mr. STAFFORD. You have not stated the case, sir.

Mr. HARRISON. Well, it was difficult for me to get all the facts. That is as well as I could understand from your evidence.

Mr. STAFFORD. In the first place, there was over two million in cold cash put into it, in money, at the time we took hold of it. I testified there was a million and a half, or about \$500,000 in the beginning. That is a simple fact. It has made some money. There is no doubt about that. Yet if to-day you put 100 shares of that stock on the market in Cleveland it would not bring 110. There are some people that have been buying it, but it is like any other industrial stock that if to-day there were \$10,000 of that stock put on the market I would not pay par for it under existing conditions.

Mr. HARRISON. I do not presume to lecture a successful manufacturer upon his duty to the country, but when you come here before us making your plea for the maintenance of the American laboring man's wages, under those circumstances, in view of the great showing your plant has made, the large dividends it has paid, does it never occur to you or any of the other gentlemen under those circumstances, that if there is to come a reduction of price it may come out of the dividends instead of out of the wages?

Mr. STAFFORD. Let me ask you, do you know anything about manufacturing at all?

Mr. HARRISON. I have learned a good deal in the last few weeks.

Mr. STAFFORD. Very well. All I have got to say is this, that anybody that knows anything whatever about manufacturing knows that the entire machinery may go out of date overnight by some invention that changes the process to such a degree that the machinery that he now has is absolutely out of date. That is one of the reasons, and it is just like an insurance company. It is just like any other great industry, if they can not have sufficient in excess of the actual cash outlay that something is liable to come along to throw them into bankruptcy.

Mr. HARRISON. You gentlemen try to head that off by buying up all the inventions and locking them up, do you not?

Mr. STAFFORD. Not at all. I submit to you in all fairness that 6 per cent or 7 per cent or 8 per cent cash dividend on a manufacturing stock is not an excessive return.

Mr. HARRISON. It depends upon whether the stock has been inflated. In your case I judge it was.

Mr. STAFFORD. It was not. I just said it was not.

Mr. HARRISON. You would not inform the committee in that respect?

Mr. STAFFORD. Simply because, in spite of all that can be said, this is a political meeting. It is a political party. There is no doubt about that. The Democratic Party has full charge to-day, and

PARAGRAPH 378—WOOLEN AND WORSTED CLOTH.

upon you is going to rest the responsibility of a mistake or not a mistake, and I am simply here to say when we give, without any reservation, and when our mill and many others invite an absolute investigation, just as we gave to the Tariff Board, that they not only came with their experts, but they sent accountants once, and then, thinking they may not have gotten the right data, they sent other accountants to check them up. I am simply here to say that any attempt, with all due respect to these gentlemen here, either on this committee or on the Democratic side of the House, and with all due respect to you, to try to put witnesses into a false position, is simply a method that will convey a wrong impression, by having a part of the testimony, unless you get it all.

Mr. HARRISON. That is exactly the position in which you put yourself.

Mr. STAFFORD. I understand; but I am here to say that it is an impossible thing. I am standing here to say it is impossible to present the actual, truthful facts to this committee, and that is why I say you need not be in haste. Why should you try to be in haste? There is time enough. If you gentlemen, after you have made your bill and have reduced the rates, and if you have made a mistake, which you are likely to make, in all good faith, too, appoint a good tariff commission, pay them any price you please, and get the best men you can, and give the country some confidence, and give that commission authority to get facts, give them money enough so that if some mistake is made these men can rectify it, and we can stand up awhile under adverse circumstances if we know that competent men will study this industry, take it up and study it, and rectify any mistakes that will be made. Then we will be content.

Mr. JAMES. You knew you were coming here. Why did you not come with a statement of the facts?

Mr. STAFFORD. Simply because a statement could not tell the facts.

Mr. JAMES. You ask the committee to send down a committee to investigate and look into your books, and, of course, you would show us the books. Do you believe this committee would have confidence in the books that would be shown, or the country would rely upon the findings of a committee that had gone to investigate the books of a manufacturing concern where the president stood before the committee under oath and said he knew how much surplus was declared last year, but refused to tell us?

Mr. STAFFORD. I never said that. There was never any surplus declared last year.

Mr. JAMES. Well, the year before?

Mr. STAFFORD. Nor the year before. The balance sheet will show the results of the year absolutely, but there was nothing declared.

Mr. LONGWORTH. I would like to ask you a question on which I think you could give us an opinion. I am not stating whether the duty is too high, or what my personal opinion is, but whether it is too high or not, is that duty added to the price of American manufactured goods for the products with which he competes abroad?

Mr. STAFFORD. Absolutely not, Mr. Longworth. There is no attention paid to that duty, and never will be, unless the duty was low enough to let the wages of Europe come in here, then we would have

PARAGRAPH 378—WOOLEN AND WORSTED CLOTH.

to meet it. Other than that, it is one of the strongest competitive businesses, and the failures of the last few years of some of the largest concerns prove that.

Mr. LONGWORTH. The statement is continually made on the stump, in the papers, and everywhere else, that the American consumer pays the tax, that whatever the duty is it is added to the cost of the article.

Mr. STAFFORD. So far as Schedule K is concerned, that is absolutely a misstatement; an unqualified misstatement.

Mr. LONGWORTH. Then the duty does not have any effect upon the price to the ultimate consumer?

Mr. STAFFORD. Absolutely not, Mr. Longworth, except at a point that I told you; figured on the duty on wool and figured on the wages of employees, those two factors control, and if the duty should be reduced to a point where they could import from the other side into this country they could import all that this country would use. You could not regulate it. You could not cut it, say, 5 per cent, 1 per cent, or 2 per cent. You could not stop it. When they can get in at all with these grades it means they can sell them a little cheaper than we can make them. If you could regulate exactly the line, so that we were always making at exactly the same price they were, of course they could not come in.

Mr. LONGWORTH. There is, then, an absolute definite and sharp dividing line between what the consumer pays for an article actually imported and one that he pays for a precisely similar article manufactured in this country?

Mr. STAFFORD. Surely. In other words, do not forget this, on the lower grades none come in. The higher grades do come in, because the people who wear them do not care anything much about the price; but the lower grades of cloth that are generally worn and that are made up into garments by our garment and clothing manufacturers are all made in this country.

Mr. LONGWORTH. Suppose that these lower grades actually were coming in at the duty put on them, how would the price, generally speaking, compare with the American price of these goods?

Mr. STAFFORD. It would have to be very much higher. In the case that I stated it would be at least 26 cents a yard higher.

Mr. LONGWORTH. Is that case you have stated an unusual case?

Mr. STAFFORD. That is typical. That is typical of every grade of cloth we manufacture. If the English manufacturer sent that cloth over here he would have to sell it for 26 cents a yard more than we are selling it for to get a market.

Mr. JAMES. Do you say that you did not say to me that you knew what the surplus was last year, but you refused to tell the committee?

Mr. STAFFORD. Yes and no. Somebody, I do not know which gentleman it was, but one of you asked what surplus was declared.

Mr. PALMER. It was not I. Don't look at me. I have not tried to get anything out of you.

Mr. STAFFORD. All that I can say is that there has been no surplus declared. I know what the balance sheet showed is exactly true.

Mr. JAMES. That is what I asked you and you said to me you knew what it was last year, but you refused to tell.

PARAGRAPH 378—WOOLEN AND WORSTED CLOTH.

Mr. STAFFORD. I said there was no surplus declared.

Mr. JAMES. It does not matter whether it was declared if it was there.

Mr. STAFFORD. Yes; I do decline to give a statement from our books, offering, as I do, to the whole committee, the entire facts, if they wish to get them.

Mr. JAMES. How much time did the employees of the Tariff Commission occupy in your plant?

Mr. STAFFORD. I was sick in Germany when they were there, but as I understand it, they were there for about three weeks or more.

Mr. PALMER. I want to ask you several questions, but I do not expect to get anything out of you about your business.

Mr. STAFFORD. Thank you, Mr. Palmer.

Mr. PALMER. I am interested in what you answered Mr. Longworth. Do you say that it would not be possible to write a rate in the woolen schedule which would slightly increase importations?

Mr. STAFFORD. Of those grades?

Mr. PALMER. Yes.

Mr. STAFFORD. Yes; I say that emphatically.

Mr. PALMER. You say that whatever rate would permit imports at all would permit importations sufficient to disrupt the entire domestic consumption?

Mr. STAFFORD. Unless we cut our prices below that, and the only way we could cut our prices below that would be to reduce either what we have to pay for the wool or what we pay the people who work for us.

Mr. PALMER. Have you not in your answer just answered the other proposition that the American manufacturer, in order to keep the competition down to a small amount, would somewhat reduce his price, the price of his product?

Mr. STAFFORD. He could not do it, Mr. Palmer, unless he cut down either the cost of the wool or wages of the employees.

Mr. PALMER. Or the returns upon capital.

Mr. STAFFORD. That might be, too.

Mr. PALMER. And that would, as a matter of fact, be the first thing he would have to cut?

Mr. STAFFORD. Yes. He would have to cut that first.

Mr. PALMER. Wages would be the last thing that he would cut?

Mr. STAFFORD. It would have to be. That would be true.

Mr. PALMER. That is true, wages being the first lien upon the receipts of a manufacturing concern, would be cut last?

Mr. STAFFORD. That is the rule.

Mr. PALMER. Yes; that is the rule. So that you would cut your profits first as far as you could and keep meeting foreign competition by a reduction in your price.

Now, is it not practicable for us to write a rate through this schedule which will permit a slight increase of importations which would be kept slight, but still be an increase, by the reduction of the American manufacturer's price at the expense of his profits?

Mr. STAFFORD. Well, that would be true to this point: It would depend upon how far you went.

Mr. PALMER. Exactly.

PARAGRAPH 378—WOOLEN AND WORSTED CLOTH.

Mr. STAFFORD. If you went far enough so that the amount cut would cut the life all out of it, then, of course, you could destroy the business. On the other hand, if you cut it just a little bit below, so that they could wiggle along for a few years and not make any profit, that might also be so; but what I mean is this: If you fix a certain schedule of rates which will permit of importation of other goods, just that moment you have got to cut somewhere or else they will take the whole market. That is evident.

Mr. PALMER. Yes; but is it possible for them to take the whole market?

Mr. STAFFORD. It would be possible unless——

Mr. PALMER (interposing). What is the total American consumption of the articles enumerated in the woolen schedule?

Mr. STAFFORD. That question was asked a moment ago.

Mr. PALMER. It is several hundred million dollars?

Mr. STAFFORD. I think the total value of the products in Schedule K would be \$500,000,000.

Mr. PALMER. You do not mean to tell us if we wrote a rate at a certain figure that foreign importers, foreign manufacturers, would take that \$500,000,000?

Mr. STAFFORD. It is perfectly plain, if I can make myself clear. You put the duty, let us suppose 5 per cent, if you please, under American present costs—and when I talk about costs, I am talking about the raw material, the wages, the distribution expense, and the profits—I put them all in, the whole of them. Now, then, you cut, under this new tariff bill that you may pass, you cut it 5 per cent below that, and it is evident that they will take the whole trade unless we in turn cut our price below that 5 per cent.

Mr. PALMER. Or unless you cut your price down to that 5 per cent, where traffic advantages, transportation advantages, will be some protection to you?

Mr. STAFFORD. That is true. That is what I say.

Mr. PALMER. Can you not conceive of a figure, and would not, perhaps, that 5 per cent be a figure; which would make it possible for you to reduce your price of the product at the expense of your profit, still keeping your protection at about what it is now?

Mr. STAFFORD. It would not keep it where it is now. It might, Mr. Palmer; but I want to say this: There are, and I am going to say that right openly to these gentlemen——

Mr. PALMER. Don't tell these men anything.

Mr. STAFFORD. There are concerns in this country, and perhaps our concern is one of them, where, because of certain conditions of management, we could afford to do that; but if you cut that 5 per cent, I am here to say that you cut out of existence practically half of the smaller men. That is all. Now, you could do it.

Mr. PALMER. You have got an efficient and well-managed plant?

Mr. STAFFORD. We think we have; yes.

Mr. PALMER. You think you have? We could write a rate which, as far as you are concerned and other plants equally as efficient and well managed, would result simply in a slight decrease in the cost to the consumer of your products at the expense of your profits without decreasing your production in any way?

PARAGRAPH 378—WOOLEN AND WORSTED CLOTH.

Mr. STAFFORD. Yes; that could be done.

Mr. PALMER. Let me follow that just a little further. If that could be done, as far as you are concerned and the other efficient and well-managed and economically administered plants are concerned, the only effect would be to reduce the price of the article to the American consumer.

Mr. STAFFORD. There is just the point I was going to make. It would not affect the price to the American consumer, a 5 per cent reduction.

Mr. PALMER. It would if you would reduce the price of your product? Somebody is paying less for it?

Mr. STAFFORD. If you are getting less for it.

Mr. PALMER. If we could find that kind of rate the production would amount to practically what it is now, and of course the price of labor would not be affected?

Mr. STAFFORD. No, sir; that is right.

Mr. PALMER. Of course, the price of labor depends upon what you have got to have?

Mr. STAFFORD. That is right.

Mr. PALMER. The wool schedule has never been changed within the memory of living man?

Mr. STAFFORD. That is right, except so far as we have got it changed by competition.

Mr. PALMER. You don't know from actual experience, therefore, what the effect, as to increased importation, would be of a cut in that schedule?

Mr. STAFFORD. Yes; we do.

Mr. PALMER. No; you have not had—

Mr. STAFFORD (interposing). Let me just give you one little brief example or explanation so as to get just the point you are after, for I want to meet that thoroughly.

You cut this schedule 5 per cent, if you please, so that we would have to cut our price 5 per cent to get under European competition. Now you say that would be a benefit to the consumer. Let me tell you just wherein it would benefit him. The average cloth that we make to-day is about 90 cents a yard. The average yardage that goes into a suit of clothes is supposed to be three and a half, but as a matter of fact 3 yards does it, but calling it three and a half. You cut that 5 per cent. Five per cent of 90 cents is $4\frac{1}{2}$ cents a yard. That would be less than 15 cents on a suit of clothes. It would not make any difference whatever to the man who wears that suit of clothes. If you are going to give him any benefit you have got to cut that rate 20 per cent under the American price to-day, which would mean the closing down of the mills.

Mr. PALMER. It would mean the closing down of the mills unless you could bring your price down to the foreign price without closing down the mills.

Mr. STAFFORD. That can not be done except in one of those two ways.

Mr. PALMER. It could not be done with a 20 per cent rate, you say?

Mr. STAFFORD. Twenty per cent off? Absolutely not.

Mr. PALMER. You mean 20 points off the present rate?

PARAGRAPH 378—WOOLEN AND WORSTED CLOTH.

Mr. STAFFORD. Oh, 20 points off the present rate? You can cut 20 points off of the present rate without affecting it at all. We have always said that, that the rates on Schedule K to-day can be cut without affecting the prices at all.

Mr. PALMER. You could take about a 20 per cent cut, could you?

Mr. STAFFORD. As I understand, you were figuring on that 5 per cent that let them come in. I say 5 per cent would not affect the price to the consumer at all.

Mr. PALMER. You do admit if we did cut it 5 per cent below cost of production at home and abroad the American manufacturer would meet the competition and would do it by a reduction of the price of his article at the expense of his profits?

Mr. STAFFORD. I think possibly that might be so with some, and with others it would be utterly impossible.

Mr. PALMER. That would be true of the efficient and well-managed plant like yours? Do you think we ought to legislate for the protection of the inefficient and badly managed plants in this country?

Mr. STAFFORD. You would not be quite doing that, and I will tell you why. While there are a few of the larger plants, the great bulk of the business, after all—

Mr. PALMER (interposing). Is not the same contention—

Mr. STAFFORD (interposing). Excuse me a moment.

Mr. PALMER. That is an answer. Is not that the same contention made originally by the steel and iron people when the knife was put into their schedule, and was not the result of it contrary to what you say? Did not the large cuts in the steel and iron schedule result in only a comparatively small increase in the imports of foreign articles and the meeting of the foreign competition by the American manufacturer? Did not all that result in better efficiency and better management in the steel and iron industry?

Mr. STAFFORD. I do not have any personal knowledge of that.

Mr. PALMER. That is common knowledge, is it not?

Mr. STAFFORD. I do not know that it is. That may be. As I say, I am not familiar with it. But the iron and steel industry can not for one moment be compared with the textile industry, because the ramifications and difficulties connected with the manufacture of cloth are a thousand times as great as in the production of iron.

Mr. PALMER. Well, the gentlemen engaged in the iron and steel industry would hardly admit that that is so.

Mr. STAFFORD. The question is of reducing the tariff to a point which will really reduce the price of cloth to the American consumer. Is not that the idea?

Mr. PALMER. Yes; and without materially decreasing the amount of the American production and therefore interfering with the price of labor. I think that a lower rate can be written so that foreign imports will be slightly increased, which will force the American manufacturer to put the price down.

Mr. STAFFORD. Then they will stop, of course.

Mr. PALMER. Yes.

Mr. STAFFORD. That is it.

Mr. PALMER. And which he can meet out of his profits, which in some lines of American industry have been inordinate and exorbitant.

PARAGRAPH 378—WOOLEN AND WORSTED CLOTH.

Mr. STAFFORD. Not in ours.

Mr. PALMER. Well, in some well-managed and efficient plants there has been, to my certain knowledge. They have up in my country. Where is your mill in Pennsylvania?

Mr. STAFFORD. Philadelphia.

Mr. PALMER. What is the name of it?

Mr. STAFFORD. We call it the Roland.

Mr. PALMER. What were you going to say?

Mr. STAFFORD. I was going to say this, that in reference to the question of a cut, as to whether the American manufacturer could do that and take it out of his profits will depend entirely on whether you guess right on the per cent.

Mr. PALMER. Yes; I understand.

Mr. STAFFORD. And unless you cut that per cent way down below where any of us can live, then it will not affect the consumer at all.

Mr. PALMER. It will depend on two things; first, whether we get the right rate of per cent?

Mr. STAFFORD. Yes; that is right.

Mr. PALMER. And, second, whether or not we get accurate information as to the amount of profits of well-managed and efficient plants in this country, so we may know how much we can cut into those profits, and that shows the reasonableness of the inquiries which these gentlemen have made of you and which you have refused to answer.

Mr. STAFFORD. No, just let me make a frank statement, without going into figures. That thing varies by years. The two years in our history when we made the most money was because we happened to have capital enough to buy wool when it was down under its cost and had the advantage of that in the rise in the price of the wool; not in manufacturing, and so I say, and I am perfectly honest in it from the bottom of my boots, that to answer the questions that those gentlemen asked, and to have it put into the record, would be an absolute falsehood and a wrong to our industry. I am here to say that an examination should be made, and that is why I say the only fair and in fact the only possible way to get at the facts is to go down into the heart of every company and study and see where they get their profits. That is the only way, and is the American public so insistent for a change that a radical revolutionary thing should be accomplished simply because they will not take the time to investigate it? Now, you have a basis on the tariff report, so far. Add another to it, and go ahead, and find out what you are doing before you become so radical as to damage American industry. Now, then, you can cut these rates. You can meet the wishes of the community by absolutely cutting it 10, 20, or 30 per cent on some of it. That will meet the public view. Then investigate thoroughly so that you can arrive at a point of rational and intelligent action.

PARAGRAPH 378—WOOLEN AND WORSTED CLOTH.

STATEMENT OF MORTON H. MEINHARD, OF CLEVELAND, OHIO.

JANUARY 21, 1913.

HON. OSCAR W. UNDERWOOD,
Chairman Ways and Means Committee,
Washington, D. C.

DEAR SIR: It appears to me that what has inspired the crusade against Schedule K is the prevalent idea that there is not the keenest of competition in the woolen and worsted lines, irrespective of actual facts which will prove the existence of competition so keen that the modus operandi of distributing woolens and worsteds has been completely revolutionized.

Up to the formation of the American Woolen Co., all woolens and worsteds were sold through commission houses, who received 7 to 8 per cent for the selling of the goods intrusted to them. After the incorporation of the American Woolen Co., competition became so keen that the old-line commission house has been practically abolished and the selling agent has taken its place, and instead of 7 to 8 per cent paid to the commission houses, the selling agents are at present paid from 4 to 4½ per cent. This reduction has taken place irrespective of the fact that the cost of distribution has been materially increased, owing to the fact that the clothier goes on the road to offer his merchandise very much earlier than he did years ago, which has made it necessary for the mills to deliver thousands of selling samples, all of which involves additional expense in both the shipping departments and the offices of the selling agents. The up-to-date mode of doing business, and the change in New York from the old dry goods district to the uptown office have also made for large additional expense.

Taking all this into consideration, as well as the responsibilities which the selling agents have to bear, inasmuch as they are responsible for the entire cost of distribution, and, in a great many cases, have to guarantee accounts, cash sales, etc., I do not believe that the average net income of the heads of departments selling woolens and worsteds will be \$5,000 per year, and in view of your well-known effort to get at actual facts, if agreeable to you, I should like to have the privilege of appearing before the Ways and Means Committee, so that this data may find its way on to your records.

I shall be in Washington Monday morning and should esteem it a favor if you could allot me some time during Monday when I can give you any and all information that will be of service to you and your associates.

I am the agent of the Cleveland Worsted Mills Co., and I know that you have met our president, Mr. Oliver M. Stafford, of Cleveland.

Awaiting an early reply as to what time you would wish me to appear on Monday, inasmuch as I must return to New York late Monday evening, I remain

Yours, respectfully,

MORTON H. MEINHARD.

NEW YORK, *January 23, 1913.*

MR. OSCAR UNDERWOOD,
Chairman Ways and Means Committee,
House of Representatives, Washington, D. C.

DEAR SIR: In the course of the testimony which was brought out during the session of the Ways and Means Committee on January 27, it appeared that certain members of that committee were under the impression that the New York selling agents were, in a great many instances, stockholders in and identified with the executive branches of the mills they represent. The fact is, writer believes, that not 1 per cent of the New York selling agents are in any way identified with the executive or administrative offices of their mills, and would call your attention to the first brief submitted.

Yours, respectfully,

MORTON H. MEINHARD.

**TESTIMONY OF AUSTIN T. LEVY, OF NEW YORK CITY,
 REPRESENTING THE STILLWATER WORSTED CO.**

MR. LEVY. Mr. Chairman, it seems to me that we are all very much interested in knowing just one thing, why is it that a suit of clothing costs so much to the man who eventually wears it? There has been a good deal of questioning as to profits, as to how they can be reduced or eliminated. I am a manufacturer of worsted cloth, and have made

PARAGRAPH 378—WOOLEN AND WORSTED CLOTH.

more or less of a specialty of the kind of fabrics that retail at \$25 in a suit of clothing such fabrics are ordinarily sold at wholesale at \$1.35 per yard net, or thereabouts. These goods, such as I make, can not possibly be made in Bradford, England, under 85 cents a yard. Putting 40 per cent on that, as recommended in the Underwood bill, their cost would be \$1.19 a yard, a saving of 16 cents a yard, which amounts to 55 cents in a \$25 suit of clothing. That does not help us out very much from the consumer's standpoint.

You ask where it is. We know from the Tariff Board's report, and from such other testimony as we have had here, that there are no excessive profits in the worsted business. I believe that to be true. I believe also that there are no excessive profits in the clothing business; I was in it at one time. We also believe, I think, that there are no excessive profits in the retailer's business, because a great many of them do not last very long.

That piece of cloth I sell at \$1.35 net is wholesaled ordinarily in clothing by houses that make a good grade at \$15 net. That suit is retailed at \$25 net. The big gap appears to be between that \$15 and that \$25, 66 $\frac{2}{3}$ per cent to bring it from the clothing house door to the back of the man who wears that suit of clothing. Allow that retail dealer 10 per cent, and you have brought it down to \$22.50, or \$7.50, just 50 per cent, to distribute that article. Can it be done more cheaply? Not as we live to-day. Gentlemen, I am inclined to think we are a little on the wrong track. It is not in the profit of the worsted maker, it is not in the profit of the clothing maker; it is in the life of the Nation, the way we have accustomed ourselves to live and to do things.

Now, I would like to say that one reason why clothing costs more to-day than it used to is that they do not make the same kind of clothing. We are all familiar with the nationwide advertised makes of clothing. Millions of dollars have been expended in educating the wearer of clothes as to what kind of clothes he had better buy, the desirable clothes. His taste has been educated. There was a time when there was a very important element known as "cross-roads" trade. There is no longer any cross-roads trade. Every young man in the smallest village wants a suit of a certain type. That suit costs more to produce than the kind of clothing that was used 25 years ago. He did not care then; he did not know unless he lived in a big city.

I would like to bring out what I think is a little fallacy in the previous witness's remarks, if they have any bearing on the general subject. If I am not mistaken he testified that in his \$10 suit he used goods costing \$1.15 a yard net. I think it is generally known that about 3 $\frac{1}{3}$ yards are required to make a suit. That would bring it to about \$3.83. He said the labor cost in that suit was \$5; that makes \$8.83. He said there was a 9 per cent discount from the \$10 wholesale price, bringing his figure down to \$9.10. He therefore leaves 27 cents for incidental expenses and profit. He testified that on the turn-over of the clothing trade in general there was an average profit of 9 per cent. On that \$10 suit there ought to be 90 cents, but his figuring showed 27. However, that is a small detail.

I think that is all I care to say.

Mr. HULL. You say you are a manufacturer of worsteds?

PARAGRAPH 378—WOOLEN AND WORSTED CLOTH.

Mr. LEVY. Yes.

Mr. HULL. What about this complaint relative to the operation of these duties. Are you familiar with that?

Mr. LEVY. I am not particularly familiar with it. I know there is such controversy.

Mr. HULL. Then I will not ask you about it.

The CHAIRMAN. That is all.

TESTIMONY OF C. BROOKS STEVENS, OF LOWELL, MASS.

Mr. STEVENS. Mr. Chairman, at the suggestion of one of the members of your committee I prepared a statement showing the difference in cost of manufacturing worsted tops, yarns, and cloth in this country and in England; also the method of determining the proper duty to equalize the difference in cost, with footnotes explaining the method of arriving at the figures given in this statement. References from the report of the Tariff Board are appended when they confirm our own experience.

1. *Worsted tops*.—The cost of worsted tops may be divided into two parts.

1. Cost of material (raw wool).

2. Cost of conversion (labor, supplies, expense, etc.).

The average cost of conversion in England is $3\frac{3}{4}$ cents (see note B); the average cost of conversion in the United States is 6; the excess cost of conversion in the United States is say 80 per cent (see note A).

If we take the present market price of worsted tops in England (see note B) as a basis for figuring, we have (1) the percentage of material cost to total cost of tops is $91\frac{1}{2}$ per cent; (2) the percentage of conversion cost to total cost of tops is $8\frac{1}{2}$ per cent.

In order to determine the duty necessary to equalize the total cost of worsted tops in this country and in England, the two components of cost must be treated differently. The cost of the component "material"—raw wool—is increased in this country over the cost of the same component in England by the amount of duty that may be assessed on material—raw wool—so that if we assume a duty of 20 per cent on wool there should be a duty of 20 per cent on the wool component of the tops (this being the compensatory duty) plus a small allowance for waste made in manufacturing tops, say 10 per cent. This allowance is made because it is necessary to import about 120 pounds of clean wool to make 100 pounds of tops, and the wool duty must be paid on the entire 120 pounds.

The cost of the component "conversion" is increased in this country by higher wages, higher cost of supplies, and higher fixed charges, etc., and the amount of increase is shown (notes A and B) to be 80 per cent greater in this country than in England, so that a duty of 80 per cent on the component "conversion" (this being the protective duty) would be necessary to equalize the difference in cost of conversion. The problem would then work out as follows: Twenty per cent duty on material (raw wool); 2 per cent waste allowance; percentage of material cost $91\frac{1}{2}$ times 22 per cent equal 20.13 compensatory duty; percentage of conversion cost $8\frac{1}{2}$ times 80 per cent equal 6.84 protective duty; total duty 26.97.

PARAGRAPH 378—WOOLEN AND WORSTED CLOTH.

As the price of wool at present in England is abnormally high, the percentage of material cost is unduly increased, while the percentage of conversion cost is correspondingly decreased. It would appear from an examination of prices for a number of years that 10 per cent would probably be a fair average percentage of conversion cost to total cost. We should then have percentage of material cost 90 per cent times 22 per cent equals 19.8; percentage of conversion cost 10 per cent times 80 per cent equals 8; total duty, 27.8, or say 27 per cent.

NOTE A.

For comparative costs of conversion, see Report of Tariff Board, Vol. III, pages 644 and 645, as follows: "In view of the facts related it seems a fair statement that the cost of making tops in the United States is about 80 per cent greater than abroad."

See also page 641 of the same volume, giving the ordinary conversion charges for combing in the United States and England.

NOTE B.

Table showing:

First. List of four representative qualities of worsted tops.

Second. Market price of these tops quoted by Windeler & Co., Bradford, England, December 5, 1912.

Third. United States equivalent in cents of English price in pence.

Fourth. Commission rates for combing these qualities in England, as per page 641, Tariff Board Report.

Fifth. Commission rates for combing these qualities in United States, as per page 641, Tariff Board Report.

Sixth. Percentage of material in English tops.

Seventh. Percentage of conversion cost in English tops.

1	2	3	4	5	6	7
Quality.	Market price.	U. S. equivalent.	Combing price, England.	Combing price, U. S.	Material.	Conversion.
	<i>Pence.</i>	<i>Cents.</i>	<i>Cents.</i>	<i>Cents.</i>	<i>Per cent.</i>	<i>Per cent.</i>
60s.....	28	57	4.50	7.5	92	8
56s.....	22½	56.67	3.75	6	92	8
46s.....	16½	32.88	3.00	5.5	91	9
40s.....	16	30.45	2.25	5	91	9
Averages.....			3.375	6	91½	8½

Average excess United States conversion cost over English, 77 per cent—say, 80 per cent.

2. *Worsted yarn.*—The cost of worsted yarn may be divided into two parts.

1. Cost of material (worsted tops).

2. Cost of conversion (labor, supplies, expense, etc.).

The average cost of conversion in England is 9½ cents. (See Note "D.")

The average cost of conversion in United States is 19 cents.

The excess cost of conversion in United States is 100 per cent. (See Note "C.")

If, as a basis for figuring, we take the average market price in England of four standard qualities of worsted tops, add to this figure the average cost in England of converting these tops into worsted yarn, we would obtain an average total cost of worsted yarn; that is,

PARAGRAPH 378—WOOLEN AND WORSTED CLOTH.

“material” plus “conversion.” These averages [shown by Table D below] are: Average cost of four qualities worsted tops, 41½ cents; average cost of converting worsted tops into worsted yarn, 9½ cents; making 51 cents.

From these figures for material and conversion we get average per cent of material cost to total cost (41½-51), 81½ per cent; average per cent of conversion cost to total cost (9½-51), 18½ per cent.

In order to determine the duty necessary to equalize the total cost of worsted yarn in this country and in England, we treat the components of worsted yarn just as we did in the case of worsted tops above mentioned, so that if we assume a duty of 27 per cent on worsted tops, there should be a duty of 27 per cent on the component “material” (tops) of the yarn; this is the compensatory duty. As the cost of conversion in this country is 100 per cent greater than in England, a duty of 100 per cent is necessary on the component “conversion” (this being the protective duty), so that the problem will work out as follows:

Percentage of material cost (81½ per cent) times duty on material (27 per cent) equals 22 per cent; percentage of conversion cost (18½ per cent) times excess conversion cost (100 per cent) equals 18½ per cent; total duty required 40½ per cent.

NOTE C.

For comparative costs of conversion, see Report of Tariff Board, page 650, “* * * the actual manufacturing costs in the United States for turning tops into yarn is about twice what it is in England.” Also, see “Comparative conversion costs of making certain counts of worsted yarn from tops.” This confirms our own knowledge based on a personal investigation.

NOTE D.

To obtain percentage of conversion and material costs, we take the quotation of worsted top prices given above (material cost), add the conversion costs from the table on page 650, and figure therefrom the percentage of conversion cost to total cost as follows:

Quality.	Price.	Size yarn spun.	Conversion cost.	Per cent conversion cost.
	<i>Cents.</i>		<i>Cents.</i>	<i>Per cent.</i>
60s.....	57	2/50	13.7
56s.....	45.67	2/40	10.6
46s.....	32.88	2/32	8.1
40s.....	30.45	2/24	5.6
Average.....	41.50	9.5	18½

3. *Worsted cloth.*—The cost of worsted cloth may be divided into two components.

1. Cost of material (worsted yarn).
2. Cost of conversion (labor, supplies, expense, etc.).

An analysis of samples, all of which are worsted goods, numbered 1, 5, 6, 7, 10, 12, 15, 22, 23, 27, 30, 34, 36, 37, 38, 42, 47, on pages 651-682, Volume III, of Tariff Board Report, gave an average percentage of conversion cost of 21 per cent and an average percentage of material cost of 79 per cent, the highest conversion percentage being 28 per cent and the lowest 16 per cent. The average excess

PARAGRAPH 378—WOOLEN AND WORSTED CLOTH.

cost of conversion in this country over the cost of conversion in England appears to be 125 per cent. Using the same method as in the case of worsted tops and worsted yarn, we have—Average percentage of material cost (79 per cent) times duty on material (40 per cent) equals 31.6, compensating duty; average percentage of conversion cost (21 per cent) times excess conversion cost (125 per cent) equals 26.25, protective duty; making 57.85.

If proper allowance be made for waste in manufacturing, the duty should be 60 per cent.

We desire especially to emphasize the fact that the above figures show, as near as we have been able to determine them, the duty necessary to equalize the cost of conversion in this country and England. In other words, they indicate the "differential." They provide nothing for profits. These duties ought to put the American manufacturer on exactly even terms with the foreign manufacturer, but they do not give him any advantage. Lower duties would make it imperative for the American manufacturer to reduce his costs. As these costs consist of labor, supplies, overhead charges—the last comprising taxes, insurance, interest, rent, power, etc.—it is obvious that the only factor of cost that can be reduced is that of labor, which, with the present condition of demand and supply, seem to be tending higher.

An analysis of the duties estimated above shows the following differential to make up for excess cost of conversion, also the duty provided by the act of 1894 for the same purpose when wool was free:

	Duty necessary to equal conversion cost.	Duty under act of 1894.
	<i>Per cent.</i>	<i>Per cent.</i>
In manufacturing tops.....	8½	20
In manufacturing yarn.....	27	30-40
In manufacturing cloth.....	44½	40-50

Since that time wages have increased about 30 per cent, and the hours of labor have decreased from 58 to 54 hours per week, the English hours of labor remaining practically unchanged at 55 hours per week.

We desire also to call attention to the fact that the percentage of material cost and conversion cost used above are based on present values. Wool is now at almost its highest price, and a drop in the price of this material would change the proportion, increasing that of conversion cost and decreasing that of material cost. As the conversion differential is much greater than the material differential, a drop in material values would require a higher total differential in case wages remained the same as at present.

Objection may be made to these average costs on the ground that it is impossible to determine an average cost for making yarn widely differing in size and, therefore, in production and conversion cost; or that there is any such thing as an average weaving cost.

PARAGRAPH 378—WOOLEN AND WORSTED CLOTH.

While this is probably true, the percentage of material cost and conversion cost tends to remain constant because the finer the yarn or fabric and the more conversion cost that there is put into it, the better the quality and, therefore, the higher the price of the material used.

While no such careful analysis has been made of (carded) woollen goods, we are of the opinion that a duty of 60 per cent would equalize the English and United States costs of these goods, assuming a duty on material of 20 per cent, except possibly in the case of a few of the finest qualities.

We beg to call to the attention of the committee the following extract from table of relative prices of cloth on page 705 of Volume III of the Tariff Board Report:

Sample.	Imports.	English price.	English price plus duty.	United States price.
E1.....	None.....	\$0.12	\$0.36	\$0.205
E2.....	do.....	.167	.48	.24
E3.....	do.....	.17	.61	.335
E6.....	do.....	.20	.65	.335
E12.....	do.....	.24	.73	.335
E13.....	do.....	.38	.98	.50
E51.....	Continual.	1.22	2.33	1.80
E54.....	do.....	1.28	2.37	1.85
E57.....	do.....	1.38	2.47	1.725

This table demonstrates that the cheap goods are entirely shut out by the prohibitive duty. This duty could evidently be greatly reduced, but it is noteworthy that these cheap goods have not been increased in price by the prohibitive duty. On the higher-priced goods, however, importations are quoted as "continual" in spite of a duty that also appears to be excessive. It may be concluded from this:

First. That even where there is no foreign competition, domestic competition will keep down the price of the moderate and low priced fabrics.

Second. That the highest grade fabrics will be imported no matter what duty may be placed on them, and as they come under the head of "luxuries," should properly be heavily assessed to increase the revenue.

BRIEF OF THE WATERLOO WOOLEN MANUFACTURING CO.

The COMMITTEE ON WAYS AND MEANS,
House of Representatives, Washington, D. C.

GENTLEMEN: Desiring to place before your committee a few concrete facts that may be of definite and practical value in the proposed revision of Schedule K, the Waterloo Woolen Manufacturing Co. submits herewith a detailed statement of the cost of manufacture of a 14-ounce broadcloth, one of its standard fabrics.

This statement, which appears on page 5 of this brief, shows the present cost of manufacture. The data are presented on five different bases which disclose the cost of producing this fabric from clothing, Cape (South Africa) wool admitted free of duty and from high grade (70's and 80's) clothing, Australian wool free of duty, dutiable at 20 per cent as proposed in the Underwood bill, dutiable at 29 per cent as proposed in the conference bill, and dutiable at 11 cents per pound as provided in the Payne-Aldrich Act.

PARAGRAPH 378—WOOLEN AND WORSTED CLOTH.

The Waterloo Woolen Manufacturing Co. has no suggestions to offer your committee in regard to the rates of duty, if any, to be levied on raw wool and for that reason the cost statement has been made up on the several bases just mentioned.

The broadcloth fabric, for which the costs of manufacture and samples are shown herewith, is a type of those used for fine uniforms and automobile linings and is made by this company from fine (70's and 80's) clothing, Australian wool. It is believed that the corresponding English sample is made from clothing, Cape (South Africa) wool. The latter is also a wool of fine quality and, in many ways, is practically as satisfactory for the manufacture of this fabric as the fine Australian wool, although its scoured price is somewhat lower. Since, however, the Cape wools shrink heavily (65 per cent to 80 per cent) in scouring, they can not be imported as cheaply as the lighter-shrinking, selected Australian wools under the present duty of 11 cents per pound on raw wool.

For obvious reasons it is impossible to secure the details of the manufacturing cost of the corresponding English fabric. But the selling price of the latter delivered in Buffalo, N. Y., duty paid, has been obtained from the H. D. Taylor Co., importers and jobbers. (See Exhibit B, p. 7 of this brief.)

In the cost statement the selling price of the English fabric delivered in Buffalo is presented in three ways: (1) Including the present duties on cloth, (2) including 40 per cent ad valorem duty proposed in the Underwood bill, and (3) including 49 per cent ad valorem duty proposed in the conference bill. A comparison of these prices with the prices (also shown in the cost statement) at which this company could afford to sell the fabric with raw wool dutiable at the rates proposed in the Underwood and conference bills gives a fair idea of the probable operation of the duties proposed in those measures.

This company does not offer any definite suggestions as to the rate or rates of duty to be levied on cloths or as to the administrative features of the act, but would call the attention of your committee to the fact—already well known by its members—that the system of duties provided in the Payne-Aldrich Act are not highly protective to the high-grade and high-priced cloths such as the one for which the accompanying cost statement is given, however highly protective they may be to the cheap and medium-priced cloths. This fact is borne out by the records of the Bureau of Statistics which show that the imports of cloths consist very largely of the high-priced grades and that on these, as a whole, the computed ad valorem duties are small as compared with those on the cheaper cloths imported.

The accuracy of the accompanying data on costs is vouched for by this company and, if desired, the data can be verified from our books at any time by your committee.

It will be noted that the English selling price in Buffalo less the duty is only 91 cents per yard, a price considerably below that at which this company could afford to sell this fabric even if made from clothing Cape wool admitted free of duty. In this connection it should be stated that the low English price is a result not only of the lower costs of production enjoyed by English manufacturers but also of the fact that foreign cloths are, as a rule, undervalued or are frequently sold at less than actual cost to dispose of surplus production. The effects of the latter two factors—undervaluation and "dumping"—are the same in their unfair operation.

Next to wool, labor is the largest item in the cost of manufacture of this fabric. In this item the English manufacturer has an important advantage, since the English scale of wages is somewhat less than one-half that prevailing in our mill. This is well illustrated by the fact that this company pays its weavers 9½ cents per yard for weaving this fabric, while the price paid in England, according to the wage scales shown at pages 715-716 of the Tariff Board's report, is only 4½ cents per yard.

The Waterloo Woolen Manufacturing Co. believes that, by reason of its excellent location, abundant cheap fuel and water, modern equipment, fixed supply of native labor, and long experience in manufacturing, it is in a position to manufacture high-grade woolen fabrics, such as the one on which costs are given herewith, as efficiently and economically as any mill in the United States.

The mill is well located in the western part of New York on the Auburn branch of the New York Central Railroad about midway between Rochester and Syracuse and on the Seneca Falls branch of the Lehigh Valley Railroad. The mill property fronts on the Seneca River, from which an abundant supply of good water is obtained at little cost, and on the Erie Canal, which makes possible an abundant supply of cheap fuel.

The mill is of medium size, operating 133 looms and 12,200 spindles and employing about 500 persons. It was established in Waterloo in 1836. The plant was completely rebuilt in 1906, when a large five-story building of modern construction was

PARAGRAPH 378—WOOLEN AND WORSTED CLOTH.

added. At that time the various departments of the mill were arranged and equipment installed for the economical manufacture of broadcloths and other fine woolen fabrics.

Another advantage enjoyed by this company lies in the fact that it can draw upon a more or less fixed body of American labor, about four-fifths of the persons employed being of native birth. Children and grandchildren of many former employees are now at work in our mill.

In further explanation of the cost statement a series of notes is given in Exhibit A on page 6 of this brief. These notes are intended to define the items of cost as used herein. Exhibit B, which appears on page 7, consists of a letter dated January 11, 1913, from the H. D. Taylor Co. of Buffalo, N. Y., giving the price at which they can import a 14-ounce broadcloth of similar grade and of English manufacture. Samples of this English fabric and of our own are inclosed in Exhibit C.

Respectfully submitted.

THE WATERLOO WOOLEN MANUFACTURING CO.,
By A. M. PATTERSON, *President*.

JANUARY 27, 1913.

STATEMENT OF COST.

Name of fabric: Broadcloth.
Purposes for which used: Fine uniforms and automobile linings.
Weight per yard (finished): 14 ounces.
Width (finished): 54-56 inches.
Kind of wool used: 70's and 80's clothing Australian.
Quality of yarn: Warp, single 4½ run woolen; weft, single 4½ run woolen.
Ends of warp: 2,800.
Picks per inch: 44.
Speed of loom: 98.
Number of looms tended: 1.

	Cost per yard of 14-ounce broadcloth made from—				
	70's-80's clothing Australian wool.				Clothing Cape wool free of duty.
	Under Payne- Aldrich tariff.	Under Under- wood tariff.	Under Confer- ence bill tariff.	Free of duty.	
Cost at the mill—total.....	\$1. 732	\$1. 606	\$1. 679	\$1. 443	\$1. 259

PARAGRAPH 378—WOOLEN AND WORSTED CLOTH.

EXHIBIT A.—Notes on cost statement.

COST AT MILL.

Wool.—Present market price for unscoured 70's to 80's clothing Australian wool is 42 cents per pound, and for scoured clothing Cape wool, 48 cents per pound. Shrinkage in scouring, 70's to 80's Australian, 50 per cent; Clothing Cape, 65 per cent to 80 per cent.

Materials.—Includes olive oil, soap, and dyestuffs. This fabric is dyed in the stock (i. e. the dyeing takes place before the wool is spun and woven). Large quantities of expensive dyestuffs are used for this fabric.

Labor.—Includes salaries paid to overseers and foremen. Sorting to spinning labor cost is the labor cost on the yarn. Weaving labor cost includes that of warp dressing and drawing in as well as that of weaving. Finishing labor cost includes that of burling and mending as well as that of the regular finishing labor.

General administrative and mill expense.—Includes salaries of officers, superintendents, and office force, taxes, insurance, water, light, power, depreciation, repairs, mill and office supplies, interest on borrowed capital, etc. The item of depreciation is as fixed by the commissioner of internal revenue for the corporation tax return.

Selling expense.—Includes expenses of office in New York City, salaries and expenses of salesmen, advertising, losses through bad debts, and loss of interest in dating bills, etc. This is figured at 6 per cent of the gross selling price, or 7.78 per cent of the cost at the mill. The latter percentage is used in computing the probable selling price of the fabric if made from raw wool free of duty, dutiable at 20 per cent, and dutiable at 29 per cent.

Profit.—A profit of 7 per cent on net sales is low, considering the risks involved, but the present profit on this fabric is slightly under 7 per cent on the net selling price. To arrive at the probable selling price of the fabric, if raw wool were free of duty or were dutiable at the rates proposed in the Underwood and conference bills, it is necessary to compute the profit on the total cost at the mill, or at the rate of 7.84 per cent.

EXHIBIT B.—Quotation of English price on 14-ounce broadcloth.

BUFFALO, N. Y., January 11, 1913.

JOHN E. J. CLARE,
Care of Patterson & Greenough,
New York City.

MY DEAR CLARE: We have your favor of the 10th instant, and are pleased to hand you herewith samples showing 14 and 20 ounce Bank's cloth.

It costs us \$1.80 to land the 14-ounce in Buffalo, \$2.50, 20-ounce.

Yours truly,

H. D. TAYLOR CO.
GEO. C. FINLEY.

P. S.—The writer expects to be in New York Thursday the 16th instant.

BRIEF OF THE AMERICAN ASSOCIATION OF WOOLEN AND WORSTED MANUFACTURERS AND OF THE CARDED WOOLEN MANUFACTURERS' ASSOCIATION.

This brief is submitted by the American Association of Woollen and Worsted Manufacturers and by the Carded Woollen Manufacturers' Association.

The former comprises 106 mills with 37 selling agents; they operate 13,990 looms in the manufacture of carded woollen and worsted cloth, and many members of the association are also combers of top and spinners of worsted yarn. The latter association has a membership of over 100 mills engaged in the manufacture of carded woollen yarns and carded woollen fabrics.

Attention is called to the fact that the membership of both associations is representative of the small and medium sized independent mills in both branches of the industry, scattered through the Atlantic and Middle Western States; in most cases the plants of these concerns are supervised by the actual owners.

PARAGRAPH 378—WOOLEN AND WORSTED CLOTH.

We feel that the woolen industry as a whole occupies an unfortunate and mistaken position in the public mind. The present duties in woolen imports have been thoroughly displayed and the natural deduction has been drawn that those engaged in the industry have benefited greatly from these rates. Such, however, is not the case. There is no trust or trade agreement in the woolen business. The product is of such an individual nature that the smaller concerns are fully able to compete with the larger, and this, coupled with the fact that the mechanical equipment in the country is more than sufficient to supply the consumption, has made the business a highly competitive one. The resulting margin of profit has been small and has been further reduced by fluctuations in raw material due to panics and repeated agitation for changes in the tariff. The serious effect of these will be realized from the following summary of price changes in fine medium scoured territory wool: July, 1896, 28 cents; October, 1899, 61 cents; January, 1901, 41 cents; July, 1905, 72 cents; July, 1908, 45 cents; January, 1910, 74 cents; January, 1911, 49 cents.

European mills possess advantages in the cost of their labor, their plants, and their materials, as well as in the real, though sentimental, influence of the word "imported." As a general average it may be said that American conversion cost is twice the European cost for similar work. We base this conclusion on data submitted by our members regarding their several products: on the information gathered by them concerning foreign conditions as compared to their own operations; on the Tariff Board report, and on the published statements of Harrison Benn and Julius Forstmann.

Although this relation of American to European costs is fairly constant, the great variation in the ratio of conversion cost to cost of material makes it impossible to apply any single rate of duty with equal justice to all the items of each classification under consideration. This could be done by a schedule of compound rates, which we believe to be the most satisfactory method of assessing these duties, and we stand ready to submit such a document if desired; but we have sought to meet the necessities of the moment and what we believe to be the wishes of the committee by devising ad valorem figures for tops, yarns, and cloth.

Articles having a low ratio of conversion cost do not require as high a rate of duty in order that they may compete with foreign manufactures as those having a higher conversion ratio. A rate adequate to the average requirement would place under impossible disadvantages one-half of those engaged in the industry. In suggesting a single rate for tops, yarns, or cloth we are therefore obliged to suggest one high enough to enable the major portion of each industry to compete and at the same time to allow for fluctuations in foreign values from the present high level. Thus a given rate of duty on 60-shilling Australian tops might be adequate when these tops sell in Bradford at 68 cents, but quite insufficient for either revenue or protection when such tops sell at 35 cents. This drop actually took place between December, 1899, and December, 1900.

Subject to these qualifications we suggest the following as minimum rates under which the greater part of each branch of the industry concerned can continue to compete:

Wool.—Should a duty be imposed on wool, the rates hereafter given must be increased to cover the greater cost of raw material.

Noils and other wastes not especially provided for should not bear a higher rate of duty than may be imposed on wools.

Top waste, slubbing waste, roving waste, and ring waste should bear the same rate of duty as is suggested for tops.

Tops.—Fifteen per cent ad valorem. This rate we believe sufficient to cover the difference in cost between Europe and the United States of a 60-shilling top at 56 cents or a 40-shilling top at 32 cents. If the market quotations were 36 cents and 15 cents, respectively, as in July, 1901, it would not be competitive.

Yarns.—A rate equal to one-fourth cent per count plus the duty on the top; the sum being approximately equal to 35 per cent ad valorem.

Cloth.—Fifty-five per cent ad valorem. We make no distinction between cloths, flannels, blankets, and dress goods, because no simple classification exists.

We have considered your committee's request for estimates of imports under these suggested rates. Since there is no basis on which such estimate can be founded, a pretense of accuracy would be misleading. Therefore we do not offer any.

Two of the most important questions to be considered are the disposal by European countries of their surplus manufactures at less than their home market values, and undervaluations. As remedies for these evils we suggest:

PARAGRAPH 378—WOOLEN AND WORSTED CLOTH.

(1) That section 11 of the administrative act of 1909 be enforced, and that it be amended so that when appraisals are made under it they be made after public hearings with notice to interested persons by advertisement or otherwise.

(2) That the practice of making private settlements with fraudulent importers be discontinued, that jail sentences be insisted on, and that corporations or individuals found guilty be excluded from the ports.

(3) That invoices and samples in the customhouse be opened to the public, or at least to any person who can show prima facie an interest in goods represented by them.

The last suggestion alone presents any point of novelty. Such a procedure would involve some hardship on those engaged in the business of importing, though the extent of this would be small as compared to the injury that domestic manufacturers and their operatives would sustain from undervaluation under an ad valorem duty. As a step in the direction of open fair dealing, it is directly in line with present legislative and governmental tendencies.

We call attention to the recent duty free importations of large quantities of cloth in short lengths under the guise of samples.

It is urgently suggested that changes in the duty on raw materials should take effect six months before the changes in the duties on manufactures.

January 1 and July 1 are suggested as dates for changing duties on manufactures in order that the business of the two established seasons may be least disturbed.

BRIEF OF EDWARD MOIR, MARCELLUS, N. Y.

MARCELLUS, N. Y., *January 25, 1913.*

HON. O. W. UNDERWOOD,
Chairman Ways and Means Committee,
Washington, D. C.

DEAR SIR: I desire to present for your consideration, and that of the Ways and Means Committee, the following:

Assuming that the duties on wool are to be assessed by value, what concerns me as a woolen manufacturer is the net rate of duty to be placed on imported woolen goods. A duty which will allow me to conduct my business and maintain the same rate of wages as are being paid now. I do not ask for a rate of duty that will guarantee a profit, simply a rate which experience in manufacturing teaches is necessary to be assessed on foreign goods in order that manufacturing may be conducted, leaving the question of profit to be settled by ordinary competition of business.

My investigations into the costs of manufacturing woolen goods show results quite different from the ideas heretofore presented in previous tariff bills. It has been assumed that the higher the value of goods the greater the ratio of manufacturing cost. My experience shows that the proportionate cost of labor and other charges increase as the value of the goods decrease. In the production of ordinary woolen goods I find that the value of raw material varies from 45 cents to 65 cents in \$1 worth of cloth, with corresponding fluctuations in percentages of labor and other expenses.

The varieties of woolen goods are so numerous, and the costs of manufacturing so variable, it is not possible to arrange a rate of duty based on the cost difference theory. This is a matter that can only be arrived at by considerable experience in manufacturing, and the exercise of good judgment, and the net ad valorem duty required on imported goods should be determined by our experience under the Wilson bill, which is the only bill with ad valorem duties with which the country has had experience in many years.

PARAGRAPH 378—WOOLEN AND WORSTED CLOTH.

I feel, too, that when it is a matter of doubt as to whether a certain rate of duty may be an adequate one or not the benefit of the doubt should be given to the home manufacturer.

There is a sentimental value attached to foreign goods which ought to be considered in fixing the rate of duty. If the rates are too low, and the difference in value between domestic and foreign goods is close, the buyer will choose the foreign goods on the theory that they are exclusive and can therefore be sold at a larger profit.

I would also call the attention of the committee to the following figures, which show the result of a too low duty on manufactured goods. Under the Canadian tariff wool is free, and the duty upon manufactured cloths is 30 per cent against Great Britain and 35 per cent against all other countries. The records of the Manufacturers' Association show that the result of this tariff has been disastrous to the industry, as the following figures indicate. The number of looms in operation in 1899 were 2,120; in 1907 there were 1,561; and in 1912, 1,154, or a total reduction in 13 years of 46 per cent. Bearing in mind that in Canada the hours of labor are longer than they are here and the rates of labor less, it is absolutely certain that anything less than 45 per cent as a minimum rate would open the door, each 1 per cent lower than that, increasingly to foreign importations, to the detriment of the home manufacturer.

I would therefore suggest that 45 per cent net would be a minimum ad valorem rate upon finished cloths as against the 50 per cent of the Wilson bill, with properly proportioned duties upon tops and yarns, and to be added to this rate the amount necessary to equalize whatever the duty on wool and by-products may require.

I would also like to call the attention of the committee to the fact that in the present Schedule K the duties intermediary between raw wool and finished cloth are out of all proportion to the duty upon cloth, and I hope, therefore, that in the new bill this will be corrected, so that each branch of the industry will have its fair proportion of duty due to its advancement in the progress of manufacture.

Yours, very truly,

EDWARD MOIR.

STATEMENT BY ROBERT BLEAKIE, HYDE PARK, MASS.

WEBSTER WOOLEN CO., OF SABATTUS, ME.,
Hyde Park, Mass., February 26, 1913.

HON. OSCAR W. UNDERWOOD,

Chairman Committee on Ways and Means, Washington, D. C.

MY DEAR SIR: In a letter from Mr. Edward Moir, president of the Carded Woolen Manufacturers' Association, he advises that I give you the benefit of my 60 years' active life as a carded woolen manufacturer, during which time I have been a close student of all tariff changes as affecting the woolen business, and he incloses your letter to him of February 4, wherein you suggest that a brief from me on the subject would be kindly received by your committee.

I appreciate the importance of preparing a brief, and the more so because I stood as one of the champion New England manufacturers for free wool during President Cleveland's administration. At that time I was in close touch with President Cleveland and the Democratic members of the Ways and Means Committee when drafting the bill known as the Wilson bill, which gave free wool and 40 to 50 per cent protection on manufactured goods. At the time the Wilson bill became a law it opened up opportunities for woolen manufacturing in this country that the business had been deprived of since 1867, when specific duties were enacted that debarred woolen manufacturers from importing, because of their very heavy shrinkage, all the short fine-stapled heavy-shrinking wools adapted for making woolen cloth, while the light-shrinking wools adapted for worsted manufacturing, because of their light shrinking, were imported freely, paying only about one-half the tariff tax per clean pound that heavy-shrinking wools had to pay if imported, thus stimulating the worsted industry and bringing a blight upon the woolen. For these reasons, as said above, I earnestly worked for the revision of the tariff that the Wilson bill brought about.

Regarding duties on wool: This, I feel, is a matter for the sheep herder and the American public to settle. If it is thought well to put a tariff tax on wool, let it be ad valorem and give a compensatory duty to equal this tax on wool. This is, as I understand it, what you are aiming to do in the bill you are now preparing, which I can assure you is very pleasing to me.

I have carefully read the hearings before your committee, as set forth in records No. 18 and No. 19, and the mass of misinformation furnished you is simply amazing to me; much of it savors of kindergarten talk. I could at some detail take up the

PARAGRAPH 378—WOOLEN AND WORSTED CLOTH.

cost of manufacturing here and abroad, but to take this to fix a standard of protection would be very misleading if consideration were not given to conditions other than purely the labor cost in producing woollen goods, as it would be difficult to find any two mills whose labor cost is the same; but we have data in what has been the result of past legislation, and I will here simply refer to the Wilson bill, which gave, as said above, free wool and 40 to 50 per cent protection. As the value of woollens imported under the Wilson bill costing under 50 per cent amounted to little, we speak of the bill as giving free wool and 50 per cent of manufactured goods. I believe that the bill you are now drafting should be reasonably along those lines. With 20 per cent protection on wool, I recommend 55 per cent on goods. This would give substantially 5 per cent less protection on manufactured goods than the Wilson bill and as large a reduction as ought to be made looking to the best interests of this great industry under present conditions.

If my physical condition would have permitted, I should have liked to have gone into this matter more in detail, but must rest content with the short general statement which I have the pleasure to submit. Personally, I thoroughly indorse the brief sent you by Mr. Edward Moir, president of the Carded Woollen Manufacturers' Association.

Respectfully, yours,

ROBERT BLEAKIE.

WOOLEN GOODS FOR MEN'S WEAR.

COX & SCHREIBER,
New York, January 25, 1913.

The WAYS AND MEANS COMMITTEE,
House of Representatives, Washington.

GENTLEMEN: Having had over 40 years' experience in the business of importation of woollen goods for men's wear, I would respectfully submit my views as to Schedule K, on which hearings are to be given on January 27, 1913.

The present tariff, 55 per cent ad valorem and 44 cents per pound, is admittedly too high and should be reduced. These rates go beyond protection of the American manufacturer. They are prohibitive, especially on the medium grades used by the masses of the consumers and on which the duties range from 100 to 150 per cent, according to price and weight.

Aside from the burden which these rates bring to the consumer, they are retarding the development of the industry instead of advancing it, as under such favorable conditions the majority of the manufacturers will not exert themselves beyond the necessity of competing with the home manufacturer, and thus will not enable the American manufacturer to produce goods to compete with other countries in markets outside of the United States, and which seems to me a necessity to keep the home market in a healthy condition.

The rates could be lowered without injury to the American manufacturer if he gets his raw material free or with a reduced duty, as there exists already a large margin in favor of the American manufacturer between the selling prices of same grade fabrics in home and foreign made goods.

Taking into consideration that the American manufacturer should have ample protection, the reduction of the present rates to an ad valorem rate of 49 per cent only would, in my opinion, not answer this purpose. I would be in favor of retaining a specific duty not less than 30 cents per pound plus 25 per cent ad valorem. This would give a greater protection on fabrics made by the majority of the American manufacturers and which is, as near as I can make it, a minimum of 50 per cent with an increase of 1 to 2 per cent for every additional ounce, according to price of the goods.

I would be pleased to answer any questions on which I can give you further information.

Very respectfully, yours,

ADOLPH SCHAUS.

REMARKS BY NATHAN T. FOLWELL, PHILADELPHIA, PA.

I take it for granted that it is desirable to legislate in the interest of our wage earners and industries rather than for the industries and wage earners of other countries. It must be taken into consideration that there are no trusts or combinations to control the raw material or finished products in the whole textile industry. The field is open to all. I want to call your special attention to these facts, as the American Woollen Co. has been mis-represented by the press as a trust. The large mills, such as

PARAGRAPH 378—WOOLEN AND WORSTED CLOTH.

the Manchester, Pacific, Atlantic, Arlington, Botany Worsted Co., Cleveland Worsted Co., Jamestown Mills, United States Worsted Co., the American Woolen Co., and many others, are absolutely independent.

My experience as a manufacturer and importer during the past 25 years enables me to speak from a practical standpoint, that the present rate of duties should be maintained on all light-weight, fine foreign fabrics in order that our manufacturers shall be able to pay the present wage scale. Competition is keen, and goods are sold on a very close margin. This has already been demonstrated by the late Tariff Commission. While it is true the duty could be lowered on some cheap heavy-weight fabrics, I do not see that the consumer would be benefited, as the goods are sold on a competitive basis regardless of the duty, and I can make the assertion that if the duty was 100 per cent higher the consumers would not have to pay one cent more for the merchandise, simply on account of competition among our own mills.

Why an industry paying out over \$500,000,000 annually to wage earners should be made a football of, to be kicked around at every congressional and presidential election, is hard for the business man to understand, and it is certainly rough on the manufacturers.

It is not generally known that most of the worsted textile machinery has been imported, and the Government has been paid 45 per cent duty on it; the mills built by American high-priced labor, and equipped with engines and boilers all on the same labor basis, which makes our overhead charges double that of England, France, and Germany. While our pay roll in our small mill is \$9,500 weekly, a similar mill in England can produce for \$4,500, a like amount of goods.

While it was freely asserted during the late campaign that no legitimate industry need have any fear of radical legislation, yet your chairman is reported as saying—

“The new bill will also be in harmony with the revision bills passed by the Democrats of the expiring Congress, and which President Taft vetoed.”

If these are your sentiments, gentlemen, why are we called? We had better stay at home and put our house in order, for, if a bill, anything like as radical as the late Underwood bills, is passed and becomes a law, it will have a demoralizing effect on the whole textile industry; wage earners, and those dependent on them, will suffer most of all. In fact, it will have a far-reaching effect on all branches of trade.

N. T. FOLWELL.

SUGGESTIONS AS TO PENDING TARIFF LEGISLATION, BY
EDGAR B. MOORE, NEW YORK CITY.

Hon. OSCAR W. UNDERWOOD,
Chairman of the Ways and Means Committee.

WILL IT PAY THE ULTIMATE CONSUMER?

In the consideration of tariff legislation as applied to wool and the manufactures of wool the parties in interest are the public (the ultimate consumer) and the wool grower and manufacturer (including the principals and all employees and every other person interested in furnishing him with buildings, machinery, soap, dyes, chemicals, and supplies).

Has the manufacturer secured undue or excessive profits under the present law? The record of the industry shows conclusively that he has not.

Three factors have prevented this, as follows:

FIRST. KEEN COMPETITION.

There are approximately 65,000 looms making woollens and worsteds, capable, without running overtime, of a yearly output of 325,000,000 broad yards, worth about \$325,000,000. The average yearly sales are estimated at \$250,000,000. The banner years, with many looms running day and night, have reached \$300,000,000, indicating that the possible production is at all times in excess of the demand, making the closest figuring and highest manufacturing efficiency necessary to market the product at any profit.

Because of heavy fixed charges, including investment, taxes, insurance, samples and supplies, it is necessary to turn off a maximum yardage to meet price competition.

Manufacturing cost increases as production is curtailed, and it is not unusual for manufacturing cost per yard to increase 25 to 50 per cent because of curtailed production.

PARAGRAPH 378—WOOLEN AND WORSTED CLOTH.

These figures indicate that even under favorable market conditions 25 per cent of the machinery is idle all of the time, or that all of the machinery is idle 25 per cent of the time.

SECOND. THE MUTATIONS OF FASHION.

Each radically different fabric (and there are scores of them) requires special equipment in machinery and organization.

When the market demands the kind of a fabric a mill is especially equipped to make that mill will secure a satisfactory profit while the demand holds, or until enough other mills can change their equipment to successfully compete and thus lower the price and reduce the profit margin.

When the public partially or wholly abandons a fabric the mills especially equipped to make that fabric have done one of three things—changed their equipment and fought for business on other cloths, continued to make it at a loss in the hope that it would return to favor, or liquidated the business (built up by years of effort) through bankruptcy proceedings, as indicated by the percentage of failures in every textile center in the last 15 years.

To illustrate: In the nineties, the kersey was in vogue for overcoats. Gradually its popularity waned until now the mills whose names were then well known throughout the trade have either liquidated, changed their equipment, or continued to supply the reduced demand at a meager profit or an actual loss.

The nearest approach to a staple fabric is the plain serge, on which competition has forced the selling price to a point so near to the lowest possible cost of manufacture that only mills with abundant capital and special equipment in organization and machinery can market it at any profit at all.

Because of the close communication between the different sections of our country, these radical changes in fashion are simultaneous and practically unanimous. The foreign manufacturer selling widely separated markets not in such close touch with each other and comprised of more conservative peoples escapes this difficult situation to a large degree.

These conditions explain why the industry is composed of a large percentage of small and medium-sized concerns with moderate capital and why it is impossible for any one or any number of large organizations to either absorb the business or force the small manufacturer out. The largest individual wool-manufacturing corporation controls less than one-sixth of the machinery, and the 10 largest corporations control less than one-third of the machinery, leaving two-thirds of the machinery in the hands of some 600 separate and distinct organizations.

THIRD. THE ATTITUDE OF THE PURCHASING PUBLIC TOWARD DOMESTIC FABRICS AS COMPARED WITH FOREIGN.

Cloths marked "Made in Britain," "Made in Germany," "Made in France" command a higher price and are given the preference by the American buying public over even more meritorious cloths offered as "domestic."

A large percentage of the cloths now sold to the consumer as "imported" are made here.

The American public has been led to believe that there are no actually pure-wool domestic fabrics, whereas 50 per cent of the cloth used in the manufacture of men's clothing contains no cotton.

This prevents the domestic manufacturer from securing any but the closest price for his product.

Any tariff legislation that will result in a large increase in importations will accentuate these conditions and make the position of the average manufacturer of wool untenable, if it does not largely destroy the industry, as seen in the case of Canadian manufacturers under a similar condition.

Finally, no average excessive profits can be shown to have been made in the wool-manufacturing business in the last 10 years. Competition has given the American public cloths as demanded by the mutations of fashion on a basis of a very meager return on the capital invested.

Will it pay the American public (the ultimate consumer) to destroy or seriously curtail their wool-growing and wool-manufacturing industry?

The destruction of the wool-manufacturing industry would wipe out an investment of \$200,000,000, to say nothing of the allied industries which furnish it with machinery, supplies, etc. It would stop the payment of yearly wages to American workers of between \$75,000,000 and \$100,000,000, causing, temporarily at least, disaster, loss, and

PARAGRAPH 378—WOOLEN AND WORSTED CLOTH.

suffering to the 200,000 operators employed and to the 1,000,000 people more or less directly dependent on them. It would seriously affect the entire business community of the sections in whose life the industry is a large factor, viz, the New England States, Pennsylvania, and portions of New York and New Jersey.

The reduction of the amount received from his product by the woolgrower would result in the decimating of his flocks of sheep, raising the price of mutton, and sympathetically increasing the price of all other meats to the consumer.

After this was accomplished and this magnificent market for manufactures of wool, amounting to \$250,000,000 yearly, was turned over to the foreign manufacturer it would so tax his ability to supply the demand (after our home wool and woollen industry had been destroyed) that the foreigner, both principal and operative, would be able to secure an advanced price, which would partially, if not entirely, wipe out the temporary saving of approximately \$1.25 per year per consumer.

Without an adequate tariff domestic woollen manufacturers can not compete with European.

Their buildings, machinery, and equipment have been bought and are owned on the present tariff basis, costing them 50 per cent more than the cost to the foreign manufacturer.

Their dyes, chemicals, and supplies are proportionately higher because of the duties levied on them, and their wages, for the same actual work performed, are 100 per cent higher, or twice as high as are paid abroad.

This contention is proved conclusively by present textile conditions in Canada, where, with practically free wool and a duty of 35 per cent on cloths, except those imported from Britain, on which the duty is 30 per cent, the woollen manufacturing industry is negligible, they having 1,250 looms with a possible product of \$5,000,000, against our 65,000 looms with a possible product of \$325,000,000.

The enactment of the present Canadian tariff resulted in the closing of 75 per cent of the woollen and worsted mills of that country.

Any tariff legislation which results in increased importations will, in proportion to their increase, cripple the American wool manufacturing industry, and will involve the ultimate consumer in the destruction of a great industry, involving the homes, happiness and position of over one million of our people, and, in consequence, affecting, more or less directly, practically every other citizen dependent on business conditions for his livelihood. The sure sign of prosperity is the full dinner pail of the laboring man. Take that away and adversity strikes home to everybody.

The Wilson bill, which proved so disastrous to the textile industry, admitted wool free and provided a duty of 40 per cent on cloth valued at less than 50 cents per pound, and of 50 per cent on cloth valued at more than 50 cents per pound.

The progress made by domestic manufacturers since that time would give them a fighting chance to hold this market under this same rate, with a compensatory duty on the actual weight of wool contained in the cloth equal to the tariff levied on the clean wool.

EDGAR B. MOORE.

THE ULTIMATE CONSUMER.

BOSTON, *January 25, 1912.*

HON. OSCAR UNDERWOOD,

Chairman Committee on Ways and Means, Washington, D. C.

DEAR SIR: As an humble citizen and one who belongs to that unorganized but very sensitive class called "the ultimate consumer," and who can not afford, however much he might like to do so, to come to Washington in behalf of himself and other members of his class, I beg leave to submit to you by mail some matter for your consideration.

In 1901 my tailor, who has been making clothes for me for twenty odd years, made a suit of which I inclose a sample. (Exhibit 1.) This was a very satisfactory piece of goods, not only as to attractiveness of pattern, but as to wearing quality. The pattern that I inclose was cut from the lapel of the pocket of the coat after the suit had been worn to the discarding point, so that the sample is not as fresh looking as if it were an unworn piece of goods, but you can see how, after constant wear, the pattern still looks clean and durable.

Since that time I have tried in vain to duplicate this piece of goods, both in character and pattern, but I can not come anywhere near it. Of course it was imported goods, and I suspect it was some that came into the country during that period from 1894 to 1897, under the Wilson bill, when wool was free. Recently my tailor has been on a

PARAGRAPH 378—WOOLEN AND WORSTED CLOTH.

hunt for something like it, and he has searched everywhere in the Boston market, and going as far as Philadelphia, where he bought the original pattern.

Somewhat skeptical, I wrote to my friend, Mr. A. Shuman, proprietor of one of the largest and best known ready-to-wear clothing houses in New England, and after my letter I went to the establishment of A. Shuman & Co. and searched their entire line of goods and was unable to come anywhere near this pattern. One of the men in their custom department, who had been with Mr. Shuman 38 years, assured me that they did not make goods of that weight now, that manufacturers 15 years ago used to make goods weighing 19 to 21 ounces per yard, but now the heaviest weight was 17 to 18 ounces per yard; and he also said, what Mr. Shuman himself told me several years ago, that even the English importations can not be of as high grade as formerly because of the very high tariff, which would make the same quality of cloth as used to be imported prohibitive in price.

I have no doubt that in some very high-priced merchant-tailoring establishments these most excellent English woollen cloths are to be found, but I am speaking of the ordinary consumer, who can scarcely afford to pay more than \$40 or \$45 for a suit made to order. The suit which I mention above, cost me, 10 years ago, \$40. I would cheerfully pay \$45, and perhaps more, if I could get the same goods.

I was shown, at Mr. Shuman's, some very good samples but, in my opinion, they were nowhere near as wearable or as heavy as this sample.

Now, I am firmly of the opinion that our woollen manufacturers of New England have no greater business desire than for free wool. Of course they are afraid of the Wyoming, Idaho, and Montana woolgrowers. I am told by woollen experts that there isn't a square mile of country in the United States, which produces wool of the peculiar soft texture of Australian wool; that, in order to make fine woollen fabrics, the Australian wool is an absolute necessity for mixing purposes, even if the fabric is not entirely made of foreign wool, and I believe that our New England manufacturers of woollen cloth would not only compete with England, but could export woollen cloth if they had free access to foreign wool.

It seems to be true that high tariff on wool has not fostered the American wool-growing industry, for there appear to be less sheep in the country to-day than there were 35 years ago, and if it is correct to say that the purpose of protection is to foster and develop American industry, it seems to have failed in the woolgrowing industry. I believe it is very clear that the maintenance of extremely high tariff duties upon wool enables the Western wool growers to do just what some of the trusts aim to do, namely, to restrict the amount produced and thus keep the price up, all the time enabled to do this behind the high tariff wall.

Now it seems to me a poor argument for continued high tariff duties upon wool and woollen fabrics, if, after all these years, our domestic manufacturers are not putting on the domestic market goods of as high quality as used to be the case.

The tailor above referred to has shown me a sample of goods that was made forty-odd years ago, and it does not require an expert to know that no such goods are made to-day. This was an American piece of goods, and I suppose it is impossible to get such a piece of goods anywhere in this country to-day. I do not know that you are interested in this letter, and if it exhausts your patience, I hope you will pardon me for the intrusion.

Yours, very respectfully,

SAMUEL W. MENDUM,

Ultimate Consumer, Member of a Nonprotected Calling.

STATEMENT OF W. A. SCHNEIDER, NEW YORK, N. Y.

NEW YORK, January 2, 1913.

THE COMMITTEE ON WAYS AND MEANS,
House of Representatives, Washington, D. C.

GENTLEMEN: I have been in the woollen cloth importing business for about 20 years and wish to state that the present tariff law has been most effective in shutting out importations of woollen cloths, excepting a few specialties.

While, theoretically, I believe in free trade or a moderate tariff for revenue only, practically I believe it would be folly to make, at this time, any radical reductions in existing rates.

I would suggest, as a beginning, that the duty on raw wool, as per section 369 of Schedule K, be reduced one-third and that the duty on cloths, as per section 378 of Schedule K, be reduced one-half as to specific duty with an ad valorem duty of 40 per cent or, preferably, a straight ad valorem duty of 60 per cent,

PARAGRAPH 378—WOOLEN AND WORSTED CLOTH.

This reduction would not, I believe, unduly stimulate importations, yet sufficiently to yield a large revenue to the Government without seriously affecting our domestic manufacturers and at the same time giving the consumer better value for his money.
Respectfully submitted.

W. A. SCHNEIDER.

STATEMENT OF W. E. POULSON, NEW YORK, N. Y.

CHICAGO, ILL., *January 29, 1913.*

Mr. O. W. UNDERWOOD.

DEAR SIR: I have been much amused at the testimony of the high-tariff robbers, and call your attention to an official report of our consul, J. Schoenhoff, at Tunstall, England, May 6, 1888, showing clearly 25 years ago that labor cost was less in America than in England. He said: "It will therefore be seen that the earnings of English weavers at the present time in these cotton mills are nearly the same as the American. The labor cost, however, by the piece, cut, or yard is considerably above."

The cost of spinning was 3.5 in Lancashire, England, to 3.2 in Lowell, Mass., and the total cost, English, 9.586 to 8.551 in America. In the manufacture of all wool dress goods it stood in England 38 to 33 in America, or 5 cents less. But the wool cost 38 cents more here on account of the tariff. He also states in his report, June 5, 1888: "If we had the wool at the same cost of English, we could produce at 64.31 cents what it costs in England 69.90 to produce." In the cost of worsteds, chevots, all-wool kerseys, etc., there is about the same comparison.

The facts are, in a great majority of our industries there has been no need of a tariff to protect labor, for labor protects itself against foreign competition by its greater efficiency, and although the price of wages is higher in this country than in other countries, the cost of labor here is the lowest in the world and needs no protection; and if our manufacturers can get their raw material at the same price the foreigners can, they can beat the world in total cost and not reduce wages one cent; in fact, can increase them and undersell other countries.

Yours, respectfully,

W. E. POULSON.

[Inclosures.]

[Chicago Tribune, Dec. 14, 1882.]

National Association of Agriculture, second day proceedings. Hon. John B. Grinnell, of Iowa, introduced Mr. Joseph Medill, of Chicago, who said:

"When in England last summer, I was astonished in traveling over that island, from Manchester to Plymouth, in not meeting one Englishman who was in favor of reducing the present American tariff. Formerly they were all anxious to have our tariff reduced. It was said they sent gold over here to bribe Congress to reduce our tariff. I was charged with getting some of that gold myself for saying the tariff ought to be reduced. But I found in every town I visited, and every man with whom I talked, in newspaper offices, in the cars, in the hotels, in the shops, at social parties, the Englishman made one universal reply to my inquiry to this effect: 'We care nothing about your tariff; we don't want it reduced, we regard it more as a protection to us than to you. Your high tariff and dear manufactures keep you out of all the other ports of the world, and we have a monopoly of them; but if you make a tariff like ours, your goods would be cheap, you would invade us, and compete with us in every port for the sale of your fabrics. We could not put any more of our goods into your country than we do now, and you would put our goods out of a hundred ports where we now have absolute control. You are a country of overwhelming natural resources, but you have artificially hedged yourselves out of the markets of the world and we hope you will continue to do it.'"

[Daniel O'Connell, Covent Garden, 1843.]

But what is the meaning of protection? Protection means an additional 6d. for each loaf; that is the Irish of it. If he had not the protection, the loaf would sell for 1s.; but if he has protection, it will sell for 1s. 6d. Protection is the English for 6d., and what is worse it is the English for an extorted 6d.

The real meaning of protection, therefore, is robbery—robbery of the poor by the rich.

Yet by the swindling scheme of protection, as it is called—they tax the bread, not for the good of the state, in which you might all participate—not for the protection against a foreign enemy, or to keep domestic peace—but for the benefit of one particu-

PARAGRAPH 378—WOOLEN AND WORSTED CLOTH.

lar class. All the rest of the community are taxed, that that tax may not go into the purse of the public, but that it may go into the pockets of private individuals. Why, really, it is too bad that you should be called sensible people and bear this. I, of course, mean you no disrespect, but there is a thickheadedness about it that I can not understand.

MEMORANDUM SUBMITTED BY GEORGE BORGFELDT & CO.

JANUARY 28, 1913.

Hon. OSCAR W. UNDERWOOD,
Chairman Ways and Means Committee,
Washington, D. C.

DEAR SIR: As importers under Schedule K, we respectfully submit the attached suggestions for your consideration in connection with them.

Respectfully,

GEO. BORGFELDT & Co.
CURT G. PFEIFFER, *Vice President.*

Schedule K of Payne bill.

This paragraph should apply to articles made wholly or in "chief" value of wool and not in part of wool. The provision of articles in part of wool is open to abuse. The article should be wholly, or in chief value of wool before the appropriate rate is applied. Now, an article 95 per cent in value of some other material pays the wool duty, though but 5 per cent wool.

GEO. BORGFELDT & Co.,
Per C. G. PFEIFFER.

BRIEF OF BELLINGHAM WOOLEN CO., NORTH BELLINGHAM, MASS., ET AL.

To the Honorable Ways and Means Committee of the Congress of the United States:

The undersigned respectfully present the following for your consideration in connection with the revision of Schedule K under the proposed tariff act.

First. That we represent numerous independent woolen mills manufacturing cloth in active competition with each other, but united in appealing to Congress to so revise Schedule K in any new tariff legislation that our capital now invested may be conserved and also that the wages paid to the operatives in the industry which we represent may not be reduced.

Second. That while we recognize the justice of a tariff being so framed that it will not tend to create monopoly or engender excessive profits to capital invested in any industry, we at the same time consider it of equal importance that the duties under any tariff be not so reduced as to place that industry in jeopardy.

Third. That Schedule K is one of the most complicated and intricate in the whole tariff and the woolen manufacturing industry is dependent upon all but three schedules in the whole tariff act.

Fourth. There is at the present time a vast investment in the mills of this country. In their equipment they have been brought to high perfection and are able to manufacture more cloth than is necessary to meet the needs of the people of this country. It is only just that the industry be sufficiently protected to permit a reasonable return on this capital invested and without requiring a reduction in wages, which are now far in excess of the wages paid in the mills of other countries with which they will be brought into competition.

Fifth. That the vast number of small towns in New England where the woolen industry is the only source of income for its inhabitants should not be jeopardized by having its business taken away and transferred to some foreign country on account of the material lowering of Schedule K.

Sixth. That for all practical purposes cloth made in this country is as good quality as that of foreign countries where it is a conceded fact that a greater amount of adulterants are used.

Seventh. That the so-called Wilson bill wrought havoc with our industry, and as a result nearly every mill in the country was obliged to close. Many manufacturers

PARAGRAPH 378—WOOLEN AND WORSTED CLOTH.

were absolutely ruined. This was due to the vast importation of foreign goods permitted under that tariff. We abhor the possibility of lower wages to meet foreign competition, and thus bringing labor conditions in this country on a parity with those of foreign countries. Considering the appalling conditions that existed under the Wilson bill, we feel confident that should the duties finally adopted be the same as under the Underwood bill, that has now twice passed the House of Representatives, namely, 40 per cent on manufactured cloth and 20 per cent on raw materials, the business which we represent is in great danger of being ruined.

Eighth. In view of the facts set forth in the preceding paragraphs, the only reason that can be advanced for adopting a low tariff is that it should be for the revenue of the Government. This method is unjust, as it really places upon the consumer a double burden. He pays the duty on the goods brought into this country, and by reason of the importation of those very goods the Government is depriving the laborers of an amount equal to the cost of their manufacture in this country.

Ninth. That the construction and cost of manufacturing cloth in this country varies greatly in different mills, and this variation would be much greater among foreign mills, and thereby the opportunity for undervaluation greatly increased. We contend that while an ad valorem duty may be feasible on raw materials (but with great danger of undervaluation), it would be impossible to accurately or justly determine the duty on manufactured cloth by means of an ad valorem duty only. The fact that it is practically impossible to find two cloth experts that will agree as to the exact value to be placed on a piece of cloth shows conclusively the impossibility of a custom official being able to detect undervaluation.

Tenth. That the lower grades of cloth carry a larger percentage of labor cost than the more expensive grades and require at least an equal amount of protection.

Eleventh. That while some mills can manufacture cheaper than others on account of local conditions and variety of cloth manufactured, that to compete with foreign mills we must have a duty accurately assessed of at least 55 per cent above whatever duty is adopted on raw materials.

Twelfth. We therefore request that whatever duty is adopted it be so assessed as to prevent undervaluation, and urge that to accomplish this end a specific duty be adopted.

BELLINGHAM WOOLEN CO.
(And 18 others).

BRIEF OF THE IRISH INDUSTRIAL ASSOCIATION OF NEW YORK CITY, N. Y., CONCERNING TARIFF ON WOOLENS, ETC.

NEW YORK, January 30, 1913.

The COMMITTEE ON WAYS AND MEANS,

Washington, D. C.

GENTLEMEN: The Irish Industrial Association of New York City, N. Y., a commercial body of American citizens of importers and dealers, representing important interests in foreign and domestic woolen cloths in the United States of America, respectfully submits to the consideration of this honorable committee, for adoption, the recommendation respecting duties on cloths, woolen or worsted, coming under Schedule K (par. 378).

That the present duty on cloths, woolen or worsted, valued not more than 40 cents per pound, is 33 cents per pound and 50 per cent.

Valued more than 40 cents and not more than 70 cents per pound, 44 cents per pound and 50 per cent.

All other manufactures wholly or in part of wool: Valued not more than 40 cents per pound, 33 cents per pound and 50 per cent.

Valued more than 40 cents and not more than 70 cents per pound, 44 cents per pound and 50 per cent.

We submit that the above rates of duty are excessive and that they should be substantially reduced, as it does not seem just both to the dealers and consumers; that a high duty of this sort naturally prohibits their importation; it gives opportunity for the creation of monopoly, and thus prevents competition, which results in the subjection of importers and consumers of woolen cloths to pay whatever price is demanded by the domestic manufacturers; and therefore we think that such an exorbitant high duty should be greatly reduced, on the ground of public policy, as the people who ultimately suffer under the present duty are the consumers and dealers, who constitute 95 per cent of the mass of American population.

PARAGRAPH 378—TAPESTRIES.

We represent important spinners, whose output of cloth goods, such as frieze and blankets, medium-priced suitings, and coarse, heavy woolen shirts, and woollens underclothes, will greatly cheapen the cost of living for the American workingman and the members of his family if a reduction of the tariff to the extent of 5 to 10 per cent will let our goods come in and will not seriously endanger the net profits of United States manufacturers.

In conclusion, there is no question that the opinion of the general public, including the majority members of the respective legislation of the United States, that the entire Schedule K should be revised downward, to the extent that it should reduce the duty on raw wool to 20 per cent ad valorem, which would bring the duties on woollens averaging about 33 per cent ad valorem, which amounts to a reduction of 40 per cent in the rates of the Payne tariff law, and will not endanger the net profits of United States manufacturers.

Respectfully submitted.

IRISH INDUSTRIAL ASSOCIATION OF NEW YORK.

Submitted by J. M. Sullivan, Emilio Yaselli, and H. Winship Wheatley, attorneys.

MEMORANDUM ON WOOLENS, ETC.

ST. PAUL, MINN., *January 21, 1913.*

HON. FREDERICK C. STEVENS,
Washington, D. C.

MY DEAR MR. STEVENS: We have noticed the various tariff matters up before Congress, and when it comes to the lines of white goods, cotton goods, silk goods, and woollens, we would suggest the following: For instance, if the reduction is 20 per cent, or practically that, it ought to be divided into four years, each of 5 per cent, so that the loss does not come too severe at any one time. If, for instance, it is 40 per cent, then it should be 10 per cent a year.

In this way the merchants of the United States will not feel the reduction, and can regulate their purchases and their stocks accordingly.

I trust you will convey our expression to Mr. Underwood or the other members of the committee.

Thanking you in advance for your kindness in this matter, I remain,

Yours, very truly,

MANNHEIMER BROS.,
Per B. L. GOODKIND.

TAPESTRIES.

TESTIMONY OF MR. WILLIAM M. BLAKE, ON BEHALF OF THE ORINOKA MILL, STEAD & MILLER CO., GEORGE BROOK & SON CO., ROBERT LEWIS CO., THE ARBEKO MILL CO., A. THEODORE ABBOTT & CO., JOHN MOORE SONS & CO., AND MOSS ROSE MANUFACTURING CO., OF PHILADELPHIA.

Mr. BLAKE. In the matter of the revision of wool schedule, the specified tapestries and other jacquard figured upholstery goods, the parties I represent respectfully request that a paragraph be inserted in the wool schedule reading substantially as follows:

Tapestries or other jacquard figured upholstery goods, composed wholly or in part of wool, in the piece or otherwise, 75 per cent ad valorem.

Heretofore these goods are mentioned specifically only in the cotton schedule.

But tapestries of wool, which represent the art of weaving in its very highest branch and which are essentially luxuries, used by the wealthy for purely decorative purposes, are being extensively imported into this country and should pay a revenue in keeping with the character of the article.

PARAGRAPH 378—TAPESTRIES.

They are now classified as woolen cloths, under paragraph 378 of the act of 1909, and their value in excess of 70 cents a pound pays a specific duty of 44 cents a pound and 55 per cent ad valorem. A piece of woolen tapestry, recently imported, costing 16.50 francs per meter, less 5 and 1 per cent, weighing 2 pounds to the yard (50 inches wide) paid a duty equal to $84\frac{1}{2}$ per cent ad valorem. If the wool bill, which passed the House of Representatives April 12, 1912, had become a law, these goods would have come in under paragraph 5 thereof, providing for cloths, knit fabrics, felts, and so forth, paying a duty of 40 per cent ad valorem; a rate that is less than provided in the same bill for such ordinary cloths as flannels, valued at over 50 cents per pound; also bunting and goods of a similar description, which were rated to pay a duty of 45 per cent ad valorem.

A reference to the sample of American wool tapestry submitted herewith, marked No. 376, is sufficient evidence that these goods should not be classified with cloth, flannel, or bunting, but should pay a much higher rate of duty.

Before a single yard was woven \$470 was paid for the sketch, Jacquard design and cards. A loom operated by a single weaver produces but 6 yards a day; if more than one loom should be required on the same design, a duplicate set of cards, costing \$100, is necessary. The labor cost is nearly 60 per cent of the net cost at the mill.

No mention was made of wool tapestries or other wool upholstery goods in the report of the Tariff Board on manufactures of wool, but the cost of three wool tapestries was given by the board in its report on cotton manufactures in Table 141, volume 2, page 459. It will be noted under the details given therein the very small margin between the total cost and the mill selling price.

We trust that the committee will give this request very careful consideration and any further or additional information or samples required will be cheerfully furnished.

The CHAIRMAN. Those goods come in under the present law?

Mr. BLAKE. Yes, sir.

The CHAIRMAN. Those goods come in under the same classification that they come in on under the bill we proposed last winter—that is, what is known as the basket clause?

Mr. BLAKE. Knit goods and so on.

The CHAIRMAN. There are a great many other goods that come in under the same classification?

Mr. BLAKE. Yes, sir.

The CHAIRMAN. Have you proposed the same classification for this class of goods?

Mr. BLAKE. This is a separate classification.

The CHAIRMAN. Do you distinguish in your brief what you think that classification ought to be?

Mr. BLAKE. Yes, sir; it is here.

The CHAIRMAN. How do you state it?

Mr. BLAKE. Tapestries, or other jacquard figured upholstery goods, composed wholly or partly of wool, in the piece or otherwise.

The CHAIRMAN. Do you think that will cover it?

Mr. BLAKE. I think so; yes, sir.

PARAGRAPH 378—PRESS CLOTH.

The CHAIRMAN. What is the amount of importation of that class of goods as described in your brief?

Mr. BLAKE. That can not be told, Mr. Chairman, for the reason that the customhouse statistics do not segregate them.

The CHAIRMAN. I know that.

Mr. BLAKE. There are several other kinds of goods in that paragraph.

The CHAIRMAN. That is the reason I asked you, because it falls in the basket clause, and there is no way for us to get it exactly out of the reports.

Mr. BLAKE. No, sir.

The CHAIRMAN. But that is a very material question to this committee in fixing this rate, what is the amount of production of that class of goods in this country?

Mr. BLAKE. I don't know, Mr. Chairman. You see, I am not familiar with that end of it, I was simply requested to come here and make this statement to your committee.

The CHAIRMAN. I suggest that you furnish the committee some additional information.

Suppose you see if you can ascertain those two facts—the amount of importation and the amount of American consumption of those goods, and then write us a letter.

Mr. BLAKE. I have some more samples. They are all in the same class.

The CHAIRMAN. I do not think it is necessary to submit them.

Mr. BLAKE. I will leave them. One is a sample of the American manufactured article.

The CHAIRMAN. Are there any questions? [No response.] You will be excused, Mr. Blake.

PRESS CLOTH.

TESTIMONY OF CHARLES E. PERKINS, OF BROOKLYN, N. Y.,
REPRESENTING J. T. PERKINS CO.

Mr. PERKINS. Mr. Chairman, I would like the privilege of demonstrating the impossibility of importing press cloth the same as the silk bolting cloth is, if you will permit me.

The CHAIRMAN. Proceed in your own way.

Mr. PERKINS. I am wearing an overcoat made of press cloth. We are the largest manufacturers of press cloth in this country—J. T. Perkins Co.—and this coat was made out of a regular cloth, called our "A2" cloth, that is used by the Refuge Cotton Oil Co., of Vicksburg, and three other mills in the Arkansas Cotton Mill Co., owned by the American Cotton Oil Co., and you will see that it is quite impossible to so designate the cloth, as the silk cloth is designated, to keep it from being used by the clothing manufacturer, should it be brought in free or at a nominal duty. I also have samples, if you will allow me to show them, of a dress made of a light press cloth, made for the American Sugar Refining Co. Press cloth is made by the worsted process, and it is used by the chocolate manufacturers, manufacturers of stearic acid, manufacturers of mustard, linseed oil manufacturers,

PARAGRAPH 378—PRESS CLOTH.

and also by the cottonseed oil manufacturers, and they use it under different pressures, and consequently they have to have a different character of cloth. This dress, or skirt, has been worn until it is almost worn out, and that was made not for the purpose of exhibition, but was made of a cloth that we manufactured for the American Sugar Refining Co.

I also have samples of goods made in England and Hungary and goods made here, which I should be very glad to put in the possession of the committee to examine at their leisure.

The CHAIRMAN. Suppose you hold them up there, where the whole committee can see them, and explain them.

Mr. PERKINS. There is some made in Austria. There you see is a light-weight cloth used by people who require light pressure. There is a heavy cloth used by the people who press the cottonseed oil. Here is some made of entirely white wool, fine white wool, English wool, made in England.

The CHAIRMAN. I thought all press cloth was made out of camel's hair.

Mr. PERKINS. No, sir. Here are our own samples. There is a sample made out of white worsted wool. Here is a sample made out of cotton. Here is a sample made out of gray wool, made by ourselves. Here is one made out of mohair; made not for exhibition merely, but for actual use. This is cut from goods made for customers.

The CHAIRMAN. Is that made out of mohair there used for clothing?

Mr. PERKINS. That could be used for clothing.

The CHAIRMAN. What is it used for?

Mr. PERKINS. That is used by such concerns as the American Sugar Refining Co. and concerns that use our light degree of pressure. There is also one made of alpaca. But I suppose that to-day 50 per cent of all the press cloth used in this country is made of camel's hair. The quantity made from sheep's wool, gray wool, has increased very considerably in the last two years, and we have made this year more than for a number of years past.

Mr. PETERS. Do you not run camel's hair and wool together in the yarn?

Mr. PERKINS. No, sir; we do not mix camel's hair with anything. Our cloth is absolutely pure camel's hair, absolutely.

Mr. PETERS. Camel's hair yarn?

Mr. PERKINS. Yes, sir; camel's hair yarn. The customhouse records are open to all you gentlemen, and you can see our importations of absolutely pure camel's hair.

Mr. PETERS. My question was not a criticism of the cloth; I was trying to find out the fact.

Mr. PERKINS. It is absolutely pure camel's hair. We do not mix camel's hair with anything else. We have mixed different characters of wool.

Mr. FORDNEY. Is camel's hair mixed by any manufacturer in the production of any article? I ask for information.

Mr. PERKINS. I do not know that I am able to state that fact, because we do not mix it ourselves. I can only state what we do ourselves. But the camel's hair cloth we make is absolutely made of Russian camel's hair and largely from the Ural Mountain districts.

PARAGRAPH 378—PRESS CLOTH.

Mr. FORDNEY. My memory is dim on the question, but my information is that in some instances camel's hair has been mixed with some other raw materials in making some kinds of goods. I do not know what it is.

Mr. PERKINS. I think it has been done by other manufacturers.

Mr. PETERS. It is stated in the report of the Tariff Board somewhere.

Mr. PERKINS. I do not think it is done to-day. We have never mixed it since I have been in the business. It has always been pure camel's hair.

Mr. HILL. Do you know anything about the process for making fabric out of cattle hair and domestic goat hair, which is being exploited or was exploited and perfected in Belgium? Do you make anything of that kind?

Mr. PERKINS. We do not make it out of domestic goat hair. We make some cloth out of the hair of Russian and Turkish goats.

The effort may be made to induce your honorable committee to eliminate from the provisions of the wool schedule, known as Schedule K, all press cloth made of camel's hair and sheep's wool. I therefore beg leave to take a few moments of your valuable time to demonstrate what losses to the Government may accrue and also call your attention to the sworn statement which I made to chairman of the Ways and Means Committee of the 60th Congress, dated December 30, 1908, and published in tariff hearings No. 47.

The cloth known as press cloth is used to cover cotton seed, flaxseed, and a number of other substances while it is being pressed, usually in hydraulic presses, for the purpose of extracting the oil. It is also used, and in that case made of a light weight cloth, where the pressure is not so great as is necessary to extract the oil from cotton seed. In most of the oil works it is the supply of the smallest cost.

The gentlemen who appeared before you this morning gave you the idea that it was a very big cost.

In the manufacture of cottonseed oil, it varies in cost to the ton of seed crushed according to the experience of the hands employed in the mills and the condition of the seed, but the average is between 20 cents and 25 cents, while the cost of the seed at times has been as high as \$36 per ton, labor about \$3.25 per ton, bags 73 cents per ton, fuel 75 cents per ton.

That, however, varies in different sections. In the chairman's section they get the coal so cheap that it does not cost them quite so much as that.

The raw material used in many cases is all cotton, in others all sheep's wool, and still others all camel's hair, which is frequently called camel's wool, and is included in Schedule K as wool of the third class. During the last three years a much larger percentage of cloth made of sheep's wool has been used than formerly, but camel's hair has the preference in many of the mills. When made of camel's wool, sheep's wool, alpaca, or mohair—and we have made it of all the four—the process of spinning the yarn is known as the English process of worsted spinning, the same as is used in making worsted overcoating, cloakings, men's and women's suitings, etc.

PARAGRAPH 378—PRESS CLOTH.

We show you samples of different styles of cloth which are used for press cloth, and you will quickly see how impossible it would be to have the cloths so made as not to interfere with cloth made for other purposes by putting on a brand or other designating mark.

I would like to say here that the cloth used by the cotton-seed oil people largely runs from $11\frac{1}{2}$ to $13\frac{3}{4}$ inches, and is a very heavy cloth. The cloth used by the linseed oil people is a cloth that is of lighter weight and runs from 15 to 17 inches in width. The cloth used by the stearic acid people is almost invariably from 36 to 40 inches in width, and we have made for special customers some as wide as 2 inches, and one customer bought it as high as 84 inches. So you see that if this is thrown out of Schedule K, a cloth can be made much finer than what we show you here and imported as press cloth, because it might be used for pressing and could be dyed the same as that coat was dyed and used for clothing purposes.

The CHAIRMAN. There seems to be in the tariff bill two designations of press cloth, one in Schedule K and one in Schedule N. How do you differentiate between those?

Mr. PERKINS. The schedule N case was brought up in this way: One of the gentlemen, living in Augusta, Ga., claimed that anything made of camel's hair should be brought in at 20 cents per square yard as hair-press cloth, and he said that no southern judge would decide against him. We said "Well, all right. We will argue it in any southern court where you want to argue it." So an importation was made by that party. Through the influence of that party we went to New Orleans, and it was brought up in the circuit court of the United States there, and the judge found that the provisions regarding alpaca, mohair and camel's hair ruled that out entirely, and he decided in our favor.

Mr. HARRISON. Your friend made a mistake in not picking out Charleston or Jacksonville. There is no cotton grown down there in Louisiana, is there? (Laughter.)

Mr. PERKINS. Not so much as formerly. Then they were not quite satisfied with that, so they wanted to carry it up further. We said: "All right," and they carried it up to the circuit court of appeals, which is next to the Supreme Court of the United States, and were beaten there. It was demonstrated before the honorable judges of both those courts that that hair-press cloth was a cloth made of horse hair, upon which there was no duty paid whatever, whereas the manufacturers in this country of camel's hair paid a specific duty which was equal to over 30 per cent.

The CHAIRMAN. As I understand, under that decision of the court, it threw this particular press cloth that is used for cotton goods in Schedule N, did it not?

Mr. PERKINS. Yes, with hair-press cloth.

The CHAIRMAN. What I want to know is, not the decision, but where do you differentiate between the press cloth that you find in Schedule K and that in Schedule N? Where is the line demarcation?

Mr. PERKINS. That is differentiated in our own business. Mr. Hill asked a moment ago if we made any cloth out of goat hair. We

PARAGRAPH 378—PRESS CLOTH.

make a cloth out of goat hair, and we have some competition on that because occasionally some is imported at that 20 cents per square yard, and that is made out of a hair that is nondutiable, a goat hair, that we sell to-day for 35 to 40 cents a pound, where we get 65 cents a pound for our camel's hair.

The CHAIRMAN. The first cloth you were talking about comes in Schedule K, does it not?

Mr. PERKINS. Yes, the camel's hair cloth.

The CHAIRMAN. The cloth that is designated in Schedule N is entirely camel's hair, is it not?

Mr. PERKINS. No, sir; it is not. Schedule N is horse hair, or undutiable goat hair.

The CHAIRMAN. I see.

Mr. PERKINS. There is a manufacturer of the article in New Orleans making it entirely—I presume entirely—of horse hair, although he may use some other kinds of hair. Some of our customers like camel's hair, and some like goat hair. We have some competition from abroad, because that comes in under Schedule N.

The CHAIRMAN. All the camel's hair press cloth comes under Schedule K?

Mr. PERKINS. Yes, sir. Should press cloth made of sheep's wool or camel's hair be allowed to come into the country at less duty than other cloths made of the same material, it would not be long before hundreds of thousands of yards would be imported and dyed for men's overcoats, women's cloaks and dresses, and men's suits, and the result to the Government would be similar to the famous hat-band cases in which the frauds amounted to many thousands of dollars, goods called hat bands being imported and used for other purposes. To illustrate, I am attaching a sample of men's wear goods made entirely of sheep's wool, and a piece of light-weight press cloth made for one of our customers, which has been dyed. I also submit an overcoat and a dress made of cloth which was originally made for press cloth. Now when you realize that it will be very easy to make these goods a little finer, yet have them still adaptable for press-cloth purposes, you can imagine what will be the result.

As before stated, hundreds of thousands of yards will be invoiced as press cloth and after arrival be dyed and used for men's and women's wear. Many of the users of press cloth may say, we use 13 $\frac{3}{4}$ -inch goods and they could not be used as described. The fact remains, however, that we have made press cloth from 2 inches to 84 inches in width and from 1 pound to 8 pounds per square yard, and have made during the past season thousands of yards 36 inches or wider.

The Government is now receiving in duties about \$300,000 on camel's hair imported. It is true that the duty received on the cloth has been only a small amount, because the price charged the oil mills for press cloth has been so low that not only has it been impossible to import it, but four or five concerns making it have gone out of the business.

In consequence of the fact that the cotton crop during the past two years has aggregated more than 25 per cent larger than usual, the supply of camel's-hair cloth manufactured has not been quite equal to

PARAGRAPH 378—PRESS CLOTH.

the demand. But certain cotton-seed crushers have continued for a number of years to agitate the subject of abolishing the duty, and while this has continued no one would buy new and expensive machinery for the manufacture of the article. This has been the chief reason for the shortage. We are the largest manufacturers of camel's-hair press cloth, and we also make it of cotton and of sheep's wool. We have been in the business since 1876. Since our incorporation in 1892 not a share of our stock has been owned by any of our customers and we are not in combination with any other manufacturer as to price or territory to be supplied. There are, we believe, manufacturers of the article in Massachusetts, New York, Pennsylvania, New Jersey, South Carolina, and Texas. We do not know what our competitors are charging. We have never made overtures to buy out any other manufacturers of press cloth, though we have had one or more concerns offer their machinery at 50 cents on the dollar to us. We have never reduced the price with the view of driving anyone out of the business, nor have we advanced the price of our product in consequence of anyone going out of the business.

The price to-day of the best Russian camel's wool out of which we make our press cloth is about 26 cents, duty paid. There is 35 to 40 per cent of dirt and grease; there is about 21 per cent of noil, which is worth about 30 cents per pound. We obtain about 41 pounds of cloth out of 100 pounds of camel's hair. When commission to agents and other incidental expenses are taken into consideration, nothing more than a living profit can be estimated; our price for the cloth being 65 cents against the price in England of about 49 cents.

We, however, are not appearing before you for the purpose of requesting that no change should take place in the rate of duty, but are before you for the purpose of illustrating what will take place should our product be placed in any other schedule than the one governing the product of other worsted manufacturers and to refute the assertion that has been made that we are making more than a legitimate profit.

**TESTIMONY OF JOHN S. RADFORD, REPRESENTING
ORIENTAL TEXTILE MILLS.**

Mr. RADFORD. Mr. Chairman and gentlemen of the committee, a question was just asked of Mr. Perkins in regard to hair press cloth. Under paragraph 445 that is a press cloth made of horsehair and cows' tails. That is made in New Orleans by two firms. The raw material from which that is made is under paragraph 583, which is imported free. That was tried out before the federal district court and the circuit court of appeals under the style of United States against Oberly & Henry.

Then that cloth is taxed at 20 cents per square yard, made of the same material as crinoline cloth, with which chairs and sofas are upholstered and haircloth used for other purposes.

Camel's-hair cloth is made of Russian camel's hair, and the factory I represent is running in Texas.

I appear before you as I knew that this question would be brought up, by a letter that was circulated by the publicity bureau of the Interstate Cottonseed Crushers' Association.

PARAGRAPH 378—PRESS CLOTH.

Mr. HARRISON. Under which paragraph of Schedule K does camel's-hair press cloth come in?

Mr. RADFORD. The raw material under paragraph 363.

Mr. HARRISON. That is classes 2 and 3, having reference to raw wool?

Mr. RADFORD. Yes, sir, and wools of the third class.

Mr. HARRISON. Where does the cloth itself come in?

Mr. RADFORD. Paragraph 378.

Mr. HARRISON. The basket clause?

Mr. RADFORD. No, sir.

The CHAIRMAN. Cloth, knit fabrics, felt not weaved.

Mr. RADFORD. And not otherwise provided for.

Mr. HARRISON. What rate does it pay under that?

Mr. RADFORD. The finished product or the raw material?

Mr. HARRISON. The finished product.

Mr. RADFORD. The finished product is three times the duty assessed against wools of the first class and 50 per cent.

Mr. HARRISON. And the effect of putting it in paragraph 445 would be to make it pay 20 cents a square yard, which Mr. Culberson testified would equal about 4 per cent ad valorem?

Mr. RADFORD. About 4 cents per pound.

Mr. HARRISON. He said it was worth \$5.60 a square yard, and 20 per cent a square yard is a little less than 4 per cent ad valorem.

Mr. RADFORD. No, sir; it is a little more than that. Hair press cloth is very heavy. Camel's hair is a combing wool and worked by the Bradford worsted process. You can not run horsehair or cow hair through a worsted comb. If you did it would tear the teeth all to pieces. It is worked by worsted machinery. It is worked like all other worsteds.

This is the letter that caused me to come to Washington, gotten out by the bureau of publicity of the Interstate Cottonseed Crushers' Association, charging that camel's-hair press cloth is absolutely necessary in the manufacture of cotton-seed product. [Reading.]

Second. That the manufacture of camel's-hair press cloth is practically a monopoly, there being at most not more than two or three concerns engaged in the business, and that the charge has been made that even these few concerns are under one and the same ownership or control, and that a part of this ownership or control is vested in one or more of the larger concerns engaged in the manufacture of cottonseed products.

Third. That there is no economical substitute for camel's hair as a press cloth material, and that camel's hair being all imported there is no competition with any home-produced material.

Fourth. That the manufacturers of camel's-hair press cloth, appreciating these facts, have taken advantage of them and the monopoly which the present tariff gives them, and have for years steadily increased the price and deteriorated the quality of their product, and that thereby there is for the benefit of these two or three manufacturers imposed a heavy burden on the thousand or more cotton oil mills of the country, and, as the producer must finally pay the tax, upon every grower and handler of cotton in the South.

That caused me to submit a brief to the Ways and Means Committee, which I now desire to present to you.

While hearings are in progress before the Ways and Means Committee looking to a revision of the present tariff, it is rumored that some of the consumers of camel's-hair and sheep's-wool press cloth may endeavor to eliminate all press cloth from Schedule K, so the American

PARAGRAPH 378—PRESS CLOTH.

manufacturer thereof will not be afforded the same protection as is afforded under the provisions of that schedule to other worsted and woolen manufacturers. True, such action on the part of Congress might be pleasing to some engaged in the great oil-crushing industry of our country, but in such event what of the interests of the American manufacturer of press cloth? It is now proposed by Congress to enact a tariff so as to provide revenues commensurate with the measure of governmental expenses; then it is well to consider the following facts, viz:

First. The manufacturers of camel's-hair and wool press cloth pay into the Treasury about \$300,000 in duties per annum. The seed crop of the country is growing in magnitude by leaps and bounds, and within the next 10 years it is predicted that the crop will probably be as large again, and in keeping with this predicted expansion the press cloth manufacturers do not seek to escape any part of their responsibility.

Primarily, the tariff, in addition to raising the necessary revenues for the purpose mentioned, its framers had in mind an additional purpose, that of consistently encouraging and protecting American manufacturers; and with faith in this policy of Government we have made large investments, believing the same protection would be given us as was afforded other manufacturers of worsteds and woolens, and clinging to this faith, I beg leave to submit this brief and attach hereto a copy of a former brief, duly sworn to, and which was submitted to the last Ways and Means Committee under date of January 16, 1909. These documents are intended to briefly explain our attitude as an American factory in keeping faith with the loftiest American business ideals and the relation of our business to Schedule K.

Second. The Oriental Textile Mills of Houston Heights, Tex., is owned exclusively by citizens of the county and State in which the factory is located. This factory, nor any of its stockholders have any connection with any other press-cloth factory nor do they own any interest in any other process-cloth factory directly or indirectly; neither is it dictated to nor dominated by any other such factory. We manufacture worsted yarns by the Bradford worsted process out of camel's hair and sheep's wool and weave these into fabrics of different widths and thinness suitable for and to fit the different oil presses of the country. We can manufacture it into any width or thickness; into cloths suitable for ladies' dress goods or men's suitings out of either camel's hair or sheep's wool, which, when dyed, could be put on the market and sold for these last-mentioned purposes. Therefore, if either the cloth, yarns, or top were admitted to this country from abroad at a less duty than other worsted or woolen materials it would be the means of upsetting the whole of Schedule K in the way of fraudulently depriving the Government of millions of dollars in duties.

Third. Our factory, alone, has invested in this business nearly a half million dollars, and our operatives, nearly all local people, have been trained at great expense, many of them with patient industry, have given as much as 12 years of their lives to the making of themselves proficient and skilled in the lines of work, and we have something like a hundred families largely dependent upon our factory for a livelihood. A number of them have been provident enough to save

PARAGRAPH 378—PRESS CLOTH.

sufficient means with which to build themselves homes about the factory, believing they would be undisturbed in the peaceful pursuit of their new line of work for the balance of their lives. We pay our operatives good wages, and in keeping with the present higher cost of living, averaging about three times the equivalent of the scale as paid by the European manufacturers of the same product. We pay to the Government such an amount on raw material imported from abroad as to equal about 75 per cent of the duties paid into the Houston customhouse, enabling this port to make a showing in economical administration the least in Texas if not the least in the whole Southwest, thus supplying a large net surplus to the general United States Treasury fund.

Fourth. We believe the Oriental Textile Mills is the only worsted factory south of Baltimore, and after years of struggling with adverse conditions in the adjustment of this new industry to a new section of our country we have, as pioneers, demonstrated that worsted milling can be done successfully in the South. With possibly one exception, we believe we are selling press cloth at a less price than any other American manufacturer, and have never taken undue advantage of the tariff, as can be shown by our records and as is shown by our present selling price of 66 cents per pound. Since we have been in the business our selling price has been worked out on a reasonable and consistent basis, always taking into consideration the cost of raw material, the cost of labor, and other fixed expenses, endeavoring to net only a fair and reasonable margin of profit, and if we did otherwise many worsted factories in the country would put in a few looms and work up press cloth during dull seasons. Consequently, it can be proved that the press-cloth manufacturers have all along sold the finished cloth at a price on about the basis of American worsted yarns, and all assertions to the contrary, charging a monopoly, etc., are very misleading and should not be considered for a moment by your honorable committee. For instance, the present American price of camel's hair delivered at American ports is about 26 cents per pound duty paid; of this camel's hair it takes about two and one-eighth pounds to make one pound of press cloth. Out of a pound of camel's hair, after losing about 35 per cent in dirt and moisture shrinkage, we get about 20 per cent in noil, which nets about 24 cents per pound. We get about 2 per cent of hard spinning waste, which nets about 9 cents per pound, and it costs us about 12 cents per pound to manufacture and sell the goods. So, with these figures before you, you can readily figure the profit on press cloth manufactured out of camel's hair when the cloth is sold at 65 and 66 cents per pound. If these convincing proofs tend to show any practices of monopoly on the part of the manufacturers, after taking into consideration that it would be absolutely impossible to deteriorate our quality when the United States customhouse records will show conclusively that our factory is purchasing only the very best Russian camel's hair obtainable, then we are ready to sell out and engage in some other more profitable and comforting occupation. We have said our factory is not dictated to by any other factory in the business; we will add to this that we have never known a business where such sharp and guarded competition exists as does exist in the manufacture and sale of press cloth.

PARAGRAPH 378—PRESS CLOTH.

Fifth. The cost of the oil mills of press cloth is one of the least item of expense; an investigation shows it usually averages in a well-managed mill at from 10 to 30 cents per ton of seed crushed, whereas, labor costs \$3.25 per ton, bags about 73 cents per ton, and fuel about 75 cents per ton, and why the small item of press-cloth cost has been singled out for an attack before your honorable committee is beyond the comprehension of all reason and justice.

Sixth. The foregoing, taken in connection with our former brief attached hereto, briefly outlines the facts such as are applicable to the manufacturer of camel-hair and woolen press cloth, which is only one branch of American worsteds. This cloth is made of nothing more or less than European combing wools, possessing all the physiological properties of all other kinds of worsted raw material, so classified by the tariff and on which duties are collected accordingly by the Government.

Seventh. I should be pleased to see in the revision of the tariff a consistent reduction made on the raw material and the finished product kept in line with other American worsteds, and so as to safeguard American labor on the present humane scale of American wages as compared with the pauper wage scale of Europe. Any reduction in the raw material will promptly result in a relative cut price to the consumer of the finished product, which would be in perfect harmony with the same fair methods governing this factory in the past.

Mr. FORDNEY. You say at the price you are getting you do not take advantage of the tariff rates, and so on?

Mr. RADFORD. No, sir.

Mr. FORDNEY. What price does the imported article that comes in competition with yours sell at in our markets now? What advantage have you over them, taking into consideration your home cost of production and the cost of production abroad?

Mr. RADFORD. I think we could sell it at something like a dollar a pound under the present tariff, and I think some has been imported at that price—I heard Mr. Culberson say about 272,000 pounds.

Mr. FORDNEY. What price do you get for it now?

Mr. RADFORD. Sixty-six cents a pound.

Mr. FORDNEY. Sixty-six cents a pound?

Mr. RADFORD. Yes, sir.

Mr. FORDNEY. So the tariff cuts no figure, as far as that is concerned, to the consumer?

Mr. RADFORD. No, sir.

Mr. FORDNEY. You are not taking advantage of the tariff?

Mr. RADFORD. None whatever; neither have we ever done so, because if we did so every worsted mill in the country would buy looms and weave press cloth from camel's hair. It is not strictly a matter of conscience, you see.

Mr. FORDNEY. You could not stand free trade?

Mr. RADFORD. No, sir; not by any means.

The CHAIRMAN. There is very little importation now in comparison with the American production?

Mr. RADFORD. No, sir; I did not know how much until I heard the extent of it mentioned by Mr. Culberson as 272,000 pounds.

PARAGRAPH 378—PRESS CLOTH.

The CHAIRMAN. That is very small, is it not?

Mr. RADFORD. Yes, sir; I should say so.

The CHAIRMAN. The duty, in fairness, means a reasonable reduction?

Mr. RADFORD. Yes, sir; I think we could stand it.

Mr. FORDNEY. Your competition at home is keen?

Mr. RADFORD. Very keen; yes, sir.

Mr. FORDNEY. That regulates the price, your home competition?

Mr. RADFORD. I think principally, sir, from the fear that other worsted mills would, during dull seasons, put in looms and weave press cloths of camel's hair themselves. There are some weavers of camel's-hair yarns, some of our competitors, and I have a statement from one of them who states he is paying now from 60 to 62 cents for yarn. It costs him 5 to 7 cents a pound to weave yarn into cloth. That would be 67 to 69 cents a pound, and I am selling the finished product at 66 cents a pound. He sells it at 70.

Mr. FORDNEY. No matter whether the tariff were raised, left where it is, or lowered, so long as it is not lowered to the danger point, your industry is all right?

Mr. RADFORD. That is the point; yes, sir. I hope to see the raw material lowered, for this reason: You take in wools of the third class, and if we purchased it at 12 cents a pound or less, which was done during several seasons since I have been in business, we pay 4 cents per pound duty. The moment it goes over 12 cents a pound, a fraction over, we have to pay nearly double the duty, or 7 cents a pound.

If you will permit me, I would like to state that if there was a specific duty of 4 cents a pound fixed upon wools of the third class, out of which we manufacture press cloths, it would at once result in a reduction of 5 to 6 cents a pound by our factory to the consumer.

Mr. FORDNEY. If a specific duty, you say?

Mr. RADFORD. Yes, sir. We pay 4 cents a pound, the duty that we have paid at times when the camel's hair was purchased at the point of origin in Russia at less than 12 cents per pound. Now we are paying 7 cents a pound duty, because it runs some over that figure in original cost.

Mr. FORDNEY. In other words, if you could get your raw material at a lower price, you could lower your price to the consumer?

Mr. RADFORD. We would promptly lower the price of the finished product.

Now, Mr. Chairman, there is a cottonseed-oil manufacturer, running the largest cottonseed-oil mill in the world, who is present. I brought him from Texas with me. I appealed to him to come and state to you the actual cost of the use of press cloth in oil mills, and he will follow me, Mr. Dawson.

I would like you to question him, because he can answer your questions as a consumer of press cloth, and as an owner of a large oil mill.

For some reason unknown to us, since we have gotten a factory down South, press cloth has been singled out for this attack. It costs less than any other supply which the oil crushers use, and which they are forced to purchase in order to run their business, as stated by them.

PARAGRAPH 378—PRESS CLOTH.

This gentleman is well prepared to testify to you as to what that cost is. In order not to take advantage of you I desire to state he owns a small amount of stock in our factory, some \$8,000, whereas he has something like a half million dollars invested in his oil mill. I went to him and appealed to him to come along, so that you gentlemen could question him from both sides of the subject, from the standpoint of an oil crusher and as having owned this small amount of stock in our factory for a number of years. As I say, he is thoroughly familiar with the manufacture of press cloth in that I have been very intimate with him for years.

Mr. HILL. Camel's hair makes the best press cloth that is made, does it not?

Mr. RADFORD. Yes, sir.

Mr. HILL. The danger is it would be used for other purposes than press cloth?

Mr. RADFORD. Yes, sir.

Mr. HILL. Supposing an arrangement was made by which you could have a rebate of duty on proving the amount of camel's hair that had gone into press cloths; would there be any advantage to the final consumer? The cost of press cloths would be reduced proportionately, would it not?

Mr. RADFORD. Oh, yes; it has always followed.

Mr. HILL. And you would not have any objection to such a plan?

Mr. RADFORD. None whatever.

Mr. HILL. A rebate on the domestic product where it was proved the material had gone into press cloth?

Mr. RADFORD. Yes, sir. Wherein we need the protection is this. As I stated in my brief, we pay our help much more than they pay in the East and in England. I have made some investigations along this line. We, of course, can not manufacture press cloth nearly as cheaply, as we pay more for our labor, and we pay a good price for fuel, and it costs us a great deal to build factories, as we have to pay the freight on our machinery down there. Consequently there are some disadvantages under which we labor.

Mr. FORDNEY. Under that arrangement of free trade in camel's hair that is put into press cloth, press cloth made of camel's hair would come into competition with all kinds of press cloth made of the other raw materials that are on the protective list?

Mr. RADFORD. Yes.

Mr. FORDNEY. And it would be hardly fair to other industries furnishing raw material for press cloth, would it?

Mr. RADFORD. No, sir; it would not be fair to them, because out of camel's hair you can make as fine fabrics as you can out of sheep's wool. When dyed it takes on a beautiful luster. We have made some cloth similar to that which was exhibited here by Mr. Perkins, in a dress and overcoat, and it makes a very beautiful fabric and a very beautiful garment. Camel's-hair rugs, the oriental rugs, are made of camel's hair, and they are very fine rugs.

The CHAIRMAN. Did you say you paid 12 cents a pound?

Mr. RADFORD. No, sir. For the raw material I pay much more than 12 cents a pound. When I first went into the business I paid from 13 to 16 cents a pound, duty paid. That included 4 cents a pound duty.

PARAGRAPH 378—PRESS CLOTH.

The CHAIRMAN. I mean what is your import price now?

Mr. RADFORD. About 26½ cents per pound, duty included.

The CHAIRMAN. Twenty-six and one-half cents?

Mr. RADFORD. Duty paid.

The CHAIRMAN. We put in our bill as it passed the House last year 20 per cent ad valorem tax.

Mr. RADFORD. Yes.

The CHAIRMAN. That makes a tax of about 5 cents a pound.

Mr. RADFORD. It is a little less, figuring on present first cost in Russia.

The CHAIRMAN. You say you could make a reduction accordingly without injury to your business?

Mr. RADFORD. Yes, sir; on the raw material.

Mr. FORDNEY. Is that 26 cents you are paying now the normal price?

Mr. RADFORD. That is as high as I have ever seen it. But a few years ago it went to that same price. It is going up every year.

Let me explain just one thing about camel's hair. Camel's hair is better for making press cloth than any other fiber because the walls of the fiber are a little thicker. This press cloth is subjected to a pressure of 3,500 to 5,000 pounds a square inch, with very hot meal in it, just as hot as it can be. The walls of sheep's wool are burned out a little sooner than camel's hair because the walls of the fiber are thicker. Then it is not so subject to spontaneous combustion—that is, this oil-soaked cloth is not—as the sheep's wool.

That is the reason why it is preferable and more suitable for making press cloth.

The former brief of Mr. Radford, referred to in his preceding statement, is as follows:

HOUSTON, TEX., *January 16, 1909.*

HON. SERENO E. PAYNE,

*Chairman Ways and Means Committee,
House of Representatives, Washington, D. C.*

GENTLEMEN OF THE COMMITTEE: Our attention is called to certain published statements claimed to have been made by Mr. J. W. Allison, of Ennis, Tex., representing the Cotton Seed Crushers' Association before the Ways and Means Committee of the House in an endeavor to secure a repeal, or such modification of the duty on camel's-hair press cloth as would make its manufacture in this country impossible without a loss. In refutation of Mr. Allison's statements, we beg you to give the following facts, to the truth of which oath is made, your serious attention before taking any action in the matter. We ask this, because the gentlemen appeared before you after the day set apart for textile hearings; and the time for all hearings having expired before we knew our industry had been attacked, which leaves us but the one alternative, that of answering through a written statement of facts, as follows:

First. It should not be overlooked that Mr. Allison and the association referred to are engaged in cottonseed oil crushing, therefore, consumers of camel's-hair press cloth and are basing their statements upon claimed beliefs and suppositions which we assert are unwarranted by the actual facts, and we are prepared to disprove them.

Second. Camel's hair is a wool, possessing the physiological properties of wool, a combing wool, and worked by the identical processes and machinery as is sheep's wool. It competes with sheep's wool in the markets of the world and is manufactured into yarns and cloth to compete with sheep's wool yarn, cloth, clothing, rugs, etc. If camel's-hair press cloth is admitted at a lower duty, the present woolen schedule would be entirely disarranged, because this press cloth is manufactured into various weights and widths to meet different conditions, consequently could be brought here, dyed, and sold for clothing purposes, or brought in loosely woven, out of loosely twisted roving (called yarn), converted back into roving, and then spun into fine yarns out of which very fine fabrics could be made. It would, doubtless, throw the door open for all kinds of frauds upon the Government.

PARAGRAPH 378—PRESS CLOTH.

We are reminded here of the breach which gave rise to the Hatband Case, causing the Government so much trouble and expense for so many years, and which would become forgotten in its insignificance as compared with that brought about by such rash action as Mr. Allison proposes.

Third. The statement that camel's hair is the only fabric out of which press cloth is made is entirely incorrect, there being in use, and manufactured in the United States, press cloth of sheep's wool, which is preferred by some to that of camel's wool, and we have made and sold lots of it. Horsehair press cloth is, and has been since we have been in business, manufactured in the city of New Orleans, La., and sold to the cottonseed-oil mills right along, and preferred by quite a number to any other; is sold at a price generally exceeding, never less within our knowledge, than camel's-hair cloth, though horsehair is on the free list, does not possess the physiological properties of a wool, is worked, we are told, by hand machinery specially made for the purpose, and is, without a doubt, the "hair press cloth" referred to in paragraph 431 in the tariff. It was so decided by the United States General Appraisers and the Federal courts up to the Supreme Court, and is grouped in said paragraph with all other horsehair fabrics, such as hair seating crinoline cloth, etc. Horsehair press cloth is manufactured abroad, as well as here, necessarily in heavy weights, and horsehair being admitted free there is just enough duty fixed on the imported article at 20 cents per square yard to protect American labor against the miserable conditions in Europe. Horsehair press cloth is freely offered to and used by the cottonseed-oil mills; therefore we will assume Mr. Allison overlooked telling you this at the hearing accorded him. We are attaching hereto an article on "Dyeing of horsehair and haircloth," published in the January, 1909, number of Textile World Record, published in Boston, Mass., in proof of the proposition that horsehair only is understood and referred to when the word "hair" is used, and that haircloth is always understood to mean horsehair cloth when made mention of, and, naturally, for the same reason, horsehair press cloth when the term "hair press cloth" was grouped in paragraph 431.

Fourth. We are paying at this time about 18½ cents per pound for Russian camel's hair delivered in our warehouse, and we are forced to purchase practically a year's supply at a time. We are enabled to convert only about 42 per cent to 44 per cent of this camel's hair into press cloth; there is about 40 per cent dead loss in dirt, vegetable matter, etc., and the balance in flyings, noil, and thread waste. We now pay 4 cents per pound duty on the camel's hair in its original condition; the last noil sold netted us about 12 cents per pound and thread waste about 8 cents per pound; it costs about 14 cents per pound to manufacture. Our manufacture of camel's-hair press cloth nets us, after the cost of packing, conditioning, and agent's selling commission, about 57 cents per pound on a present invoicing price of 60 cents and 61 cents per pound. Therefore, you have actual facts and figures by which to determine how much a pound of American-manufactured camel's-hair press cloth represents in revenue to the Government and as to whether or not there is anything in the statement that the American manufacturer is taking advantage of the present tariff to act in bad faith with the consumer with regard to fixing upon him a burden of undue profit. The raw material and by-product market is of easy access, and any well-posted honorable worsted manufacturer can make you correct figures from the above.

Fifth. Mr. Allison's statement may have left you to believe the American camel's-hair press cloth market did not fluctuate, whereas during the eight years we have been in business we have sold our products at 51, 52, 55, 56, 60, 61, and last year (when camel's hair cost us about 25 cents per pound, inclusive of 7 cents per pound duty to the Government) 65 and 66 cents per pound. The money panic of last year, causing all markets to decline, brought camel's hair down, and consequently camel's-hair press cloth down 5 cents per pound. These facts are matters of general knowledge to all interested; so it is a matter of general knowledge and of record that all markets for several years, up to the panic of 1907, had been on the advance, inclusive of the wool market. Then as a matter of reason the camel's-hair press cloth market had necessarily been advancing to meet conditions. The cloth has always consistently followed the raw material market and not been influenced by anything else at any time, so far as we know. In the face of these facts it would be comforting to have had Mr. Allison figure out his "fair and liberal protection" to the American manufacturer and at the same time a consistent attitude for the Government in framing such a tariff as he proposes.

We do not know of any such price as 62 cents per pound. We would be pleased to sell any crusher at 61 cents, and as to the terms of payment stated we never make a draft against an invoice short of 30 days from date of sale except in cases where the purchaser is not in good credit standing, and then we ship sight draft attached to bill

PARAGRAPH 378—PRESS CLOTH.

of lading. This latter is of rare occurrence, whereas, on the other hand, we are often called upon and do carry patrons for months at a time, and sometimes from one season to another.

Under paragraph 431, as we figure it, and our estimate is carefully made, the camel's-hair press cloth consumed in Texas, if imported, would net the Government about \$12,000 to \$15,000 in duties per annum, whereas our factory alone pays to the Government in duties from \$35,000 to \$55,000 per annum, and Texas is by far the largest press-cloth consuming State.

Sixth. With regard to the statement that it costs the cottonseed oil mills 50 cents per ton of seed crushed for press cloth, we are confident an investigation will disclose a cost ranging from 10 cents to 30 cents, with an average of about 20 cents. This is regulated by the handling and local conditions.

Mr. Allison states an ordinary interior mill will use three or four thousand dollars' worth of press cloth a year, whereas we are sure an investigation will show that the ordinary interior mill will not average exceeding one-third of the amount claimed.

Seventh. Mr. Allison states to you there exists a monopoly or combination of interests in the manufacture of American camel's-hair press cloth. We state to you under oath that we are a corporation doing business under a Texas charter, and every share of our stock is held by citizens of this city and State, none of whom is interested in any way with any other press-cloth factory, nor is anyone interested in any other press-cloth factory in any way interested in ours. There does not exist any agreement as to price, division of territory, nor limit of production, and if either was the case and the unwarranted statement referred to correct, under the laws of Texas we would be subject to a heavy fine, the personal liberty of our officers jeopardized, and our charter be canceled.

We have always noticed that a change in price followed the camel's-hair market, up or down, and our experience is such, almost invariably, that lots of cloth has been sold to the oil mills by competitors at the new price before knowledge of it reached us.

We have always made it a rule to meet our competitors in price and we have often asked 1 cent per pound in advance of theirs. To have asked a higher figure would have lost the business, and at the beginning we lost money in meeting their prices, and then for a year or so we endeavored, with poor success, to sell our best grade at 5 cents per pound higher than competitors, but since that time we have successfully met the price by manufacturing on the most economical basis. It is a matter of fact that several camel's-hair press-cloth factories have either liquidated, failed, or been closed out and dismantled since we have been in the business, all for a lack of profit, and our first years were most unhappy.

We do not like to cut our price because the margin of profit will not admit of a cut, which is to be seen from the figures given. A cut in price could be taken out of the quality, but such a practice would quickly lose the business, for competition is so keen we are, at all times, endeavoring to excel competitive goods.

We notice, with due concern, the statement with reference to the superiority of the imported cloth, whereas we are confident the oil mills of the Republic of Mexico (under the free-trade policy) will tell you our press cloth is of very superior quality to the European goods, and we have sold them largely at a price netting us slightly more than that paid by the American mills, adding the drawback recovered.

Eighth. Mr. Allison charges it is a common occurrence for the different factories engaged in the production of press cloth to have the same selling agents. This is specifically denied so far as we know, except in one instance, the facts in such instance being that the Associated Manufacturers of cotton-seed products, a corporation organized under the laws of Texas (we have heard said to handle and sell certain cottonseed products and for the purchase and sale of mill supplies), having Mr. J. W. Allison, of Ennis, Tex., for president and Mr. W. L. Yopp, of Dallas, Tex., for general manager, the latter the selling agent for one of the press-cloth manufacturers in competition with us. Mr. Yopp called up the manager of the Oriental Textile Mills by telephone and stated that some of his stockholders preferred to use the cloth manufactured by us, and that if a commission of 3 cents per pound was allowed his company he would guarantee the sale of 100 rolls or about 40,000 pounds of press cloth, which proposition was agreed to. As stated to us shortly afterwards by Mr. Yopp, our Eastern competitor heard of his offering our goods to the trade, and demanded an explanation. Mr. Yopp thereupon asked to be released from his agreement, which request was acceded to cheerfully because we could sell and did sell the same press cloth to a better and more profitable advantage. We are prepared, if desired, to show the correspondence in substantiation of the above. No other instance of one agent representing two competing press-cloth concerns is known to us.

PARAGRAPH 378—PRESS CLOTH.

Ninth. We have made large investments in a plant which is of modern equipment, construction, and extensive proportions, all predicated upon a well-founded faith in our Government and the American policy of the protective tariff, but these would be largely lost and more than a hundred skilled operatives in our employ thrown out of work if we should be discriminated against so as to be forced to meet any of the unjust plans suggested by Mr. Allison.

Tenth. You, gentlemen, now have the statements of Mr. Allison on the one hand and the manufacturers sworn statement of facts, figures, and accessible markets on the other, by which to reach correct conclusions. Therefore, it is but natural for us to feel secure in the result of your findings, and that the settled policy of the American Government is to be perpetuated without discrimination, especially when the spirit of that policy has been seen to have been respected, and been proven not abused.

The statements referred to were made before you December 14, 1908, and we believe your No. 33.

Very respectfully,

JNO. S. RADFORD,
Treasurer Oriental Textile Mills.

Subscribed and sworn to before a notary public.

The following papers were filed at a later date:

ORIENTAL TEXTILE MILLS.
Houston, Tex., January 4, 1912.

Hon. JOHN M. MOORE, M. C.,
Washington, D. C.

DEAR SIR: I hear Mr. J. W. Allison, of Ennis, Tex., has made an appeal to Congress through Senator Culberson to abrogate the tariff on camel's-hair press cloth for this season, and that, through Senator Culberson, Chairman Underwood has promised him a hearing.

You will remember Mr. Allison has made it his fight for some years to get around the tariff on camel's-hair press cloth, and this is but another attempt on his part, after having exhausted all other means to accomplish his purpose. The cottonseed oil mills have been a little close run for camel's-hair press cloth this season, for one reason that Mr. Allison has made it his business for the past seven years to bound the life out of the American press cloth manufacturer, if possible, and an investigation will disclose that he has done it for no good cause or reason. At first he was the staunch supporter of "the press-cloth suit," which cost the Treasury Department a sum of money to defend as well as the manufacturers. Then, when the Payne-Aldrich bill was before the Ways and Means Committee, he tried to have press cloth brought in free, and, failing in these attempts, he is now endeavoring to get around the tariff in the newly conceived way referred to above. He has been the main instigator in passing resolutions at oil-mill conventions for the last number of years, until the press-cloth manufacturer did not know where he stood nor what his finish would be; and there being a shortage of camel's-hair press cloth is largely due to his own handiwork, because his unwarranted fight upon the manufacturer has caused the latter to feel depressed in spirit, allowing his plant to become depleted of efficiency, and when the country made the biggest crop in its history the first thing Mr. Allison does is swoop down upon Congress with the plea that there wasn't enough press cloth to meet the demands. But mills all over the South have been making up the deficiency of supply by using cotton press-cloth, which, as will be seen from the inclosed letters, is a good thing for the cotton grower and the cotton mills the country over. The letters here inclosed were not written at our solicitation; copies of them were only sent us from men who knew the true situation and would not stand for it, but addressed them to their Congressmen voluntarily. I think I am safe in saying that the oil mills generally are not in sympathy in the fight of Mr. Allison, and an investigation would disclose as much, and all will take a long breath of relief when he lets up on this unwarranted fight. The oil mill of Mr. Allison has been supplied by this factory during the present season, and I think I would be safe in saying he hasn't been forced to close down for press cloth a single day, though we have been dealing with the most belligerent labor conditions imaginable.

The press-cloth manufacturer is operating to-day on a margin of profit not sufficient to properly pay his help in keeping with the rapid advance of wages in other lines, and two of the manufacturers are selling camel's-hair press cloth at a price less than the worsted yarn market. Others are higher, though these latter are only working on a fair margin of profit. Since we have been in the business several camel's-hair press cloth manufacturers have either failed in business or been forced out of it for lack of profit, which will be seen from a copy of a letter inclosed you herewith from Mr. B. F.

PARAGRAPH 378—PRESS CLOTH.

Taylor, who wrote us asking what was the matter with the general press cloth surplus, and we wrote him the facts as they were, and you are inclosed herewith his reply. Mr. Taylor is one of the foremost seed crushers of the country, as well as one who was forced to retire from the manufacture of press cloth for the very reasons stated in his letter—he could not make a profit at the price at which it was sold. If the Ways and Means Committee should consider Mr. Allison seriously, he could not get foreign goods in before the close of the season; and I hope you will see that the camel's-hair press cloth manufacturers are also given a hearing, and they will tell the whole thing, to the complete undoing of Mr. Allison and his plans. There will be no shortage of supply of camel's-hair press cloth if Mr. Allison will but let the manufacturer alone, so as to let him know where he stands, so he can furnish the supply; whereas if he was allowed to import press cloth temporarily it would mean the flooding of the country with the product for future requirements for years to come, working all sorts of frauds upon the Government and Schedule K generally, and stop the manufacture of cotton press cloth completely. I have no idea his proposition will be entertained seriously, but it might be well that Mr. Culberson and Mr. Underwood know the real facts in the case and of the absurd fight and purposes of Mr. Allison.

Thanking you in advance, I beg to remain, yours, very truly,

JNO. S. RADFORD.

[Inclosure.]

COLUMBIA, S. C., December 9, 1911.

Mr. JNO. S. RADFORD,

Oriental Textile Mills, Houston, Tex.

DEAR MR. RADFORD: I thank you very much for your's of December 5, and I was not aware of the fact that labor troubles were giving you so much trouble. The situation here is very quiet, and no trouble at all about labor. The only thing that has ever bothered us in the press cloth business is the fact that we could not make any money, as the prices charged for the cloth were lower than we could possibly manufacture the goods. We have been able, however, this year to get rid of all of our rag tags and bob tails at almost any kind of price we cared to ask for them, and Perkins has been one of our largest buyers.

I have always thought that the agitation against press cloth manufacturers was outrageous and inopportune, and, as you know, I have done everything that I could to block it and to stop it. I suppose, of course, that our friend Allison will think now more than ever before that the press cloth manufacturers are in an unholy conspiracy to "skin" him in particular and the rest of the cottonseed oil people in general.

Yours very truly,

B. F. TAYLOR.

MEMPHIS, TENN., December 19, 1911.

HON. K. D. MCKELLAR, M. C.,

Washington, D. C.

DEAR SIR: We observe in press dispatches to-day that J. W. Allison, Ennis, Tex., has requested, through Mr. Burleson, that the duty on camel's-hair press cloth be removed, owing to an unusual condition existing just at the present time in the South among the oil mills, and therefore I ask that you give this matter thorough consideration before any definite action is taken.

In the first place there has been numerous press-cloth factories started in the South, but through antagonism of certain oil mill men to these factories they have not been successful, and the result is that one or two of them have recently failed, and this proves beyond the question of doubt that they are not asking an unreasonable price for the press cloth. The remaining factories this season have had a strike upon their hands, and the result is a temporary shortage in this article.

Of course, to reduce the tariff would mean not only defeating the purpose of the strike, but would also probably mean bankrupting of the remaining factories.

We have observed this present condition, and have sent to New York and have arranged for about four or five cotton mills to immediately begin making a cotton-press cloth. Some of this cotton-press cloth is now made and is being shipped out by express, and it is highly desirable before any action is taken by the Tariff Board to see the advisability of the mills using cotton-press cloth instead of camel's-hair cloth. Should this cotton-press cloth prove a good substitute, then it needs every kind of protection as it will mean a large consumption of cotton, and at any rate it seems that this cotton-

PARAGRAPH 378—PRESS CLOTH.

press cloth could at least tide over the present situation until matters were adjusted in the press-cloth factories.

One of the largest press-cloth factories in the country is at Houston, Tex., and the capital is entirely subscribed by Southern people, and it would certainly be a great blow to this industry if they were deprived of the benefit of the protective tariff.

I wish to ask that you give this matter full investigation, and if I can serve to furnish any information, I will not only be glad to do so by mail, but to come on to Washington.

Yours, very truly,

HUMPHREYS GODWIN CO.

(A communication identical with the above and addressed to United States Senator Luke Lee was filed with the committee.)

**TESTIMONY OF JAMES D. DAWSON, JR., REPRESENTING THE
FIDELITY COTTON OIL & FELT CO.**

The witness was duly sworn by the chairman.

Mr. DAWSON. Mr. Chairman, the question that I expected to speak upon (I have no brief) does not seem to me germane to this subject, because it was the relation of the tariff as to the cost of press cloth per ton of seed crushed. It does not appear to me as at all germane to the subject that you gentlemen are questioning the witnesses upon, and unless you wish to ask me some questions I will not take up your time.

The CHAIRMAN. There are gentlemen here asking us to put press cloth on the free list for the purpose of advancing an industry in this country. We would be very glad to have you state what relation this press cloth bears to that industry. You are a practical man in business?

Mr. DAWSON. Yes, sir. My experience for a long number of years with a large number of mills has been that the cost of press cloth is one of the most inconsiderable items of expense. It depends largely upon the capability of the manager in charge of the mill, the condition of his machinery, the condition of his seed, his method of manufacturing that seed, his method of cooking it, the heat applied to it, the temperature, so that the question is so varied and covers such a wide scope that I fear I might take up too much of your time if I attempted to go ahead and explain it in detail.

So far as I am personally concerned, the cost of press cloth to me in the plant I operate is such a small item I pass it over because of so many other items of expense that are of much greater importance, some of them under the tariff, such items for instance as the jute question, the sack question, which are very much more important to me than the cost of press cloth.

The question of free or lower duties on oleaginous seeds is very much more important to me than the cost of press cloth. Indeed, I do not consider the cost of press cloth per ton of seed is of sufficient importance to attract any attention in any well managed oil mill.

The CHAIRMAN. What is the capacity of your mill?

Mr. DAWSON. Our mill is capable of crushing between 250 and 300 tons of cottonseed a day.

The CHAIRMAN. How much do you crush?

Mr. DAWSON. We crush about 200 to 250.

The CHAIRMAN. How much press cloth do you use in crushing that?

PARAGRAPH 378—PRESS CLOTH.

Mr. DAWSON. It costs me about 15 cents a ton.

The CHAIRMAN. Fifteen cents a ton for press cloth?

Mr. DAWSON. Yes, sir. That is the unit of our expense, the per ton of seed crushed.

The CHAIRMAN. What is the value of a ton of seed crushed?

Mr. DAWSON. The gross realization?

The CHAIRMAN. What is the value? You spend 15 cents for press cloth to crush a ton of seed?

Mr. DAWSON. Yes.

The CHAIRMAN. What do you realize on that ton of seed?

Mr. DAWSON. This year in that section of the country it is probably from twenty-five to twenty-eight dollars a ton. That is, the gross realization from it.

The CHAIRMAN. What is your net profit this year?

Mr. DAWSON. My net profit I am sorry to say, this year is nothing.

The CHAIRMAN. Ordinarily it would be what?

Mr. DAWSON. I am perfectly content with a dollar a ton on my seed because of the large volume of seed I crush. If I crushed smaller volume I would not be so content.

BRIEF OF THE SUGDEN PRESS BAGGING CO.

Hon. OSCAR W. UNDERWOOD,
Chairman Ways and Means Committee, Washington, D. C.

DEAR SIR: We understand that an effort may be made by the cottonseed crushers to persuade your honorable committee to eliminate press cloth made of camel's hair and sheep's wool from Schedule K. If this was accomplished it would be disastrous to the Government as well as to the manufacturers of press cloth, as many woven fabrics could be imported under the name of press cloth which would be not only suitable for press cloth but also for wearing apparel and other uses. It would be impossible to separate press cloth from Schedule K without making it possible to perpetrate frauds, thus undermining the whole woolen schedule. Press cloth is used mostly for cottonseed and linseed oil presses, and lighter weights for filter presses, and the cost of same for the manufacture of cottonseed oil is only in the neighborhood of 25 cents per ton of seed crushed, while the cost of seed at times has been as high as \$36 per ton.

A resolution was passed by the Interstate Cottonseed Crushers' Association at their meeting in Memphis, in which they petitioned that in the revision of Schedule K, which is the woolen schedule, that camel's hair and woolen press cloth, and the material from which it is made, be allowed to enter the United States free of duty; but would not ask that the manufactured goods be allowed to enter free of duty, unless the raw material be allowed to come in free of duty also; as otherwise the American manufacturers would be put out of business entirely. It was also stated by them that it is to the credit of these manufacturers that they have not been exorbitant in their prices under this tariff.

You can readily see from this, they did not believe it advisable to separate press cloth from Schedule K.

The Sugden Press Bagging Co. was started about the year 1870, and was incorporated in 1904. The stock is owned by three individuals, none of whom are interested in any oil mills, or any concern using press cloth.

We have no agreements with competitors, and do not know what they are charging for their product.

We believe, at the present time, press cloth is manufactured in the States of New York, Texas, Massachusetts, South Carolina, New Jersey, and Pennsylvania.

Respectfully submitted.

DONALD M. CAMERON,
Treasurer of the Sugden Press Bagging Co.

PARAGRAPH 378—PRESS CLOTH.

STATEMENTS REGARDING TARIFF ON PRESS CLOTHS.

AMERICAN PRESS CLOTH CO.,
Columbia, S. C., January 13, 1913.

To the WAYS AND MEANS COMMITTEE,

House of Representatives, United States Congress, Washington, D. C.

GENTLEMEN: This company is a small manufacturer of camels' hair and woolen press cloth for use in cotton oil mills and linsced oil mills. It was organized in 1905, and started working in December of that year. The plant consisted of four looms, necessary twisting and doubling machines, and other appurtenances. The capital stock of the company is \$41,900. It has operated some every year since its organization, and at the present time, under its sworn statement, now shows a net loss for the period of operation of \$7,619.85. The business has only shown a profit two years out of the seven operated. The company has never paid a dividend. Our expenses on 119,766 pounds manufactured during the past season were as follows:

Repairs.....	\$312.87
Operating expense.....	594.18
Office expense.....	703.62
Labor.....	5,171.16
International exchange and discount.....	222.71
Salaries.....	583.32
	<hr/>
Total.....	7,587.86

We call particular attention to the fact that our salaries are practically nominal, and by no means in proportion to the responsibility and the amount of work involved. Our bookkeeping is done for nothing and our stenographic work as well.

The cost of manufacture as per above expenses is 6½ cents per pound. We sell press cloth at 64.8 cents per pound, average; deducting the expenses from this, it would leave 58½ cents for cost of yarn and profit. At the present time our contract for yarn is at 55 cents f. o. b. Philadelphia, so that we have an apparent profit of 3½ cents per pound on the basis of this contract, which was made in October, 1912.

As we import no camel's hair ourselves, we are dependent upon the spinners for our supply of raw material. We, however, do receive quotations from time to time on camel's hair, and the last one which we have in hand offered 7 tons of mill sorted manes at 9¾ pence Liverpool. We figure that the expense of bankers, commissions, and other charges will add about three-fourths cents to the price of the manes. The duty on camel's hair costing from the point of shipment more than an equivalent of 12 cents is 7 cents. Therefore, on the basis of the above quotation, we would have:

	Cents.
Cost of hair.....	19.25
Duty.....	7
Exchange and other items.....	.75
	<hr/>

27

In order to have a sufficient supply on hand it is necessary to buy a month ahead of time. Consequently, the storage and interest would have to be added, which would amount to about three-fourths cent.

The shrinkage in dirt and waste material in camel's hair runs from 35 to 45 per cent. The amount of noils gotten out of the hair is usually 21 per cent. It is estimated by the spinners that they get about 41 pounds of yarn out of 100 pounds of stock, but the noils, of course, will have to come in to reduce the expense. Just what these are bringing I am unable to advise, but the information can be very readily obtained from the Wool Exchange.

According to this, on the above quotation the yarn would cost, allowing 10 cents for spinning, approximately 66 cents per pound, and from this should be deducted the value of the noils. If noils are valued at 6 cents per pound it would reduce the cost of the yarn to 54 cents. We do not know what the actual cost of washing, carding, and spinning is, but we have had the hair treated on commission and the charge has been 10 cents per pound.

We respectfully urge that whatever be the duty on the raw material, that the duty on the manufactured article ought to be sufficient to cover the difference in cost of manufacture, placing a few cents additional duty to protect the American manufac-

PARAGRAPH 378—PRESS CLOTH.

turers. We are not in position to state definitely what this ought to be, as we are not spinners and do not know the details of this part of the business, but we do know that the weaving process in this country will cost at least 7 or 8 cents in a factory where salaries are paid commensurate to the amount of work and responsibility involved.

We will further add that the stockholders and officers of this company are all Democrats and believe in free trade, except that we realize that a revenue for the Government is desirable and we believe that where such a revenue is levied it ought to be applied to the upbuilding of American industries and the maintenance of those already in existence. The press cloth manufacturers have never taken advantage of the tariff as it now stands. They could have made charges for their goods that would have netted them as high as 40 per cent, but they have not done so, which is evidence to our mind that the tariff was not arranged in accordance with our ideas, but evidently for the purpose of excluding entirely competition from abroad. If the manufacturers of press cloth are allowed a tariff that would net them 2 cents per pound profit, we believe it would result in competition from abroad, and at the same time would permit the American manufacturers to exist.

We call attention to the fact that the hair that we use competes with wool, and there may be other industries that would require a higher tariff than the one in which we are particularly interested; what the bearing is upon these other manufacturers we do not know, but we realize the importance of careful consideration on their account.

Yours, very truly,

AMERICAN PRESS CLOTH CO.,
By B. F. TAYLOR, *General Manager.*

PRESS CLOTH.

NEW YORK, *December 11, 1911.*

HON. WILLIAM SULZER,
Congressman, Washington, D. C.

HONORABLE SIR: I wish to call your attention to a great iniquity existing and acting against a great industry employing at least 100,000 men and exporting many millions worth of their product.

Paragraph 445 of the tariff act of August 5, 1909, reads as follows: "and hair press cloth twenty cents per square yard." It does not state what kind of hair, whether horsehair, camel hair, or any other hair, still only horsehair press cloth is admitted at the above rate. Unfortunately horsehair press cloth is not strong enough and can not be used by oil and chemical factories. Camel press cloth is the only one which can be used and this has been taxed 33 cents per pound and 50 per cent ad valorem. This seems not to have been the intention of Congress, which looking at press cloth as necessary tool for oil and chemical factories put the duty at 20 cents per square yard, thereby protecting the American workmen without harming the factories. It is the same as silk bolting cloth, which being a necessary tool for flour mills, is admitted free. Press cloth comes in strips 72 inches long and 12 to 13 inches wide and can not be used for any other purpose. Protests against this classification have been lodged in vain and the classification as manufacture of wool not specially provided for was affirmed by the United States circuit court of appeals in T. D. 29352. The 20 cents per square yard covers amply the difference in wages but camel-hair press cloth adjusted at 33 cents per pound and 50 per cent ad valorem, which is equal to 160 per cent ad valorem made importation of it impossible. The result is that three or four manufacturers making this cloth here and employing at the utmost 500 men levy a tax of at least \$500,000 yearly on the oil and chemical factories of the United States and hinder them to expand their export business. I most earnestly entreat you to investigate this matter and finding the facts stated by me to be correct to do all in your power to have this iniquity remedied when the new tariff is framed. It is one of those little jokers hidden in the wool tariff which does not yield a single cent revenue to the Government, nor does it give protection to wool producing farmers, but simply allows few manufacturers to export a great amount every year from the oil and other factories. Should be pleased to hear your opinion about this matter and what you would suggest that should be done in order to have this great injustice done away with.

Yours, most respectfully,

ISIDOR STERN.

PARAGRAPH 378—PRESS CLOTH.

COLUMBIA MILLS Co., *Columbia, S. C.*

DEAR SIRs. Every successful manufacturer is constantly striving to save in his cost and consequently increase his profits. The lower the manufacturing cost, the larger the margin of profit.

You can save money in the cost of your press cloth by using cotton press cloth instead of camel's hair cloth. The cotton cloth naturally does not last as long as the camel's hair cloth, but by actual test has proven cheaper per ton of seed crushed.

Camel's hair is now quoted at 65 cents per pound or \$1.95 per yard. Our special kingkotton press cloth is 62 cents per yard, or less than half the cost of the camel's hair, and lasts more than half as long, which of course means a saving in cost of seed crushed to the user. This cloth is put up in rolls of 200 yards (about) and can be shipped promptly. It weighs 30 ounces to the yard, 13 $\frac{1}{4}$ inches wide, and has proven thoroughly satisfactory to those who have used it.

We solicit your inquiries and feel sure we can interest you.

Very truly, yours,

COLUMBIA MILLS COMPANY.

STATEMENT SUBMITTED BY J. J. CARBERY, CINCINNATI, OHIO.

THE JOHN J. CARBERY Co.,
Cincinnati, Ohio, January 15, 1913.

HON. ALFRED G. ALLEN, *Washington, D. C.*

FRIEND ALLEN: I am inclosing herewith a piece of American-made mohair coat lining, 32 inches wide, weighing 5 ounces to the running yard, the price of which is 45 cents, subject to a discount of 8 per cent for cash. The manufacturer of this claims that the cost of same on the other side would be 15 pence per yard, dutiable under the Payne bill at 44 cents per pound and 55 per cent ad valorem. This, of course, is prohibitory; for 15 pence equals 30 cents in our money, the goods weighing 5 ounces to the yard would be in weight duty 13.75, to which would be added the ad valorem duty of 55 per cent, making 16.50, and totaling 60 $\frac{1}{2}$ cents net. Adding 8 per cent to this, making it subject to the same discount as the American goods, would mean a cost of 65.05 per yard, which as said before is prohibitory, and of course no goods of this kind are imported, and therefore no revenue received.

But the "darkey in the woodpile," unknowingly exposed by the American manufacturer to me, is this, that if instead of 44 cents a pound and 55 per cent ad valorem, which is figured above, amounts on goods costing 15 pence and weighing 5 $\frac{1}{4}$ ounces to the yard and measuring 32 inches in width, is over 100 per cent, that a reduction to a plain 50 per cent ad valorem would still keep out the foreign goods.

I don't want to be too tedious or to bore you in the least, but figuring this same cloth at 15 pence, equaling 30 cents in our money, and paying 50 per cent ad valorem, would make same cost 45 cents net. Now, adding 8 per cent to this, to equal the discount allowed on the American fabric, would advance the goods by that item alone to almost 48 $\frac{1}{2}$ cents, and in all fairness a house could add to this for ocean and rail transportation and cost of doing business an additional 5 per cent, which would make the total cost about 51 cents; so a 50 per cent tariff on such goods (coat linings, as sample) would not afford the Government any revenue at all.

I, of course, don't know what the committee is going to propose, but I am submitting this to you to establish the fact that a reduction from 100 per cent and over to 50 per cent in this particular cloth still spells prohibition of importation, and consequently no revenue.

You know where the writer stands on these matters, and I am writing to you as a tariff-for-revenue Democrat, that as far as coat linings are concerned in Schedule K 33 per cent of a custom tax would be sufficient enough protection for American manufacturers.

The writer takes it for granted that you are glad to receive this information, and if the gentleman on the Ways and Means committee who has this matter in charge has not this information this statement may be a matter of enlightenment to him. Mr. Representative C. V. Fornes, of New York, is fully acquainted with the bearing that the Payne bill has upon foreign woolens, but he may be, like some Republicans and some Democrats, a protectionist in spite of any presented facts.

Would it be amiss for the committee to have before it some of the importers of these goods who are really acquainted with the facts?

PARAGRAPH 378—PRESS CLOTH.

Of course, there might be this hesitancy, on the part of such persons, that they would not care about imparting full information for fear of being deprived of goods by American manufacturers for so doing.

Wishing you and yours all possible good things and hoping that I have not bored you, I am,

Yours, truly,

JNO. J. CARBERY.

BRIEF OF THE BUCKEYE COTTON OIL CO., CINCINNATI, OHIO.

CINCINNATI, *December 18, 1912.*

HON. ALFRED G. ALLEN,
House of Representatives, Washington, D. C.

DEAR SIR: We are large users of camel's-hair press cloth in our crude-oil mills and would like very much to see the duty on same taken off.

Camel's-hair press cloth is practically a necessity in the pressing of cotton seed; there is no satisfactory substitute for it. The manufacture of this material in this country is practically in the monopoly of two or three people and prices on account of the duty are held at a ridiculously high figure.

When you have an opportunity we would be glad if you would do what you can to have this duty removed.

I have wired Mr. Brown to-day, who is in Washington, asking him to speak to you about this matter, it having been overlooked before he left Cincinnati.

Yours, truly,

D. M. WARDWELL.

BRIEF OF THE SELMA OIL, ICE & FERTILIZER CO., SELMA, ALA.

SELMA, ALA., *January 29, 1913.*

HON. OSCAR W. UNDERWOOD,
Washington, D. C.

DEAR SIR: I wish to confirm the following telegram sent you yesterday regarding camel's-hair press cloth:

"We urge you to favor duty be removed from camel's-hair press cloth and put on free list or material reduction in duty. It now costs us 30 cents per ton cotton seed crushed. Other cloths experimental and little used. Camel's-hair press cloth not used for wearing apparel."

I want to urge that you use your influence to have the duty on this cloth removed, as it is certainly a hardship on the oil-mill industry. It does not interfere with other cloths, as it is not used for wearing apparel. Various experiments with other cloths have been made, and none are satisfactory except camel's hair.

Yours, very truly,

R. W. BARNES, *President.*

BRIEF OF THE SCANDINAVIA BELTING CO., NEW YORK, N. Y.

The COMMITTEE ON WAYS AND MEANS,
House of Representatives, Washington, D. C.:

Brief in relation to press cloth, and in support of its proper classification, under paragraph 445, with a duty of 10 cents per pound; also in relation to camel's-hair belting, and in support of a new paragraph, under Schedule K, entitled "Belting for machinery only," with a duty thereon of 20 to 25 per cent ad valorem.

It is respectfully submitted that camel's-hair press cloth is manufactured of cotton and camel's hair, of which camel's hair is the component part, and is used extensively in the various oil-crushing and oil-producing industries. Instead of being an article of luxury, its peculiar nature and the purpose for which it is so well adapted, makes it a prime necessity in the production of vegetable oils, and it should be classified as a mechanical textile, with a duty so low as to afford healthy competition and enable the oil crushers to buy in an open market where they might secure the benefits of high quality and fair prices.

PARAGRAPH 378—PRESS CLOTH.

The question at issue is not alone one of rate. It is whether camel's-hair press cloth is not entitled to be considered hair press cloth, the same as other hair press cloth, or whether it shall be discriminated against and continue to be classified as a manufacture of wool not otherwise specified.

Paragraph 445 of the law of 1909 says:

"Hair cloth, known as crinoline cloth, 8 cents per square yard; hair cloth, known as hair seating and hair press cloth, 20 cents per square yard."

We claim that camel's-hair press cloth is hair press cloth and dutiable as such, and it would appear that the wording of the above paragraph is so plain as to preclude any other construction. But if the framers of the law intended to bring camel's-hair cloth within its provisions their purpose was defeated by the arbitrary ruling that hair press cloth shall come within the provisions of paragraph 378 as a manufacture of wool not otherwise specified and dutiable at about 44 cents per pound and 50 to 55 per cent ad valorem.

Therefore we urge that this paragraph be so amended as to provide beyond any further question that camel's-hair press cloth shall be classified with other hair press cloth under paragraph 445 and shall not be included within the terms of paragraph 378.

Having given camel's-hair press cloth a proper classification, we further request that as a mechanical textile of necessity and great importance to the cottonseed and other oil-producing industries it be subject to a reasonable duty and not a tax so prohibitive as to force the seed and oil crushers to use articles of admittedly inferior quality. It must be conceded that the foreign camel's-hair product is of a much higher quality than the domestic product, yet the latter is forced on the user at higher prices, and he is prohibited by the present rate from taking any advantage of the better foreign article.

While the prices on these goods fluctuate, it can be seen that during the present tariff period the price has advanced from about 60 cents per pound to approximately 66 cents per pound, yet the wholesale price of the foreign article, f. o. b. foreign port, is only about 45 cents per pound, which, under the present construction, bringing it under paragraph 378, is to be subjected to 44 cents and 50 per cent ad valorem, making the total cost of the imported camel's-hair press cloth approximately \$1.11 per pound wholesale, excluding freight. When this price is compared with the present price of 66 cents per pound for the domestic product, it can be seen that the prevailing rates are prohibitive and not competitive.

Under the above provisions the importations are practically nothing, but with a reduced rate, based on about 10 cents per pound, the imported article could be landed in port at about 56 or 57 cents per pound, to which should be added freight and other charges, making the wholesale prices just sufficiently under the present rate as to produce healthy competition in the trade.

The result of this competition would be an immediate increase in the imports of camel's-hair press cloth, and we believe this increase would be of such importance as to produce a revenue to the Government of from \$50,000 to \$150,000 annually.

We have, therefore, to request:

First, a classification of camel's-hair press cloth under provisions similar to paragraph 445 of the law of 1909.

Second, a competitive rate of 10 cents per pound instead of the prohibitive duties of paragraph 378.

We shall now discuss camel's-hair belting, which is also manufactured of cotton and camel's hair, and classified under Schedule K and paragraph 383 as an "article of clothing," with a prohibitive duty of 50 cents per pound and 60 per cent ad valorem. This is purely a "mechanical textile" and should be so classified. It is not an article of clothing, but a machinery belting, which by no process of reasoning could be defined as dress goods, nor by any process of manufacture turned into clothing.

Camel's-hair belting is largely used abroad, but little imported into this country, owing to the heavy and prohibitive rate to which it is subject by being classified and made dutiable under paragraph 383.

It is superior in wearing qualities to other kinds of belting, and, if more largely used, would result in a decreased cost in many factories now using inferior products. But, owing to the prohibitive rate of duty, the foreign-made camel's-hair belting is not available to the domestic users of machinery belting, and, while its cost abroad is low to the European user, this price is so increased by the high duty that the foreign article can not compete with American-made belting.

We would urge that the committee provide a new paragraph under Schedule K, entitled "Belting for machinery only," and in order to obtain competition make the rate on such belting 20 per cent ad valorem.

PARAGRAPH 379—BLANKETS.

This rate would not injure the present American manufacturers of camel's-hair belting, and is only sufficient to permit the entry of the foreign article, which, being now excluded, affords no revenue whatever to the Government. On the other hand, a competitive tariff rate would develop the importation of the foreign belting to an estimated value of from two to three million dollars and at the rate indicated produce a revenue of four to six hundred thousand dollars annually.

We have, therefore, to request:

First. The creation of a new paragraph under Schedule K, entitled "Belting for machinery only," so that such a necessary article of ordinary use in factories may not be classed as an article of clothing.

Second. That the present prohibitive rates thereon be reduced, and that a strictly competitive rate of 20 per cent ad valorem be applied.

SCANDINAVIA BELTING CO.,
By HERBERT F. L. ALLEN,
Washington, D. C.

TELEGRAM OF OZARK OIL CO., OZARK, ALA.

OZARK, ALA., *January 29, 1913.*

OSCAR W. UNDERWOOD,
Chairman Ways and Means Committee, Washington, D. C.

We respectfully urge your influence and efforts in having camel's-hair press cloth put on free list or duty on same materially reduced. The present cost of this commodity makes it a very high item our working cost. Other cloths only experimental. Little used and not generally satisfactory. Camel's-hair press cloth not used for wearing apparel.

OZARK OIL Co.

PARAGRAPH 379.

On blankets, and flannels for underwear composed wholly or in part of wool, valued at not more than forty cents per pound, the duty per pound shall be the same as the duty imposed by this section on two pounds of unwashed wool of the first class, and in addition thereto thirty per centum ad valorem; valued at more than forty cents and not more than fifty cents per pound, the duty per pound shall be three times the duty imposed by this section on one pound of unwashed wool of the first class, and in addition thereto thirty-five per centum ad valorem. On blankets composed wholly or in part of wool, valued at more than fifty cents per pound, the duty per pound shall be three times the duty imposed by this section on one pound of unwashed wool of the first class, and in addition thereto forty per centum ad valorem. Flannels composed wholly or in part of wool, valued at above fifty cents per pound, shall be classified and pay the same duty as women's and children's dress goods, coat linings, Italian cloths, and goods of similar character and description provided by this section: Provided, That on blankets over three yards in length the same duties shall be paid as on cloths.

BLANKETS.

BRIEF OF THE CHATHAM MANUFACTURING CO., WINSTON-SALEM, N. C.

WINSTON-SALEM, N. C., *January 31, 1913.*

HON. OSCAR UNDERWOOD,
House of Representatives, Washington, D. C.

MY DEAR MR. UNDERWOOD. I did not know enough about the conditions of your committee hearings to know that an appearance before the committee had to be fixed by previous arrangement.

You very kindly told me when I met you in the café that you thought I might be able to be heard at the end of the list, but I felt that the long time accorded the wool schedule had become tiresome to the committee, and did not feel like making further imposition.

PARAGRAPHS 380-381—DRESS GOODS.

As a blanket manufacturer I was very anxious to get our position before you, and having failed, I take the liberty of making a slight explanation, and will prove the same by bringing our books or balance sheet, or any other information you may desire.

The present duty on wool and on blankets is entirely too high from my viewpoint as a Democrat, standing on the platform and also as an American citizen. I think the country could stand free wool, but you want a revenue and I am perfectly willing to have you fix the duty at whatever you see fit. The present duty on blankets is equivalent to two or three times that on unwashed wool, and from 30 to 40 per cent additional.

I have figured the cost of manufacture in America and Europe very closely, and I believe we can make 25 cents per pair on blankets if you will give us 30 per cent more duty on blankets than on wool. If you think that is too high we might be able to do with 25 per cent, but I do not think we could operate our American mills on any less than that.

Your bill of March 21, 1912, made a difference of 10 and 25 per cent. The House and Senate bill of April 1 and July 25 made a difference of 20 per cent, and the bill vetoed by President Taft on August 9, 1912, gave us a difference of only 9 per cent.

We want the duty on noils to be one-half the duty on wool, or less. If noils were made free we could give the American people wool blankets at a price they are now paying for the best grades of cotton blankets. As I understand it there are practically none imported now.

The blanket industry is quite different from that of cloths and knit goods, but if you have any doubt as to the correctness of any my statements I should like to be allowed to verify them.

With assurances of high esteem, I am, yours, truly,

H. G. CHATHAM.

PARAGRAPH 380.

On women's and children's dress goods, coat linings, Italian cloths, and goods of similar description and character of which the warp consists wholly of cotton or other vegetable material with the remainder of the fabric composed wholly or in part of wool, valued at not exceeding fifteen cents per square yard, the duty shall be seven cents per square yard; valued at more than fifteen cents per square yard, the duty shall be eight cents per square yard; and in addition thereto on all the foregoing valued at not above seventy cents per pound, fifty per centum ad valorem; valued above seventy cents per pound, fifty-five per centum ad valorem: Provided, That all the foregoing, weighing over four ounces per square yard, the rates of duty shall be five per centum less than those imposed by this schedule on cloths.

See National Association of Wool Manufacturers, page 4195.

PARAGRAPH 381.

On women's and children's dress goods, coat linings, Italian cloths, bunting, and goods of similar description or character composed wholly or in part of wool, and not specially provided for in this section, the duty shall be eleven cents per square yard; and in addition thereto on all the foregoing valued at not above seventy cents per pound, fifty per centum ad valorem; valued above seventy cents per pound, fifty-five per centum ad valorem: Provided, That on all the foregoing, weighing over four ounces per square yard, the duty shall be the same as imposed by this schedule on cloths.

See National Association of Wool Manufacturers, page 4195.

DRESS GOODS.

TESTIMONY OF ROBERT PLUYM, REPRESENTING THE NATIONAL LADIES' TAILORS AND DRESSMAKERS ASSOCIATION.

The witness was duly sworn by the chairman.

Mr. PLUYM: Mr. Chairman and Gentlemen, I appear before you representing, in my capacity of president, the National Ladies' Tailors and Dressmakers Association. I reside here in Washington, and my business is here; but the association includes in its member-

PARAGRAPHS 380-381—DRESS GOODS.

ship many of those in all sections of the country who are engaged in the business of making to order the better class of gowns worn by women whose circumstances permit them to call upon the services of a tailor or dressmaker when they require a new gown. The garments made by a majority of those composing our membership may be described as afternoon gowns, ball gowns, reception gowns, evening wraps, lace gowns, and fine lingerie. These articles will at once be recognized, we think, as purely luxuries. The number of women in this country who can afford to go to a ladies' tailoring or dressmaking establishment for the purpose of having made a gown of the kind I have enumerated, for which she will be charged anywhere from \$75 to \$400, is comparatively small in proportion to the total number of women in this country, and the field upon which we can draw for our business is accordingly very restricted. It is, however, being constantly widened under present tariff laws, and our industry is becoming each year broader in scope and the competition keener because of new additions to our ranks.

The American husband is well known to be the most indulgent in the world. He likes to see his wife and daughter well and stylishly dressed, and he is willing to pay a fair price for having their garments made when he is able to do so. Our work is constantly growing more skillful and satisfactory to our customers. Still, the industry is a comparatively young one. Fifteen years ago there were very few high-class ladies' tailors or dressmakers in this country. Now there are over 4,000 of all kinds in New York alone, of which at least 500 do work that may be called high class. Other large cities now have a proportionate number of such establishments, so that it will be seen that it is for a class of business of considerable proportions and of increasing volume that I speak as president of the National Ladies' Tailors and Dressmakers Association.

Our customers are largely confined to those living in our larger cities, as the dressmaker of the small town is not as a rule interested in the duties on imported gowns, as she is seldom called upon to make a gown which would compete with the foreign models. The class of business men and women, therefore, for whom I appear may be classed as "custom ladies' tailors and dressmakers," and the products of their establishments should certainly be classed as luxuries, upon which, we understand, it is the intention of your committee to place the higher duties for the purpose of raising the desired amount of revenue. With this purpose, if we are correct in believing it to be such, we are in hearty accord, and it is our opinion that the gowns of the better class made in London, Paris, Berlin, Vienna, and other European centers of fashion should be made to stand their full share of the task of raising revenue, as they have done for many years past.

This should be all the more the case as no man can point the accusing finger at us and say we have a "trust." Each ladies' tailor or dressmaker in this country is conducting his or her own business, be it great or small, and fighting his or her battle for a living. There is no great combination controlling our operations upon which we can rely for help in times of financial stress. If the individual tailor or dressmaker does not get sufficient custom to

PARAGRAPHS 380-381—DRESS GOODS.

make a living he goes out of business, and, in all probability, becomes an employee instead of a proprietor; though usually there is no room for further employees.

So we desire to impress upon your committee two facts at the start:

First, that we are dealing, in this statement, with articles which we believe should be classed as luxuries.

Second, that no trust, or any sort of combination, is interested, through us, in seeing the duties retained on the articles we make.

We have an organization purely voluntary in character, to which many of those in our line of business belong; but it is merely intended as a means of bringing its members together at stated times for mutual benefit, social intercourse, or for educational purposes.

The object of this brief, submitted on behalf of the National Ladies' Tailors and Dressmakers Association, is, therefore, to ask your committee to retain the duties of the present tariff law on the finer grades of women's wearing apparel imported, in part, under paragraph 382 of Schedule K.

We are, of course, also interested in importations under similar paragraphs of Schedules I, J, and L and what we have to submit in this brief on Schedule K, will apply, with equal force, to those importations of the finer grades of gowns or other garments that would fall under the other schedules mentioned. We address ourselves just as much to those schedules as to the one now under consideration, and ask the permission of the committee to file, for printing in the hearings on those other schedules, a short statement of our views and suggestions as to the items in those schedules in which we are interested.

Mr. HILL. What do you think about those rates? Should they be left, from your viewpoint, just as they are—all those four paragraphs?

Mr. PLUM. Yes. We also make the further suggestions here, and if you will permit me to read the balance of my brief I think you will find that the suggestions will apply to these various paragraphs, to be added to or made a schedule by themselves.

The paragraphs under which the garments we make are imported are, as we interpret the present law:

No. 324, in Schedule I, covering wearing apparel of cotton, paying a duty now of 50 per cent ad valorem;

No. 349, in Schedule J, covering wearing apparel containing flax, hemp, etc., now paying a duty of 60 per cent ad valorem;

No. 382, in Schedule K, covering wearing apparel of wool, now paying a duty of 44 cents a pound and 60 per cent ad valorem.

No. 402, in Schedule L, covering wearing apparel of silk, now paying a duty of 60 per cent ad valorem; and

No. 709, exempting the personal effects of persons arriving in the United States to the value of \$100 from duty. We would like to see this paragraph remain unchanged, as the limit is a reasonable and proper one, and the customs officials are quite liberal in their administration of this paragraph.

Mr. PETERS. You are probably right. As the law is to-day, if the articles do not accompany the person they can not come in at all; that is, if the trunk of a traveler should be left behind and not be on

PARAGRAPHS 380-381—DRESS GOODS.

the same boat, it can not come in under that exemption. Do you think the law should remain in that way?

Mr. PLUYM. I do not know about the other practice, but the way the law reads here, people coming into the United States should not be allowed to bring in more than \$100 worth, and we wish to have this exemption of duty remain up to \$100.

Mr. PETERS. And you also think that provision should remain which requires the goods to accompany the person into the country?

Mr. PLUYM. Which provision? I did not quite understand that.

Mr. PETERS. The provision of the law as it is to-day only allows that exemption where the goods are actually with the person coming into this country. If by any chance they are left behind, then he would have to pay a duty on them.

Mr. PLUYM. Yes, sir; because they very often leave things behind intentionally, and so do people engaged in the trade, or their ladies, and my opinion is that they ought to pay a duty on those things that are left behind, because you could not tell whether they were left behind purposely or unintentionally.

Mr. PETERS. You could tell whether a person brought in \$100 exemption on that?

Mr. PLUYM. Oh, yes; we could tell that.

Mr. PETERS. They could not continue to claim \$100 on any indefinite number of importations.

Mr. PLUYM. There might be a family traveling with six or seven ladies in the party, and several maids, and of course each one is entitled to \$100 worth, and that makes quite an item. If they should leave a trunk behind, they can fill it with wearing apparel.

Mr. PETERS. It does not make any more of an item whether they leave it behind or bring it in afterwards?

Mr. PLUYM. I have not given this matter any consideration, and I would not like to comment on that subject. I am not prepared to discuss this matter, because I have not given it much thought. I would like to continue reading my brief, with your permission.

The CHAIRMAN. Very well.

Mr. PLUYM. The American ladies' tailor and dressmaker respectfully urge upon your committee the desirability of retaining the duties of the present tariff law upon at least the grades of importations under the paragraphs mentioned that are plainly entitled to be put in the class of "luxuries," viz: The gowns of the well-to-do women.

Most of these gowns when imported, are trimmed with laces, beaded, etc., lined with silk and other materials, which have always been classed as luxuries, and are subjected to the highest rates. The ladies' tailor or dressmaker who makes the better class of gowns uses these high-grade trimmings and cheerfully pays the high duty involved in their purchase; but he believes that he should be as well treated so far as the finished gown is concerned, and that the foreign tailors should not be permitted to send their foreign-made gowns into this country at a rate of duty that would enable them to largely displace the American tailor or dressmaker in the American market. We claim that the finished garment should be rated proportionately as high as the various trimmings and accessories used upon it.

If this is not done, and these imported gowns are let in under low rates, there can be no doubt that the business of the ladies' tailor or

PARAGRAPHS 380-381—DRESS GOODS.

dressmaker will go almost entirely to foreign centers of fashion, so far as the better grade of work is concerned, for in these foreign centers the originals of styles can be obtained instead of duplications from models imported from such centers. The celebrated gown makers of Paris, such as Worth, Paquin, Doucet, Dracol, and others, are held forth, and have been for years, in the advertisements of our ladies' tailors as the arbiters of all fashion in women's wear, and for many years have thus received free advertising worth millions of dollars to them, for led by such representations, which were true in all respects, our women of means have flocked to these foreign establishments to have their gowns made, and thus our American tailors and dressmakers have helped to make millionaires of at least 25 of the leading French ladies' tailors, who have formed a "Syndicate" to maintain prices, whereas it is impossible to name one in America who has accumulated even \$100,000.

There is no plutocratic class among us. Our business is one involving a comparatively small profit. Take, for instance, a gown costing \$100. The material in such a gown will usually cost about \$40; the labor involved in the making about \$40 leaving but \$20 for gross profit, out of which \$10 should be deducted for all expenses other than labor involved in the conduct of the business, which would leave a net profit of \$10 or 10 per cent.

Bradstreet's Agency reports that only about 6 per cent of those who start in business succeed, about 94 per cent failing. We respectfully submit that unless we can be allowed to make 10 per cent, a very reasonable profit, we will probably have to join the 94 per cent, and allow the foreign tailor or dressmaker to make the gowns worn by our American women.

The profit of the French tailor is much larger. In Paris the average wage paid for skilled labor on women's garments is 16 to 18 cents per hour. In New York the same labor is paid about 54 cents per hour. Yet, an afternoon visiting gown that would bring \$100 to \$200 in Paris, would sell for between \$100 and \$150 in New York. This difference in price in favor of Paris is the result of the unique character of the conditions prevailing in our business. Paris, for example, has for generations been the source of fashions for women, and our women have all been anxious to possess the original Paris "creation." Hence they have gone there in great numbers to buy their gowns and paid much more for them, because of the great reputation gained by the Paris house. In other words our American women have been paying these foreign dressmakers and tailors about a third more than they would have to pay for the same gown in this country, this third representing a charge made by the famous tailor or dressmaker for his label. The charm of the label is so great that there is even a traffic in them between this and other countries, principally France. They are imported by some unprincipled makers, who sew them into the gowns they produce, and such gowns are sold to our American women as imported from the celebrated French house—a palpable imposition and fraud. I recently brought this matter to the attention of the Treasury Department, and received the following reply:

SIR: The department is in receipt of your letter of the first ultimo, requesting to be informed whether woven labels bearing the name of foreign dressmakers are being imported into the United States.

PARAGRAPHS 380-381—DRESS GOODS.

In reply, I have to advise you that the collector of New York reports that labels of this description are imported at the port through the parcel post and that importations of such labels are frequently made and are for importers whose business is restricted to the garment label business.

In connection with your statement that the public is being deceived by the use of these labels on American made garments I have to state that the department is aware of no Federal statute under which their importation could be prevented. The collector at New York suggests that in his opinion section 438 of the New York penal code, which makes it a misdemeanor to put upon an article of merchandise any false description or other indication respecting the kind, number, quality, weight, or measure of such article or any part thereof, or the place or country where it was manufactured or produced, etc., might be invoked to prevent their use in that State.

Respectfully,

F. M. HALSTEAD,
Chief, Division of Customs.

Evidently there is need for a Federal statute prohibiting this practice, and we propose to follow the matter up and endeavor to secure such an enactment.

Of necessity, in order to get business, our American ladies' tailors and dressmakers have been buying their dress models of the foreign house, and advertising them as from the well known maker. As a result of this advertising, and the syndicate referred to, the higher prices of the foreign houses are possible. Our products can not, therefore, be compared with the staple articles of commerce, but should be judged by the same standards as articles of fashion and art, or other luxuries, the prices of which are governed, not by the ordinary law of supply and demand, but by the peculiar conditions surrounding each particular case. This tendency of our women to buy their gowns abroad is gradually being checked, and our styles are commencing to be more recognized the world over.

Mr. PETERS. The sum and substance of your brief is that you propose a higher scale of rates for the costlier women's dress goods running through these four schedules?

Mr. PLUYM. I beg pardon. We do not ask a higher rate; we simply want to retain the tariff as it is now.

Mr. PETERS. But if the present rate should be reduced on the cost of goods, you want this rate retained?

Mr. PLUYM. Exactly.

Mr. PETERS. Under separate classification?

Mr. PLUYM. Either as a separate schedule or else add it as a paragraph to these various schedules, but at the same rate that they have now—60 per cent, I think, is the rate.

Mr. PETERS. I notice on page 16 a suggestion as to the form of classification. Would not that be easily evaded by the importation of gowns in a slightly unfinished condition?

Mr. PLUYM. Why, no. These gowns, as a rule are imported in a finished condition, because there are so many details and, as a rule, it is the finishing touches that make the gown a complete gown, and if those finishing touches are left out the gown would not be complete and it would not have the value that it would have with those finishing touches.

Mr. PETERS. There would be none imported in any other condition, in any event.

Mr. PLUYM. Hardly, except robes. They are being imported now, such as lace robes, and any other lace gown which is made up, for

PARAGRAPHS 380-381—DRESS GOODS.

instance, and then assembled; it is a mere matter of putting them together. What I am referring to here generally, is silk dresses, cloth dresses, velvet dresses and so forth, ball gowns. Some of them are partly lace and some of them are partly velvet or partly silk, but there are some robes imported, as you suggested which are partly finished now, which are, as a rule, lace gowns or embroidered gowns, simply certain parts of it being embroidered, but they are sold and classified as robes.

It is our contention that this great country, which leads the world in so many things, will, before many years, lead also in styles, as it should.

So it will be seen that while the expenses of the foreign ladies' tailor or dressmaker are lower than ours, he can, because of peculiar and exceptional conditions, secure a much greater profit. It would seem only right and proper, therefore, that the privilege of paying the tax should continue to be accorded to his customers.

We repeat, however, that our argument is directed only to the higher class of importations, and not to those for the use of the average citizen, who buys ready-made garments of the cheaper grades. We will not venture a suggestion as to the proper duty to be levied upon the commoner grade of importations under the paragraphs in which we are interested. If the committee does not feel disposed to maintain present rates upon all wearing apparel of wool under paragraph 382, or on wearing apparel under the other schedules we have referred to—wearing apparel, that is to say, intended for people of ordinary means—we recommend that recognition be given as luxuries to the product of the foreign ladies' tailors and dressmakers, by formulating a new schedule for women's wearing apparel, or at least a new paragraph under each of schedules E, J, K, and L, to cover those articles that can clearly be classed as luxuries. Such paragraphs should cover women's wearing apparel, when composed chiefly of the substance treated of in the schedule, and when valued, in the case of a complete gown, at \$50 or more; in the case of a separate skirt at \$30 or more, in the case of a separate coat at \$40 or more, and in the case of riding habits at \$30 or more. In order to carry out our idea we submit herewith paragraphs which we suggest should be incorporated in schedules I, J, K, and L, and sincerely hope that the committee will agree with our contention that this would be a fair and proper solution of the matter.

The rates should in all cases be on the ad valorem basis. Such a method would simplify the work of the appraisers and bring in more revenue to the Government. The appraiser under the present system must necessarily guess at the valuation of the various component parts of a gown. For example, the correct valuation of a velvet gown lined with silk and trimmed with lace, jet, furs, or other articles on which the duties vary, must be largely left to the judgment of the appraiser if he suspects that the gown is undervalued. He can not expect to be shown an itemized bill for each particular kind of trimming, and must estimate an average duty, very often to the disadvantage of the Government. Our plan would certainly make the work of the appraiser easy and more accurate.

PARAGRAPHS 380-381—DRESS GOODS.

It is at once apparent that imported gowns of the value above specified abroad would be essentially in the nature of luxuries and should be subjected to a revenue duty somewhat higher than that placed on the materials of which they are composed, viz, silks, velvets combined with wool, and broadcloths and woolen cloths, usually trimmed with laces, beaded trimmings, braids, etc., most of which trimmings will probably carry the highest rates of duty in the tariff, to cover the additional cost of making these materials into a finished gown. We submit that such a course would be distinctly in line with the democratic doctrine, or policy, of levying the tax on the one best able to pay it, thus letting the well-to-do consumer pay the tax on imports.

It should not be lost sight of also that we are ourselves importers to some extent, and as such pay considerable sums into the custom-house each year. We import wearing apparel, principally models of gowns, wraps, etc., of high grade for copying purposes. But our labor is all at work in this country, and is highly paid.

We are striving to break the hold of the foreign tailor and dressmaker on our styles and our market, and with the continuance of the present tariff rates we believe we can succeed. Prominent women of this country are interested in a movement under the name of American fashions for American women, and are lending us their hearty cooperation in our effort to encourage the growth of a sentiment in favor of letting American ladies' tailors and dressmakers set the styles for American women and carry out such ideas in the garments made for them. This is a patriotic movement that should be encouraged by our lawmakers. It is sought to gradually make New York, as our metropolis, the center of American fashions and educate our women of means up to the knowledge that it is unnecessary for them to go to Paris, London, or Vienna in order to get a gown made in the latest style; but that in New York, or, for that matter, any other large city of our country, ladies' tailors and dressmakers can be found who can give them the same material and superior workmanship and, what is more important, the same or better effects, for less money.

There is no need to point out to your committee that such a movement, if successful, would mean much to this country, by keeping hundreds of thousands of dollars here that are now spent abroad by women who, partly through our own advertising it is true, have been led to believe that only in Paris, London or Vienna can real original styles be found and who accordingly go there and spend their money. There will, of course, always be a large number of women of means traveling abroad, who will buy costly garments made by our foreign competitors, and there will always be duties collected from them, so there will be no danger that this source of revenue will cease. The passenger lists of trans-Atlantic vessels are larger each year, and the women who will go abroad will continue to buy gowns abroad and duties will not decrease greatly, if at all, in amount if present rates are maintained. But as our population and wealth increase it is only fair that we should hope that our business in this country will likewise grow and flourish in proportion, and that we will get an increasing share of the business as our skill and prestige for style-making become more and more recognized by our women. We can do this

PARAGRAPHS 380-381—DRESS GOODS.

if your committee will continue the present rate, and this we ask you to do, at least on the better grade of importations under the various paragraphs we have referred to.

If, therefore, the committee reduces the duty on ordinary wearing apparel, under paragraph 324, in Schedule I, we suggest that the following, or a similar paragraph, be added:

Articles of women's wearing apparel as described in the foregoing paragraph, when valued at \$50 or more in the case of a complete gown; at \$30 or more in the case of a separate skirt; at \$40 or more in the case of a separate coat, and at \$30 or more in the case of a riding habit, shall pay a duty of 50 per cent ad valorem.

Insert same paragraph after paragraph 349, Schedule J, rate 60 per cent.

Insert same paragraph after paragraph 382, Schedule K, rate four times the duty on one pound of unwashed wool of the first class and 60 per cent ad valorem. In case the committee eliminates the specific duty on unwashed wool, we suggest that the ad valorem rate be increased proportionately.

Insert same paragraph after paragraph 402, Schedule L, rate 60 per cent.

That the wearing apparel imported is of sufficient volume and importance to deserve a schedule by itself, in which women's wearing apparel of the higher grades should form a paragraph, is shown by the volume of imports for consumption for the years 1910, 1911, and 1912, as given below:

SCHEDULE I (READY-MADE CLOTHING OF COTTON).

Year.	Values.	Duties collected.
1910.....	\$1,838,356.72	\$919,178.43
1911.....	1,883,194.03	941,597.10
1912.....	1,871,477.20	935,738.79

SCHEDULE J (FIBER READY-MADE CLOTHING).

Year.	Values.	Duties collected.
1910.....	\$229,405.73	\$137,643.44
1911.....	200,904.60	120,542.78
1912.....	241,908.45	145,145.06

SCHEDULE K (WOOLEN READY-MADE CLOTHING).

Year.	Pounds.	Values.	Duties collected.
1910.....	860,412.87	\$1,776,236.34	\$1,444,296.87
1911.....	926,616.02	2,257,374.13	1,762,093.68
1912.....	974,189.72	2,190,301.60	1,742,687.42

SCHEDULE L (SILK READY-MADE CLOTHING).

Year.	Values.	Duties collected.
1910.....	\$4,399,846.39	\$2,639,907.83
1911.....	5,230,782.18	3,138,469.31
1912.....	3,896,199.13	2,337,719.47

PARAGRAPHS 380-381—DRESS GOODS.

If the committee desires any additional statistics or facts with reference to any of the matters touched upon in this brief, we will be glad to file a supplemental brief covering such points as may be indicated. Having just returned from a trip abroad I have not had the time to go into all the phases of the schedules in which we are interested as fully as might be done; but I desire to thank the committee, on behalf of our association, for giving me this opportunity of presenting our views, even in this brief manner; and hope they may be deemed worthy of consideration.

The CHAIRMAN. Your time has expired. Are there any further questions, gentlemen?

Mr. PLUYM. I have but a very little more to say, Mr. Chairman.

The CHAIRMAN. I know, but you have already run over your time, to some extent, anyhow.

Mr. PLUYM. Very well.

The witness also filed the following papers:

AMERICAN RETAILERS HAVE ASSURED A WARM WELCOME FOR THE FLOOD OF FOREIGN GOODS THAT WOULD FOLLOW RADICAL TARIFF REDUCTIONS ON WOMEN'S WEARING APPAREL.

[From Women's Wear, Oct. 18, 1912.]

Let us concede that Paris fashions are still first in the hearts of many American women.

And that foreign goods are often better than the American.

It would be strange, indeed, if it were not so, considering the public insistence of so many Americans that it is, and for ever will be so, for conditions are generally as we make them.

At any rate the present foreign fashion firstness being for the sake of argument admitted, let us then inquire if that condition must necessarily be permanent, and if anything may be done whereby American creative and productive ability in the women's wear industries may have fuller opportunity of expanding to the national standard if it is able to do so.

American effort is not so unaccustomed to being first, not so accustomed to being reputed largely imitative in industry or otherwise. That is rather the Chinese reputation.

But in their merchandizing methods the Chinese don't care much for reputation or price. In their modern merchandise they are open copyists, and they get the prices of copyists. In that, or that reputation, acquiescence, shortsightedness, or indifference—whatever one prefers to call it—we are rather like the Chinese.

And because we are lazy or indifferent in building up and protecting our home reputation in fashions and fashion merchandise, foreigners continue to usurp it, just as they go in and grab the Chinese territory, because the Chinese have neglected to build up their power of resistance.

In the direction of improvement, let us inquire why foreign fashions and fashion goods should still be so conspicuously preferred by American merchants in their advertising to the women, considering the development and progress of the American women's wear industries.

Although Paris is still great, she is no longer exclusively great. Even the majority of those who consider almost sacrilegious any question of continued Paris firstness in all matters of dress, nowadays point out the wonderful progress of American fashion creators and producers, especially in the last few years. They seem to concede that Paris to-day depends appreciably upon American suggestion; that the bulk of the original Paris fashions are quite unsuitable for American women without more or less radical modification; that the American designers are the cleverest adapters in the world and that Paris also simply adapts, and moreover that the successful creation of distinct American styles is a rapidly expanding condition.

If these claims of development regarding American fashions are justified, have the American fabrics and other materials that go, or should go into these fashion kept pace with our fashion development? The majority opinion seems to be that we do produce the bulk of these latter goods, but not at all the bulk of the quality.

PARAGRAPHS 380-381—DRESS GOODS.

Still it is the growing contention that neither in fashions nor in fashion fabrics and materials as a whole is it to-day necessary or just, for American merchants to boost foreign goods and their makers to American women in the exaggerated way they do—as if we, ourselves, produced nothing at all worthy of similar open recognition.

It is urged that as long as American retailers give Paris fashions such public preference, just so long will all other foreign fashion merchandise be favored in the minds of American women. For it is impossible to prefer foreign fashions without preferring foreign goods. And in fact the leading American advertisers promote foreign fashions and fabrics, and other merchandise, with equal enthusiasm, as will be seen by the extracts from only a month's publicity by half a dozen big retail stores. These extracts will be found collected in a double page cut in this section.

From this viewpoint, if even we urge the superiority of foreign fashions alone, we simultaneously suggest the equal superiority of foreign fashion goods, silks, dress goods and other women's wear merchandise. The influence of foreign fashion publicity can not but unfavorably affect the whole substance of American women's wear and fabric industries, if not in bulk than in quality and the reputation of ideas, novelties, the finest goods, that encourages and assures the maintenance of eventually higher standards of product and price.

Perhaps we do to-day really make a lot of these finer things, but we do not get the credit for them, nor do we make much appreciable effort to get such credit.

American creators and producers must recognize that meanwhile American stores doing a tremendous business, are playing up their foreign stuff more and more. Why? Evidently it pays them to do so. Therefore, other retailers will argue, "Let us do so likewise." Thus, the foreign stuff grows ever stronger in reputation, price and sale and the merchandise of our producers ever weaker in reputation, sale and price.

Of course, the less we produce, the less work for our own people and the less money they will have to spend in our own stores. But the average retail mind doesn't bother about that possibility. The retailers live in the present. Each day with most of them is a bargain day. The less reputation the American makers have, the more bargains for the retailers. The future is distinctly up to the producer.

And yet, it has happened before, if the tariff should again be reduced and we pursue the same foreign-boosting policy, it is difficult to see, considering the stilts we are on in this country, how there will be much left for American producers, and the people they employ, and in turn for the American retailers.

But if our fashions, and our fashion goods, really have style and merit, we must build up and maintain recognition of that style and value, and meanwhile, apart from the question of comparative merit, "Paris" and "imported" still convey all the glamor of a mighty reputation and of much enthusiastic American endorsement. Whether or not they have all the best goods, the foreign producers still get all the best publicity to the wearers. And just wishing and talking will not remedy that condition, supposing we really want it remedied. If they do not get what they want, the American merchants will have to go after it.

Of course, the bulk of each leading American store's advertising is occupied by the usual seasonal domestic merchandise. By far the greater part of their stocks is American. But the keynote of the publicity opening each season is with the pivotal stores overwhelmingly foreign. The imported goods get the preference of space and display and eulogy, and thus each season is again earmarked Paris and foreign.

In these basic seasons it is usually made clear to the public by these stores that much of the merchandise is naturally American, but if you want "something classy," that something had better be from Paris, or from Germany, or from London, but not from America. When the season is well underway, this foreign publicity is naturally abated, but at no time do native ideas and merchandise get promotion of the sort so freely accorded the foreign.

And so often the statement of foreign source appears to be a sheer misrepresentation. Only a few weeks ago one of the most conspicuous retail foreign goods boosters in a way apologized for the statement of a French silk and wool charmeuse at \$1.98 being French, on the ground that they couldn't get it made here. In its form this was unusual. The regular department store course would have been to glory in the supposition that this fabric was French—to apologize, rather, if it were not French. And yet, of course, this store made the alleged French source quite clear, as usual, only they did it more cleverly, more tactfully than usual. They simply added the alleged patriotic intent to the ad of a French cloth.

Now, some leading American mill should have taken up that charge of American incompetence and have demonstrated to this retailer that it could produce that fabric

PARAGRAPHS 380-381—DRESS GOODS.

for them, of the quality and at the price desired, and have tried to get the store to treat American goods more honestly. American producers should not take a laissez faire policy in this question, but they invariably do. They are satisfied to produce the bulk and sell it—at bulk prices.

As a matter of fact, at the suggestion of Women's Wear, a leading American mill did secure a sample of the fabric referred to, and found no difficulty at all in producing these goods, which it was asserted by the retailer only a French mill could make. The fabric was quite similar to goods which this American mill had produced already, and offered no complications in manufacture. Moreover the sales department of this mill reported that the alleged French goods were not as desirable as similar fabrics which the American mill was already producing and the sales department did not recommend the manufacture of these goods which the retailer had eulogized as French and impossible for an American mill to make at that price.

A second fabric concerning which this mill was questioned as a fabric which it had been asserted could not be wrinkled and which could not be secured in this country, the American mill also secured a sample of and asked for a report on it from its sales department, which report was in part as follows:

"The cotton goods referred to have been produced in large quantities in this country. There is no difference in the principle of producing the silk goods. The article, while it requires special spinning of yarn, could be easily produced if any demand should be shown for it."

This is undoubtedly the frequent condition.

The American buyers who go to Paris expect to pay what the Paris creators and makers exact for study and art, beyond the price of mere materials and work. But it is admitted that practically every buyer in this country keeps pounding and pounding the American manufacturers to produce a copy or an original for the least possible money. The entire premium in this country is downward and not upward, toward trading down instead of trading up, away from instead of toward originality, individuality and consequently higher standards of creation, production and prices.

How can native talent be developed if it gets so little encouragement?

Under the circumstances it is fortunate for the American producers that most of the American women can't afford the really imported fashions and merchandise. But the foreign goods boosting probably does often make women insist on at least an imitation of the imported. This naturally forces incalculable counterfeiting on the part of American producers, the demoralizing production of much merchandise at a price.

As a rule we pay the foreigners willing for "atmosphere," "inspiration," but too often the buyers hardly want to pay our own producers for essential time and material.

And then they howl at the results.

The American originator can enforce credit and reputation for patented dress idea of ingenuity rather than style. The law protects him in that.

But because of the comparative youth of this great country, because of the ancient fashion name and glamor and real merit too of much Paris goods, and because above all of the way in which American retailers persistently force the foreign idea down the throats of American women an American creator can not to-day get credit and reputation and just price in his own country for any original fashion or for the best in fashion merchandise.

Either he himself labels his fashion ideas "Paris" or the retailers do so.

Here is an extract from a recent interview by Women's Wear with one of the leading Fifth Avenue, New York, specialty shops:

The head of this retail house said: "The saleswoman selected a hat harmonizing with the customer's coloring and figure and with a reproduction of a Paris costume she had just bought. The customer liked the hat and lifted it off to further examine it. She saw the name of this American shop on the label. 'Oh, I want a Paris hat—nothing else will content me with this charming Paris gown,' she said. Picking up a small 'plug' hat with a Paris label in it, the woman said, 'Here, this will be just right. I'm not used to it, but you may trust the French in matters of taste.' And she discarded the hat which in every point suited the conditions of her gown and bought a hat no French modiste would have designed for that gown.

Could there be a more striking instance of the power that has been built up in this country for a mere French label, which often is a lie, of the frequent absurdity, ignorance, and injustice to American fashions in that habit, and of the difficulty confronting American creators in getting reputation for their ideas? If the American retailer often can not sell his own fashions under his own name, how then can he sell as such the fashions of an American creator about whom, under the present conditions, the women can know nothing?

PARAGRAPHS 380-381—DRESS GOODS.

And so often the only way is to sell the American fashions as "Paris" or not to sell them at all, or to sell them "at a price."

This condition is not very inducive to study and origination on the part of American designers.

It does not appear to need any additional fostering.

It is true that in the most elaborate costumes American designers have probably not yet got into their full stride; and yet, on the other hand, it is asserted that the French costumers are not what they used to be—that they have become commercialized, mere tradesmen, producing all they can for the sake of profit and to keep their big organizations going—"that the glory of Paris in the matter of dress is in its history, not in its present."

Reputation is largely a matter of repetition, and the foreign goods have enjoyed much repetition of American eulogy. But still to-day if the American creator or producer insists on just recognition and its fair reward, he must go to Paris, and we will then gladly buy the ideas of this American brain at Paris prices and boost his reputation free of charge.

It does seem that in all the vast field of American fashion industry there must, from time to time, be some genius. Paris can really have no more monopoly of brains than of fashion ideas. Just as brains are unpatentable, so are the sources of fashion inspiration all over the world, including Paris, equally possible to all.

The American protective tariff gave our own merchandise industries an opportunity to get started and established. But is not the tariff in effect more or less offset by unlimited boosting on the part of American stores of foreign fashions and products? Is not the tariff proportionately offset by the consumption here of foreign products, and which is consequent on our own promotion of such foreign products?

Is not the cost of living enhanced by the promotion and sale of high-priced foreign goods?

The imports to this country for the 12 months ending with June, 1912, in certain important women's wear lines amounted to \$243,591,876, as follows:

Laces, embroideries, etc.:

Cotton.....	\$37, 184, 161	
Silk.....	3, 297, 051	
Linen.....	4, 214, 993	
Total.....		\$44, 696, 205
Manufactures of cotton, including all cotton clothing and other wearing apparel; stockings, other knit goods, handkerchiefs, cotton cloths, plushes, etc.....		65, 152, 785
All kinds of feathers, natural and artificial.....		8, 480, 029
Manufactures of flax, linen, etc.....		59, 659, 843
Furs, dressed on the skin.....		8, 533, 029
Fur hats, bonnets, and hoods.....		885, 943
Hats, bonnets, and hoods, and materials for.....		9, 686, 464
Gloves.....		7, 804, 597
Manufactures of artificial silk.....	\$2, 647, 493	
Silk clothing and other wearing apparel.....	4, 248, 491	
Silk ribbons.....	595, 946	
Silks, velvets, plushes, and other pile fabrics.....	2, 325, 614	
Other manufactures.....	11, 723, 129	
Total.....		21, 540, 673
Total manufactures of wool, including the women's wear lines.....		14, 912, 619
Dress goods, women's and childrens:		
Of silk.....	\$6, 764, 791	
Of wool.....	3, 279, 198	
Total.....		10, 043, 989
Grand total.....		243, 591, 876

One student of the question estimates that \$25,000,000 goes each year to Paris and France alone for American women's clothes.

It is an interesting fact that the leading retail factors in the boosting of foreign fashions and goods strongly urge the maintenance of the high American protective tariff.

PARAGRAPHS 380-381—DRESS GOODS.

This is the attitude of practically all of the big department stores, especially in New York.

It will be recalled that the Tariff Board stated in many instances that by far the biggest cost and biggest profit borne by the consumer was imposed by the retailer.

Surely it can not be that the big department stores want to maintain the high tariff so that they may retain a price level on the basis of the prices of imported goods which so many of them exploit as against American goods.

If the women, their customers, want the Paris touch, the foreign goods, why do not the American retailers who urge this also now urge that the tariff be cut so that the American women can get all the imported goods they want?

But in that event the big American women's wear industries, and the many thousands of people they employ at high wages, might be embarrassed by the influx of the foreign goods the stores have boosted, and a lot of American people might then not have the money to buy any goods, either domestic or foreign. This would not suit the American retailers, nor that the removal or serious reduction of the tariff would probably interfere with the sale of domestic goods at high prices as foreign.

Meanwhile the countries from which we usually import, and whose styles and goods we so generously advertise, are more and more closely protecting their own industries.

Even "free-trade" England is planning assiduously to shut out our automobiles, typewriters, cash registers, and other American products.

Germany is planning to squeeze out the Standard Oil Co.

Perhaps it would be helpful if the American creators and producers were to organize and secure the passage of a Federal law penalizing the misrepresentation of American merchandise as "imported."

New York stores are probably the greatest sinners in this respect, and the existent State law may be sufficient there if it were enforced. But organization of the creators and makers would probably be necessary to bring this about. Only organized selfish interest can enforce such a law.

Necessary compliance with State or Federal law against such misrepresentation, and the consequently increased and open promotion of American styles and merchandise, would probably help the American public to appreciate the domestic products according to their fair merit. If the American goods are right, such a law would show the retailers that it is unnecessary to maintain any "imported" deceit. Under such conditions, if the American styles and adaptations are found really acceptable to the American women, the retailers might naturally discontinue the expense of buying and promoting the foreign fashions and adaptations.

But any movement to promote American styles for American women which does not recognize or can not abate the tremendous contrary influence of certain big American retail advertisers, can make very little headway.

If one looks over the extracts in this issue from the season's opening advertising of some of the leading American stores, it seems idle to deny this condition.

While this tremendous boosting of foreign goods continues, the promoters of American fashions and fashion goods for American women will probably continue to be more or less of a joke.

New York is to the United States of America what Paris once necessarily was, or still is, to New York. And New York says to the women of that city and to the rest of this country, "Paris is first—our own styles and our own merchandise are not in it with Paris—with the imported."

Apart from the question of comparative merit, this condition and its tremendous influence seem to be undeniable. This is, first of all, what those who urge American fashions and fashion goods are "up against."

No matter what the merit of American fashions and fashion goods may be to-day, or ever be, while our own leading stores and newspapers boost Paris and imported styles and goods to American women as they do, it is useless to urge the women to "show a distinct and earnest inclination to buy hats and dresses of American design, and thus show a practical willingness to patronize home industries instead of products with a French label."

They won't do it. It wouldn't be in human nature. It wouldn't be common sense on their part.

No matter what the merit of foreign fashions and fashion goods, from a national viewpoint, it is really about as unintelligent for American producers and retailers to boost the foreign products in this way as it would be for them to steadily advertise their own home competitors, to the exclusion of their own businesses. Some day the public may appreciate this.

PARAGRAPHS 380-381—DRESS GOODS.

This method of merchandising certainly verges on snobbery and sycophancy. In so exaggerated a form, it is almost un-American, almost playing on a weakness of women which has been cultivated and enhanced by peculiar conditions.

It is the fact that a few dignified American stores do very little of this sort of advertising. No doubt they have the goods, but about the limit of their publicity in this way is an announcement that their foreign importations are now ready. They don't urge people that the foreign goods are the best, the only. Though perhaps they do prefer the foreign goods in their merchandising, from these stores the American goods get more of an even deal because people don't go there with their minds set on some foreign article that has been played up in a word picture.

Besides, this Paris boosting is now being terribly overdone. It really isn't exclusive, any more than the thousand-copied Paris styles are exclusive.

And lots of women are "getting on" to this fact of foreign model duplication. The trade reports for the last month have been of great difficulty on the part of specialty shops to get rid of the foreign fashions because the big department stores and all the smaller fry who imitate them have copied these things to death, just as they all try to copy the big advertisers in their Paris "gush."

The women can't be really so crazy to grab a foreign model judging by the prices all the big stores and specialty shops are now offering in the effort to get rid of them.

And it is true that Paris has got the credit of any vulgarity in latter-day styles. Probably smart women would not be deterred by this risqué quality if it were exclusive. But they don't like to share it with callow shopgirls, and questionable women.

And the Roman Church has criticized these extreme fashions severely.

No one denies the beauty of many Paris styles and the value of much foreign merchandise. But when New York has passed on and adapted these things to suit the ideas of their American patrons, they are then New York, not Paris, not foreign. New York is the greatest market in the world for women's clothes, and the label of a representative New York store should be sufficient for its customers. It probably would be so, but for these stores' own incessant Paris boosting.

It is a pretty fair chance that a lot of high-class American women are really sick of this Paris publicity "mush"—for that is almost what it has degenerated into with the effort among the big stores to go each other one better on the foreign idea.

It would make a splendid spring campaign, for one of the leading first-class department stores—the new touch—the American idea—the New York idea.

On the occasion of a dinner tendered to John Wanamaker by the most prominent merchants of New York, and public personages, November 17, 1911, Mr. Wanamaker expressed himself in part as follows regarding a few of the guiding principles he would suggest:

"To embrace among other things a study of the causes of the high cost of commodities and to suggest means to reduce various forms of taxation that add to the cost of doing business and therefore to the cost of goods.

"To reduce the tariff to a point to revive the dying spirit of inventors, designers, and workmen of American enterprise which the high manufacturers' tariff has hindered."

Perhaps it would be easy for a merchant of Mr. Wanamaker's highly esteemed patriotic and civic virtues to simultaneously protect the tariff, reduce the cost of living, increase American prosperity, and "revive the dying spirit of American inventors, designers, and workmen" in the American women's wear industries by lending all the force and influence of his wonderful personality and the great genius of his store publicity organization to a movement in promotion of real American genius and really worthy American goods. It does not seem that boosting foreign goods will reduce the cost of living or encourage the development of American fashion and fashion goods, art, and standards.

Suppose Wanamaker's, Gimbel's, Loeser's, Abraham & Straus, Strawbridge & Clothier, and a few of the other big and conspicuous promoters of foreign goods played up American goods as they do the foreign.

Suppose they were supported by some of the more conservative houses, such as Marshall Field & Co., Altman's, Jordan, Marsh Co., and McCreery's, etc.

In three or four years there might be a very different tale to tell. There might be higher standards and more prosperity among the American women's wear industries and their thousands of employees, and so among all American stores.

Would it not be possible for the big American stores to cease conspicuously advertising the foreign goods as such, and to simply sell them side by side with the American styles and goods on merit and under the store's own name, or at least to say which is American, and not to sell American goods as imported and put French labels on goods that are not French?

PARAGRAPHS 380-381—DRESS GOODS.

That is, not to give the Paris goods preference of place and publicity and promotion. To let merit decide, to fairly know if American fashions and merchandise really do not or can not come up to their opportunity, if it be fairly afforded them.

Really hideous French styles should, under such conditions, fall flat, and good styles, French or American, sell on merit. This is all that could fairly be asked. Put the real French and real American side by side in the stores; don't lie about them, and let the best win.

With the rapid and wonderful development of this country, it is not improbable that understanding and change of present-day methods and standards will come. Already there have been appreciations in this direction.

There might not then be—as for the 12 months ending June, 1912, a year of depression—imports to this country of women's wear fashions and fabrics, and materials amounting to \$243,594,876.

At any rate, it does not seem absurd, or treasonable to Paris, etc., for American business men to consider this question in behalf of American interests.

"PARIS" LABELS—TRADE-MARKS OF LEADING PARISIAN MODISTES AND COUTURIERS WHICH CAN BE SUPPLIED IN NEW YORK AT A MINUTE'S NOTICE FOR USE ON DOMESTIC-MADE "IMPORTATIONS."

The frequent lie and cheat of Paris labels was strikingly demonstrated yesterday when Alexandre M. Grean turned over to Women's Wear a collection of Parisian labels which he had just purchased from a man who makes a business of selling these fraudulent guaranties of alleged French "art" and "exclusiveness" to such American manufacturers or retailers as are unscrupulous enough to use them.

All of the great modistes and couturiers of Paris seem to be represented in the list of labels which can be furnished by this concern and probably others, to manufacturers "at a minute's notice."

WHY MR. GREAN BOUGHT THE LABELS.

Alexandre M. Grean, who is Grean, ladies' tailor and dressmaker, 26 East Thirty-third Street, New York, purchased the collection of labels which are reproduced in a cut on this page for the sole purpose of turning them over to Women's Wear as proof that an assertion made by Mr. Grean some time ago to the effect that French labels actually are sold in this city was in no way an exaggeration.

"I want to make quite plain why I am exposing this fraud," said Mr. Grean to a Women's Wear representative. "People say 'You are trying to knock Paris,' but I am trying to do nothing of the kind. I want Paris to remain Paris, and I want the great modistes there to prosper and I want Vienna, and Berlin, and London all to prosper, but I also want New York to be fairly recognized."

"I bought these labels," Mr. Grean continued, "from a man who came in here to sell me some labels for my use with my own name on them, and when I told him I did not need any he said: 'Well, if you won't buy any of these I have some here that you will buy.' And then he produced these alleged French labels, and I bought them to show to Women's Wear."

"Here is a list," Mr. Grean added, "of the Paris labels which can be supplied by this enterprising concern 'at a minute's notice,'" and Mr. Grean supplied the following list:

The labels that can be supplied.—Paquin, Callot, Francis, Drecoll, Beer, Doucet, Radnitz, Agnes, Worth, Templier Randeau, Cheruit, Perdeoux, Douillet, Martial & Armand, Bernard, Jenny, Maurice, Georgette, Lewis, Reboux, Roger, Carlier, Meyer, Talbot, Virot, Blum, Alphonsine, Marie Louise, Louison, Heitz Boyer, Maria Guy, Lanvin, Julia Beaucourt, Royant, Mangin, Maurice.

Belts.—Beer, Worth, Doucet, Agnes, Callot, Doeuillet, Cheruit, Drecoll.

"Some two years ago," Mr. Grean explained further, "at the time of the meeting of the National Association of Ladies' Tailors and Dressmakers in the Hotel Astor, I made the statement that such labels as these could be purchased here in New York City. That statement was quoted in the New York World, and, while nothing much was done about it, there was a lot of talk throughout the trade, some of the trade publications criticising my statement severely. Women's Wear was the only paper which did not misquote me. A number of cloth manufacturers even went so far as to intimate that it was quite untrue. Now, however, with these labels there can be no further question of it, and I feel that when I expose this cheat, this fraud by which dishonest manufacturers are enabled to make garments here in New York and give

PARAGRAPHS 380-381—DRESS GOODS.

them a Paris label, I am doing a favor to the honest importers who find models of value in Paris and are willing to pay the high United States tariff duties and transportation charges to bring in foreign garments.

"It is also doing Paris a favor when I supply such evidences of the way in which men here are trafficking on the reputations of her greatest couturiers and modistes.

"I have nothing against Paris," Mr. Grean continued. "If American women really do prefer Parisian clothes when they see them, and know what they are getting, well and good—but I do want to see New York garments known and fairly sold as New York creations and not hidden under a spurious Paris label.

"I do not care to make known the name of the man from whom I purchased these labels," Mr. Grean said in conclusion, "because he is only one of a number who are doing this thing, and I see no reason for making a scapegoat of him. The labels, however, speak for themselves."

Some of the prominent couturiers of Paris have from time to time made efforts to suppress this practice, because, while it does give them and Paris a great deal of more or less valuable advertising, it also necessarily cheapens and injures the reputation of these Parisian houses.

BRIEF OF THE FRENCH CHAMBER OF COMMERCE.

[PARAGRAPHS 380-381.]

The WAYS AND MEANS COMMITTEE,
House of Representatives, Washington, D. C.:

The importers of woolen goods ask a reduction in the present rate of duty upon women's and children's dress goods, coat linings, Italian cloths, buntings, and goods of similar description or character, covered by paragraphs 380-381 of the present act.

The rate upon these goods is prohibitive, ranging from 7 cents and 50 per cent. ad valorem per square yard to 11 cents and 50 per cent. ad valorem.

The goods covered by these paragraphs are those mostly in use by poor people or people in moderate circumstances, and not by the wealthy classes, but the above duties advance the cost of all these goods more than 100 per cent above foreign market value.

Is it any wonder that the manufacturers of woollens in this country have grown enormously rich, protected by a duty which gave them double the price for their products that the same goods bring in the markets of the world, but is it not a wonder that the millions who have been so exploited by this unjust and oppressive law have submitted to the same without uprising?

In this country woolen clothes are needed for the warmth they supply, at least during a good portion of the year. Under the excessive duty upon woolen cloths the poor man and the poor woman can not afford genuine woollens, and as a result they are forced to buy for themselves and their little children a "shoddy" garment, perhaps one-half, but more likely one-quarter woolen, and shiver through the cold weather with that. Only the rich can adequately protect themselves, since the required clothing is too expensive for any but the rich.

That these statements are not extravagant, but are borne out by the actual figures and facts, we submit herewith two sheets (on file) with actual samples of the foreign-made woolen cloths suitable for women's wear, showing the actual goods, their weight per yard, their width, the cost price in the country where made—in this case France—the amount of duty charged upon the same, both specific and ad valorem, the freight, and other expenses, and finally the cost of the goods laid down in New York.

It will be noted that the goods costing \$1.05 per meter abroad cost \$2.22 per meter in New York, or a duty of about 111 per cent; that goods costing \$1.05 per meter abroad cost in New York \$2.38, or an advance of 107 per cent; goods costing \$1.25 per meter abroad cost in New York \$2.69, an advance of over 115 per cent; goods costing \$1.20 per meter abroad cost in New York \$2.60, being an advance of over 116 per cent; goods costing \$1.22 per meter abroad cost in New York \$2.68, or nearly 120 per cent advance; goods costing \$1.95 per meter abroad cost in New York \$4.25, being an advance of 112 per cent; goods costing \$3.05 per meter abroad cost in New York \$6.25, which is an advance of 104 per cent; goods costing \$2.85 per meter abroad cost in New York \$5.60, an advance of 96 per cent; goods costing \$2.65 per meter abroad cost in New York \$5.45, being an advance of 106 per cent; goods which cost \$2.20 per meter abroad cost in New York \$4.75, an advance of 116 per cent.

PARAGRAPHS 380-381—DRESS GOODS.

These examples might be multiplied a hundredfold, and in every case it would be found that the protection of the present act is approximately 100 per cent.

This is not protection; it is prohibition. It tends to combination, trusts, and extortion; it leads to unrest, irritation, anger, and revolution.

The people have rights, but the rights of the masses have been lost sight of in the scramble for wealth, so that exploitation and not protection, combination rather than competition, has been the rule.

In November the people called upon the Democratic Party to correct these evils, and it is your duty to listen to that call.

We ask such a reduction on these exorbitant rates as shall grant relief.

All of which is respectfully submitted.

FRENCH CHAMBER OF COMMERCE,
HENRY GOURD, *President*.

Filed by Francis E. Hamilton, counsel, 32 Broadway, New York, and Hotel New Willard, Washington.

BRIEF OF HARRY D. SPEARMAN, EVANSTON, ILL.

EVANSTON, ILL., *January 30, 1913.*

HON. OSCAR W. UNDERWOOD,

House of Representatives, Washington, D. C.

MY DEAR SIR: I notice that various woolen "experts," manufacturers, and interested tariff barons are presenting their views to your honorable committee this week on the proposed woolen schedule.

I myself am merely one of some 40,000,000 or 50,000,000 obscure consumers whose voices are never raised in your committee room in protest against this legalized woolen-tariff robbery. These consumers are too busy scratching for the money to pay their bills to the protected manufacturers to present themselves before your committee in Washington. But I beg leave briefly to call your particular attention to a few facts that I give you herewith.

In the spring of 1912 I ordered from Messrs. McBirney & Co., 14 Aston's Quay, Dublin, Ireland, 52½ yards of Irish homespuns, suitable for men's suitings and ladies' dresses. I had you inclosed the invoice for the same (not printed). The 18 yards of Irish hopsac are ladies' dress goods, the balance for men's suits. Samples of these goods are inclosed (on file).

I also inclose the bill (not printed) from R. F. Downey & Co., customhouse brokers, 45 Pearl Street, New York City, which will show you the actual duty and forwarding charges I had to pay on these goods, \$45.72.

I call your attention to the fact that this invoice of cloth amounts to about \$35, or a trifle less, £7 6d., while the actual duty levied on this cloth was \$37.62. The New York customhouse charges amounted to \$3.60, a trifle over 10 per cent on the value of the cloth, while the forwarding charges were \$4.50.

Now, let us sum up this matter in a few words. On an invoice of inexpensive cloths that should be within the reach of every poor man, I paid actual customhouse duties of over 100 per cent. I paid customhouse fees of a trifle over 10 per cent. You will also keep in mind that the forwarding charges of this little invoice amounted to \$4.50, making a cost in the way of customhouse dues and forwarding charges of over 20 per cent on this invoice.

In conclusion, it is hardly an exaggeration to say that if no tariff duty whatever were imposed on these goods, the various customhouse and forwarding charges (over 20 per cent) would afford adequate protection to the American manufacturer. Keep the document as long as it will be of any use to you, but be kind enough to return to me when you are through with it.

With the highest consideration and regard, I am, sir,

Very respectfully, your friend,

HARRY D. SPEARMAN.

PARAGRAPH 382—WEARING APPAREL, ETC.

PARAGRAPH 382.

On clothing, ready-made, and articles of wearing apparel of every description, including shawls whether knitted or woven, and knitted articles of every description made up or manufactured wholly or in part, felts not woven, and not specially provided for in this section, composed wholly or in part of wool, the duty per pound shall be four times the duty imposed by this section on one pound of unwashed wool of the first class, and in addition thereto sixty per centum ad valorem.

WEARING APPAREL, ETC.

TESTIMONY OF WILLIAM GOLDMAN.

The witness was duly sworn by the chairman of the committee.

Mr. GOLDMAN. The industry engaged in the production of men's and boy's clothing is by far the largest of the industries affected by the duty on wool and its products. The manufacturers of clothing are concerned in the tariff both as consumers of cloth and as producers of wearing apparel. The duty on cloth, the raw material of the industry, determines in a large measure their cost of production and the price to the consumer; the rate on clothing decides the extent to which the American manufacturer can supply the domestic market.

Ready-made clothing ranks among the 10 leading manufacturing industries of the country. Over 5,500 establishments are engaged in it. The number of employees may be estimated at more than 300,000, and the annual output is now in excess of \$500,000,000. The National Association of Clothiers, appearing here through its committee, represents an organization of the leading manufacturers in the trade throughout the country.

In approaching the question of duties on cloth and clothing, we have kept in mind the underlying purpose of tariff reform, namely, to bring about the greatest possible reduction to the consumer consistent with considerations of revenue and competition. In accord with this view, the National Association of Clothiers protested against the reenactment of the Dingley rates in the Payne-Aldrich tariff, and placed itself on record in favor of revision downward.

Our purpose in appearing here is to place before the Committee on Ways and Means full data to enable its members to determine the justness of the rates in the Underwood bill, and to formulate a proper duty for ready-made clothing. This action on our part is the more necessary for the reason that the Ways and Means Committee has never had presented to it adequate information on comparative costs and conditions in the clothing industry here and abroad, upon which a competitive tariff could be based. The report of the Tariff Board does not present any data on the cost of manufacturing clothing in foreign countries or on the difference in wages or in the general expense of conversion. Believing these elements to be essential for the determination of a just rate on clothing, the data are herewith submitted for the use of the committee.

It is our view that the same principles which apply in fixing the rate for cloth govern also in the determination of the duty on clothing. The principle followed by the Ways and Means Committee

PARAGRAPH 382—WEARING APPAREL, ETC.

has been to study the costs of production here and abroad, to allow compensation for the duty on material used, and to impose a duty to cover differences in foreign and domestic costs of conversion, after making due allowance for importation expenses and other factors adverse to the foreign producer. In deciding the rate on clothing, this method of procedure was abandoned, evidently for the reason that the Ways and Means Committee, as shown by its own reports, had not at its disposal the necessary data on relative conversion costs in the United States and in other countries.

For this reason we have found it necessary to make a study of wages in the clothing industry in the United States, Great Britain, Germany, and Austria. The data, gathered from official sources, demonstrate that the conversion cost in the United States is between 100 and 200 per cent greater than the foreign cost. As compared with Great Britain, where the compensation for labor is higher than elsewhere in Europe, our wages in the clothing industry are two and a quarter times as great. For Germany the difference is greater. The margin between the domestic and foreign conversion cost in clothing is thus fully as great, if not greater, than in the manufacture of cloth. This difference must be borne in mind in the formulation of a duty which will be competitive as between the American clothier and his European rival enjoying a far lower conversion cost.

With the difference in labor cost and general conversion expense established, the basis is laid for a determination of proper rates on clothing. We are not, however, in a position to suggest definite rates before the duty on cloth is fixed.

Consideration of the duty on cloth involves the rate on wool and its preliminary stages of manufacture. These have been studied in the light of the underlying principle that the tariff should be so framed as to bring the greatest possible reduction to consumers of wool and its products consistent with consideration of revenue and competition. As an expression of this policy, we heartily indorse the rate of 20 per cent named in the Underwood bill for raw wool.

Desirable as free wool is we believe the step to be too revolutionary. A change from the present rate of 11 cents per pound for wool in the grease, equivalent to 45 per cent ad valorem, to free wool would invite reaction to higher duties and defeat permanent tariff reform. We do not believe the American woolgrower could prosper without some degree of protection, until his flocks are more extensively made up of the mutton type of sheep, in connection with which wool costs nothing to produce. Furthermore, the fiscal needs of the country do not permit so large a source of revenue as raw wool now is to be abandoned.

While we favor a rate of 20 per cent, we are opposed to any higher duty. Wool, through its products, is a commodity of such wide and increasing use that the tax imposed through it on all classes should be made as light as possible. Moreover, a large part of our clip is made up of wools that do not enter into competition with foreign wools, and always sell below the price at which foreign wools could be imported to displace them. For this part of our clip the reduction of the duty will have no material effect on the price to the American producer. Our consideration for the woolgrower should therefore not permit us to lose our chief opportunity for real tariff reform, the

PARAGRAPH 382—WEARING APPAREL, ETC.

reduction of the cost of the vast quantity of wool now imported by about one-fifth of the present price.

Under the rate proposed the consumer will benefit not only through a lower cost for wools now imported but also because ad valorem rates will admit to our markets many varieties of heavy shrinking wools at present excluded by the operation of specific duties.

The duty on cloth is of more immediate concern to the clothier. We have, therefore, given close attention to the conditions of production here and abroad, the differences in conversion expense, and the effect of fluctuations in the price of raw wool on the relative cost of production in the United States and foreign countries. A fuller discussion is contained in the statement submitted herewith. Our conclusion is that with a rate of 20 per cent on raw wool a duty of 55 per cent is required to bring about competition on even terms between the American and foreign manufacturers of cloth.

Bearing in mind that it is possible to bring certain foreign cloths into competition with American fabrics now, in spite of present rates, and that, even at higher prices, there is a demand for imported goods on account of their distinctive styles, it is evident that the rate named will mean considerable increased importation.

The duty named for ready-made clothing in the Underwood bill is 45 per cent. Taken in conjunction with a rate of 40 per cent on cloth, it is utterly inadequate. It takes little account of the large difference in the conversion cost for clothing here and abroad. With the present development of the industry the conversion cost is as important to the clothier as his material cost. We have departed far from the conditions existing when the Wilson tariff was in effect. At that time the production of the industry was limited in amount, the clothing cheap in construction, requiring little skill in designing and little labor in making. There was then no inducement to foreign competition, for better grades of clothing were almost entirely left to the custom tailor.

To-day the industry has reached the highest development of tailoring. The production of ready-made clothing has been adapted to meet the needs of all classes. It has called into its service the best talent for designing and supervision. It has built up a modern factory system on a large scale. More labor and labor of a higher order than ever before is employed in the production of a garment. All this means a far higher conversion cost, and it is this higher cost of conversion involved which lays the industry open to competition of foreign clothing centers, where wages are lower and conversion expenses in general correspondingly less.

Moreover, other countries have developed their ready-made clothing so as to approach more nearly American standards. There has also been a tendency to meet our styles. There are, therefore, fewer obstacles to competition in our markets from foreign manufacturers than ever before. This is proved by the fact that in the last few years there has been considerable importation of English clothing, in spite of existing rates.

The duty of 45 per cent proposed for clothing does not take adequate account of these conditions in the present development of the industry. After the tax of 40 per cent on cloth is deducted, the duty remaining on clothing is less than one-half the difference in conversion

PARAGRAPH 382—WEARING APPAREL, ETC.

cost. Under a rate of 45 per cent on clothing, the clothier is given a far lower duty to offset the difference between the American and foreign expense of conversion than the manufacturer of cloth receives in a duty of 40 per cent. The relative expenditures for material and conversion are about the same in the two industries and the excess in the American conversion cost over that abroad is the same. The discrimination between the two industries arises from the fact that the duty on the raw wool used by the manufacturer of cloth is 20 per cent, whereas the rate on the cloth used by the clothier is double, or 40 per cent. With relative differences in foreign and domestic conversion costs the same for the two industries, it is not conceivable that it was the intention of the Ways and Means Committee to impose a duty to cover these differences which is lower for the industry engaged in turning wool into cloth.

In our statement submitted herewith we have analyzed the effect of various duties on clothing in conjunction with different rates on cloth. With a duty of 40 per cent on cloth and with a conversion cost in the United States more than twice as great as that for the least-favored European producer, the rate required for clothing is 65 per cent. If the duty on cloth is established at 50 per cent, the rate for clothing should be 70 per cent. A duty of 55 per cent on cloth requires that the rate on clothing be 75 per cent in order to make conditions fairly competitive as between American and foreign producers of clothing. These rates would still leave a margin in favor of the foreign clothier, more than sufficient to offset charges for freight and insurance and other costs incident to the importation of foreign goods. Even with these rates on clothing, it would not only be possible but profitable for American manufacturers to produce abroad clothing for American consumption.

While the extent of increase in imports under the rates here proposed can not be stated in advance, these are sure to be considerable. Under the present tariff clothing that could be sold at popular prices is practically excluded by the compensatory weight duty. A single ad valorem rate opens our market to such goods. Moreover, the reduction in the effective duty under the rates named is from one-quarter to one-third on the cheaper grades, making possible competition for all classes of clothing. We are convinced, therefore, that the estimated importations of \$5,000,000 anticipated by the Ways and Means Committee will be realized under the rates advocated and yield more than \$3,000,000 in revenue.

The CHAIRMAN. Your time has expired, Mr. Goldman. I see the National Association of Clothiers is represented here by Mr. Turnbull and Mr. Corwine. Do they expect to appear also?

Mr. GOLDMAN. I want to say this, that I am presenting the whole argument for our committee—the statement of our committee, and Mr. Corwine is not to appear at all. Mr. Turnbull is simply here to answer any questions that you might want to ask of him with reference to foreign cloths and fabrics, and with reference to the time when the tariff ought to go into effect. Any matter relating to the clothing business I expect to answer myself.

Mr. FORDNEY. Mr. Levy wants to take Mr. Corwine's place because he represents the same industry.

PARAGRAPH 382—WEARING APPAREL, ETC.

The CHAIRMAN. These three gentlemen appear for the same association.

Mr. GOLDMAN. Mr. Corwine does not intend to appear at all. I want to say that we shall not take up over 10 minutes more of your time, and it is an important industry.

The CHAIRMAN. Very well.

Mr. FORDNEY. Then I want to take up a little time with the witness after he gets through with his statement.

Mr. GOLDMAN. It is of the utmost importance to our industry that these considerations be kept in mind in framing the duty on clothing. A tariff that does not take adequate account of differences between the European and American conversion cost, will nullify any duty imposed for the benefit of the manufacturer of cloth, and of necessity oblige the American clothier to transfer to other countries the manufacture of a large part of the clothing intended for the American market.

We heartily indorse the principle of ad valorem duties as opposed to specific duties. Mindful of the possibilities of undervaluation, we are, nevertheless, convinced that inequalities, which can not be guarded against by the Government, will not be as great as under a system of specific duties, or a mixed system such as now prevails.

We strongly urge that all duties under Schedule K be made operative at one date. A change of duties in one branch of the industry has a sentimental effect on all, and is disturbing to business. This can be obviated only by making all duties effective on the same date.

We recommend that this date be made the 1st of December. The date here proposed meets best all interests concerned. It is particularly in keeping with the needs of the retailer, whose interest here is uppermost. The stock, as it reaches his hands, carries with it the highest value. The possibilities of injury to him are correspondingly large, if duties are reduced and the value of his stock depreciated through a reduction of tariff rates. Inasmuch as the retailer is obliged to order his clothing six months in advance of its sale, it is only just that he be given a fair opportunity to dispose of his stock before a change in duties goes into effect. December 1st gives him this opportunity to liquidate a large part of his stock, and importations of foreign clothing thereafter would not seriously affect his season's business. A change in rates, effective earlier, would involve great hardships to a large class of men carrying on business with limited capital and little able to bear the loss entailed.

The data here named is likewise in the interest of the manufacturer and the public. For the clothier the business of the fall season constitutes by far the largest part of his year's transactions. If duties become operative December 1st he is enabled to complete his fall season's business without disturbance. He can make his arrangements for the following spring season under the new conditions, and this means that the consumer will at once receive the benefit of reduced rates. If the change is made later, this can not take place. If earlier, it involves hardship to the manufacturers and more serious loss to the vast body of retailers.

The CHAIRMAN. You say you want to ask the witness some questions, Mr. Fordney?

PARAGRAPH 382—WEARING APPAREL, ETC.

Mr. FORDNEY. I do.

The CHAIRMAN. Proceed.

Mr. FORDNEY. Mr. Goldman, you are here representing manufacturers of ready-made clothing?

Mr. GOLDMAN. Yes, sir.

Mr. FORDNEY. You do not ask for a lower rate of duty on your own product, and let wool and woolen goods be explained by the men who produce those articles? You come in and ask for a lower rate of duty on your raw material, is not that so?

Mr. GOLDMAN. In considering the question of the duty on clothing, we must consider the question of the duties on the raw material.

Mr. FORDNEY. But, Mr. Goldman, you have not asked this committee to reduce the duty on your manufactured article, clothing, without taking with it the other man's industry.

Mr. GOLDMAN. Yes, sir; that is correct.

Mr. FORDNEY. Do you not believe it would be better if you had come here and told the committee only about your own industry, and let your raw material be represented by the man who produces that?

Mr. GOLDMAN. Well, with regard to that, we feel that in the question of wool, for example, that we have made a study of the question of raw-wool duties, and we feel that we have a right to express our opinion with regard to wool duties. We see no reason why we should not. We are a large part of the industry, and we are as competent to judge; we are detached from it; we are probably a little more competent to judge than somebody who is selfishly interested in it. I do not think we have looked at any branch of this inquiry from any other standpoint than that which is fair, having in mind the purpose of this revision; that is, to bring about a tariff that will enable the bringing in of some foreign competition. I think that is the purpose, to reduce the duties.

Mr. FORDNEY. Mr. Goldman, your association filed in 1909 your opinion of what should be done.

Mr. GOLDMAN. Yes, sir.

Mr. FORDNEY. And what the rates fixed in the Payne tariff law were going to do to the American consumer.

Mr. GOLDMAN. Yes, sir.

Mr. FORDNEY. I want to read you what you said about it then.

Mr. GOLDMAN. Yes.

Mr. FORDNEY. Just briefly, in the Congressional Record. It is on page 5258, under date of August 6, 1909, but the statement was made and filed July 8, 1909.

Mr. GOLDMAN. Yes.

Mr. FORDNEY. But not printed until August 6. [Reading:]

These advanced prices on worsteds which have been announced, following the steady deterioration of the fabrics in weight and quality, resulting from the operation of the Dingley bill, will add to the retail price approximately \$2.50 on a \$10 suit of clothes; \$3 on a \$15 suit, and \$5 on a \$20 suit, or from 20 per cent to 25 per cent of the cost of the clothing to the wearer thereof, and the aggregate burden of the increased cost of men's and boys' clothing to the American people, under the present advance alone, will be \$120,000,000 for the year 1910, which is twice the value of the annual domestic wool clip. Although the bill has not yet actually become a law, yet it is clearly seen how it will operate, and the foregoing demonstrates the result already apparent to the actual manufacturer of clothing.

PARAGRAPH 382—WEARING APPAREL, ETC.

Mr. Goldman, there was no—as the Payne tariff bill was presented to the House and passed the House and finally became a law—there were no increases at all. Did you know that?

Mr. GOLDMAN. I understand it fully, and we did not assert in there—we said this—

Mr. FORDNEY (interposing). You said just what I read.

Mr. GOLDMAN. We said that the increases in the price of the product—the advances in the price of the product, due to the fact that the Payne-Aldrich bill was to be reenacted, or practically the Dingley rates reenacted over again—would amount to an increased cost to the American consumers of clothing of about \$120,000,000, and we did not say it was due to the changes in the tariff, but we said as soon as it became known to the manufacturers of wool and the woolgrowers in this country that they were not to be disturbed in the existing tariff that everything went up, and we referred to the advances that took place at that time, as soon as it became sure that these rates were going to be continued, as causing an increase in the cost of the product to the American people of \$120,000,000.

Mr. FORDNEY. Now, Mr. Goldman, is it true that since the Payne tariff law was put into effect and became a law that prices went skyward, as you say?

Mr. GOLDMAN. Before it was put into effect. As soon as it became reasonably assured that the Dingley rates in Schedule K would be reenacted in the Payne-Aldrich bill, the prices advanced, to be accurate, from 25 to 35 per cent.

Mr. FORDNEY. What caused that increase, when the Dingley tariff law had been in effect 12 years?

Mr. GOLDMAN. Because prior to that, perhaps—some time prior to that—there had been the expectation that we would have a revision downward. It was generally thought—I do not think that there is any question about it—that after the election of Mr. Taft there was a very general expectation that when the tariff was revised that there would be some reduction in the rates, and it was because of this threatened reduction, perhaps, that prices had receded for our products.

Mr. FORDNEY. Did prices go down upon the expectation that if Mr. Taft was going to be elected there was going to be a revision downward—did prices go down just at that time?

Mr. GOLDMAN. Yes.

Mr. FORDNEY. They did?

Mr. GOLDMAN. Yes, sir.

Mr. FORDNEY. Can you tell me what that difference in the prices was before the election and after the election?

Mr. GOLDMAN. I can not say exactly. They did go down considerably. I should say, perhaps, from 10 to 15 per cent, and then when this—we go to excesses in these things frequently. We were simply announcing the fact that the effect of the reenactment of the Dingley rates in the Payne-Aldrich bill had brought about a great impetus to all branches of the industry at that time, and that goods advanced and went up to such a point—

Mr. FORDNEY (interposing). I notice, Mr. Goldman, that when the Payne tariff law put raw hides on the free list, up went the price.

PARAGRAPH 382—WEARING APPAREL, ETC.

Mr. GOLDMAN. I do not deny it.

Mr. FORDNEY. You do not deny that?

Mr. GOLDMAN. No; I am simply stating that this statement made at that time, in the month of July was a positive fact. Goods that were selling in March were selling in the month of July at from 25 to 35 per cent more.

Mr. FORDNEY. Mr. Goldman, what is the relative value or cost of the cloth in a \$10 suit of clothes?

Mr. GOLDMAN. When we get to that point I am going to ask that my chart be displayed. It is a very important exhibit.

Mr. FORDNEY. Yes.

Mr. GOLDMAN. And it is something that I feel everybody will be interested in, as it is very apparent that the Ways and Means Committee have not had information on the clothing industry—one of the greatest in this country.

Mr. FORDNEY. We have had a lot of information, but there is a lot yet to be obtained.

Mr. GOLDMAN. Now, I want to hold this up so that the committee can see it [exhibiting chart]. This reads, "Cost of making a popular-priced suit (or overcoat) in the United States and abroad." The American cost is \$10. Now, the first item in that is material, \$5. How do we get at that?

Mr. FORDNEY. Now, let us go along together. On a \$10 suit of clothes—that is a suit of clothes that sells at \$10?

Mr. GOLDMAN. No, sir; that is a suit of clothes that cost \$10 to make in the United States.

Mr. FORDNEY. What do you mean by that?

Mr. GOLDMAN. That is the actual cost of producing a suit of clothes in the United States.

Mr. FORDNEY. The actual cost of converting the cloth?

Mr. GOLDMAN. No; the whole cost of the suit of clothes—the cloth, conversion, and materials, and all.

Mr. FORDNEY. Then let us go back to my proposition of a \$10 suit of clothes.

Mr. GOLDMAN. The Tariff Board reports on page 858 that of \$63,000,000 of the clothing business they examined into, about one-eighth of the total product of this country, that the percentage of material in the whole cost of the clothing was a fraction over 57 per cent. Now, then, it is natural that the conversion cost rises slightly as the value of the goods goes up—that is, there is more labor expended in the better grades—so, therefore, the material cost in a little higher grade of goods, or a better grade of goods, that would enter more largely into foreign competition, would be something less than 57 per cent. We say 52 to 53 per cent. In addition to that, it is contemplated at this time that we reduce the tariff on the cloth, so we have assumed a 50 per cent material and a 50 per cent conversion cost as being conservative figures, and that would represent the ultimate proportion of the material and the conversion in the cost of clothing under the Underwood bill or under any legislation here enacted.

Having established 50 per cent as the material cost in a \$10 suit of clothes, the foreign cost of that material under a 40 per cent tariff is \$3.57.

PARAGRAPH 382—WEARING APPAREL, ETC.

That is clear, is it?

Mr. FORDNEY. Yes; I understand you.

Mr. GOLDMAN. We go now to the conversion. If the conversion is \$5, and the difference in conversion cost—in our brief we show difference in cost and show it to be a minimum of 125 per cent—if it is as we have indicated here, then the conversion cost on what costs \$5 in this country is \$2.22. We get the whole cost of that suit of clothes abroad \$5.79 as based upon this product. If we had a 45 per cent duty and add that to the foreign cost, which is the duty called for by the Underwood bill, we get a whole cost landed here for that suit of clothes of \$8.40 as opposed to \$10 of American cost. If we add 65 per cent to the rate that is necessary with a 40 per cent rate on the cloth, we get a further foreign cost with a 65 per cent tariff of \$9.58, and that we claim is the tariff required to bring about competition between the American and the foreign clothing.

The relative proportions of the cost are in these little scales shown below on this chart.

Mr. FORDNEY. That is where you come in as a manufacturer?

Mr. GOLDMAN. The cost of the foreign-made suit in the United States is \$8.40 with a 45 per cent duty. The cost of the foreign-made suit in the United States is \$9.55 with a 65 per cent duty. The cost of making the suit in the United States is \$10 with a 20 per cent tariff on wool and 40 per cent on cloth.

Mr. FORDNEY. What measure of protection do you believe 20 per cent on wool and 40 per cent on cloth and 60 per cent on the manufactured clothing would be? Do you believe that 20 per cent on wool would be as full a measure of protection to the man that grows the wool as 60 per cent would be to you in the manufactured clothing?

Mr. GOLDMAN. My answer to that is as I have already stated in our reasons for advocating the 20 per cent rate. First of all, it is desirable to have raw material on as low a basis as possible. Secondly, we are rapidly cultivating the mutton type of sheep in this country, and it will not be long before we will not need any duty on wool.

Mr. FORDNEY. You will not need any sheep in this country except for mutton?

Mr. GOLDMAN. There is a difference of opinion on that. I am advocating the rate of 20 per cent on wool as a fair rate, a proper rate, and the right thing to do at this time.

So far as cloth is concerned, I stated very positively and explicitly that a 40 per cent rate on cloth, with 20 per cent on wool, is absolutely inadequate.

Mr. FORDNEY. You are sufficiently well skilled in the growing of wool and the manufacture of clothing to know absolutely that 20 per cent on wool is adequate protection to the man who grows the wool, and 40 per cent is adequate protection—

Mr. GOLDMAN (interposing). No; I did not say either one of those things. I say 20 per cent rate on wool. I did not say it is adequate protection. I am not saying that at all. I consider, if there is any sacrifice to be made at any stage of this tariff, it should be the raw material.

Mr. FORDNEY. That is, 60 per cent is adequate protection to you on these rates?

PARAGRAPH 382—WEARING APPAREL, ETC.

Mr. GOLDMAN. Sixty-five per cent is what we require, with 20 per cent. I have shown this in our brief in the tables there. We worked them out on all rates of duty.

Mr. FORDNEY. I am asking whether or not 20 per cent on wool is as fair to the wool growers as 65 per cent on clothing is to you? You know all about making clothes, but you do not know all about wool?

Mr. GOLDMAN. I am trying to show that would depend on who the wool grower is, of course.

I want to call attention to one fact, that a very large percentage of our domestic clip sells here continually for a price less than wool could be imported for, and that—

Mr. FORDNEY. Do they not sell at all times at a higher price here than that same wool could be imported here for from abroad?

Mr. GOLDMAN. I think they would; yes. They need some protection, and I am advocating 20 per cent. I figure 20 per cent is a fair rate. We can not have a revision of the tariff that will give any reasonable reduction in the cost to the consumer without a considerable reduction in the tariff on wool, and we feel that it ought to go to 20 per cent.

Mr. FORDNEY. The tariff on wool to-day is something like 100 per cent.

Mr. GOLDMAN. It is 45 per cent, as far as those that come in are concerned.

Mr. FORDNEY. I differ with you. There is one rate of duty somewhere from 75 to 100 per cent.

Mr. GOLDMAN. You mean if we were to take into consideration the wools excluded?

Mr. FORDNEY. I am talking about import wool that comes into this country now. Two-fifths of all the wool consumed in this country is imported, and the tariff is from 75 to 100 per cent.

Mr. GOLDMAN. The tariff is 44 or 45 per cent.

Mr. FORDNEY. Eleven cents a pound on wool, on first-class wool, is how much based on the value of wool to-day that is imported of that class?

Mr. GOLDMAN. Forty-four to forty-five per cent.

Mr. FORDNEY. What does that wool bring in the market?

Mr. GOLDMAN. It brings all kinds of prices.

Mr. FORDNEY. Wool of the first class?

Mr. GOLDMAN. The range is tremendous even in first class.

Mr. FORDNEY. I know that 45 per cent is not the right duty, when the duty is 11 cents a pound.

Mr. GOLDMAN. That is a matter of record.

Mr. FORDNEY. That is what I am talking about.

Mr. GOLDMAN. Our importations of wool under the tariff run about 44 to 45 per cent.

Mr. FORDNEY. Do you import wool?

Mr. GOLDMAN. No, sir; but I have access to the Tariff Board report and the Ways and Means Committee report.

Mr. FORDNEY. I say when the duty on this class of wool is 11 cents a pound and that wool is selling at 23 or 24 cents a pound, duty paid in this country, the duty is mighty close to 100 per cent ad valorem and not 45 per cent.

PARAGRAPH 382—WEARING APPAREL, ETC.

Mr. GOLDMAN. The average rate on our importations is about 45 per cent. There are lots of wools excluded.

Mr. FORDNEY. There is no use arguing that question with you, but I want to ask you another question.

Do you not make clothing that you sell at a different price, made out of the same bolt of goods; that is to say, do you not make one suit which you sell at one price and another suit which you sell at another price, out of the same grade of cloth?

Mr. GOLDMAN. No. There might be two manufacturers who make different grades of goods who might do that.

Mr. FORDNEY. No; I mean the same grade of cloth.

Mr. GOLDMAN. No; and no clothier does that. He makes his clothing all alike and sells it all at one price.

Mr. FORDNEY. Is it not true that a suit of clothes made out of a certain bolt of cloth is sold at one price and another suit of clothes made out of that same bolt of cloth is sold at another price?

Mr. GOLDMAN. No, sir; it is not.

Mr. FORDNEY. My information is that they are, and that the price ranges from \$10 to \$20 difference.

Mr. GOLDMAN. You have been misinformed. I can set you right if you will let me do so.

Mr. FORDNEY. I want you to do so, because you have been talking a lot about clothing and a little about wool.

Mr. GOLDMAN. Cloth is the raw material of the clothing-manufacturing industry. One man might make up a suit very cheaply out of a piece of cloth costing \$1 a yard, and his suit might cost him five or six dollars, and another man would put in the best trimming and the best lining and the best work and have style, etc., and his suit of clothes would cost double. Those are commonplaces.

Mr. FORDNEY. You spoke about the great variety in the value of a suit of clothes because of the duties on cloth, etc.?

Mr. GOLDMAN. No; on account of the conversion cost.

Mr. FORDNEY. You say the value is \$2.50 difference on a \$10 suit of clothes?

Mr. GOLDMAN. I say that this advance that took place at that time, which was equivalent from 20 to 35 per cent of the cost of cloth, is equivalent to an increased cost of suits ranging from \$2.50 to \$3 a suit.

Mr. FORDNEY. At that very time I obtained a piece of cloth sufficient to make a suit of clothes for me from a manufacturer at Philadelphia to use in the House of Representatives when the Payne tariff bill was up. I had no occasion to use it. I took that piece of cloth home with me. The wholesale value of that cloth was \$4.48. It was not a high-grade and not a low-grade cloth. I took it to a merchant tailor and I asked him to make that into a suit of clothes and charge me just what he would charge if that cloth belonged to him less the value of the cloth. He charged me \$35 for making up \$4.48 worth of cloth.

Mr. GOLDMAN. It all depends on the class of the tailor.

Mr. FORDNEY. He made the suit of clothes for me that I have on now. He is not one of the fancy tailors, but makes good clothing and charges fair prices.

PARAGRAPH 382—WEARING APPAREL, ETC.

Mr. GOLDMAN. I could have taken you to a tailor that would have made that suit of clothes for you for \$3. I could have taken you to a cut-make-trim concern in the wholesale business who would have made it up for you for \$3.

Mr. FORDNEY. He would have made a straight jacket for me.

Mr. GOLDMAN. That is all a matter of grade and style and trim, and everything that goes into the manufacture of a suit of clothes.

Mr. FORDNEY. Are you a manufacturer of clothing?

Mr. GOLDMAN. Yes, sir.

Mr. FORDNEY. What is your concern?

Mr. GOLDMAN. Cohen, Goldman & Co.

Mr. FORDNEY. Is that a partnership or an incorporated company?

Mr. GOLDMAN. No, sir; it is a firm.

Mr. FORDNEY. Are the firms represented in your association incorporated?

Mr. GOLDMAN. Some of them are and some of them are not.

Mr. FORDNEY. What is the profit of your concern?

Mr. GOLDMAN. The Tariff Board report—

Mr. FORDNEY. No; I mean in your business.

Mr. GOLDMAN. I want to answer this way first. I will make this general statement. The Tariff Board report shows a profit of firms doing a volume of \$63,000,000 in the clothing business, or about one-eighth of the industry—and the firms selected were the cream of the industry, the most successful and the largest houses in the trade for their examination—made an average of 9.1 per cent, and nothing was allowed for interest, nor were there figured in any salaries for members of firms or for officers of corporations, in order to have it on an equal footing. The result was that 9.1 per cent as covering the net profit of the cream of the industry, including the interest on capital, salaries of officers, and items that showed that perhaps if those things were eliminated the net profit of the cream of the business was about 5½ or 6 per cent.

Mr. HILL. Do you accept those figures as correct?

Mr. GOLDMAN. Absolutely.

Mr. HILL. I have them before me now, and they report a disagreement of about 50 per cent with you in your conversion cost in making these figures.

Let me read to you what they say:

Analysis of the information obtained in this investigation reveals the fact that in all the houses studied the cost of materials entering into clothing is equal to 53 per cent of the selling price. The expense connected with converting the material into garments affords over one-fourth of the amount for which these are sold.

Are not your figures based on the fact that the conversion costs 50 per cent?

Mr. GOLDMAN. Yes; the conversion cost 50 per cent.

Mr. HILL. And they report 25 per cent.

Mr. GOLDMAN. Not conversion, but expense of making, is it not?

Mr. FORDNEY. Yes; and the profits to which you have referred are a part of the 50 per cent, so the profits are shown inside of the cost figures which they show.

Mr. GOLDMAN. There are \$26,419,000 worth of material used in the total product of \$50,155,000 net sales, which includes profits.

PARAGRAPH 382—WEARING APPAREL, ETC.

I deduct the 9.1 per cent profit, as shown, from that \$50,000,000, which brought it down to something over \$45,000,000, and that is 57 and a fraction per cent for materials and 42 something for conversion cost.

Mr. FORDNEY. You have stated what the Tariff Board reports, but let me tell you what they report.

Their report shows that the average value of a sheep is \$5.30 at the time they made their report, and that the average fleece is a fraction over 6 pounds to the fleece, and that it requires 9.7 pounds of wool in the grease to make a certain suit of clothes which they describe. They show that the profit to the farmer is 68 cents on that wool raised on a sheep and a half in which they have an investment of an average of \$5.30, or a total of about \$8. In that profit of 68 cents for that wool no interest was figured for the money invested in the sheep.

Mr. GOLDMAN. It is the same all the way through the industry.

Mr. FORDNEY. And if on that \$8 invested in the sheep they were to allow 6 per cent interest, then the profit to the farmer would be 20 cents for enough wool to make that suit of clothes.

They followed that suit of clothes along, and they found that the manufacturer paid 23 cents a pound for that wool. The farmer received 16 cents. Seven cents a pound was absorbed somewhere between the farmer and the manufacturer. The manufacturer, over and above cost—not allowing any interest upon his money invested—made a profit of 17 cents for that pattern that made that suit of clothes.

When it went to your association, the price at which you sold these goods gave you a profit of \$2.25 on that suit of clothes, which you sold at \$16.50. It then went to the retailer and was retailed for \$23, giving a profit to the retailer of \$6.50.

The farmer nets 68 cents, without interest, on his investment; the manufacturer of the cloth made 17 cents, without allowing interest on his money invested; the manufacturer of the clothing, you and your association, made \$2.25 off of that product; the retailer got \$6.50.

Do you think that is a square deal to the farmer and the manufacturer of cloth? That is the Tariff Board's report for that year.

Mr. GOLDMAN. I want to answer that, and to make a most emphatic answer, because there is an awful lot of buncombe about this very question.

I do not believe any one factor—the woolgrower, the spinner, the cloth manufacturer, the clothing manufacturer, or the retailer—nets a larger actual net profit than the other. The net profit return to each class in these industries is small all the way through. I can say that most emphatically with reference to the cloth manufacturer, and I want to say it here, because I am as familiar with the industry as any man in the industry, that they have a very small net profit. It is small in the clothing trade for the retailer and the wholesaler both.

I am convinced the woolgrower does not get rich. This is a competitive business all the way through. Competition is close, very close, in every branch of the industry, and there is no one man that is getting away with any big thing in clothing or wool or other branch of the industry.

PARAGRAPH 382—WEARING APPAREL, ETC.

Mr. FORDNEY. According to the Tariff Board's report, it is much closer to the producer of wool and woollen cloth than it is with your concern?

Mr. GOLDMAN. The Tariff Board's report shows it is 9.1 per cent, including interest on capital, including salaries of officers; and if you will analyze the figures you will see that it does not vary more than 1 per cent in any branch of the business. I want you to bear in mind that they picked out—and I happen to know a good deal about who the firms were that were examined by the Tariff Board—the cream of the industry in a very good year—and we have some off years.

Mr. FORDNEY. Was your firm one of the firms?

Mr. GOLDMAN. Yes, sir.

Mr. RAINEY. I want to call your attention to the fact that the figures you have given from the Tariff Board report do not include profit to the farmer on account of the mutton and lamb that he sells.

Mr. FORDNEY. Yes, sir; that is charged up to the wool. That report charges up to the wool all of the receipts from the flock.

Mr. RAINEY. Perhaps you are right about that.

Mr. FORDNEY. That is what it says, yes.

What profit does your firm make off of the \$10 suit of clothes?

Mr. GOLDMAN. The net profit on a \$10 suit of clothes is not to exceed—I am speaking in general terms—7 to 7½ per cent.

Mr. FORDNEY. How much?

Mr. GOLDMAN. Seven to seven and one-half per cent.

Mr. FORDNEY. Seventy to seventy-five cents on a \$10 suit of clothes?

Mr. GOLDMAN. Yes; you quoted a \$16.50 suit, and said that the clothier got \$2.25 profit on it.

Mr. FORDNEY. That is what the Tariff Board report says.

Mr. GOLDMAN. But that \$16.50 suit was subject to a discount for cash of 9 per cent, or of 7 per cent for four months' time, so it is well to bear that in mind.

Mr. FORDNEY. I do not know where the Tariff Board got their figures.

Mr. GOLDMAN. That is the trade custom.

Mr. FORDNEY. When they investigated you, did they get from you the fact that in selling that suit of clothes and in the profit which you got of \$2.25, they say, those deductions were not made?

Mr. GOLDMAN. They positively got the facts as to everything connected with our business; but I want to say this, that when the Tariff Board first sent to our place to investigate our business, their questions were so couched that they could not get intelligible information that would lead them to know what the cost was. They discovered this, and subsequently they sent other investigators to examine into the affairs and they got everything; they got the books, they got the profits, and they got everything in detail as to the manufacturing cost in the clothing business, and I can vouch for the clothing part of the Tariff Board's report so far as ascertainment are concerned, so far as figures are concerned, as being a true representation of the clothing business.

Mr. FORDNEY. After the second men came back, they got everything?

PARAGRAPH 382—WEARING APPAREL, ETC.

Mr. GOLDMAN. Yes, sir; because he put his questions in different ways and asked for things that they wanted to know.

Mr. FORDNEY. They asked for things that they wanted to know, that you could tell them, and that was true?

Mr. GOLDMAN. Yes, sir.

Mr. FORDNEY. They reported that your profit is \$2.25 on a suit of clothes. What do you say about that?

Mr. GOLDMAN. If you will read that through—

Mr. FORDNEY (interposing). I have read it through two or three times, and have been studying it in the last day or two, because I knew this was coming up.

Mr. GOLDMAN. It includes 9 per cent discount for cash for a suit of clothes—

Mr. RAINEY (interposing). If you will pardon me, I have it right here. Mr. Hill read until he got to the proper point, and then he quit, after having challenged your statement as to the profits of manufacturers.

Mr. HILL. He interrupted me and took the book to read himself.

Your claim was what? You claimed there should be how much percentage between the cloth and the manufactured article?

Mr. GOLDMAN. I claim that under the new tariff—and my claim is based on the tariff we are to have in effect, because we are going to have lower rates—

Mr. HILL (interposing). What is the difference you want between the cloth and—

Mr. GOLDMAN (interposing). I say that now it is 57 per cent material and 42 per cent conversion; but I claim that that is an average per cent of the entire industry, that it is necessary to lower the per cent for the material and to raise the per cent for the conversion, particularly as to the finer goods, and that they will still be lowered by the change in duties.

Mr. HILL. What should be the duty on the finished product?

Mr. GOLDMAN. 45 per cent is the Underwood rate.

Mr. HILL. I understand, but what is your idea?

Mr. GOLDMAN. 65 per cent.

Mr. HILL. You claim a margin of 25 per cent?

Mr. GOLDMAN. No; 20 per cent.

Mr. HILL. You claim a margin of 20 per cent?

Mr. GOLDMAN. Yes.

Mr. RAINEY. Your controversy a minute ago with Mr. Hill as to what the Tariff Board report shows as to the profit of manufacturers was not carried far enough.

Mr. GOLDMAN. No, sir.

Mr. RAINEY. Mr. Hill denied that you had correctly stated what the Tariff Board report showed, and then he started to read, and he read a part of the report here on page 859, and stopped. Just at this point I want to read the rest of it:

As the garment leaves the factory, they have cost the manufacturer 80 per cent of the price for which they are sold. Marketing the product absorbs 7 per cent in commission to salesmen, advertising, and incidental selling expenses. The general expenses of running the business absorbs 4 per cent more. The manufacturer has left about 9 per cent from which he may deduct losses through bad debts and reimburse himself for services of partners or officers and for the capital invested or borrowed for the business.

PARAGRAPH 382—WEARING APPAREL, ETC.

This figure for profit, it should be borne in mind, is not a percentage of either capital of investment, but of net receipts for the year—receipts with all discounts and allowances out.

Therefore you were exactly correct in what you said, and Mr. Hill was exactly wrong in what he said.

Mr. FORDNEY. What is your profit on a suit of clothes such as they report is sold for \$16.50?

Mr. GOLDMAN. I want to say that the average profit on a \$10 suit is a little less probably than on most other grades of suits. You asked me about a \$10 suit of clothes, and I said I thought it would average about 7 to 7½ per cent. It is a very competitive article and sold very close.

Mr. FORDNEY. How about the \$16.50 suit, on which the Tariff Board says your profit is \$2.25?

Mr. GOLDMAN. I say absolutely that that is \$16.50 less 9 per cent for cash or 7 per cent four months, and that the average profit on that suit of clothes does not exceed 9 per cent.

Mr. FORDNEY. So when the Tariff Board made up their report they knew nothing about the 9 per cent discount?

Mr. GOLDMAN. They did know about it and show it here.

Mr. FORDNEY. They do not in that case. On the suit of clothes which they traced from the woolgrower to the manufacturer of woolen goods and then to the manufacturer of clothing they say your profit is \$2.25.

Mr. GOLDMAN. Let me answer that. Your statement is taken from a statement made by the Tariff Board itself. The work of the Tariff Board, I want to say, was divided and done in sections. The expert who examined into the men's clothing business understood it, and they reported; but that report there was written by men that understand the wool business, and was in the front part of the report, and is not with the clothing section. If you will refer to the clothing section you will find that statement which you have just made is not a part of it. It is a part of the general conclusions of the Tariff Board, and is based on that mistake that they did not allow for the 9 per cent discount on the suit.

Mr. FORDNEY. I am going to put this one question, and then give it up:

The Tariff Board report says that they followed the wool from the sheep's back to the men's back. They show the conversion cost in great detail and show that your profit is \$2.25 on that suit of clothes, which you sell at \$16.50, and now you say they are wrong?

Mr. GOLDMAN. I say they made a mistake, that they positively did not allow the discount, and I am willing to have you introduce as many clothing men as you want to, and they will substantiate my statement.

Mr. DIXON. You testified here a few minutes ago relative to the cost of a \$10 suit of clothes at home and abroad?

Mr. GOLDMAN. Yes, sir.

Mr. DIXON. You figured out that by adding the 45 per cent, as allowed in the Underwood bill, the foreign cost plus the duty would be \$8.40. How much do you add to that \$8.40 for freight and insur-

PARAGRAPH 382—WEARING APPAREL, ETC.

ance and expense of handling after its arrival here before it goes into the hands of the wholesaler?

Mr. GOLDMAN. Our idea was to show from that statement that if you add 65 per cent it presented a foreign cost of \$9.55 as opposed to \$10 here, and that that duty is required to bring about satisfactory competition.

Mr. DIXON. You have at no place indicated what expense would be included to cover freight, insurance, and handling in New York before it gets into the hands of the wholesaler.

Mr. GOLDMAN. Somewhere between 2½ and 5 per cent.

Mr. FORDNEY. Mr. Goldman, I started to ask you a question, but we were both switched away from the subject. How long have you been in the business of manufacturing clothing?

Mr. GOLDMAN. On my own account since 1889. I have been in the business for 31 years.

Mr. FORDNEY. What are your investments in machinery and plants?

Mr. GOLDMAN. The investment in machinery and plants in all clothing business is small comparatively. The organizations of the clothing business are largely men and not machinery.

Mr. FORDNEY. Your investment in plant and machinery is very small?

Mr. GOLDMAN. Yes, sir.

Mr. FORDNEY. About how much have you invested in your plant?

Mr. GOLDMAN. Offhand, I should say \$50,000.

Mr. FORDNEY. Has the business been fairly profitable since you have been in it?

Mr. GOLDMAN. Yes, sir.

Mr. FORDNEY. You have no complaint about the reduced duty on the articles which you produce so far as your profits are concerned?

Mr. GOLDMAN. The rates of duty have not affected our business, largely because we have had exaggerated compensatory duties, which have excluded importations to a very large extent, until recently.

Mr. FORDNEY. If this is not a fair question do not answer it. I do not wish to be unfair. What has your profit been in the business?

Mr. GOLDMAN. I will answer that only in this way, that our profits, covering a period of years—I will say for the last 10 years, have averaged under those stated as the average profits of the industry, nine and one-tenth per cent. I will say that ours have averaged under that for the past 10 years.

Mr. FORDNEY. On the volume of business that you have done?

Mr. GOLDMAN. Yes, sir.

Mr. FORDNEY. How much business do you do a year?

Mr. GOLDMAN. Upward of \$3,000,000.

Mr. FORDNEY. Nine and a half per cent on \$3,000,000, with \$50,000 invested in the plant.

Mr. GOLDMAN. \$50,000 in the plant, but not the capital employed in our business.

Mr. FORDNEY. About how much capital have you invested in stock and goods?

Mr. GOLDMAN. Approximately a million and a half.

PARAGRAPH 382—WEARING APPAREL, ETC.

Mr. FORDNEY. And on \$3,000,000 worth of business you have made 9.1 per cent—

Mr. GOLDMAN (interrupting). We have made considerably under the average rate. I will not state the amount, but I will say this: That it is very materially less than the average profits stated for the \$63,000,000 reported by the Tariff Board.

Mr. FORDNEY. It is somewhere under 9 per cent on \$3,000,000 dollars worth of business?

Mr. GOLDMAN. Very materially less; yes, sir.

Mr. HULL. What is your opinion about the method of levying the tariff rate on woolen products according to the wool contents?

Mr. GOLDMAN. We consider that entirely impracticable, from our examination of the subject.

Mr. HULL. That is the general opinion of the trade, is it not?

Mr. GOLDMAN. Of those that have studied the question. There have been a good many analyses of that form of duty submitted by men who have looked into it, and they consider this impracticable. Some also have reached the conclusion that it would not end the discriminations existing under the present specific form of duty.

Mr. HILL. You would change your opinion if the Treasury Department and the Board of Appraisers in New York said that it was entirely practicable and feasible.

Mr. GOLDMAN. I am only expressing the opinion of those who do not agree with that. It is a novel thing and it may be possible.

Mr. HILL. If it were possible it would be a great deal more fair than it would be to put a wool duty on cotton which was imported as a part of the product.

Mr. GOLDMAN. It would in that sense, but it does not take account of the grades of wool. Unless you had varying rates on the specific contents it would not take account of the grades of wool.

Mr. HILL. I fully agree with you in regard to having a graded ad valorem duty. Have you stopped to think that in making your 25 or 20 per cent margin—

Mr. GOLDMAN (interrupting). Twenty per cent margin?

Mr. HILL. Yes. Have you stopped to think that in applying that 20 per cent duty you are applying a cloth duty to the value of the clothing according to your own showing? According to the Tariff Board cloth was only 50 per cent of the value of the finished product.

Mr. GOLDMAN. Yes, sir.

Mr. HILL. If the duty is 20 per cent more you will be applying 60 per cent on double the value of what the 40 per cent was applied on in the shape of cloth.

Mr. GOLDMAN. Exactly.

Mr. HILL. Do you not think that would be a very wide margin?

Mr. GOLDMAN. I have illustrated that. If I may use that chart again—

Mr. HILL. I will not bother you to do that now.

Mr. GOLDMAN. But will you let me answer your question? I do not want to leave the committee in doubt as to that point. Let us assume that the same comparative difference exists in the percentage of material and the conversion cost in cloth and clothing.

Mr. HILL. It is double.

PARAGRAPH 382—WEARING APPAREL, ETC.

Mr. GOLDMAN. It is double on cloth, is it not?

Mr. HILL. Yes.

Mr. GOLDMAN. We have 20 per cent on wool and 40 per cent on cloth. That is double.

Hr. HILL. Yes.

Mr. GOLDMAN. If you have the same relative figures of conversion cost and material it has got to be double on clothing.

Mr. HILL. The duty does not particularly affect you in making the conversion from cloth to clothing, does it?

Mr. GOLDMAN. Only in so far as it relates to the cloth duty.

Mr. HILL. You recognize the fact that when your duty is 40 per cent on the cloth out of which you are going to make the clothing, when you apply your cloth duty to the importation which is your direct competitor, that the duty of 60 per cent—

Mr. GOLDMAN. Sixty-five per cent.

Mr. HILL. Sixty-five per cent. But that would be on double the value on which the 40 per cent is laid?

Mr. GOLDMAN. Yes; 65 per cent is double what the 40 per cent is, just the same as 40 per cent is double duty on what 20 per cent is.

Mr. HILL. If there was the same ad valorem, 40 per cent on cloth and 40 per cent on clothing, still you would have a wide differential to cover the difference in the cost between making the cloth into clothing.

Mr. GOLDMAN. No; I would not. I beg your pardon, but we would not. You have got to work on this fundamental fact, that our raw material is cloth, linings, and trimmings, and we must have a compensatory duty equal to our raw material. Let us find out what that compensatory is. I would like to illustrate that on the chart. I have taken the Underwood rate of 40 per cent on cloth—not because we commend that rate, because we think it is wholly inequitable, and we advocate a duty of 55 per cent as a minimum, and I only point it out by way of illustration. If we have a rate of 40 per cent on our raw material, the first thing you have got to do is to compensate us for that rate that we are compelled to pay on our raw material, and then all that we want is to give us duty enough to bring about an equalization of the conversion cost, to bring it up to a point where, with the freight, shipping, and insurance charges, it will put the foreign manufacturer and the American manufacturer on a parity.

Mr. HILL. That is exactly what I tried to do. After studying the question for 10 weeks with members of the Tariff Board, to my great surprise I found when the Underwood bill was introduced that we had both allowed a margin of 5 per cent between the cloth and clothing, without any compensation whatever. We agreed on that particular rate.

Mr. GOLDMAN. Mr. Hill, I would like to use that chart again, and I would like you to point out to me—I would like you to prove to me that you are right; but I am convinced that you will come to the conclusion that I am right.

Mr. HILL. It would be far better to prove that to Mr. Underwood.

Mr. GOLDMAN. I would be very glad to prove it to the committee. I brought that chart here for the purpose of showing—

The CHAIRMAN. We understand your purpose.

PARAGRAPH 382—WEARING APPAREL, ETC.

Mr. FORDNEY. I asked the gentleman before as to what is the cost of the cloth, or what is the price that you pay for the grades of cloth that you put into a \$10 suit of clothes?

Mr. GOLDMAN. That varies tremendously. One man will make a \$10 suit of clothes on which he spends \$4 or \$5 for labor, and another man makes a suit of clothes on which he will spend \$3 for labor, and which will contain a very much higher-priced piece of cloth.

Mr. FORDNEY. I am asking you about your \$10 suits. Do you make various kinds of \$10 suits of clothes out of the same cloth?

Mr. GOLDMAN. No.

Mr. FORDNEY. What do you pay for the cloth that you put into a suit of clothes that you sell for \$10?

Mr. GOLDMAN. \$1.15 net.

Mr. FORDNEY. About \$1.15?

Mr. GOLDMAN. Net.

Mr. FORDNEY. So that when you made that statement there that the cost to the consumer would be from \$2.50 to \$5, you rather missed the bull's-eye, did you not?

Mr. GOLDMAN. How is that?

Mr. FORDNEY. You stated in that statement four years ago that the change in the tariff rates to be put in the Payne tariff law would increase the cost of the suit of clothes to the consumer from \$2.50 to \$5.

Mr. GOLDMAN. I did not miss the bull's-eye. Let me explain that to you. You asked me what the price of the cloth was in a \$10 suit of clothes. The method under which clothing is manufactured in this country is this: As clothing rises in price, the clothing manufacturer makes a range of goods. For example, many houses will start their line at \$13.50 wholesale and run up to \$25 wholesale. Others will start at \$7 wholesale and run up to \$15 wholesale. The method pursued by all clothing manufacturers alike is this, that as their goods rise in grade they improve not only the cloth but the trimmings and the linings that go into them, but they spend more money to manufacture as they advance in grade. Therefore what we wanted to convey is this, that the cloth, as it progresses geometrically, grows that much poorer, that the man would get the same kind of cloth in a suit of clothes that retailed at \$15 before that advance took place as he would get in an \$18 suit.

Mr. FORDNEY. But your former president said that in the cost of cloth it would change the price of that suit of clothes to the consumer from \$2.50 to \$5.

Mr. GOLDMAN. I think you are mistaken in the quotation. After all, the main consideration, when you get into clothing up to a fair grade, is the quality of the cloth. What he meant to say was that the same quality of cloth that formerly cost \$15 would cost \$18 under those increased prices.

Mr. FORDNEY. What he meant to say and what he said, then, are two different things.

Mr. GOLDMAN. What is it he said?

Mr. FORDNEY (reading):

Resulting from the operation of the Dingley bill, as it will add to the retail price approximately \$2.50 on a \$10 suit of clothes, \$3 on a \$15 dollar suit of clothes, \$5 on a \$20 suit of clothes.

PARAGRAPH 382—WEARING APPAREL, ETC.

From 20 to 25 per cent of the cost of the clothing to the wearer thereof.

Mr. GOLDMAN. That statement is practically correct, with an advance that ranged up to 30 per cent in the cost of cloth, and a corresponding advance in some of the materials that are used, linings—

Mr. FORDNEY. What is the labor cost to you in a \$10 suit of clothes?

Mr. GOLDMAN. It is about \$4, something like that.

Mr. FORDNEY. Then your \$6 for the cloth—

Mr. GOLDMAN. No; you are talking about a suit of clothes that sells at \$10, and it is \$10 subject to a discount of 9 per cent.

Mr. FORDNEY. There is \$6 to be used in the payment for cloth and trimmings.

Mr. GOLDMAN. No; that is for trimmings and cloth, and that is for labor. The balance is other expenses, of conversion, and the profit.

Mr. FORDNEY. What are the expenses of conversion?

Mr. GOLDMAN. All of the expenses. You are asking me about the actual labor of making the goods. There are other expenses in running every business that go in under the conversion rate.

Mr. FORDNEY. I asked you what the labor cost in a suit of clothes is that you turn out for \$10.

Mr. GOLDMAN. The whole tailoring cost, as I understand it?

Mr. FORDNEY. All your cost.

Mr. GOLDMAN. If the suit of clothes costs \$10, the labor cost is \$5. I am talking about conversion cost.

Mr. FORDNEY. Mr. Chairman, I am done; but the additional cost of \$2.50 because of the duty on the cloth is somewhat of an important statement.

Mr. GOLDMAN. I do not understand the additional cost of \$2.50. There is not any question about it that a suit of clothes would retail for \$2.50 more. But you want to bear in mind that not only is there that additional cost of the cloth, but the wholesaler gets his profit on a percentage basis on what he sells, and he then sells it to a retailer who adds his profit on a percentage basis to what he has paid for it, and all of those things together result in a \$2.50 additional price to the consumer.

Mr. FORDNEY. The Tariff Board says that the retailer's profit was \$6.50 on that suit of clothes that they followed from the sheep's back to a man, on a suit of clothes that you, the manufacturer of clothing, get your \$6.50 for.

Mr. GOLDMAN. At wholesale.

The CHAIRMAN. I consented that Mr. Fordney should ask the gentleman one question. I hope my friend will stop at this time.

Mr. GOLDMAN. I am very glad for him to go on asking these questions, for you all know how each man through whose hands merchandise passes must have his percentage. The statement we made there is absolutely capable of verification in every detail. There was not any question about that advance having accrued as the result of the increased cost, not due to the tariff itself, but due to the fact that it was reenacted.

PARAGRAPH 382—WEARING APPAREL, ETC.

Mr. FORDNEY. As a parting shot, you get your profit no matter whether the wool grower or anybody else gets any?

Mr. GOLDMAN. Absolutely. That is what we are in business for.

The witness submitted the following brief on behalf of the National Association of Clothiers:

Industry and tariff revision.—The clothing industry is vitally affected by the duties to be imposed under Schedule K both as consumer of cloth and producer of clothing. The industry engaged in the production of men's and boys' ready-made clothing is by far the largest purchaser of the output of the woolen and worsted mills. The cost at which clothing can be produced and the price at which it can be sold is in a very great measure determined by the cost of cloth, and that is in turn affected by the duty on wool and its products.

Development of industry.—Equally as important to the clothier and to the consumer as the cost of the material entering into ready-made garments is the expense of converting cloth into wearing apparel. Moreover, the development in the industry has been in the direction of a higher proportion of expense for labor and conversion in the total cost of production. This tendency is the result of a complete revolution which took place largely in the past 15 years. About 1898 the industry entered upon a policy of producing not only cheaply constructed garments for the poorer classes, but clothing for all, until to-day ready-made garments have taken the place of custom work, except of the most expensive sort.

Material and conversion costs.—The production of clothing, according to present standards, involves the use of the highest talent in designing and tailoring, it necessitates the upbuilding of a modern factory system on a large scale, it requires in the production of a garment more labor, and labor of more skill than ever before. The conversion cost has become as important to the clothier as his material cost, and the extent to which the American manufacturer can compete for the American market is most largely determined by the difference in the cost of converting cloth into clothing under foreign and under American conditions.

Necessary data for tariff revision.—Data on the material cost in the industry have been available. Information on the relative conversion cost in the United States and abroad has not been easily accessible. The committee therefore presents herewith the data on American and foreign labor costs as obtained from official sources. It asks that the Way and Means Committee give full scrutiny to the information submitted on the cost of producing clothing, not only the cost of material, but the cost of conversion, in order that a rate of duty may be arrived at that will be just to the enormous industry here concerned.

The committee of the National Association of Clothiers can not suggest definite rates for the duty on clothing before the rate on cloth is fixed. In the brief here submitted, illustrations are given of how the tariff on clothing would operate assuming various rates of duty on cloth. It is our understanding that the tariff to be enacted is to be a competitive tariff. Due allowance is accordingly made for those forces working in favor of the American manufacturer to secure for him the domestic market, such as freight, insurance, and shipping charges, and the fact that he is at home in his own market.

Consideration of duties on clothing must necessarily base themselves on rates for cloth, the clothier's raw material. The formulation of cloth duties in turn involves attention to the rate on wool. A brief discussion of these rates is therefore given here as preliminary to the main purpose of this brief—the presentation of the facts for a determination of duties on clothing.

WOOL.

Rate proposed.—We favor a duty of 20 per cent on raw wool, as proposed in the Underwood bill. It would be desirable, indeed, that wool should be free, in order that wool products, which enter so largely into general consumption, should be produced as cheaply as possible. Against free wool there are, however, many arguments. In the first place, change from a duty of 11 cents per pound on wool in the grease, equivalent to 45 per cent ad valorem, would be so revolutionary as to invite inevitably reaction and return to higher rates. It would, therefore, be opposed to real tariff reform. In the second place, we do not believe that the woolgrowing industry can at this time prosper without moderate protection. As ranchmen introduce more widely the mutton type of sheep, in connection with which wool costs nothing to

PARAGRAPH 382—WEARING APPAREL, ETC.

produce, even a moderate duty will cease to be needed, and in the next 10 or 15 years it can doubtless be abolished.

Advantages.—Another reason for retaining a moderate duty is found in considerations of revenue. With imports of between 200,000,000 and 250,000,000 pounds a year, wool is one of the greatest revenue-producing factors in Schedule K. Revenue consideration alone would, therefore, demand the retention of some duty on raw wool.

While specifically indorsing a rate of 20 per cent on raw wool, we protest against any higher duty than 20 per cent. The world-wide tendency is for wool to increase in price. At the same time our consumption is steadily increasing, requiring that we import more and more to meet our needs. Concern for the woolgrower should not permit us to forego our chief opportunity for real tariff reform—to benefit the consumer by reducing the price on the vast quantity of wool now imported by about 20 per cent.

A further advantage to the consumer will come from the adoption of ad valorem duties. These will permit to be brought into our market a variety of heavy-shrinking wools which are excluded through the operation of specific duties.

In considering the effect of a reduced duty on the American woolgrower, it should be borne in mind that a considerable percentage of the domestic clip consists of wools that do not now enter into competition with foreign wools, selling continually at lower prices than the wools which could be imported to displace them. For that part of the domestic clip it is not expected that a reduction of duties will materially affect the price to the American woolgrower.

CLOTH.

Factors in tariff revision.—Determination of the tariff on cloth involves two important considerations—the difference in conversion cost here and abroad, and the varying ratio of conversion expense and stock cost in the total cost of the cloth. In the stock cost there is necessarily involved the problem of a compensatory duty for the tax levied on raw material. The relative proportions of stock and conversion expense are affected, in the first place, by fluctuations in the cost of the raw material, and, in the second place, by the amount of stock required for a given yard of cloth.

Material and conversion costs.—In fixing rates account can not be taken of extreme cases that are only occasionally met with. The aim is, therefore, to present here what is a conservative figure for the relative proportions of material and conversion costs—one applicable to the great bulk of American cloths manufactured. The variation in the ratio of material cost to the total cost of cloth is from 33 per cent to 66 per cent. It is believed that 50 per cent for material and 50 per cent for conversion represent the fairest appraisal of the relative proportions of these factors in the total cost of production.

In United States and abroad.—The difference between American and foreign labor costs has been fairly well determined. On tops it is estimated at 80 per cent and on yarns at 100 per cent. On cloths varying percentages are given, ranging from 100 per cent to 160 per cent, or 170 per cent in extreme cases. Taking into consideration the increased cost of labor which resulted from the reduction of hours in various States last year, and which is estimated as equal to about 12½ per cent of the labor cost that prevailed in the country, a fair measure of the difference in conversion cost here and abroad is about 125 per cent. In other words, the American cost is one and one-quarter times greater than the foreign cost of conversion.

The efficiency of the operatives engaged in the industry must be kept in mind in comparing American with foreign labor costs. Contrary to the usual contention for American industry, that our workmen are more efficient than the foreign operatives, it is a well-established fact that in this industry the reverse is true.

Conversion expense and total cost.—At present prices for wool, 50 per cent for material and 50 per cent for conversion would seem to be fair ratios for these factors in the cost of production. Taking into account the reduction in the cost of the raw material consequent upon lowered rates for raw wool, the increase in the cost of labor, and also the effect of downward fluctuations in the price of wool to increase the relative importance of the expense of conversion, a fair ratio of material to conversion costs may be found by taking 45 per cent for stock and 55 per cent for conversion.

Below are given two calculations for comparative costs, one on the basis of 50 per cent for material, and the other on 45 per cent.

PARAGRAPH 382—WEARING APPAREL, ETC.

Comparative cost of producing cloth in the United States and abroad.

[Duty on wool 20 per cent, American conversion cost 125 per cent in excess of foreign cost.]

MATERIAL COST 50 PER CENT, CONVERSION COST 50 PER CENT.

Items.	United States.	Foreign.
Material.....	\$0.50	\$0.417
Conversion.....	.50	.222
Total.....	1.00	.639
Duty 50 per cent.....		.319
Total (duty paid).....		.958

MATERIAL COST 45 PER CENT, CONVERSION COST 55 PER CENT.

Items.	United States.	Foreign.
Material.....	\$0.45	\$0.375
Conversion.....	.55	.244
Total.....	1.00	.619
Duty 55 per cent.....		.340
Total (duty paid).....		.959

Cloth duty suggested.—Consideration of all the facts involved indicate that with a duty of 20 per cent on wool, the rate on cloth necessary to bring about fair competitive conditions is 55 per cent.

Under existing rates on cloth several members of the committee are able to bring in certain classes of fabrics in competition with American goods. Moreover, aside from price, style in the fabric is an important element in creating a demand for imported cloth. Even when foreign goods are within 5 or 10 cents of the price per yard for the domestic product, the American clothier will buy a considerable percentage of imported goods, for the reason that he is always eager to diversify his product. Foreign cloths enable him to do so, not only because they are different in style, but also because they possess an individuality quite distinct from that of our own fabrics. These facts indicate that even though the duty on wool is lowered for the benefit of the American manufacturer, under a rate of 55 per cent on cloth, importations will materially increase.

Effect on importation.—The existing duty on cloth in 1910 was equivalent to 97.27 per cent ad valorem. A reduction to 55 per cent means substantially 50 cents per yard on cloths now imported. Furthermore, the elimination of the weight duty under the ad valorem system will make it possible for cheaper grades of cloth now entirely shut out to enter and compete. This, of itself, opens a wide avenue for foreign goods. Materially increased importations will necessarily follow, and at the rate named bring in a large revenue.

READY-MADE CLOTHING.

Rate proposed—Its basis.—In the Underwood bill now before the House the rate proposed for clothing is 45 per cent. An examination of the report of the Ways and Means Committee (H. R., 62d Cong., 1st sess., Report No. 45) shows no discussion of the costs of producing clothing here or abroad. A later report (H. R., 62d Cong., 2d sess., Report No. 455) of this committee analyzing the report of the Tariff Board on ready-made clothing, says "There is no definite information in the board's data regarding the cost of manufacturing clothing, inasmuch as costs do not appear to have been ascertained abroad upon the same basis." It is thus evident that the committee had not adequate data for a determination of just rates on clothing.

Method of determining rates in Schedule K—Not followed in clothing industry.—In fixing rates on wool and its products in the Underwood bill the committee followed the principle of compensating the manufacturer for the duty on his raw materials, and then adding a rate of duty to cover the difference in conversion cost here and abroad. This method was adhered to step by step in building up the rates on tops, yarns, and cloth. In the proposed clothing duty the committee abandons this principle, evidently for no other reason than that the information was not at its disposal.

PARAGRAPH 382—WEARING APPAREL, ETC.

As a result the duty of 45 per cent set for clothing, under a 40 per cent rate on cloth, allows far less to cover the difference of conversion cost in making garments than 40 per cent on cloth with a duty of 20 per cent on raw wool. In the latter instance 20 per cent is allowed to cover the difference in foreign and domestic conversion cost, in the case of clothing only 5 per cent, or one-fourth.

Discrimination in duty as between cloth and clothing.—This discrimination on the part of the Ways and Means Committee, we are convinced, was not intentional. We are of the belief that the committee has never had the facts presented to it in regard to the clothing industry, its present development, and the relative conversion costs here and abroad. It is not conceivable that it is the purpose of the Committee on Ways and Means to name a lower rate of duty to cover differences in conversion costs on the output of an industry the volume of which is to-day upward of \$500,000,000 than on the product of the cloth industry, if it can be demonstrated that the same relative differences exist in the conversion cost of cloth and of clothing here and abroad.

Factors in duty on clothing.—The elements to be kept in mind in establishing the rate of tariff on clothing are exactly the same as those involved in the duty on cloth. We must consider, first, the duty on raw material, and, second, the relative importance of the expense for material and for conversion in the cost of the finished product. For the conversion expense it is necessary to compare the relative costs of the American manufacturer and the European clothier.

Material and conversion costs—Relative importance.—Facts on the importance of the raw material and conversion cost are readily at hand. An investigation was made by the Tariff Board covering one-eighth of the entire output of clothing in the United States. Establishments were studied having a production of \$63,000,000. Deducting the amount shown for profit, it will be found that material entering into the production of clothing constituted 57.8 per cent; other expenses amounted to 42 per cent. In the conversion cost, as the report expressly points out, nothing is included for "salaries of officers, compensation for the services of members of firms, interest on capital invested or borrowed, and bad debts." As the clothing industry is in the main conducted by men actively engaged in manufacturing and selling, the omission of any compensation for their services alone serves materially to understate conversion costs. Moreover, the figures are based on a cloth cost protected by an average duty of over 90 per cent and produced under existing high rates on raw wool. A reduction of the tariff on wool will of itself bring about a proportional decrease in the material cost of clothing. For these reasons a fairer statement of the relative costs for material and conversion, particularly for the bulk of higher-grade clothing characteristic of the trade to-day, is 50 per cent for material and 50 per cent for conversion. This is an extremely conservative estimate in view of the probable reduction in the cost of cloth that will follow upon a decrease of present rates.

Conversion cost and wages.—The principle followed in fixing rates has been to compensate the manufacturer for the duty on his raw material (in the case of the clothier, cloth, lining, and trimming). It is the obvious intention of the Ways and Means Committee to do so in this instance, too. We may, therefore, pass at once to a consideration of the relative conversion cost here and abroad.

In the conversion cost the chief item is, of course, labor. A study has accordingly been made of wages in the clothing trade here and abroad, and the details are presented in an appendix to this brief.

Wages—American and foreign.—Inasmuch as Great Britain is our chief competitor special attention is here given to English wages as contrasted with those paid in the American industry. For American wages the figures are available in the Report of the Immigration Commission; English wages are taken from the Special Report of the British Board of Trade.

PARAGRAPH 382—WEARING APPAREL, ETC.

Wages in the clothing industry in the United States and Great Britain.

¹ British figures are for males 20 years and over.

² British figures are for males 14 to 20 years of age.

³ Not comparable, owing to difference in age and sex distribution.

⁴ As it is not clearly shown whether American figures are on basis of general earnings or full-time earnings, comparison is here made in both ways.

An examination of the figures summarized in the table here given shows that for male adult labor American average earnings are over 70 per cent greater than in England, and this regardless of the fact that English figures are for men 20 years and over, while the American figures include also younger workers, those between 18 and 20. For female labor, which is numerically far more important than male labor, the wages earned in the United States are over 155 per cent greater. For younger workers in the trade, those under 18, who are relatively more important in England than in the United States, the differences in earnings are still greater.

According to the latest United States census (1909), the proportion of male workers, 16 and over is 42.5 per cent, of female workers in the same group 55.5 per cent, of children 2 per cent. On comparing the earnings of the labor force as here constituted, with the wages they would receive at English rates, even after allowances are made for differences in hours and in the method of gathering the data, it is evident that American wages in the trade are about 125 per cent in excess of English wages, or two and one-quarter times as great.

These observations on relative American and English earnings are confirmed by other wage data. The United States Bureau of Labor published for 1909 data on wages in the clothing trade for the largest occupations. These have been compared in the following table with the information in the British Board of Trade Report:

PARAGRAPH 382—WEARING APPAREL, ETC.

² Weekly wages computed according to hours and wages per hour given in Bureau of Labor Bulletin. See also Appendix, Table II.

³ For full week.

It will be observed that for cutting American rates are from 130 per cent to 170 per cent higher, and for pressing 74 per cent. For operating men receive 69 per cent more, and women 140 per cent. Women at finishing get 160 per cent more.

American wages over twice English wages.—In view of the data here presented, and shown in further detail appended, it is clear that even after allowances are made for differences in hours and conditions and imperfections of statistical data, there is for the manufacturer a difference of about 125 per cent between American and English wages. This difference exists between the United States and its nearest competitor, England.

German wages.—For Germany and Austria available data can not be compared so closely. They are, however, sufficient to show that differences in wages are even greater between the United States and those countries. The minimum rates named in German and Austrian collective bargaining agreements are indicative of normal wage rates prevailing there. In establishments employing the greatest number these rates are between \$5 and \$6.50 for men. The same is true in Austria. These figures may be contrasted with average weekly earnings of \$13.30 reported for the United States, \$7.75 average earnings in England for those working full time, and \$7.47 for all. It is thus probable that American wages are twice as great as German wages for men.

For women in Germany the rate named for skilled workers is between \$3.50 and \$4, but for the great mass of unskilled women in the trade it is between \$1.50 and \$2. These rates are to be compared with an average of \$8.02 in the United States.

American conversion cost over twice foreign cost.—To sum up, the conversion cost for clothing in the United States is in all probability between two and three times the European conversion cost. It will, therefore, be conservative to assume in the following calculation a conversion cost for the American clothier 125 per cent in excess of the conversion cost abroad.

With these data on conversion cost, a basis is laid for calculating the duties on clothing. The committee, representing the National Association of Clothiers, is not in a position to propose definite rates until the duty on cloth has been fixed. Examples, however, are here given of the duty needed, with various rates on cloth.

For convenience there is taken as illustration a garment costing the manufacturer \$10, and typical for a large class of clothing. Taking account of probable reductions in cloth, lining, and trimming, in consequence of lowered tariff rates, the material will cost \$5 and the conversion expense will be \$5.

PARAGRAPH 382—WEARING APPAREL, ETC.

Relative cost of manufacturing clothing in the United States and abroad under a tariff of 40 per cent on cloth.

Items.	United States.	Foreign.	Excess cost in United States.	
			Amount.	Per cent.
Material.....	\$5.00	\$3.57	\$1.43	40
Conversion.....	5.00	2.22	2.78	125
Total.....	10.00	5.79	4.21	72.7
Duty at 45 per cent.....		2.61		
Total (duty added).....		8.40	1.60	19

The foreign clothier under proposed rates.—Under the rates proposed in the Underwood bill, imposing 40 per cent on cloth, the material cost may be figured at \$3.57 in England, the conversion cost would be \$2.22. In other words, with the differences in the price of cloth and expense of conversion, the suit in England would cost \$5.79, or less than three-fifths of the cost in the United States. After paying a duty of 45 per cent, the expense undergone by the English manufacturer would still be \$1.60 less than the cost of making that suit in the United States. With freight insurance and other expenses paid, the foreign clothier could market his product below the cost to the American manufacturer, and still earn a profit much larger than is customary in the American trade.

Analysis of duty on clothing.—Analysis of the duty paid on the suit here taken for illustration shows that 55 per cent of the amount levied is compensation for the tariff imposed on the cloth, 45 per cent, or 10 per cent less, is duty on conversion. The duty applicable to the conversion cost is less than one-half of the difference between the American and foreign cost of turning cloth into garments.

Inadequacy—Discrimination as between cloth manufacturer and clothier.—It needs no further comment to show the utter inadequacy of the duty on clothing as proposed in the Underwood bill. It discriminates against the clothier, providing a far smaller duty to offset the difference in his cost of conversion, than it does in the case of the producer of cloth. Under a 40 per cent rate on cloth, and assuming a 55 per cent conversion expense, the manufacturer receives a duty on conversion equal to at least 71 per cent of the foreign cost. Under a 45 per cent duty on clothing, the clothier is given only 53 per cent on the conversion cost. This difference arises from the fact that the one pays a tariff at the rate of 20 per cent on his raw material, wool; whereas the other pays 40 per cent, or double, on cloth. The discrimination here shown is unjust, particularly in view of the fact that both labor under similar differences between foreign and American costs of conversion. The clothier is entitled to the same duty on his conversion cost as is given to the manufacturer of cloth.

With the rate in the Underwood bill of 40 per cent on cloth and 45 per cent on clothing, it has been shown how completely the competition of the American manufacturer of clothing for his own market would be nullified. At the same time the duty imposed on cloth for the benefit of the American manufacturer would be rendered valueless, inasmuch as the foreign clothier would be given access to the American market on terms which prevent competition from our own manufacturers.

Calculations on different rates.—While no rates can definitely be proposed for clothing before the rate for cloth is determined, calculations are here submitted to show the difference between foreign and American costs, assuming various rates of duty on cloth and on clothing. These calculations, like the foregoing, are all based on a typical garment, costing the American manufacturer \$10, namely, \$5 for material and \$5 for conversion.

PARAGRAPH 382—WEARING APPAREL, ETC.

Differences in American and foreign production costs for clothing.

[Based on garment costing \$10 to the American clothier—\$5 for material and \$5 for conversion.]

DUTY ON CLOTH, 40 PER CENT.

Duty on clothing.	Difference in cost of production.	Amount of duty on foreign clothing.	Difference in cost after duty is paid.	Excess of American over foreign cost.	
				Without duty.	Duty paid
<i>Per cent.</i>				<i>Per cent.</i>	<i>Per cent.</i>
45	\$4 21	\$2 61	\$1.60	72.7	19
50	4.21	2.90	1.31	72.7	15.1
55	4.21	3.18	1.03	72.7	11.5
60	4.21	3.47	.74	72.7	8
65	4.21	3.76	.45	72.7	4.7

DUTY ON CLOTH, 45 PER CENT.

<i>Per cent.</i>				<i>Per cent.</i>	<i>Per cent.</i>
50	\$4.33	\$2.84	\$1.49	76.4	17.5
55	4.33	3.12	1.21	76.4	13.8
60	4.33	3.40	.93	76.4	10.2
65	4.33	3.69	.64	76.4	6.8
70	4.33	3.97	.36	76.4	3.7

DUTY ON CLOTH, 50 PER CENT.

<i>Per cent.</i>				<i>Per cent.</i>	<i>Per cent.</i>
55	\$4.46	\$3.05	\$1.40	80.2	16.3
60	4.45	3.33	1.12	80.2	12.6
65	4.45	3.61	.84	80.2	9.2
70	4.45	3.89	.56	80.2	5.9

DUTY ON CLOTH, 55 PER CENT.

<i>Per cent.</i>				<i>Per cent.</i>	<i>Per cent.</i>
60	\$4.55	\$3.27	\$1.28	83.5	14.7
65	4.55	3.54	1.01	83.5	11.2
70	4.55	3.82	.73	83.5	7.9
75	4.55	4.09	.46	83.5	4.8

Clothing duty with 40 per cent on cloth.—From the table it will appear that where a 40 per cent duty on cloth is required, a garment that costs \$10 here can be made abroad for \$5.79. If 40 per cent is levied on cloth, a duty of 65 per cent on clothing is needed before the cost of the foreign product plus the duty will at all approach the cost to the American clothier. This may be seen more clearly from the subjoined illustrations:

Relative cost of manufacturing clothing in the United States and abroad under a tariff of 40 per cent on cloth.

Items.	United States.	Foreign.	Excess cost in United States.	
			Amount.	Per cent.
Material.....	\$5.00	\$3.57	\$1.43	40
Conversion.....	5.00	2.22	2.78	125
Total.....	10.00	5.79	4.21	72.7
Duty at 65 per cent.....		3.76		
Total (duty added).....		9.55	.45	4.7

PARAGRAPH 382—WEARING APPAREL, ETC.

Even with a duty of 65 per cent on clothing the cost of the foreign product imported is \$9.55, leaving a considerable margin in favor of the foreign producer, who is then enabled to compete on even terms.

With 45 per cent and 50 per cent on cloth.—If the duty on cloth is fixed at 45 per cent, the corresponding duty on clothing should be between 65 per cent and 70 per cent. With a cloth duty of 50 per cent, the rate on clothing should be 70 per cent. The following calculation will make this clear:

Relative cost of manufacturing clothing in the United States and abroad under a tariff of 50 per cent on cloth.

Items.	United States.	Foreign.	Excess cost in United States.	
			Amount.	Per cent.
Material.....	\$5.00	\$3.33	\$1.67	50
Conversion.....	5.00	2.22	2.78	125
Total.....	10.00	5.55	4.45	80.2
Duty at 70 per cent.....		3.89		
Total (duty added).....		9.44	.56	5.9

In this illustration the cost of the foreign garment, duty paid, is \$9.44. As in the foregoing, the duty here assumed for clothing will not entirely compensate for differences in conversion cost.

Clothing duty with 55 per cent on cloth.—If the duty levied on cloth is made 55 per cent, the corresponding rate on clothing indicated by the difference in foreign and domestic costs is 75 per cent.

Relative cost of manufacturing clothing in the United States and abroad under a tariff of 55 per cent on cloth.

Items.	United States.	Foreign.	Excess cost in United States.	
			Amount.	Per cent.
Material.....	\$5.00	\$3.23	\$1.77	55.0
Conversion.....	5.00	2.22	2.78	125.0
Total.....	10.00	5.45	4.55	83.5
Duty, at 75 per cent.....		4.09		
Total (duty added).....		9.54	.46	4.8

Conclusions—Duty required for clothing.—A review of the differences between foreign and American conditions of production indicates that, to compensate for the duty on cloth and differences in conversion cost, the rate required on clothing is at least 65 per cent. This is under a duty of 40 per cent on cloth. With higher rates for cloth, the duty on clothing must be increased by 15 per cent to 20 per cent in order to give a reasonable rate on the cost of conversion, and to deal as fairly with the clothing industry as with the producers of cloth.

Foreign competition under rates named.—Even with the tariff here suggested, there is left a margin of about 5 per cent or more by which the foreign expense of production falls below the American manufacturers' costs. It is evident, therefore, that ample allowance is made for all factors that tend to help the American manufacturer to hold his own market—the cost of importation in freight, insurance, and other shipping charges, and above all the proximity of the American manufacturer to his customers in the domestic market. With the duties here indicated, and after paying all charges for freight, insurance, and the like, imported clothing could still be introduced into our markets on fairly competitive terms. In fact it would be possible and profitable

PARAGRAPH 382—WEARING APPAREL, ETC.

under such a tariff for American manufacturers to produce abroad clothing intended for the American market, made according to our own standards of style and workmanship, and in every way fitted to compete with our domestic product.

Effect of duty proposed on imports and revenues.—While the extent of increase of imports under the rates advocated can not be stated beforehand, these are certain to be considerable. In the first place, the reduction made is large. On the cheaper grades of clothing now brought in the rate, according to the report of the Ways and Means Committee, is 95.56 per cent. On certain low grades of clothing like heavy overcoats the duty is over 100 per cent. The rates named mean a reduction of one-quarter to one-third or more, and are, therefore, bound to stimulate importations. On higher grades of clothing the reduction in duty is also very substantial.

The adoption of an ad valorem system eliminating weight duties will remove existing inequalities and open wide the door for imports of overcoats, raincoats, and outer garments on which the weight duties are now, as a rule, prohibitive. The tax burden will, moreover, be distributed more evenly than to-day and permit competition not only for the most expensive garments but in clothing for all classes.

The rates advocated have been determined on the basis of comparative costs and are made not protective but competitive. They will permit foreign clothiers to enter our markets and enable our retailers to appeal to the consumer with foreign garments.

In view of all this, it is reasonable to believe that the imports of \$5,000,000 anticipated by the Ways and Means Committee under the rate it proposed will be realized with the duties here named, and a much larger revenue, or over \$3,000,000, will result.

New conditions in industry.—With the rates proposed in the Underwood bill, a new situation confronts the clothing industry. Owing to the exaggerated compensatory features embodied in the present duties, competition from foreign manufacturers has hitherto been practically nonexistent. Moreover, up to about 15 years ago the position of the American ready-made clothing industry was not such as to invite competition. The product at the time when the Wilson bill was in force was cheap in construction, required little skill in designing, and but little labor in making. The conversion expense was low in comparison with the total cost of the garment. The volume of clothing was relatively limited. It was primarily for the poorer classes. Better grades were supplied by the custom tailor.

Beginning about 1898, the tendency developed toward establishing the manufacture of clothing on the high plane it now holds. Tailoring of a kind that had formerly been employed only on custom garments was applied to ready-made wearing apparel, and a complete revolution took place in the industry and its product. This policy led to a tremendous expansion, and to the displacement of custom clothing, except of the highest class, by ready-made garments.

Increase in conversion cost.—The change involved essentially the employment of higher grade talent in designing garments, and supervising production, it called for a modern factory system on a large scale, it meant the use of more labor and labor of greater skill. The inevitable result was a far higher conversion cost. It is this development of the industry, increasing the importance of its labor cost and general conversion expense which exposes American clothing to competition from all European centers, advantaged by their lower labor cost.

Furthermore, the art of making clothing abroad has developed in the direction of American standards, and there has been a tendency to approach a common basis on styles. This has shown itself, the last few years, in the increased importation of English clothing in spite of the present duties. There is thus less of a barrier to-day than ever before to the introduction of foreign-made clothing into the United States.

Effects of inadequate duty.—For these reasons, we urge that the most searching investigation be made by the Ways and Means Committee into the question of proper rates on clothing. The industry affected by these rates has an output of over one-half billion dollars, it embodies the greatest tailoring skill and the highest development in manufacture. Should a tariff be enacted that would allow foreign clothing to be brought in to a very marked extent, it will become a necessity for American manufacturers to transfer their plants abroad in order to take advantage of cheaper labor and lower general conversion expenses. Particularly is this true of the better grades of clothing, where the conversion expense is so great a factor.

We ask, therefore, a thorough consideration of the facts here presented, and such a readjustment of rates on ready-made clothing as will serve the best interests of the industry and its vast labor force.

PARAGRAPH 382—WEARING APPAREL, ETC.

AD VALOREM RATES.

Advantages.—We heartily indorse the application of the principle of ad valorem rates in assessing duties on all items of Schedule K. We realize the force of the argument against ad valorem duties on the ground that undervaluations will creep in. We are, however, convinced that no other method so nearly approaches justice to all concerned.

The Government will have to adapt its customs administration to the new conditions created by an ad valorem system. Inequalities which may result from undervaluation that can not be guarded against will be negligible compared to those under any form of specific duty. We believe that so long as men can be found to buy wool on their judgment, the Government can secure efficient customs officers to appraise it.

TIME FOR DUTIES TO GO INTO EFFECT.

Date proposed.—We urge that all duties on wool, tops, yarns, cloth, and clothing be made effective on the 1st day of December. This date is in keeping with the best interests of all concerned. In fixing the time for putting new rates into operation, the interests of the retailer should be considered first, for he has most at stake. He is obliged to order his clothing six months in advance of the time when it will be sold. Goods for the fall season must be bought in March, April, and May, in order that the clothier be given proper opportunity to manufacture and to make deliveries in time for the fall and winter business. The retailer should therefore be given a fair opportunity to dispose of his stock, before a change of duties is put into operation. Unless this is permitted, he may suffer great loss on goods purchased in good faith, through a reduction in their value brought about by the lower rates.

Interest of retailer chief consideration.—If December 1 is adopted as the date for change in tariff rates, the retailer is given reasonable time to liquidate the larger part of his stock. Such clothing as might enter after that date would not seriously affect his fall business or occasion great hardship. The interest of the retailer is uppermost for two reasons. When the stock reaches his hands it has attained its maximum value, carrying all the charges imposed by the long process of conversion from wool to clothing. The largest amount is involved, and accordingly, the greatest losses are possible. On the other hand, the great mass of retailers are doing business on limited capital, and, therefore, least in a position to bear the loss, which would result from a shrinkage in the value of their stock, if lower duties are established and importations facilitated. For this reason the change should be made when the fall season's business of the retailer is well nigh completed.

Interest of manufacturer and public.—From the standpoint of the manufacturer of clothing, and in the interest of the wearer of ready-made garments, December 1 is likewise the most favorable time for making a change. The fall season is by far the larger of the two seasons. Five-eighths of the year's business applies to the fall season, as against three-eighths for spring. A change of rates going into effect on December 1, will permit the manufacturer to end his fall season with the least loss. It will also allow him to make preparations for the spring season under the new conditions, and thereby to give to the American consumer at once the benefit of any reduction in the tariff. A change made later than December 1 would prevent this. Made earlier, it would create confusion, and inflict great hardship and tremendous loss, both upon the clothing manufacturer and the retailer, bringing financial embarrassment to thousands and tens of thousands of small retailers throughout the country.

Necessity for single date.—We urge further that all duties levied under Schedule K should be made effective on the same date. If new duties are put into operation in one branch of the woolen industry in advance of another, the sentimental effect is felt in all, and results in confusion and disturbance to business. This condition it is highly desirable to obviate; and it can be prevented only by adopting a single date on which all duties go into effect. The earliest date that best meets all interests is the 1st day of December.

TESTIMONY OF FRANK S. TURNBULL, REPRESENTING THE NATIONAL ASSOCIATION OF CLOTHIERS.

The CHAIRMAN. Gentlemen, I am going to try to hold the examination of the witnesses down to 10 minutes, because I want to give them all a chance.

Mr. TURNBULL. I am going to help you. I have not any speech to make.

Mr. FORDNEY. Mr. Chairman, do not permit the witness to come up here and make a statement that he wants protection on his finished product and free trade on his raw material, and choke off questions.

The CHAIRMAN. I am not going to choke off the members of the committee. They have the same rights I have. But I am appealing for these witnesses who are sitting here waiting to be heard.

Mr. FORDNEY. I agree with you. I feel for the committee as well. But I like to go for a fellow who wants free trade on his neighbor's product and protection on his own.

The CHAIRMAN. Proceed, Mr. Turnbull.

Mr. TURNBULL. I have not any speech to make. Mr. Goldman made the speech. I am here to answer any questions.

The CHAIRMAN. I think Mr. Goldman very clearly presented your side of the case, and from what the Tariff Board has given, and from the investigation we have made and what the witnesses have said, I think we understand the theory.

Mr. TURNBULL. I will be very glad to answer any questions.

The CHAIRMAN. That is all.

TESTIMONY OF LOUIS NEWMAN, OF CLEVELAND, OHIO.

Schedule K, Paragraph 382.

The witness was duly sworn by the chairman.

The CHAIRMAN. You may proceed, Mr. Newman.

Mr. NEWMAN. Mr. Chairman, and gentlemen of the committee, we desire to call the special attention of your committee to our branch of the woolen industry, which is of considerable importance, although seldom mentioned in the general discussion of the proposed revision of Schedule K. This is the manufacture of knitted wearing apparel,

PARAGRAPH 382—WEARING APPAREL, ETC.

such as sweater coats, bathing suits, shawls, caps, and other fancy knit goods.

Our industry has assumed large proportions only in the past few years. It is shown by the United States Census Bureau reports, Table 52, that in the year 1909 the annual volume of business in the articles I have mentioned amounted to \$50,000,000, while the same was but \$19,000,000 in 1904, and only \$10,000,000 in 1899, thus showing the splendid increase of 400 per cent during the decade between 1899 and 1909. This proportionate growth has no doubt been maintained since this census report was issued.

The production of such a volume of goods necessitates the employment of thousands of operatives, as well as many salesmen, stock keepers, and office employees. To enable us to maintain the average high rate of wages prevalent in our industry and to permit us to have the merchandise manufactured in this country, instead of being imported, we require a sufficient rate of duty which will compensate us for that levied on woolen yarn, which is our raw material, and in addition afford us protection to cover the difference in cost of production between this country and others.

We do not expect you to permit the present rates of Schedule K to stand, but want to protest against such a radical reduction as was provided in the previous Underwood bill.

In view of the fact that our measure of protection is only the difference between rates on our raw material, woolen yarns, and our product, knitted wearing apparel, we feel that this difference should be maintained in proportion to the reduction on each from present rates. In other words, that the percentage of reduction on woolen yarns shall be about the same as that on manufactured goods.

You will please note the fact that there is free and open competition in our industry; that there are no trusts, nor even any "gentlemen's agreements" which could in any manner control prices or production. Also that we set the selling prices of our goods as low as possible consistent with our costs and anticipated competition, disregarding the tariff rates entirely.

Complying with your request for suggestions, in framing the new tariff bill on Schedule K, we respectfully recommend:

First. That paragraph No. 382 should read as follows:

On knitted wearing apparel, including shawls, whether knitted or woven, and knitted articles of every description made up or manufactured wholly or in part, and not specifically provided for in this section, composed wholly or in part of wool, the duty per pound shall be three times the duty imposed by this section on one pound of unwashed wool of the first class, and in addition thereto ad valorem rates as follows:

If valued at no more than forty cents per pound, thirty per cent ad valorem.

If valued at more than forty cents and not more than seventy cents per pound, forty per cent ad valorem.

If valued at more than seventy cents and not more than one dollar per pound, fifty per cent ad valorem.

If valued at more than one dollar per pound, sixty per cent ad valorem.

We recommend a specific compensatory duty, plus the ad valorem rates, because this is the fairest method to pursue. It would otherwise be very difficult to properly administer the law on account of the likelihood of undervaluation in case of straight ad valorem rates, and on account of the impossibility of arriving at the correct proportions to be levied without destroying the value of the articles

PARAGRAPH 382—WEARING APPAREL, ETC.

imported, in case the duty was to apply only to the wool contents, when mixed with cotton or other ingredients.

Further reasons for these recommendations are that these rates would afford our industry only sufficient protection to put the merchandise on a competitive basis with the European manufacturers, and would cover only the difference in cost of production. They would not be sufficient in case the Chinese or Japanese should manufacture knit goods for export.

A separate clause for knitted wearing apparel is recommended because in the process of manufacture we must first knit our own fabrics and therefore yarn is our raw material, whereas in the manufacture of other wearing apparel, the finished cloth is the raw material. After the manufacture of the fabric we have an additional conversion cost which entails much waste of fabric on account of cutting by patterns for the proper fitting and finishing of our sweater coats, and other wearing apparel.

Second. Under the tariff law of 1894, when the duty was 50 per cent ad valorem, the imports of knitted articles were about \$2,500,000 in the year of 1896 against a total production in this country that year of about \$8,000,000. The imports were, therefore, over 30 per cent of the aggregate production in this country.

Under the tariff laws of 1897 and 1909 the imports have decreased to less than half a million dollars in 1911, whereas the production in the United States has increased to over \$50,000,000, showing that these laws have helped to foster the industry. In view of the fact that the rates here proposed would place our goods on a competitive basis, and the further fact that these rates are considerably lower than those at present in force, it is impossible to estimate the amount of future imports.

Third. In making suggestions we have obtained the figures quoted from the United States census reports. We have also calculated the cost of a number of articles, such as we manufacture, comparing the same with the probable cost of a German manufacturer by taking the cost of his material from current market quotations and the cost of labor from recent list of wages paid in Germany, which enables us to state the measure of protection required.

Fourth. Reply to your fourth query I have embodied in my answer to your first request.

Fifth. We can not presume to offer any suggestions as to the betterment of the administrative features.

We hope that your committee will give the views which I have presented your favorable consideration. The same are respectfully submitted and are indorsed by all of the knitting manufacturers of Cleveland and other manufacturers, as follows: The Bamberger-Reinthal Co., by Manuel Reinthal, vice president; the Keetch Knitting Mills, the Consolidated Knitting Co., proprietors; Morris J. Wolf, treasurer; the Friedman-Blau-Farber Co., H. Friedman, president; the Cleveland Knitting Mills Co., Louis Neuman, secretary; the Green-Hass-Schwartz Co., E. E. Schwartz, secretary; N. J. Rich & Co., H. J. Rich; the Standard Knitting Co., O. F. Schmidt, president; the United Knit Goods Co., Wm. Graslin; the Federal Knitting Mills Co., Ludwig Seligman, vice president; the Fashion Knitting Co.,

PARAGRAPH 382—WEARING APPAREL, ETC.

E. S. Couzens, secretary; the Star Knitting Co., La Crosse, Wis.; the Bradley Knitting Co., Delaven, Wis., J. J. Phoenix, president; the Imperial Knitting Co., Milwaukee, Wis., O. A. Finck, secretary; Eagle Knitting Mills, Milwaukee, Wis., D. Karger; the Great Western Knitting Co., Milwaukee, Wis., E. J. Miller, treasurer; the M. Friedlander Knitting Co., Milwaukee, Wis., M. Friedlander, president; the Clinton Knitting Co., Clinton, N. Y., H. W. Roberts, treasurer; the Ess Arr Knitting Mills, S. Rottenberg, proprietor.

Mr. PALMER. Mr. Newman, do I understand you to say the imports are something under half a million dollars?

Mr. NEWMAN. Yes, sir.

Mr. PALMER. They are actually under \$400,000, are they not?

Mr. NEWMAN. They are very small. They run over \$400,000, if you include all the articles that are embraced—

Mr. PALMER (interposing). That is to say, the imports now are less than 1 per cent of the American production?

Mr. NEWMAN. Yes.

Mr. PALMER. I understand you to say these rates are competitive now, in your judgment?

Mr. NEWMAN. In my judgment, the rates proposed here would bring us to a competitive basis with the European rates.

Mr. PALMER. What do those imports consist of?

Mr. NEWMAN. Of what articles, you mean?

Mr. PALMER. Yes.

Mr. NEWMAN. Shawls, sweater coats, caps, bathing suits, etc.

Mr. PALMER. Of what value are they per pound as a rule?

Mr. NEWMAN. The average value per pound, I believe, has been \$1.32. There is a difference, however.

Mr. PALMER. So that all the competition that you have now is on the articles of greater value than \$1 a pound?

Mr. NEWMAN. The better goods are being imported and the lower class are not.

Mr. PALMER. The present rates are prohibitive as to the cheaper articles?

Mr. NEWMAN. They practically exclude them. They are not being imported.

Mr. PALMER. The schedule of rates which you have suggested and which you have presented to the committee leaves the duty on the kind of articles which are imported now exactly the same as it is now?

Mr. NEWMAN. As it is now, yes sir; because we feel there is some competition in those at the present time. They are being imported against the American manufacturer as it is.

Mr. PALMER. You think that less than 1 per cent of the American production is such competition as that you should not allow it to be increased?

Mr. NEWMAN. I feel the increase would come in the lower-priced articles.

Mr. PALMER. How much have you reduced them, speaking in ad valorem percentages?

Mr. NEWMAN. It would be a reduction from 60, as it is now, graded down to 30 on the lowest ones. That is a reduction of 50 per cent—that is, a reduction of one half.

PARAGRAPH 382—WEARING APPAREL, ETC.

Mr. PALMER. Would that admit any of these cheaper classes of goods to come in, in your judgment?

Mr. NEWMAN. I believe so.

Mr. PALMER. Have you written them with the purpose of allowing some of them to come in?

Mr. NEWMAN. We have written them with the purpose of trying to keep the manufacture of them here. We want to stay in business.

Mr. PALMER. To keep the sale of the foreign article out of this market?

Mr. NEWMAN. We have written them so that if the American manufacturer tries to set that price at a rate to bring it up above the tariff rate, you will be able to import them and not let him do it.

Mr. PALMER. Making it possible for the manufacturer to raise his price up to the tariff rates, but no higher for fear of competition?

Mr. NEWMAN. That is it.

Mr. PALMER. Could he raise his prices above what they are now, on these cheaper classes of goods under your arrangement, and still be under the tariff rate which you suggest?

Mr. NEWMAN. I believe he could. If the manufacturers could get together, or were permitted to get together—

Mr. PALMER (interposing). And they would, would they not?

Mr. NEWMAN. No; we do not.

Mr. PALMER. Is the manufacturer making a pretty fair return on his investment now?

Mr. NEWMAN. Some of them are, I presume. I do not know of any of them that have gotten rich in the business.

Mr. PALMER. The industry has been very prosperous of late years, has it not?

Mr. NEWMAN. Yes; there has been a good demand for our particular class of goods.

Mr. PALMER. Then, why write a rate which would make it possible for you to raise the prices of the product above the prices at which the manufacturers now sell, and at which you say he is getting a fair return on his capital? Why do you do that?

Mr. NEWMAN. So we shall keep on manufacturing—

Mr. PALMER (interposing). And keep on raising prices?

Mr. NEWMAN. No; we do not contemplate raising the prices, but we do want to stay in business.

Mr. PALMER. Of course, you are not selling these cheaper classes of goods for an amount less than cost of production plus a return on the capital?

Mr. NEWMAN. We try not to.

Mr. PALMER. Then, you have written the rates on these cheaper articles at a figure which makes not only differences in your cost production but many more besides?

Mr. NEWMAN. Very little, in my judgment. I do not think there is anything much.

Mr. PALMER. What rates would you suggest which would just equalize the cost in production and start you on an even rate with your foreign competitor?

Mr. NEWMAN. That would apply very differently to different articles.

PARAGRAPH 382—WEARING APPAREL, ETC.

Mr. PALMER. I am talking about these cheaper articles of knitted wearing apparel.

Mr. NEWMAN. I am talking of them, too. Possibly some of these have a much greater proportion of cost of material than labor cost, and others vice versa. It would not apply the same way all the way through. If you would take one article and figure up the cost of production of that article, it would vary considerably from the next one, undoubtedly.

Mr. PALMER. The truth is, your paragraph is like so many we have heard about all through the tariff law, that as to the high-class, more expensive articles used by the people who have large means, there is some competition from abroad, and as to the lower class or cheaper articles used by the comparatively poor the rates are absolutely prohibitive and the American manufacturer still has room to boost his price to keep the foreigner out. Is not that so?

Mr. NEWMAN. I believe he could if he did not have American competition to contend with.

Mr. PALMER. I am speaking of the American manufacturers as a whole.

Mr. NEWMAN. That is probably true.

Mr. FORDNEY. What has he done in the way of boosting prices? Has he done anything since the adoption of that law?

Mr. NEWMAN. No, sir.

Mr. FORDNEY. What is the relative class of your goods now going to the consumer as compared to the time prior to the adoption of the existing tariff law? Is it higher or lower?

Mr. NEWMAN. I believe it is lower.

Mr. FORDNEY. Then you have not taken advantage of this increased rate of duty?

Mr. NEWMAN. We have not.

Mr. FORDNEY. It has encouraged home competition, which has caused the prices to the consumer to be lower?

Mr. NEWMAN. Exactly.

Mr. FORDNEY. It is a pretty good law, is it not?

Mr. NEWMAN. It strikes me as a good law. It has helped us to increase our business.

Mr. FORDNEY. It strikes me, too, as a good law. American labor is employed, American capital is employed, and the American consumer gets good prices.

Mr. PALMER. You and Mr. Fordney on one side and about all the American people on the other side?

Mr. FORDNEY. No; you represent a million and a half less than the popular vote of this country. [Laughter.]

Mr. PALMER. But not on this question.

The CHAIRMAN. You do not take into consideration that the Government has any rights in this matter at all, do you?

Mr. NEWMAN. I believe the Government has all the rights.

The CHAIRMAN. We levy a tax upon a commodity which you are making, and we give you a right to collect part of that tax by raising your rates above what you could otherwise get for it. You want to maintain the rate so that you get all the taxes levied upon this commodity and the Government gets none, because it is so prohibitive

PARAGRAPH 382—WEARING APPAREL, ETC.

that nothing can come in and the Government will get no tax. Do you think that is square or fair for the Government?

Mr. NEWMAN. I do not think we are getting it all, because our prices are not anywhere near the import prices; that is, the difference in rate of duty, if added to our prices, would make our prices considerably more than we are actually getting for the goods.

The CHAIRMAN. If you had a charge for coming through that door there [indicating] so high that nobody would come through it, you would get no return, would you?

Mr. NEWMAN. The Government is getting revenue out of the wool we are using.

The CHAIRMAN. I am asking about your particular commodity. You admit you have a rate so high it is practically prohibitive. If the Government gets no return from the tax levied—

Mr. NEWMAN (interposing). We are employing labor, and the Government gets taxes from them.

The CHAIRMAN. No; the Government does not collect its taxes from the laborer.

Mr. NEWMAN. Indirectly.

The CHAIRMAN. Do you not think it is proper that this tax should be adjusted so that in the collection of it you should not get it all, but that the Government should get a small portion of it?

Mr. NEWMAN. That is for you gentlemen to decide. That is a little too deep for me.

Mr. LONGWORTH. How does your price compare now with value plus the duty?

Mr. NEWMAN. It is considerably less.

Mr. LONGWORTH. How much less? Take any particular article that you sell at a certain price and tell us what would be the price of that article based on the import value plus the duty.

Mr. NEWMAN. I should judge there would be a difference of about 25 to 33 per cent on the selling prices of the goods.

Mr. PALMER. Then what is the use of having so much duty?

Mr. FORDNEY. It stimulates domestic production.

Mr. NEWMAN. As I said before, we want to stay in business.

Mr. PALMER. You want that much protection above you, so that if necessary you can get up that far and not let the foreigner come in?

Mr. NEWMAN. Our aim is to keep it that far so we can stay in business, and we will keep the foreigner out. We will fight the foreigner as long as you give us an even break or very near it.

Mr. PALMER. You will agree to fight the foreigner if we will keep him out? [Laughter.]

Mr. FORDNEY. The chairman has pointed out that under the existing low rates the duties are so high that there is no money going into the Treasury of the United States on imports on the kind of goods you produce?

Mr. NEWMAN. Yes, sir.

Mr. FORDNEY. The people of this country are the Government, and instead of getting the money through the Treasury they are getting it directly into their pockets by lower prices that you are giving them. Is not that right?

Mr. NEWMAN. Undoubtedly.

PARAGRAPH 382—WEARING APPAREL, ETC.

Mr. FORDNEY. That is a little better way of benefiting the Government?

Mr. PALMER. And the poor manufacturer gets nothing? [Laughter.]

Mr. FORDNEY. We can get the revenues; there are plenty of ways of getting revenue without taking it out of the common people.

Mr. NEWMAN. I am glad you suggested that, and I hope the chairman will consider it. [Laughter.]

BRIEF OF A. J. FRIEDLANDER, MILWAUKEE, WIS.

M. FRIEDLANDER KNITTING CO.,
Milwaukee, Wis., February 11, 1913.

The HOUSE COMMITTEE ON WAYS AND MEANS,
Washington, D. C.

Attention of Hon. Oscar W. Underwood, chairman.

GENTLEMEN: As the secretary and treasurer of the M. Friedlander Knitting Co., a corporation employing about 500 people in the manufacture of knit gloves and mitten exclusively, I wish to submit the following brief for the consideration of your committee, showing the absolute necessity of a tariff equal to the one now in existence on our line of merchandise:

We represent an industry that is brought into the closest kind of competition with European manufacturers, and even with the existing duties of 44 cents per pound and 60 per cent ad valorem we are unable on account of the enormous advantage they enjoy over us in the way of cheap labor and long hours to compete with them on certain lines of our goods.

It is an absolute fact that almost 85 per cent of the ladies' and children's wool and knit gloves worn in this country to-day are imported, this in spite of the existing tariffs, and the only salvation of the American manufacturer to-day is the specific duty imposed on our lines of goods, which makes it possible for us to compete with the foreigners on the heavier lines of ladies' goods and the men's and boys' lines, which represent about 90 per cent of our business, and an elimination of the existing specific duty on this goods would simply take this line of business away from us and force us, as well as about 50 other mills in our line of business, either to reduce our wages to the basis of European labor or close up our plants.

Our line of goods is peculiar in the fact that labor represents almost 50 to 60 per cent of the cost of manufacture, and a slight reduction in the cost of raw material would be of no benefit to us if the duty on the manufactured article is going to be materially reduced.

The foreign manufacturer can procure his raw material and his machinery just as cheap as we can, and when it comes to labor they have us absolutely at their mercy.

Our knitters can earn on the average of \$1.50 to \$2 a day, working on a basis of 9 hours a day, or 54 hours a week, while in foreign factories they can procure the same help for about \$3.50 to \$4.50 per week and work them if they wish 24 hours a day. Even our small apprentice girls who work at finishing and spooling while learning the trade can earn from \$4.50 to \$6 a week and work only 8 hours a day, or 48 hours a week, while this class of help can be procured in foreign factories for almost nothing. Your committee can readily see that it is of course absolutely impossible for us to compete with these factories without protection, unless we bring our labor down to the basis of the European factories, which, to our minds, in this country would result in a condition worse than white slavery.

It is also a known fact that the consumer does not reap any benefit of the American importer being able to land foreign gloves cheaper than we can produce them, as the knit-glove business in this country to-day has resolved itself into a 25 and 50 cent proposition, and the difference in the cost of the foreign and American glove only results in a longer profit for the big importer and retailer in handling foreign goods in preference to domestic, at the cost of added employment for thousands and thousands of American wage earners. In fact, a good many of the larger importers in this country have absolutely refused to place any contracts whatever for the coming year with American manufacturers, using as an argument that if the new administration puts

PARAGRAPH 382—WEARING APPAREL, ETC.

their policy of general reduction of the tariff in force they will not handle any American goods whatever, and this season is the first since 1896 that we have been face to face with such conditions.

The knit-glove and mitten industry is as legitimate as any industry in this country; the business is done on a closer margin than almost any other line of business; the producing of our goods is very slow, and the making of experienced operators is a very slow, tedious, and expensive proposition, as there is absolutely no automatic machinery in our line of business, everything being up to the operator.

It takes us from four to six months to develop an experienced operator, and then after a girl has worked at this trade for almost a year the best she can do is to produce on an average about 27 to 36 pairs of gloves a day, which makes our cost of production very high in comparison to those lines of textile industry using automatic machinery.

At the very best there is no branch of the textile industry in this country that can stand for any reduction in the tariff rates now imposed, but to our particular line it would mean absolute destruction.

The knitting industry is as clean and healthful an occupation as female labor can possibly find, and under the protection of the existing tariffs we have been able to increase our wages from year to year, until to-day our industry gives as good employment to female labor as they can possibly find in any other line of industry, and we beg of your committee to consider this line of manufacture very carefully when working on Schedule K for the new tariff, as any material reduction in the duty now existing would either force us to reduce our wages down to a basis of European manufacturers or close up our factories, throwing thousands and thousands of employees out of employment.

If your committee would like any further statistics and facts regarding our line of business, allow me to offer my services whenever they should see fit to ask any questions of us.

Yours, respectfully,

M. FRIEDLANDER KNITTING CO.,
A. J. FRIEDLANDER, *Secretary and Treasurer.*

**BRIEF ON WOOL HATS, SUBMITTED BY RALPH S. TOMPKINS,
OF DUTCHESS HAT WORKS, FISHKILL ON THE HUDSON, N. Y.**

The WAYS AND MEANS COMMITTEE,
Washington, D. C.

GENTLEMEN: I am engaged in the manufacture of wool hats.

My factory is located at Fishkill on the Hudson, Dutchess County, in the State of New York.

The business was established in 1874 by my father, the late Lewis Tompkins, and has always been known as The Dutchess Hat Works.

After my father's death, in 1905, the business was incorporated under the same name, and the capital stock divided between my mother and sisters and myself, representing our respective interests in the business, and I am president and treasurer of the company and actively engaged in the management of the same.

Wool hats and wool-hat bodies are included under the present tariff act in paragraph 382 of Schedule K, as "Articles of wearing apparel * * * composed wholly or in part of wool," and the duty per pound is four times the duty imposed on 1 pound of unwashed wool of the first class—that is, 44 cents a pound, and in addition thereto 60 per cent ad valorem.

Much has been written and reported in various public documents in recent years relative to the wool industry in general, but very little, if anything, has been said about the wool-hat industry in particular. The process of manufacture of the wool felted hat differs materially in essential features from the manufacture of woven wool and worsted fabrics and wearing apparel, which are included in the same paragraph under the present tariff act.

The manufacture of wool hats comprises a small percentage of the total wool industry.

Wool hats and wool-hat bodies are properly included in Schedule K, as they are manufactured from wool and noils, and should not be confused with fur or fur felt hats, which are made from the fur of the rabbit, muskrat, and similar animals, which under all recent tariffs have been admitted free on the skins, in which form practically all the furs used in the fur-hat industry are brought to this country.

The principal materials used in the manufacture of wool hats are wool and wool noils. The wool is obtained in the grease and the noils in the form of combings from the yarn or worsted mills.

PARAGRAPH 382—WEARING APPAREL, ETC.

Both the wool and the noils require scouring before they can be used in the manufacture of wool hats. This is the first process.

This stock is then dried, picked, and dusted, then mixed, carded, hardened, fulled, dyed, washed, and twisted. The process to this point is analogous to that employed in the manufacture of felt cloth.

From this point the hats are put thorough the following processes:

Drying, pouncing, stiffening, redrying, stretching, seasoning, and stamping or blocking, finishing, buffing, redrying, pressing, trimming, sweating, and machine work, flanging and packing. These latter operations are similar to that employed in the manufacture of fur felt hats.

The combined processes, therefore, require an extensive plant, a vast amount of heavy power machinery, and an abundant water supply.

The division of factory costs as applied to the typical wool hat is approximately as follows:

	Per cent
Wool.....	30
Trimmings (band and sweat).....	29
Direct labor.....	26
Indirect labor, including packing, boxing, casting, together with all other factory costs.....	15

It will be noted that 59 per cent of the factory cost of the hat is made up of wool and trimmings.

Raw scoured wool such as is used in the manufacture of wool hats is subject, under the preset tariff, to a duty of 33 cents per pound.

The band on the hat is protected by a duty of 50 per cent. The leather sweat by a duty of 40 per cent; and if a lining is used, the satin is subject to a duty of from 50 to 75 per cent, depending on the quality.

The extra cost of the wool, together with the shrinking incident to its manufacture, is compensated by the duty of 44 cents a pound on the weight of the finished product, but there is no offset or compensation for the duty on the trimming other than that covered by the ad valorem duty of 60 per cent on the finished product, which, as applied to wool hats is sufficient only to cover the increased cost of labor, plant, and other expenses of manufacture in this country.

The hat made of fur, commonly called the fur felt hat, as distinguished from the wool felt hat, by reason of the fact that fur on the skin is entered free of duty, can be produced at all prices from \$7 per dozen upward, and from \$10.50 upward is vastly superior to the wool hat produced at the same price, so that there is practically no market for a wool hat manufactured to sell at a price over \$10.50.

On the other hand, a wool hat can not be profitably produced at a grade sufficiently low to compete with the hats and caps of cloth, which sell at less than \$4.50 per dozen, so that the wool-hat market is practically confined to grades between \$4.50 and \$10.50 per dozen, and a hat of the \$9 grade may be taken as a typical illustration of this product.

An analysis of the cost of production of this \$9 hat in our own factory, based upon a total production of 54,000 dozen of men's hats, is as follows:

Average cost expense and material per dozen (shipped).

Wool, 3 $\frac{3}{4}$ pounds, at 54 cents.....	\$2.16
Band, 12 yards, at \$1.83 for 18 yards.....	1.22
Leather, \$6.75 per gross, at 18 cents a dozen for making up.....	.75
Elastic, at \$1.50 gross yards.....	.10
	2.07
Labor:	
Salary and supervision.....	.07
Making.....	1.17
Finishing.....	.35
Trimming.....	.22
	1.81

PARAGRAPH 382—WEARING APPAREL, ETC.

Materials used in processing: Alcohol, glue, and shellac; burlaps and duck; dyestuffs; fuel; flour and whiting; lumber; office supplies; rosin, borax, and sal soda; stable expense; strawboard and paper; supplies; soap.....	\$ 67
Miscellaneous expenses: Freight, gas, insurance, interest, repairs and maintenance, taxes, truckage.....	.39
	\$1.06
Total factory cost.....	7.10
Selling expenses.....	.45
	7.55
Total cost.....	7.55
Discount to customers.....	.90
	8.45
Profit.....	.55
	9.00

From the foregoing it will be seen that on this hat there is a profit of only 0.073 per cent on the cost of production and sale.

On the lower grades the profit is proportionally less, and on the higher grade hat which sells for \$10.50, the additional profit is largely offset by the increased cost of the trimming, as the body is usually the same.

The importation of wool hats has more than trebled during the last year.

The following statement of importations is taken from the Reports on Commerce and Navigation of the Department of Commerce and Labor, showing the following importations of wool hats since 1907, up to and including the fiscal year 1912:

	Pounds.	Value.
1907.....	9,616	\$15,900
1908.....	32,592	51,363
1909.....	28,923	49,439
1910.....	19,557	33,305
1911.....	19,630	47,145
1912.....	87,675	171,923

The foreign manufacturer, by reason of his cheaper labor and free raw material, notwithstanding the present duty, is able to compete in this market with the product of our own mills.

The Government statistics relating to the woolen industry show that the rate of wages paid in this country averages more than 100 per cent greater than the foreign rate.

That the whole mode of living and surroundings of the people employed in exactly similar work in this country is vastly superior to that which prevails abroad.

Much of the rough labor of hat making abroad is performed by women and is of a character which compels them to work in steam and dust and wet. In this country it has been customary, up to the present, to employ only men in work of that character.

In Senate Document, volume 46 (61st Cong., 2d sess., 1909-10), page 113, it is stated, referring to the clothing trade in the United Kingdom, which included hats, "A larger number of women and girls is included in those industries than in any other group except domestic service."

The hours of labor in Italy, Germany, and England, in the hat industry, are very much longer than in this country, and child labor is prevalent, especially in Italy, where the largest wool hat factories of the world are situated.

In the States in this country in which hat factories are situated 16 years is the allowed age, with many other limitations as to age and sex and as to working beyond prescribed hours.

The present tendency is for closer restrictions in these particulars and additional expense in the safe guards and insurance to be provided by manufacturers for the benefit of employeess.

With the present duty on wool, the American manufacturer is confined exclusively to the American market, whereas the foreign manufacturer, in nearly all instances, will be able to sell in practically all the markets of the world, especially those in the Southern Hemisphere. As wool felt hats are worn in any considerable quantities only

PARAGRAPH 382—FELT.

during the winter season, the foreign manufacturer has a tremendous advantage in being able to run his works to their full capacity for a much longer portion of the year than it is possible for the American manufacturer, who has to carry his organization over a long dull season.

In general, the wool hat industry in this country is conducted by individuals, firms, or corporations, none of whom have been formed by consolidation or merger with any other concerns heretofore existing. Such corporations as exist are either family affairs or concerns organized by local subscriptions in towns where they are located. The competition is genuine and keen.

As the present specific duty on wool hats is to compensate the manufacturer for the extra cost of his raw material by reason of the duty on wool, if it should be determined to reduce the duty on wool, an equivalent reduction in the specific duty on wool hats and hat bodies would be acceptable to me.

It is respectfully submitted that no other or further reduction should at this time be made in the duty on wool hats and wool hat bodies than is to be compensated by an equivalent reduction of the duty on wool.

Respectfully submitted.

RALPH S. TOMPKINS.

FELT.

MEMORANDA IN RE IMPORTATION CATTLE-HAIR FELT.

GLASS UTILITIES Co.,
Pittsburgh, Pa., January 23, 1912.

HON. OSCAR W. UNDERWOOD,
Washington, D. C.

SIR: I had the honor of calling on you in March last in Washington, in relation to the duty assessed upon cattle-hair felt which has been classified by the appraiser general under the head of wool felt, and subject to a duty approximating 400 per cent, rendering the importation prohibitive. We imported some of this merchandise in the latter part of 1910, when the Government assessed a duty at the rate of 20 per cent ad valorem under the paragraph of the tariff act which covers all manufactured articles not specially enumerated.

On January 27, 1911, the appraiser general rendered a decision that cattle-hair felt was to be held dutiable under paragraph 382 of the tariff act as "felt not woven composed wholly or in part of wool." The contention of the Government was not that the felt contained wool to an appreciable extent, or in fact any wool at all, but that by virtue of the operation of the similitude clause of the tariff act the article was held dutiable at the same rate as wool felt not woven, at the rate of 44 cents per pound and 60 per cent ad valorem. It will readily be seen that as this material has to be sold at 35 cents per pound to compete with the all-wool felt, the payment of 44 cents per pound in addition to the original cost, freight, and a further assessment of 60 per cent ad valorem makes the importation impossible.

This cattle-hair felt is used as a raw material in the process of the manufacture of plate glass, and is used for the rubbing blocks for polishing the glass. At the present time an all-wool felt is used at a price of about 60 cents per pound, but as the cattle-hair felt answers the purpose equally well, it will be seen that the lower price of the cattle-hair felt is a great advantage to the industry.

There are in this country 11 plate-glass manufacturers, who are anxious to import this article with a view to reducing the cost of their product in competition with the foreign manufacturer of glass. Besides these independent factories there is the Pittsburgh Plate Glass Co., who were using this felt almost exclusively before the decision of the customs officials to assess the felt at the same rate as wool. The quantity of felt used by the combined manufacturers would be approximately 550,000 pounds, and taking the difference between the price of the wool felt at 60 cents and the cattle-hair felt at 35 cents per pound there would be a saving of \$137,500 per annum to the industry.

This cattle-hair felt is not manufactured in this country. It is a secret process. The labor employed is of a low class, not obtainable in this country.

The company with whom I am connected have purchased and have in bond \$1,500 worth of the felt, which can not be brought in under present conditions.

I would be obliged if you will advise me what steps I shall take to bring this before your committee, with a view to obtaining some modification of the classification in

PARAGRAPH 382—FELT.

the tariff act. My clients, the plate-glass companies, will all give me letters or sign a petition to the effect that the importation of the article under a reasonable tariff would be a benefit to them.

Respectfully,

J. W. CRUIKSHANK.

[Extract from court ruling. Appeal of Pittsburgh Plate Glass Co against the United States. In re tariff levied on felt.]

It may be extremely regretable that the court by the often and well-considered rules of decision is compelled to a conclusion which in this particular instance seems to work a hardship. Nevertheless, it is better to visit that unhappy result in a particular case than it is for a court to assume, in any case whatsoever, to set at naught the well-settled rules of construction and madnates of the statute in order to reach a result however more desirable. The matter then becomes a subject for legislation. Legislation can be neither certain nor effective, nor can the rights and properties of the citizen ever become fixed and certain, except in the presence of strict adherence to the rules of judicial interpretation by the courts.

GLASS UTILITIES CO.,
Pittsburgh, Pa., March 2, 1911.

Mr. W. L. KANN,

*Vice President and General Manager, Penn-American Plate Glass Co.,
Pittsburgh, Pa.*

DEAR SIR: The felt shipped on your recent order is held in the Pittsburgh custom-house, with duty assessed thereon at 44 cents and 60 per cent ad valorem. In view of the price at which this felt is sold, you will see that it is quite impossible to pay this duty, and the shipment will be indefinitely held unless the Treasury Department make a new ruling on this commodity.

Under paragraph 382 of the tariff act 1909, "Felts not woven and not especially provided for, composed wholly or in part of wool, are assessed at the rate of 44 cents and 60 per cent ad valorem." The Government has assessed cattle-hair felt at the same rate under operation of the similitude clause, in that it is a felt, not woven, and is used for the same purposes as the all-wool felt. They have attempted to show that the felt contains wool fibers, but the experts differ among themselves on this point.

The ruling seems very unfair, in that it makes the importation of this material prohibitive, and as it is a product used in manufactures for an American industry, it would appear that the decision of the Appraiser General might be revised. I am going to Washington to present the matter before the Secretary of the Treasury, and would ask you to give me your cooperation by writing me stating that you are an interested party to the importation of this felt and you consider it advantageous to your industry to be able to import the article at a lower rate of duty. I would suggest incorporating the statement that the comparative cost of wool felt in the manufacture of plate glass is a comparatively high and unnecessary one, and it can with advantage be replaced by cattle-hair felt with a corresponding benefit to your industry.

I trust you may find it convenient to write me by return mail on this matter as I expect to be in Washington on Tuesday, and that I may count on your full cooperation to our mutual interests.

Very truly, yours,

GLASS UTILITIES CO.
J. W. CRUIKSHANK.

PENN-AMERICAN PLATE GLASS CO.,
Pittsburgh, Pa., March 3, 1911.

Mr. J. W. CRUIKSHANK,

The Glass Utilities Co., Pittsburgh, Pa.

DEAR SIR: Replying to your letter of the 2d and referring to conversations which we have had recently, regarding the order for hair felt which we placed with you some time ago, and which you advise us has arrived and is in bond ready to deliver but has been held up in the Pittsburgh customhouse from the fact that it has been assessed at 44 cents per pound and 60 per cent ad valorem, asking whether we would cooperate with you to bring the attention of the authorities to the wrong position they are taking in construing the tariffs on this article.

PARAGRAPH 382—FELT.

In reply beg to state that the ruling undoubtedly is unfair and their deductions are unwarranted.

In the first place, up to the present time to the best of my knowledge no felt for polishing plate glass, to which use we put this article, has been made in the United States from cattle hair. All we have heretofore used and are using, and that which is being used by practically every one of the manufacturers of plate glass, is made out of wool.

We find in the trials we have given this cattle-hair made felt that it is effective and will answer the purpose comparatively with the wool made felt, and as cattle-hair felt is very much less in cost than wool it is plain to be seen that the article can be produced for less money and should be encouraged, and of course will be helpful to the American industries using it, if permitted to come over at a reasonable tariff, until at least such a time as the article will be made in this country.

I am relying of course upon your statement and that of the experts, that the manufacture of the felt which you have sold us, of which this is a duplicate, is made entirely of cattle hair, and that being the case this can easily be proven. We think that the department having their attention called to this fact will see the injustice of their ruling and modify the same.

Cattle hair used for this purpose is worth from 1 cent to 2½ cents per pound extreme, while wool suitable for the same purpose for felts costs as you know very many times that price.

The department would be acting within their province we think if they would allow this felt to come over free of duty, as long as there is none of it made in this country for this specific purpose, if they can find a way of safeguarding the same so that it will only be used for the purpose it is intended. But against that it would be fair that we should pay a reasonable duty, and we think this would stimulate imports and give the Government a source of revenue, and that is the purpose of the tariff particularly when the article is not made in this country.

We are much interested in having you get this matter clear before the department on its merits, and will do anything we can consistently to assist you in that direction.

You may use this letter or such portion of it as you wish for the purpose of your argument, and we are willing to appear at any time before the department at Washington with you.

Very truly, yours,

PENN-AMERICAN PLATE GLASS CO.,
W. L. KANN, *Vice President.*

BRIEF OF THE BYFIELD WOOLEN CO., BOSTON, MASS.

BOSTON, MASS., *February 12, 1913.*

COMMITTEE ON WAYS AND MEANS,
House of Representatives, Washington, D. C.

GENTLEMEN: I beg to call your attention to numerous misstatements of facts in the evidence submitted to your committee in regard to cattle-hair felt. This evidence appears in a pamphlet entitled:

"Tariff Schedules, No. 19, Hearings before the Committee on Ways and Means, House of Representatives, on Schedule K, Wool, and Manufactures of. Dated January 27, 1913, evening session."

First. There are 12 plate-glass companies in this country, only 1 of which uses cattle-hair felt, and only 1 is equipped with machinery suitable for the use of cattle-hair felt.

Second. Cattle-hair felt for polishing glass is made in this country. Our average production of it for the last three years has been about 300,000 pounds. Besides this many hundred tons of felt of exactly the same construction, only in thinner sheets, is made in this country for use as wadding in cartridges.

Third. The average price on this felt to the glass manufacturers has been 33 cents. Our labor and manufacturing cost alone has been from 13 to 15½ cents per pound.

Fourth. The cost to the glass manufacturers on this felt when imported three years ago, before the ruling of the United States Treasury Department, under a 20 per cent duty, was 18 to 20 cents. Since that time labor has advanced at least 15 per cent and hair more than 20 per cent.

Fifth. The manufacture of this cattle-hair felt comprises two-thirds of our felt production. Without protection felt manufacturers in this country can not compete with the low cost of labor abroad, and an American industry of considerable proportions would be destroyed.

Respectfully submitted.

ALFRED S. WILLIAMS, *Treasurer.*

PARAGRAPH 382—FELT.

STATEMENT OF RICHARD RANFT, OF NEW YORK, REGARDING PIANO FELTS.

My firm, Richard Ranft, has been importing these piano felts from Germany since about 1856.

Up to 1883 our felts had been classified as manufactures of wool not otherwise specified at 35 cents per pound and 40 per cent ad valorem; in the McKinley bill they appeared for the first time in the ready-made clothing clause in conjunction with plushes and pile fabrics, at 49½ cents per pound and 60 per cent ad valorem; the Wilson bill properly classified them as felts not specially provided for, in paragraph 284, at 50 per cent ad valorem when valued at over \$1.50 per pound and 45 per cent ad valorem at under \$1.50 per pound. In the Dingley bill our felts were placed back in the ready-made clothing clause, paragraph 370, at 44 cents per pound and 60 per cent ad valorem as "Felts, not woven and not specially provided for," and which rates of duties and classification remained in force for these felts in the Aldrich-Payne tariff, being kept in this clothing clause, notwithstanding my efforts made at the time to get these felts a separate rating, have them specially mentioned, in order to get them out of the clothing clause, the rates of which call for duties ranging from 95 to 115 per cent ad valorem on the finished product.

I have not and do not now ask for lower rates of duty as against other manufactures of wool, but I do ask for a separate paragraph for "piano felts, not woven," in the new tariff to come, to have them specially mentioned and provided for as "piano felts, not woven, in sheets or rolls," with duties as applied to other manufactures of wool; or if a separate paragraph for felts can not be granted, ask them to be placed as "manufactures of wool" in the omnibus clause, not provided for and at rates of duty as called for in this paragraph.

These piano felts come in sheets 36 inches wide, 38 to 45 inches long, tapering in thickness from 1½ inches to ¼ inch in thickness, and weigh from 10 to 18 pounds per sheet and certainly have nothing in common with clothing. The plush and pile fabric folks were successful in getting their goods taken out of the clothing clause long ago; but all my efforts in the same direction availed me nothing, felts having been retained in the paragraph calling for the highest rates of duty for some special cause and reason.

My importations of these felts are large enough to warrant giving them a special paragraph, averaging in weight about 60,000 pounds per annum, valued at from \$80,000 to \$100,000.

It is my belief that luxuries should and ought to pay the very highest rates of duties. If anybody desires his or her clothes made in Paris or London, they should be made to pay well for this privilege; but if luxuries are to be increased, my felts, if still remaining in this ready-made clothing clause, would also be subjected to this increase of duties, and this is the sole reason why I desire piano felts to be taken out of this clause and be specially provided for in a separate paragraph. Our imported felts are not luxuries; on the contrary, are a necessity to the makers of artistic pianos in this country, nine-tenths of which I supply these felts to, because of their even, uniform qualities, which the makers of artistic pianos in this country believe as best adapted to their requirements, and therefore almost exclusively used by them in their artistic pianos.

RICHARD RANFT,
213 East Nineteenth Street, New York.

PARAGRAPH 383—EMBROIDERED FLANNEL.

PARAGRAPH 383.

Webbings, gorings, suspenders, braces, bandings, beltings, bindings, braids, galloons, edgings, insertings, flouncings, fringes, gimps, cords, cords and tassels, ribbons, ornaments, laces, trimmings, and articles made wholly or in part of lace, embroideries and all articles embroidered by hand or machinery, head nets, nettings, buttons or barrel buttons or buttons of other forms for tassels or ornaments, and manufactures of wool ornamented with beads or spangles of whatever material composed, any of the foregoing made of wool or of which wool is a component material, whether containing india rubber or not, fifty cents per pound and sixty per centum ad valorem.

EMBROIDERED FLANNEL.

TESTIMONY OF A. H. KURSHEEDT.

Mr. Kursheedt was duly sworn by the chairman.

Mr. KURSHEEDT. Mr. Chairman and gentlemen of the committee, this is in relation to paragraph 383, Schedule K.

I desire to show you a sample of what is termed "embroidered flannel" [exhibiting sample]. This is an article that was originally introduced in this country and about a half a million dollars' worth made. There are several factories that are dependent upon it as a class of manufacture. There is one in Tennessee, another one in Illinois, several in New Jersey, and one in New York. These goods are made on what is termed a "hand-embroidering" machine, and there may be 1 or 2 per cent made on what is called the automatic embroidering machine. They belong to the same industry, the articles of which yield to the Government a revenue of about \$15,000,000, and they are made in some cases in the same factories; that is, embroideries and embroidered laces.

The CHAIRMAN. Paragraph No. 383 relates to webbings, gorings, suspenders, etc. You said that is in 383.

Mr. KURSHEEDT. How is that?

The CHAIRMAN. Did you not say that article was in paragraph 383?

Mr. KURSHEEDT. I think so.

The CHAIRMAN. Paragraph 383 relates to webbings, gorings, etc.?

Mr. KURSHEEDT. They come in under the head of embroideries and wool.

Mr. HULL. What is the ad valorem equivalent of the rate?

Mr. KURSHEEDT. What is that?

Mr. HULL. What is the ad valorem equivalent of the rate on your product?

Mr. KURSHEEDT. I do not know now. The goods have not been imported at all in the last 30 years. It is an article that has been introduced here, and I do not know that there is any at all in Europe or anywhere else, so that the question of the rate of duty at the present moment has really never arisen, and I never have had any occasion to calculate it.

Mr. HULL. It is immaterial, then, whether it is high or low?

Mr. KURSHEEDT. Not so. The present rate of duty has not invited parties to export the goods to this country.

Mr. HULL. It has kept out importations?

Mr. KURSHEEDT. I do not think they know that such an article exists, because I have not seen the article sold in Europe as we sell it

PARAGRAPH 383—EMBROIDERED FLANNEL.

here, and, as I stated, it has practically been introduced in this country by the manufacturers here as a specialty for this country.

Mr. HULL. It has been in use here for 15 or 25 years?

Mr. KURSHEEDT. Oh, yes; longer.

Mr. HULL. Longer than that?

Mr. KURSHEEDT. It superseded what was termed the "hand-embroidered" flannels, and I suppose they were made before I was born.

Mr. HULL. Pardon me for interrupting you. I just wanted to get that information.

Mr. KURSHEEDT. Yes.

In relation to the automatic embroidering machine, I wish to make a few remarks, because some statements were made on that subject on Saturday morning by a representative of an importers' association.

Those machines have been in use in this country since about 1892. They are an American invention, and in 1897 a machine was sent to Europe, which served as a model for the house of Loeb & Schoenfeld, who were interesting themselves in Europe in this invention, and equipped their factory in Switzerland. In 1907 they purchased all the European rights, and in 1908 they purchased practically all the rights in the United States, the vendor reserving the right to use a limited number of machines. Loeb & Schoenfeld operate factories under different names in Europe, and they operate the largest plant in the world in Switzerland. They also have the largest plant in this country. They import into this country almost the entire production of their plant in Switzerland. Under the present tariff they have one-fifth of their machines in this country and four-fifths in Switzerland.

Now, Mr. Loeb and Mr. Schoenfeld are citizens of the United States, and as the tariff stands to-day they are practically forced to manufacture their goods in Europe and bring them to this country. So we are not overprotected.

There was a remark also made that no one would import an embroidery machine without the Automat, because it would be obsolete when the Automat came on the market here. Now, the Automat is really an auxiliary machine and can be attached to any embroidering machine, and anyone can buy in Europe the most modern embroidery machine, to which an Automat can be attached.

In relation to the duty on this embroidered flannel, all we wish is a duty fixed so that we can continue to make it. It is impossible for me to say what that duty ought to be, because I am naturally in doubt as to what duties will be fixed upon our raw materials.

The CHAIRMAN. How much of this particular article, this embroidered flannel, is made in this country?

Mr. KURSHEEDT. About half a million dollars' worth.

The CHAIRMAN. The total importations in all of this schedule were about \$72,000.

Mr. KURSHEEDT. On these particular goods, Mr. Chairman—

The CHAIRMAN. The importations in all of this paragraph only amount to about \$72,000.

Mr. KURSHEEDT. I doubt whether any embroidered flannel has been imported for 30 years. I have no information concerning it.

PARAGRAPH 383—EMBROIDERED FLANNEL.

The CHAIRMAN. The total paragraph, including everything in it, had only \$72,000 imports, and the Government figures the ad valorem rate on the whole paragraph as 82 per cent, so that the paragraph as it stands to-day is prohibitive, is it not?

Mr. KURSHEEDT. As I explained, that article is made altogether by domestic manufacturers. I do not think that the importers really know of its existence. In fact, a gentleman who spoke on Saturday said that these goods on the woolen schedule were used only when the fashions came in. I doubt if he knows that there is such an article in existence. At the same time, in preparing these schedules, the duties might be fixed so that this industry would be wiped out and those factories entirely closed.

The CHAIRMAN. Do you admit that the present rate is not competitive at all on these particular articles?

Mr. KURSHEEDT. I do not really know, because you can not have competition unless your competitor knows that such an article can be sold.

The CHAIRMAN. Well, there is none coming in.

Mr. KURSHEEDT. How is that?

The CHAIRMAN. Practically none of this particular article comes in.

Mr. KURSHEEDT. I have not known of any coming in within the last 30 years, and I have never seen the article in Europe. It is practically unknown to foreign manufacturers.

The CHAIRMAN. Have you any suggestion to make as to what would be a competitive rate?

Mr. KURSHEEDT. Well, I can not say until I know how the plain flannels and the other materials we use are to be assessed.

The CHAIRMAN. That is all.

Mr. KURSHEEDT. I am much obliged.

BRIEF OF THE ASSOCIATION OF AMERICAN EMBROIDERY & LACE MANUFACTURERS (INC.).

Paragraph 383, Schedule K, customs tariff law of 1909.—Webbings, gorings, suspenders, braces, bandings, beltings, bindings, braids, galloons, edgings, insertings, flouncings, fringes, gimps, cords, cords and tassels, ribbons, ornaments, laces, trimmings, and articles made wholly or in part of lace, embroideries and all articles embroidered by hand or machinery, head nets, nettings, buttons or barrel buttons or buttons of other forms for tassels or ornaments, and manufactures of wool ornamented with beads or spangles of whatever material composed; any of the foregoing made of wool or of which wool is a component material, whether containing india rubber or not, 50 cents per pound and 60 per cent ad valorem.]

JANUARY 27, 1913.

The COMMITTEE ON WAYS AND MEANS,
House of Representatives.

Mr. CHAIRMAN AND GENTLEMEN: In this industry we embroider upon the finest woolen fabrics, such as must necessarily pay the highest rates of duty. Therefore, in order not to discriminate against the domestic industry, the duty on woolen embroideries and laces under paragraph 383, Schedule K, should be assessed at a commensurate rate.

The rates to be levied upon these articles may best be determined after those upon the woolen fabrics, etc., are fixed.

Respectfully submitted.

ASSOCIATION OF AMERICAN EMBROIDERY AND LACE MANUFACTURERS (INC.),
N. W. KURSHEEDT, *President.*

PARAGRAPH 383—DRESS TRIMMINGS.

DRESS TRIMMINGS.

BRIEF OF IMPORTERS OF DRESS TRIMMINGS.

[Substituting a straight ad valorem duty for the present compound duty on dress trimmings under paragraph 383 of the tariff act of 1909.]

NEW YORK, *February 5, 1913.*

HON. OSCAR W. UNDERWOOD,
*Chairman Committee on Ways and Means,
 House of Representatives, Washington, D. C.*

DEAR SIR: The object of this brief is primarily not to secure a reduction of the present duty, but to recommend the substitution of a straight ad valorem for the present compound duty.

Dress trimmings containing wool to any extent whatever are dutiable under paragraph 383 of the present law, which reads as follows:

383. "Webbings, gorings, suspenders, braces, bandings, beltings, bindings, braids, galloons, edgings, insertings, flouncings, fringes, gimps, cords, cords and tassels, ribbons, ornaments, laces, trimmings, and articles made wholly or in part of lace, embroideries, and all articles embroidered by hand or machinery, head nets, nettings, buttons or barrel buttons or buttons of other forms for tassels or ornaments, and manufacturers of wool ornamented with beads or spangles of whatever material composed; any of the foregoing made of wool or of which wool is a component material, whether containing india rubber or not, 50 cents per pound and 60 per cent ad valorem."

STATEMENT OF THE CASE.

The compound duty of 50 cents per pound and 60 per cent ad valorem is the highest rate levied on dress trimmings of any material and the highest rate levied upon any article under Schedule K. Yet there seems to be less reason for imposing so high a rate on dress trimmings than there might be in the case of some other articles, and we beg leave to submit our reasons against the present compound duty.

SO-CALLED COMPENSATORY RATE A PROTECTION IN DISGUISE.

1. The specific rate of 50 cents per pound on dress trimmings is supposed to be compensatory for the duty on raw wool which enters into the cloth. Granting, for the sake of argument, that there should be a compensatory duty, as long as a specific duty is levied on raw wool, there can be no justification for a duty of 50 cents per pound. Even on cloth consisting wholly of wool the highest compensatory rate under the present law is 44 cents. This rate has been proven to be excessive by the report of the Tariff Board. In dress trimmings, however, wool enters to but a slight extent, the component material of chief value being the ornamental parts, such as beads of glass or metal, spangles, tinsel, silk² thread, etc. Such being the case, the compensatory duty, if anything, should be lower on trimmings than on cloths. Instead the rate is 50 cents on trimmings as against 44 cents on cloths.

The so-called compensatory rate of 50 cents being levied on the entire weight of the trimmings instead of on the woolen contents, it is virtually a duty on glass, gelatin, metal, and silk, and not on wool, and can not be justified even on protectionist grounds, since the present tariff law, drawn on avowedly protectionist principles, provides for no such specific rates on trimmings composed of those materials.

We attach sample of a dress trimming dutiable under paragraph 383, from which it will be seen that the weight of wool is about 22 per cent of the total, so that of the duty of 50 cents per pound 39 cents is levied on the spangles and other materials entering in the composition of the article and only 11 cents is properly chargeable to wool.

We are therefore justified in saying that the so-called compensatory duty is practically a disguised protective duty which is levied in addition to the ad valorem duty of 60 per cent.

WOOLEN TRIMMINGS PAY HIGHER DUTY THAN SILK TRIMMINGS.

2. Even from a protective point of view there is no justification for a compensatory duty in the case of an article like trimmings, in which the value of the wool is a negligible quantity (less than 1 per cent of total value), when there is no compensatory

PARAGRAPH 383—DRESS TRIMMINGS.

duty on trimmings in which silk forms the sole material or material of chief value, the duty in that case being a straight 60 per cent ad valorem. Yet yarn and thread of silk is subject to a much higher duty than that of wool.

3. From the point of view of a tariff for revenue and following the principle laid down by your committee, that articles of luxury should pay higher duties, it can not be argued that silk trimmings, which are an article of luxury and much more expensive than those of wool, should pay a considerably lower rate (60 per cent) than trimmings containing wool (50 cents and 60 per cent ad valorem).

EFFECT OF PROPOSED AMENDMENT ON REVENUE.

4. The value of the imports of trimmings containing wool in the fiscal year 1912 was only \$72,439, weighing 31,969 pounds. The removal of the specific duty, if unaccompanied by an increase in importation, would result in a loss in revenue of \$15,985. It is highly probable, however, that the loss would be more than offset by increased importations.

PROPOSED AMENDMENT OF PARAGRAPH 383.

We therefore respectfully recommend that the words "fifty cents per pound and" in the last line of paragraph 383 be stricken out, leaving a straight ad valorem duty at such a rate as your committee may deem wise.

Although we have no rate of our own to suggest, we heartily indorse the rate of 35 per cent ad valorem provided for in H. R. 22195 passed by the House of Representatives at the last session of Congress, and believe that it would result in a greater revenue for the Government and a reduction of the price to the consumer without injuring any domestic producers, since practically none of these goods are produced in this country.

Respectfully,

JULIUS LOEWENTHAL & Co.

Also representing C. Willenborg & Co., Kern, Loewi & Mendel, Ewing & Clancey, L. Mane & Co., Sundheimer Bros., Royal Embroidery Works, S. Katz & Co., B. Blumenthal & Co., Case & Co., Mills & Gibb, Max Mandel, G. Hirsch Sons.

[Inclosure.]

Exhibit (on file with Ways and Means Committee).—Fancy spangle trimming cost per meter 12.17 francs, or, at 19.3, \$2.35; duty, ad valorem, 60 per cent, \$1.41; specific, 50 cents per pound on 4½ ounces (which is the weight of 1 meter), 14 cents; total duty, \$1.55; total value imported, \$3.90.

Weight of spangles and beads, 3½ ounces; weight of wool, 1 ounce; value of spangles and beads, 100 per cent; wool, no value.

BRIEF OF THE BRAID MANUFACTURERS ASSOCIATION OF THE UNITED STATES OF AMERICA.

[Schedule "K," paragraph 383, covering braids, trimmings, etc., made of wool.]

NEW YORK, N. Y., *January 13, 1913.*

The duty assessed on these goods under paragraph above is 50 cents per pound and 60 per cent ad valorem, and we request that said rate of duty be maintained.

We make the above request on the ground that the goods covered by this paragraph are luxuries and that the above rate of duty will produce the highest rate of revenue and at the same time enable the domestic manufacturers to compete with similar goods manufactured in Europe.

As stated in our brief in connection with other schedules, the labor and expenses in manufacturing this class of goods in Europe are about one-third of what they are in this country. Our cost of material is about 40 per cent of our total cost. Therefore, the foreign cost of labor and expenses would be only one-third of 60 per cent of our total cost, which equals 20 per cent of our cost, thus making their total cost including material, equal to 60 per cent of our cost.

Their total cost landed, with 60 per cent duty added, would equal about 96 per cent of our cost, which puts us in a position to compete, without said rate of duty being prohibitive.

For above reasons we respectfully ask the maintainance of the existing rate on above goods.

PARAGRAPH 383—COACH LACES.

We also request that the language of this paragraph be amended by striking out the words "of which wool is a component material," and inserting in place thereof the words "of which wool is the component material of chief value."

The object of this change is to prevent the evasion of duty by the foreign manufacturer by putting a few threads of wool in an article which might otherwise be assessed at a higher rate of duty and thereby bring it in under this paragraph, in which a duty might be assessed at a lower rate than it would otherwise pay.

Respectfully submitted.

THE BRAID MANUFACTURERS ASSOCIATION OF
THE UNITED STATES OF AMERICA,
Per ALBERT T. WAITZFELDER,
HENRY W. SCHLOSS,
Committee.

COACH LACES.

COACH, CARRIAGE, AND AUTOMOBILE LACES AND GALLOONS.

BRIDGEPORT COACH LACE CO.,
Bridgeport, Conn.

Hon. OSCAR W. UNDERWOOD,
Chairman of the Ways and Means Committee.

I submit the following brief and accompanying indorsements of other manufacturers:

I am here in the interest of three of the four manufacturers of coach, carriage, and automobile laces or galloons of the United States. By referring to Schedule K, paragraph 383, you will notice all of the items are apparently common commodities consumed by the poor and the millionaire alike, but under the heading of galloons and laces in this paragraph coach, carriage, and automobile laces are imported.

Coaches and carriages are certainly luxuries of a higher class than diamonds, silk dresses, gloves, etc., not only on account of the first cost, but the maintenance of same. But these conveyances are a thing of the past; the limousine automobile has displaced them. My reason for referring to the limousine and not runabouts, touring cars, etc., is because the limousine is the only style of automobile in which our laces are used. It is a well-known fact that the limousine automobile (the cheapest at \$2,000 ranging up to six or seven thousand) is a luxury of the highest class and owned only by the very high-salaried and wealthy people.

Under the present duties these laces are being imported in large quantities and have preference over domestic laces offered at a lower price. The wife or daughter in picking out the color and style of trimming for the new limousine insists upon the imported materials for name only, even stating they are willing to pay a bonus for the imported (cite "Columbia" lavender and white show limousine). Now a reduction in the duties on coach, carriage, and automobile laces or galloons will not only be a loss of revenue to the Government, but a subsidy to the importer and a reduction in cost of the most extravagant luxury known. Is it not possible to remove these laces from paragraph 383 and insert them in a paragraph by themselves, as there is not another item in the entire list of imported articles in the same class?

These laces are made on special looms that can not be used for weaving any other kind of textile fabric, and are used especially for the upholstering trimming for closed carriages, coaches, and limousine automobiles, and are not and never have been used for individual consumption, as are all the other articles in paragraph 383, and by inserting same in a separate paragraph it will be possible to allow the duty to remain as it is at present, and even if the duty was raised it would be a hardship to no one and practically an income tax.

W. W. NARAMORE.

VOGT MANUFACTURING & COACH LACE CO.,
Rochester, N. Y., January 21, 1913.

BRIDGEPORT COACH LACE CO.,
Bridgeport, Conn.

GENTLEMEN: We understand from Mr. Schlegel that one of your firm is going to Washington next week to personally appear before the committee in regard to the reduction of duty on coach lace.

PARAGRAPH 383—COACH LACES.

We have taken up this matter with the Representative from this district, and are doing everything we can to oppose this decrease, and if we can aid you in any way to make your appearance before the committee of more weight we shall be glad to do so.

We believe that cooperation in a matter of this kind brings the best results, and we trust you will advise us if you feel that we can give any strength to your argument.

Awaiting your reply, we are, yours, very truly,

VOGT MANUFACTURING & COACH LACE CO.,
A. E. VOGT.

SCHLEGEL MANUFACTURING CO.,
Rochester, N. Y., January 20, 1913.

Mr. F. J. NARAMORE,
President The Bridgeport Coach Lace Co., Bridgeport, Conn.

DEAR SIR: Whereas the Underwood bill in its present form has scheduled a reduction on coach lace, an article of luxury upon which even the present tariff is low, and understanding that you will attend a hearing of the Committee on Ways and Means in Washington, with the hope of convincing and persuading the committee to let the present tariff remain as it is, we therefore herewith authorize you to represent us at this meeting.

Respectfully, yours,

SCHLEGEL MANUFACTURING CO.,
Per C. P. SCHLEGEL, *President.*

**STATEMENT BY VOGT COACH LACE & MANUFACTURING CO.,
ROCHESTER, N. Y.**

ROCHESTER, N. Y., *January 23, 1913.*

HON. HENRY G. DANFORTH,
224 House Office Building, Washington, D. C.

DEAR SIR: We desire to protest against the proposed reduction of the present duty on coach lace, which under Schedule K is now 50 cents per pound and 69 per cent ad valorem.

Under the new Underwood bill this article is scheduled for reduction from 20 to 30 per cent, to which we protest, for the following reasons:

Present price of coach lace is too low, for we must meet the price of German and French lace, which is made under the cheaper cost of labor prevailing in those countries, the making of broad lace being an industry in which France and Germany are famous.

Fifty per cent of the cost of American-made lace is labor, and yet coach-lace weavers are not paid as well as weavers of other goods requiring the same degree of skill.

The cheapness of imported lace hinders the development of this industry in the United States, there being only four manufacturers, none of whom make lace exclusively, and from our own experience we venture to say that investigation will show that none of these manufacturers have increased their facilities to any extent, whereas the consumption of lace has greatly increased within the last five years, through the increased use of the automobile.

Coach lace is not a necessity, being only used in the higher grades of automobiles, such as coupes and limousines.

As the term coach lace is very much misleading, we inclose herewith a sample to show you that this article is entirely foreign to the usual commodity known as lace.

We will greatly appreciate any effort you can make in the defense of home production, and will be very glad to supply you with any further information upon receipt of your request.

Very respectfully,

VOGT MANUFACTURING & COACH LACE CO.,
O. E. VOGT, *Secretary.*

PARAGRAPH 383—COACH LACES.

ROCHESTER, N. Y., *January 15, 1913.*HON. OSCAR W. UNDERWOOD,
Washington, D. C.

DEAR SIR: We are manufacturers of what is called coach lace, which is used for embellishing the interior of limousines.

The present duty on this is 50 cents per pound, and 60 per cent ad valorem, and even at this we have a great deal of competition from German, French, and English made laces. We understand that under your bill, the duty on these goods will be reduced from 20 to 30 per cent; if such is the case, it would practically kill this industry.

Inasmuch as coach lace is only used in high-grade coaches and limousines, and can only be bought by the wealthy, we think that rather than have this reduced, it should be increased, as it is nothing more than an extreme luxury, and really should not be classed in paragraph No. 383, Schedule K.

We would be very grateful to you for your opinion.

Respectfully, yours,

THE SCHLEGEL MANUFACTURING CO.,
C. P. SCHLEGEL, *President.*

CARPETS.

TESTIMONY OF CHARLES L. FETTERLY, OF THE KILMARNOCK TEXTILE MANUFACTURING CO.

The witness was duly sworn by the chairman.

The CHAIRMAN. You may proceed, Mr. Fetterly.

Mr. FETTERLY. Mr. Chairman and gentlemen of the Ways and Means Committee, I wish to present to you one of the weakest and possibly the smallest manufacturing ends of the wool business.

Previous to five years ago there was a rug made in Scotland, of which I show you a sample here [indicating] and which was never made in this country before that time. We attempted it with success. This [indicating] is the fabric that we make. This is received under a duty of 22 cents a square yard and 40 per cent ad valorem.

According to the bill which was up before the House, the Underwood bill, in section 389, the duty on the manufactured product was 30 per cent, whereas the wool we use in it is a better grade of wool than is used in regular ingrain in order to get the light color, and it comes under clause 2, so that in reality there was only 10 per cent difference between the duty on the raw stock and the manufactured product.

Under the present duty the Scotch people say—I have not been able to verify it on account of it coming in with other goods—that they have increased their sales over 100 per cent since we have started in business here advertising our fabric. That shows conclusively that the duty as it now stands is not prohibitive.

The CHAIRMAN. Under what paragraph is that?

Mr. FETTERLY. It is received under paragraph 389, triple ingrains.

We are paying now \$20 a week for our weavers. The Scotch people pay £2. Our overhead expenses at our factory costs, for instance, at the rate of 30 cents a square foot per year for the rent. Fifty per cent of the price is the wool that is in the fabric, and 25 per cent represents the labor. The other 25 per cent consists of overhead expenses, the cutting of cards, which costs us \$80 on an average for every design we get out, and allowing 6 per cent on the money that we use there is a very small leeway for profit.

Since we began business in 1907 we show an undivided profit of \$11,000 on \$50,000 invested. If the duty was put through at the rate of the last bill it would be utterly useless for us to try to compete with the Scotch manufacturer, who gives us now all we want to do to compete with him.

The CHAIRMAN. It would be rather difficult to make a separate paragraph for that particular rug.

Mr. FETTERLY. According to the Philadelphia port of entry, the appraiser says that should come under paragraph 391; that he has received shipments under paragraph 391, and because he put it under that schedule and appraised it that way they ceased to send it that

PARAGRAPHS 384-394—CARPETS.

way and put it under the ingrain, and despite the fact that paragraph 391 says "carpets of every description, woven whole for rooms, oriental rugs, etc." We use just as much wool in this fabric as they use in chenille Axminsters. We use $3\frac{1}{2}$ pounds to the square yard.

Mr. HILL. What is the proportion of the value of the wool to the value of the rug?

Mr. FETTERLY. Fifty per cent.

In reality there is less protection for us against competition than there is for the Wilton, Axminster, or any other line of fabric.

The CHAIRMAN. How large is the consumption of that class of goods?

Mr. FETTERLY. The consumption so far has been very small, because we have just been working up a market for it. It is something entirely new for the average householder.

The CHAIRMAN. What are the imports?

Mr. FETTERLY. The imports are about \$100,000. We have been selling about \$100,000. It is very small to consider comparatively, but it means putting us out of business if the tariff is not changed.

The CHAIRMAN. I will make a suggestion to you, though I do not know whether we will adopt it or not. This article is now classed in ingrains, with a 30 per cent rate. You want to get it under paragraph 391, where we have a 50 per cent rate. I suggest that you figure on how that can be changed to include that rug. I do not say we will do it, but we will consider it if you will write us a letter and give us the amount of imports and exports and the language you think is necessary to make the transfer.

Mr. DIXON. You have made a suggestion along that line in your brief?

Mr. FETTERLY. Yes, sir; I merely suggested we had to have 30 per cent to cover additional expenses over whatever is the price of the raw wool.

The CHAIRMAN. But you do not give the language of the phrase you desire?

Mr. FETTERLY. No, sir; I left that for the committee.

Mr. RAINEY. It is principally the difference in labor?

Mr. FETTERLY. It is principally the difference in labor; yes, sir.

Mr. RAINEY. Here you pay \$20 a week for making similar rugs?

Mr. FETTERLY. Yes, sir.

Mr. RAINEY. And over there in Scotland they pay £2 a week?

Mr. FETTERLY. Yes, sir. I have that from fully a dozen weavers we have hired direct over there—probably the first job they had.

Mr. RAINEY. You hired Scotch weavers and brought them over?

Mr. FETTERLY. No, sir; we do not bring them over.

Mr. RAINEY. No, of course, you would not do that; but they come over here?

Mr. FETTERLY. Yes, sir; and are glad to be employed in the same line of work.

The CHAIRMAN. I would like to have a suggestion from you as a manufacturer when it comes to a change of language, because presumably the manufacturer knows the language of the trade better than this committee does.

Mr. FETTERLY. I shall furnish you with that information.

PARAGRAPHS 384-394—CARPETS.

The witness furnished the following brief:

WASHINGTON, D. C., *January 27, 1913.*

HON. OSCAR W. UNDERWOOD,

Chairman Committee on Ways and Means, House of Representatives.

SIR: The Kilmarnock Textile Manufacturing Co. started in 1907 to make a rug which was previous to that date made only in Scotland. To-day there are seven firms making similar rugs, employing approximately 1,000 people. This was made possible under the tariff act of 1909, which calls for a duty of 22 cents per square yard and 40 per cent ad valorem. The average wage paid by us is \$18 to \$20 for men and \$9 and \$12 for women, depending on three-quarter or full time.

Our greatest competitors are the Scotch, and they claim that, owing to our making a market for the goods, they have increased their exportations to America 100 per cent since 1909. We can not give the amount of importations because our grade of goods is included with other goods. The duty paid at the present, as stated above, is 22 cents per square yard and 40 per cent ad valorem, and this duty is not prohibitive, as more goods are imported into the country than ever before.

If the duty should be materially reduced we would be compelled to discontinue business.

For your consideration we submit Exhibit A, of Scotch manufacture, which costs to land, duty paid, \$2.30 per yard, and Exhibit B, our manufacture, which costs to make, \$1.88 per yard.

We would respectfully ask that paragraph 15, page 4, of Schedule K, be made to read "on triple ingrains, etc., the duty shall be 60 per cent."

Any less duty than this would work great hardship to us and would absolutely compel us to discontinue business and thus throw out of employment all of our work people.

Unless the duty on wool and woollen yarns is materially reduced we doubt whether a duty of less than 60 per cent ad valorem would save our industry, which is new to this country, from destructive Scotch competition.

Respectfully submitted.

KILMARNOCK TEXTILE MANUFACTURING CO.,
CHARLES L. FETTERLY,

Secretary and General Manager.

BRIEF OF McCLEARY, WALLIN & CROUSE, AMSTERDAM, N. Y.

AMSTERDAM, N. Y., *February 19, 1913.*

HON. OSCAR W. UNDERWOOD,

Chairman Ways and Means Committee, Washington, D. C.

SIR: We wish to submit to you some figures showing the wages paid for skilled labor here and in England and Scotland in the carpet and rug industries, as follows:

BRIEF OF JOHN C. UHRLAUB, NEW YORK, N. Y.

NEW YORK, *January 14, 1913.*

The WAYS AND MEANS COMMITTEE,
Washington, D. C.

DEAR SIR: As a large importer of floor coverings from the Orient, I wish to present to you people the unnecessary difficulties which are caused by the present method of levying the customs duties in this country.

We are paying to-day 40 per cent ad valorem and 10 cents a square foot. Other countries in Europe are paying duty on Oriental rugs per 100 pounds. I do not wish to discuss whether the duty is too high or too low. I merely wish to call your attention to the fact, that an ad valorem duty gives a great deal of chance to dishonest and unscrupulous importers. I am convinced that to-day the Government does not obtain more than 60 per cent of the duties which it should levy, for the simple reason that the most expensive rugs by a great many firms are not invoiced at their true value. This gives a better chance to do business to people who are less scrupulous than others. It would be a very easy way to compute how much the present duty would amount to per hundred-pound weight, and, if necessary, add an extra 25 per cent to the value on duty so obtained and do away with the terrible nuisance of having to figure out the square feet and square inches on each single rug, which, considering the class and type of employees we importers have to work with in the Orient, the loss of time, etc., amount to a great hardship to all of us importers. In addition to this, we are losing at present an immense amount of trade with Canada, Mexico, and South America, which countries undoubtedly would buy very heavily in the New York market if we importers would have from the Government the same facilities as the countries, for instance, Germany and Austria have. That is, in Germany every importer can obtain a bond for the duties which he might have to pay during a given period, and by paying a small salary per month to a customhouse officer his own place of business is made a Government bonded warehouse, from which he can export without having to pay duty to any country in the world. He only pays duty on goods sold for home consumption at the end of each period—3, 6, or 12 months. All the goods in his place of business are weighed and for any loss of weight he has to pay the proportionate amount of such loss in cash right away. The Government permits him to break packages and sell, if necessary, one or more rugs out of each bale. He can have the

PARAGRAPHS 384-394—CARPETS.

rugs cleaned or washed or otherwise manipulated and only is responsible for duty payment on any loss of weight which might have occurred in thus handling the rugs, and of course has to pay the full duty on each rug which is sold for home consumption.

The appraisal of oriental rugs is one of the most difficult things in the world to do correctly. The Government has no salaries large enough to pay to a real expert who could appraise oriental rugs within 10, 20, or even 50 per cent. A man who could do that would easily find a salary of \$25,000 a year, and such men are more than rare. The salary, such as the Government is paying to its appraisers, around \$3,000 per annum, would never find a man with sufficient technical and commercial knowledge to place even a remote value on any ordinary shipment of oriental rugs.

I would, therefore, strongly recommend to abolish present ad valorem and square-foot duty, and in its stead place a duty of the same or even a higher rate of so many dollars per hundred-pound weight. It would be a great economy to the Government, as it would do away with all the different salaries for expert appraisers. Each shipment which should come into any port of entry could simply be put on the scales and weighed, and it might be possible to arrange for a drawback on reexports of such goods to South American countries, to Mexico, and to Canada.

If the committee should see fit, the writer would be very glad to come to Washington and explain the matter in detail. I have recently been appointed delegate to Washington by the American Chamber of Commerce in Constantinople for the Levant. I am an American citizen of German origin, but have been a citizen of this country for about 20 years.

Hoping to see my letter favorably considered, I remain,

Respectfully, yours,

JOHN C. UHRLAUB.

PARAGRAPH 395.

Whenever, in any schedule of this act, the word "wool" is used in connection with a manufactured article of which it is a component material, it shall be held to include wool or hair of the sheep, camel, goat, alpaca, or other animal, whether manufactured by the woolen, worsted, felt, or any other process.

This concludes the hearings on Schedule K.

SCHEDULE L.
SILKS AND SILK GOODS.

SCHEDULE L.—SILKS AND SILK GOODS.

COMMITTEE ON WAYS AND MEANS,
HOUSE OF REPRESENTATIVES,
January 13, 1913.

The committee met at 10 o'clock a. m., Hon. Oscar W. Underwood in the chair.

Present with the chairman: Messrs. Harrison, Shackelford, Kitchin, James, Rainey, Dixon, Hull, Hammond, Palmer, Payne, Dalzell, Hill, Needham, Fordney, and Longworth.

The CHAIRMAN. The committee will come to order.

Gentlemen, we have two schedules to-day. The first is Schedule D, wood and manufactures of. We would like to dispose of this schedule this morning, and then take up Schedule L, silk and silk goods, this afternoon.

PARAGRAPH 396.

Silk partially manufactured from cocoons or from waste silk, and not further advanced or manufactured than carded or combed silk, thirty-five cents per pound.

See American Silk Spinning Co., page 4516; F. E. Kip, page 4529.

RAW SILK.

MEMORIAL OF THE ITALIAN CHAMBER OF COMMERCE IN NEW YORK.

RAW SILK AND SILK WASTE—SILK MANUFACTURES.

HON. O. W. UNDERWOOD,

Chairman of the Ways and Means Committee, Washington, D. C.

SIR: The Italian Chamber of Commerce in New York, in line with the study undertaken on the revision of the present tariff, according to the criteria of a proper adjustment of the rates on the various commodities, consistent with the necessities of American industry, the stimulus of trade, both domestic and with foreign countries, the avoidance of privileged class legislation, the encouragement of American labor, and the needs of providing revenue without fiscalism, the necessity of maintaining healthy competition and preventing monopoly, and above all the protection of consumers and the amelioration of their condition by reducing the high cost of living, respectfully submits the following recommendations regarding articles included in Schedule L, silk and silk manufactures, which it hopes will be favorably considered by this honorable committee.

Raw silk and silk waste.—The United States is now the largest silk-consuming country in the world and is also one of the largest manufacturing centers, especially for the cheaper silk productions, the use of which American silk manufacturers have helped to make in our country more popular than in any other.

The value represented by silk manufacturers, according to the census of 1909, was of \$196,911,667 against \$133,288,072 in 1904. Establishments numbering to 852, representing an invested capital of \$152,158,002, using materials for a total cost of \$107,766,916, employing between salaried and wage-earning labor 105,238 men, receiving in wages and salaries \$46,097,361, using 97,947 of primary horsepower and 17,472,204 pounds of raw silk, give an idea of the importance of this industry in the United States, whose wonderful development, even in comparison with only five years ago, with an increase of about 48 per cent in the total value of products, of

PARAGRAPH 396—RAW SILK.

37 per cent in the number of establishments; of about 39 per cent in the capital invested; of about 42 per cent in the cost of materials used; of about 25 per cent in the number of wage earners, and of about 51 per cent in the amount of raw silk used, is another evidence of American industrial progressiveness, the more remarkable because of the fact that this industry depends for its raw material entirely upon foreign supply.

There is, in fact, no production of raw silk in the United States. The experiments undertaken at various times by the Department of Agriculture in order to introduce sericulture in this country have invariably met with failure.

It is a safe assumption that the United States will never become a silk-producing country so long as it can draw its material from countries like Japan, China, and southern Europe, where conditions of environment and labor are more favorable to this production than in the United States. The reason why silk raising never acquired a foothold in this country is mainly one of cost of labor, being here too expensive. Climatic conditions in this country are not altogether favorable to the raising of the silk worm, and the fact that mulberries, whose foliage furnishes the necessary food for the silk worm, are not found to any great extent, is a further and serious difficulty.

From the above-stated reasons the United States will continue to draw its supply of raw silk from the countries which have specialized in the production of this material and which are, in order of importance in supplying the American market, Japan, China, Italy, and France.

The importations of this indispensable raw material for one of the most conspicuous American industries show a constant tendency to increase, having amounted in the fiscal year 1911 to 22,379,998 pounds, valued at \$72,713,984, against 16,722,207 pounds, valued at \$70,229,518, in 1907. To these figures the importations of silk waste should be added, which from 1,950,474 pounds, valued at \$1,158,574, in 1907, increased to 4,122,226 pounds, valued at \$2,210,020, in 1911.

Both raw silk and silk waste are admitted in this country in exemption of duty and have always been on the free list for obvious reasons. Being the raw material indispensable to a great and growing industry, it is almost superfluous for this chamber to recommend, as it does, that it be maintained on the free list, where it has always been in the past.

Silk manufactures.—The prevailing idea that silk goods are luxuries accounts to a great extent for the high protective tariff maintained by this country on silk manufactures. While it is an undeniable fact that silks are not, as a rule, as indispensable to the masses as cotton or woolen manufactures, and that they represent mostly expensive articles, which can bear a reasonable amount of duty, it must nevertheless be recognized that certain lines of silk manufactures are not necessarily luxuries.

Among these is, for instance, the silk fabric used as covers for umbrellas, which no one will refute is a necessity. Silk is preferable to any other material in the manufacture of this article, because of its lasting qualities, as well as for other advantages, such as lightness, etc. No one will contend that a silk umbrella is not a luxury, but an article of common use. At present this fabric is taxed at the rate of 70 per cent, which is practically prohibitive, and should therefore be reduced in the interest of revenue, as well as in order to secure to the consumers in this country the advantage of better quality. This would be a good opportunity for Congress to do something for the protection of the people against "rainy days."

While it is certain that the imported silk manufactures represent, as a rule, articles of higher cost than the domestic, the former being the product of particular workmanship, in which the ability of the workman is a factor of primary importance, this should not constitute a reason why they should be burdened with duties which puts them beyond the means of the middle classes, and confines their use to the more fortunate. That prohibitive duties should be levied on all articles of value is not always a fair principle to be followed in the indirect taxation of the people, which taxation the tariff represents.

This principle is adhered to too strictly in the present rates assessed on silk manufactures, without regard to the usual exceptions to every rule. The fact that the importations of silk manufactures show a visible tendency to decrease, having diminished from a value of \$38,903,040 in fiscal year 1907 to \$28,858,008 in 1911, is an evidence of the necessity of an adjustment of the silk goods schedule to prevent the inevitable loss to revenue that indiscriminately high rates have caused, and to secure to the consumer the advantages of those improvements that may be attained in foreign manufactures before they appear in the domestic.

The last tariff revision radically altered the method of levying duty in many of the paragraphs of the silk schedule by substituting whenever possible specific for ad valorem rates, a principle which should be further extended.

PARAGRAPH 397—SPUN SILK YARN.

If the rates on certain silk manufactures of more popular use, such as cravats, etc., were lightened, considerable increase would be brought in revenue without appreciable prejudice to American manufacture, which, firmly established and specialized as it is in the production of the cheaper lines of silk goods, does not need at present the same measure of protection that it needed in its infancy, especially in view of the fact that the cost of production abroad has considerably increased of late years through higher wages, so that the difference under this item is not nearly so great now as it has been in the past.

In conclusion, this chamber, for the above reasons, recommends that the rates of duty on silk manufactures used especially in certain lines of popular consumption, and subject at present to the exorbitant duty of 70 per cent, which prohibits importation, be reduced to a more reasonable level.

Respectfully submitted.

[SEAL.]

LUIGI SOLARI, *President.*

G. R. SCHROEDER, *Secretary.*

PARAGRAPH 397.

Spun silk or schappe silk yarn, valued at not exceeding one dollar per pound, whether in singles, or advanced beyond the condition of singles by twisting two or more yarns together, thirty-five cents per pound; if valued at exceeding one dollar per pound, in the gray, in skeins, warps, or cops, if in singles or not advanced beyond the condition of singles by grouping or twisting two or more yarns together, on all numbers up to and including number two hundred and five, forty-five cents per pound, and in addition thereto ten one-hundredths of one cent per number per pound; exceeding number two hundred and five, forty-five cents per pound, and in addition thereto fifteen one-hundredths of one cent per number per pound; if advanced beyond the condition of singles by grouping or twisting two or more yarns together, on all numbers up to and including number two hundred and five, fifty cents per pound, and in addition thereto ten one-hundredths of one cent per number per pound; exceeding number two hundred and five, fifty cents per pound, and in addition thereto fifteen one-hundredths of one cent per number per pound; if valued at not exceeding one dollar per pound, in the gray, on bobbins, spools, or beams, if in singles or not advanced beyond the condition of singles by grouping or twisting two or more yarns together, on all numbers up to and including number two hundred and five, fifty-five cents per pound, and in addition thereto ten one-hundredths of one cent per number per pound; exceeding number two hundred and five, fifty-five cents per pound, and in addition thereto fifteen one-hundredths of one cent per number per pound; if advanced beyond the condition of singles by grouping or twisting two or more yarns together, on all numbers up to and including number two hundred and five, sixty cents per pound, and in addition thereto ten one-hundredths of one cent per number per pound; exceeding number two hundred and five, sixty cents per pound, and in addition thereto fifteen one-hundredths of one cent per number per pound; if valued at exceeding one dollar per pound, colored, bleached, or dyed, in skeins or warps, if in singles or not advanced beyond the condition of singles by grouping or twisting two or more yarns together, on all numbers up to and including number two hundred and five, fifty-five cents per pound, and in addition thereto ten one-hundredths of one cent per number per pound; exceeding number two hundred and five, fifty-five cents per pound, and in addition thereto fifteen one-hundredths of one cent per number per pound; if advanced beyond the condition of singles by grouping or twisting two or more yarns together, on all numbers up to and including number two hundred and five, sixty cents per pound, and in addition thereto ten one-hundredths of one cent per number per pound; exceeding number two hundred and five, sixty cents per pound, and in addition thereto fifteen one-hundredths of one cent per number per pound; if valued at exceeding one dollar per pound, colored, bleached, or dyed, on bobbins, cops, spools, or beams, if in singles or not advanced beyond the condition of singles by grouping or twisting two or more yarns together, on all numbers up to and including number two hundred and five, sixty-five cents per pound, and in addition thereto ten one-hundredths of one cent per number per pound; exceeding number two hundred and five, sixty-five cents per pound, and in addition thereto fifteen one-hundredths of one cent per number per pound; if advanced beyond the condition of singles by grouping or twisting two or more yarns together, on all numbers up to and including number two hundred

PARAGRAPH 397—SPUN SILK YARN.

and five, seventy cents per pound, and in addition thereto ten one-hundredths of one cent per number per pound; on all numbers exceeding number two hundred and five, seventy cents per pound, and in addition thereto fifteen one-hundredths of one cent per number per pound. In assessing duty on all spun silk or schappe silk yarn, the number indicating the size of the yarn shall be taken according to the metric or French system, and shall, in all cases, refer to the size of the singles: Provided, That in no case shall the duty be assessed on a less number of yards than is marked on the skeins, bobbins, cops, spools, or beams. But in no case shall any of the goods enumerated in this paragraph pay less rate of duty than thirty-five per centum ad valorem.

SPUN SILK YARN.

BRIEF OF THE AMERICAN SILK SPINNING CO. ON SPUN SILK (SCHAPPE).

NEW YORK, January 25, 1913.

HON. OSCAR R. UNDERWOOD,

Chairman Ways and Means Committee, Washington, D. C.

DEAR SIR: We respectfully submit for the consideration of your committee the following facts on spun silk (or schappe) yarns, Schedule L, paragraphs 396 and 397, and respectfully urge that the duties on same as assessed in the existing tariff be allowed to remain intact, for the following reasons:

1. The present duties are specific, with an ad valorem catch clause of 35 per cent. The specific duties having been carefully computed, have not averaged over 38½ per cent. The average total duty assessed on all imported spun silk being 36½ per cent. This is the lowest rate of duty assessed on any article of silk.

2. From a revenue standpoint for the Government, the importations have steadily increased, being as follows:

Year.	Pounds.	Foreign invoice value.	Duty collected.
1908.....	1,907,979	\$3,520,298	\$1,312,241
1909.....	2,232,854	3,450,843	1,311,512
1910.....	2,657,388	4,319,401	1,656,884
1911.....	3,155,879	5,554,358	2,069,553
1912.....	3,153,655	5,581,155	2,061,500

3. From a competitive standpoint, it is entirely too much so. There was manufactured in this country during the past year approximately 2,000,000 pounds of spun silk with an approximate value of \$5,000,000, several millions dollars being invested in plants, employing between 3,000 and 4,000 operatives.

4. The operation of the specific duty with the ad valorem catch clause has been found easy of administration by the customhouses, and has minimized the possibility of under valuation. The importations of spun silk relatively under specific and ad valorem clauses were as follows: During the year 1911, 60 per cent of the total importations specific, 40 per cent ad valorem. During the year 1912, 50 per cent of the total importations specific, 50 per cent ad valorem.

5. About 70 per cent of all imported spun silk (or schappe) is manufactured by a huge continental trust.

They manufacture in the lowest price labor countries on the continent, have a huge capitalization, and are combined as to the absolute dictation of prices, amount of output, division of territory, increase of machinery, purchase of raw materials, etc.

6. Japan, with its low-priced coolie and child labor, has been vastly increasing its production of spun silk, and this competition will be severely felt.

7. Any reduction in the present duty would not materially benefit the consumer, as the articles manufactured from same are mostly all high cost and luxuries, and are sold generally at fixed denominational retail prices.

PARAGRAPH 397—SPUN SILK YARN.

In view of these facts, and the all-important one that a lowering of the duty would absolutely mean a lowering of the wage schedule of our labor, and that the business is not as remunerative as it should be owing to the keen present European competition, and that of Japan in the near future, we respectfully urge your committee that the duties of the present schedule be retained.

All of which is respectfully submitted.

AMERICAN SILK SPINNING CO.,
Providence, R. I.
 M. C. MIGEL, *Treasurer.*

BRIEF OF THE STEWART SILK CO. RELATING TO SCHAPPE AND SPUN SILKS.

SCHEDULE L, PARAGRAPH 397.

The same petitioners who have asked for the abolition of duties on artificial silk would most respectfully petition the committee to abolish the duty on the above-named silks and for largely the same reasons, to wit:

That to the silk manufacturer they are raw material. The claim for a duty on these silks is that they are advanced in manufacture and should therefore be classed as manufactures of silk. The same argument could, with about as much reason, be advanced that a duty should be levied on raw silk, for it also goes through numerous manufacturing processes before the completed skeins are baled and exported to America to come in as raw silk, duty free. The great difference why one is free and the other dutiable at 35 per cent per pound is that the framer of all silk schedules, including the Morrill tariff, and since has been and is a spinner of these yarns and neither Republican nor Democratic legislators so far seem to have been able to eliminate or reduce the duty on these classes of silk, although until about 10 years ago there was only one concern spinning them in the United States, but during all these 40 years the American people have been compelled to pay tribute to this one concern.

At present there are only three concerns of any consequence who are spinners of schappe or spun silk and their total production per annum is probably something less than a million pounds. The imports of schappe and spun silk for the year ending June 30, 1912, amounted to 3,260,427 pounds, valued at \$5,754,074, and the duty collected was \$2,134,501. 20. Aside from a revenue basis, we would respectfully ask why should the American manufacturer and consumer be made to pay tribute to these three concerns? The abolition of the duties on these silks would permit a much larger use of them and would reduce the price of the manufactured goods to the American consumer and would increase the import of fabrics in which these silks are component parts, and thus contribute a greatly increased revenue to the United States Government, besides establishing a competition which does not now exist.

That there will be a determined and desperate effort made to prevent the free entry of these silks in any proposed changes in Schedule L is, we believe, absolutely certain, and for the following reasons:

If the committee will recall, the most exhaustive arguments brought to the committee on the 13th instant for the retention of the present rates on velvets and plushes were presented by Messrs. Cheney, Blumenthall, and Kipp, all of them manufacturers of velvets and plushes. The reason they are so anxious to have the present rates maintained, the reason they are so willing to pay the present duties on schappe and spun silk yarns, of which they are large users, is because they fear your honorable committee will investigate and ascertain the truth as to what the specific rates on plushes and velvets really mean when expressed in ad valorem terms. These rates are excessive and in many cases are actually prohibitive, and their effect has been to certainly minimize, if not to almost destroy former competition from abroad. It is because these rates are in many cases prohibitive that they wish them continued, for the collection of large amounts of revenue which would under lower rates of duty be collected by the United States is no part of their program. With the American market almost completely in their possession they are in a natural position where they can to a large extent control and exact prices from the ultimate consumer.

Referring to this subject of revenue, a few figures showing the amount of revenue derived from these articles previous to the McKinley bill, under an ad valorem duty of 50 per cent, would seem to prove, first, that the United States had no difficulty

PARAGRAPH 397—SPUN SILK YARN.

whatever in collecting duties upon an ad valorem basis, and secondly, that the importation of velvets and plushes have not increased as was asserted by some of the gentlemen before referred to:

Importations of velvets for the years 1889 and 1890 were.....	\$10, 478, 359. 73
Duty collected at 50 per cent.....	5, 239, 179. 86
Importation of plushes for the years 1889 and 1890.....	4, 864, 324. 06
Duty collected at 50 per cent.....	2, 432, 162. 03

As against these amounts of imports and revenues during the years stated, at 50 per cent ad valorem, the total duty received on these same goods for the year ending June 30, 1912, at specific rates of from \$1 to \$4 per pound was \$680,800.

It was asserted by one of the petitioners mentioned that only specific rates of duty should be levied upon plushes because under ad valorem rates huge quantities of imperfect goods, classed as "seconds," had been imported under the ante McKinley ad valorem rate of 50 per cent reduced prices of from 25 to 50 per cent. This is a gross exaggeration of the facts and we believe the United States Government is perfectly capable of ascertaining correct values and collecting the proper amount of duty under any ad valorem system. At any rate, no one can gainsay the fact that the duty collected by the United States Government on plushes during the years 1889 and 1890 was \$2,432,163.03, while for the year ending June 30, 1912, the duties collected on plushes and velvets only amounted to \$680,800.

Mr. Kip then proceeds to make this statement: "The framers of the Wilson bill realized this and made silk velvets and plushes specific, or rather, compound, and furthermore, for this very reason, in all subsequent bills these rates of duties have been made either compound or specific."

The facts are these: The Ways and Means Committee, who framed the Wilson bill, provided for a duty on velvets and plushes of 45 per cent ad valorem, and this rate remained in the bill as it passed the House.

This rate was an honest attempt on the part of the committee and the House to revise the tariff downward, the rate previous to the McKinley bill having been 50 per cent ad valorem.

Those who are familiar with tariff legislation during the past 20 years know the fate of the Wilson bill in the Senate and it was there these velvet and plush manufacturers were able to carry their point and substitute compound rates on velvets and plushes for the 45 per cent ad valorem rate enacted by the House.

The bill emerged from the conference committee with the high compound rates and became a law without the signature of President Cleveland.

That the compound rates have been practically retained in all bills subsequent to the Wilson bill is quite true, but the reason is too obvious to require explanation. Suffice it to say, they were political rather than technical.

The advalorem equivalent rates shown on the importations of velvets and plushes do not truly reveal the real facts, as only high priced goods can be imported and the Treasury statistics can of course deal only with goods that are actually imported. The rates on all low-priced velvets and plushes, were they to be imported, would reveal such enormous comparative ad valorem rates that the Treasury averages would have to be tremendously advanced.

We have tried to explain, and perhaps at too great a length, the true meaning of the plush and velvet duties because in the prohibition and high protection contained in the present rates is found the real reason these gentlemen named have urged the retention of present duties on schappe and spun silks. They will gladly continue to pay 35 per cent on these silks, which are raw material to them, if you will only not touch the rates on the manufactured article.

We would most strongly urge that schappe and spun silk be made free, that corresponding reductions be made on all articles on which these silks are a component part, and that all rates be restored to an ad valorem basis.

All of which is most respectfully submitted.

STEWART SILK CO.,
By JNO. W. STEWART, *President.*
(And others.)

PARAGRAPH 399—VELVETS, PLUSHES, ETC.

PARAGRAPH 398.

Thrown silk in the gum, if singles, fifty cents per pound; if tram, seventy-five cents per pound; if organzine, one dollar per pound; and if ungummed, wholly or in part, or if further advanced by any process of manufacture, in addition to the rates herein provided, fifty cents per pound. Sewing silk, twist, floss, and silk threads, or yarns of any description made from raw silk, not specially provided for in this section, if in the gum, one dollar per pound; if ungummed, wholly or in part, or if further advanced by any process of manufacture, one dollar and fifty cents per pound: Provided, That in no case shall duty be assessed on a less number of yards than is marked on the skeins, bobbins, cops, spools, or beams.

PARAGRAPH 399.

Velvets, chenilles, and other pile fabrics, not specially provided for in this section, cut or uncut, composed wholly or in chief value of silk, weighing not less than five and three-fourths ounces per square yard, one dollar and fifty cents per pound; weighing less than five and three-fourths ounces per square yard, but not less than four ounces, or if all the filling is not cotton, two dollars and seventy-five cents per pound; if all the filling is cotton, two dollars per pound; all the foregoing weighing less than four ounces to the square yard, four dollars per pound. Plushes, cut or uncut, composed wholly or in chief value of silk, weighing not less than nine and one-half ounces per square yard, one dollar per pound; weighing less than nine and one-half ounces per square yard, two dollars and forty cents per pound. Measurements to ascertain widths of goods for determining weight per square yard of the foregoing articles shall not include the selvages, but the duty shall be levied upon the total weight of goods, including the selvages. The distinction between "plushes" and "velvets" shall be determined by the length of the pile; those having pile exceeding one-seventh of one inch in length, to be taken as "plushes"; those having pile one-seventh of one inch or less in length, shall be taken as "velvets." The distance from the end of the pile to the bottom of the first binding pick shall be considered as the length of the pile. Velvet or plush ribbons, or other pile fabrics not over twelve inches and not less than three-fourths of one inch in width, cut or uncut, of which silk is the component material of chief value not specially provided for in this section, containing no silk except that in pile and selvages; if black, one dollar and sixty cents per pound; if other than black, one dollar and seventy-five cents per pound; if containing silk other than that in the pile and selvages; if black, two dollars per pound; if other than black, two dollars and twenty-five cents per pound; for each one-fourth of one inch or fraction thereof, less than three-fourths of one inch in width, there shall be paid in addition to the above rates, forty cents per pound. Woven fabrics in the piece, composed wholly or in chief value of silk, not specially provided for in this section, weighing not more than one-third of one ounce per square yard, four dollars per pound; weighing more than one-third of one ounce, but not more than two-thirds of one ounce per square yard; if in the gum, three dollars per pound; if ungummed, wholly or in part, three dollars and twenty-five cents per pound; if further advanced by any process of manufacture or otherwise, or if dyed or printed in the piece, three dollars and fifty cents per pound; if weighing more than two-thirds of one ounce but not more than once per square yard; if in the gum, two dollars and sixty-five cents per pound; if ungummed, wholly or in part, three dollars per pound; if further advanced by any process of manufacture or otherwise, or if dyed or printed in the piece, three dollars and twenty-five cents per pound; if weighing more than one ounce but not more than one and one-third ounces per square yard; if in the gum, two dollars and fifty cents per pound; if ungummed, wholly or in part, two dollars and eighty-five cents per pound; if further advanced by any process of manufacture or otherwise, or if dyed or printed in the piece, three dollars and ten cents per pound; if weighing more than one and one-third ounces, but not more than two and one-half ounces, and if containing not more than twenty per centum in weight in silk, if in the gum, seventy cents per pound; if ungummed, wholly or in part, or if further advanced by any process of manufacture or otherwise, or if dyed or printed in the piece, eighty-five cents per pound; if containing more than twenty per centum, but not more than thirty per centum in weight of silk; if in the gum, eighty-five cents per pound; if ungummed, wholly or in part, or if further

PARAGRAPH 399—VELVETS, PLUSHES, ETC.

advanced by any process of manufacture or otherwise, or if dyed or printed in the piece, one dollar and ten cents per pound; if containing more than thirty per centum, but not more than forty per centum in weight of silk; if in the gum, one dollar and five cents per pound; if ungummed, wholly or in part, or if further advanced by any process of manufacture or otherwise, or if dyed or printed in the piece, one dollar and twenty-five cents per pound; if containing more than forty per centum, but not more than fifty per centum in weight of silk; if in the gum, one dollar and twenty-five cents per pound; if ungummed, wholly or in part, or if further advanced by any process of manufacture or otherwise, or if dyed or printed in the piece, one dollar and fifty cents per pound; if containing more than fifty per centum in weight of silk or if wholly of silk; if in the gum, two dollars and fifty cents per pound; if ungummed, wholly or in part, or if further advanced by any process of manufacture or otherwise, or if dyed or printed in the piece, three dollars per pound; if weighing more than two and one-half ounces, but not more than eight ounces per square yard, and if containing not more than twenty per centum in weight of silk; if in the gum, fifty-seven and one-half cents per pound; if ungummed, wholly or in part, or if further advanced by any process of manufacture or otherwise, or if dyed or printed in the piece, seventy cents per pound; if containing more than twenty per centum, but not more than thirty per centum in weight of silk; if in the gum, seventy-five cents per pound; if ungummed, wholly or in part, or if further advanced by any process of manufacture or otherwise, or if dyed or printed in the piece, ninety cents per pound; if containing more than thirty per centum, but not more than forty per centum in weight of silk; if in the gum, ninety cents per pound; if ungummed, wholly or in part, or if further advanced by any process of manufacture or otherwise, or if dyed or printed in the piece, one dollar and ten cents per pound; if containing more than forty per centum, but not more than fifty per centum in weight of silk; if in the gum, one dollar and ten cents per pound; if ungummed, wholly or in part, or if further advanced by any process of manufacture or otherwise, or if dyed or printed in the piece, one dollar and thirty cents per pound; if containing more than fifty per centum in weight of silk, or if wholly of silk; if in the gum, two dollars and twenty-five cents per pound; if ungummed, wholly or in part, or if further advanced by any process of manufacture, or otherwise, or if dyed or printed in the piece, two dollars and seventy-five cents per pound. Woven fabrics in the piece, composed wholly or of chief value of silk, if dyed in the thread or yarn, and the weight is not increased in dyeing beyond the original weight of raw silk, if containing less than thirty per centum in silk, one dollar and twenty-five cents per pound; if containing more than thirty per centum but not more than forty-five per centum in weight of silk, one dollar and sixty cents per pound; if containing more than forty-five per centum in weight of silk, three dollars per pound; if weight is increased in dyeing beyond the original weight of raw silk; if weighing more than one-third of one ounce but not more than one ounce per square yard; if black (except selvedges), two dollars and twenty-five cents per pound; if other than black, three dollars per pound; if weighing more than one ounce but not more than one and one-third ounces per square yard; if black (except selvedges), two dollars per pound; if other than black, two dollars and seventy-five cents per pound; if weighing more than one and one-third but not more than one and two-thirds ounces per square yard; if black (except selvedges), one dollar and eighty cents per pound; if other than black, two dollars and fifty cents per pound; if weighing more than one and two-thirds but not more than two ounces per square yard; if black (except selvedges), one dollar and sixty-five cents per pound; if other than black, two dollars and twenty-five cents per pound; if weighing more than two but not more than eight ounces per square yard, and if containing not more than thirty per centum in weight of silk; if black (except selvedges), seventy-five cents per pound; if other than black, ninety cents per pound; if containing more than thirty per centum but not more than forty-five per centum in weight of silk; if black (except selvedges), one dollar and ten cents per pound; if other than black, one dollar and thirty cents per pound; if containing more than forty-five per centum in weight of silk, but not more than sixty per centum; if black (except selvedges), one dollar and forty cents per pound; if other than black, one dollar and sixty cents per pound; if containing more than sixty per centum in weight of silk, or if composed wholly of silk, and if having not more than four hundred and forty

PARAGRAPH 399—VELVETS, PLUSHES, ETC.

single threads to the inch in the warp; if black (except selvages), one dollar and fifty cents per pound; if other than black, two dollars per pound; if having more than four hundred and forty, but not more than six hundred single threads to the inch in the warp; if black (except selvages), one dollar and sixty-five cents per pound; if other than black, two dollars and twenty-five cents per pound; if having more than six hundred, but not more than seven hundred and sixty single threads to the inch in the warp; if black (except selvages), one dollar and eighty cents per pound; if other than black, two dollars and fifty cents per pound; if having more than seven hundred and sixty, but not more than nine hundred and twenty single threads to the inch in the warp; if black (except selvages), two dollars per pound; if other than black, two dollars and seventy-five cents per pound; if having more than nine hundred and twenty single threads to the inch in the warp; if black (except selvages), two dollars and twenty-five cents per pound; if other than black, three dollars per pound; if printed in the warp and weighing not more than one and one-third ounces per square yard, three dollars and fifty cents per pound; weighing more than one and one-third but not more than two ounces per square yard, three dollars and twenty-five cents per pound; weighing more than two ounces per square yard, two dollars and seventy-five cents per pound. But in no case shall any goods made on Jacquard looms or any goods containing more than one color in the filling, or any of the goods enumerated in this paragraph, including such as have India rubber as a component material, pay a less rate of duty than forty-five per centum ad valorem.

VELVETS, PLUSHES, ETC.

TESTIMONY OF SIDNEY BLUMENTHAL.

The witness was duly sworn by the chairman pro tem.

Mr. HARRISON. To which paragraph do you speak?

Mr. BLUMENTHAL. Paragraphs 397 and 399.

Mr. HARRISON. Please proceed.

Mr. BLUMENTHAL. I desire to save the committee's time in so far as it is possible, and to file my statement on behalf of the silk, velvet, and plush industry.

My purpose is to recommend the retention of specific duties, and the present schedule in paragraphs 397 and 399 of Schedule L—399 in so far as it refers to the silk, velvet, and plush industry.

The importations have grown since 1907 up to now about 40 per cent, being, respectively, \$2,500,000 for those years and about \$3,500,000 for the last fiscal year.

Mr. HARRISON. Covering which classes of articles?

Mr. BLUMENTHAL. The particular items I am speaking of are pile fabrics. The pile-fabrics division of paragraph 399 of Schedule L is what I am speaking of.

The growth of the domestic industry has been possibly slightly faster than the growth of importations. We have, therefore, in this line really competitive tariffs. This tariff at the same time brings a liberal revenue to the Government, not only on the importations, but on the materials which enter into the home product, materials which are largely dutiable; and, lastly, all of these duties are assessed upon silks, velvets, and plushes, luxuries in a very broad sense.

I take it to be the purpose of these hearings to discover the extent to which, in the minds of those most interested in the schedules under discussion and familiar with their application, whether they be producer or consumer, the various rates of duties levied have permitted

PARAGRAPH 399—VELVETS, PLUSHES, ETC.

the industry to progress in this country here, and while permitting such progress to allow the consumer to enjoy the opportunity of being served by the competition of foreign countries with our own. If, indeed, the consumer has had such an opportunity, as shown by steadily increased importations in any one line of manufacture, and if at the same time the industries have broadened with the growth of the country, then I believe it can be assumed that the schedules under which this was possible belong in the class which you, Mr. Chairman, term competitive tariffs. I believe that the silk, velvet, and plush industry—that is to say, the production in this country of pile fabrics such as come under Schedule L—has grown under such a competitive tariff. Manufacturing its products largely from silk yarns spun abroad, upon which it pays a duty varying from 35 per cent to 50 per cent, being compelled for many of its cotton yarns to resort to foreign spinning, upon which there is a duty ranging from 35 per cent to 50 per cent, and competing, on the other hand, with foreign cloths similar to its own, of which about two-fifths were subject to only 45 per cent duty, and the entire importations only subject to 53 per cent during the fiscal year ending June 30, 1912, it can readily be conceded that it has very little protection at all on whatever the value of raw materials entering the composition of its fabrics is.

To illustrate this point and to take an arbitrary figure: Assuming that the cost of raw materials in a fabric is 50 per cent, that the cost of labor varies from 20 per cent to 25 per cent, and that the cost of overhead charges varies from 20 per cent to 25 per cent, then you will agree that we have not more than 15 per cent protection on one-half the value of the foreign cloths, and we have not more than 50 per cent protection on the other one-half of the value of foreign cloths. Allowing, however, that our labor cost varies from 100 per cent to 200 per cent above foreign labor cost, and in view of the fact that overhead charges are different, almost in similar proportion to those ruling abroad, it can be seen immediately how clearly the international race is now between competitors of equal equipment and without any favors to the American manufacturer. Pile fabrics are so varied, not only in their composition, but in the treatment they receive by the requirements of an ever-changing fashion, that scarcely any year goes by without the introduction of new creations which for the moment meet the immediate dictates of a fickle demand and become the temporary staple of the day. By this very fickleness, however, productions of relatively recent origin are depreciated in value to an enormous extent.

Merchandise which in one country is very desirable is frequently entirely unsalable in another, and, while the progress of the fashion idea is likely to reach across the borders of France into England, and vice versa, or from France into Germany, or from either country into America, it can be readily seen that the period of transition between the time when a product is most desirable and the period when it is not desirable at all is a relatively short one, and great fluctuations in value occur within almost incredibly short periods. The most astute buyer will find himself surprised at certain times by this unaccountable range of difference in the value which various countries and various holders of merchandise put upon their wares. With a most earnest desire to be just, it is scarcely possible for a Government

PARAGRAPH 399--VELVETS, PLUSHES, ETC.

official, whether here or abroad, to keep track of the real value—that is to say, the convertible value—of fabrics in these lines. Subject as they are frequently to changes in width, due to changes of the styles of hats and garments—subject as they are to a change in coloring; subject as they are to a change in finish and appearance—a very slight deviation from the new standard which dame fashion may set completely destroys any table of value that the merchant may have to guide him.

Added to these difficulties there are the technical problems which confront the manufacturers in this country. Although we have, by reason of the past encouragement, induced several of the largest foreign firms to transplant their ingenuity and experience upon our own soil—and we can count among our American manufacturers to-day the largest and most successful makers in France and some of the largest in Germany and England—the element of risk in establishing and conducting manufacturing centers in pile fabrics in this country is a very great one. To the writer's own knowledge, several eminent manufacturers, very largely successful abroad and equipped with financial means enabling them to incur the combat, have either after careful investigation over periods of many months of the circumstances here decided not to enter the arena, or in some instances have lost so much money after a short trial here that they withdrew and went back to confine themselves to their enterprises abroad where they still maintain the supremacy which they were not able to establish here. The importations of pile fabrics during the fiscal year ending July 1 last amounted, including duty, to about \$3,500,000. In the two years ending 1909 on the same date, they averaged \$2,500,000 per year. Accordingly, the importations have increased in five years to an extent of from 40 per cent to 50 per cent. The silk pile-fabric industry in this country has increased at a rate somewhat, but not very much, faster during this period. If the statement were made that during the same time the productions of pile fabrics in this country have doubled, I should be very much inclined to doubt the same.

Attention must be drawn to the quantity of merchandise which, due to the inherent difficulties, are classed as seconds, and also to the depreciated value of merchandise left on the manufacturer's hands because of late delivery and rejected by the purchaser. Unless productions of this nature are kept in a group with merchandise selling at a price above its cost of production, it is plain that they become parasites on the system of ad valorem classification.

Not the least factor of importance which deserves your consideration is the difference in conception of economical methods as they prevail abroad and as they are permitted to prevail here. Whether or no our aim in this country to indorse competition by preventing combination is in itself a wasteful one, or whether the conception of the foreign manufacturers is correct that by joining hands and eliminating duplication of effort and excessive risks they can sufficiently cut out the waste, can offer a more uniform basis of employment, and can provide the consumer with a better average price and a less fluctuating market value, it must be conceded that the combinations of foreign manufacturers have this power—that whenever, for the purpose of maintaining a uniform price, they find themselves loaded with

PARAGRAPH 399—VELVETS, PLUSHES, ETC.

merchandise which without inducement they can not sell to their buying public, they find only one chief outlet for such accumulations. The United States is apt to be the recipient of such accumulations, and the syndicates abroad accomplish the double purpose of maintaining their price at home and interfering with American production by sending their surplus here. But at present, if sent to this country, they meet a specific duty, and, whatever the low foreign dumping value may be, this country does not at this time further the plans by temporarily demoralizing its industry and temporarily aiding the plans of foreign syndicates.

At this point I wish to emphasize the desirability of a specific duty wherever it can be conscientiously and specifically applied.

A specific duty has, above all, the quality of being easily "appraised."

It naturally changes in response to the needs of the country in this respect: That whenever there is a depression in the markets of the world it becomes automatically high because of the lower values which are impending, and avalanches of goods dumped on this market are thereby prevented at the time when we most need protection here.

It becomes, on the contrary, automatically low as soon as the condition of the market here has forced up prices beyond a reasonable level and lowers thereby the barriers to foreign importations, because the percentage will be lower in the degree in which prosperity is reflected in high prices here.

It prevents the undervaluations and frauds which have freely been admitted as resulting from ad valorem duties in nearly every schedule. The reduction of the number of reappraisements since the specific duties have been applied on textiles in particular is so marked that everyone in the employ of the Government must be gratified with the continuance of specific duties and to the further development of them in the tariff which may be under consideration.

Lastly, the Government will receive the relatively highest revenues at times when importations fall off, that is, when values are low, duties are high, and depression exists, and it will be able to get along with a relatively lower revenue basis when prosperity reigns all over and the influx of importations grows because of the increasing demand here.

Largely due to the consumption in this country of velvet yarns, prices for spun silk yarns are at the present higher than since 15 years, excepting only a short period in the second half of 1907.

In spite of this fact, the price of most silk pile fabrics in this country is, upon the whole, to-day lower than at any previous period. For a long period competition in Germany and France made velvet manufacturing so unprofitable that a little over four years ago a syndicate was formed to control production, prices, and terms. I am informed that in the year following this formation two new factory buildings were built in Crefeld, the home of German velvets—the first new construction for velvets in over 10 years (I was told in 18 years). Battling as we do the serried ranks of the united foreign competition, containing in one body the foremost manufacturers of the various foreign countries (to the extent of 90 per cent of the looms of Germany, France, and England), we trust the committee

PARAGRAPH 399—VELVETS, PLUSHES, ETC.

will see the wisdom of sustaining above all a specific rate of duty, both on yarns and products, in so far as they may be concerned with the pile fabric industry, and that as far as it may be possible the present tariff schedules be left as they are. A frankly specific duty, without basket clause, is the only thing which would be preferable, if it can be applied properly.

Finally, I wish to recommend that the committee give heed to the wish that I have heard expressed by many business men as to the taking effect of any new tariff at a date not prior to December the 1st of this year. The uncertainty of what adjustment may be needed to any new tariff rates in so far as it effects raw materials, manufacturers, or importations, will seriously hamper the assertion of natural and healthy business conditions now prevailing. A knowledge on the part of merchants and manufacturers as to what is impending will insure employment for vast numbers otherwise kept waiting because of uncertain buying. Ample notice will give the contestants for business on both sides of the Atlantic time to map out their future course with the least injury to employees and consumers. The consumer after all in this country is eminently the factory producer who has been for many years apparently so much better paid that the factory has seduced workers away from the farm until the scarcity of farm labor and the increased cost of foods has in turn added to the cost of living while raising the income of the farmer. It can truly be said that to-day the factory prosperity is in the last analysis harvested by the producer of grains and foodstuffs, of fibers and minerals, by that much-pitied tiller of the soil now at last come into the fruits of tariff legislation and no longer the once "ultimate consumer" but now the final beneficiary of all intelligent industrial effort. If, therefore, it could be promised that a change in the tariff schedules will not go into effect until, say, December 1st next, and if the committee would voice such a recommendation now to the public, it will give an assurance for this entire year to all the wage earners, manufacturers, and merchants in the United States.

Mr. PALMER. You say the duties on plushes and velvets are now competitive?

Mr. BLUMENTHAL. I should think I could draw that deduction from the fact that I have taken the years 1907 and 1908 arbitrarily, because one was a year of great abundance and the other was one with a slight decline, and I have taken an average for those years, and that amounts to \$2,500,000, and, according to the records that were available to me, the importations during the previous year were slightly less, but during the past year were about \$3,500,000. I should make it as a statement to the best of my knowledge that the industry has not grown faster than that in this country, or about the same rate.

Mr. PALMER. You mean plushes and velvets, and yarns used in plushes and velvets?

Mr. BLUMENTHAL. I am speaking only of plushes and velvets. We do not spin yarns. I am talking particularly about the imports of manufactured cloth.

Mr. PALMER. Plushes and velvets?

Mr. BLUMENTHAL. Yes.

PARAGRAPH 399—VELVETS, PLUSHES, ETC.

Mr. PALMER. The imports being last year about \$2,300,000?

Mr. BLUMENTHAL. Duty paid \$3,500,000.

Mr. PALMER. Duty paid \$3,500,000?

Mr. BLUMENTHAL. Yes, sir.

Mr. PALMER. In other words, the duty was about \$1,200,000?

Mr. BLUMENTHAL. Yes, sir.

Mr. PALMER. The most of the imports are of the high-priced goods?

Mr. BLUMENTHAL. That is true, for various reasons.

Mr. PALMER. The high-priced goods are less competitive than the cheaper goods, are they not?

Mr. BLUMENTHAL. Yes, sir.

Mr. PALMER. And therefore the lower specific rates which are levied upon the cheaper classes of goods are more nearly prohibitive than the higher rates which are levied upon the higher class of goods?

Mr. BLUMENTHAL. Your inference is correct, but only in part.

Mr. PALMER. Then if we want to have a really competitive rate, properly balanced all through this paragraph, we should lower the duty on the cheaper articles and raise the duty on the higher articles, should we not?

Mr. BLUMENTHAL. I do not think those higher articles that now come in, in many instances, would be kept out, if the purchasers were willing to pay for them at any price.

Mr. PALMER. Then we would get more revenue by increasing the rates on the higher class articles?

Mr. BLUMENTHAL. You can not exclude the artistic qualifications of France and Germany in particular creations.

Mr. PALMER. They are very high-class goods and very expensive goods?

Mr. BLUMENTHAL. Yes, sir.

Mr. PALMER. Used by rich people?

Mr. BLUMENTHAL. There are other reasons. It is quite conceivable that whatever the rate of duty is under which goods are imported, the foreign manufacture will promptly adjust itself, particularly when that duty is a weight duty, by contriving merchandise which is light in weight, and thereby permit him to import. A lighter weight naturally means a closer fabrication; that is to say, a finer yarn, and thereby he enhances the cost, at the same time permitting himself to get into a new competitive range.

Mr. PALMER. He does not have the same incentive; his conditions are not the same with reference to the heavier goods, and he is permitted to get into wider market?

Mr. BLUMENTHAL. The consumption being very large, the competitive conditions in the country here have contributed considerably to reduce the cost. Besides, the composition of low-priced goods changes in this respect, or is in this respect different from the higher-priced goods, in that it contains a smaller quantity of silk and a larger amount of cotton.

Mr. PALMER. Whatever these facts may be, you agree generally with Mr. Cheney that, as a rule, the duties on high-priced goods are now competitive, and the duties on low-priced goods are prohibitive, practically speaking?

PARAGRAPH 399—VELVETS, PLUSHES, ETC.

Mr. BLUMENTHAL. I would not unconditionally agree upon that, for this reason, that when——

Mr. PALMER (interposing). Upon what condition would you agree to it?

Mr. BLUMENTHAL. If I may set before you my thought, I would say this, that when a specific duty is formulated, it is generally based upon the average importance of that division of the productions which are being chiefly bought by consumer and manufactured by manufacturer or imported by importer. Having obtained this average, and in the desire to handle the scheme so as to cover all possibilities, you naturally work toward both ends, and you create a specific duty that takes account of the productions of a higher nature and value, and you try to reach those of a lower classification, and in that sense you may arrive at a point, and naturally will, where apparently schedules of importations of a lower grade will be excluded, and the higher grades will likewise be excluded; therefore you might find that apparently the minimum rate or the minimum values are under a prohibitive duty simply because they are, in their nature, not likely to be the subject of importation.

Mr. PALMER. And not because the duty is high?

Mr. BLUMENTHAL. Not in every sense; and I qualify my remark, for the reason I have stated.

Mr. HILL. In regard to the point about which Mr. Palmer is speaking, taking a rate of duty on goods valued at \$5 a yard—and I am not speaking of any particular amount, but anywhere between \$5 and \$10—there would be no importations at \$5.50? They would try to get that under the \$5 mark, would they not?

Mr. BLUMENTHAL. Probably.

Mr. HILL. And the importations would come as close up to \$10, on the other hand, as they possibly could get them, because thereby they would get a lower ad valorem?

Mr. BLUMENTHAL. Yes, sir.

Mr. HILL. And that would force our statistics of importations to show that under the specific duty the higher values were more competitive and the lower were prohibitory, whereas, as a matter of fact, unless there was a bracket for every change of price, it would necessarily follow that that was so, and that there would be no importations.

Mr. PALMER. I understand that result is bound to happen in these various classifications, but there is a catchall clause in each of these sections, and in this section we are talking about, which provides that where the specific duty is under 45 per cent or the equivalent of 45 per cent, the goods imported shall pay 45 per cent.

Are not the largest importations under that section?

Mr. BLUMENTHAL. Approximately 40 per cent of the importations last year, according to the records that were available to me, came in under the catchall clause; that is to say, 40 per cent of all importations.

Mr. PALMER. Yet the catchall clause is only one of a great many classifications?

Mr. BLUMENTHAL. Perhaps——

PARAGRAPH 399—VELVETS, PLUSHES, ETC.

Mr. PALMER (interposing). Just stick to this a moment. Yet the catchall clause is only one of a great many of the classifications?

Mr. BLUMENTHAL. Yes.

Mr. PALMER. And 40 per cent of the imports come in under it?

Mr. BLUMENTHAL. Yes.

Mr. PALMER. And of course it is a high-priced article that comes in under the catchall clause? Is not that correct?

Mr. BLUMENTHAL. Perhaps you have the figures available to show each division of those various paragraphs which came in under the catchall clause.

Mr. PALMER. Is it not always true that the high-priced articles come in under the catchall clause?

Mr. BLUMENTHAL. Not necessarily. I should say this, that high prices on merchandise in our line are produced by two factors. One is when there is a relatively small amount of material and a very great amount of labor, such as in art work, where skill and time are an essential factor. The other instance is where there is a very large amount of material, conditioned upon very few picks to the inch and rapid production. These both might be high-price merchandise, and of course you can readily recognize how they would enter under a catchall clause, without violating the principle of specific rates of duty.

Mr. PALMER. The catchall clause covers articles where the specific is not equal—high enough to equal 45 per cent of the import price?

Mr. BLUMENTHAL. Yes.

Mr. PALMER. Where the specific is not high enough to equal that, it is because the imported price is high, is it not?

Mr. BLUMENTHAL. Yes, sir.

Mr. PALMER. Therefore the articles imported are high-priced articles?

Mr. BLUMENTHAL. Yes.

SUPPLEMENTARY BRIEF.

SHELTON, CONN., *January 20, 1913.*

For the better understanding of the causes which lead to it that a considerable portion, over one-third, of the pile fabrics imported under specific duties become dutiable under the catch-all clause, I want to draw attention to the fact that a specific duty is designed to cover not only the merchandise which has been heretofore produced and imported, but such as is likely to be the subject of future importations.

There is on the part of fashion changes every tendency and on the part of foreign manufacturers in meeting duty schedules every effort toward lighter weights. In fact it is necessary to so construct the clause that all such tendencies are safeguarded by a minimum rate of duty. The direct consequence is that while it has been sought to make the average specific duty equal to about 50 per cent, yet occasionally it runs up as high as 60 per cent, and, on the other hand, it may run down very easily to 40 per cent or 35 per cent. If the cloth is debased by having a less quantity of silk in it, its relative specific duty thereby becomes enhanced when translated into ad valorem. But the duty upon such a cloth will remain specific. If, on the contrary, the cloth is contrived in the other direction—that is, if it is made very much lighter in weight, it will vary from the central standard of 50 per cent in the downward direction, and while, if figured on weight, it will pay considerably less than 45 per cent, it is safeguarded by this catch-all clause. To illustrate that a heavy-weight cloth of low duty classification and a light-weight cloth of higher duty classification may both come in under the catch-all clause.

A plush cloth 36 inches wide and weighing from 11 to 9½ ounces and of \$1.75 foreign cost, would come under the catch-all clause.

PARAGRAPH 399—VELVETS, PLUSHES, ETC.

On the other hand, a velvet cloth 36 inches wide, weighing $3\frac{1}{2}$ ounces, and selling at \$4 per yard, foreign cost, would also come under the catch-all clause when entered under the present schedules.

Of course it is possible to create new groups, dealing with every conceivable combination of weight. Further subdivisions than now exist can be created if needed, and if the catch-all clause were completely eliminated, such further groupings would unquestionably be necessary to deal with all the importations and with American manufacturers equitably.

After all, it must be recognized that even though a specific duty may be 60 per cent, as applied to a very low-priced cloth (taking 50 cents as a basis, it would be 30 cents per yard), yet it must be noted that on cloths where an ad valorem duty on a foreign cost of \$4 per yard would yield \$1.60 per yard by specific and \$1.80 under the catch-all clause, it would mean six times the amount per yard, though apparently much lower in the rate of its duty than the 50-cent cloth pays. Therefore, although the percentage in the low-priced cloth might seem high, it is so only in percentage, amounting in money to very little. The high-cost cloths pay the high duty under the present schedule.

Respectfully submitted.

SIDNEY BLUMENTHAL & Co. (INC.),
SIDNEY BLUMENTHAL, *Treasurer*.

TESTIMONY OF F. E. KIP.

The CHAIRMAN. The next witness is Mr. F. E. Kip. We will yield you 10 minutes.

Mr. KIP. I represent the silk velvet and plush manufacturers of the United States, and beg to hand the committee our signed brief, which I desire to have printed as part of my remarks.

As in the time allotted I can not read all of this brief, I wish to emphasize a few cardinal points.

It is absolutely essential in this particular industry that the duties thereon be specific and not ad valorem, for the principal reason that the duties intended could not otherwise be properly collected, and the revenue to the Government would be materially decreased by any ad valorem rate of duty, owing to the immense amount of seconds produced and the utter inability to properly judge the values thereof.

The framers of the Wilson bill realized this and made silk velvets and plushes specific, or rather compound, although few, if any, of their other schedules were so made; and, furthermore, for this very reason in all subsequent bills these rates of duties have been made either compound or specific.

Our raw materials are spun and schappe silk yarns. The total duty collected thereon in the fiscal year 1911 was \$2,115,088. Over one-half of this, or approximately \$1,163,250, was paid by our industry alone.

We as importers and payers to the Government of over one-half of the total of all the duties collected thereon request that the duties on spun and schappe silk yarns be left specific, and emphatically insist that any ad valorem duty would be incapable of proper collection owing to the heavy weighting of the dyed yarns and the positive inability of any one, including the Government experts, to determine their values, full particulars of which are given in our brief.

We wish to call the committee's particular attention also to the fact that silk velvets and plushes and the spun and schappe silk yarns

PARAGRAPH 399—VELVETS, PLUSHES, ETC.

to make them are strictly articles of luxury and the rates of duties as they now stand are highly competitive, collecting the highest possible amount of revenue for the Government.

The importation of silk velvets and plushes and of spun and schappe silk yarns have steadily increased year by year. Any reduction of said duties will positively decrease the Government's revenues, for the reason that the decrease in rate will not be compensated by sufficiently increased importations to make up the loss of revenues. I will give proof of this if the committee so desires.

Recapitulating, I would say:

First. There are peculiar conditions in this industry which make it imperative that the duties should be specific, for this reason: The duties in the Wilson bill and all subsequent bills on silk velvets and plushes have been specific or compound.

Second. We desire the committee to take cognizance of the significant fact that notwithstanding our industry imports and pays over one-half of all the duties collected on spun and schappe silk yarns we desire said duties to be specific.

Third. Our industry—both the finished product and our raw materials—are luxuries, and, furthermore, are highly competitive, importations of both having materially increased year by year.

Fourth. The present duties will collect the highest amount of revenue, and any possible reduction will act to decrease the revenue.

We think from the facts submitted we have fully proven that the Government should be interested, from a revenue standpoint only, in maintaining the present specific rates of duties on paragraphs 396, 397, and 399—399 as far as it applies to silk velvets and plushes—of Schedule L.

I have stated why if you should make an ad valorem rate on silk velvets and plushes the revenue would be decidedly decreased.

I wish to state now that if you make a specific rate and reduce said rate from the present one you will also get a decreased revenue for the following reasons:

There is no trust or combination in our United States industry; on the other hand it is intensely competitive, so much so that not only are the lowest grades sold at actual cost but they are sold—in order to get business on better grades—at an actual loss; therefore, any ordinary reduction in the specific rates would not get importations and added revenues on those lowest grades.

On the other hand the domestic manufacturers can not under the present rates successfully compete on the very highest grades, where the labor cost is very high, and requiring also the very highest class of expert help obtainable only in limited quantities in this country. The consequence is that importations on these finest grades are increasing and will continue to increase under the present specific rates.

I can prove this by a few facts far better than by any statements of my own.

Our company being large pile-fabric manufacturers, and realizing the fact that we could not manufacture here under the present duties these grades of silk velvets and plushes and compete with France and Germany, decided to open a branch factory in France and make there and import said fine grades which we were unable to compete

PARAGRAPH 399—VELVETS, PLUSHES, ETC.

on in the United States; therefore, in 1911 we hired a factory building in Lyon, France, equipped it with the latest new machinery and ran it about a year to prove the proposition. In 1912 we bought a very large tract of land in the best manufacturing district of Lyon, France, and have built and equipped this new factory for the purpose of making there and importing to the United States these fine grades, and therefore we shall still add additional revenues in duties to the Government on our importations from France.

The gentleman before me raised a question. He stated that there was no trust in Europe on silk velvets and plushes. Now, I want to say that there is a trust in Europe; furthermore, that he knew that there was a trust in Europe. Everybody knows that. He may not have been the recipient of the rebates given by those people, but that he did not know that there was a trust in Europe is quite inconceivable, because everybody knows that. It has been existing for about four or five years.

I wish to read you a letter dated December 17, 1912, from my representative in Lyon:

LYON, FRANCE, *December 17, 1912.*

Mr. F. E. KIP, *New York.*

DEAR SIR: We have just come back from Paris and wish to give you a report which will thoroughly post you about the situation there.

The syndicate of velvet manufacturers has done so much pressing on the Paris buyers and has offered them so many advantages, according to what they, the buyers, say, that they, the buyers, have accepted to sign a contract binding them for three years with the syndicate of velvet and plush manufacturers. During this time they can not buy from anybody outside of the syndicate, excepting one manufacturer, Montelieu, who is tolerated for the same amount of business done with him in 1910.

He is the only manufacturer that they can deal with outside of the trust.

If they buy from anybody else, they lose the return rebate, which is fixed this year at 10 per cent.

Then it follows on with a lot of other matter which is not germane to this subject. I would be glad to leave this letter in the record if you want the whole thing.

The CHAIRMAN. Very well.

Mr. FORDNEY. I think it is better that that be put in the record, Mr. Chairman.

Mr. KIP. There are other things in there, but there is nothing so confidential that it can not be put in the record.

The CHAIRMAN. All right; it may go in the record.

The letter referred to is in the words and figures following, to wit:

LYON, *December 17, 1912.*

Mr. F. E. KIP, *New York.*

DEAR SIR: We are just coming back from Paris, where we spent a few days together with Mr. Rhodes, Mr. Rubiff, and Mr. Williams, looking round the trade.

You have probably been already informed by Mr. Rhodes of the result of a few visits we made with him, but now we are still more thoroughly posted about the situation in Paris.

The syndicate of velvet manufacturers has been so much pressing on the Paris buyers and has offered them so many advantages (according to what they say) that they have (the buyers) accepted to sign a contract binding them for three years with the syndicate of velvet manufacturers. During the time they can not buy from anybody outside the syndicate, except one manufacturer, Montelieu, who is tolerated for

PARAGRAPH 399—VELVETS, PLUSHES, ETC.

the same amount of business done with him in 1910. If they buy from anybody else they lose the return which is fixed this year at 10 per cent.

The first house we saw was Jean Jardel Chalrier & Co., with whom we had done some good business and who had told me last year that they would stick to us. Mr. Chalrier was in Paris and so I introduced Mr. Rhodes to him. He told us he was very sorry but as he had a large outlet he had to choose entirely either for the syndicate or for us. If he had seen any movement on our part before he might have possibly not accepted the syndicate's agreement, but he was aware of the fact that the mill was not built, that it would take quite some time before it is complete, and also some time before we could deliver some perfect goods to suit his trade. His business is a little better than the trade of Beach & Blum or of Mahler. According to his explanation the syndicate of velvet buyers who comprise about 23 to 24 houses agree that they would all accept the decision of the majority, but this was voted according to Chalrier by 16 yeas against 8 noes. The agreement is accepted but not signed by all the houses, but they have agreed as I say, to accept, and it is like if it was all signed.

The whole trouble comes from the fact that you did not decide quick enough. I can myself understand entirely your reasons, but the buyers did not see it in the same way and did not think it worth while to leave the syndicate for some house which was not ready to furnish them with a great many qualities and a certain quantity of goods. Last year we had the prestige of the purchase you had made of the ground. They knew very well that you could not have built right away, but they were expecting that something would come out in March or April. Then after came the question of leasing a mill, which thing they were bound to hear through the syndicate of manufacturers who has always been trying to get all the information regarding us. This question of leasing a mill made them think the question of remaining here all the time was not decided, and that you were only here, as the syndicate has always said, for a certain time to gather information.

Well, if you had now 100 looms running or nearly this, would not that happen? As it is, we shall have to work with a different trade. There is no doubt that we shall succeed, but the thing will be a little hard to start. After having seen Mr. Chalrier, we went to see Mr. Beach, of Beach & Blum, and Mr. Ach, of Ach firm, and afterwards all the big jobbing houses of Paris, with some specialists like a Mr. Henman, who is more in the cloaking trade. All these houses—a great many of which we had seen before I got the information—through some of my manufacturers and friends here, with some introductions to some buyers.

In all these houses it was the same story that they were very sorry; that they would rather do business with an independent house, but that for the present, we did not have enough production. Every house was afraid that if they were to stick to us that in a few months we would be bought by the syndicate and they would be boycotted then by the syndicate, who would not sell anything to them.

This is certainly a great point. In the case of Ulmer Sons, of Lyons, and some others who will stick to us, we shall always have to protect them and in case, which I do not think, you would make an agreement with the syndicate, this thing will have to be taken into consideration.

One of the houses, Bernheim Sons, told us that he might employ a few of our looms working for him. He could not buy the goods, but he could get work done on your looms. This is another point of which I do not think much. Some houses like Gaillit Guniot and J. Samuel & Co. told us that they will see in a few days that possibly we may be able to do something with them.

At the same time we saw a man named Ferratore, who is agent in Paris for Los An Et A. Giraud, the house which is represented in New York by F. Victor Achelis. The agent sees the exportation trade and the mi-gres. He believes he can do a pretty good business with our line and we shall have to see and make arrangements with him. We had also information from a man who is traveling in the Provinces all around France for Chalries' account and who offered his services for the Paris trade and from time to time to see the Provinces' trade.

As far as I can see in Paris there will be left for us the exportation trade, South America, Australia, and similar countries in which the business done in velvet is not very large, and some of the mi-gros smaller jobbing houses, and the makers up trade. This ought to be given to a man like this man Feuston or the other man from Challier. Some of these makers up will be seen also by some of our customers like Ulmo firm, who have decided to remain with us.

Coming back to Lyon, we wanted to make sure about the customers who will be true to us and we have seen yesterday some. Our biggest customers, Ulmo firm, will remain with us, but in order to meet his demand we shall have to make a low

PARAGRAPH 399—VELVETS, PLUSHES, ETC.

grade of schappe mirior, which is made largely in black and in color and also some cotton pile velvet with three qualities running in 45 centimeters from 1.50 to 2.25 francs net, it will be sufficient. Mr. Rhodes is coming back in one or two days and we shall take up the matter with him. This man who can use from us about 8 to 10,000 pieces of velvet has to be protected and we shall have to make all that we possibly can for him. We saw two or three more people with Mr. Williams, and this morning I saw a few more who are all willing to do business with us if we get the goods. They all want our line of silk pile, some schappe pile, and also some cotton pile outside of peluche and paune.

We are going to see some more people this afternoon with Mr. Williams, and will keep after the trade all the time. Outside of the Lyon people we shall have to see the jobbers of the various cities like Bordeaux, Marseille, Lille, etc. These people have no connection whatever with the syndicate. They buy from the Paris houses and will be very glad to buy direct from an independent house.

We shall have to send some circulars in a few days advising all these houses, of which I shall get a complete list.

Now, outside of these, I do not know or rather I am not quite sure if Lister is in the syndicate or not. Some people say he is; some say no. At all events if he was in the syndicate, as the duties on his goods are the same as those on your goods made in the States, you could possibly compete on your line of imitation furs on the Paris market. This would enable us to keep in touch with some of the Paris people.

The agreement is for plain goods, velvet and plush, but no fancies which the customers can buy anywhere they like. In this respect, Beach was telling us it might be a good thing to start a few patterns of striped velvet. This would keep some houses running and enable us also to remain with the trade in Paris. I give you this point as it was submitted to us.

Regarding the question of velvet, the customers, most of them, are claiming that the next season will not be extraordinary good, as there are plenty of stocks. This was the same story last season. I must say, however, that velvets are worn more and more now for millinery and for dresses.

Most of the hats worn are black velvet. As regards plushes, everybody says it will not be very good; velou paune is the great thing and the latest thing out. This means probably a revival of the mirois.

As regards colors: Next season will see more colors used; last season were black; white mostly in form. It looks as if colors are coming stronger. It is a little early to give the colors which will be in fashion, but in five to six weeks, we will be able to post you much better. As regards size of hats, they are mostly small now, velvet bonnets with aigrettes, but some big models are seen also in wide width. The customers are taking about 60 centimeters wide goods.

Trusting everything will soon be all right. I shall do my very best in all manner.

With my best wishes of the season, I beg to remain, dear sir,

Yours, very sincerely,

J. M. SAUE.

I will say further that the rebate by the trust was 5 per cent before this year, and this year it is 10, and the contract with the buyers is for three years.

I want to state that this is not only a combination and trust of all the manufacturers of silk velvets and plushes in France, but it is a combination of over 90 per cent of the manufacturers of silk velvets and plushes of France and Germany. They are all in one body, and heretofore their contracts were for one year, while now they are for three years.

I will now speak of the large buying customers of France, who probably buy of the French products fully 50 to 75 per cent of the output of the mills of the French manufacturers. These French buyers made a syndicate, because it was getting rather strenuous for them. They were being squeezed out by high prices of the trust, and possibly some of the buyers were out with the syndicate, and by the manufacturers' instigation, or by their own, they went into a buying syndicate, and my representative is speaking of those buyers to whom we had formerly sold our goods made in France. The

PARAGRAPH 399—VELVETS, PLUSHES, ETC.

buyers agreed, when they entered this syndicate, that the majority vote should carry with it whether they should buy outside of the trust or not, and if the majority vote of the members said to buy outside of the manufacturers' syndicate, they would buy of outside manufacture but if the majority of the members of the buyers' association by vote agreed not to buy of anyone but the trust, they would buy of the trust alone. That trust includes German manufacturers as well as French. If they buy nothing but from the members of the trust, then they receive the 10 per cent rebate. If they buy of anyone else, then they lose the 10 per cent rebate.

It is fair to assume that they make over the 10 per cent rebate that they give, and if we manufacturers in America could make 10 per cent on our product we would be tickled to death. I presume, however, they are going to make more profit. We know that they are going to make the 10 per cent. They could not give the rebate if they did not. These buyers do not get a rebate if they buy from anybody else.

Mr. FORDNEY. On the other hand, the dealer here purchasing from the domestic manufacturers would have to undersell them 10 per cent and get his profit out of that?

Mr. KIP. Absolutely. And furthermore, how do you know what the price is going to be, if they give that 10 per cent rebate?

There are lots of other reasons why. I do not want to take up the committee's time, but I wish to state here that I have been an importer. I have been in this business for over 30 years. I have been an importer from 1881 to 1893. I have been the agent—and that is well known in the market—of the largest foreign manufacturers in the world—Sir Titus Salt Bar't. Sons & Co., Saltaire, England; L. J. de Ball & Co., Lobberick, Germany; J. B. Martin, Lyon, France.

I know about silk velvets and plushes.

There is a class of silk velvets and plushes—there is a class of piece-dyed goods that, previous to the Wilson bill, came into this country in carload lots, so to speak, invoices of 30, 40, and 50 cases that were invoiced as seconds from 25 to 50 per cent off of the regular price. They were reappraised by the appraising department of the customhouse, and they were sustained as seconds for the reason that the goods were so uneven in finish. They are finished like a seal plush. I also cite these in my brief, but in just a few words I will reaffirm it. They go through a great many processes. In some of the processes they are tipped like the sealskins that are used for ladies' cloaks, and the tipping material is put on the ends of the pile and washed off a great many times. In some of these processes the silk is tendered or made towy, and thereafter it is utterly impossible to raise the pile evenly, and consequently such pieces when finished have the pile or nap slanting in different ways, and all such pieces must be made seconds. That might happen either through the water being impregnated with extra vegetable or mineral matter or some other reason unknown, but it is impossible to make the pile of such pieces come up regularly. To be a first the pile must be slanting only one way. If it is slanting in two or three ways, that piece is made a second. No man can tell it. It is utterly impossible.

PARAGRAPH 399—VELVETS, PLUSHES, ETC.

It is the same way with yarns, as I show in my brief, giving the particulars on page 3 up to page 8. The yarn is weighted. I give you a price list also from the trust, where we buy a lot of material, prices of the dyeing of schappe yarns, and you will see in an appendix to this brief prices last January, 1912, given in Germany.

We will take on the first page, there are 20 kinds of dyeing. One of those kinds of dyeing is not weighted. All the other 19 are weighted from 15 to 100 per cent. On page 2 there are 12 kinds of dyeing. One is not weighted and all the others are. On page 3 there are 22 kinds of dyeings, and every one of them are weighted all the way to 130 per cent.

The CHAIRMAN. You mean by "weighted" what the witness was talking about this afternoon—dynamited?

Mr. KIP. Dynamited; it is the same thing.

On page 4 I tell you exactly the conditions. Gray yarn, under the ad valorem duty—we will say it is worth \$2 a pound, or 20 francs; say \$2 a pound for argument's sake. I have got it here in francs—23 francs per kilo, if dyed black and weighted 25 per cent would, under any ad valorem duty, be invoiced at 18.50 francs per kilo. If it is weighted 50 per cent that gray yarn, under any ad valorem duty, has to be invoiced at 15.50 francs per kilo.

I will defy any expert, Government or otherwise, when a spun silk or schappe silk yarn is dyed and weighted, to tell the amount of weighting.

The CHAIRMAN. You could assess duty very much better if it did not have any weighting at all?

Mr. KIP. Certainly. He could not assess it correctly at all with the weighting on.

On page 6 I give the opinion of Mr. Maguire, of the New York Customhouse, who is one of the best examiners in the United States. He admits candidly that he can not even tell the count (or number) of the gray yarn, much less the grade of it.

I have told you here of the large importance of that material. As a matter of fact, in the fiscal year 1911, we imported ourselves, my firm—that is, we imported and paid duties, and the duties we paid to the Government on the importations of spun and schappe silk yarn were \$383,000, or, in other words, one-sixth of the entire duty collected by the Government, or, as pile-fabric manufacturers are estimated to pay one-half of the duty on spun and schappe silk yarn, my firm alone paid one-third of all the duty paid by the silk velvet and plush manufacturing industry, and when we ask a specific duty there must be something in it.

If you will just excuse me a moment, it was also stated that the firm of Scheibler & Co. were not in the trust. That was, I believe, afterwards withdrawn, and the witness stated that he did not know that they were in the trust.

I wish to state and affirm positively, and I defy any contradiction, that Scheibler & Co. are one of the members of the German and French trust, and the following large manufacturers are also members: J. B. Martin & Co., Lyons, France; Roche & Co., Lyons, France; J. L. de Ball & Co., Lobberick, Germany; Nadick & Co., Lobberick, Germany; Andrea & Co., Muhlheun, Germany; Von Beckaroth,

PARAGRAPH 399—VELVETS, PLUSHES, ETC.

Crefeld, Germany; Rossie Bros., Suchteln, Germany; King & Duhr, Suchteln, Germany.

BRIDGEPORT, CONN., March 7, 1913.

The WAYS AND MEANS COMMITTEE,
House of Representatives, Washington, D. C.

MY DEAR SIR: In accordance with the request of the committee that we furnish them with a copy of the European Velvet Trust agreement, we herewith attach same and ask to have it made a part of our remarks on this subject.

We wish to call the attention of Congress to the following points of the agreement with the customers:

First. This trust agreement runs for three years, January 1, 1913, to December 31, 1915.

Second. Ten French and 36 German (total 46) manufacturers are members of this combine. This, we are told, is 90 per cent of the entire industry in France and Germany. A number of these concerns are very large and immensely wealthy, and have international reputations.

Third. A rebate of 10 per cent is allowed end of each year, if the customers' books show that they have bought no goods outside the members of the combine, and if they have also kept up the prices fixed for re-sale to the retail trade.

Fourth. Wholesale prices are not only fixed but prices for re-sale to retail trade (see article C) are also fixed—in fact a trust of the worst possible type (international in its scope, composed of about 90 per cent of the entire silk velvet and plush industry of France and Germany) and one that would not be allowed to exist for one moment in the United States.

Respectfully submitted,

THE SALT'S TEXTILE MANUFACTURING CO.

BRIEF CONCERNING FRENCH SILK MANUFACTURERS.

[Translation from French copy.]

DECEMBER 6, 1912.

Confirming our conversation of to-day, we take note of the following propositions in behalf of the manufacturers noted on the following list:

This list that you have submitted may be changed each year by the two groups of manufacturers, or in other words, certain names added or detached. Notice will be given by registered mail, and we will hold exactly to the day. We take note that the French manufacturers on the list no longer pack and pay shipping expenses to Paris, but give us the following returns for packing and shipping expenses to Paris, returns payable every three months: 0.04 per meter on articles up to 50 cm. wide; 0.08 per meter on articles 51 to 81 cm. wide; 0.16 per meter on articles above 81 cm. wide.

Free sample collection in velvets or erect pile plush will not be given after February 1, 1913, excepting for the year 1913 velours and plush fancies may be sold with a premium of a free sample collection at the end of the year.

At the end of the year 1913-1915 the following progressive rebate calculated exclusively upon the total net amount of the business done during each of the years with the total organization of the manufacturers of velours of whose names are to be found on the list: 4 per cent for 20.001 francs; 5 per cent for 50.001 francs; 6 per cent for 100.001 francs., etc., up to 10 per cent.

This progressive rebate at the end of the year will only be due when we have taken integral note of all the orders delivered respectively with all the manufacturers in the list in 1913-1915 before December 31, and if we have fulfilled all the engagements relative to the disposition and to the delivery of the assortments sent before February 1.

This rebate will only be payable if we have fulfilled the engagements that we make below.

(A) We bind ourselves to divide neither all nor part of this rebate, whether to fellow tradesmen or customer. The rebate being for our personal advantage, we agree not to join with other concerns in buying together, that is to say, to take this means to get larger rebates than we have a right to have directly.

(B) We further agree to keep for ourselves the sum total of the rebate, whatever the amount may be.

(C) We agree equally to respect the price of retail sale that we have fixed on certain articles.

PARAGRAPH 399—VELVETS, PLUSHES, ETC.

The articles English cotton velvet, velvet and plush faconnes, upholstering plush, and collar velvet can be purchased outside of the group of manufacturers.

(F) Premium, 1 per cent for dating to be returned. An examination of all books at least once a year by two expert bookkeepers charged to do this. In case of a refusal to give all justifications, all advantages of the contract will be lost whether it be in the course of this or of the following years:

These engagements are made for three years, January 1, 1913, to December 31, 1915.

List of manufacturers.—Bickert Freres; J. B. Martin & Co.; Chaverot; Quinson; Riboud Freres; Roche & Co.; Christoph Andree; Giron Freres; Araud; Guillaume; Schwartz & Co., Crefeld; C. & H. Von Becherath, Crefeld; H. Vom Bruck-Söhne, Crefeld; Burkart & Erbsloh, Crefeld; Edm. Coty & Co., Crefeld; F. W. Deussen, Crefeld; C. Flaskamp & Co., Crefeld; M. de Greiff & Co., Crefeld; Hermann Eugen Jacobs, Crefeld; Michels, Kauffmann & Co., Crefeld; Keller & Essers, Crefeld; Mottau & Leendertz, Crefeld; Pelzer Freres, Crefeld; Pollems & Lingenberg, Crefeld; Scheibler & Co., Crefeld; Rud Skellekes; Just. Jacobiny, Crefeld; Gebr. Schaub, Viersen; Coenenzufges; Honnert Hostges; Seidenberki; Menger; Oehne, Berlin; J. L. De Ball & Cie. & Nachf., Lobberich; Escales, Zwerburgen; V. Gierlings, Dulken; Hoffmann, Proebstug; August Girmes, Oedt; Halzemann, Gladbach; Zehmann, Bernan; Duhr, Suchteln; Wm. Muthmann & Son, Kaldenkirchen; Huber & Co., Saarquemines; Gebr. Rossie, Suchteln; Scheulen & Amrath, Rheydt; Wurt, Pitteen.

Between (1) The two groups of manufacturers represented by Mr. Cabaud; (2) the group for the defense of the Parisian commerce of silk, ribbons, and velvets, represented by their office, Mr. Jean Raimon, A. Dreyfus, Jean & A. Lebrun of one part, and Mr. Agnellet, 73 Rue de Richelieu, of the other part; (3) the manufacturers, selling their articles, velvets and plushes, without rebates to a part of their customers, ask that their buyers do not sell below the price which they themselves sell to these customers; (4) the purchase price less the cash discount and the 4 per cent premium will be the minimum price for which they can be resold; (5) the members of the Parisian commerce and the manufacturers have nominated comptroller to inspect their operations. Each buyer must keep his books open to the disposal of the comptroller. (6) The arbitration tribunal is composed of two arbitrators, one chosen from the buyers and one chosen by the manufacturers or the member of the group, E. Bouton or Mr. Brach, or E. Giron or Mr. Millet. In cases of disagreement a third person, Mr. Drucreux, lawyer, of the court of appeals, 1 Rue de Gerisoles, or Mr. Mayer, 56 bis rue de Chateaudun. (8) If, during the contract extending from the 1st of January, 1913, to December 30, 1915, said contract existing between the members of the group and the two groups of manufacturers is to be rescinded, the parties wishing this must notify by registered letter one month before the 1st of December of each year.

BRIEF PREPARED BY THE SILK PLUSH AND VELVET MANUFACTURERS OF THE UNITED STATES FOR HEARING BEFORE WAYS AND MEANS COMMITTEE JANUARY 13, 1913.

[Schedule L, pars. 396, 397, 399. Spun-silk yarns and silk velvets and plushes.]

Mr. Chairman and members of the Ways and Means Committee, we, the manufacturers of silk velvets and plushes in the United States, come before you in a dual position—

First. As United States manufacturers, our finished product being silk velvets and plushes.

Second. As importers, our raw material being spun-silk and schappe yarns, practically all of which we import (it is estimated that the silk velvet and plush manufacturers of the United States pay between 50 per cent and 55 per cent of the total duty paid in to the Government on spun and schappe silk yarns).

We desire to place before you in as few words as possible the conditions relative to silk velvets and plushes, which make it absolutely essential that the duties thereon be specific and not ad valorem.

Many of the silk plushes used in the United States are piece dyed. A class of same known as silk seal plushes is used in large quantities to make ladies' cloaks, in imitation of real sealskin. Such goods to be "firsts" must not have the pile slanting two or three ways, but the pile must, throughout the entire piece, be standing all even and erect. These plushes are first dyed and then go through a great number of different processes—among others the pile is tipped (a dyeing material tipped on the ends of the silk) and washed off several times. During some of these processes something often goes wrong (either through the dyeing water being impregnated with extra

PARAGRAPH 399—VELVETS, PLUSHES, ETC.

vegetable or mineral matter, or from some other unknown cause), in which case, in some of these processes, the silk is tendered or made towy—and thereafter it is impossible to raise the pile evenly, and consequently such pieces, when finished, have the pile or nap slanting in different ways, and all such pieces must be made "seconds."

Previous to the Wilson and McKinley bills this industry was most chaotic. Entire invoices of 30, 40, or 50 cases, amounting to thousands of dollars, came in through the customhouse invoiced at from 25 per cent to 50 per cent off regular market prices, on account of being seconds for the above-mentioned faults made in finishing of the goods. Again, we wish to emphasize to you the fact that such seconds can not be told from firsts until each and every piece has been gone over yard by yard, and even then it is a matter of individual opinion.

Notwithstanding that in textiles nearly all the rates in the Wilson bill (1894) were ad valorem, silk velvets and plushes were made specific, or rather compound, in the said bill. Furthermore, the rates on silk velvets and plushes have, in all bills since the Wilson bill, been either specific or compound.

If you should, in the Underwood bill, adopt anything but specific rates, you will do great damage to the industry, and besides deprive the Government of considerable revenue, owing to the seconds and the uncertainty of collection due thereto.

The Payne bill's present specific duty on silk velvets and plushes has been very scientifically worked out and as same produces a duty which compensates only for difference in wages and expenses abroad and here; and, furthermore, as the importations thereunder have been large, giving the Government a considerable revenue on these articles of luxury, we respectfully urge that you retain said duty as it is to-day. If, however, in your judgment, you decide to alter these rates at all, we implore you, in this peculiar industry, not to adopt any rates other than specific rates of duty.

As large importers (it is estimated by experts that we, the silk velvet and plush manufacturers of the United States, pay 50 per cent to 55 per cent of the total duty paid) of spun and schappe silk yarns (our raw materials), we desire to place before you special reasons why the duties on said yarns should be continued as they are now, viz, specific:

Large quantities of these yarns are imported in the dyed state. Practically all of the black yarns are weighted in the dyeing from 10 per cent to 100 per cent. Now cotton, wool, or worsted yarns are not so weighted in the dyeing, these silk yarns being the only ones where this weighting is indulged in to this very large extent.

The value to-day of a medium quality of schappe silk yarn in French count or No. 200 2 is, in the gray, 23 francs per kilo, and under any ad valorem rate of duty it would be invoiced, if in the undyed state, at 23 francs. When dyed black, however, if weighted 50 per cent (and large quantities are so dyed and so weighted) the same quality would be invoiced at only 15.50 francs per kilo, plus the dyeing charge (which, of course, is nothing near the value of the silk). We give table of same as follows:

Quality, medium.

Count or number before dyeing, 200/2.

Market value in gray, per kilo, 23 francs.

Invoiced price, if shipped in gray, per kilo, 23 francs.

Invoiced price (under any ad valorem duty) when received in dyed state, 25 per cent weighted, 18.50 francs.

Invoiced price (under any ad valorem duty) when received in dyed state, 50 per cent weighted, 15.50 francs.

The above table shows at a glance that a spun or schappe silk yarn, worth in gray or undyed state 23 francs per kilo, if dyed black and weighted 25 per cent, would (under any ad valorem duty) be invoiced at only 18.50 francs per kilo, plus dyeing charge; worth in gray or undyed state 23 francs per kilo, if dyed black and weighted 50 per cent, would (under any ad valorem duty) be invoiced at only 15.50 francs per kilo, plus dyeing charge.

Now, we maintain that no expert is able to accurately determine the amount of weighting in said weighted yarns, and hence is unable to judge whether the value thereof is 15.50 francs or 18.50 francs.

We print at the end of this brief exact copy of price list, dated January, 1912, of the Circle of Dyers (or Dyers' Trust), of Crefeld, Germany, which we desire to have printed and made part of this record. From this price list we print the different dyeings for spun and schappe silk yarns, viz:

PARAGRAPH 399—VELVETS, PLUSHES, ETC.

DYEINGS OF SCHAPPE SILK YARN FOR VELVET AND PLUSH.

[From page 1 of said price list.]

You will please note that out of 20 kinds of dyeings only 1 is not weighted and 19 are weighted from 5-10 per cent up to 80-100 per cent.

We affirm positively and defy contradiction thereof that it is absolutely impossible for the best experts to tell from examination of these dyed and weighted spun or schappe silk yarns either the amount of weighting thereof, and consequently the correct value, or the count or quality of the yarn as it was in the gray before dyeing. Now, if we can prove this to your honorable board (and we know we can), you must see that the only rate of duty permissible is strictly a specific rate.

The present silk-yarn examiner, Mr. Maguire, of the New York customhouse, is acknowledged to be one of the best experts in this line in the country. We quote his testimony in the schappe silk yarn case, before the United States General Appraisers January 7, 1911:

By Mr. SHARRETT:

Q. Mr. Maguire, are you one of the United States examiners at the port of New York?—A. Yes.

Q. Do you pass on schappe silk yarns?—A. Yes, sir.

Q. Both—do you pass on both the undyed and the dyed yarns?—A. Yes, sir.

Q. Well, in examining the undyed yarns—the gray yarns—have you found gum in those yarns?—A. I do.

Q. Do you find that that gum is variable at all, the amount of gum in them?—A. Yes.

Q. What are the limits of variation?—A. Well, from 1 per cent up to about 15 per cent.

Q. Do you ever have occasion to determine the number of these yarns?—A. Yes; we have to determine them to classify them.

Q. In determining the number of a dyed yarn, would it be possible to figure back to what the number was in the gray from this dyed yarn?—A. My opinion is that you can't do it accurately; no.

Q. Can you tell how much gum has been boiled out of the yarn in the process of dyeing?—A. I couldn't tell. A chemist might be able to tell.

You will see from this that the best Government expert has to acknowledge that he can not tell, from weighted dyed yarn, even the number or thickness of gray yarn before it was dyed, much less the quality thereof.

The Salt Textile Manufacturing Co. have sent schappe silk yarns weighted 55 per cent to the best-known experts in this country, with request to test and report amount of weighting. Their reports all varied. Some made the weighting 18 per cent, others up to 30 per cent, but none higher than 30 per cent, whereas the yarn was actually weighted 55 per cent.

In the gray or undyed spun or schappe silk yarn there is left in the yarn from the spinning process a certain amount of gum. This gum is boiled off before the yarn is dyed. This process already changes the quality of the gray yarn somewhat. Then, to obtain these large amounts of weighting the yarns are loaded up to the utmost carrying capacity and the original character of the yarn is destroyed. We therefore assert positively again, and defy contradiction by anyone, that when a spun or schappe silk yarn is dyed and heavily weighted no expert can accurately tell either the original quality of the undyed yarn or the amount of the weighting thereof.

You might ask, under these circumstances, how did this industry operate when the duties on spun or schappe silk yarns were ad valorem? Relative to this we would

PARAGRAPH 399—VELVETS, PLUSHES, ETC.

say that our industry has been entirely created since 1893, and principally since 1897, during which time compound or specific duties have been in force. This is evidenced by the increased importations of spun-silk yarns:

Fiscal year.	Imported.	Foreign value in dollars.	Duty collected.
	<i>Pounds.</i>		
1893-94.....	427,438	\$719,390	\$251,785
1897-98.....	956,974	1,176,677	449,328
1900-1901.....	1,652,177	2,505,272	939,803
1908-9.....	2,232,354	3,450,843	1,311,512
1910-11.....	3,236,231	5,696,788	2,115,088

As we, the silk velvet and plush manufacturers, pay 50 per cent to 55 per cent of said yarn duty received, the Government has collected from us in 1911 revenue to the extent of \$1,163,250.

There are several single manufacturers of silk velvets and plushes in the United States who are paying per annum larger amounts of duty than the amount of \$251,785 collected in duties from all sources by the Government on spun silk and schappe silk yarns in 1894, when the silk velvet and plush industry started in this country.

From this you can see—and we wish you to please bear in mind the fact—that we are not United States spinners of yarns asking for specific duties to protect us, but we are the actual importers of at least 50 per cent of all of said yarns imported, and consequently large payers of revenue to the United States, and therefore when we ask for specific duties on these yarns (our raw materials) it should prove to you that in this particular industry nothing but a specific rate is permissible, and we do not believe there is any other way to protect the honest man against the dishonest one and to insure the Government's proper revenue.

Under the present specific duty the duty is assessed upon the weight of yarn as found at the time of importation, and consequently 1 pound of yarn imported in the dyed state and weighted 50 per cent would pay duty on 1½ pounds of yarn (and in addition thereto the cost of said dyeing), but we, as importers, would rather pay on dyeing materials as silk than to be confronted with the uncertainty—under any ad valorem rate—of dishonest importations, which it is utterly impossible to check or prevent. Besides, the specific rate of duty has a tendency to discourage these very heavy weightings, resulting in the consumer obtaining a finished product of greater merit.

Previous to the Payne bill the manufacturers of silk velvets and plushes and the United States spinners of spun and schappe silk yarns tried to work out a specific duty on these yarns, but were unable to work out an equitable one. This, however, was accomplished in the Payne bill, after much study and thought and after many conferences had been held by all parties interested, viz, manufacturers, importers, and United States spinners, and the result was the incorporation in the Payne bill of the present specific rate of duty on spun and schappe silk yarns. The United States manufacturers of spun and schappe silk yarns claim they must have the present Payne rates in order to exist, and we, as the largest importers and payers of duty to the Government on said yarns also request (subject to the duties on our finished product, viz, silk velvets and plushes, being left specific and not materially reduced) that the present specific duties on spun and schappe silk yarns be left as they are at the present time. If, however, in your wisdom you decide to change the rates in any way, we again implore you not to make said duties other than specific under any circumstances.

Recapitulating, we would say:

First. As manufacturers of silk velvets and plushes we insist—owing to the peculiarities of these goods, the great amount of seconds, and the inability of anyone to determine what a second is without examination of the entire piece yard by yard—that the specific duties be positively retained. Silk velvets and plushes are luxuries, and the revenue collected under present rates is only the same as under previous tariffs and only such as the Government should collect on a strictly revenue basis. Therefore we request not only that the duties on silk velvets and plushes be specific, but that the present rates of specific duties be adopted.

Second. Notwithstanding that we are importers and payers of duties to the United States Government to the amount of at least 50 per cent of all duties collected on spun and schappe silk yarns, paying duties in 1912 of approximately \$1,200,000, we realize

PARAGRAPH 399 —VELVETS, PLUSHES, ETC.

the utter impossibility of any ad valorem rate of duty collecting an honest rate or the rate stipulated by law, owing to the facts enumerated, namely:

The large amounts of said yarns imported in the dyed and weighted state.

The utter impossibility of even the best experts being able to judge the degree of weighting in said yarns, and being therefore also unable to accurately judge the value of said dyed and weighted yarns.

Therefore we consider that the only practical rates at all on spun silk and schappe silk yarns are the specific rates of duty.

As the present rates are needed on a luxury, both for the Government revenue and for the protection of the United States spinners (subject to duties on silk velvets and plushes also being specific), we strongly recommend that the present specific rates on spun and schappe silk yarns be retained in their present form.

Respectfully submitted by—

Frederic E. Kip, president the Salt's Textile Manufacturing Co., mills at Bridgeport, Conn., and Lyon, France, and signed by the following manufacturers of silk velvets and plushes in the United States, viz: Collins & Aikman Co., Thos. M. Doody, assistant secretary, mills at Manayunk, Philadelphia, Pa.; the Salt's Textile Manufacturing Co., Fred. E. Kip, president, Bridgeport, Conn.; Sidney Blumenthal & Co. VERBAND DER SEIDENFÄRBEREIEIEN CREFELD—FARBPREIS-LISTE FÜR DIE SAMMT-FABRIK.

BEDINGUNGEN—DIE PREISE VERSTEHEN SICH PER KILO ERHALTENES GEWICHT (KONDITIONSGEWICHT UNGULTIG).

Qualität.—Für alle Färbungen wird ein Minimalquantum von 500 Gramm, bei echten und alizarin echten Farben von 1.000 Gramm berechnet.

Die Aufgabe von Provenienz der Seide, Titre und Verwendung der Seide und Schappe ist für eine sachgemässe Ausführung der Farbaufgabe unerlässlich.

Zahlung.—Monatliche Abrechnungen.

Die Rechnungen, welche alle Farbaufgaben bis Schluss des Monats enthalten müssen, werden bis zum 15. des folgenden Monats zugestellt und sind ab 22. desselben Mts. zahlbar 3 Monate netto. Für Vorausbezahlung werden 6 procent Zinsen pro anno vergütet. Bankfähige Wechsel werden zum Reichsbank-Diskont angenommen. Nichtbankfähige Wechsel werden bei Verfall unter Abzug der Einziehungskosten gutgeschrieben. Durch Zahlung in eigenen Accepten oder Sola-Wechseln darf das Ziel von 3 Monaten unter keinen Umständen überschritten werden, auch nicht unter Vergütung des Diskonts.

Vergütungen.—Denjenigen Kunden, welche den Mitgliedern des "Verbandes der Siedenfärbereien" ihren ganzen Jahresbedarf zum Färben geben, werden nach Erfüllung dieser Bedingung 15 procent Umschlagssconto gutgeschrieben Ausserdem erhalten die Kunden für den mit allen Mitgliedern erzielten Wertumsatz in Sammfärbungen Schwarz und Couleurs eine Umschlagsvergütung auf den Brutto-Jahresumsatz.

von Mk. 30,000 und mehr 1 procent.

von Mk. 50,000 und mehr 1½ procent.

von Mk. 75,000 und mehr 2 procent.

von Mk. 100,000 und mehr 2½ procent.

von Mk. 120,000 und mehr 3 procent.

Diese Umschlagsvergütung gelangt nach Schluss des Geschäftsjahres zur Auszahlung.

Das Geschäftsjahr des Verbandes läuft vom 1. Juli bis 30. Juni d. f. Js.

BRIEF OF THE ASSOCIATION OF NEW YORK IMPORTERS
AND MANUFACTURERS OF MILLINERY GOODS.

NEW YORK, *January 10, 1913.*

Hon. OSCAR UNDERWOOD,

Chairman House Ways and Means Committee, Washington, D. C.

DEAR SIR: This association is interested in paragraph 399 of the present tariff. A careful investigation of this paragraph reveals the fact that the specific duty rates therein put a very heavy duty on the cheaper class of goods. These are the goods that reach the masses of the people, and contrary to the opinion of many, a number of these items are not luxuries. Take the fabric called velvet—it would be quite safe to say that at least 60 per cent of the women of this country had a velvet or plush hat this fall. The department stores of this city were selling velvet hats at \$2 each, which is less than in many cases men's felt hats are sold for, so that an article of this nature can hardly be called a luxury. In the spring of the year a number of the items known as silks, are used in women's hats, and are of such a low price as to be within the reach of any person, and are far removed from being classed as a luxury. We would like to see the inequalities in percentage of duty smoothed out in this section so that the low-priced goods will not have to pay double the percentage of duty paid by the higher grades. We submit a few instances in support of this statement.

Sample A velvet made in France cost in American money per yard 48.8 cents. It weighs 2½ ounces per running yard, and at prevailing rate of \$2 per pound pays 29½ cents duty which is 60 per cent on the cost. This was a quality that was about the lowest priced velvet you could bring in under the old Dingley tariff. Under the present law this quality can not be brought in profitably, because in adding to the above two figures 4 per cent for landing expenses, 7 per cent discount to be given to the customers, and 9 per cent profit to the importer, this velvet would have to be sold for 98 cents; sample B, a domestic velvet, which is exactly the same count, construction, and finish, sells at 75 cents less 7 per cent.

Sample C is a domestic velvet sold this past fall for 34 cents; it runs 2½ ounces to the running yard, and if such an article were being imported it would pay the same duty of 29½ per cent that the quality A above mentioned pays. This cloth sells in Europe for an equivalent of 25 cents per yard, and this would make the duty 120 per cent of the foreign cost. Certainly there can be no such disparity in foreign and domestic labor cost in an article where the raw material is so expensive as in velvet.

Plush, although heavier in weight than a velvet of an equal value, pays a higher rate of duty, and is accorded an even greater protection than velvet.

The cheaper grades of silk are similarly affected. Sample D, a chiffon, foreign cost 0.09½ cents a yard, pays a duty of 0.08½ cents as weighing between one-third and two-thirds of an ounce to the square yard. It is assessed at \$3.50 a pound.

PARAGRAPH 399—SILK GOODS.

It is our opinion that a fair rate of duty on the goods enumerated in this paragraph would be 35 per cent ad valorem. This would put many articles that have not been imported for years on a competitive basis, and yet be ample protection to the domestic manufacturers.

To prove this: Sample A velvet at 35 per cent, would have to be sold by the importer, figured as before mentioned, at 84 cents.

Sample C would sell for 42 cents.

Sample D is as yet not made to any extent in this country. (These samples we send under separate cover; on file.)

You have set aside a hearing for us on January 13, from 2.30 to 2.40 p. m., but, as an association of silk importers of this city will appear before you on that day to advocate a similar rate to ours, we wish to state that we will not avail ourselves of that time to present this brief in person.

Respectfully,

EDWARD L. JOHNSON, *President.*
SIDNEY B. VEIT, *Secretary.*

SILK GOODS.

TESTIMONY OF HORACE B. CHENEY, REPRESENTING THE SILK ASSOCIATION OF AMERICA, SOUTH MANCHESTER, CONN.

Mr. CHENEY. I appear here on behalf of the Silk Association of America, which includes the manufacturers of ribbons of all kinds, silk goods, including the dyers, printers, finishers, and throwsters. The association represents approximately two-thirds of the entire silk industry. There are some 900 mills in this country, and the silk association, while it does not represent the corresponding number of mills, represents approximately two-thirds of the production of the country. I believe they represent somewhere in the neighborhood of 200 mills.

We have filed a brief which comprises the argument which we wish to present to your committee. It is chiefly a brief in favor of the imposition of specific duties upon silk goods of all kinds, and it is based largely upon the theory, or the fact, that silk goods are not a matter of determined value; they are not a thing in which the value is proportionate in any way to the cost of production, but is solely a question of whim. The same article, under an ad valorem duty, might pay three different duties the same identical day. For instance, if you were to have goods which are made in Japan and dyed and printed in Japan, they would pay one duty; if the same goods were exported to France and there dyed and printed, they would pay another duty. And by the way, that industry is so great in France that in the last revision of the French tariff it was considered to be of equal importance to the French weaving industry, and carried its own point against them. Thirdly, if that same article should be produced in France, or some other European country, it would be of another value and would take a third duty.

You have the condition that at the same time in the same article there would be different prints or different colors that have different values, and we ask the kindly consideration of Congress in favor of the poor gentlemen who have to base their business on guesses as to what the women are going to wear six months and a year in advance.

Mr. HARRISON. You regard that as an uncertain quantity, do you?

PARAGRAPH 399—SILK GOODS.

Mr. CHENEY. Yes, sir; I do.

Mr. HARRISON. Your mills are in South Manchester, Conn., I believe?

Mr. CHENEY. Yes, sir.

Mr. HARRISON. Do you know what the total American production of silks is?

Mr. CHENEY. It is a little difficult to ascertain that. I want to warn the committee against drawing any conclusions from the census figures in relation to silks. The census reports that there are \$196,000,000 worth of silk produced in the country; it then proceeds to tell you that there are some \$20,000,000 of duplications. These duplications have been purely guesswork. Nobody knows what the duplications are. They will report to you one item as labor and another as contract work. Well, contract work is practically all labor. They report among the products of the country all the spun and all the thrown silk, and most of that thrown silk and spun silk is not going into silk goods; a considerable portion of it goes into the manufacture of electric wires, into braids, and into woolen goods, cotton goods, and all kinds of other different things; and all of those would have to go out.

Mr. HARRISON. What is your own estimate of the total production in the United States?

Mr. CHENEY. It would be a guess, pure and simple. I should say that it might amount to \$150,000,000, but that is the purest kind of a guess, and I hardly like to make it.

Mr. HARRISON. Assuming that your guess is correct and that the production in the United States is about \$150,000,000, do you regard the importation of \$27,000,000 worth of silk as being serious competition with our market?

Mr. CHENEY. The average importation of silk goods for a number of years has been about \$30,000,000, on which the Government has averaged a revenue of about \$16,000,000. The silk business is on the most closely competitive basis of any business that I know anything about in this country.

Mr. HARRISON. Is it true that the silk business is one in which it is impossible to form monopolies or combinations of manufacturers?

Mr. CHENEY. There have been a number of attempts made to do that, but they have all failed. I do not think, in the nature of the thing, that it is possible to make a combination in silks that can last.

Mr. HARRISON. Will you tell the committee why that is so?

Mr. CHENEY. From the very great variety of the products themselves, and from the very varying conditions under which they are made.

Mr. HARRISON. Is it true that it is a business that any man with a small capital can set up in his own back yard, so to speak?

Mr. CHENEY. There are at the present time three of the successful silk manufacturers in the country who used to be loom fixers in our mill.

Mr. HARRISON. How many silk manufacturers do you suppose there are in the United States?

Mr. CHENEY. There are 852 silk mills reported in the census——

Mr. HARRISON. Does that include all of the small men who manufactured with one loom?

PARAGRAPH 399—SILK GOODS.

Mr. CHENEY. That includes everybody, but it does not include the knitting industry, the dying industry, the printing industry, nor the finishing industry, nor does it include the silk goods which are produced in cotton mills or the silks used in woolen mills, or a variety of other trades.

Mr. HARRISON. Are there any goods which are produced in your mill which could not be reckoned as luxuries?

Mr. CHENEY. I would say that everything that is made of silk is of voluntary consumption; the consumption is voluntary; that is, if a person was in straitened circumstances there is no reason on earth why they should ever use a shred of silk.

Mr. HARRISON. Even though many people in moderate circumstances do use silk?

Mr. CHENEY. Undoubtedly. There is no question about it whatever. People in very moderate circumstances use silk.

Mr. HARRISON. You consider it a matter of voluntary consumption?

Mr. CHENEY. Yes, sir.

Mr. HARRISON. Tell us from what countries there is competition in silk goods.

Mr. CHENEY. The largest silk-producing country in the world is China.

Mr. HARRISON. Do you mean the raw silk or the silk goods?

Mr. CHENEY. Both; but they can not be accurately stated. Different estimates have been made by the people who compiled the French tables of consumption and production of silk. Those estimates were made some years ago, but since then they have been withdrawn, and simply the imports and exports of China shown, so they do not state what the native consumption is. France is the largest country reported in the table to-day, next to the United States, for the consumption of silk.

Mr. HARRISON. It is mostly from the Lyon district, is it not?

Mr. CHENEY. Yes, sir; very largely; but there are many mills throughout France, Italy, Switzerland, and Germany.

Mr. HARRISON. Where does your raw silk come from?

Mr. CHENEY. The largest amount of raw silk is to-day produced in Japan.

Mr. HARRISON. Have you any competition with the manufactured silk goods from Japan?

Mr. CHENEY. A tremendous competition.

Mr. HARRISON. You neglected to mention that among the countries with which you compete; that is why I asked you.

Mr. CHENEY. I mentioned the fact that the same article might be exported from Japan, or exported from Japan to France. There is an enormous industry in taking Japanese and Chinese goods to France and converting them—that is, dyeing or printing or embossing, or putting them through some other treatment, and then selling them as French goods.

Mr. HARRISON. You stated that the raw silk comes from several European countries. Does it also come from Japan?

Mr. CHENEY. More raw silk comes from Japan than from any other country.

Mr. HARRISON. Have we ever made a success of establishing the growth of raw silk in this country?

PARAGRAPH 399—SILK GOODS.

Mr. CHENEY. One of the first things that was done when our forefathers landed in this country was to try to make an arrangement for the establishment of the silk industry in this country, and they have been at it ever since that time. There was never a time in the whole history of the United States that enough silk was produced in this country in one year to operate our mills for one day.

Mr. HARRISON. Is there any raw silk produced in the United States to-day?

Mr. CHENEY. Nothing, except in a very experimental kind of way; a few pounds here and there by somebody who likes to "monkey" with it.

Mr. HARRISON. It is what you would call a noncompetitive product?

Mr. CHENEY. Yes, sir.

Mr. HARRISON. Suppose the committee should decide to impose a duty upon raw silk, which now comes in free from the foreign countries. What effect would that have upon the silk industry?

Mr. CHENEY. Unless there were compensating duties put upon it the result would be—whatever duty was put upon it—it would result in a certain decrease in the imports of raw material and a corresponding increase in the imports of manufactured goods.

Mr. HARRISON. Would it be possible for the silk manufacturers in the United States to hand down the whole of this duty upon their raw material to the consumers of silk goods in the shape of higher prices?

Mr. CHENEY. No, sir.

Mr. HARRISON. On account of competition from foreign silk manufacturers?

Mr. CHENEY. Yes, sir.

Mr. HARRISON. That would be a tax probably borne by the manufacturers and not by the public? Is that correct?

Mr. CHENEY. It would be either paid by the manufacturer or the workmen. The manufacturer is on such a close competitive basis to-day that he is not making much more money than you make on railroad stock. If you put them on any lower basis, it is probably going to come out of the workmen.

Mr. HARRISON. It is improbable in your opinion that the tax would be one that would be imposed upon the public that consumes the silk?

Mr. CHENEY. As I said before it would depend entirely upon what other adjustments were made in the tariff. I think it would be an unwise thing to do.

Mr. HARRISON. Assuming that the rates upon the finished product remain as they now are, and that a low revenue duty was imposed upon the raw silk, it is your opinion that that tax could not be handed down, so to speak, by the manufacturers to the public? Is that correct?

Mr. CHENEY. I do not think it could.

Mr. HARRISON. On account of this sharp competition from abroad?

Mr. CHENEY. On account of sharp competition both in this country and abroad.

Mr. HARRISON. As I understand it your objection to the ad valorem method of assessing duties upon your products is that it is difficult

PARAGRAPH 399—SILK GOODS.

if not impossible to tell what the value of the French goods are. Is that correct?

Mr. CHENEY. Yes, sir. But not only the French goods, but any other goods. Worst of all, it is hardest to tell the value of the Asiatic goods. We have absolutely no basis of getting at the cost.

Mr. HARRISON. You do not regard the invoice as a reliable method of fixing the value?

Mr. CHENEY. Hardly, sir; no.

Mr. HARRISON. Would you think the silk business is any different in that respect from other businesses?

Mr. CHENEY. I can not answer for other businesses, but I know that there are gross undervaluations made under the ad valorem duties in the silk business. It is doubtful whether more than two-thirds of the duty imposed is ever collected.

Mr. HARRISON. Do you suppose that is peculiar to silk—

Mr. CHENEY (interrupting). More peculiar to silk than anything else, because it is almost impossible to tell what the value is; it is purely a matter of guesswork. It may be one thing to-day and another thing to-morrow.

Mr. HARRISON. Explain to the committee why that is so, as distinguished from any other marketable commodities.

Mr. CHENEY. Silks are entirely a question of fashion. If a woman wants a thing she will pay anything she has to pay until she gets it.

Mr. HARRISON. Isn't there more or less a staple trade in silk from year to year?

Mr. CHENEY. There is no such thing as a staple product in silk goods.

Mr. HARRISON. Do you mean that the changes in women's fashions begins at the silk looms?

Mr. CHENEY. Even in the colors. For instance, take one of our chief products, which is foulards. That comes in close competition, by the way, with Asiatic products. Every year we have to make an entirely new series of designs, and everything that we happen to be so unlucky as to have left over from the year before has got to be sold at a reduction of anywhere from 25 to 33½ per cent of the price of the previous year. Those goods come in the class that I speak of. They are competitive goods. They are made in Japan and China, sent to France and converted, and come over here from France.

Mr. HARRISON. What were those three classes you spoke of at the beginning of your remarks? What has that got to do with the changes in fashions?

Mr. CHENEY. I only illustrated that to show that at the same time, for a given article, you have three different values.

Mr. HARRISON. In what way? I do not understand that.

Mr. CHENEY. For instance, if the goods were made in Japan, they would have one value; if they were made in Japan in the gray and exported to France and there converted, they would have a second value; if they were made in France, they would have a third value.

Mr. HARRISON. In exporting to the United States they will be invoiced at a value upon which an ad valorem duty could be assessed, would they not?

Mr. CHENEY. The same ad valorem duty assessed upon that same article from three different ports would in each case be different.

PARAGRAPH 399—SILK GOODS.

Mr. HARRISON. But the port from which it is shipped to the United States is the port as of which the duty would be assessed on the ad valorem basis.

Mr. CHENEY. Yes, sir.

Mr. HARRISON. Then why would the fixing of these three different values enter into it?

Mr. CHENEY. You would have the same article paying three different amounts of duty.

Mr. HARRISON. But only one duty would have to be paid by the exporter into our country?

Mr. CHENEY. It would pay three different duties, as I understand it. It would be the value of the goods in the country where they were produced. If the value of the goods is taken in Japan, it would be one thing—

The CHAIRMAN (interposing). The price on which the duty is levied is the value in the market from which it is shipped; the local value.

Mr. CHENEY. Yes, sir; that is just what I mean.

Mr. HARRISON. We collect only one duty upon it.

Mr. CHENEY. Yes; but you would collect three different duties upon the same article produced in three different places.

Mr. DALZELL. Provided it was shipped from those three different places?

Mr. CHENEY. Yes; provided it was shipped under those three different sets of circumstances.

Mr. LONGWORTH. What, if any, countries place a duty on raw silk?

Mr. CHENEY. What countries place a duty on raw silk?

Mr. LONGWORTH. Yes.

Mr. CHENEY. I do not know of any country.

Mr. LONGWORTH. There is no such thing as a duty upon raw silk?

Mr. CHENEY. No; I do not know of any such duty.

Mr. PALMER. Were you the president of the American Silk Association at the time of the Payne revision?

Mr. CHENEY. I am not the president of the association, sir; I am the chairman of the revenue laws committee.

Mr. PALMER. Were you chairman of that committee at the time of the Payne tariff hearings?

Mr. CHENEY. I was.

Mr. PALMER. Did you appear before this committee?

Mr. CHENEY. No; I did not appear before this committee at that time. I beg your pardon. I was not chairman at the time the hearings began. At that time my father was chairman. He appeared here.

Mr. PALMER. Were you then an officer of the Silk Association of America?

Mr. CHENEY. No; not at the beginning. Before the end of that session I was doing the same work that I am now doing. But, of course, I was cognizant of what was going on.

Mr. PALMER. You were cognizant of everything that was being done by the silk association with relation to the writing of the Payne tariff law?

Mr. CHENEY. Yes, sir.

Mr. PALMER. Did your committee prepare the details of this schedule for the assistance of the committee?

PARAGRAPH 399—SILK GOODS.

Mr. CHENEY. Yes, sir.

Mr. PALMER. In making the classifications?

Mr. CHENEY. Yes, sir.

Mr. PALMER. And in writing the rates?

Mr. CHENEY. Very largely.

Mr. PALMER. At that time were you of the same opinion that you are now, that specific duties only should be inserted in the bill?

Mr. CHENEY. We first recommended a schedule which should have only specific rates, but it developed that they amounted to such considerable inequalities in administration that there were a large number of rates reduced. To meet that condition there was a catch-all clause, covering the things which were not covered by the specific duties.

Mr. PALMER. Then you made suggestions to the committee providing for the catch-all clause, did you? Was that your suggestion?

Mr. CHENEY. No; that was not our suggestion; but the lower rates made it practically a necessity.

Mr. PALMER. Do you want that catch-all clause taken out now?

Mr. CHENEY. I think as the thing stands to-day the Government would lose large revenue without any compensating advantage, by taking it out. There are a large number of articles that pay very low rates of duty under the specific rates—as low as 5 per cent.

Mr. PALMER. It is a fact then that practically all of the duties in the schedule are specific duties now?

Mr. CHENEY. Well, no; a large proportion of the goods that enter come in under the ad valorem feature.

Mr. PALMER. Yes; but I am speaking about the duties. The duties are all specific, except that in every classification there is a catch-all under the ad valorem.

Mr. CHENEY. Yes, sir.

Mr. PALMER. And you are recommending a continuance of that sort of classification?

Mr. CHENEY. Yes, sir.

Mr. PALMER. You are not asking us to change that in any way?

Mr. CHENEY. We are not asking you to change anything.

Mr. PALMER. You have made no suggestions at all about the rates of duty. Do you want them to remain exactly as they are?

Mr. CHENEY. If the committee decides that they wish to make a new silk schedule, I think there are some changes which could be made without any serious disadvantage—

Mr. PAYNE (interposing). Will you please repeat that. I did not understand you.

Mr. CHENEY. I say if the committee decides that they wish to make a new silk schedule, I think there are some changes which could be made to equalize some points of minor importance. I do not think the things of real great importance need adjustment. These discrepancies which appear are more apparent than they are real. They occur upon items of slight importance and of small importations. The rates upon the factors which are of real importance to the business of the country are fairly reasonable.

Mr. PALMER. Have you recommended such changes in your brief?

Mr. CHENEY. I have not.

PARAGRAPH 399—SILK GOODS.

Mr. PAYNE. Let me refresh his recollection about that. I know something about it myself. You made your statement before the committee. In that statement you asked to have some schedules made specific instead of ad valorem. Is not that true?

Mr. CHENEY. Yes, sir.

Mr. PAYNE. In the presence of the committee it was stated to you, by the chairman, that no schedule would be approved that increased the Dingley schedules.

Mr. CHENEY. Yes, sir.

Mr. PAYNE. No matter whether it was ad valorem or specific.

Mr. CHENEY. Yes, sir.

Mr. PAYNE. Did not an importer appear with you also?

Mr. CHENEY. Yes, sir.

Mr. PAYNE. I do not remember his name now. However, I afterwards requested you and the importer to get together and suggest rates on those parts of the schedule that you asked to make specific and submit them to the committee, and that those rates were modified from time to time by you after conversation with me in the presence of the committee.

Mr. CHENEY. There were a large number of modifications made.

Mr. PAYNE. But the Ways and Means Committee refused to take those rates, but put the old rates in the bill that went to the Senate.

Mr. CHENEY. Yes, sir.

Mr. PAYNE. Or the bill that went to the House. I do not know whether it went to the Senate in that shape or not.

Mr. CHENEY. The House did not take the rate which we suggested first. The bill went to the Senate, was modified in the Senate, and was finally accepted by the House.

Mr. PAYNE. It was accepted by the conference committee. Before it was accepted by the conference committee, did I not have several interviews with you gentlemen who represented the imports?

Mr. CHENEY. Yes, sir.

Mr. PAYNE. For the purpose of going over those items specifically?

Mr. CHENEY. Yes, sir.

Mr. PAYNE. And they were figured out by experts, to see whether they exceeded the rates of the Dingley schedule before they were finally accepted by the conference?

Mr. CHENEY. Not only was that done, but the result of the administration of that law has proved that now.

Mr. PAYNE. I wanted to call your attention to that.

Mr. CHENEY. I do not think in any one of those groups of duties that there has been a variation of more than one cent from the rates which ruled under the old bill. I confess that I am surprised myself at the accuracy with which the result was arrived at.

Mr. PAYNE. I had already arrived at that same conclusion from the figures. Was it not announced to you after the hearings that while the committee would accept the Dingley rates they would not accept anything higher?

Mr. CHENEY. Yes, sir.

Mr. PAYNE. That they also regarded silk as an article of luxury and that there was evidently a high state of competition between this country and the other side in the manufacture of these goods?

Mr. CHENEY. Yes, sir.

PARAGRAPH 399—SILK GOODS.

Mr. PAYNE. And that was before any of these specific rates were admitted?

Mr. CHENEY. Yes, sir.

Mr. PAYNE. You were asked, in view of the sharp competition here, whether the manufacturers could impose that additional revenue tax on the raw material on the customers, and you gave a negative answer.

Mr. CHENEY. I do not think it could be done.

Mr. PAYNE. You do not think they could impose the duty on the customer because of the sharp competition?

Mr. CHENEY. I think it would result in probably one of two things: That it would either come out of the workmen or else it would go abroad.

Mr. PAYNE. If it would come out of the manufacturer, it would either come out of his profit or out of his capital. In view of the sharp competition, could he take it out of his profits?

Mr. CHENEY. I do not think he can.

Mr. PAYNE. So it would come out of the workman if he would agree to it?

Mr. CHENEY. Yes; if the workman couldn't get better employment somewhere else.

Mr. PAYNE. If it didn't, I suppose the business would stop?

Mr. CHENEY. If there were a very high revenue duty put on raw silk there would not be any importing.

Mr. PAYNE. Is there any way you could continue the business at the present rates of wages, with a fair revenue or moderate revenue duty, or whatever they chose to call it, on raw silk?

Mr. CHENEY. I would be afraid of it, sir. I couldn't say positively what would happen; but I should be afraid of it.

Mr. PAYNE. Do you remember the effort that was made in 1890 to put a duty on raw silk? Or were you too young then?

Mr. CHENEY. I remember it, sir. I was at that time employed in making figures on that question. I am mistaken. It was 1897.

Mr. PAYNE. That was for the purpose of encouraging the growth of the silk worm in this country?

Mr. CHENEY. That proposition has come up in every tariff revision.

Mr. PAYNE. A difference of \$2 a pound or a dollar a pound—

Mr. CHENEY (interrupting). It has been anywhere from \$3.50 a pound down to \$1 a pound. I have never heard anyone suggest anything below \$1 a pound.

Mr. PAYNE. At that time it was stated by your father that with a tariff duty of \$2 a pound on raw silk, he would have to get an average of \$20 a yard on his silk goods in order to compensate and be able to make them.

Mr. CHENEY. It would depend on whether he made goods out of silk or made them out of something else. I think it would promote a tendency to make them out of something else.

Mr. PAYNE. His statement was that it would stop the industry because no one would buy their goods at that price. Do you agree with that statement?

Mr. CHENEY. I think it would decrease the consumption considerably. May I be pardoned for a moment? I want to make one statement before it slips my mind.

PARAGRAPH 399—SILK GOODS.

A gentleman here spoke about tie silk. I only want to say that tie silks are any kind of silk that is produced. A necktie is, first or last, made out of anything which a man's fancy happens to induce him to use for that purpose.

Mr. LONGWORTH. You do not agree with his proposition that the duty was substantially increased on tie silks?

Mr. CHENEY. Tie silks are anything in the whole schedule, from yarns to brocades.

Mr. LONGWORTH. You say the Payne duty is not higher than the Dingley duty?

Mr. CHENEY. The average duties in each schedule are just about where they were before.

Mr. LONGWORTH. He said the duty was very much higher.

Mr. CHENEY. The duty on some of the individual items in the schedule might have been higher. If he was talking about some one importation, some one article, his statement may be true.

Mr. LONGWORTH. I asked him the general question whether the duty under paragraph 399 had been increased, and he said, "very largely."

Mr. PALMER. Mr. Cheney, of course, I intended no reflection upon the Ways and Means Committee when I elicited from you the information that your association had written this schedule in 1909. It is a very complicated and technical schedule, as it is a very technical business, and it was perfectly proper for the committee to enlist your services for their assistance. I want to be straight on that.

Now, I want to go back to these rates a moment. The rates in this schedule, as I understand you, are all specific, with the exception of what you call the "catchall clause," and with perhaps one or two other exceptions, where there is a compensatory specific duty and an ad valorem added, such as in goods made from artificial silk—

Mr. CHENEY (interposing). No. Excuse me. On all small articles, like ribbons and laces and things of that kind, it is an ad valorem duty.

Mr. PALMER. Yes, I think so, but there are not many of those items?

Mr. CHENEY. But those duties afford much protection.

Mr. PALMER. Well, the vast majority are as you now desire. Do you want ribbons put in at specific rates, too?

Mr. CHENEY. We tried very hard last time to get a schedule figured out for specific duties on ribbons, but we could not get the ribbon manufacturers together and we dropped the matter.

Mr. PALMER. Now, in each of these classifications the largest importations are under the catchall clause, are they not?

Mr. CHENEY. In which?

Mr. PALMER. Throughout this schedule, as a general rule, the largest importations in each class of goods are under the catchall clause?

Mr. CHENEY. Yes; not always, but in the majority of cases.

Mr. PALMER. Well, that is almost universally so, is it not?

Mr. CHENEY. There are a number of such cases.

Mr. PALMER. That is to say, the catchall clause was written to impose an ad valorem duty on the higher-priced goods?

PARAGRAPH 399—SILK GOODS.

Mr. CHENEY. Yes.

Mr. PALMER. So that the largest importations are of the higher-priced goods?

Mr. CHENEY. Yes.

Mr. PALMER. The comparatively cheap goods, which come in under or which carry a specific duty, are not imported to any considerable extent, are they?

Mr. CHENEY. There are some classes of goods that are imported to a considerable extent.

Mr. PALMER. In comparison with those high-priced goods imported under the catchall clause, the importations under specific rates are small?

Mr. CHENEY. I think that your statement is, in the main, correct; that the importations from Europe are, in the main, the high-priced goods.

Mr. PALMER. But the importations are in the main high-priced goods?

Mr. CHENEY. Yes. That is not true of the importations from Japan and China, which are low-priced goods.

Mr. PALMER. Are you making any suggestion of an increase in the catchall rate?

Mr. CHENEY. No; I am not making any suggestion of an increase at all.

Mr. PALMER. Those higher-class goods would come in under a higher rate of duty, would they not?

Mr. CHENEY. They would, undoubtedly.

Mr. PALMER. And would yield more revenue for the Government, of course, would they not?

Mr. CHENEY. Why, I think——

Mr. PALMER (interposing). That goes without saying, does it not?

Mr. CHENEY. I do not think it would be advisable, because while you would get more revenue out of certain articles I am afraid you would lose it on others.

Mr. PALMER. Well, is it your purpose in advising these specific rates to continue the conditions which now obtain by keeping the cheaper articles out of the country?

Mr. CHENEY. It is to be able to maintain the present condition of the trade as near as it is possible to do so.

Mr. PALMER. And to do it by holding back imports of the cheaper grades of silk?

Mr. CHENEY. Well, the imports of some of the cheapest grades are now coming in. It is the medium grade of goods that are most affected by it.

Mr. PALMER. It is the medium grades that are most affected?

Mr. CHENEY. Yes.

Mr. PALMER. Well, I notice in reading the statistics from the department that the goods—as a rule all through the schedule—the goods carrying the smallest specific rates have the smallest imports. Now, those goods are very largely manufactured in this country, are they not?

Mr. CHENEY. I am afraid I do not understand exactly what your question was, sir.

PARAGRAPH 399—SILK GOODS.

Mr. PALMER. I say, I see by the report of the department that the goods carrying the smallest specific rates are imported in very small quantities. Is that not correct?

Mr. CHENEY. I can not say. I am not advised. I would have to look up the schedule to be able to answer that question.

Mr. PALMER. Well, is not this the fact, Mr. Cheney, and well recognized by the silk people of the country, that the present rates on the cheaper grades are practically prohibitive?

Mr. CHENEY. They are practically prohibitive upon certain articles. They are not at all high on other articles which come in at the same price and in the same items. There are certain articles on which the duties are very nearly prohibitive.

Mr. PALMER. Take velvets and plushes, for instance; that is a very large part of the business, is it not?

Mr. CHENEY. Yes.

Mr. PALMER. The cheapest grades of velvets and plushes do not come in here at all, do they?

Mr. CHENEY. I do not think they do to any large extent, though I am afraid I can not answer positively.

Mr. PALMER. The cheapest grades, I suppose, are those which are dutiable at a dollar a pound?

Mr. CHENEY. The cheapest grades of velvets are made out of spun silk.

Mr. PALMER. Well—

Mr. CHENEY (interposing). And the duty would be the same whether they were made out of spun silk or made out of reeled silk, and on velvets it is almost an impossibility to tell of which grade they are made.

Mr. PALMER. Take this class, of which the cheaper silk is the larger component part—plushes, not weighing less than $9\frac{1}{2}$ ounces per square yard. That is the heaviest stuff, and of course the cheapest stuff, is it not?

Mr. CHENEY. Not necessarily; no. The heaviest stuff is not necessarily the cheapest stuff. In fact, I do not think it is.

Mr. PALMER. Well, the specific duty on that heavy stuff is a dollar a pound, and on the lighter article it is \$2.40 a pound. Now, did you not say awhile ago in answer to Mr. Payne that the duties were made higher on the higher class goods, or something to that effect.

Mr. CHENEY. Why, I can not recall. I do not think I did.

Mr. PALMER. But, anyhow, if the specific rate on the plushes weighing more than $9\frac{1}{2}$ ounces is a dollar, and on those weighing less than $9\frac{1}{2}$ ounces it is \$2.40, that is an indication that the lighter plushes are the higher priced plushes?

Mr. CHENEY. You are speaking now only of the plushes?

Mr. PALMER. Yes; I am speaking of plushes now.

Mr. CHENEY. Excuse me. I thought you were speaking of that whole velvet range.

Mr. PALMER. No.

Mr. CHENEY. Yes; in the plushes, the heavier goods are the cheaper goods.

Mr. PALMER. Yes.

PARAGRAPH 399—SILK GOODS.

Mr. CHENEY. But, at the same time—

Mr. PALMER (interposing). And of these heavier, cheaper plushes there are practically no importations; is not that true?

Mr. CHENEY. I can not answer that. I do not know. Some of the other gentlemen can tell you better about that.

Mr. PALMER. The statistics show that the importations for the year ending June 30, 1912, of the heavy plushes were \$3,741. That would indicate that the rate was practically prohibitive would it not?

Mr. CHENEY. Apparently.

Mr. PALMER. Yes. And does not that condition run through the schedule of the cheapest articles carrying the prohibitive rates?

Mr. CHENEY. No, sir; the cheapest article there is produced and which comes into this country is the ruching, which can not be made in this country at all, because the duty is not high enough to do it.

Mr. PALMER. Now, let me call your attention to the statistics. Take silk, in the grey, in skeins, warps, etc. That is the smallest specific. The imports are \$156, whereas in the higher-priced articles the imports rise until there is on each a specific duty which does not amount to 35 per cent, and the imports are \$985,000 worth, so that in that case the higher-priced articles are the imported articles, and the cheapest rate is practically prohibitive. Is it not so?

Mr. CHENEY. You are speaking of the spun silks?

Mr. PALMER. Yes.

Mr. CHENEY. I did not catch the first end of it.

Mr. PALMER. Yes; I am speaking of the spun silks.

Mr. CHENEY. Well, there is a condition there which is different than any of the others. There is a small product and consumption of tussah spun in this country which is made from the wild cocoons.

Mr. PALMER. I understand.

Mr. CHENEY. And the price of that article has risen, so that it now comes under the ad valorem duty, whereas it was intended it should take the 35-cent rate, and the condition will probably again obtain when the fashions change, so that that is no longer so much in demand, and that will again come down on to the specific class.

Mr. PALMER. It is true then that in that section, whatever may be the reason for it, that the rate on the cheapest article is prohibitive, and the rate on the highest-priced article is—

Mr. CHENEY (interposing). Excuse me. It is not prohibitive, sir, because those goods are coming in now.

Mr. PALMER. Well, \$156 worth came in—

Mr. CHENEY (interposing). Well, that applies to practically—must apply only to noil yarns. I do not know what it is. Excuse me a moment. One hundred and fifty-six dollars?

Mr. PALMER. This is yarn. First, in singles—yarn, in singles.

Mr. CHENEY. Well, I don't know what that is.

Mr. PALMER. Well, you can look that up.

Mr. CHENEY. I am afraid I can not tell you what that item means. There are enormous quantities of singles in the gray imported into this country, of all qualities.

Mr. PALMER. Do the highest-priced singles in the gray come in in the largest numbers?

Mr. CHENEY. I can not say that, sir. I do not think so.

PARAGRAPH 399—SILK GOODS.

Mr. PALMER. Well, the record shows that. Numbers 41 to 50 are the cheaper yarns, are they not? The imports of that are \$3,386 worth, increasing as the specific rate goes up, until on those others, on which the specific duty does not amount to 35 per cent, the imports amount to \$1,196,232.

Mr. CHENEY. That is somewhat deceptive, sir. There are all kinds of imports there of all the qualities of spun silk in about the proportion in which they are used, and they do not, any of them, pay exorbitant rates of duty.

Mr. PALMER. These figures may be deceptive, but still they are the official figures of the United States Government. I think you will find, if you look at them, that they show that in every grouping of imports under the classifications in this schedule that the largest amount, with only one or two exceptions, of imports are those which carry this catch-all rate; that is to say, where the specific is not equal to 35 per cent—in other words, the high-priced goods.

Mr. CHENEY. No, sir; not necessarily.

Mr. PALMER. Now, is it not a fact that you silk manufacturers want to retain the specific duties, which are now prohibitive on the cheaper article, because they are prohibitive on the cheaper article?

Mr. CHENEY. No, sir; we want to keep them because under the old system of ad valorem duties there was no protection against anything. Nobody knew what the value of anything was. There is not a man in the United States who can tell you what is the value of spun silk by looking at it.

Mr. PALMER. I understand that, but that is another story.

Mr. CHENEY. That is what you were speaking of, sir.

Mr. PALMER. As far as the high-priced silks are concerned, there is real competition between this country and foreign countries to-day, is there not?

Mr. CHENEY. Between high priced and low priced.

Mr. PALMER. Well, I have just shown you that the Government says the largest imports are in the highest-priced articles, and on that the duty of 35 per cent is not as much an ad valorem as the equivalent of the specific on these cheaper goods, is it?

Mr. CHENEY. We are, ourselves, large importers of spun silks, and we are importing not only the higher qualities, but some of the low qualities as well, in large quantities.

Mr. PALMER. Well, I understand—

Mr. CHENEY (interposing). That means that the rate on the low quality is not prohibitive.

Mr. PALMER. As far as your business is concerned.

Mr. CHENEY. If it is not prohibitive to us manufacturers of spun silk, it can not be prohibitive to anybody else.

Mr. PALMER. Well, can you suggest any better way of determining whether a rate is prohibitive than by an examination of the custom-house receipts under that rate?

Mr. CHENEY. You would have to compare it on the article. There are very many of these things which do not mean anything at all. They relate to articles which are of no importance; of which there would not be any large imports no matter what rate you would put on them.

PARAGRAPH 399—SILK GOODS.

Mr. PALMER. Well, I will put it this way: These catchall clauses throughout the silk schedule run from 35 per cent to 55 per cent?

Mr. CHENEY. No.

Mr. PALMER. Thirty-five to 45, as a rule, are they not?

Mr. CHENEY. Spun silk 35 and the rest of the schedule 45, and the ribbons a plain ad valorem of 50, and then 60 on the laces, and so on.

Mr. PALMER. Now, is not that catch-all clause a lower ad valorem than the equivalent ad valorem of the specific on the cheapest goods?

Mr. CHENEY. I think, probably.

Mr. PALMER. In other words, under this silk schedule now the cheap silk pays the high tax or has the high duty, and the high-priced silk pays the low tax and has the low duty, generally speaking?

Mr. CHENEY. Yes, sir.

Mr. PALMER. And you said a little while ago that nowadays the man of moderate means is a very considerable user of silk; that is true, is it not?

Mr. CHENEY. Not the man; the woman.

Mr. PALMER. Well, the woman, yes. Mechanics and workingmen buy silk these days for their families, do they not?

Mr. CHENEY. Yes.

Mr. PALMER. And yet upon those cheap goods that the mechanics and workingmen of the country are buying for their wives the rates are so high as to be practically prohibitive, and this tax is paid to the manufacturer and not to the Government; is not that so?

Mr. CHENEY. I do not follow your reasoning.

Mr. PALMER. Well, if the rates are prohibitive and you have any advantage from the rate—

Mr. CHENEY (interposing). We get precious little advantage out of it, when it comes to the domestic market.

Mr. PALMER. If this specific rate on cheap silk keeps the foreign silk out, do you not consider that duty in making your price to the American consumer?

Mr. CHENEY. Yes.

Mr. PALMER. Certainly you do. That is what you want it for?

Mr. CHENEY. Oh, that is what we want any tariff for.

Mr. PALMER. Yes.

Mr. CHENEY. We want it so we can be able to manufacture.

Mr. PALMER. So as to protect you in your prices?

Mr. CHENEY. We could not manufacture at all if there were not a protective duty.

Mr. PALMER. I understand. That may be right.

Mr. CHENEY. Yes; that is all we want it for.

Mr. PALMER. But my point is this: In these cheap silks, where the duty is prohibitive, used by people of moderate circumstances—working people, and so forth, to some extent, the duty is entirely for the benefit of the manufacturer, is it not?

Mr. CHENEY. No.

Mr. PALMER. Well, none of it goes to the Government, if it is prohibitive.

Mr. CHENEY. It goes to the workingman, most of it does.

Mr. PALMER. It goes to the workingman?

PARAGRAPH 399—SILK GOODS.

Mr. CHENEY. For every dollar——

Mr. PALMER (interposing). It filters down to the workingman from the manufacturer?

Mr. CHENEY. For every dollar of revenue you get by decreasing the duty upon silks, which means an increased importation, you would take \$2 out of the pocket of the American workingman.

Mr. PALMER. Would we not take care of the American manufacturer and the American workingman better if we would raise the duty under the catchall clause, and lower the duty on the cheap silks?

Mr. CHENEY. I do not think so.

Mr. PALMER. And would we not then be compelling the rich, who use this silk as a luxury, to pay a tax, because their goods would still come through the customhouse, and would we not be getting cheaper silk for the poor people?

Mr. CHENEY. Sometimes, yes; sometimes, no.

Mr. PALMER. Well, generally "yes," I guess. That is all.

The CHAIRMAN. Mr. Cheney, I want to ask you, is there not a process used in the manufacture of silk, or as an adjunct to silk making, called "dynamiting" silk?

Mr. CHENEY. Yes.

The CHAIRMAN. I wish you would explain to the committee what is meant by "dynamiting" silk?

Mr. CHENEY. It is loading it with tin salts.

The CHAIRMAN. Does your company dynamite silk?

Mr. CHENEY. Yes.

The CHAIRMAN. Mr. Cheney, is not that a fraud on the consumer?

Mr. CHENEY. No, sir. These silks, which have just been spoken of, which are made for the poor people, could not be made within their reach, without that process. There is a point at which that process becomes a fraud upon the public. There is not any doubt about it. When there is enough tin salts put upon silk goods to deteriorate the fibers, and injure the quality of the silk, and it wears out very quickly, it is a fraud.

The CHAIRMAN. Well, now, is it not a fact that they put this tin salts into silk and subject it to this wash for the purpose of making it appear heavier, so the consumer thinks he is getting the heavier grade of silk, and that at the same time it brightens the fiber, is that not so?

Mr. CHENEY. I can not say it brightens the fiber. It does add to the weight of the goods.

The CHAIRMAN. Well, does not the luster of the silk increase?

Mr. CHENEY. I do not know. I could not say that it does. But there is a large industry, which is a very honest and legitimate industry, which is engaged in manufacturing goods which have a certain percentage of tin salts in them. Most of the goods, however, are not tin weighted. I answered your question directly. We do make some goods that are weighted with tin salts, but it is an infinitesimal fraction of our product. Now, some years ago I made some absolutely pure dye taffetas, and put them out in direct competition with the same article made with tin weighting, and we could not sell any of them at all, although they were guaranteed to be pure dye, and the women knew that the others were not.

The CHAIRMAN. This dynamited silk that is subjected to this tin bath, does not a great deal of it rot and fall to pieces? I know I

PARAGRAPH 399—SILK GOODS.

had an umbrella—and this is what first brought it to my mind—I had an umbrella covered, and a few weeks afterwards, where I folded it, every fold broke to pieces and rotted out. Now, that is because I bought some of this dynamited silk, is it not?

Mr. CHENEY. Yes; you got some of it that was overweighted.

The CHAIRMAN. Now, that is an exception to the rule, is it?

Mr. CHENEY. It is.

The CHAIRMAN. Do not most of these imported goods come in without being treated in that way?

Mr. CHENEY. Oh, no, sir.

The CHAIRMAN. They come in in the same way?

Mr. CHENEY. It is done just as much abroad as it is done in this country. In fact, I think I could say that it is done more abroad than in this country.

The CHAIRMAN. Well, would it not be a good thing for the public and for the trade, if we were to put such a high tax on silk that had been treated in that way that it could not come in at all, and also provide penalties from the American manufacturer for defrauding the public in that way?

Mr. CHENEY. If a bill can be devised which will do that equitably. We have ourselves been engaged for some time in trying to arrive at a basis upon which it would seem possible to make a bill that would be administrable and not clumsy, which would accomplish that result, and I do not know, but I am inclined to think we are getting in the region where it may be done. The difficulty is, Mr. Underwood, that it is almost impossible to tell with accuracy from a small amount what the percentage of weighting was that was made upon the goods. Now, if you want to prevent the importation of those goods there is nothing that you could do that would do it better than specific duties, because the specific duties are so much a pound. Now, the heavier the goods are weighted the more in proportion to the value of the goods they pay.

The CHAIRMAN. Why could we not levy a tax? The customhouse can tell when a piece of silk is dynamited.

Mr. CHENEY. Yes; they can tell when it is, but they can not tell the percentage.

The CHAIRMAN. I know, but suppose we put a tax of \$10 a yard on all silk that was dynamited, none of it would come in, would it?

Mr. CHENEY. I do not think that would be right. I think it would be a serious injury to the silk business. I do not think it would be fair.

The CHAIRMAN. Why should any of it come in? It is a fraud on the consumer, is it not?

Mr. CHENEY. I do not think it is a fraud when it is done in a reasonable way. When the weighting gets over a percentage which injures the fiber it becomes a fraud, but there would not to-day be the number of working girls wearing silks that there are, and wearing them as long and as satisfactorily as they do, if it were not for that process.

The CHAIRMAN. A while ago, when Mr. Payne asked you what would happen in the event of a certain contingency, you stated that you could not live if you manufactured silk in that way, that you

PARAGRAPH 399—SILK GOODS.

would manufacture something else. You meant you would dynamite your goods, did you not?

Mr. CHENEY. Yes, sir. That is just what I meant. I hope you will not drive us into it, however.

The CHAIRMAN. I hope we will prevent you from doing it. A great many silk manufacturers are doing it, and doing it excessively to-day, and perpetrating a fraud on the American people, are they not?

Mr. CHENEY. Undoubtedly.

The CHAIRMAN. Now, if you have any suggestion, I would like the committee to consider that question. I do not know what views they have on it. I am only speaking for myself, but I would like to have them consider this question, and if you have any bill which you would like to submit, which you think would prevent that fraud, as a leading silk manufacturer, I would be glad to have you submit it.

Mr. CHENEY. Well, Mr. Underwood, we are at the present time investigating this matter, with a number of different chemists, and we have reports from a number of those chemists which are narrowing the determining field to a degree which was not known a year or two ago. Now, we hope that it may be possible to determine those percentages of weighting, within a reasonable degree of certainty, so that the man would not run the risk of a jail sentence on the chemical analysis of a material made by an analyst who was not sure of his results.

The CHAIRMAN. I should think if you have some suggestions that you want to make, you had better make them, because you may get a pretty drastic law, if you do not.

Mr. CHENEY. Why, I think that probably the best way to regulate it would be to allow goods which do not more than restore the gum weight to come in as pure dye, and goods which do not go beyond 24 ounces weighting to come in as standard dye, and beyond that, brand them in any way you want to.

The CHAIRMAN. Will you make those suggestions in writing and submit them to the committee?

Mr. CHENEY. I should not like to make that suggestion for practical operation at the present time, for the reason that I have given. That is the nearest that we have gotten to it, but there you run against the factor of whether it is a practicable thing to determine those percentages by analysis. I submitted a lot of samples to an analyst, and he reported that dye of 76 per cent was 97 per cent; he reported that dye of 141 per cent was 160 per cent, and that dye of 160 per cent was 180 per cent.

The CHAIRMAN. Now, let me ask you, Mr. Cheney, is it not a fact that the weaver of silk, taking a pound of silk—raw silk—and subjecting it to this process, often brings it out of this process weighing 3 pounds?

Mr. CHENEY. Well, that would involve another process. There are silks to which that has been done.

The CHAIRMAN. What process is that?

Mr. CHENEY. That means that they load them not only with tin salts, but load them with other materials as well.

The CHAIRMAN. Lead?

PARAGRAPH 399—SILK GOODS.

Mr. CHENEY. They will start with gum silk and retain the gum in the silk to begin with, and then they treat it with tin, iron, and other salts.

The CHAIRMAN. Do they put lead into it?

Mr. CHENEY. I do not know of any. We never have dyed silk anything like that, and I do not know just what the process is.

The CHAIRMAN. Do you not think it would be better for the silk trade of this country and for the American consumer if that process of loading silk was absolutely prohibited by a prohibitive tax on the consumers and a penalty on the American manufacturer who indulged in it?

Mr. CHENEY. Mr. Underwood, such a law would redound undoubtedly to the pecuniary advantage of Cheney Bros. We do not compete in that article, but I do not think it would be a fair law to the silk industry.

The CHAIRMAN. Well, why? I have no objection to Cheney Bros. making money out of an honest condition of trade. But do you not think that this is a dishonest condition of trade?

Mr. CHENEY. No, sir; I do not.

The CHAIRMAN. Why?

Mr. CHENEY. I think there is a large class of very good, sound merchandise that is weighted with tin, to a reasonable degree, and that that process has been a great benefit to the silk industry; that it never would have reached where it is to-day, and women in moderate circumstances would not be able to provide the clothing that they have for anything like the prices that they do.

The CHAIRMAN. Well, it makes the clothing when they buy it out of a store look good, but you agree that it rots very much quicker and some of it in a very much shorter space of time?

Mr. CHENEY. If it is overdone.

The CHAIRMAN. Well, does not the treatment by this process of silk, if it is done at all, deteriorate and destroy the fiber and lessen the life of the goods?

Mr. CHENEY. I can not say definitely upon that, whether it does to any degree. The average woman nowadays does not want a silk that wears out to its last ultimate point. We used to make grosgrains years ago, which were a rather coarse-looking material, which could be washed and ironed and would wear for 20 years; but the woman would not want that material now, because she would not want it to last that long, and would prefer the modern fabrics.

Mr. JAMES. The women do not want it to wear very long, but the men are not of that opinion, are they?

Mr. CHENEY. I am inclined to think some of the husbands would agree with you, sir.

The CHAIRMAN. Mr. Cheney, I think that process ought to stop; at least the abuse of it, at any rate.

Mr. CHENEY. I agree with you, Mr. Underwood, that the abuse of the process it is desirable to stop. The process itself I consider a valuable one, and one which has not been a detriment to the public at large.

Mr. KITCHIN. What percentage of this dynamited silk goods is produced in this country?

PARAGRAPH 399—SILK GOODS.

Mr. CHENEY. Why, it is pretty safe to say all the yarn-dyed goods have some percentage of weighting upon them.

Mr. KITCHIN. Dynamited?

Mr. CHENEY. Well, they would treat it in one way or another.

Mr. JAMES. How did they happen to give the particular word "dynamited" to this character of silk?

Mr. CHENEY. I do not know, unless it made things go up.

Mr. JAMES. Well, do you refer to the purchasers' pocketbooks or to the silk?

Mr. CHENEY. To the silk.

Mr. HARRISON. Mr. Cheney, does it cost more to produce silk goods in this country than abroad?

Mr. CHENEY. Why, yes, sir; we pay about half the wages they pay in France and about one-quarter of what they pay in Italy.

Mr. HILL. You mean twice as much?

Mr. CHENEY. Yes; about twice what they pay in France, about four times what they pay in Italy, about ten times what they pay in Japan, and about twenty times what they pay in China.

Mr. HARRISON. So, in your opinion, if it were not for a protective tariff, you could not exist?

Mr. CHENEY. Why, several years ago in England they employed 130,000 people in the silk industry. In 1850 they removed the tariff on silk goods. Now the conditions there are very much nearer to the conditions that obtain upon the Continent than they are in this country; yet England has lost that silk industry, and to-day she employs less than 30,000 people in the silk industry, and she imports three or four times as much material as she did at that time. Now, that is the difference. You should not make a comparison between the silk industry in England and the cotton industry in England. In the cotton industry, that was not an industry organized on the Continent, which was able to produce material at a cheaper rate and employ cheaper labor than England did.

Mr. HARRISON. So that in your opinion the difference in the wages that are paid to the laboring man makes the cost of production of all kinds of silk goods in this country higher than abroad?

Mr. CHENEY. Unquestionably.

Mr. HARRISON. Then how does it come that we have such a large export trade in silks? Where do they go?

Mr. CHENEY. The only exporting the United States does in silks are goods which are sent to ports close at hand, because they are novelties, or something which can be delivered right on the spot when it is wanted, and not because it is sold at a lower price.

Mr. HARRISON. Into which ports are they shipped?

Mr. CHENEY. Chiefly to Canada.

Mr. HARRISON. Chiefly to Canada?

Mr. CHENEY. Yes.

Mr. HARRISON. And in Canada they must compete with the French goods?

Mr. CHENEY. They do not compete. The articles which go there are not competitive articles. They go there either because the market is bare of them, or they are something which they can deliver quickly, before they could be gotten from the other side.

PARAGRAPH 399—SILK GOODS.

Mr. HARRISON. Do you know what the size of the export trade is? I would like to read here, for your benefit, the figures given for the last three years. In 1910 there were \$1,097,593 worth of manufactures of silk exported from the United States; in 1911 there were \$1,538,543 worth, and in 1912, \$1,992,765 worth.

Mr. PAYNE. Those are all manufactured silk?

Mr. HARRISON. All listed as manufactures of silk.

Mr. CHENEY. I will tell you our own experience in attempting to export silk. I think I told you something about the foulard business, in which, if we have anything left over, we have to sell it next year for less than it cost to produce.

Mr. HARRISON. That is exactly the attitude of all American manufacturers when discussing before this committee their export business; but I will call your attention to the fact that the export trade has grown more than 50 per cent in the last two years, and in the current year it equaled nearly 8 per cent of the imports, which you described as being so large. Does not that look to you as if there were certain classes of silk goods which can be manufactured cheaper in the United States, and sold in Canada in competition with French and Japanese silk goods, and sold cheaper, or they would not have found any market?

Mr. CHENEY. No, sir.

Mr. HARRISON. Now, if that is so, would it not be worth while to inquire whether the cost of production of certain kinds of silk is not cheaper in the United States than in Japan or France?

Mr. CHENEY. I know it is not. The question is simply one of the proximity of the market; not of cost or price.

Mr. HILL. Is not that a question of noncompeting products, such as ladies' dresses, made up, known as manufactured goods, which are all included in the figures the gentleman has given?

Mr. HARRISON. Would not those same goods be noncompetitive if there was a market in this country under free trade?

Mr. CHENEY. There are always novelties in silk goods, and if a man has a novelty which is wanted at the moment he can sell it.

Mr. HARRISON. Is 10 per cent of the whole trade a novelty trade?

Mr. CHENEY. I do not know, sir. I can not say.

Mr. HARRISON. Well, why should you need to fear imports from abroad if it is a question of novelties? Your ingenuity would induce you to supply novelties to the American market, and you do not need to fear the foreigner in that regard, do you?

Mr. CHENEY. We would have to double our ingenuity.

Mr. HARRISON. Well, is it not true in the cheaper grades of silk goods that the American manufacturer can manufacture them cheaper than the manufacturers of any other nation, and are manufacturing them cheaper, and are shipping them abroad and underselling the foreign manufacturers?

Mr. CHENEY. No, sir; it is not true. It is not true in any single instance I know of. We have tried it over and over again ourselves. We have just been through an experience of the kind, where we sent a whole line of samples of practically everything we make to some gentlemen who said they could create a considerable business for us in Mexico. They said the question of whether they were this year's styles in the United States had nothing to do with it; that they could,

PARAGRAPH 399—SILK GOODS.

nevertheless sell them down there, and show us a profit on goods that we would have to sell at a loss here. Well, they took them to Mexico, and after having canvassed the market very thoroughly, they said they could not sell any at all for the cost of the labor and materials in them.

Mr. HARRISON. Have you examined the report of the Tariff Board upon the other textile schedules?

Mr. CHENEY. I could not say that I have made a very exhaustive examination of it; no. I have it in my possession, and that is about as much as I could say.

Mr. HARRISON. If you had read the report of the Tariff Board upon Schedule K you perhaps would have been struck by the statement at two places in the report that in the United States the high wages are coincident with a low cost of production. Now, the woolen-trade manufacturers were making the same statements which you are, but after examining into their statements the Tariff Board found that the high cost of labor was coincident with a very low cost of production, and it may be that an investigation of your industry would disclose the same condition.

Mr. CHENEY. We are the only firm in the world that make practically all kinds of silk goods. We make pretty nearly the whole range—dress goods, decorative goods, upholstery goods, ribbons, neckties, both spun and reeled yarns and we have yet to find a single article that we can make here as cheaply as it can be made in the nearest market of the world to our business.

Mr. HARRISON. Some manufacturers found at least \$2,000,000 worth of such business last year.

Mr. CHENEY. No, sir.

Mr. HARRISON. I am only taking the Government figures; of course, the Government may be mistaken.

Mr. CHENEY. You assume that those were sold because they were cheaper. I assume that they were not sold because they were cheaper, but because they were articles which that market did not have from other sources, or because they were articles which could be gotten quicker from this source than any other source. Now, there is not, in the silk industry, any advantage in the matter of machinery. In a great many other industries that is not true. To-day the fastest running machinery that is invented that is in use in the world is French machinery.

Mr. PAYNE. Did you examine the Tariff Board's report on the woolen schedule enough to find out that they ascertained the cost of labor on, say, a thousand yards of goods, of different kinds of goods, and that they found that the cost per unit was from two times upward more here than abroad?

Mr. CHENEY. I am afraid, Mr. Payne, that I am not an authority upon that.

Mr. PAYNE. You do not remember that?

Mr. CHENEY. No; I have not had time to examine it carefully.

Mr. PAYNE. Of course, we have heard a great deal all our lives about going after the markets of the world. It has not come from this side of the House, sufficient to say, and under this woolen schedule we appear to have been going after the markets of the world,

PARAGRAPH 399—SILK GOODS.

and increased the exports up to about \$3,000,000—two or three times as much as they were, under the present law—the silk schedule. Would it not occur to you that that was an argument in favor of continuing the present silk schedule on silk goods?

Mr. CHENEY. It would, if it were true, but I haven't any idea that we can ever go after the markets of the world.

Mr. PAYNE. Well, if it is desirable to have the markets of the world. Of course, there are other gentlemen who can argue that more strongly than I.

Mr. CHENEY. No, sir. We have no hope of going after the markets of the world.

Mr. HILL. I have read the Tariff Board's report on the wool schedule, and I have it in mind distinctly now, and the paragraph to which the gentleman from New York refers has nothing to do with the case. It was just this. I studied it particularly, because I understood the national Democratic committee furnished a gentleman with several questions to ask me at a campaign meeting during the campaign, and that was one of them. That refers to the examination of the respective efficiency of labor in 70 different woolen mills in this country, and the board reported that so far as the facts were shown they indicated that in this country the most efficient men were paid the highest rate and got out the greatest production. Now, that principle is a fundamental one, and just as true of your competitors on the other side as it is here. It has in no sense any reference to a comparison between your most efficient men and the most efficient men of your competitors in Italy. It is simply as to the results of the investigation of these 70 mills here. That is all there is to it.

The CHAIRMAN. I hope you gentlemen will confine yourselves to the discussion of this silk schedule.

Mr. HILL. Mr. Chairman, I felt in view of the question having been put now, and having been formerly put by the National Democratic Campaign Committee in the last campaign, as I was advised, that it was a good chance to answer it.

Mr. FORDNEY. In the manufacture of any grade or quality of silk, what proportion of the cost of production is the cost of labor?

Mr. CHENEY. You have asked me a question which it is almost impossible to answer, because it varies all the way from 30 to 80 per cent.

Mr. FORDNEY. The labor is a very large proportion of the cost, is it not?

Mr. CHENEY. Yes; it reaches as high as 80 per cent of the cost.

Mr. FORDNEY. Well, where the cost of production is 80 per cent labor, and where labor, as you have described, in Japan and in China, is ten or twenty times cheaper than it is here, it would be utterly impossible for you to make that grade of silk without protection, would it not?

Mr. CHENEY. Why, we would not attempt it.

Mr. FORDNEY. To offset that cost of labor, where labor is your chief cost—

Mr. CHENEY (interposing). There are to-day in Japan mills being built equipped with the very best American and European machinery, and Japan, according to her last Government report, is weaving more silk upon imported looms than they weave upon their old hand looms

PARAGRAPH 399—SILK GOODS.

Mr. HARRISON. Did you ever hear of the city of Osaka, in Japan?

Mr. CHENEY. I can not say that I did.

Mr. HARRISON. Well, one of my colleagues visited Osaka, and there he found one of the largest cotton mills in the Orient, and it was shut down, and when he asked them why with such a supply of cheap labor it was not in operation, they said they could not stand the competition from Fall River.

Mr. CHENEY. That is lucky for Fall River.

Mr. KITCHIN. You say that labor constitutes the greatest part of your product; represents the greatest part of the cost of your product?

Mr. CHENEY. I do not like to try to answer the question for the reason I am afraid it will be applied to specific cases. If you apply it to specific cases, anything I say will be wrong.

Mr. KITCHIN. You said about 80 per cent. I understood.

Mr. CHENEY. That is the maximum. I do not mean to be quoted that that is always so.

Mr. KITCHIN. I ask you if the census report does not show that a smaller part of the cost of finished product of silk goods is labor than substantially any other industry in this country? Do they not give less than 20 per cent of the value of the finished product of silk as the cost of labor?

Mr. CHENEY. I endeavored to explain that some time ago, sir; that you will see on the table where they give you that labor, another item which, so far as I remember, is about one-third of the amount given for labor of contract work. Now, contract work is practically labor. On the next page you will find that there are deductions of \$20,000,000 on account of duplications.

Mr. KITCHIN. That goes with the labor—the labor cost?

Mr. CHENEY. No, sir.

Mr. KITCHIN. The amount of the labor cost, \$38,000,000, includes that.

Mr. CHENEY. No, sir.

Mr. KITCHIN. Well, of course, if \$20,000,000 is added in as a duplicate, then the labor cost of a duplicate would be——

Mr. CHENEY (interposing). The proportion of labor to the materials is varied very greatly when you take out of that the materials which are not used in the industry, or are duplicated in it.

The CHAIRMAN. If Mr. Kitchin will let me interrupt him just a moment, in the census report, the way they ascertain this result is that they give as furnished them by the manufacturer, the total amount of production of the mill—not contracts, but of the mill—and then they give the total labor cost, and then give the number of men employed. Now, from those figures they ascertain the percentage, and they give the total amount paid for labor, and dividing the total amount paid for labor into the total production of the mill, they ascertain the percentage of the labor cost. Now, how could the contract figures enter into that, because that is outside of the mill production?

Mr. CHENEY. No, sir; that is largely a labor cost, that contract work. In addition, the dyeing, the printing, and the finishing industry, which is practically all labor cost, is not reported in the census

PARAGRAPH 399—SILK GOODS.

at all, although it is reported in the cost of the finished product. In addition, there are reported in those values, as a part of the cost of the goods, all of the silks that have been used in other trades; those that went into woolen manufacture and into the manufacture of cotton goods, into the manufacture of braids, and electric wires, and all kinds of other things. You can not draw any kind of conclusions from those census figures that will not be erroneous.

Mr. KITCHIN. Well, it is just what you manufacturers swore to the Census Department it cost you.

Mr. CHENEY. But you have not got it all there.

Mr. KITCHIN. And they have it all. They have figured it all.

Mr. CHENEY. No, sir; you have not got it all there.

Mr. KITCHIN. Well, does it take very skilled labor, as a general proposition, in the manufacture of silk goods?

Mr. CHENEY. Yes, sir.

Mr. KITCHIN. Well, how much labor do you employ in your mills?

Mr. CHENEY. About 4,000.

Mr. KITCHIN. How much is the average wage now?

Mr. CHENEY. It is \$1.90 a day.

Mr. KITCHIN. \$1.90 a day?

Mr. CHENEY. Yes, sir.

Mr. KITCHIN. Will you average that, not counting your clerical force and your salaried officers? Will it average \$1.90 a day?

Mr. CHENEY. That is the average of the people who are paid by the day without including the clerical force or without including any salaried persons.

Mr. KITCHIN. Now, how many women and how many children are employed in your mill?

Mr. CHENEY. I have not the figures at hand, but there are approximately half men and half women.

Mr. KITCHIN. How many children?

Mr. CHENEY. We do not employ anybody in our mills who is over 15 years of age.

Mr. PALMER. Under, you mean?

Mr. CHENEY. Yes; under.

Mr. KITCHIN. Do you send your work out to the homes of the people to work on?

Mr. CHENEY. No, sir.

Mr. KITCHIN. I do not know a thing about your industry, or the labor, but I have talked with a great many people from Paterson, N. J. That is a great silk manufacturing town, is it not?

Mr. CHENEY. Yes.

Mr. KITCHIN. In fact, I believe it is the largest, is it not?

Mr. CHENEY. Yes; it is the largest.

Mr. KITCHIN. I have been told by men living in Paterson, N. J., that it took less skilled labor to produce manufactures of silk than probably any other kind of industry.

Mr. CHENEY. I am afraid that your friend was either dreaming or misinformed.

Mr. KITCHIN. I remember a silk industry was established in my section once several years ago in a county near me, and they employed negro help altogether. I asked the man who established

PARAGRAPH 399—SILK GOODS.

the plant "If he could work the ignorant colored labor"? He said, "Well, it does not take much intelligent labor to manufacture silk." Now, I want to know whether the impression which I had received from these people, that it does not take much skilled labor, is correct.

Mr. CHENEY. They should send some of that labor up to us. We would like it very much right now.

Mr. KITCHIN. Most of your wage earners are foreigners, are they not?

Mr. CHENEY. In the employ of Cheney Bros., approximately half of them are native born and there are approximately one-third of that number who have been in our employ for over 10 years.

Mr. KITCHIN. But, as a general proposition in this silk business, the proportion of foreign-born workers is larger than in most other industries, is it not?

Mr. CHENEY. I think, sir, that the mills that you have been speaking about probably have been working mills, where they only wind, and which employ rather a low grade of help in winding the silk; and even there, it is of doubtful value, because it is easy enough to ruin enough silk to make up the difference in the cost of labor.

Mr. KITCHIN. Take Paterson, N. J. Are not at least 75 per cent of its help foreigners or foreign born?

Mr. CHENEY. I can not give you any statistics about Paterson. I do not know anything more about it than any person present as to what the population is.

Mr. KITCHIN. Well, the foreigners which you import into your mill, they are not from France or Japan or countries which are manufacturers of silk products, are they?

Mr. CHENEY. Unfortunately, not.

Mr. KITCHIN. And so you take labor from other countries where silk is not produced at all, do you not?

Mr. CHENEY. We get the labor which we can get. The labor which we have—the largest proportion of it is Irish, Swedish, and German. We would be very glad indeed if we could get labor from silk-producing countries.

Mr. FORDNEY. Mr. Cheney, you do not believe then that the gentleman's information is correct, that the mills in Japan have been closed down because you pay your labor only \$1.90?

Mr. CHENEY. I have no idea that in the silk industry mills in Japan are being closed down. The silk industry in Japan has been going up with leaps and bounds. It has been one of the most profitable of all industries in Japan, and the silk industry was invented in China 2,600 years ago, and the Chinese and Japanese were wearing elaborately woven silks when our ancestors were clothed in skins.

Mr. KITCHIN. Yes; and China has been protected with a tariff for the last 2,600 years, and the silk industry there has been on the decline has it not?

Mr. CHENEY. No.

Mr. KITCHIN. They, China and Japan, have shipped less to this country in the last few years than ever before.

Mr. CHENEY. I am very glad to say they do, and I hope you will not put us in competition with Asiatic labor.

PARAGRAPH 399—SILK GOODS.

Mr. KITCHIN. The tariff has not helped China, has it?

Mr. CHENEY. If you make legislation excluding Asiatic laborers from the United States, why should you let them work at home and send their products over here?

The CHAIRMAN. Any further questions? [No response.]

The CHAIRMAN. That is all, Mr. Cheney.

BRIEF OF THE SILK ASSOCIATION OF AMERICA.

[For presentation to the Ways and Means Committee at the hearing Jan. 13, 1913.]

The value of silks is a matter of opinion. These goods are the creation of fashion, and values come and go according to the uncertain whims of woman's dress. There is no such thing as a standard silk, even in black. If an article is in demand, it sells at a price giving a reasonable profit. When it ceases to be the fashion it can not be marketed for even the cost of labor and materials. There is not even a fixed value for merchandise of a given character when it is in fashion, as some colors will be considered as more desirable than others. It often happens that in a style of goods on which the principal shades are selling at one price, high novelty shades of which the market is scarce will be selling at another, while other novelty shades which have gone by will be selling at a third price, the difference in price covering a considerable variation in value. Of two prints on the same foundation cloth, one will be fashionable and the other not; one will sell for a profit, the other for a loss; and it is almost universally true that in printed silks styles do not last over one year, and the styles carried over from the previous year are sold at a reduction of from 25 to 50 per cent of the value obtainable when in fashion. Ad valorem duties upon silk goods are, therefore, of very doubtful value. When they have been in operation the Government has been defrauded of enormous revenues through undervaluation of merchandise. They are, moreover, the source of constant annoyance to the importer who tries to do business on an honest basis and frequently finds his values changed by the customhouse officials and himself unable to compete with unscrupulous rivals.

The manufacture of silk was invented in China over 2,600 years before Christ, and the Chinese people were weaving and manufacturing silks when the Anglo-Saxons were clothed in skins. They have from that time down to the present continued to manufacture them and have progressed in their manufacture more nearly to our level than they have in any other manufacture. This is still more true in Japan. Japan last year for the first time manufactured, according to its Government report, more silks upon imported power looms than it manufactured upon hand looms, and we are credibly informed that they have more spindles for the manufacture of spun silk than we have in the United States, and that they have already taken possession of the eastern market for yarns.

Li Hung Chang is said to have advised the Chinese Government against another physical migration, but to have suggested that as an alternative they copy European and American methods of manufacture and migrate while they stay at home, by taking possession of their markets by their superior ability to produce at a lower cost. If there is any industry in the world in which China is able to follow the advice of Li Hung Chang, it is in the silk industry, which she invented and which she has carried on for so many centuries. She has made more than a start in this direction. There is now 400 miles in the interior of China a factory employing the best modern machinery, both for throwing and weaving, in which wages as low as 2 cents per day are paid, and in no case, we understand, over 15 cents per day to the highest paid labor, and for very long hours of work. It is only one of many establishments which are springing up in China and Japan in which silks are being manufactured upon the very best American and French machinery.

The eastern competition can not be measured by the goods imported from there, as many woven fabrics are sent to France, where they are converted by printing, etc., and come here as French fabrics.

Specific duties are the only ones which can protect the American manufacturer and workman against the competition of Asiatic labor, for the cost of manufacture in Asia is less than half of the cost of manufacture in Europe, and, under ad valorem duties, just where protection is most needed, the duties would be smallest, and, due to ignorance of Asiatic cost, almost impossible of collection.

It has been an established principle of the United States Government that American labor should be protected against the competition of Asiatic labor, and legislation has

PARAGRAPH 399—SILK GOODS.

for many years, by both parties, been maintained to prevent the immigration of such laborers into the United States. It is just as necessary that the American laborer should be protected against the products of such cheap labor when those products are made in Asia, as it is that they should be protected against the direct competition with the laborers if imported into this country.

The silk industry in Europe is one of the oldest and best organized of the European manufacturing arts. The wages paid are very low, even when compared with the wages of other industries in those countries, and when compared with those paid in the United States, the discrepancy is so great that direct competition is an impossibility, French labor being paid approximately one-half and Italian labor one-quarter the average wages paid in the silk industry in this country.

The following is a table compiled from the most reliable sources obtainable—census figures, consular reports, State reports, and private information—of the wages paid in the silk industry in the various silk-producing countries of the world; the figures of wages in the United States are very conservative.

Silk wages.

	United States.		Japan.		China.		Italy.		France.	
	High.	Low.	High.	Low.	High.	Low.	High.	Low.	High.	Low.
Weavers (men).....	\$3.00	\$1.00	\$0.20	\$0.10	\$0.15	\$0.05	\$1.25	\$0.30	\$1.50	\$0.50

¹ Not done.

It is frequently argued that American labor is more productive than that of foreign countries, and in many industries this is doubtless true. In the silk industry this is not at all the case. The handling of silk is a delicate matter, and requires smooth hands and careful fingers. In France, Italy, China, and Japan, people have been trained in the same families for centuries in its manipulation, and these countries have developed labor particularly well adapted to the needs of the industry. In this country there is no such cast of people to be drawn from. The best labor employed is American, Irish, Swedish, and German, chiefly people who have come from farming parentage—strong, sturdy, good people, but with coarse and clumsy hands, difficult to train in the handling of such delicate fabrics.

In many industries the United States has a tremendous advantage in the productivity of its machinery, which is far in advance of that used in similar industries in other countries. This is not the case in the silk industry. While there have been many improvements in silk machinery in the United States, and there are still many improvements being made, yet the French industry has kept fully abreast of us in the productivity of its machinery. In fact, the most rapid-running looms in the industry are recently invented French looms, which can be run at a speed heretofore unknown in this country. The operation of these looms requires most expert labor, and they have not yet been successfully operated in this country at the highest speed used in France.

There is no natural advantage to the industry of silk manufacture in this country to give it encouragement. There is small reason to believe that there would ever have been any silk industry here except for the fostering influence of the protective tariff, and there is grave reason to fear its decay and extinction should that protection be withheld. The silk worm is not raised here and we must rely entirely upon imported raw materials. At the beginning we not only had to learn the many and complicated steps in the process of manufacture and create the plants and organization, but we also had to overcome the prejudice in favor of the imported article which was based upon the reputation gained through centuries of success abroad. Yet, in spite of the disadvantages under which the American industry has labored, it has steadily developed until to-day the United States is the greatest silk-manufacturing country in the world, with the possible exception of China, the value of whose products it is impos-

PARAGRAPH 399—SILK GOODS.

sible to ascertain, owing to the great internal consumption of silk goods in that country, of which no statistics are obtainable. The United States now consumes \$70,000,000 worth of raw silk each year, gives direct employment to 120,000 people working in silk factories alone, without including such establishments as dyeing, printing, finishing, makers of supplies, and silk manufacturing in cotton mills, reported separately by our census. If these were included it would probably be twice that number. The industry produces products to the value of about \$175,000,000, exclusive of duplications, not including goods woven in cotton mills and other establishments. We make more silk goods than France, Italy, and Germany combined, and more than twice as much as France, which is the next largest producer.

This industry has been developed without decreasing the imports of silk goods, which have practically remained constant for the last 50 years, and during this time the price of silk goods, owing to the keen domestic competition, has steadily fallen. Even during the last five years, when there has been much increase in the cost of living, the price of silk goods has steadily fallen, and is lower to-day than it has ever been. In fact, the chief danger of the silk industry to-day is the keenness of competition among domestic manufacturers. There are no trusts or combinations in the silk industry, and it is unlikely that any such can be successfully formed, owing to the character of the business and its constant changes and variations, due to fashions.

When one considers the census figures of the United States in relation to the silk industry, there are numerous factors which must be taken into account. It is impossible from these figures to arrive at the amount of labor entering into the cost of production, as there are many branches of the industry in which the labor is reported separately, such as dyeing, printing, and finishing establishments. In addition to this a large part of the silk materials there reported are used eventually in other industries, particularly cotton mills. Some are twice reported, and then duplication must be deducted. It must further be remembered that the item of labor enters into all the other factors of manufacture, such as supplies, machinery, and buildings. Also the item of overhead expense is much higher here than abroad.

It is difficult to make direct comparisons of the cost of production of silk goods in the United States and in France, which country would be the nearest to the United States in the cost of production, and figures made of the cost of production in these two countries would mean little if the goods should be produced in China, Japan, or Italy.

Silks are a luxury. It has been the policy of the United States to endeavor to make the burden of taxation fall most heavily upon the luxuries and upon those things which are of voluntary consumption, so that the necessities of life may be provided to the working people at a minimum cost. It is, therefore, only reasonable that the rates of duty which have proved to be equitable, easy of collection, and which have been worked out through the courts, should be allowed to stand with as little change as may be found reasonable.

Spun silks.—The mixed duties which were used for spun silk in the Dingley law were changed in the Payne law to specific duties. These duties have worked very successfully and have proved themselves to be just and equitable. About half of the spun silks imported have come in upon the specific rate, and about half on 35 per cent ad valorem; but had those which paid the ad valorem duty entered upon specific rates, the duties would have averaged about 30 per cent. Those on the two-cord yarns were very nearly the same as the specific rates, while the singles have proved to be a little lower, and would average about 27 per cent.

As a proof that these duties are very reasonable and may be considered upon a revenue basis, it is possible for European yarns to now be imported in close competition with those manufactured in this country. The largest manufacturers of spun silks are also the largest importers. In fact, approximately two-thirds of the spun-silk yarns used in this country are imported. Spun silk yarns have produced more revenue for the Government in the last 10 years than those of cotton, woolen, and worsted put together. The industry abroad is very highly organized, and it is not possible that the domestic industry would be able to continue to thrive under materially lower duties than the present.

Specific duties upon spun silk yarns are just as necessary as they are upon goods. The different qualities of yarn have their value for special reasons, some being good for one purpose, and some for another, and even an expert finds it impossible to give an opinion of the value of spun silk yarns from their appearance. The custom-house examiners have acknowledged that they are unable to do so when the identification marks of the manufacturer are removed. When these yarns are dyed and weighted even an approximation to correct values become impossible. Under the ad valorem

PARAGRAPH 399—SILK GOODS.

and mixed duties there were scandals and the Government was defrauded from much income.

As spun silks are the cheapest form of silk yarns, the goods made from them under specific duties carry a differential duty amply sufficient to compensate for the duty paid by domestic manufacturers on yarns used in making competing goods.

Thrown silk.—The duties on thrown silk amount to less than 25 per cent of the invoice value. They were lowered in the Payne bill and seem reasonable. The industry is a very large one and represents a large amount of invested capital and gives employment to a large body of people.

Velvets.—Among all silk fabrics there are none on which specific duties are more necessary than pile fabrics because of the many difficulties in judging values and making analyses and calculations of cost, as the pile threads are cut so short that it is almost impossible to judge what yarns they are made from. Also the classification of goods into perfect goods and "seconds" is most difficult. When duties were assessed upon an ad valorem basis many frauds were perpetrated by entering perfect goods as seconds, and it was impossible to detect the deceit as judgment can only be formed by an expert after inspecting the entire piece.

Velvet ribbons under the Payne bill were for the first time put on specific duties, which were purposely made low to cover only those qualities made here and were at that time pronounced as entirely satisfactory to the importing interests. It is as yet impossible for the American manufacturer to successfully compete on the highest and lowest grades, which continue to be imported exclusively because of the low import cost.

Piece dyed and printed goods are those which come in closest competition with the products of Asia, and no duties except specific can afford protection to American labor, and as Asiatic costs of production are impossible of ascertainment, they are also the only ones that can be collected. There are several large establishments in France engaged in the industry of converting Japanese and Chinese goods by dyeing, printing, embossing, finishing, and otherwise changing their condition. Afterwards they are usually sold as French merchandise. This industry is of such importance as to receive special consideration and concessions in recent revisions of the French tariff.

Yarn dyed goods, which includes most of the high fancies, are the ones upon which it is most difficult to make specific duties equitable, and an ad valorem catch-all clause is a practical necessity. The duties at present in force work well and are the easiest of collection and most equitable of any tariff ever drawn in the United States.

On ribbons, laces, appliqués, and other similar articles, ad valorem duties are the only ones it has yet seemed feasible to assess, and the present duties are reasonable and not more than necessary. The ribbon industry is at present in a far from healthy condition, and there has been little profit in it for many years. A change might easily kill it.

The artificial or imitation silk industry does not come within the activities of the Silk Association of America and we do not assume to speak for that industry.

The silk schedule is by far the most scientific of any of the textile schedules, and it is also the most difficult of all to adjust. We believe it to be fair and ask that it be retained as at present.

ADDITIONAL STATEMENTS SUBMITTED BY CHENEY BROS.

SOUTH MANCHESTER, CONN., *January 17, 1913.*

HON. OSCAR W. UNDERWOOD,

Chairman Ways and Means Committee, Washington, D. C.

MY DEAR MR. UNDERWOOD: I desire to call your attention to two or three matters in relation to the brief filed by several importers, Mr. Kridel and Mr. Tiederman among them. Mr. Kridel quoted my father as having said that a 40 per cent duty was sufficient protection for the silk industry. What he did say was that with the bill then presented, the first attempt at ad valorem duties was made, that with these ad valorem duties and with a 50 per cent catch-all clause, the schedule would not average in the collection of duties over 40 per cent, which is quite a different proposition and is only a reiteration of the statement which I made to your committee that ad valorem duties could not be collected at their full value.

At the bottom of the same page he refers to a movement among silk manufacturers to have duties removed on schappe, quoting a letter of John W. Stewart to that effect.

PARAGRAPH 399—SILK GOODS.

Mr. Stewart is the only exponent of this movement. I have either letters or the personal assurance of all the gentlemen quoted as being in favor of this move—Messrs. Schwarzenbach-Huber & Co., D. G. Derry, Hess-Goldsmith Co., Holmes Silk Co., James Simpson & Co., Stehli & Co., Reiling & Schoen, and Duplan Silk Co., all of which are reliable and considerable houses; that the use of their names by Mr. Stewart was without their warrant or authority and that they have no intention of asking your committee for the removal of duties upon schappe silk or their reduction. Further, that the velvet-ribbon schedule, to which the importers make objection, was in a large measure their own proposal and was pronounced as entirely satisfactory to Mr. Henry F. Tiederman, who acted as their spokesman during the revision of the Payne tariff bill, Mr. Tiederman having been in constant consultation with us in relation to the matter. Further, that there is only one class of velvet ribbons which can be manufactured in this country under the present rate of duty—which is spun pile and reeled silk back—and this on a competitive basis. We, ourselves, manufacturers of velvet ribbons, have found it impossible to compete on the higher grades and are importing them our ourselves. Further, that they propose to place a flat rate, based on broad goods, on velvet ribbons, on which the cost of production varies from \$11.50 a pound down to \$4.50 a pound.

Following is a statement covering that proposition: They have taken the minimum rate of duty for broad goods as a maximum rate for velvet ribbons. The value of broad goods for the same quality of pile ranges from \$3 per pound up; for ribbons from \$4.75 up. Broad goods are entirely single-thickness goods—that is, they only have one face—while ribbons are really two pieces of goods, velvet upon one side and satin on the other. There is at least \$2 per pound more labor in satin-back ribbons of the medium and better qualities than in broad goods with similar qualities of pile. If the broad-goods schedule was to have been applied to ribbons, it should have been a sliding schedule, ranging from \$1.50 per pound to \$4 per pound, instead of a flat schedule at the minimum rate of \$1 per pound. On this schedule in broad goods it has been found that the \$4 a pound rate does not cover the large range of high-priced fabrics which come in on ad valorem duty. The proposed schedule places cotton-pile and silk-pile velvets upon the same basis, although the least difference in cost is \$1.25 per pound for the same weight. The duty proposed is approximately correct for cotton piles in black. They have attempted to reduce ribbons to a yard basis without allowance for the fact that in very narrow ribbons the edges, which are constant for all widths, constitute 60 per cent of the material, while in the widest widths they do not constitute 2 per cent. Ribbons can not be put upon a broad-goods schedule without scaled allowances to cover the cost of labor, which increases rapidly as the width decreases. On the principal quality of velvet ribbon, which we are ourselves manufacturing at the present time, the total cost on the narrowest width is \$11.43 per pound, while the cost of the widest width is \$4.97 per pound. The labor cost on No. 1 ribbon is \$8.90 per pound, while on the widest width, No. 60, the labor cost is \$2.43 per pound. The present allowances for narrow widths of 40 cents additional for each quarter inch under three-quarters of an inch is not sufficient to allow domestic manufacturers to compete at present except upon the very heavy spun-silk quality. Velvet ribbons are a high-class luxury, and this proposition of the importers to make the largest reduction on the highest qualities, that go only to the most exclusive trade, would make it impossible practically to manufacture any velvet ribbons in this country.

I am working upon your suggestion in relation to weighted silks and endeavoring to work out something which seems feasible and administerable to propose to your committee; and if we are able to arrive at any conclusions in the matter, will immediately submit them to you, and in any case will be glad to consult with you upon the subject and show you the results of our investigations.

I have not had time to go through all of the testimony on silk goods. Will communicate further with you in relation to the matter.

Yours, very truly,

HORACE B. CHENEY.

JANUARY 18, 1913.

HON. CLAUDE KITCHIN,

Committee on Ways and Means, Washington, D. C.

MY DEAR MR. KITCHIN: In my examination on Schedule L of last Monday, January 13, you asked me certain questions in relation to the proportion of labor and material in silk goods and about the use of labor in the silk industry, from which it appeared that you were attempting to draw certain conclusions from census figures.

PARAGRAPH 399—SILK GOODS.

I am therefore giving you an analysis of the meaning of some of these figures, which follows:

[United States Census. Silk Manufacturing, 1909.]

Total value of products..... \$196, 911, 667

Does not include silks made in other mills, such as cotton mills.

Value of duplications..... 24, 656, 113

This is a guess and far from correct. All yarns reported as product are deducted from both materials and product. Many such are used in cotton, woolen, knitting, and electrical industries and should not be deducted from product, but should be deducted from materials used in silk industry.

Labor reported:

Wages..... 38, 570, 085

Clerks..... 3, 711, 509

Salaries..... 3, 815, 770

Not reported as labor: Contract work..... 12, 008, 744

Contract work is work done on materials belonging to other mills.

None of the labor employed in any dyeing, printing, embossing, finishing plants is included in this section of the census. It is at least equal to 25 per cent of whole labor and is included in the value of the products.

None of the labor employed on any materials or supplies before coming into this section of the census is included, although a large part of the cost of these materials and supplies is labor.

Fuel, rent, taxes, and overhead expense are very largely labor in their cost.

The division of raw materials, profit and labor, might be arrived at as follows:

Value of raw silk imported..... 71, 138, 698

Value of spun silks imported..... 4, 319, 401

Value of waste silk imported (estimate)..... 1, 323, 000

Value of materials brought into this country from abroad..... 76, 781, 099

Does not include imported dyes, chemicals, etc., comparatively small item.

Estimated profit about 6 per cent on capital invested, reported..... \$152, 158, 000

Add one third for subsidiary concerns..... 50, 719, 000

Total..... 202, 877, 000

12, 172, 000

Total cost of imported material and profit..... 88, 953, 099

which, subtracted from value of products (\$196,911,667—\$88,953,099) gives total labor..... 109, 958, 668

Duplications (thrown silk sold to cotton, wool, electric, etc., is not duplication of product)..... 18, 000, 000

91, 958, 668

This is assuming that as affecting the silk industry in the United States, the total value is composed of three elements—the value of the materials brought into the country in their state at import, labor put upon them, and profits.

This statement might answer for the whole trade; but for any branch of it, such as the weaving industry, it is all at sea again.

The reported value of silks follows: Broad goods, \$107,871,146; velvets, \$4,767,990; plushes, \$2,104,768; tapestries, \$332,820; ribbons, \$32,744,873.

These industries represent in their product most of the labor used in the entire report, and also a very large amount of labor not reported. Almost the entire amount used in printing, finishing, dyeing, and embossing.

On the other hand, in the throwing industry (incompletely reported as such, because a large part of it is contract work) there is reported as product for sale, \$12,550,510. This is not more than 10 per cent labor and is largely diverted into the electrical, cotton, and woolen industry.

PARAGRAPH 399—SILK GOODS.

The writer was consulted by Mr. Stewart of the Census Bureau when these figures were assembled, and he agreed that it was impossible to arrive at the proportion of labor and materials in an industry from census figures, and that no conclusions relating to the tariff could properly be drawn from them. That their purpose was to show the growth of the industry. They are very dangerous.

You asked also concerning the quality of labor in the silk industry. A consideration of your question leads me to believe that the gentlemen with whom you had talked were unquestionably employed in the throwing industry, an industry which has used a good deal of unskilled labor, I believe very unprofitably.

Raw silk is very valuable, and inferior labor is quite liable to cause waste equal to any saving it can effect in cost. One of the serious handicaps of the silk industry of the United States is the lack of skilled labor in the industry.

You also asked me concerning the employment of children in our mills. My reply was not complete on that point. The law of Connecticut allows the employment of children from 14 years of age. We do not employ children under 15 years of age upon moving machinery, and employ children between the ages of 14 and 15 only upon the special recommendation of the school board and examination of their family condition. In the report of Cheney Bros.' employees, those reported as girls and boys are anybody up to 18 or 19 years of age, and even older, who are employed upon certain classes of work. We do not employ any children such as have been described in magazines by people interested in the uplift movement.

Yours, very truly,

HORACE B. CHENEY.

P. S.—We will be glad to have you include this in the record.

FEBRUARY 1, 1913

Hon. OSCAR W. UNDERWOOD,
Washington, D. C.

DEAR SIR: We are sending you herewith a copy of the silk associations' compilation of duties collected during the 2 years and 11 months from August 9, 1909, to June 30, 1912, under the operation of the present tariff bill, this being as long a period as we have the figures available for. The figures are transcribed and compiled from the Government reports, although somewhat differently arranged, and are arranged to show just what importations there have been under each section of the tariff law as written, which is not done, particularly in the case of spun silks, under the Government compilation. We believe that you will find this compilation more comprehensive and more easily understood than the Government one. It gives in addition to the duties under each paragraph the total duties collected under each section.

An examination of this list will show that there is one item, No. 2270, which has paid 107 per cent, but an examination of the per pound value of the goods which have been entered in the gum shows that the value was only \$2.30 per pound. These were Chinese pongees, made out of wild silk, which, owing to the great diminution in use because of fashion in the United States and Europe, have lost practically half their value during the last two years; in fact, at the time the bill was drawn the raw silk from which these goods were made was worth approximately the per pound value here given for manufactured goods, and it is quite probable that another year will again see the raw materials worth more than the value here given.

The only other place which shows very high rates of duty are in the mixed schedules of cotton goods in the classes which have provided for "Containing more than 50 per cent of silk or wholly of silk." These variations could be remedied by the introduction of a clause of one more line for "Containing more than 50 per cent of silk or less than 75 per cent of silk."

The article referred to as paying over 200 per cent duty is a freak and of no importance to anybody, one which it had not seemed necessary to provide for in the tariff, but if it is thought necessary to provide for such an item in order to avoid the appearance of the rate, it would be necessary to introduce an additional schedule, "Cotton filled goods weighing less than 1½ ounces per square yard." If such a schedule is made, there will be little if any, imports made under it.

We trust that when you consider the silk schedule you will give us an opportunity to consult with you in relation to the matter and to give you any information that may be necessary to a complete understanding.

We are endeavoring to meet your wishes in relation to weighted silk. In that case, frankly, we find ourselves against great difficulties and fears in the trade in general; but if we can see our own way clear, this will not prevent us from making recommendations to your committee, and we are earnestly at work upon the proposition.

Yours, very truly,

HORACE B. CHENEY.

PARAGRAPH 399—SILK GOODS.

Dutiable silk imports at the customs districts of New York, Philadelphia, Boston, Hartford, Bridgeport, Chicago, Cincinnati, and San Francisco.

[Entered for immediate consumption and withdrawal from warehouse for 2 years and 11 months—Aug. 9, 1909, to June 30, 1912.]

Classification.	Number.	Duty.	Pounds.	Foreign invoice value.	Duty collected.
Silk partially manufactured from cocoons or from waste silk, and not further advanced or manufactured than carded or combed silk.	2197	\$0.35	17,076.70	\$18,718.00	\$5,4936.61
Epun silk or schappe silk yarns, valued at not exceeding \$1 per pound:	2198	.35	370,746.62	336,417.00	131,046.27
Whether in singles or advanced beyond the condition of singles by grouping or twisting two or more yarns together.					
Epun silk or schappe silk yarns, valued at exceeding \$1 per pound:					
In the gray—					
In skeins, warps, or cops, in singles and not advanced beyond singles by grouping or twisting two or more yarns together—					
Nos. 1 to 215.....	2199	1.45	734,771.00	1,044,126.00	398,382.52
Nos. 216 and over.....	2200	1.45	111.33	154.00	61.37
Other on which specific duty does not amount to 35 per cent.	2201	.65	1,671,080.77	3,053,091.00	1,080,033.60
In skeins, warps, or cops, advanced beyond the condition of singles by grouping or twisting two or more yarns together—					
Nos. 1 to 215.....	2202	1.50	3,125,989.46	4,811,928.00	1,901,663.74

PARAGRAPH 399—SILK GOODS.

TESTIMONY OF SAMUEL KRIDEL, OF NEW YORK, N. Y.

The witness was duly sworn by the chairman pro tempore.

Mr. HARRISON. You are representing J. Kridel Sons?

Mr. KRIDEL. I come here representing one of a committee appointed for the purpose of protesting against the present specific rates of the present tariff as being altogether intricate and befogging the public as to the nature of the rates imposed. I represent the importers of merchandise, who have delegated me to come here and present to you various samples of merchandise showing that through these specific rates quite a number of them have become prohibitive.

I wish to add that I speak of the paragraphs enumerated under Nos. 399 to 401, inclusive, of the present tariff, and this committee which I represent prays that in finding your new tariff an ad valorem rate of 35 per cent may prevail.

Mr. PALMER. Are you an importer?

Mr. KRIDEL. Yes, sir; and representing as well domestic manufacturers. We are also allied with domestic mills, interested as such.

On January 6, 1890, Mr. Frank Cheney, the father of the gentleman who testified here to-day, testified before the Ways and Means Committee on the McKinley bill, and he at that time testified that a 40 per cent ad valorem rate was sufficient protection for any manufacturer here. The record shows his testimony, if you will refer to it.

Mr. FORDNEY. You say you are a manufacturer?

Mr. KRIDEL. No, sir; I am not, but we represent manufacturers, and we are interested in domestic mills as well.

Mr. FORDNEY. You are representing manufacturers here in asking for a lower rate of duty?

Mr. KRIDEL. No, sir.

Mr. FORDNEY. Pardon me; I misunderstood you.

Mr. HILL. You will admit there is a vast difference in the weight cost now as compared with 1890? That is 22 years ago.

Mr. KRIDEL. Not in the silk industry of this country, so far as I could ascertain.

Mr. HILL. The silk industry was then different from the other industries of the country in this respect?

Mr. KRIDEL. That I really do not know. I do not think we had the high wages at that period that we have to-day.

Mr. HILL. As a natural supposition, the wage scale of the United States in 1890 was lower than it is now, was it not?

Mr. KRIDEL. In a general way; yes.

Mr. HILL. And that would make a difference as to the rate of duty, would it not?

Mr. KRIDEL. Possibly.

Mr. HILL. From our standpoint?

Mr. KRIDEL. Yes.

Mr. LONGWORTH. I am not quite sure just exactly whom you are representing when you say "manufacturers."

Mr. KRIDEL. I am representing the importers of silk goods of the United States under paragraphs 399 to 401, inclusive.

Mr. LONGWORTH. But Mr. Fordney asked if the manufacturers you represent desire a decreased duty, and you said no.

PARAGRAPH 399—SILK GOODS.

Mr. KRIDEL. I, as chairman of this committee, do not represent any manufacturers, but my firm personally is interested in domestic manufacturers as well as importing goods.

Mr. LONGWORTH. But you are not representing any manufacturers in desiring a decrease of duty?

Mr. KRIDEL. No, sir.

Mr. HILL. You speak only as an importer when you want lower rates of duty?

Mr. KRIDEL. I also speak for the interests of domestic manufacturers as well, who, at the rate that I recommend, would not suffer in comparing certain samples that are made here and those which are imported.

Mr. DALZELL. Will you be kind enough to name one manufacturer in this country that wants a lower rate of duty? He would be a curiosity, and I would like to know his name.

Mr. KRIDEL. I did not say a lower duty.

Mr. DALZELL. A lower rate of duty than the existing law?

Mr. KRIDEL. I do not know that I can name any.

Mr. PALMER. We have had several here who suggested lower rates perfectly acceptable to them.

Mr. HILL. Was it not invariably accompanied by a request for free raw materials?

Mr. PALMER. Oh, no.

Mr. FORDNEY. I have never yet seen one.

Mr. KRIDEL. I wish to bring before you certain articles which, through these specific rates, have been prohibited from being brought into the United States, and I wish to state that these rates that are specific range all the way, under this paragraph, from a catchall clause of 45 per cent to 259 per cent ad valorem value.

Mr. HARRISON. That refers to articles which are not imported because of that very fact?

Mr. KRIDEL. There have been a few imported, but after they had been found to have been assessed at this high rate, the importations stopped and have been stopped for quite a number of years; but in the first year of the tariff when these rates became applicable, without many importers knowing the exact amount of duty applied and before we were up to the intricacies of the specific rate, we discovered exactly what they had to pay, and these are the samples that I bring before you now.

Mr. FORDNEY. Has that high rate of duty on those specific articles increased the value of that product to the consumer of this country?

Mr. KRIDEL. He has not been able to receive them. Yes; it has.

Mr. FORDNEY. The manufacturers of this country are getting more for that grade of goods than they did get before for them?

Mr. KRIDEL. No. They are not making these goods, not this exact grade.

Mr. FORDNEY. It is not used?

Mr. KRIDEL. Yes; it is used, because it was used prior to the present tariff.

Mr. FORDNEY. You say it is not being imported now, and again you say it is not being made here, and yet it is being used. Where did it come from?

PARAGRAPH 399—SILK GOODS.

Mr. KRIDEL. It is used in a different form, sir. It is used in better qualities of goods that are made here.

Mr. HILL. In presenting your samples, if not too much trouble, name the foreign manufacturer and the country of origin.

Mr. KRIDEL. This [indicating] is an article known as cotton china silk. There is 90 per cent of cotton in that article and 10 per cent of silk, classified under the silk schedule, having a little bit of silk therein, as being silk of cheap value. The goods are made in France. They sell at \$3.10 a pound under the complex classification, and would pay 259 per cent of their value.

The article abroad costs 65 centimes per meter, 20 and 2 per cent discount, bringing it to about 10 cents a yard abroad.

Mr. PALMER. Who is the manufacturer?

Mr. KRIDEL. The principal manufacturer I do not know. This is a current article made there.

Mr. HILL. So far as you do know, kindly name the manufacturer and the country where it is manufactured.

Mr. KRIDEL. I can name one manufacturer who made this article [indicating]; yes. The name of the firm is Pelletier Freres & Co.

Mr. PALMER. Would 259 per cent equalize the difference in cost of production at home and abroad, together with a reasonable profit to the American manufacturer?

Mr. KRIDEL. No.

Mr. PALMER. It would not equalize it?

Mr. KRIDEL. No.

Mr. FORDNEY. You say the duty is 259 per cent ad valorem?

Mr. KRIDEL. Yes, sir.

Mr. FORDNEY. Is that article being used in this country?

Mr. KRIDEL. Used in a different form, sir. It has been supplanted by the manufacture of cotton goods.

Mr. FORDNEY. When was it used in this country?

Mr. KRIDEL. Prior to the enactment of the present law it was brought over in considerable quantities, and used for the linings of ladies' hats.

Mr. FORDNEY. What is the difference in the rate between the rate now under the Payne tariff law and under the Dingley law on that article?

Mr. KRIDEL. Under the Dingley law it was 60 cents a pound.

Mr. FORDNEY. That is the existing law?

Mr. KRIDEL. No.

Mr. FORDNEY. The so-called Payne law?

Mr. KRIDEL. Yes. It is now \$3.10.

Mr. FORDNEY. And under the old Dingley law it was how much?

Mr. KRIDEL. Sixty cents.

Mr. LONGWORTH. Point out in paragraph 399.

Mr. KRIDEL (reading):

Goods weighing below one and one-third pounds per square yard, containing less than 20 per cent of the weight of silk, dyed.

Mr. FORDNEY. Your contention is the duty is so high that it is prohibitive and therefore it is not imported?

Mr. KRIDEL. It is not imported; no, sir.

PARAGRAPH 399—SILK GOODS.

Mr. FORDNEY. Why is not the manufacture of that article then encouraged in this country, if foreign competition is absolutely shut off? Is not the duty high enough to compensate?

Mr. KRIDEL. When they make mercerized cotton cloth, it takes its place completely.

Mr. FORDNEY. Then it is not article that is used?

Mr. KRIDEL. It could be used if there were a rate of duty that would permit its importation, and it could be used again.

Mr. FORDNEY. Why don't they make it here again?

Mr. KRIDEL. They make these cotton goods, as I said before, to replace it. It is cheaper, still cheaper.

Mr. FORDNEY. I can not quite understand, when a duty of 259 per cent is prohibitive, if it is an article of common use, an article the people would use, why they will not use it now at all.

Mr. KRIDEL. Some of it has been made here now, but not in any quantity.

I want to point out another illustration of an article made by the same manufacturer in both countries. I have before you an article made by a manufacturer of Switzerland. This very identical manufacturer has a mill in this country that he constructed within the last year, and is making in both mills the identical quality of goods of the same texture. The price of the article abroad is 59 cents per yard. The price of the same article here, both being 36 inches wide, is 68½ cents per yard, showing the difference in cost in the labor abroad and here.

Mr. HILL. Read those prices again.

Mr. KRIDEL. Fifty-nine cents per yard—

Mr. HILL (interposing). That is abroad?

Mr. KRIDEL. Yes, sir.

Mr. HILL. And how much here?

Mr. KRIDEL. Sixty-eight and one-half cents per yard.

Mr. HILL. What is the duty?

Mr. KRIDEL. The duty on that article is \$2.25 per pound.

Mr. FORDNEY. What is the ad valorem rate of duty on that article?

Mr. KRIDEL. The ad valorem rate is, I should judge, about 55 to 60 per cent.

Mr. LONGWORTH. You hear Mr. Cheney state awhile ago that in no case that he knew of was there a larger difference between the two laws on the same articles than 1 per cent.

Mr. KRIDEL. I am afraid Mr. Cheney was wrong. I can enumerate many instances where the rates were a good deal higher.

Mr. HILL. What is it that you call this particular article? What do you call it?

Mr. KRIDEL. That is an all-silk satin, 36 inches wide.

Mr. HILL. An article of common use?

Mr. KRIDEL. Yes, in common use.

Mr. HILL. The duty, you said, is 55 per cent?

Mr. KRIDEL. Yes, sir.

Mr. HILL. The price abroad is 59 cents and the price here is 68½ cents?

Mr. KRIDEL. The price of the domestic article made here by the same manufacture is 68½ cents.

PARAGRAPH 399—SILK GOODS.

Mr. HILL. Consequently the difference is 9½ cents?

Mr. KRIDEL. Yes, sir.

Mr. HILL. Which is 16 per cent?

Mr. KRIDEL. Yes, sir.

Mr. HILL. The public is not paying for that duty, then, is it? No man pays over 16 per cent duty on that article, does he?

Mr. KRIDEL. Yes, they are. I think you are getting this confounded.

Mr. HILL. I think that very likely I am, but the fact is that no consumer pays over 16 per cent then because of the tariff?

Mr. KRIDEL. No, on account of buying the domestic article here.

Mr. HILL. He buys the domestic article at an advance of 16 per cent, notwithstanding the tariff arrangement is 55 per cent?

Mr. KRIDEL. Yes, sir.

Mr. HILL. Consequently doing nobody any harm?

Mr. HARRISON. Consequently a rate of 16 per cent ad valorem would equalize the difference in cost of production here and abroad.

Mr. KRIDEL. Exactly. I figure it about 20 per cent.

Mr. HILL. If you could confine it to the specific thing.

Mr. KRIDEL. Exactly.

Mr. HILL. But nobody is being harmed by leaving it as it is. Is anybody paying 1 cent over 16 per cent?

Mr. KRIDEL. No.

Mr. HILL. Then what is the matter with it?

Mr. KRIDEL. I am only showing the relative condition of cost of labor between here and abroad and directing attention to the different items I have here.

Mr. HARRISON. In your judgment, would 20 per cent cover the difference in cost of production between the different schedules?

Mr. KRIDEL. Yes, sir.

Mr. HARRISON. In this specific thing it would not?

Mr. KRIDEL. Oh, yes, sir. I think only a difference of 30 per cent would generally cover the difference in cost between here and Europe in these articles.

Mr. HARRISON. Do you think the employment of specific duties throughout this schedule makes many cases of prohibitive duties as to cheaper classes of goods, such as the one you first showed us?

Mr. KRIDEL. Absolutely only in the cheaper classes of goods.

Mr. HARRISON. Will you enumerate by name the classes of these goods in which these instances occur?

Mr. KRIDEL. Yes, sir.

I have before you cheap linings of caps, cheap linings of white satins used for the lining of coffins—

Mr. HARRISON. What is the specific duty upon that?

Mr. KRIDEL. Eighty-five cents a pound.

Mr. HARRISON. What is that ad valorem?

Mr. KRIDEL. Eighty-five per cent.

Mr. LONGWORTH. Do any of those importations come from Japan?

Mr. KRIDEL. No, sir.

Mr. PAYNE. How do you get at the valuation of that article there [indicating]?

Mr. KRIDEL. By the importations we made of the goods.

PARAGRAPH 399—SILK GOODS.

Mr. PAYNE. That you pay abroad for the goods?

Mr. KRIDEL. Yes, sir.

Mr. PAYNE. Landed at New York?

Mr. KRIDEL. Yes, sir.

Mr. PAYNE. Do you import large quantities of that?

Mr. KRIDEL. We did before the present tariff bill went into effect.

Mr. PAYNE. And sell it in this market?

Mr. KRIDEL. We sold it in this market; yes, sir.

Mr. PAYNE. After paying the duty?

Mr. KRIDEL. Not this duty; no, sir; previous to this duty, because it has been prohibited from coming in here now at the rate of 85 cents a pound.

Mr. PAYNE. You made your profit out of it? You do not do business for nothing?

Mr. KRIDEL. No, sir; we do not.

Mr. PAYNE. You made a profit out of it?

Mr. KRIDEL. Yes, sir; we tried to.

Mr. LONGWORTH. In the Dingley bill, what was the rate on that?

Mr. KRIDEL. Sixty cents a pound.

Mr. HARRISON. What is that you are referring to now?

Mr. KRIDEL. Lining for little boys' caps.

Mr. HARRISON. What is that other article you have just referred to?

Mr. KRIDEL. That is a lining for coffins.

Mr. HARRISON. What is the duty on that?

Mr. KRIDEL. Eighty-five cents a pound.

Mr. RAINEY. That equals how much ad valorem?

Mr. KRIDEL. Eighty-five per cent.

Mr. RAINEY. Does that keep these cheaper coffin linings from coming in?

Mr. KRIDEL. It does.

Mr. RAINEY. Do they come in at all?

Mr. KRIDEL. In very moderate quantities.

Mr. RAINEY. The effect of this particular clause in the Payne-Aldrich bill is to make it more expensive to die than it would otherwise be?

Mr. KRIDEL. Yes, sir.

Mr. FORDNEY. Is it being manufactured in this country now since it has been prohibited, as you say?

Mr. KRIDEL. Yes, sir.

Mr. FORDNEY. What is the difference in the cost now as compared prior to the adoption of the Dingley law?

Mr. KRIDEL. This article, under the Dingley law, costs to import—the value abroad—

Mr. FORDNEY. No; I am speaking of the cost to the consumer.

Mr. KRIDEL. This article [indicating]?

Mr. FORDNEY. Any article. How much more does the consumer pay for that now than he did pay for it under the Dingley law?

Mr. KRIDEL. For this article [indicating], 4 cents per yard.

Mr. FORDNEY. What is the relative value?

Mr. KRIDEL. The value of that per yard is 20 cents to-day. He bought it for 16 cents before this bill came into effect.

PARAGRAPH 399—SILK GOODS.

Mr. FORDNEY. This is an increase from 60 per cent to 310 per cent?

Mr. KRIDEL. I did not say 310. This is 85 per cent.

Mr. FORDNEY. What was it under the Dingley bill?

Mr. KRIDEL. 60 cents per pound. To-day it is 85 cents.

Mr. FORDNEY. It has increased the selling cost price to the consumer 20 per cent?

Mr. KRIDEL. Yes, sir.

Mr. HARRISON. Which is just about the ad valorem increase in duty?

Mr. KRIDEL. Yes, sir.

Mr. JAMES. He asked if the yellow piece which you have exhibited there was not manufactured here before the Payne-Aldrich law.

Mr. KRIDEL. Yes, sir; it has been.

Mr. JAMES. It was manufactured and sold here?

Mr. KRIDEL. Yes, sir.

Mr. JAMES. And sold 4 cents per yard cheaper than it is sold now since the Payne-Aldrich tariff bill raised the rates on it?

Mr. KRIDEL. Yes, sir. That law raised the rates 4 cents a yard.

Mr. JAMES. And they just lifted up the price of the article to about that extent?

Mr. KRIDEL. Yes, sir.

Mr. RAINEY. Is that cap lining to which you have referred manufactured here?

Mr. KRIDEL. Yes, sir; on the better qualities of goods.

Mr. RAINEY. The bill had the effect of stopping those altogether?

Mr. KRIDEL. Yes, sir.

Mr. FORDNEY. But being made in this country, American labor gets the benefit of it, does it not?

Mr. KRIDEL. Certainly.

Mr. JAMES. It was being made here before that rate was established on it, was it not?

Mr. KRIDEL. Yes, sir; that is correct.

Mr. FORDNEY. But it is made in larger quantities now than it was before the Payne rate was put on?

Mr. KRIDEL. Yes, sir.

Mr. RAINEY. But it costs more now, does it not?

Mr. KRIDEL. Yes, sir.

Mr. FORDNEY. But American labor gets it?

Mr. KRIDEL. Yes, sir.

Mr. RAINEY. They certainly get it when they die.

Mr. HARRISON. You have given us two or three instances of articles as to which the rates of the Payne law are in effect prohibitive. Can you give us any other instances than those?

Mr. KRIDEL. Yes, sir; I have quite a few here.

Mr. HARRISON. If so, are they all of the cheaper grades of silk goods?

Mr. KRIDEL. They are all of the cheaper grades of silk goods, yes.

Mr. HARRISON. So in your judgment the effect of the complicated paragraphs in the silk schedule of the Payne law has been to raise the duty upon most of the cheaper grades of silk manufacture?

Mr. KRIDEL. Exactly, sir.

PARAGRAPH 399—SILK GOODS.

Mr. HARRISON. You might give the committee some more instances. They will be of great use to us in framing a new schedule.

Mr. KRIDEL. I have before you, gentlemen, velvets and plushes on which the rates today vary all the way from 120 per cent in the cheapest qualities of goods down to rates varying in amount 74 per cent, 66 per cent, 78 per cent, 66 per cent, and so on, in the fairly medium qualities of goods.

All of the higher priced goods come under the catchall clause, 45 per cent ad valorem.

Mr. HILL. Are those higher than they were under the Dingley law?

Mr. KRIDEL. Yes, sir; much higher.

Mr. HILL. From whom do they come? Where are they bought?

Mr. KRIDEL. They are bought probably in Germany and France.

Mr. HILL. Are any bought in Italy?

Mr. KRIDEL. Very few in Italy, but there have been some. The industry hardly exists there any more.

Mr. HILL. When did the change occur in the price—immediately upon the passage of the Payne tariff bill?

Mr. KRIDEL. How do you mean?

Mr. HILL. When did the change of price occur?

Mr. KRIDEL. Immediately upon the passage of the Payne bill.

Mr. HILL. Give me the names of some of the manufacturers.

Mr. KRIDEL. Abroad?

Mr. HILL. Yes; manufacturers of these articles.

Mr. KRIDEL. Scheibler & Co.

Mr. HILL. Who else?

Mr. KRIDEL. I can give dozens of them.

Mr. HILL. Are not every one of them in the German-Italian-French syndicate?

Mr. KRIDEL. No, sir.

Mr. HILL. None of them? Remember, this is under oath. Are not every one of the producers of these goods in a syndicate in Germany and Italy and France?

Mr. KRIDEL. I know these velvets I am producing here are made by a man who is not in a syndicate.

Mr. HILL. You have not given the names.

Mr. KRIDEL. Scheibler & Co.

Mr. HILL. Are not Scheibler & Co., of Germany, in the syndicate?

Mr. KRIDEL. I do not think so.

Mr. HILL. Do you know or do you think?

Mr. KRIDEL. I do not know, but I do not think so.

Mr. HILL. Is not every yard of these goods sold under prices fixed and controlled by a foreign syndicate?

Mr. KRIDEL. Not these in Germany.

Mr. HILL. Do you not get a 10 per cent rebate at the end of the year on every bit of these goods you buy?

Mr. KRIDEL. No, sir; I have imported velvets myself from France and I got no rebate.

Mr. HILL. Is not that price fixed uniformly by the German and French and Italian syndicate?

Mr. KRIDEL. Not that I know of.

Mr. HILL. Are not Scheibler & Co. members of that syndicate?

PARAGRAPH 399—SILK GOODS.

Mr. KRIDEL. I do not know. I do not think so.

Mr. HILL. You do not say they are not?

Mr. KRIDEL. I do not, because I am not positive.

Mr. HILL. I think the evidence will be submitted that Scheibler & Co. are members of a syndicate, and that these goods are sold under a fixed agreement, with distribution of territory, and a rebate of 10 per cent at the end of the year.

Mr. HARRISON. Mr. Chairman, the testimony of this witness has been with reference to prices of American-made goods, and he has shown here, by exhibiting the goods, that American-made goods have advanced in price since the passage of the Payne bill, so that the remarks of my friend, the gentleman from Connecticut (Mr. Hill), are not exactly in point.

Mr. HILL. I want to ask particularly when the syndicate was formed?

Mr. KRIDEL. I have no idea.

Mr. JAMES. If there is a syndicate over there that sells goods cheaper to the people than the manufacturers they are more benevolent than the people who control the market here.

Mr. HILL. Certainly. The only question I ask is, what is the use of placing an ad valorem duty on an article, the price of which is arbitrarily fixed and controlled by 90 per cent of the producers of Europe in a syndicate, which gives a rebate to the importer after those goods are sent over here? That duty could not operate under those circumstances.

Mr. KRIDEL. I have bought velvet in France which I supposed to come from the so-called syndicate over there, or from one of the members of it, and I have never received a rebate nor have I had any proposed to me nor did I ever seek any.

Mr. HILL. Do you know the concern of J. L. de Ball & Co., of Germany?

Mr. KRIDEL. Yes, sir; by reputation.

Mr. HILL. Do you know the firm of Niedick & Co., of Germany?

Mr. KRIDEL. Yes, sir.

Mr. HILL. Do you know the firm of Roche & Co., in Lyon, France?

Mr. KRIDEL. Yes, sir.

Mr. HILL. Do you know the firm of Pelzer Bros., of Germany?

Mr. KRIDEL. Yes, sir.

Mr. HILL. Do you know the concern of Von Beckwith, of Germany?

Mr. KRIDEL. Yes, sir.

Mr. HILL. Are not all of those members of the syndicate?

Mr. KRIDEL. I do not know, sir.

Mr. HILL. You do not know either of them?

Mr. KRIDEL. I do not know whether they are.

Mr. HILL. You do not know either whether they fixed prices or distributed territories and make a rebate subsequent to the first invoice?

Mr. KRIDEL. No, sir.

Mr. HILL. And you do not know that they do not do it?

Mr. KRIDEL. I do not know that they do. You have not mentioned one manufacturer that I have bought goods from where I ever received a rebate.

PARAGRAPH 399—SILK GOODS.

Mr. HILL. How about the firm of L. F. Domerick & Co.?

Mr. KRIDEL. They are importers here. They are merchants here.

Mr. HILL. Do not they buy their goods from these people?

Mr. KRIDEL. I do not know whether they do or not.

Mr. HILL. You have bought from these men?

Mr. KRIDEL. No, sir; I have not.

Mr. HILL. Consequently you have not received any rebate from them, if you have not bought from them?

Mr. KRIDEL. No, sir; I have not.

Mr. HILL. Do you think it would be possible under that system to safely and properly administer an ad valorem rate?

Mr. KRIDEL. I do not think it would be proper if such a syndicate is in existence.

Mr. HILL. I agree with you fully.

Mr. KRIDEL. I would not advocate it, but I would advocate a specific duty based upon lower percentages of ad valorem duties.

Mr. HILL. That is really an argument, but I mean with the whole system handicapped by such an arrangement, it would not be possible in your judgment, would it, to safely administer an ad valorem rate?

Mr. KRIDEL. Not if such a syndicate were proven to exist that would give a rebate of 10 per cent, as you have mentioned.

Mr. FORDNEY. Will you give the names of some American firms or manufacturers of this class of goods which you have exhibited here who have advanced the price 4 cents per yard on these goods you have exhibited here on the adoption of the Payne tariff law?

Mr. KRIDEL. I did not say they advanced the rate 4 cents per yard.

Mr. FORDNEY. Yes; you say it sells for 4 cents per yard more than it did before.

Mr. KRIDEL. So it does, the imported article?

Mr. HILL. Pardon me; you said that this advance came upon the adoption of the Payne tariff law.

Mr. KRIDEL. In imported goods, sir.

Mr. FORDNEY. No; the manufactured goods to the consumer.

Mr. LONGWORTH. I understood you to say it very positively.

Mr. FORDNEY. I asked whether or not the increased duty under the Payne tariff law had increased the cost to the consumer, and you said, "Yes, to the extent of 4 cents per yard."

Mr. KRIDEL. On the imported article, but not on the domestic article.

Mr. LONGWORTH. That is a very different reply than you made to Mr. James a while ago.

Mr. KRIDEL. If you will look at the record I believe you will find I answered it as I had said.

Mr. FORDNEY. Perhaps you did not intend to mislead, but you did certainly mislead me. Can you tell me any domestic manufacturer of that class of goods who increased the price on his goods 4 cents per yard upon the adoption of the Payne tariff law?

Mr. KRIDEL. No, sir.

I have before me some more umbrella silks which also come under that class, and have been prohibited from coming in here and which show various duties under these specific rates ranging between 65½ per cent to 77 per cent.

PARAGRAPH 399—SILK GOODS.

Mr. HILL. Have umbrella silks been increased in price by the American manufacturer since the passage of the Payne bill?

Mr. KRIDEL. It was the imposition of these rates that has prevented them from coming in here, allowing the domestic manufacturer naturally—

Mr. HILL (interposing). Have the domestic prices been increased?

Mr. KRIDEL. No; but they have been able to obtain the prices which they were prevented from obtaining under the conditions existing previous to the Payne bill.

Mr. HILL. Has the domestic price fallen off since the Payne tariff bill was passed?

Mr. KRIDEL. No, sir.

Mr. HILL. You are quite sure of that?

Mr. KRIDEL. I am quite sure of that.

Mr. HILL. Mr. Chairman, there is a large umbrella silk factory in the town in which I live, and I will undertake to furnish the prices for the last four years.

The CHAIRMAN. We would like to have the gentleman from Connecticut (Mr. Hill) furnish the information, but we would also like to have the witness before us.

Mr. HILL. I will endeavor to bring him down.

Mr. JAMES. What has been the effect on these articles, where they have reduced the rate from the Dingley bill to the Payne rate?

Mr. KRIDEL. It has not increased the revenue. We are importing less silk goods of that kind.

Mr. JAMES. So the revenue has fallen off?

Mr. KRIDEL. Yes.

Mr. JAMES. To what extent?

Mr. KRIDEL. Not to a very great extent. I should think last year there were \$27,000,000 of silk goods imported, and previous to that there were \$29,000,000 or \$30,000,000. It has remained practically stationary. The entire importation of silk goods has remained stationary for quite a number of years.

Mr. RAINEY. On these goods you have here, the Government gets no revenue now?

Mr. KRIDEL. Absolutely none to speak of.

Mr. RAINEY. It completely destroyed the revenue, so far as it concerns the Government?

Mr. KRIDEL. Entirely.

Mr. HILL. Do you know of the firm of Muller & Co., of the Gloria Silk Mills?

Mr. KRIDEL. Yes, sir.

Mr. HILL. They make umbrella silks?

Mr. KRIDEL. Yes, sir.

Mr. HILL. You would accept their signed statement as to prices, would you not?

Mr. KRIDEL. Yes, sir.

Mr. HILL. I will ask Mr. Muller to furnish statements and put them in as a brief.

Mr. FORDNEY. He states that on account of increased duty in the Payne tariff these goods are prohibited from importation, yet on the domestic goods there has been no increase in price. That stands in the record in that way.

PARAGRAPH 399—SILK GOODS.

The CHAIRMAN. I understand that is the way he states it.

Mr. JAMES. Do you want it taken out?

Mr. HILL. No.

The CHAIRMAN. In reference to these goods you suggested to the committee where there is a prohibitive rate. Have you in your brief set out a description of these goods, so that the committee can arrange them in a reclassification?

Mr. KRIDEL. Yes, sir.

The CHAIRMAN. Is that all you desire to say?

Mr. KRIDEL. I only wish to say that I think that a rate, as I have said before, of 35 per cent ad valorem would not destroy the domestic industry at all. In suggesting that rate I simply do it so as to enable the importation of such goods as have been prohibited, and it will not tend to hurt the domestic industry, because I feel at a 35 per cent rate of duty it fully covers the cost of labor between this country and abroad.

The CHAIRMAN. There are some portions of that paragraph that are quite competitive at the present time; some portions of this paragraph where a good deal of goods are imported?

Mr. KRIDEL. Yes, there are; but not as competitive as you would imagine.

The CHAIRMAN. As far as I am concerned—I am speaking only for myself, but I am probably voicing the view of this side of the House—what we want to do is to get a large amount of revenue out of the luxuries, so that we can put less tax on the necessities of life, and if there is a portion of this schedule where there is great competition and a large percentage of the imports would not be stopped by such a rate, even if it were a high rate, because it is a luxury, we want to put a tax on that. We are desirous of cutting the rate on those articles where there is no competition and where we do not get any revenue, and the committee would be glad to have you differentiate between those.

Mr. KRIDEL. I would be perfectly willing to have the high-class goods pay a higher rate of duty, sir—

The CHAIRMAN (interposing). I would be glad if you can supplement your brief by making a showing of that kind.

Mr. KRIDEL (continuing). If we could get the lower class in on a basis that would help the importation and bring a lot of revenue to the Government without hurting in a great way the domestic production.

The CHAIRMAN. We would be very glad to have you submit a supplemental brief in that way, if you desire to do that, that would indicate that to the committee.

Mr. PAYNE. In making that out, bear in mind the pressing necessity for more revenue.

PROPOSED DUTY ON RIBBONS SUBMITTED BY MR. KRIDEL AS SUPPLEMENTARY TO HIS REMARKS.

Velvet or plush ribbons, or other pile fabrics not over 12 inches in width, cut or uncut, with fast edges or cut edges, of which the pile is composed, of silk, artificial silk, cotton, or any other vegetable fiber weighing not less than $6\frac{1}{2}$ ounces per square yard, \$1 per pound; weighing less than $6\frac{1}{2}$ ounces per square yard, but not less than $5\frac{1}{2}$ ounces, \$1.50 per pound; weighing less than $5\frac{1}{2}$ ounces, \$2 per pound. But in no case shall any of the foregoing pay a less rate of duty than 35 per cent ad valorem.

PARAGRAPH 399—SILK GOODS.

Ribbons, bandings including hat bands, beltings, bindings, all of the foregoing not exceeding 12 inches in width, and if with fast edges, bone casings, braces, cords, cords and tassels, garters, gorings, suspenders, tubings, and webs and webbings, composed wholly or in chief value of silk, or of artificial silk, and whether composed in any part of india rubber, in part metal threads, or otherwise, if not embroidered in any manner by hand or machinery, 35 per cent ad valorem.

SILK AND SILK GOODS.

GENTLEMEN: The following statement is made in behalf of the importers of silks, velvets, and other articles of merchandise embraced within the designation of silk and silk goods, covered by Schedule L of the present tariff act of August 5, 1909, paragraphs 399 to 401, inclusive, and 405 as to piece goods and ribbons.

The importers of silk goods during the one single fiscal year ending June 30, 1912, paid into the Government of the United States the sum of \$14,000,000 upon importations valued at \$27,000,000, of which \$10,000,000 is imported under paragraphs 399 to 401. Seventy million dollars worth of raw silk, to be used by American manufacturers, was imported free of duty, but the several rates of duty collected on the different classes of merchandise included in the total valuation of \$27,000,000, ranged from 45 per cent ad valorem, on the highest quality or most expensive goods, upward. Thus on plushes, velvets, chenilles, and other pile fabrics, the specific duties applied varied in equivalent ad valorem from 52.34 to 69.85 per cent and, including the ad valorem of 45 per cent on the highest price goods, the average duty assessed was 53.64 per cent.

On fabrics woven in the piece, the equivalent ad valorem was 56.68 per cent; on laces, 60 per cent; and on edging, insertions, and galloons, 70 per cent; and, taking the entire schedule into account and including therein items where the duty assessed on ungunmed thrown silk (the specific duty being \$1 a pound on a valuation of \$10, the equivalent ad valorem is 10 per cent), even including this 10 per cent item, the equivalent ad valorem on the total schedule is 52.03 per cent.

It must not be overlooked that in addition to this excessive rate of duty, which actually ranges between 45 and 70 per cent on goods admitted to entry, there is a further incidental protection resulting from freight rates, insurance, interest, and additional duties resulting from wrong classifications due to the intricacies of the present schedule, and legal expenses in having these classifications corrected.

There is another very important matter which adds to the incidental protection afforded the domestic manufacturer, and that is that the importer is compelled by the American buyer to sell these goods f. o. b. American shipping points duty paid. This gives to the American purchaser the option to accept or refuse delivery after the goods have passed through the customhouse and duties have been paid. Thus, if the goods do not meet with the approval of the domestic buyer, he will reject the entire shipment and these goods can only be disposed of at a considerable loss.

In the McKinley Act of 1890 the duty was 50 per cent; in the Wilson-Gorman bill of 1894, 45 per cent; and in the act of 1897—the Dingley Act—the minimum duty was 50 per cent. In the Payne-Aldrich Act the minimum duty was fixed at 45 per cent, but as heretofore shown, the actual duty was very much in excess of this amount. It is interesting to note that the domestic manufacturers have at no time been stayed or retarded in the increase of their production. In 1860 the domestic production of manufactured silk goods amounted to \$6,607,771, and in 1905 it was \$133,288,072, whereas, with regard to imported merchandise in 1860, the value of manufactures of silk amounted to \$32,961,120, and in 1905 it amounted to \$28,702,445, and the importations for the year 1912 are even less, to wit, \$27,092,355.84.

From 1789 up to March 2, 1861, the duty was at no time in excess of 30 per cent, and ranged down to as low as 10 per cent. Under the act of July 3, 1846, it was 25 per cent, and under the act of March 3, 1857, it was 19 per cent; and, notwithstanding this fact, the silk production increased in value in this country from \$1,809,000 to \$6,607,000. From 1861, to wit, under the war tariff, the duties were increased to 40 per cent, then to 50 per cent, and finally to 60 per cent, and under the acts of 1874, 1883, and 1890 the rate was substantially 50 per cent, but it is to be noted that from 1870, when the domestic production amounted to approximately \$12,000,000, to 1905, when it totaled \$133,000,000, the actual increase has been over 1,000 per cent. Hence it is perfectly evident that during all this time the domestic manufacturers have had all the protection if not more than they needed.

Our argument in this behalf is that a flat ad valorem of 35 per cent is amply protective and would increase the revenue, and by reason of the increased demand for

PARAGRAPH 399—SILK GOODS.

goods of this character, in which demand the domestic manufacturer will share, the increase in the revenue and the reduction of duty will be an actual benefit to the domestic manufacturer.

When hearings were being had before the Ways and Means Committee in preparation of the McKinley bill, on Monday, January 6, 1890, Mr. F. W. Cheney, of South Manchester, Conn., addressed the committee as follows:

“Mr. CHENEY. Mr. Chairman and gentlemen of the committee, we have not any prepared argument to make in the presentation of this matter. We have only to say that the Senate bill was very carefully prepared under Mr. Fairchild’s administration of the Treasury Department, and so far as it can be silk was placed upon a specific basis instead of all together an ad valorem basis. The bill is acceptable to the silk manufacturers generally. We think, however, that instead of 50 per cent, that this bill gives us of protection, that on an average it is not more than 40 per cent.

“The CHAIRMAN. This Senate bill is a reduction of the present law.

“Mr. CHENEY. We may say that the Senate bill as it is written probably averages about 40 per cent protection. There will be great inequalities in all duties in any specific system. It is absolutely impossible to have uniformity under specific duties in silk unless you introduce many classifications, by which you bring in more complications in ascertaining the foreign market value. You will readily understand that you can take a pound of silk and make 5 or 50 yards of cloth, yet the duty at one end is prohibitive and at the other it will reach a vanishing point almost. We are satisfied that this Senate bill is an honest attempt to provide for a specific duty. We do not know how it can be made better. All we can say about it is that we think the rates are very low indeed on the better class of goods, goods which are worth from \$2.50 to \$3 per yard. The duty on that will only be about 25 per cent. On goods that are worth, say, \$1 a yard, about 2 ounces to the yard, it will be 30 per cent, and when you get down to the lower grades you will get about 50 per cent and over.”

Here was a presumably frank statement to the effect that the silk manufacturers of this country were satisfied with 40 per cent. That any specific system for the assessment of duties would result in inequalities and complications.

It may be as well to state here parenthetically that in addition to the proposition that this industry has grown practically 1,000 per cent in the last generation, in addition to the fact that as far back as 1890 the industry had so far ceased to be an infant industry that the manufacturers expressed themselves as willing to accept a protective duty of 40 per cent without going back for any period of years in the statistical records it is sufficient to show that domestic manufacturers of silk and silk goods, by reason of manifestly favored conditions, have been able to export their merchandise and sell it on the foreign market in competition with the foreigner; thus the monthly summary of commerce and labor of the United States for June 1911 and June 1912, shows the exports in 1909 to be \$847,894; in 1910, \$1,097,593; in 1911, \$1,538,543; and in 1912, \$1,992,765, or roundly \$2,000,000 worth.

The present duty on schappe is approximately 35 per cent ad valorem. A concerted effort is being made by the domestic manufacturers of silk and silk goods to have this duty removed and it would seem that their position in this matter was eminently proper. Attention should be called to the fact, however, that the removal of this duty constitutes a further or additional argument for the reduction of the duty upon the completed article. In other words, if the domestic manufacturer can pay a 35 per cent duty on his raw material and is content with a 40 per cent duty on his manufactured article, it seems fairly reasonable to assume that if the duty is removed on the raw material an ad valorem duty of 35 per cent on the manufactured article would be amply protective. The letter setting forth the position of the silk manufacturers of America in this behalf is reproduced here for the information of the committee:

“DEAR SIR: A movement has been started to secure for the silk manufacturers of America the abolition of duties on what to us is raw material, viz, ‘schappe’ and ‘artificial silk.’

“The Ways and Means Committee have appointed Monday, January 13, to hear the wishes of silk manufacturers, and a large number of concerns, among whom are Messrs. Schwartzbach, Huber & Co., D. G. Dery, Hess, Goldsmith & Co., Holmes Silk Co., James Simpson & Co., Stehli & Co., Reiling & Schoen, and Duplan Silk Co., and many others, have instantly and most heartily indorsed the plan to secure these two classes of silk free of duty.

“As far as ‘schappe’ is concerned, there are only three concerns in the country spinning it, and the entire production is so insignificant that it seems unjust that the manufacturers and consumers should be made to pay a tribute of 35 per cent to these three producers to the detriment of both manufacturers and consumers.

PARAGRAPH 399—SILK GOODS.

"With 'artificial silk' the situation is largely the same, but of a more aggravated type, inasmuch as there is only one concern producing it in this country. They are protected by a duty of 45 cents a pound on what they produce.

"These duties have been established, in the case of 'schappe' for many years, and in the case of 'artificial silk' for at least 4 or 5 years, but they have not resulted in the building up of a great industry in either case, and it would therefore seem as though the doctrine of freeing 'raw materials,' common to both the Republican and Democratic Parties, could fairly be urged in the silks here named, without doing injustice to any but very insignificant interests, while the great mass of consumers and the silk manufacturers at large would be largely benefited.

"You may not be a user of either of these silks, but in any event we think you will approve of any plan by which cheaper 'raw materials' would be obtained for the silk industry.

"It is impossible for the writer to personally visit all the silk manufacturers to explain this proposition, especially when the time is so soon coming when our views must be presented at Washington.

"If, however, you approve of this movement, will you kindly let me know whether I may incorporate your concern among the number who are in favor of this plan?

"In replying, if you are in favor of it, will you kindly let me know about how many looms you have and about how many hands you employ?

"Trusting I may hear from you by return of mail, I am,

"Yours, very truly,

"JNO. W. STEWART."

Numerous examples of specific cases wherein a duty of 35 per cent is more than ample can be furnished to this committee. It will suffice, however, to call your attention to a few cases of this character. For instance, we have here a sample of satin made in Switzerland and the same article made in America by the same manufacturer; in other words, Stunzi Sons have a mill in Switzerland and one here. The article made in Switzerland is $37\frac{3}{4}$ inches wide and the selling price in Zurich is fr. 4.20 less 20 per cent and 1 per cent, or 58.93 cents net per yard. If a duty of 35 per cent be added, the net price is 79.56 cents per yard, not including packing, forwarding and transportation charges. This same article made in America by the same manufacturer 36 inches wide is produced at a cost of $68\frac{1}{2}$ cents net, including all manufacturing expenses.

Another example consists of certain piece dyed silks known as silk corduroys, made in France, width 80 centimeters, $31\frac{1}{2}$ inches, selling price Lyon fr. 11.10, less 20 per cent and 2 per cent, equals \$1.5437 net per yard. With a duty of 35 per cent added the price is \$2.0839, not including packing, forwarding, and transportation charges. The same article made in America—width 34 inches instead of 31—at a net mill cost of \$1.35, including all manufacturing expenses. It is interesting to note in connection with this article that the manufacturer here in America can undersell the foreigner to the extent indicated notwithstanding the fact that he is compelled to pay 35 per cent duty on his raw material.

An interesting exhibit is found in connection with a plain all-silk taffeta ribbon with respect to which the raw material and labor cost each represent 50 per cent. The width of the ribbon is $7\frac{1}{4}$ inches; its cost abroad is 9.1 cents per yard, at which price it is offered freely to all purchasers in the foreign market. A domestic manufacturer figuring on this article has offered to produce the same here at a price, including a mill expense of 10 per cent, of 11.8 cents per yard. If a duty of 35 per cent were assessed it is evident that the domestic manufacturer could sell the goods at the price stated with a fair margin of profit. A duty of 30 per cent would equalize exactly the difference between the cost abroad and the cost here, not taking into consideration the transportation charge, which is certainly not less than 5 per cent.

A further example consists of certain louisines. The foreign article sells in Lyon at 6.25 francs per meter net. This is equivalent to \$1.25 f. o. b. New York without duty. The same article exactly manufactured here sells at \$1.20 a yard less 7 per cent.

As an illustration of the inequality of the present duty on velvet ribbons, which is \$2 a pound for blacks, we are in a position to exhibit samples of merchandise, the value of which abroad is 88 cents per square yard, weight $7\frac{1}{4}$ ounces, and the duty at \$2 per pound is equivalent to 104 per cent ad valorem. A little lighter grade of silk-faced ribbon composed of spun silk instead of a pure silk, the value abroad being 95 cents per square yard and the weight 6.6 ounces, the present duty at \$2 per pound is equal to 85 per cent ad valorem. Taking an extreme case, we can produce samples of merchandise valued at \$1.90 per yard, weight 5.4 ounces; the duty at \$2 per pound is equivalent to $35\frac{1}{2}$ per cent ad valorem, but on which the minimum rate under the present act of 45 per cent prevails. This shows that the cheapest quality pays 104

PARAGRAPH 399—SILK GOODS.

per cent and the richest quality would pay 35½ per cent but for the minimum provision of 45 per cent ad valorem.

We can also produce for the information of this committee a vast number of cases in which the present rates are absolutely prohibitive. For instance, take a black silk-faced velvet, silk chief value, 44 to 46 centimeters wide; weight under 5¼ ounces and over 4 ounces per square yard; rate of duty \$2 per pound; market price Crefeld 45 cents yard; amount of duty paid, 30 cents yard; percentage of duty, 66.66 per cent; selling price New York, 90 cents less 6 per cent discount, 8 per cent commission and 3 per cent expenses. The domestic selling price of this same article is 67½ to 70 cents. Hence the importation of this merchandise is absolutely prohibited.

Take a black schappe faced velvet, silk chief value, 44 to 46 centimeters wide, weight over 5¼ ounces per square yard, rate of duty \$1.50 per pound, market price in Crefeld 43½ cents per yard, amount of duty \$0.238 per yard. Percentage of duty 66 per cent. Selling price for New York 87½ cents.

Take a colored schappe-faced velvet, silk chief value, 44–47 centimeters wide, weight under 5¼ ounces and over 4 per square yard, duties \$2 per pound, market price, Crefeld, 42½ cents per yard; amount of duty, \$0.317, and the rate of duty is 74½. Selling price, New York, 90 cents per yard, less 6 per cent discount, 8 per cent commission, and 3 per cent expenses, and the domestic selling price in this market is 75 cents.

One more example of this merchandise in black schappe faced plush: Silk chief value, 58–60 centimeters wide, weight less than 9½ ounces per square yard. Market price at Crefeld, \$0.478. Amount of duty paid, \$0.528. Rate of duty, 110 per cent. Selling price in New York is \$1.20, less 6 per cent discount, 8 per cent commission, and 3 per cent expenses. The duty on this merchandise is absolutely prohibitive.

This same situation is true with regard to a large class of umbrella silks, as to which we are in a position to produce samples. The merchandise is dutiable at from 70 to 85 cents a pound, and the duty ranges from 65½ to 83½ per cent, and is altogether prohibitive.

There are numerous other examples to which the attention of your committee might be called, and we have the samples and will be pleased to do so; but it would seem unnecessary. We will, however, call your attention to one striking example of the operation of the present tariff act. Messrs. Rusch & Co. imported and entered ex steamship *St. Paul*, entry number 193600, from Lyons, July 29, 1909, certain 50 pieces of 36-inch silk and cotton pongee; weight, 193.50 kilos; 5.191 meters; at 65 francs per meter equals 0.3374.15 francs, the net value of the case in United States money being \$510.54. Owing to the great intricacies of the present schedule the appraiser at the port of New York was uncertain as to whether or not this merchandise was provided for in the schedule, and he came to the conclusion that it was not and would, therefore, be dutiable at 50 per cent ad valorem. He subsequently changed his mind, however, in regard to this classification, and the merchandise was assessed at \$3.10 per pound. The importers, assuming that the appraiser had knowledge of the law, took delivery of the goods and upon liquidation of the entry at the customhouse they were subsequently called upon to pay the sum of \$1,322.42. The duty on this merchandise, therefore, was at the rate of 259 per cent. It is a fairly reasonable presumption that merchandise of this character is likewise prohibited.

This last example naturally brings us to the absurdly intricate nature of the present tariff schedule. If an importer of long experience in the silk business and the appraiser of merchandise at the port of New York, having at his elbow all the expert information available, are unable to determine what the rate of duty is, it seems reasonable that the law should be so changed that all who run may read. The fact is, that without a dissenting voice customs officers would welcome a change from specific to ad valorem duties, and some of the intricacies of the act and the difficulties of administering it may be visualized to the committee by an examination of a consular invoice covering a varied lot of silk goods. This schedule, we feel, was drawn up on the specific-duty basis, with the intent of increasing the protection without, on the face of it, admitting the extent, or, we might say, the enormity of the equivalent ad valorem secured thereby. No reasonable body of legislators would have stood for the proposition of 259 per cent duty, or even 120 per cent, and we are inclined to believe that even the most hide-bound standpatters would have approached the matter with some temerity, if they had been frankly asked to increase the duty under the Dingley Act from 50 per cent to 60, 70, 80, 90, or 100.

A specific example of how the present act operates is illustrated with respect to cheap satin weighing between 1½ ounces and 2½ ounces per yard, costing in Lyons 0.80 franc per meter, with 20 and 2 per cent discount. These cheap-dyed goods come under the specific rate of 85 cents a pound, which on this quality is equivalent to 65 per cent ad

PARAGRAPH 399—SILK GOODS.

valorem. All low-priced silk and cotton satins which are used by the poorer classes of people pay under the specific schedule from 65 to 85 per cent ad valorem. If the wording in paragraph 399 referring to this class of merchandise had been left as it originally passed both House and Senate—that is, “if weighing not less than $1\frac{1}{2}$ ounces and not more than 2 ounces,” etc., it would have been bad enough, but the record shows that the above wording was changed in some unaccountable manner in the conference committee to read “weighing more than $1\frac{1}{2}$, but not more than $2\frac{1}{2}$ ounces per square yard, and weighing more than $2\frac{1}{2}$ but not more than 8 ounces per square yard.” This little change of one-half ounce shut out absolutely a large class of low-priced goods, putting them into the higher rate, which was absolutely prohibitive.

It was alleged that these specific rates of duty were to be adopted for the reason that it was so difficult to ascertain market value and, secondly, to the end that the Government might not be subjected to loss by reason of undervaluation. With regard to the first of these propositions, it would seem sufficient to call your committee's attention to the letter of Mr. Cheney above set forth and secondly the fact is that the cheese and fig frauds upon the customs were made possible by reason of the specific duties. The fact is that the experts at the appraisers' stores are abundantly able to ascertain market value, and furthermore, at the present time they are not only compelled to apply the intricate specific-duty schedules; but in each and every instance to ascertain the market value also. If the gentlemen framing the present tariff act were fully desirous of seeing to it that no excessive ad valorem rate were assessed under the guise of a specific duty, it might have been eminently proper, in addition to the ad valorem minimum of 45 per cent to include an ad valorem maximum under which the duty assessed should not be in excess of, say, 50 per cent.

We feel—in fact, we know—that 35 per cent is amply protective. It is admitted that a large quantity of merchandise would be brought in at that rate which is now prohibited. There are thousands of small manufacturers all over the United States who cut up silk goods; and even at very much lower rates of duty than are now assessable, they are unable to compete with the foreign manufacturers of finished articles in their line. Thus, as an example, a great many artificial flowers are imported, the rate of duty on the manufactured article being 60 per cent. The domestic flower makers, being obliged to use silks and satins which are protected all the way from 45 to over 100 per cent, naturally have a hard time to compete against the importation of the finished article, which pays a lesser rate of duty than they do on their raw material. These people are absolutely thrown out of business, because they can not purchase the merchandise here.

With regard to more expensive lines of merchandise, a decrease in the duty would unquestionably mean an increased demand for the goods, and if, as stated by the domestic manufacturers, 40 per cent is amply protective, then, if the duty were written in the act at 35 per cent, the incidental protection of freight rates, charges, interest, etc., would this protection to approximately 45 per cent and under this principle the domestic manufacturer would have 5 per cent more than he states is amply protective.

It is extremely difficult to estimate the increase or decrease in imports by paragraphs which would result from suggestive modification of duties, and it is questionable whether the reduction of 35 per cent would result in doing more than to permit the importation of merchandise, which is at present prohibited, and on this basis alone the duties would be but slightly increased over those which are collected at the present time. It is hoped that this reduction of duty would result in the reduction of the selling price to the ultimate consumer and that thereby an increased demand would be created for these goods and it is perfectly obvious that the domestic manufacturers would more largely share in this increased demand than would the importers. If the domestic manufacturers can to-day supply \$133,000,000 worth of goods to the domestic trade, as against \$27,000,000 imported, and can incidentally export \$2,000,000 of goods, in competition with the foreigner, it is a reasonable presumption that the imports would not be greatly increased.

Now, one more word in regard to the questions of luxuries. What are luxuries in the first place, and having ascertained or formulated a correct and adequate definition of the term, do silk and silk goods come within the term?

The Century Dictionary defines the word as—

“A free or extravagant indulgence in pleasure, as of the table; voluptuousness in the gratification of any appetite: also the free expenditure of wealth for the gratification of one's own desires as in costly dress and equipage—

“Luxury does not consist in the innocent enjoyment of any of the goods things which God has created to be received with thankfulness, but in the wasteful abuse of them

PARAGRAPH 399—SILK GOODS.

to vicious purposes, in ways inconsistent with sobriety, justice, or charity." (Clarke, Works II, cxiv.)

"Learn the luxury of doing good." (Goldsmith, Traveller I, 22.)

This latter connotation of the word is one which we most earnestly present to the attention of the committee with regard to removing the present prohibitive rates on silks and silk goods.

An expensive automobile used for mere pleasure and gratification is a luxury, but the physician who to meet the demands upon him employs an automobile that he may more promptly and adequately minister to the sick and dying is not luxurious, but humanitarian.

Illustrations of this character might be repeated indefinitely, all tending to show, as stated by Clarke, that it is the particular use, or rather abuse, that determines. But with reference to silks, a vast quantity of silks could not by any stretch of the imagination be designated luxuries. It may be argued that the expensive qualities are. Well, let it be admitted. What then? The Payne-Aldrich Act fixed the duty on these expensive goods at 45 per cent. The domestic manufacturers say 40 per cent is ample, but why make the duty range from 50 to 100 per cent on the cheaper goods which are not luxuries?

M. E. MAILHOUSE.

 ADDITIONAL BRIEF OF SAMUEL KRIDEL ET AL. ON SILK AND SILK GOODS.

GENTLEMEN: Pursuant to the request of the committee by its chairman, Mr. Underwood, at the time that Mr. Samuel Kridel appeared before the committee, the following recommendations are made with respect to the provisions to be included in the silk schedule with reference to merchandise covered by paragraphs 399 to 401, inclusive, and 405 as to piece goods and ribbons, of the act of August 5, 1909.

First. It is desirable to have the fact borne in mind that the schedule submitted herewith has been prepared by a committee composed of merchants who are not only importers, but men likewise representing distributing agencies for domestic manufacturers. It is, therefore, evident that these men are interested solely in an increased outlet for silk goods, both foreign and domestic. To the end, therefore, that no recommendation be made which would in any sense sacrifice either of these interests, it has been necessary for the committee to go over the matter with great care, safeguarding the interests of the domestic manufacturer against any radical reduction and at the same time providing for reductions with respect to goods heretofore prohibited and on goods with respect to which there is no domestic competition.

In the act of 1890, known as the McKinley Act, the duty was purely ad valorem, and in the Wilson bill of 1894 it was likewise purely ad valorem. In the Dingley Act of 1897 specific duties were introduced for the first time, and these specific-duty provisions were largely increased in the Payne-Aldrich Act of 1909. In this latter act provision was made for a minimum ad valorem of 45 per cent, but experience has demonstrated that on many lines of merchandise theretofore imported the specific duties provided ranged upward anywhere from 60 to 100 per cent or more, and hence, in many instances, were absolutely prohibitive, although the domestic manufacturers have, on several occasions, admitted that they were content with a protection of 45 per cent, and in the tariff hearings on Schedule L, before the present Ways and Means Committee, in response to a question propounded by Mr. Palmer, Mr. Cheney stated that he did not think that this duty should be increased. Mr. Cheney made the further statement, on page 1507, as follows: "It is doubtful whether more than two-thirds of the duty imposed is ever collected."

If Mr. Cheney be satisfied with 45 per cent and two-thirds of the duty is collected, then a provision for 30 per cent that is collected would, according to his statement, be amply protective. Following out this line of thought, and bearing in mind the fact that American manufacturers are to-day imitating most silk fabrics created by foreign manufacturers and selling them far below the cost of importation, with but 30 per cent duty added, your committee has prepared a schedule of specific duties to be applied to the importation of silk goods, coupled with the proposition that provision is made

PARAGRAPH 399—SILK GOODS.

for a minimum of 30 per cent and a maximum of 45 per cent. This condition is modified in its operation by the provision that goods valued at 65 cents per ounce or more shall pay the maximum duty provided for, and thus all goods of such a character as can properly be designated as luxuries are subject to the highest rate of duty imposed by the act. At the same time many lines of merchandise of the cheapest character are provided for at specific rates, which work out on the basis of an equivalent ad valorem at 50 per cent or more, but which, by virtue of the maximum clause, will be dutiable at 45 per cent. The balance of the schedule ranges approximately between 37 to 43 per cent, or an average of about 40 per cent. Manifestly, it is perfectly impossible to prepare any schedule on the specific-duty basis without greatly multiplying the provisions in order to avoid a fluctuation of equivalent ad valorem duties of anywhere from 15 to 50 per cent. The provision for a minimum ad valorem and a maximum ad valorem is the only way possible to prevent these fluctuations. Silk goods are subject to violent and rapid fluctuations in value, inasmuch as their demand is largely determined by the question of fashion, and the committee therefore unanimously came to the conclusion that specific duties were more properly applicable to silk goods than a straight ad valorem, but that whereas specific duties would be unfair to the American manufacturer in the case of some high-priced goods, they were likewise unfair to the importer in the case of some low-priced goods, and hence in the schedule proposed a minimum rate is provided to protect the domestic manufacturer, and a maximum rate is included to protect the importer against such rates as might otherwise be prohibitive.

It has been demonstrated that the silk schedule in the Payne-Aldrich Act is really based on intrinsic values, and it only required some readjustments to meet prevailing conditions in order to make it fairly competitive, and the importers and the members of the committee representing distributing agencies of American manufacturers have had this object in view in framing the schedule submitted herewith.

It may be of interest to refer to some of the figures furnished by the Bureau of Statistics with reference to the importation of dress and piece goods imported from France, Switzerland, and Japan.

France, 1905.....	\$5, 598, 882
France, 1910.....	4, 792, 272
Switzerland, 1905.....	2, 496, 366
Switzerland, 1910.....	1, 542, 677
Japan, 1905.....	5, 171, 080
Japan, 1910.....	2, 044, 402

In fact, the record shows that the importation of dress and piece goods from all the world in the year 1905 amounted to \$15,120,615, whereas in the year 1910 they amounted to \$9,608,985. The year 1905 was a good average year, and the importations were not as great as in the years 1906 and 1907, but the comparison was made on the basis of an average year under the act of 1897 and the act of 1909. The record further discloses that in the year ended June 30, 1912, the importations of this class of merchandise were between \$10,000,000 and \$11,000,000. These figures establish beyond a peradventure that the importations of this class of merchandise have decreased 30 per cent or more under the present tariff act. When it is considered that the increase under the Payne-Aldrich Act was responsible for this condition, it is obvious that with an adjustment of the ad valorem ratio and of the specific duties in such manner as to prevent the prohibition of the cheaper class of goods that more revenue will be collected than we collected under the Dingley Act. Admitting that the importations on the basis of those shown for the year 1910, to wit, \$9,000,000, were doubled so as to provide for an importation of \$18,000,000, this would be no greater than has been heretofore imported and the tariff would, although purely a protective tariff, be more nearly on a revenue basis than is the present act.

We think it is established, by the figures quoted from the reports of the Bureau of Statistics, that Japan is not in any sense a "yellow peril." In truth, a vast quantity of the Japanese goods are now prohibited and their use substituted by a fabric composed of cotton and silk, in the manufacture of which this country can undersell the world.

It is regrettable that the Tariff Board did not conclude an investigation in regard to the silk industry in this country. Undoubtedly, had it done so, the facts demonstrated by its investigation of the cotton industry would have been shown to exist in large measure with respect to the silk industry. There was imported last year practically \$70,000,000 free raw silk, which is comparable to the free raw cotton used by the cotton manufacturer, and we feel that such an investigation would have developed many other analogies.

PARAGRAPH 399—SILK GOODS.

We have appended hereto the schedule which we desire to have adopted by the committee, and to the end that there may be no misunderstanding as to its application, we have set forth some tabulations showing its operation as to given lines of merchandise. As before stated, the extreme high goods and the extreme low goods will pay the maximum duty, and the balance of the importations will range, as nearly as it is possible to have them, in and about the average of 40 per cent.

This committee may further state that this entire schedule, as herein submitted, has been gone over by the examiner of silk and silk goods in the office of the appraiser of merchandise at the port of New York, and that he has found it is more than reasonably fair to the interests of the American manufacturer. Should there be any question with regard to this fact, your committee would be very pleased indeed to have the schedule submitted to the appraiser of merchandise at New York for a demonstration of its practical application.

SCHEDULE L: SILK GOODS.

[To replace paragraph 399.]

399. Velvet and other pile fabrics, not specially provided for in this section, cut or uncut, composed wholly or in chief value of silk, or artificial silk; if the warp is cotton, and the filling is cotton, eighty cents per pound; if the warp is silk, and the filling is cotton, or if the warp is cotton, and the filling is silk, one dollar and twenty cents per pound; but in no case shall any of the foregoing pay a less rate of duty than thirty per centum ad valorem, nor a greater rate of duty than forty per centum ad valorem; if the warp is silk, and if the filling is silk, two dollars and fifty cents per pound; but in no case shall any of the foregoing pay a less rate of duty than thirty-five per centum ad valorem, nor a greater rate of duty than forty-five per centum ad valorem.

Plushes, cut or uncut, composed wholly or in chief value of silk, or artificial silk; if the warp is cotton, and the filling is cotton, seventy-five cents per pound; but in no case shall any of the foregoing pay a less rate of duty than thirty per centum ad valorem, nor a greater rate of duty than forty per centum ad valorem; if the warp is silk, and the filling is cotton, or if the warp is cotton, and the filling is silk, or if the warp is silk, and the filling is silk, one dollar and twenty-five cents per pound; but in no case shall any of the foregoing pay a less rate of duty than thirty-five per centum ad valorem, nor a greater rate of duty than forty-five per centum ad valorem.

The duty shall be levied upon the total weight of the goods including the selvages. The distinction between "plushes" and "velvets" shall be determined by the length of the pile; those having pile exceeding one-seventh of one inch in length to be taken as plushes; those having pile one-seventh of one inch or less in length shall be taken as velvets. The distance from the end of the pile to the bottom of the first binding pick shall be considered as the length of the pile.

399A. Velvet or plush ribbons, or other pile fabrics not over twelve inches in width, cut or uncut, with fast edges or cut edges, of which the pile is composed of silk, artificial silk, cotton, or any other vegetable fiber, weighing not less than six and one-half ounces per square yard, one dollar per pound; weighing less than six and one-half ounces per square yard, but not less than five and three-quarters ounces per square yard, one dollar and fifty cents per pound; weighing less than five and three-quarters ounces per square yard, two dollars per pound; but in no case shall any of the foregoing pay a less rate of duty than thirty-five per centum ad valorem, nor a greater rate of duty than forty-five per centum ad valorem.

399B. Woven fabrics in the piece, composed wholly or in chief value of silk or of artificial silk, not specially provided for in this section, weighing not more than one-quarter of one ounce per square yard, three dollars per pound; weighing more than one-quarter of one ounce, but not more than one-half of one ounce per square yard; if in the gum, one dollar and seventy-five cents per pound; if un gummed, wholly or in part, two dollars per pound; if further advanced by any process of manufacture or otherwise, or if dyed or printed in the piece, two dollars and twenty-five cents per pound; if weighing more than one-half of one ounce, but not more than three-quarters of one ounce per square yard; if in the gum, one dollar and sixty cents per pound; if un gummed, wholly or in part, one dollar and eighty cents per pound; if further advanced by any process of manufacture or otherwise, or if dyed or printed in the piece, two dollars and ten cents per pound; if weighing more than three-quarters of one ounce, but not more than one ounce per square yard; if in the gum, one dollar and fifty cents per pound; if un gummed, wholly or in part, one dollar and seventy cents per pound; if further advanced by any process of manufacture or otherwise, or if dyed or printed in the piece, two dollars per pound; if weighing more than

PARAGRAPH 399—SILK GOODS.

one ounce but not more than one and one-quarter ounces per square yard; if in the gum, one dollar and forty cents per pound; if un gummed, wholly or in part, one dollar and sixty cents per pound; if further advanced by any process of manufacture or otherwise, or if dyed or printed in the piece, one dollar and eighty-five cents per pound; if weighing more than one and one-quarter ounces, but not more than two ounces per square yard, and if containing not more than twenty per centum in weight of silk, if in the gum, fifty-five cents per pound; if un gummed, wholly or in part, or if further advanced by any process of manufacture or otherwise, or if dyed or printed in the piece, sixty-five cents per pound; if containing more than twenty per centum but not more than thirty per centum in weight of silk; if in the gum, seventy cents per pound; if un gummed, wholly or in part, or if further advanced by any process of manufacture or otherwise, or if dyed or printed in the piece, eighty cents per pound; if containing more than thirty per centum but not more than forty per centum in weight of silk; if in the gum, eighty-five cents per pound; if un gummed, wholly or in part, or if further advanced by any process of manufacture or otherwise, or if dyed or printed in the piece, ninety-five cents per pound; if containing more than forty per centum, but not more than sixty per centum in weight of silk; if in the gum, one dollar and ten cents per pound; if un gummed, wholly or in part, or if further advanced by any process of manufacture or otherwise, or if dyed or printed in the piece, one dollar and twenty-five cents per pound; if containing more than sixty per centum in weight of silk, or if wholly of silk; if in the gum one dollar and forty cents per pound; if un gummed, wholly or in part, or if further advanced by any process of manufacture or otherwise, or if dyed or printed in the piece, one dollar and seventy-five cents per pound; if weighing more than two ounces per square yard, and if containing not more than twenty per centum in weight of silk; if in the gum, forty cents per pound; if un gummed, wholly or in part, or if further advanced by any process of manufacture or otherwise, or if dyed or printed in the piece, fifty cents per pound; if containing more than twenty per centum, but not more than thirty per centum in weight of silk; if in the gum, fifty cents per pound; if un gummed, wholly or in part, or if further advanced by any process of manufacture or otherwise, or if dyed or printed in the piece, sixty cents per pound; if containing more than thirty per centum, but not more than forty per centum in weight of silk, if in the gum, sixty cents per pound; if un gummed, wholly or in part, or if further advanced by any process of manufacture or otherwise, or if dyed or printed in the piece, seventy-five cents per pound; if containing more than forty per centum, but not more than sixty per centum in weight of silk; if in the gum, seventy-five cents per pound; if un gummed, wholly or in part, or if further advanced by any process of manufacture or otherwise, or if dyed or printed in the piece, one dollar per pound; if containing more than sixty per centum in weight of silk, or if wholly of silk; if in the gum, one dollar and twenty-five cents per pound; if un gummed, wholly or in part, or if further advanced by any process of manufacture or otherwise, or if dyed or printed in the piece, one dollar and sixty cents per pound.

Woven fabrics in the piece, composed wholly or in chief value of silk, or of artificial silk, if dyed in the thread or yarn, and the weight is not increased in dyeing beyond the original weight of raw silk, if containing less than thirty per centum of silk, one dollar per pound; if containing more than thirty per centum, but not more than forty-five per centum of silk, one dollar and thirty cents per pound; if containing more than forty-five per centum, but not more than sixty per centum in weight of silk, one dollar and sixty cents per pound; if containing more than sixty per centum in weight of silk, two dollars and fifty cents per pound; if weight is increased in dyeing beyond the original weight of raw silk; if weighing not more than one ounce per square yard; if black (except selvages), one dollar and eighty cents per pound; if other than black, two dollars and thirty cents per pound; if weighing more than one ounce, but not more than one and one-third ounces per square yard; if black (except selvages), one dollar and sixty cents per pound; if other than black, two dollars and ten cents per pound; if weighing more than one and one-third ounces, but not more than one and two-thirds ounces per square yard; if black (except selvages), one dollar and fifty cents per pound; if other than black, two dollars per pound; if weighing more than one and two-thirds ounces, but not more than two ounces per square yard; if black (except selvages), one dollar and forty cents per pound; if other than black, one dollar and eighty cents per pound; if weighing more than two ounces per square yard, and if containing not more than thirty per centum in weight of silk; if black (except selvages), sixty cents per pound; if other than black, seventy cents per pound; if containing more than thirty per centum, but not more than forty-five per centum in weight of silk: if black (except selvages), ninety cents per pound; if other than black, one dollar per pound; if containing more than forty-five per centum in weight of silk, but not more

PARAGRAPH 399—SILK GOODS.

than sixty per centum; if black (except selvages), one dollar and fifteen cents per pound; if other than black, one dollar and thirty cents per pound; if containing more than sixty per centum in weight of silk, and if having not more than four hundred and forty single threads to the inch in the warp; if black (except selvages), one dollar and twenty cents per pound; if other than black, one dollar and fifty cents per pound; if having more than four hundred and forty, but not more than five hundred and twenty single threads to the inch in the warp; if black (except selvages), one dollar and thirty cents per pound; if other than black, one dollar and sixty cents per pound; if having more than five hundred and twenty, but not more than six hundred single threads to the inch in the warp, if black (except selvages), one dollar and forty cents per pound; if other than black, one dollar and seventy cents per pound; if having more than six hundred, but not more than six hundred and eighty single threads to the inch in the warp, if black (except selvages), one dollar and fifty cents per pound; if other than black, one dollar and eighty cents per pound; if having more than six hundred and eighty, but not more than seven hundred and sixty single threads to the inch in the warp, if black (except selvages), one dollar and sixty cents per pound; if other than black, one dollar and ninety-five cents per pound; if having more than seven hundred and sixty, but not more than eight hundred and forty single threads to the inch in the warp, if black (except selvages), one dollar and seventy cents per pound; if other than black, two dollars and ten cents per pound; if having more than eight hundred and forty, but not more than nine hundred and twenty single threads to the inch in the warp, if black (except selvages), one dollar and eighty cents per pound; if other than black, two dollars and twenty-five cents per pound; if having more than nine hundred and twenty single threads to the inch in the warp; if black (except selvages), two dollars per pound; if other than black, two dollars and fifty cents per pound; if printed in the warp, and weighing not more than one and one-third ounces per square yard, two dollars and seventy-five cents per pound; weighing more than one and one-third ounces, but not more than two ounces per square yard, two dollars and forty cents per pound; weighing more than two ounces per square yard, two dollars and twenty-five cents per pound. But in no case shall any of the foregoing, including such as have India rubber as a component material, pay a less rate of duty than thirty per centum ad valorem, nor a greater rate of duty than forty-five per centum ad valorem: *Provided, however,* That all fabrics enumerated in this paragraph valued over sixty-five cents per ounce shall pay the maximum rate of duty as herein provided.

[To replace paragraph 400.]

Handkerchiefs, mufflers, or flags, composed wholly or in chief value of silk, finished or unfinished, if cut, not hemmed or hemmed only, shall pay thirty-five per centum ad valorem; if such handkerchiefs, mufflers, or flags are hemstitched or imitation hemstitched, or revered, or have drawn threads, or are embroidered in any manner, whether with an initial letter, monogram or otherwise, by hand or machinery, or are tamboured, appliqued, or having tucking or insertion, forty-five per centum ad valorem.

[To replace paragraph 401.]

Ribbons, bands, including hat bands, bandings, beltings, bindings, labels, all of the foregoing not exceeding twelve inches in width, and if with fast edges, or cut edges, bone casings, braces, cords, cords and tassels, garters, gorings, suspenders, tubings, and webbs and webbings, composed wholly or in chief value of silk, or artificial silk, and whether composed in any part of India rubber, or of metal threads, thirty-five per centum ad valorem.

[To replace such part of paragraph 402 relating to veils or veillings.]

Veils or veillings, made of chiffons, woven in the piece not less than 18 inches in width, if not hemstitched, appliqued or tamboured, shall pay the same rate of duty as imposed on woven fabrics in the piece in paragraph 399.

[To replace paragraph 403.]

All manufactures of silk, or of artificial silk, or of which silk is the component material of chief value, including all fabrics or articles that are tamboured, embroidered, or appliqued, either by hand or by machinery, and including such as have

PARAGRAPH 399—SILK GOODS.

India rubber or metal threads as a component material, not specially provided for in this section, forty-five per centum ad valorem: *Provided*, That all manufactures of silk enumerated under any paragraph of this schedule, if composed in any part of wool, shall be classified and assessed for duty as manufactures of wool.

[To replace paragraph 404.]

In ascertaining the weight of silk under the provisions of this schedule, either in the threads, yarns, or fabrics, the weight shall be taken in the condition in which found in the goods, without deductions therefrom for any dye, coloring matter, or other foreign substance or material. The number of single threads to the inch in the warp provided for in this schedule shall be determined by the number of spun or reeled singles of which such single or two or three-ply threads are composed.

Sample 1, cheap cotton-filled pongee hat lining:

Paid on actually entered goods, 259 per cent duty.

Proposed schedule brings these to 54.3 per cent.

Sample 2, cheap cotton-filled satin:

Under present tariff, 65 per cent duty.

Under proposed schedule, 39 per cent.

Sample 3, shantung, made in Austria:

Under present tariff:

Quality 1260, 82½ per cent.

Quality 664, 87½ per cent.

Under proposed schedule:

Quality 1260, 45 per cent.

Quality 664, 50 per cent.

Sample 4, cheap 36-inch satin:

Paid on actually entered goods, 74.3 per cent.

Under proposed schedule, 43.7 per cent.

Sample 5, cheap silk and schappe marceline:

Paid on actually entered goods, 86 per cent.

Under proposed schedule, 52.9 per cent.

The above shows that on very cheap goods even the proposed schedule is rather too high, bringing most of these over 50 per cent, and it is therefore necessary to insert in the tariff a clause fixing a maximum rate of 45 per cent.

PARAGRAPH 399—SILK GOODS.

Some of the above samples represent goods imported shortly after the present tariff went into effect, and the details of these entries are attached to the samples. These exorbitant rates naturally stopped further importation of these goods.

We feel that it is not improper to reiterate the statement that this committee is endeavoring, in all fairness, to submit a schedule which is eminently protective to the domestic interests, and to secure to the United States Government a maximum duty of 45 per cent on the goods which are concededly luxuries. On page 1513, Mr. Cheney stated that he was making no suggestions of an increase at all, and further on he stated that he did not think it would be advisable to increase the duty, "because while you would get more revenue out of certain articles, I am afraid you would lose it on others." Following this suggestion, in our schedule we have proposed 45 per cent therefor as the proper rate applicable to these so-called luxuries, and we feel that your consideration of the suggestions made will convince you of the reasonableness of our proposal. If this rate be proper as to the luxuries, and if it be true that the domestic manufacturer is content with 40 per cent protection, it seems reasonable that such goods as are not luxuries, and come in here for the use of the masses, should pay a somewhat lesser rate of duty, and we have therefore suggested specific rates which will range or average about 40 per cent, as near as this can be done without increasing the specific provisions to an unreasonable extent.

We desire to thank the committee for the opportunity afforded of thus further expressing our views on this situation after the hearings had been closed, and we desire to make the offer to further cooperate with your committee, with the appraiser of merchandise at New York, or other unprejudiced experts to the end that the schedule may be so drawn as to do substantial justice to all parties concerned.

Very respectfully,

SAMUEL KRIDEL.
HENRY F. TIEDEMAN.
JOSEPH A. BLUM.
C. A. STREULI.
A. H. SANDS.
M. E. MAILHOUSE.

TESTIMONY OF C. A. STREULI, NEW YORK, N. Y.

The witness was duly sworn by the chairman of the committee.

The CHAIRMAN. What paragraph are you speaking to, Mr. Streuli?

Mr. STREULI. I wish to talk on the same paragraph Mr. Kridel talked on and simply to submit a few remarks I have to make.

We have been importing silk for Rusch & Co., importers in New York City, and one of the importers for which Mr. Kridel has appeared. We have been importing a great many low-priced goods, mostly for manufacturing purposes, goods used by people who make artificial flowers, umbrellas, ruchings, fancy boxes, coffins, and so on. These importations, through specific rates of the present tariff, have almost been completely killed. The case that Mr. Kridel brought before you of 259 per cent was a case of goods which we imported, and which came in just after the tariff went into effect. We went to the customhouse to inquire what would be the rate on this case of goods, and we were told "Not specially provided for" 50 per cent, so we took the liberty of ordering the case, and they found out in the customhouse that the goods were provided for at \$3.10 per pound. So in this case it is not a theoretical case; it is a fact. We positively paid 259 per cent duty to the Treasury of the United States. In the brief you will find the entry number, so it is easy to verify the statement.

I have samples of other goods.

Here is a cheap satin that has been used for all kinds of linings. This is satin. The entry number of this is 193,600, August 9, 1909,

PARAGRAPH 399—SILK GOODS.

and paid 74.3 per cent duty, which killed the further importation of these goods.

This satin was sold prior to the new tariff at a rate of about 30 cents a yard, 36 inches wide. This new tariff forced us to put the price up to about 34 cents or 35 cents and kills the article.

Here [indicating] is entry 354,815. This is a silk and schappe goods, used for lining ladies' hats. We used to sell these goods at around 37.5 to 40 cents. Now we would have to sell them at 45 to 47.5 cents, the duty on these goods being 86 cents, which we paid.

These are all cases which I can prove. They were actually paid. This duty was actually paid. It is not a theoretical case.

Mr. LONGWORTH. What takes the place of that material in the market?

Mr. STREULI. Gentlemen, that is not made here. They make something similar, but not the same article. This is an article that is used to line French hats, and we have had a few milliners who, notwithstanding that we have to get 45 cents to 47.5 cents, insist on getting the imported article, but there are only a very few left.

Mr. LONGWORTH. What American goods answers that same purpose for lining women's hats?

Mr. STREULI. They use American taffetas.

Mr. LONGWORTH. How much do those sell for?

Mr. STREULI. All the way from 35 cents to 50 cents, according to quality.

Mr. LONGWORTH. They are cheaper than this?

Mr. STREULI. It is a different article. It comes in cheaper than this.

Mr. LONGWORTH. So that nobody is hurt at all by that?

Mr. STREULI. They are not exactly hurt. If you want to buy a hat with satin lining and you are forced to buy a hat with taffeta lining you are not hurt, but at the same time you do not get what you want.

Mr. FORDNEY. It answers your purpose just as well, does it?

Mr. STREULI. Yes; and a cotton dress answers the same purpose as a silk dress.

Mr. FORDNEY. Then the consumer is not very badly damaged, is he?

Mr. STREULI. He does not get what he wants. I will show you where the consumer is in a way damaged. A lot of small manufacturers who are not organized and who do not come down here, such fellows as manufacture ladies' hats and such articles, they get hurt, inasmuch as it results in a great many more ready-made hats being imported, lined with this stuff, because they look Frenchy, and ladies want something that looks Frenchy, while if they could buy this stuff here and make their hats and make them look like the Parisian hats, the consumer would buy them, and he is indirectly hurt that way.

Now, I want to say, just as Mr. Kridel said, that I consider that the duty of ad valorem is the only right duty, because everybody can understand what it means. It takes an expert to figure out these specific duties, and I dare say that this House and the Senate would not have made, possibly, some of these rates if they had known what they were. I do not think it was the intention to put a duty of 259 per cent on any one article.

PARAGRAPH 399—SILK GOODS.

Mr. FORDNEY. It has been proven to this committee time and time again that under the ad valorem rates undervaluations have frequently occurred in this tariff, robbing the Government of their just rate of duty, which can not be done under specific rates.

Mr. STREULI. Excuse me. I want to tell you this, the greatest fraud committed in the customhouse was committed under the specific rates, while Mr. Brown was sent up to Sing Sing, or some State's prison somewhere, for a number of years. That was underweight of Chinese silks, where the Government was robbed, some people say, of \$2,000,000 and others say of \$1,000,000.

Mr. FORDNEY. The sugar importers also went up.

Mr. STREULI. Yes; but all under a specific duty.

Mr. FORDNEY. There was always opportunity for fraud, but the greater fraud consisted of undervaluation under the ad valorem rates. There was always a greater fraud under undervaluation under the ad valorem rates than there are under specific rates.

Mr. STREULI. I do not think so; not under the present administration of the customhouse, which is excellent. I believe you have, owing to the activity of Mr. Loeb, a splendid force, and if that force is kept up I do not think there will be much opportunity for frauds. Of course if you have a crooked examiner there, they might be dangerous, but under the specific rates it would be the same way.

There is something else which makes it very difficult to make a correct specific rate. Silk is an article which in the manufacture of goods in which the raw material enters comes up to a high amount in the manufactured article. In a piece of silk on an average the raw material amounts to from 50 per cent to 75 per cent against labor. We now have a specific tariff based on a raw-silk valuation of about \$4 per pound. If the raw-silk price goes down to \$3 per pound, which has frequently happened, the thing is out of gear. If it goes up to \$6 a pound, which happened about six or seven years ago, it is out of gear in the other direction, while the ad valorem duty automatically follows the market.

The CHAIRMAN. You want an ad valorem duty?

Mr. STREULI. I advocate an ad valorem duty. Thirty-five per cent I believe is enough, or you can make it 40 per cent, but I believe we should have an adequate duty to protect the domestic manufacturer. The way these specific rates are now, nobody knows what they really are. If it should be decided that specific rates should be kept, in order to prevent such occurrences like 259 per cent or 100 per cent or something like this, there should certainly be a catch clause upward, not only downward, not only of 45 per cent minimum, but there should be a maximum clause of, say, 60 per cent maximum. Then the worst features of the specific duty would be all eliminated.

Mr. FORDNEY. Do you know of any domestic manufacturers who have advanced prices on that class of goods since the adoption of the present tariff law on these goods that you have exhibited, where the duty is now prohibitive? Do you know of any domestic manufacturer who has advanced the price of that commodity?

Mr. STREULI. I do not know, sir. I will tell you why. Because domestic manufacturers do not make this exact article or any like it.

Mr. FORDNEY. But they do make an article which the people use with the same amount of satisfaction?

PARAGRAPH 399—SILK GOODS.

Mr. STREULI. We had to stop the importation of these goods. We used to import \$40,000 to \$50,000 worth a year, and after we had made such a big loss on these goods we stopped. Then the people who used this article either did not use any linings for their hats or they used an all-cotton article, which is entirely different. In most instances they use all cotton, and they would have to pay for such an article so much more, if they wanted the same article, but if they preferred to pay a larger price for a better article they paid that price; so you can not say that this very article or something very similar to it was made here.

The CHAIRMAN. The effect of your argument is that by reason of this very high duty poor people are required to wear cotton linings in their hats, and the richer people, instead of paying the tax, wear silk?

Mr. FORDNEY. That would apply on champagne. We have increased the duty on champagne, but that has not prevented any American from using champagne.

Mr. STREULI. No, sir; but champagne is a luxury, and this is not.

Mr. LONGWORTH. The chairman of the committee stated a few moments ago that silks come under the head of luxuries.

The CHAIRMAN. As a rule.

I think the committee understands what you want to present to them. We have got another witness. Is that all?

Mr. STREULI. I think, gentlemen, that is all.

The witness later filed the following paper:

RUSCH & Co.,
New York, February 3, 1913.

Hon. OSCAR W. UNDERWOOD,

*Chairman Committee on Ways and Means,
House of Representatives, Washington, D. C.*

DEAR SIR: I inferred from the hearing on Schedule L, January 13, that it is the intention of your committee to reduce excessive duties which are now prohibitive on a great many low-priced articles of silk fabrics enumerated in paragraph 399 of the present tariff, and the reduction to be sufficient to enable the importation of such articles (if the demand is brisk) in fair competition with domestic goods; and at the same time to raise the rates on real luxuries and novelties, which are well able to stand a higher rate, so as to get the largest revenue possible out of the silk schedule.

The majority of the importers' committee have decided to submit revised specific rates, but I am sure that it is impossible to meet your intentions fully under any specific schedule. The real luxuries and high-priced goods are not necessarily the heaviest articles, but in most cases they are articles which have been manipulated in the most elaborate and artistic way, and consequently a tariff based on weight can never reach them, and some of the very richest goods would continue to enter at the minimum (catch-all) rate.

I therefore take the liberty to submit here a schedule which is very simple, can be understood by anyone, and which would attain the desired object:

Woven fabrics in the piece, composed wholly or in chief value of silk, not specially provided for:

	Ad valorem
Valued not over 50 cents per square yard.....	30
Valued 50 cents per square yard but not over 75 cents per square yard.....	35
Valued 75 cents per square yard but not over \$1 per square yard.....	40
Valued \$1 per square yard but not over \$1.50 per square yard.....	45
Valued \$1.50 per square yard but not over \$2 per square yard.....	50
Valued \$2 per square yard but not over \$2.50 per square yard.....	55
Valued \$2.50 per square yard.....	60

Goods up to 50 cents per square yard, and even up to 75 cents per square yard, comprise mostly silk and cotton goods, which are used by the poor people and by manu-

PARAGRAPH 399—SILK GOODS.

facturers of umbrellas, artificial flowers, neckties, ladies' hats, fancy boxes, and many others who cut up silk goods.

Another reason why it is almost impossible to establish a correct specific schedule is the tremendous fluctuations which take place in the raw-silk prices. Raw silk enters under the free list, and the market price for a standard grade has fluctuated during the last 10 years from below \$3 per pound to over \$6 per pound. In most silk fabrics the value of the raw material amounts to 50 to 75 per cent of the total cost. It is therefore evident that a specific rate, which is based on the present raw silk price of about \$4 per pound and which would be equal now to say 50 per cent ad valorem, will be equal to much more than 50 per cent if the raw-silk market drops to \$3 per pound, and to much less than 50 per cent if it rises to \$6 per pound. The ad valorem rates follow the market prices automatically.

Undoubtedly the above ad valorem schedule would increase the revenues derived from goods covered by paragraph 399 considerably, as it would enable the importation of a great many low and medium priced silk and cotton articles which have been shut out almost completely by the present tariff, and would increase the rate of duty on the high-priced and novelty goods which at present enter mostly under the catch-all clause of 45 per cent. The importation of such will not diminish even if they are taxed up to 60 per cent.

Very respectfully, yours,

C. A. STREULI,
Of Streuli & Howell.
RUSCH & Co.,
New York City.

STATEMENT OF ALBERT HERZOG, NEW YORK, N. Y.

NEW YORK, N. Y., *January 25, 1913.*

The WAYS AND MEANS COMMITTEE,
House of Representatives.

Mr. UNDERWOOD: Permit me to submit to your consideration my plea and briefs for a reduction of excessive duties imposed by the present tariff under Schedule L, silk and silk goods.

In order to make my plea plain, I have taken the liberty to add to my briefs and examples samples of the very goods, which in my special case are all "raw materials" used and made exclusive for an American industry, which in the late tariff did not get any protection, so to speak. I have reference to the manufacturers of "jewelry and silverware cases, jewelers' trays, toilet and manicure cases, etc., covered under the tariff of 1909 under paragraph 215, as follows: Jewelry cases, covered with velvet and satin lined, as manufactures of wood, T. D. 14,502, 35 per cent ad valorem." Under this and other paragraphs such cases have been permitted to pass at no higher rate of duty than 45 to 50 per cent ad valorem, as against the raw material of which I submit samples and illustrations, to prove the excessive duties collected." (Samples, etc., are on file.)

Brief No. 1 concerns a 36-inch silk and cotton mixed brocade, assessed under Schedule L, paragraph 399, silk woven fabrics in the piece, not over 20 per cent in percentage of silk, over $1\frac{1}{2}$, not over $2\frac{1}{2}$ ounces in weight per square yard un gummed, at 85 cents per pound, but not less than 45 per cent ad valorem. My brief shows that the duty on this special article on the specific rate of duty is over 60 per cent ad valorem, as against a provision that it shall be not less than 45 per cent ad valorem.

Brief No. 2 concerns the next better grade of silk and cotton mixed brocade, assessed under Schedule L, paragraph 399, silk woven fabrics in the piece not over 20 per cent in percentage of silk, over $1\frac{1}{2}$, not over $2\frac{1}{2}$ ounces in weight per square yard un gummed, at 85 cents per pound, but not less than 45 per cent ad valorem.

Brief and example No. 2 shows that the duty on this special case covering brocade on the basis of the specific rate of duty of 85 cents per pound is about $53\frac{1}{4}$ per cent ad valorem, as against a provision that it shall not be less than 45 per cent ad valorem.

Brief No. 3 concerns silk and cotton mixed velvet, used exclusively for the manufacture of jewelers' trays, velvet cases, etc., coming under Schedule L, paragraph 399. The weight per square yard of this velvet amounts to 5.71 ounces per square yard, and is for this reason assessed at \$2 per yard, which rate of duty is equivalent to an ad valorem rate of over 57 per cent, while no such goods are manufactured in the United States, and goods that are manufactured in the United States are not suitable for this special purpose.

PARAGRAPH 399—SILK GOODS.

Brief and example No. 4 concerns a silk and cotton mixed velvet, again used exclusively for the covering and lining of jewelry cases, also for the lining of trays, etc. This quality also comes under Schedule L, paragraph 399, but as the ad valorem rate of 45 per cent exceeds in amount any specific rate that might be imposed, the goods pass at 45 per cent ad valorem.

Brief and example No. 4 clearly set forth that the tariff makers did not intend to exact a higher rate of duty than 45 per cent ad valorem, and my plea is for an ad valorem rate all through the schedule, doing away with specific duties which levy a high rate on the cheaper goods, while better quality of goods pay a lower duty.

And a second plea on my part is to lower the rate of duty on the raw materials, or then to advance the rate of duty on the manufactured jewelry case, manicure case, toilet case, etc., under paragraph 215, to at least 75 per cent, so that there is some protection to the American industry of jewelry case, manicure case, and fancy cases in general.

All the above-enumerated materials are not manufactured in the United States, and the velvet qualities can not be made here, so for this reason no American mill or American interest will suffer by a reduction in the excessive duties. On the other hand an ad valorem rate of duty will be much fairer, because goods will then pay according to market value and the better grades will pay a higher amount in duties, as against now, where the lower grades pay a higher amount of duty.

Recommending my briefs and examples to your kind consideration, I remain, gentlemen at all times at your service.

Most respectfully, yours,

ALBERT HERZOG.

A. H. SELF.

Brief and example No. 1.—Silk and cotton mixed fabrics, chief value silk, not over 20 per cent in weight of silk; weight per square yard, $1\frac{1}{2}$ to $2\frac{1}{2}$ ounces. Piece dyed rate, 85 cents per pound, but in no case shall duty be less than 45 per cent ad valorem.

BRIEF SUBMITTED BY FRANCIS E. HAMILTON, NEW YORK, N. Y., IN BEHALF OF THE FRENCH CHAMBER OF COMMERCE.

The WAYS AND MEANS COMMITTEE,
House of Representatives, Washington, D. C.

Speaking for my clients, importers of silk and silk and cotton, I desire to request a re-writing of the entirety of Schedule L, which was evidently the product of the combined brains of the American silk, silk schappe, and silk and cotton manufacturers, and which as at present written, imposes practically prohibitive duties upon all the cheaper grades of silk, silk schappe, and silk and cotton goods, to the great injury of the consuming public.

Goods of pure silk may pay a duty of 45 per cent ad valorem, but by the intricate system of complex specific and ad valorem duties, now existing, goods where silk and silk schappe yarns are mixed, or where cotton yarn is a component part, run the duty up in some cases to fully 110 per cent ad valorem.

This is wrong—wrong to the Government—since so high a duty limits importations; wrong to the consumer, for the reason that such a towering duty wall enables the home producer to charge exorbitant prices, and lastly wrong to the manufacturer himself, since it is temptation to extortion placed before him by the law of the land.

How few men or combinations of men are strong enough to resist such a temptation? As a result, the importations of silk products, especially silk and schappe, or silk and cotton, has fallen off enormously, and the American citizen—the man of the masses—is to-day paying fully twice what he should pay for goods of these combinations.

Of course, such conditions tend to high wages among the 200,000 or 300,000 silk workers in this country, and of course the same conditions result in making millionaires of perhaps two or three lucky manufacturers; but what of the Government,

PARAGRAPH 399—SILK GOODS.

which is stripped of its just dues in duties that do not eventuate upon goods prohibited, importation by this tariff rate, and what of the ninety odd million of citizens of this great Republic who each and everyone pay more for their wearing apparel because of these conditions?

No one will attempt to argue for the justice of the present system, for it is rank injustice, and no one will commend it as a political or economical policy bringing good to the State and its subjects, since it appears upon the most cursory examination that the present tariff act has simply reversed the great rule of government—"the greatest good to the greatest number"—and remade it into a rule "the greatest good to a selected number," we, the manufacturers.

The animus behind the present law makes itself apparent when we realize that the finest goods pay the lowest duty; a system most pernicious, since through it the rich benefit by a low tariff, while the poor suffer under an exorbitant one, and it is further to be remembered that 100, yes, 1,000 times more of the low-grade goods, silk and schappe or silk and cotton, are required by the millions of the masses of the people, than are required of the high classes of goods by the exceedingly few who wear the best of silk, both men and women.

Thus, it appears that in this commodity the poor pay for the benefits of the rich, a condition that points directly to anarchy.

Believing that the Democratic Party desires to try and line up to their promises—when the Republican Party had not even the decency to even pretend to attempt which they formulated a tariff—we earnestly demand a careful revision and reforming of Schedule L, that shall result in equalizing the duties as between high cost and low cost goods, and that shall force a reasonable competition upon the American manufacturer, to the end that importations may increase, thus benefiting the Government and prices may reduce upon the finished article of wear, thus benefiting the consumer.

All of which is respectfully submitted.

THE FRENCH CHAMBER OF COMMERCE,
HENRY GOURD, *President*.

FRANCIS E. HAMILTON,

Counsel for the Importers, 32 Broadway, New York.

SUPPLEMENTAL BRIEF.

THE WAYS AND MEANS COMMITTEE,
House of Representatives, Washington, D. C.

GENTLEMEN: Supplementing the brief under the silk and silk and cotton paragraph heretofore submitted by me for importers of these goods, I desire to call attention to the following facts:

As long ago as the late seventies Col. Cheney, of the firm of Cheney Bros., New York, at that time largely interested in silk and silk manufactures, stated that a duty of 30 per cent would be all sufficient to protect American silk manufacturers who understood their business and had sufficient capital to conduct the same.

This statement was doubtless made in view of the fact that a high duty upon silk would induce many persons lacking in knowledge and financial means to establish themselves or attempt to establish themselves in the business in this country to manufacture silk, and thus create a competition more dangerous than the European one.

This condition has been realized and the home market is to-day seriously and injuriously affected by many of the smaller manufacturers who produce silk and silk and cotton goods of all grades of imitation, seriously injuring the home product and the home manufacturer of high-grade goods.

At the last annual meeting of the American Silk Association one of the principal speakers made the positive assertion that American silk could now be exported and sold at a profit in Europe.

If such a statement is true, and it would hardly have gone without denial before the American Silk Association if not true, it shows that the industry in this country has been so protected by the high tariff as to produce an enormous profit, and as a result to force the manufacturers to seek a foreign market for the surplus of their production.

In view of this fact it is impossible to deny that a very material reduction of the present tariff rates would not only be just, but would yield a benefit to the Government and as well to the consumer.

PARAGRAPH 399—SILK GOODS.

The present ad valorem duty, involved as it is in the several paragraphs of the tariff act from 396 to 406, offers opportunity for the cunning or unscrupulous importer or manufacturer to undervalue his goods and to deceive the public. The true method of imposing the duty is to establish a specific duty to be based upon weight, surface, number of threads, percentage of weight added by the dyer, and such other technical conditions as are thoroughly well known to the trade, and would enable competent inspectors to promptly and without error properly classify importations. A specific duty could be collected with very much less of delay and litigation, and would be far cheaper for the Government and would be much fairer both to the importer and to the honest manufacturer in this country, since it would establish grades and qualities that could not be fraudulently imitated by other competing manufacturers willing so to do.

The present requirements of the silk schedule call for the highest expert knowledge, and even then no expert is clever enough to appraise the value of silk within 8 or 10 per centum, while if rules were established for a specific duty all question of variation would be eliminated.

Finally, we submit to your honorable committee the immense injustice resulting under present conditions where the importer, no matter how honorable, is subject to a fine should the appraiser see fit to advance his goods 1, 2, or 5 per cent above the invoice or entered value.

Three years ago when the silk schedule was revised Congress agreed to permit a margin of 5 per cent on this product before imposing a penalty for undervaluation, but the committee which finally wrote the bill canceled this allowance and the same was not found in the final bill, although Congress had expressed itself in favor thereof.

For all of the above reasons we again earnestly plead with the committee that this schedule should be carefully rewritten and the duty rate very materially reduced and placed under a specific schedule.

FRENCH CHAMBER OF COMMERCE,
HENRY E. GOURD, *President*.
FRANCIS E. HAMILTON, *Counsel*.

STATEMENT SUBMITTED BY HERMAN F. OBERTEUFFER, PHILADELPHIA, PA.

PHILADELPHIA, *February 19, 1913.*

HON. OSCAR W. UNDERWOOD,

Chairman of Committee on Ways and Means, Washington, D. C.

DEAR MR. UNDERWOOD: I thank you for your kind letter of February 5, and coming back again to the silk schedule of the new tariff act, please pardon me if I make a few suggestions.

I have gone over this matter very carefully and do not see how specific rates can meet your intention to raise the duty on very high-price silks and novelties, which are really luxuries.

These high-price goods are not the heaviest article. Therefore, under specific rates, a tariff based on weight would hardly reach them, and some of the finest goods would continue to enter at the minimum rate.

I therefore take the liberty to inclose you a schedule which is simple, easily understood, and, I think, meets your views.

Woven fabrics in the piece, composed wholly or in chief value of silk, not specially provided for—

	Per cent ad valorem.
Valued not over 50 cents per square yard.....	30
Valued at over 50 cents per square yard, but not over 75 cents per square yard.....	35
Valued at over 75 cents per square yard, but not over \$1 per square yard....	40
Valued at over \$1 per square yard, but not over \$1.50 per square yard.....	45
Valued at over \$1.50 per square yard, but not over \$2 per square yard.....	50
Valued at over \$2 per square yard, but not over \$2.50 per square yard.....	55
Valued at over \$2.50 per square yard.....	60

Goods up to 50 cents per square yard and even 75 cents per square yard are mostly silk and cotton goods, used by the poor people and manufactures of umbrellas, ladies' hats, and artificial flowers.

PARAGRAPH 399—SILK GOODS.

Another reason why it is difficult, if not impossible, to establish a correct specific rate is the great changes which take place in the raw-silk market.

Beyond doubt the above ad valorem schedule would increase revenue from goods in paragraph 399 very much, as it would allow the importation of a great many low and middle price silk and cotton articles which have been almost shut out by the present tariff, and it would increase the rate of duty on the very high-price goods, and the importation of these very high-price goods will not lessen, even if taxed up to 65 per cent.

Hoping you will excuse me for taking up your valuable time and hoping the pleasure of seeing you in Washington Friday,

Very truly, yours,

H. F. OBERTEUFFER.

PHILADELPHIA, *February 3, 1913.*

Hon. OSCAR W. UNDERWOOD,

Chairman Committee on Ways and Means, Washington, D. C.

DEAR SIR: Supplementary to briefs submitted by the importers of silks, your attention is respectfully drawn to the inequalities in paragraph 399, Schedule L, and injustice of the specific duties therein as applied to silk and cotton mixed goods intended for use in the manufacturing of umbrellas and low-price dress goods.

Following is a list of some of our own importations. Figures of same can be verified by the Philadelphia customhouse:

Silk and cotton, dyed in the piece, all under 20 per cent in weight of silk.

Quality.	Price.	Duty per pound.	Equivalent ad valorem.	Quality.	Price.	Duty per pound.	Equivalent ad valorem.
	<i>Marks.</i>	<i>Cents.</i>	<i>Per cent.</i>		<i>Marks.</i>	<i>Cents.</i>	<i>Per cent.</i>
K. N.....	1.02	70	65	M. V.....	1.24	85	63
V. P.....	1.00	70	65	F. N.....	1.15	85	60
Z. U.....	1.00	70	65	A.....	1.20	85	71
F. E.....	1.05	85	70	D. X.....	1.40	85	56
C. R.....	1.29	85	70	J. U.....	.64	85	70

Hoping the above figures will receive your careful consideration.

Very respectfully, yours,

GEO. H. OBERTEUFFER'S SON.
H. F. OBERTEUFFER.

BRIEF FILED BY J. M. SULLIVAN, OF THE IRISH INDUSTRIAL ASSOCIATION OF NEW YORK, N. Y.

IRISH POPLIN, MIXED SILK AND WOOL GOODS.

NEW YORK, *January 29, 1913.*

The COMMITTEE ON WAYS AND MEANS,

Washington, D. C.

GENTLEMEN: The Irish Industrial Association of New York City, N. Y., a commercial body of American citizens of importers and dealers, representing important interests in foreign and domestic Irish poplins, silk and silk goods, in the United States of America, respectfully submits to the consideration of this honorable committee for adoption, the recommendation respecting duties on the said articles as coming under Schedule L (pars. 399, 400, 401, and 402).

In a general way we consider that the duty on mixed silk and wool goods is excessive and should be considerably reduced for the present duty is practically prohibitive and prevents its importation, thus depriving the United States out of a large revenue. For instance, take mixed silk and wool, flannel, or Irish poplin, which was first made at Avignon, the papal residence, from which its name is derived in 1309 and 1376, and later an attempt to imitate it was made in England, but was not successful, and in 1775 it was introduced in Ireland by the French Protestant refugees, and from that time on Irish poplins have been famous, hence to have put a high

PARAGRAPH 399—SILK GOODS.

duty on a specialty of that sort is simply preventing its importation, for no one will buy anything. Whereupon the dealer is to charge an outrageous price owing to the high duty, and the ultimate result of such legislation injures both the American citizens, who are deprived of comfort and the United States Treasury in that it can not collect any revenue for articles which are prohibited by means of a high tariff.

We, therefore, trust that this honorable committee will give the above-mentioned articles due consideration in revising the tariff law, and reduce same a considerable amount.

Respectfully submitted,

IRISH INDUSTRIAL ASSOCIATION OF NEW YORK.

Submitted by J. M. Sullivan, Emilio Yaselli, and H. Winship Wheatley, attorneys.

MEMORIAL OF DRESS TRIMMINGS WORKERS OF UNION HILL, N. J.

UNION HILL, N. J., *January 14, 1913.*

Messrs. Underwood, Kitchin, and members of the Democratic Tariff Committee:

GENTLEMEN: Inclosed find absolute evidence of the existence and formation of the "American silk trust," in the restraint of trade, to which I will testify if necessary under oath at any time.

The names in the accompanying pamphlet underscored with blue pencil (printed in italic) are those of foreigners, Jews, and others, some of them not naturalized, who have laid their scenes for the exploiting of the consumers and producers of this country in the following cities: Paterson, N. J.; Allentown, Pa.; Bethlehem, Pa.; Greater New York, N. Y.; Philadelphia, Pa., and in numerous towns and cities throughout the Union.

Taking the city of Paterson, N. J., as an instance, I have this to say. That where formerly the city of Paterson was a law-abiding community whose people were happy and free and prosperous, the trust has since 1888, in conjunction with the high unnecessary tariff on all "staples," such as "shaft work" both in narrow and broad goods, enslaved the community, restrained trade, and demoralized the liberty, political and industrial, of the people. The foreign Jew is the only one who has benefited by the high tariff on "shaft-work" staples, broad and narrow.

Women and foreigners (Italian and Jews) are now working for wages, whose mean average is in some instances as low as from \$6 to \$9 per week, in the place of intelligent American citizens, who formerly earned a mean average of \$18 per week.

The only kind of ribbons and broad silks that require the protection of a tariff are those goods, narrow or broad, that are classified as "Jacquard work." In other words, those made on the Jacquard loom.

Ribbons or broad silks made on "plain or shaft looms," require no tariff protection whatever, no matter what any one interested may advance to the contrary, for the following best of reasons, and this is incontrovertible:

On plain (shaft-made goods, broad or narrow) the machinery and facilities in this country have been so improved as to render utterly abortive any attempt at European competition.

Then why a protective tariff on staples (shaft work) you will ask.

For purposes of exploitation to limit the supply and raise the price of product to the consumer is one answer of mine. To debauch the citizen workman and bring him to the level of Asiatics is another reason.

In 1893 there was a general strike in Paterson. Why? Was it because the tariff protected the workmen?

Why did Collector Erhardt, under Grover Cleveland, discover and convict Rosenthal for undervaluation and fraud in the New York customhouse? Do you think that the crime has stopped?

Why is it necessary to give a lot of foreigners and Jews a bounty and protective tariff on manufactured articles that don't require it?

Ribbons and broad silks that are made on a Jacquard loom are the only silks that need a protective tariff. Placed on anything else, simply means limiting the producer and consumer.

Yours, very respectfully,

FRED'K C. MOLT,
131 Main Street, Union Hill (Weehawken P. O.), N. J.

Or address Fred'k Molt, recording secretary, of the Passementerie Union of Dress Trimming Workers, No. 3, Great-Jones Street, New York City.

SILK IMPORTATION FROM ROUBAIX, FRANCE.

L. FOREMAN FECHTMAN & Co.,
NEW YORK, January 27, 1913.

Hon. OSCAR W. UNDERWOOD,
Chairman Ways and Means Committee,
Washington, D. C.

DEAR SIR: The following details of an importation from Roubaix, France, may be of interest to you in your investigations:

5 pieces York moire, silk and cotton:	Francs.
290.75 meters (weight, 65.9 kilo), at 5.45 francs	1, 584. 60
Discount, 6 per cent.	95. 10
	<hr/>
Charges.....	1, 489. 50
	<hr/>
	1, 521. 10
	<hr/>
At 5.18½.....	\$293. 58
Freight, insurance, charges.....	10. 63
Duty, 65.9 kilos, at 2.2046 (145.283 pounds), at \$1.60 per pound.....	232. 45
	<hr/>
Total cost.....	\$536. 66

These goods were entered under paragraph 399, silk-woven fabrics in the piece, over 30 and not over 45 per cent in weight of silk, duty \$1.60 per pound.

We give you the figuring on the percentages of weight and value of silk and cotton as declared by the manufacturers in the consular invoice:

Cost, \$536.66. Value, 88 per cent silk, \$472.26; duty, 20.52 per cent, \$96.91; 12 per cent cotton, \$64.40; duty, 210.43 per cent: \$135.50.

Weight, 145,283 pounds, 41.7 per cent silk at 60.583 pounds at \$1.60 per pound, \$96.93; 58.3 per cent cotton, 84,700 pounds, at \$1.60 per pound, \$135.52. Value of silk, \$7.79 at 53 cents per pound; value of cotton, 76 cents at 3 cents per pound.

The result of the specific duty is that the cotton has to bear a very heavy duty.

1,494.50 francs, at 19.3 cents, \$288; the duty \$232.45, makes it the equivalent of 80.71 per cent ad valorem.

Under the previous tariff these goods came in at 50 per cent ad valorem, so that the present tariff for these goods is revision upward, not downward.

This is one specimen out of very many.

Yours, truly,

L. FOREMAN FECHTMAN & Co.

PARAGRAPH 399—SILK GOODS.

MEMORANDUM ON SILK—JAPAN STOCK.

Sixteen ounces boiled in soap until the gum is out weigh 12 ounces. This if dyed a perfectly pure dye with only dyestuffs enough to get a good color will be increased in weight to from 13 to 14 ounces. Manufacturers are in the habit of dyeing up to 40 ounces by working in foreign material in the dyeing, or as the boys used to say "filling it with dirt." In fact, there are no black dress goods or any other silk goods in the market better than 16-ounce dye, and very little as good as that. The only test is to strip the color out and see what you have left.

LEWIS E. LEIGH,
Portland, Conn.

STATEMENT OF A FRENCH IMPORTER OF SILK.

COMITÉ DE DÉFENSE DES INTÉRÊTS
LYONNAIS AUX ÉTATS-UNIS DE L'AMÉRIQUE DU NORD,
Lyon, le 30 Décembre, 1912.

Mr. UNDERWOOD,
Committee on Ways and Means, Washington:

We have been informed that a hearing concerning the schedule for silk duties would take place in Washington before a Committee of the Ways and Means department on January 13, 1913, and we solicit herewith the favor to produce a short statement of facts.

In former years Lyon used to export big quantities of silk goods to the States, the largest proportion being by far cheap articles, cotton and silk, or silk and schappe mixtures.

At that the United States of America were the best customer of our district.

Under the present tariff regulations exports from here have fallen down considerably, have been totally annihilated, especially in the cheap articles, which are necessities for all poorer or medium classes of people.

Customhouse figures clearly ascertain it.

This is a proof that the actual tariff is not a law of protection, but a prohibition of competition, going directly against the interests of the consumers, as it has been so strikingly put in light by the broad and high-minded President Wilson.

The argument that silks are luxuries can not be earnestly maintained when silk and cotton or silk and schappe mixtures are in question—goods sold in the States at prices from 20 cents to 55 cents per yard.

Luxuries are the silks sold at and above \$3 per yard.

These pay now 45 per cent ad valorem, whilst the silks for the poor above mentioned pay specific duties ranging from 80 to 113 per cent are consequently prohibited.

We believe that it had never been in the intentions of American legislators to vote such prohibitive duties.

This result was obtained by means of the specific schedules which a few interested domestic manufacturers managed to have adopted in order to be masters and absolute regulators of the selling prices, for their benefit against all democratic principles.

We are aware that before an American committee we necessarily must more or less be suspected to defend our own interests, but, on the other hand, we are so convinced of the spirit of truth and public welfare which animates that body that we feel sure these real true facts will find due consideration.

We are at the disposal of the committee for any information or explanations which may be desired.

Respectfully,

BERTRAM.

Pour le president un de vice president.

TIE SILK.

TESTIMONY OF I. S. WOLF, OF I. S. WOLF & CO., 99 GREEN STREET, NEW YORK.

The CHAIRMAN. What paragraph do you wish to speak to?

Mr. WOLF. Paragraph 399.

I wish to make a statement on behalf of the tie-silk importers.

It must be understood that popular-priced neckties are necessities and the silks from which they are made are always sold at prices that

PARAGRAPH 399—SILK GOODS.

have been established for years. The tariff of 1909 has made it necessary for the foreign manufacturer of tie silks to reduce his qualities to such an extent as to almost preclude their sale in competition with the domestic goods sold at similar prices.

Exhibit A shows the inferior quality of the foreign silks—in many cases cotton warps are used—compared with the domestic silks shown in Exhibit B, which are made of all silk, of superior quality, are more lustrous, finer texture, have better wearing qualities, and consequently are of greater intrinsic value.

Twenty-five cent and fifty-cent neckties are made of goods that cost the tie maker from 55 cents to 57½ cents per yard for the 20-cent ranges, and 82½ to 85 cents per yard for the 50-cent ranges. It therefore is evident that the consumer gets less for his money when he buys ties made of foreign silks than when he buys ties made of domestic silks, and it is also evident that the domestic tie-silk industry is overprotected.

Mr. LONGWORTH. Will you kindly repeat that last sentence?

Mr. WOLF. It therefore is evident that the consumer gets less for his money when he buys ties made of foreign silks than when he buys ties made of domestic silks, and it is also evident that the domestic tie-silk industry is overprotected.

Your attention is called to the fact that men's ready-made neckties are imported in large quantities from France and England at 60 per cent ad valorem, while the silks from which those ties are made in most cases would, if imported, pay as high as 60 per cent or higher, which, of course, shows a discrimination in favor of the foreign necktie makers. In other words, dealers in men's ready-made neckwear are able to import the finished article at lower rates of duty than the American necktie makers pay for their raw materials, namely, tie silks. The disadvantage to the home industry in men's ready-made neckwear is obvious. Exhibit C clearly demonstrates this point.

It is submitted that inasmuch as tie silks are manufactured for the sole purpose of being made into men's neckwear, and are always about 61 centimeters in width, are distinguished from other silk goods by patterns, styles, etc., they should be specially provided for in the tariff, and rates of duty to be provided that would not be affected in any way by rates governing other manufactures of silks, such as dress silks, upholstery silks, etc. This principle has been established with many kinds of merchandise in the present and previous tariffs, and many precedents might be cited. However, a few illustrations should suffice:

Hatters' plush, black, for making men's hats—10 per cent ad valorem (paragraph 477); other silk plushes pay 45 per cent ad valorem.

Button forms, cut to a certain size, 10 per cent ad valorem (paragraph 426); the materials of which these button forms are made would pay, if imported, rates equivalent to four and a half to eight and a half times higher.

Bolting cloth, free (paragraph 514) when stamped. The same class of merchandise when not stamped would pay a high rate of duty.

Ribbons are specially provided for at 50 per cent ad valorem, while other trimmings pay 60 per cent.

PARAGRAPH 399—TIE SILK.

Veilings made on leather machines are exempt from paragraph 350, although all other goods made on leather machines pay 70 per cent ad valorem, etc.

Upholstery silks and dress silks are not sold at staple prices, as is the case with tie silks, but fluctuate or vary according to styles, demand, the class of dealers to whom sold, or other market conditions, and are sold almost invariably at prices from 5 to 20 per cent higher than the same qualities of tie silks, and therefore should not be classified for dutiable purposes with tie silk.

The duty on tie silk should be established at rates that, while affording ample protection for domestic manufacturers, should be sufficiently low to allow this class of merchandise to be imported.

The undersigned all having been large importers of tie silk before the Payne-Aldrich tariff went into effect have seen the imports of tie silk shrink to almost nothing, but are confident that with a fair and equitable adjustment of the tariff the importations would materially increase, as we are all agents of domestic tie-silk manufacturers, and as such are certainly not desirous of injuring the business of those manufacturers.

We feel certain that a new tariff on the basis suggested herewith would afford ample protection to the domestic manufacturers and at the same time would enable us to largely increase our business in imported goods.

It is submitted that for the four years since the enactment of the present tariff the imports of foreign-made tie silks have fallen off 50 per cent, as compared with the imports for the four years preceding August 5, 1909. This fact was obtained by averaging the records of all the subscribers.

After a study of the foregoing statements you are urgently requested to consider the fairness, equity, and advisability of providing special rates for tie silks for the reasons stated, such new rates of duty to indicate a general reduction of 20 per cent from the specific rates as now constituted in paragraph 399 of the act of 1909, with a catchall proviso to read:

But in no case shall any goods enumerated in this paragraph pay a less rate of duty than 35 per cent ad valorem or a greater rate of duty than 45 per cent ad valorem.

I thank you.

The CHAIRMAN. Are there any questions, gentlemen?

Mr. LONGWORTH. I would like to ask you to which paragraph you refer?

Mr. WOLF. Three hundred and ninety-nine.

Mr. LONGWORTH. Do you claim that the Payne tariff increased the duties over those in the Dingley bill?

Mr. WOLF. Certainly. I can show samples that pay as high as 72 per cent.

Mr. LONGWORTH. What is tie silk?

Mr. WOLF. It is silk used for neckties; for men's neckwear purposes.

Mr. LONGWORTH. Is it a particular kind of silk?

Mr. WOLF. It is made especially for neckwear purposes; it is specially manufactured.

PARAGRAPH 399—TIE SILK.

Mr. LONGWORTH. What part of paragraph 399 would it come in under?

Mr. WOLF. Different quantities come in at different rates; \$1.30 a pound; \$1.50 a pound, and \$2 a pound. At 40 per cent ad valorem some of them pay as high as 72 per cent. I have samples to show that.

Mr. LONGWORTH. The first part of the paragraph shows a decrease in duty, does it not?

Mr. WOLF. No.

Mr. LONGWORTH. The Dingley rates were \$1.50 a pound and 15 per cent ad valorem. The Payne rate is \$1.50 a pound.

Mr. WOLF. And some as high as \$2.50 a pound.

Mr. LONGWORTH. I am speaking about the first part of paragraph 399.

Mr. WOLF. There are different qualities. It depends upon the quality.

Mr. LONGWORTH. What quality is that, then?

Mr. WOLF. All kinds of qualities. I am speaking in a general way. Tie silks have paid as high as 72 per cent, and only a few have paid as low as 45 per cent.

Mr. LONGWORTH. What I am trying to find out is what part of paragraph 399 do these tie silks come under?

Mr. WOLF. They come under different subdivisions of the paragraph.

Mr. LONGWORTH. Well, what subdivison?

Mr. WOLF. Well, for instance, 440 threads to the inch in the warp.

Mr. HULL. Was not the present tariff law as it relates to the silk schedule agreed upon by the different representatives of the silk industry four years ago?

Mr. WOLF. Well, we really come over especially as tie-silk importers. We did not act with the silk people or the silk association; we acted independently.

Mr. HULL. Did you accept the rates that were made—

Mr. WOLF (interrupting). We wanted lower rates, but we did not get them.

Mr. HULL. You asked for lower rates?

Mr. WOLF. Oh, yes. We had a number of interviews with different gentlemen here. Mr. Payne was one of them and Mr. Hill was another, but we did not get anything lower than what was eventually published as the law.

BRIEF SUBMITTED BY McCOLLOM & POST ET AL., PATERSON, N. J.

*To the Honorable the Chairman and
Members of the Ways and Means Committee,
House of Representatives,
Washington, D. C.*

In view of the testimony given to your committee at the hearing on the silk schedule in Washington, we, the undersigned manufacturers of tie and fancy silks, desire to submit to you as follows:

There is no branch of the silk industry more in need of the protection afforded by the present schedule than the tie and fancy silk branch. The reason is evident. These are the goods in which labor forms a much larger part of the total cost than is

PARAGRAPH 399—TIE SILK.

the case in any other article. These goods are made on box and on Jacquard looms, are of slow production, require experienced weavers, and are therefore mainly made in Paterson and Hoboken, where wages are relatively high. The cost of production, exclusive of materials in these goods, is rarely less than 50 per cent of their cost price. In an American article costing 75 cents per yard about 45 cents is cost of production, exclusive of material. The German price of the same cloth would be about 50 cents per yard net. The duty, ranging from 45 to 50 per cent and amounting to 22 to 25 25 cents, would cover the difference between American and European cost of production, if American cost of production were only double that of European. As a matter of fact, in many instances it is three or four times as much, so that a duty of from 45 to 50 per cent does not as a rule cover the difference between American and European cost of production. Whenever an article is in vogue which requires more than the usual amount of labor, as is for instance the case in swivel corded goods, the American manufacturer can not possibly compete with foreign merchandise under the present rate of duty, and large quantities of this article were imported two and three years ago when fashion favored it.

Tie silks can not be classified separately in the tariff schedule. If they could, we firmly believe we would be justified in asking for a higher rate of duties on these than on any other goods. In many cases they are not distinguished from other silks by patterns, styles, etc., and goods made for dresses and trimmings are frequently sold for ties, and vice versa, according to the whim and fancy of the buyer. Neither are they uniformly 24 inches wide, but they are made and sold 28, 32, 36, and 48 inches in width as well, and many styles of neckties can be cut from narrower silks to advantage.

Neckties made of fancy silks are not a necessity but a luxury. The man of small means can buy a tie made of plain silk and sometimes even of fancy silks in every 5 and 10 cent store for 5 and 10 cents a piece. A large part of tie silks imported to-day come in under the 45 per cent catchall clause, which was designed and adopted mainly for the reason that the present specific rates in this class of goods in many instances would not yield more than from 30 to 40 per cent ad valorem. While it is true that some styles under the present specific rates pay as high as 45 to 55 per cent, we have never seen a tie-silk cloth which, at the proper European valuation, would pay a duty of 72 per cent or anything like such a figure.

The amount of importation of tie silks can not be ascertained with any degree of accuracy, as they are not classified separately and are dutiable like other silks under the different rates of the schedule. There is therefore no comparison possible between the amount of tie silks imported under the Payne-Aldrich and under the Dingley tariff. However, inasmuch as the Payne-Aldrich tariff reduced the catchall clause from 50 to 45 per cent and did not materially alter the specific rates, it is evident that a falling off in importations, if any, is not due to the tariff rates. It may be justly ascribed to the vogue of the knitted scarf, which greatly reduced the consumption of all tie silks, and furthermore, the fact that the price of American-made tie silks, due to the highly competitive condition of the industry, was reduced about 10 per cent during the last eight years in spite of a considerable increase in wages, and the same price level of raw material.

In consequence of the price reduction and increase in wages the profits to the manufacturer are exceedingly small, and any reduction in duty, causing additional competition from foreign countries, would be nothing less than disastrous.

What is true of tie and fancy silks is to a great degree true of all other silks. Silks are an article of luxury, and nobody who does not care to needs to wear a single shred of silk. The industry is highly competitive. There is no trust or combination, and American silk goods are sold to-day cheaper than ever, the best proof that the tariff does not protect the manufacturers' profits but merely tends to equalize the difference between cost of goods here and abroad.

The importation of silk goods yields a substantial revenue to the Government under the present schedule, which is the best and most scientific ever devised. Specific duties, with an ad valorem catchall clause, are by far the most satisfactory for the Government, the manufacturer, and the importer as well.

We therefore trust that in consideration of the above-stated facts, all of which we stand ready to prove, your honorable body will decide to continue the silk schedule in its present form.

McCULLOM & POST,
Paterson, N. J.
(And 39 others.)

PARAGRAPH 399—UMBRELLA SILK.

UMBRELLA SILK.

STATEMENT SUBMITTED BY OTTO MÜLLER & CO., NEW YORK CITY.

NEW YORK, May 1, 1911.

Hon. OSCAR W. UNDERWOOD,
Chairman of the Ways and Means Committee,
House of Representatives, Washington, D. C.

HONORABLE SIR: Attached hereto we beg to hand you a statement pertaining to the duties on the cheapest class of silk and cotton mixed goods used principally for cheap umbrella coverings.

The importation of these goods has been made impossible through the enormous increase of duties on occasion of the last tariff revision, when a reduction was asked for.

May we respectfully ask you to give this matter your attention?

At any time we shall be very glad to go to Washington to supply you with such further information as we may have and which you may deem necessary.

We are, honorable sir, respectfully, yours,

OTTO MÜLLER & Co.
 H. G. ADOLPH.

PARAGRAPH 399.

The undersigned hereby respectfully beg to draw your attention to paragraph 399 of the Payne-Aldrich tariff law.

This paragraph 399 tends to exclude from this market textiles of silk and cotton mixed goods dyed in the piece, manufactured in foreign markets.

Previous to the last tariff revision, the leading umbrella manufacturers, who are the principal consumers of this class of goods, presented a petition for the purpose of preventing an increase of duties. The only large manufacturer who did not sign this petition manufactures his own cloth.

This class of goods has heretofore enjoyed a protection of 50 per cent ad valorem, which protection, although always oppressive, permitted the foreign manufacturer to bring to this country a certain amount of such goods which, in spite of being limited, proved ample to give the American consumer, by paying a somewhat higher price for the foreign goods, the advantage of being to a certain degree independent of the domestic manufacturer, who was thus compelled to keep his prices within reason.

The Payne-Aldrich law placed the goods in question in the "weight-duty" class, which in itself is desirable, as all chances for undervaluation and disputes over values are eliminated; the rate, however, was fixed so that all the goods which formerly paid 50 per cent ad valorem are now subjected to a duty averaging 65 to 75 per cent.

The original exceedingly high duty, plus this new enormous addition, enables the domestic manufacturer not only to raise his prices and thereby add to his already large profits, but also to increase the difference in price between the domestic and foreign goods to such an extent that the consumer can no longer pay this difference, and therefore is absolutely compelled to buy at excessive prices, from a very limited number of domestic manufacturers, to the detriment of his own already scant profits.

The section of paragraph 399 referred to, which involves the cheaper and cheapest grades of silk and cotton mixed goods and which needs most consideration, reads as follows:

"If weighing more than 1½ ounces, but not more than 2½ ounces, and if containing not more than 20 per cent in weight of silk, if in the gum, * * * 70 cents per pound; if un gummed, wholly or in part, or if further advanced by any process of manufacture or otherwise, or if dyed or printed in the piece, 85 cents per pound; * * * but not a less rate of duty than * * * 45 per cent ad valorem."

Under the Dingley tariff this same section reads (paragraph 387):

"Weighing not less than 1½ ounces per square yard and not more than 8 ounces per square yard, and containing not more than 20 per cent in weight of silk, if in the gum, 50 cents per pound, and if dyed in the piece, 60 cents per pound; * * * but not a less rate of duty than 50 per cent ad valorem."

On the face of it the new tariff provides for a reduction of 5 per cent (from 50 to 45 per cent) ad valorem. The schedules of weights, however, have been manipulated in such a way that they always exceed the ad valorem rates; in consequence thereof the former are those collected; but aside from raising the rates, for instance, from 60 to 85 cents per pound the range in rate has been reduced from 1½ ounces per square

PARAGRAPH 399—UMBRELLA SILK.

yard to 8 ounces per square yard to $1\frac{1}{2}$ ounces per square yard to $2\frac{1}{2}$ ounces per square yard.

This change affects principally the cheapest kind of goods (about three-fourths of all the goods consumed) and the effects of this change are such as to make the importation of the cheapest grades absolutely prohibitive; but, further, for all other grades of this class of goods the rates of weight are figured with such care that hardly any can be imported at the apparently reduced rate of 45 per cent ad valorem. In every case the weight duty exceeds not only the present ad valorem rate of 45 per cent but also the old Dingley rate of 50 per cent.

The difference between cost of manufacture of the goods in question, viz, the foreign and domestic article, averages about 10 per cent. The protection for these same goods is 65 to 75 per cent, the higher figure being for the cheapest and most sought-for grades.

The difference of about 10 per cent in favor of the foreign manufacturer in producing is almost eliminated through freight, brokerage, etc. To illustrate the foregoing statements: There is attached hereto the calculation of a certain grade showing the cost in foreign countries, the duty attached, the cost of the same goods in this country, the difference in price at which these goods are sold by the domestic manufacturer against those of foreign origin, and the resulting profit to the domestic manufacturer.

This remaining enormous balance in favor of the very few domestic manufacturers of this class of goods is a direct result of the very high protection accorded their products, and although this may be well for these manufacturers and perhaps their few hundred mill hands, there are several hundred of their customers and there are several thousand hands using these goods for further manipulation, who can not on account of this enormous balance make a fair and necessary living, nor can they, in spite of hard and arduous work, distribute their final product to the ultimate consumer at a fair and reasonable price.

We therefore respectfully propose that the mode of imposing the duty by weight on this class of goods be maintained, that the range of weight be extended to its old limit, $1\frac{1}{2}$ to 8 ounces per square yard, that the rate for goods in the gum be reduced to 40 cents per pound and for those dyed in the piece to 50 cents per pound, but not less than 40 per cent ad valorem.

Extract from original consignment bill, case No. 319.

Sixty pieces 46-inch iris tape 1728, 3,188 meters, at 98 pfennigs, including 5 per cent for expenses and 8 per cent profit to the mill, 3,124.25 marks.

3,124.25 marks, figured at 23.8 cents per mark.....	\$743.57
Former duty at 50 per cent ad valorem amounted to.....	371.79
Duty amounts now to.....	523.22

Explanation: 3,188 meters weigh 279.210 kilos, or 615.55 English pounds; they amount to 4,454.9 square yards and 1 square yards weighs 2.21 ounces.

Duty imposed is 85 cents per pound, making on 615.55 pounds, \$523.22, or equal to 72 per cent ad valorem.

Foreign goods.

Selling prices in Europe.....	\$743.57
Plus present duty.....	523.22
	<hr/>
	1,266.79
Plus 10 per cent for expenses and commissions on this side.....	126.67
	<hr/>
Selling price in United States of America.....	1,393.46

Domestic goods.

Cost in United States of America, including 5 per cent for expenses and 8 per cent profit to the mill.....	\$817.92
But it sells at.....	1,254.12

Which is 10 per cent less than the importer must have, leaving a balance in favor of the domestic manufacturer amounting to \$436.20, or more than 53 per cent.

PARAGRAPH 399—UMBRELLA SILK.

NEW YORK, *May 1, 1911.*

HON. WILLIAM SULZER,
House of Representatives, Washington, D. C.

HONORABLE SIR: Attached hereto we beg to hand you a statement pertaining to the duties on the cheapest class of silk and cotton mixed goods used principally for cheap umbrella coverings.

We respectfully ask you to take this matter up with the Committee on Ways and Means, and also to use your great influence when the question comes before the House of Representatives.

If you desire any other information on the subject dealt with we shall be glad to furnish same as far as we possibly can.

Respectfully, yours,

OTTO MÜLLER & Co.
 H. G. ADOLPH.

Respectfully referred to Hon. Oscar W. Underwood, chairman Committee on Ways and Means.

NEW YORK, *January 23, 1913.*

HON. OSCAR W. UNDERWOOD,
*Chairman of the Ways and Means Committee,
 House of Representatives, Washington, D. C.*

HONORABLE SIR: We greatly appreciate your sending the copy of the hearings of January 13, Schedule L. We have read with great interest the statements of Mr. Hill, particularly (page 1549) the question addressed to Mr. Kridel "Do you know the firm of Miller & Co., of the Gloria Silk Mills?" and wish to draw your attention to the fact that Otto Muller & Co. (480 Broome Street), and Muller Gloria Mills (South Norwalk), are two entirely separate concerns competing against each other in umbrella silks, the former imported and the latter domestic goods, and we wish to say also that any statements which Mr. Richard Muller (head of the Muller Gloria Mills) may make will be entirely his own presentations and in no way have any connection whatsoever with us. We state this in order to avoid any confusion or wrong impression to the effect that Otto Muller & Co. and Muller Gloria Mills are making the same statement.

Reading further on page 1550, we come to the conclusion that Mr. Hill wishes to bring out through Mr. Richard Muller of the Muller Gloria Mills the fact that since the Payne-Aldrich tariff came into force with its enormous increase of duties on cheap silk mixtures there has been no increase of prices from the domestic product to the consumer, in this case the umbrella manufacturer. Meantime we have had occasion to speak to some umbrella manufacturers on this subject and they do state that since the new tariff came into force, prices, especially on cheaper goods, have been increased repeatedly by one-fourth cent at a time, special care being taken each time to explain this increase through labor troubles and higher cost of raw material.

Within the last four years, during which time cheap imported goods have been kept out of the market, the sale of the better class of imported goods has also fallen off in spite of the fact that they can be imported to advantage, because the consumer finds it difficult to obtain cheap material from the domestic manufacturer if he does not also place the larger part of his business in better grades with the domestic manufacturer, although he can buy his better grades from the importer to greater advantage.

Respectfully, yours,

OTTO MÜLLER & Co.
 H. G. ADOLPH.

BRIEF OF THE DUNDEE TEXTILE CO., PASSAIC, N. J.

PASSAIC, N. J., *February 13, 1913.*

HON. O. W. UNDERWOOD,
Chairman Committee on Ways and Means, Washington, D. C.

DEAR SIR: Referring to the conversation which our treasurer and manager, Mr. G. Hilgert, had recently with you in Washington, and as per suggestion you made to him, we are sending herewith, statements and samples (on file) of piece-dyed umbrella cloth, which, in connection with the letter, will, we think, make our position plain, and the situation in regard to this cloth clear to your committee. The figures used for the

PARAGRAPH 399—UMBRELLA SILK.

cost of the imported cloth are those given by the European manufacturers themselves, and are shown in Schedule L, No. 7, page 1576. The demand for this cloth is limited, the total consumption used in this country probably being not over \$1,000,000 per annum, and up to a very few years ago all of these goods were imported.

There are at present only two mills manufacturing it in this country—our own and the Muller Gloria Mills of Norwalk, Conn. These two mills, running at full capacity, could produce easily the entire consumption used in this country, but due to the importation of foreign goods, and to the fact that the general demand for umbrella cloth in this country has been steadily decreasing for the past six or eight years, partly on account of the mercerized cotton goods now being used for the cheaper grades of umbrellas, the total output of both these mills has probably not exceeded \$700,000 annually. Both of them have been obliged to run on a low rate of efficiency from 75 down to 50 per cent of normal production, in order to prevent a large overproduction at home. There has always been a very keen competition between these two mills, which, together with the importation of foreign goods has prevented even a fair margin of profit, and this company has not as yet been able to earn 6 per cent interest on the capital actually invested.

Both of the two mills, our own and the Muller Gloria Works, are maintained and running on as high a standard of efficiency as can be secured from the kind of help employed in this country, none of which have had either the training or experience of the operatives employed by our competitors in Europe. We have to work under a much higher cost of production here, against the low cost of production in Europe, the higher cost being due to a large extent to the greater cost of construction, repairs, supplies, and considerably higher wages we are obliged to pay in this country.

For the first five or six years and up to two or three years ago, we have also had to compete against the importation of goods which were very much undervalued, and we understand that at present the manufacturers in Italy and Germany, expecting a reduction in the tariff on this cloth, are making preparations to send over immediately thereafter a large amount of manufactured goods they have on hand, in order, if possible, to kill the production of the cloth in this country. As the demand for the article is so limited, a very small percentage of larger importation in competition with the two domestic mills, who have been and are still struggling to make a success and a market here for their own cloth, would practically destroy it so far as we are concerned, and the problem that confronts us means the very life of our mill.

We are confident that everything we can do has been done in order to keep the cost of the production down to where even less than a reasonable profit may be secured, and the only reason that we have been able to continue to make these goods has been on account of the duty, which has so far, to some extent, prevented the overstocking of the American market. The production and consumption of this cloth is so small that the tariff thereon does not affect any other industry and would make no difference whatever to the consumer, the present tariff not affecting the cost of an umbrella more than 1 or 2 cents.

The cheap umbrellas are now being made from all-cotton goods, which is manufactured to closely imitate our goods which have a silk warp, while the cost of the cotton fabric is only one-half of the lowest grade we make. In consequence of this the consumption of cotton goods for umbrellas has increased considerably and cut heavily into the sale of our fabrics.

We believe the foreign manufacturers do not understand or realize this condition, but think there is a very much greater consumption for the kind of cloth we manufacture than actually exists, and they undoubtedly think there is a market for several million dollars of this cloth, and you can readily see how easy it would be to kill this market entirely by greater imports without benefiting the consumer of this cloth in any way.

Besides, we understand efforts will be made to introduce or import this cloth, having it entered under the name of Habuti, which is a silk tissue manufactured largely in Japan and can not be used for umbrella covers at all, but would come in under the tariff at a lower valuation. The foreign manufacturer commands the entire market to-day in yarn dyed, silk and cotton mixed umbrella goods, and the domestic manufacturer is unable to present anything like formidable competition, and is at a great disadvantage on this account with the foreign manufacturer, who can make either yarn-dyed or piece-dyed goods in his mill, as may suit him or the market, while the domestic manufacturers can not do so, as their mills are not equipped for this purpose.

Our mill was started to manufacture this cloth, believing that for many years no change would be made in the tariff on it on account of the small quantity consumed, and we very earnestly request and plead with you to do everything possible to prevent a further and more serious loss to our concern and to allow the present tariff on

PARAGRAPH 399—UMBRELLA SILK.

this cloth to remain as it is and as a specific instead of an ad valorem duty. The change from a specific to an ad valorem duty on this cloth will enable the foreign manufacturers to have a very much greater advantage over us than if the duty was specific as at present and we believe will permit of great undervaluations of the foreign cloth entered here. This has been the experience of past years and these undervaluations, which were very serious under the Dingley tariff, will unquestionably be repeated if the duty is made ad valorem.

The proposition is entirely too small to permit of any great active competition between a number of mills either at home or abroad and there is no likelihood that its consumption will be increased or that a reduction in the tariff will benefit any citizen of the United States, but, on the contrary, very seriously damage the two domestic mills.

Our mill here employs local people, some of whom we have had to train ever since we started business, and we understand the same condition prevails in the Muller Mill at Norwalk, Conn. Our employees and those of the Muller Mill are dependent on the mills continuing under present conditions. We have been obliged during the past year to increase wages, while the price of the cloth has not increased, and our employees tell us they can not stand a reduction in wages to bring them anywhere near the level of wages paid by our foreign competitors.

Should your committee require fuller and more detailed figures to verify our statements, the private cost sheets of our mill will be submitted to you. We believe a careful analysis will show the statements made by the foreign manufacturers in regard to this cloth and the cost and profit of the American manufacture of it are not correct and can be easily disproved.

Yours, very truly,

DUNDEE TEXTILE Co.,
By FRANK HUGHES, *President.*

PIECE-DYED UMBRELLA CLOTH.

[Samples on file.]

Estimated cost 46-inch (116.84 cm.) piece-dyed umbrella cloth with tapes like sample.

(Taffeta, black; Ground, warp (including tapes), 6,620 Grege; filling, cotton, English No. 40-1; picks, 104 per inch. Per cent silk, 13; per cent cotton, 87; tariff duty, \$0.85 per pound.)

DUNDEE TEXTILE CO.,
G. HILGERT, *Treasurer and Manager.*

STATEMENT SUBMITTED BY RICHARD MULLER, NORWALK, CONN.

NORWALK, CONN., *February 8, 1913.*

With reference to the attack of foreign manufacturers on the present duties of umbrella goods, silk and cotton mixtures which come in under paragraph 399, "if weighing more than 1½ ounces, but not more than 2½ ounces, and if containing not more than 20 per cent in weight of silk, if in the gum, 70 cents per pound; if dyed, 85 cents per pound, but not less rate than 45 per cent ad valorem," I submit the following statements:

(1) Statement showing how various umbrella qualities are affected by the present tariff.

(2) Statement showing the fluctuation of their market value from 1904-1912.

At the hearing on January 13, 1913, on the Schedule L, it is claimed by these manufacturers or importers (a) that the present Payne-Aldrich duty is excessive and prohibitive; (b) that through enormous addition in duty the domestic manufacturers raised their prices and added enormously to their large profits.

These manufacturers or importers wish to give the impression that they are making their attack on the present duties to bring about an increase in the revenue for the benefit of the United States Government (p. 1549). Also to give Congress an opportunity to benefit the poor people by lower prices as a result of lower tariff; also to benefit and protect the interest of the umbrella makers.

Their actual purpose in advocating a 40 per cent ad valorem duty is nothing else but to completely kill off all domestic competition and force these manufacturers to shut their mills and drive same out of business.

With regard to the increase of the United States Government revenues of which the foreign manufacturers are making a point, the record will show by the testimony given on page 1549 by the representative of the foreign manufacturers that the import of silk goods has only decreased about \$2,000,000 out of \$30,000,000 basis, which equals about 8 per cent; but if, in addition to this, the Government would get all the revenues on the amount of business done by domestic umbrella-cloth manufacturers, this amount would be almost infinitesimal, as all the domestic business on these goods amounts to about \$700,000 per annum, and a 40 per cent revenue on this would be about \$280,000 for the Government. So according to the facts it is clearly shown,

PARAGRAPH 399—UMBRELLA SILK.

beyond any possible contradiction, that the Government would practically benefit nothing by lower tariff, whereas the domestic makers of the cloth would be ruined.

The poor man would not benefit by this proposed reduction for two reasons: First, the cheap umbrellas are made out of all cotton cloth; second, the proposed reduction on mixed silk and cotton goods would reduce the price of the finished fabric about 1 cent per yard, which would lower the cost of the umbrella made from it about 1 cent, which the umbrella manufacturer promptly gives to the retailer, but the retailer of course would retain this 1 cent, in addition to his already large profit. This fact can easily be verified by any umbrella maker.

IS THE PRESENT DUTY PROHIBITIVE?

The Payne tariff switched from the ad valorem to the specific rate. The reason was to prevent further undervaluations, which have been exercised extensively in the customhouse, which fact is clearly admitted by the foreign manufacturers in their testimony on page 1574. It can not be advocated too strongly to stick to these weight duties, even if unfortunately they can not do justice to each and every quality. It is an impossibility to bring by specific duty each quality on the same ad valorem basis. My table shows how rates differ, and that at the 85-cent rate only very few qualities are shown above 50 per cent ad valorem. To get at a fair specific rate one had to figure many different qualities and then draw an average. One gets a wrong impression by analyzing only one quality like Otto Muller Co. do on page 1574. By the way, their own statement is very valuable to show that the present duty is not prohibitive. They state:

Foreign goods selling price in Europe.....	\$743. 57
Add 72 per cent ad valorem.....	523. 22
Add expenses and profits on this side, which amount to 17 per cent ad valorem.....	126. 67
	<hr/>
	1, 393. 46

Domestic goods sell at \$1,254.12.

They state themselves that with 89 per cent on top of the German price they are only 10 per cent out of the way. How would a 40 per cent duty do in this case? Their statement allows expenses and profits for the foreign manufacturer, \$90; for domestic manufacturer, \$100; for New York agent, \$126—all on the same transaction. So if only the New York agent would be a little more modest regarding his profits this would result in very close competition.

They state that the goods could be made domestic for \$817.92, which is only 10 per cent more than the German cost. How they arrive at this figure is a puzzle to me, but if so we would be able to sell our all-silk warp goods as low as inferior fabrics made entirely from cotton. There are still a lot of goods imported into this country, and the foreigners would not keep their own offices here if it were not for a paying business.

HAVE PRICES GONE UP ON ACCOUNT OF TARIFF?

My statement shows that they have not. The slight differences are due to market fluctuations, and even Mr. Kridel, on page 1550, admits there was no raise. What O. Muller Co. say on page 1573 regarding this subject has no leg to stand on. American competition is so keen that there is no chance to raise prices, besides the foreign manufacturers are always on our heels, and an attempt to raise prices would result in a large reduction of consumption of this class of goods, and in the end make the sale of it impossible.

WHY WE NEED PROTECTION IN THE UNITED STATES.

Because labor and material are much higher in this country and we do not get the benefit of skilled labor which enables the foreign manufacturer to use cheaper materials.

Otto Muller Co. pretend, on page 1574, that the cost of manufacturing here is only 10 per cent more than in Germany. I wonder why they ask, then, for a 40 per cent duty. This no doubt shows their statement is doctored. Here are a few examples to illustrate the needed protection. The first refers to a prominent quality known as "Iris."

PARAGRAPH 399—UMBRELLA SILK.

Germany:	Marks.

Dyeing.....	14. 50
Management, tools, expenses.....	10. 40
	<hr/>
	119. 20

This shows that it is practically on account of high wages and higher cost of supplies that we require the continuance of the present duty, and besides it has to be considered that interest and depreciation have to be calculated at a higher rate here than on the other side. The danger resulting from slightest undervaluation of an ad valorem tariff beats the domestic mill, and in case the duty is figured too close the temptation to undervalue is too great.

The business which has been done by the various importers before the Payne tariff existed is the best proof for this argument.

SITUATION IN THE UMBRELLA SILK BUSINESS.

The umbrella silk business in question is a limited business in the United States and can not, in spite of increasing population, be increased. It even has been decreased the last years, because the umbrellas are no more so extensively used as they were. No exporting can be done from here, so the domestic manufacturer is entirely dependent upon the home market. There is already a big overproduction in this line in the United States, and if the tariff helps by means of tariff reduction to bring into this country the foreign goods again, it means an actual loss for our industry. We are especially equipped for this kind of goods; and, in general, there are too many silk looms already running in the country.

PARAGRAPH 399—UMBRELLA SILK.

The situation in the old country is such that the manufacturers are just waiting for a chance to fall over us. If only the Government gives them the slightest inducement they will grasp the situation and will do the business here with ridiculously small margin, which they can do without hurting themselves. Having supplied this country for a period of about 20 years before 1909 they are completely equipped. Not being able to find any other channel for their reduced American consumption, they have to-day many of their looms idle and it would not take them long to swamp our market again. They have mills running since 1880; have written off every cent; the book value of their establishment does not amount to anything. If they only have to calculate our depreciation on the plant they will make money; they certainly prefer to do this than to stand idle. It goes to show what a serious competition we are up against and how badly we need protection for our still infant industry. The time is not as yet ripe to be rigorous with duties on these articles.

The question of lowering the duty is for the domestic mill a question of death or life, while the manufacturer on the other side has the business in his fatherland and can export almost everywhere. We domestic manufacturers need the United States umbrella business like our daily bread, we can not afford to lose it. If it comes to any reduction in tariff, we have to go into the fight to the bitter end before we close our mills.

If the present rate of tariff on our goods is reduced, even though we shall fight to the last, the inevitable result will be that we will be forced out of business. We should think that with the above facts set before you, we are confident the Government will give our case fair and careful consideration.

MULLER GLORIA MILLS.

The fluctuations are due to raw material conditions. No rise took place on account of tariff revision in 1909.

PARAGRAPH 399—UMBRELLA SILK.

EXCESSIVE DUTIES ON UMBRELLA SILK.

NEW YORK, *January 11, 1913.*

Hon O. W. UNDERWOOD,

*Committee on Ways and Means,**House of Representatives, Washington, D. C.*

DEAR SIR: In reply to your favor of the 9th instant, sent to me by your secretary, Daniel C. Roper, I submit to you a few samples of black silk and cotton piece dyed umbrella silks to give you an idea regarding the excessive duty which is placed on this class of goods under the present silk tariff schedule, viz: Piece dyed taffeta, O D C, 46-inch, rate 85 cents per pound, pays 67 per cent duty; D D R, 46-inch, rate 85 cents per pound, pays 62 per cent duty; Y Y N, 46-inch, rate 85 cents per pound, pays 63 per cent duty.

In submitting these samples, I further wish to say that these qualities are constructed as light in weight as possible, otherwise the duty would be much higher if made in the usual way.

The evil of the present silk schedule is so constructed that there are three different ways by which goods can be passed, viz, ad valorem duty (foreign market value), specific duty (by weight), and third, by selling prices in this country.

I want to say right here that three quarters of my business is done in American manufactured goods, but in justice to all concerned the silk schedule should be changed to an ad valorem duty only, giving American manufacturers ample protection to cover the difference between foreign and domestic labor.

Yours, very truly,

CHAS. HERRMANN,

96 Spring Street, New York City.

PARAGRAPH 400.

Handkerchiefs or mufflers composed wholly or in chief value of silk, finished or unfinished, if cut, not hemmed or hemmed only, shall pay fifty per centum ad valorem; if such handkerchiefs or mufflers are hemstitched or imitation hemstitched, or revered, or have drawn threads, or are embroidered in any manner, whether with an initial letter, monogram, or otherwise, by hand or machinery, or are tamboured, appliquéed, or having tucking or insertion, sixty per centum ad valorem.

See Samuel Kridel, page 4590; C. A. Streuli, page 4615; French Chamber of Commerce, page 4621.

PARAGRAPH 401.

Ribbons, bandings, including hatbands, beltings, bindings, all of the foregoing not exceeding twelve inches in width, and if with fast edges, bone casings, braces, cords, tassels, garters, gorings, suspenders, tubings, and webs and webbings, composed wholly or in chief value of silk, and whether composed in any part of India rubber or otherwise, if not embroidered in any manner, by hand or machinery, fifty per centum ad valorem.

See Samuel Kridel, page 4590; C. A. Streuli, page 4615; French Chamber of Commerce, page 4621; J. M. Sullivan, page 4624.

PARAGRAPH 402.

Laces, edgings, insertings, galloons, flouncings, neck ruffings, ruchings, braids, fringes, trimmings, ornaments, nets or nettings, veils or veilings, and articles made wholly or in part of any of the foregoing, or of chiffons, embroideries and articles embroidered by hand or machinery, or tamboured or appliquéed, clothing ready made, and articles of wearing apparel of every description, including knit goods, made up or manufactured in whole or in part by the tailor, seamstress, or manufacturer; all of the foregoing composed of silk, or of silk and metal, or of which silk is the component material of chief value, whether in part of India rubber or otherwise, and braid composed in part of India rubber, not specially provided for in this section, and silk goods ornamented with beads or spangles, sixty per centum ad valorem: Provided, That articles composed wholly or in chief value of any of the materials or goods dutiable under this paragraph shall pay not less than the rate of duty imposed upon such materials or goods by this section: Provided further, That tamboured, embroidered, or appliquéed articles or fabrics shall pay no less rate of duty than that imposed upon the material if not so tamboured, embroidered, or appliquéed.

See Samuel Kridel, page 4590; C. A. Streuli, page 4615; French Chamber of Commerce, page 4621; J. M. Sullivan, page 4624.

PARAGRAPHS 401-402—LACES, ETC.

LACES, ETC.

TESTIMONY OF A. H. KURSHEEDT.

The witness was thereupon duly sworn by the chairman of the committee.

The CHAIRMAN. On what paragraph do you wish to speak?

Mr. KURSHEEDT. Nos. 402 and 405, Schedule L.

The CHAIRMAN. Proceed.

Mr. KURSHEEDT. I represent the Association of American Embroidery & Lace Manufacturers (Inc.). We manufacture silk and artificial silk embroideries and embroidered laces. Nearly all the foundations that we use for our work necessarily pay high duties, and the labor in Switzerland and Germany and other countries where these goods are produced costs about one-third of what it costs here. The consequence is that these articles are imported continuously. The advantage we have is that we manufacture colored goods in very large quantities when there is a great demand. I have here the samples to show what I mean by embroideries and laces [exhibiting].

The duty as it is to-day is not sufficiently high to yield the Government all the revenue that can be obtained from those articles. We are engaged to some extent in manufacturing specialties for this market, in many cases goods that have never been imported, and in that way the industry has been able to exist for a number of years, but at times there has been very great changes in the different manufacturing concerns. I think to-day, of the first 20 concerns that were in that business there is one left, and I know of no concern that has grown rich in this industry since its establishment in this country. The competition is very keen.

There are more than 200 manufacturers, and any new sample is taken to different manufacturers to obtain a lower price, and in that way the consumer gets from a domestic manufacturer good value for his money. I can not give you the exact statistics regarding the imports and the domestic production, because no separate record of these particular articles is kept. The laces are grouped with veiling and other articles which are not of the same class. I might be able to prepare some statistics in the course of a week or so that would be approximate, but there is really nothing printed that would be of assistance.

Mr. PALMER. The bureau says that the total imports of articles of this kind amount to \$4,161,000 in duties. That includes laces, embroideries, edgings, insertings, and galloons, and nets or nettings, veils or veiling, flouncing, etc., all of which are mentioned in this paragraph.

Mr. KURSHEEDT. Yes.

Mr. PALMER. What proportion of the domestic production is that?

Mr. KURSHEEDT. I could not find that out in any way, because a great many of these goods are made at irregular periods in some manufactories. Manufacturers keep no itemized accounts of the different varieties.

Mr. PALMER. Do you not know what the domestic production is?

Mr. KURSHEEDT. No. I have tried to find out at different times, but could get no estimate that I would care to place before you.

Mr. PALMER. What are you asking for?

PARAGRAPHS 401-402—LACES, ETC.

Mr. KURSHEEDT. We desire a higher duty.

Mr. PALMER. Yes.

Mr. KURSHEEDT. Of course.

Mr. PALMER. How much?

Mr. KURSHEEDT. As we think the goods would bear a higher rate.

Mr. PALMER. How much do you want?

Mr. KURSHEEDT. I think the goods would be imported in large quantities even if the duty was 80 per cent. In order to get as much revenue a 70 per cent straight rate would be sufficient.

Mr. PALMER. Seventy per cent instead of sixty?

Mr. KURSHEEDT. Well, it is 60 now and a specific duty in addition on the artificial silk goods, and nearly all the laces and embroideries imported and made in this country are artificial silk.

Mr. PALMER. You would want that left at 45 cents a pound and 70 per cent instead of 60?

Mr. KURSHEEDT. That is what I should like to have.

Mr. PALMER. What would be the equivalent ad valorem of 45 cents a pound and 70 per cent?

Mr. KURSHEEDT. One moment; 45 cents a pound. Well, that is—

Mr. PALMER (interposing). On the average?

Mr. KURSHEEDT. Yes; well, that would be very difficult to say on fine laces. It would depend entirely upon the amount of work.

Mr. PALMER. Can you not give me an estimate of an average equivalent ad valorem for 45 cents a pound and 70 per cent on those articles?

Mr. KURSHEEDT. That would really be impossible on laces and embroideries because some are made very light and others very heavy, and that would depend entirely on the fashion.

Mr. PALMER. It would run from 90 to 140 per cent, would it not?

Mr. KURSHEEDT. Oh no, I do not think so. You mean—

Mr. PALMER (interposing). The ad valorem equivalent to the compound rate.

Mr. KURSHEEDT. No; I do not think so. I think it would not run to more than 75 per cent on laces or embroideries.

Mr. PALMER. Forty-five cents a pound; and 70 per cent would not, on the average, be more than 75 per cent?

Mr. KURSHEEDT. I do not think so. I think 75 or 80 per cent at most. It might reach 80 per cent, but in some cases it would be very much lower than that.

Mr. PALMER. And you would like to have 80 per cent duty, I suppose, to equalize the difference in labor costs that you gentlemen are all talking about?

Mr. KURSHEEDT. Well, there is labor and general expenses, and, of course, in an industry of this kind the variety of designs is very great. It is necessary for us to employ designers and make many samples. This class of work can be done in Europe for a half of what it costs here. It is really labor, but is considered as part of the general expenses. Whether we pay designers or people to prepare the patterns or people working on the embroidery machines it is exactly the same.

Mr. PALMER. That is all.

PARAGRAPHS 401-402—LACES, ETC.

Mr. RAINEY. If you had as much duty as you want on these articles, do you think any more would come in than now comes in?

Mr. KURSHEDT. If we had more duty, do I think more goods would come in?

Mr. RAINEY. Yes.

Mr. KURSHEDT. I think there would be practically the same quantity coming in.

Mr. RAINEY. It would not make any difference as to the quantity that comes in at all?

Mr. KURSHEDT. I do not think it would make a difference equal to the difference in the revenue that you would obtain.

Mr. RAINEY. Well, if it does not make any difference in the amount that comes in—

Mr. KURSHEDT (interposing). It will make some difference, naturally.

Mr. RAINEY. What do you want it for?

Mr. KURSHEDT. I say it would make some difference. We might be able to make 10 or 15 per cent more goods.

Mr. RAINEY. You might be able to make 10 or 15 per cent more in profit?

Mr. KURSHEDT. Oh, no. More in quantity.

Mr. RAINEY. More in quantity?

Mr. KURSHEDT. Yes.

Mr. RAINEY. What effect would that have? Would you employ any more people if you did that?

Mr. KURSHEDT. The effect would be probably to keep more people employed, because it would enable us to make goods at times when otherwise the machinery would be idle.

Mr. RAINEY. It would not result in the employment of any more people?

Mr. KURSHEDT. It would, or else enable the people already employed to make more wages in this industry, and embroidered laces and embroideries of different materials. We employ, I judge, about 12,000 or 15,000 people.

Mr. RAINEY. How many would you employ if you ran your machinery all the time and made 10 per cent more?

Mr. KURSHEDT. We could not run all the machinery on these laces. That is not the largest part of our business. That is only a part of the general embroidery business, because we manufacture embroideries and laces of all materials.

That is all; thank you.

BRIEF OF THE ASSOCIATION OF EMBROIDERY & LACE MANUFACTURERS (INC.),

Relative to Schedule L, paragraph 402, covering laces, embroideries, trimmings, etc., composed of silk; paragraph 405, covering laces, embroideries, trimmings, etc., made of artificial silk.

The duty provided on these goods in paragraph 402 is 60 per cent ad valorem, and the duty fixed on these goods in paragraph 405 is 45 cents per pound and 60 per cent ad valorem.

The laces and embroideries which we manufacture are luxuries and their use is determined entirely by fashion. It is never essential, however, to employ them as a decoration in order to conform to fashion, as at no time within the last 30 years have they been used as an exclusive decoration. The difference in the cost of manufacture between here and abroad in the items of labor, expenses, etc., is about three to one. The groundwork or foundation for the embroidery or lace invariably costs a large percentage more in this country than in Europe. The articles are imported continuously, varying in variety.

PARAGRAPH 402—VEILINGS.

The margin of difference in cost between here and abroad is sufficient, so that a much higher rate than at present imposed would yield a still larger revenue. A reduction in the rate would cause a loss of revenue and be a serious blow to our industry.

When the above articles are in vogue and in great demand, were it not for the keen competition of the domestic manufacturers, the importers would add such large additional profits that the consumer would pay a much higher price for the goods than they do under present conditions. A reduction in duty would simply be an additional profit for the importers or foreign manufacturers.

Respectfully submitted.

ASSOCIATION OF EMBROIDERY & LACE MFRS. (INC.),
By A. H. KURSHEDT, *President*.
S. SCHUSTER, *Vice President*.

VEILINGS.**TESTIMONY OF WILLIAM S. BENNET.**

The witness was thereupon duly sworn by the chairman of the committee.

Mr. BENNET. Mr. Chairman and gentlemen of the committee, I shall endeavor to requite the courtesy of the committee in giving me rather extended time by not taking all of it, because I shall be back here on the 24th when very much the same ground will have to be gone over again.

The principal subjects in which the manufacturers whom I represent are interested are under paragraph 402—veilings, silk veilings, and silk nettings. Of course, as a most cursory examination of the books show, schedule 402 is a very productive schedule from a revenue standpoint; is a highly competitive schedule; and also is one in which the labor cost is much higher than the percentage of the present tariff.

In my service with all of you in Congress I trust that I learned that one of the best arguments before a congressional committee is frankness, and therefore I take this occasion of saying in behalf of these manufacturers that they come before you relying, to a very large extent, upon the indicated views of Mr. Hughes, a former member of this committee, and of your honored chairman, in whose sincerity we all have a deep and abiding trust. Your chairman has said, in relation to this particular schedule, that silk is a luxury, and the position of the Democrats is that luxuries should pay the tax and that a revision downward should be applied to the necessities of life. I say that, and I want to be very frank about it, without any idea of what is, colloquially called, putting a man in a hole, or anything of that sort. We appreciate that we are appearing before a Democratic committee and that the people of the United States have given them the right to write a tariff, and that, therefore, it would be discourteous on our part to appeal to any except the accepted Democratic view of the tariff. I want to make that clear. We are a good deal like the lady who was on the witness stand one day and said she was 26 years of age, and the judge said: "Madam, were you not here last year, and did you not say you were 26 years of age?" And she said: "Yes, judge, but I am not one of those women who say one thing one day and something else the next."

At the same time, because we were before Mr. Payne's committee in 1909 and may be before other committees, we want to adhere to the position we have always taken on this subject, and that is that the 60 per cent is not all to which we are really entitled; that we really

PARAGRAPH 402—VEILINGS.

ought to have about 80 per cent, and that therefore we can appeal to the protective side of this also; and thirdly and lastly, we come abundantly under the rule of the committee in relation to a competitive or regulative industry. This industry has a trifle too much competition to suit the American manufacturer, as the best guess that we make at it—there are no exact figures—but the best guess that we can make at it is that we are able to produce somewhere between 17 and 20 per cent of the total American consumption of goods made on plain or warp machines. Now, if you should reduce this tariff to a point where we could no longer compete and the American industries were destroyed, you would simply put the American consumer of this class of goods at the mercy of the foreign producer, and I expect to be able to show this committee when I come back here on the 24th that the foreign producer has what might be called a territorial monopoly in connection with many classes of silk manufacture. That is all that I desire to say at this time.

Mr. Bennet submitted the following brief:

BRIEF ON BEHALF OF THE HALL LACE CO., E. & Z. VAN RAALTE, VARI LACE MANUFACTURING CO., LIBERTY LACE & NETTING WORKS, AMERICAN TEXTILE CO., TAYLOR TEXTILE MANUFACTURING CO., SEEKONK LACE CO., REDFERN LACE WORKS, LEIGHTON LACE CO., J. A. DUNHAM, AND DRESDEN LACE WORKS.

SILKS, LACES, AND EMBROIDERIES.

[Schedule L, par. 402.]

The attitude of the foregoing is that in their opinion the rate ought to be about 80 per cent, but the present rate of 60 per cent permitting them to compete to some extent with the foreign manufacturer they will be content, recognizing that this Congress is pledged against upward revision, if the rate remains unchanged.

Recent importations of silk laces, embroideries, and similar manufactures have been as follows:

[From Payne committee's figures till 1907; since, from Bureau of Statistics.]

Laces, embroideries, etc.	Entered values.	Duties.	Laces, embroideries, etc.	Entered values.	Duties.
1898.....	\$3,211,973.67	\$1,927,160.19	1905.....	\$4,670,609.47	\$2,802,365.69
1899.....	2,901,753.11	1,741,051.83	1906.....	4,918,375.07	2,951,036.04
1900.....	3,227,311.23	1,996,386.72	1907.....	7,049,851.51	4,229,910.92
1901.....	3,114,958.02	1,868,974.81	1910.....	8,677,743.53	5,207,826.12
1902.....	4,554,392.74	2,732,635.63	1911.....	8,084,638.56	4,850,969.22
1903.....	5,071,999.26	3,043,199.54	1912.....	6,781,603.02	4,068,960.83
1904.....	5,046,725.92	3,028,035.51			

In the figures for 1910-1912 wearing apparel is included, as some goods manufactured by the parties represented by this brief are included under that head. It will be seen from the foregoing that silk laces and embroideries are great revenue producers.

The present rate is one which is justified from many viewpoints.

First. The Democratic chairman, Underwood, said in a speech at Paterson in the recent campaign (American Silk Journal, December issue): "Silk is a luxury, and the position of the Democrats is that luxuries should pay the tax, and that a revision downward should be applied to the necessities of life."

Judge William Hughes, recently a member of the Ways and Means Committee and to be a Senator after March 4, is quoted in the same journal as having said: "The silk schedule as it stands now is a competitive schedule that produces a revenue of from \$16,000,000 to \$17,000,000 a year. I can see no good reason for any material change in it, and that seems to have been the sentiment of the Ways and Means Committee of the present Congress when we revised some of the tariff schedules a few months ago. As a member of the Ways and Means Committee, I, of course, had a direct part in the tariff changes agreed upon by the committee, and I found no objection to permitting the silk schedule to remain as it is. I have every reason to believe that the same sentiment with reference to the silk schedule will be found when the new Congress meets for the purpose of revising the tariff."

PARAGRAPH 402—VEILINGS.

Second. The protective tariff. The American factories, some 25 in number, have been built up under a protective tariff. At present their production is estimated at about 17 per cent of the total American consumption. They believe themselves entitled to a rate of duty equaling the difference in cost of production at home and abroad. This they do not obtain under a 60 per cent tariff. An exhaustive inquiry into comparative American and foreign wages has resulted in the compilation of the following table of wages, which is believed to be substantially correct. French and English documents as to the foreign wages have been filed for reference with the clerk of the committee and the American figures have been recently verified:

Wages in American and foreign lace factories.

¹ Engineers act also as watchmen.

Third. The regulative.

The foreign lace and embroidery manufacturers maintain practical monopolies. The existence of an American competitive industry deters them from raising their prices. Drop the duty to a point where the American manufacturer, if his workmen will not accept a lower wage, must close his doors, and as soon as the American industry consequently dies or becomes negligible the foreign monopoly will raise its prices, and they will remain raised, because after such an experience it would be many years before American capital could be again secured for the manufacture of silk laces, veilings, embroideries, and similar goods. The present duty being thus justified from the Democratic, the protective, and the regulative viewpoints, ought not to be disturbed.

Drawn and submitted by

WILLIAM S. BENNET,

PARAGRAPH 402—BRAIDS AND TRIMMINGS.

BRAIDS AND TRIMMINGS.

TESTIMONY OF ALBERT S. WAITZFELDER, BRAID MANUFACTURING ASSOCIATION, NEW YORK, N. Y.

The CHAIRMAN. Which paragraph do you wish to refer to?

Mr. WAITZFELDER. I wish to speak in relation to paragraphs 402 and 405. Braids and trimmings, made of real silk, under paragraph 402, and braids and trimmings, made of artificial silk, under paragraph 405.

The CHAIRMAN. You may proceed.

Mr. WAITZFELDER. I appeared before this committee on Friday last in relation to braids, made of metal threads. Many of the facts which I stated at that time in relation to metal braids are also applicable to silk braids and artificial silk braids.

These goods are luxuries; they have been largely imported and are suitable revenue-producing articles.

For the convenience of the committee we have prepared in our brief, tables showing the duties collected each year under the Wilson tariff of 1894, the Dingley tariff of 1897, and under the present Payne tariff of 1909. From these figures we have calculated the average annual income derived on these goods under each of those tariffs. Those figures show that under the Wilson tariff, in which a portion of these goods were assessed at 45 per cent and the remainder at 50 per cent, the average annual revenue derived was \$1,649,120. Under the Dingley tariff, in which all of these goods were assessed at 60 per cent, the annual revenue derived from them was \$2,845,518, and under the present Payne tariff, in which the duty on a portion of these goods was assessed in paragraph 402, at 60 per cent ad valorem, and the remainder under paragraph 405, at a duty of 45 cents a pound and 60 per cent ad valorem, the annual revenue derived amounted to \$3,223,916.

In other words, these figures show that under the existing rate the annual revenue derived from these goods was greater than the revenue derived from them under any previous tariff, at lower rates.

We therefore recommend that the existing rates of duty be maintained on these for that reason, as well as for the reason that these goods are luxuries, and for the further reason that the report of importations shows that the existing rates are neither prohibitive nor excessive.

The CHAIRMAN. Will you state the amount of the American consumption of those goods?

Mr. WAITZFELDER. I do not know of any figures available showing the American consumption under the present tariff. I have here, however, figures showing the American production, taken from the census reports for the years 1909, 1904, and 1899, if those are the figures you desire, Mr. Chairman. Those figures show that for the year 1899 the domestic production of these goods was \$4,862,157, for the year 1904 the domestic production of these goods amounted to \$8,476,839, and for the year 1909 the domestic production of these goods amounted to \$10,994,395.

Comparing the amount of domestic production of these goods with the amount imported for the same years shows that approximately

PARAGRAPH 402—BRAIDS AND TRIMMINGS.

one-third was imported and about two-thirds were made in this country. The figures under the present tariff were not available.

Mr. HULL. Where were these imports from, chiefly?

Mr. WAITZFELDER. From Germany and France.

Mr. HULL. From Germany and France?

Mr. WAITZFELDER. Yes, sir.

Mr. HULL. I notice several proposed silk schedules and portions of silk schedules were submitted by different branches of the silk industry during the hearings of 1909. Was this schedule generally agreed upon at that time by the manufacturers and the representatives of each line of the industry?

Mr. WAITZFELDER. It was, so far as I know.

Mr. HULL. There was no particular objection to the rates and classification?

Mr. WAITZFELDER. I did not hear of any.

Mr. HULL. On the part of any of the representatives?

Mr. WAITZFELDER. I do not know of any objections.

Mr. PALMER. What is your business?

Mr. WAITZFELDER. We manufacture braids and dress trimmings.

Mr. PALMER. Where is your manufacturing plant?

Mr. WAITZFELDER. Our plant is in Brooklyn, but I represent an association of a number of different manufacturers who have plants located throughout the country. Many of the largest plants are situated in the States of Pennsylvania, Illinois, Massachusetts, and New York.

Mr. PALMER. What do you buy?

Mr. WAITZFELDER. We buy the raw materials, or yarns.

Mr. PALMER. You buy the raw materials in the shape of yarns?

Mr. WAITZFELDER. Yes, sir.

Mr. PALMER. Both of silk and artificial silk?

Mr. WAITZFELDER. Yes.

Mr. PALMER. The artificial silk is used in the cheaper form of braid, I presume?

Mr. WAITZFELDER. To-day it is used very largely in all kinds of braids.

Mr. PALMER. Well, it is intended to cheapen the final price of the product, is it not?

Mr. WAITZFELDER. It does cheapen the final price of the product to a certain extent, and in addition thereto it is more suitable to the manufacture of dress trimmings on account of having a better luster than real silk, as well as having more firmness; it is therefore more adaptable to that use.

Mr. PALMER. The use of it makes it possible for the final product of your manufacturing plants to be sold at a less price?

Mr. WAITZFELDER. Yes, sir.

Mr. PALMER. Where do you get your artificial silk?

Mr. WAITZFELDER. The bulk of it is imported from Germany and from France. There is some little of it manufactured in this country.

Mr. PALMER. Who manufactures it in this country?

Mr. WAITZFELDER. The American Viscose Co., of Marcus Hook, Pa.

Mr. PALMER. Do you know of any other concern in this country having an artificial silk plant?

PARAGRAPH 402—BRAIDS AND TRIMMINGS.

Mr. WAITZFELDER. No, sir; not to any extent. There have been several experimental plants, but I have never heard of their product being marketed.

Mr. PALMER. You bring your article from abroad?

Mr. WAITZFELDER. Yes, sir.

Mr. PALMER. Why is it that you are asking that the duty be retained on artificial silk if you are such large importers of artificial silk?

Mr. WAITZFELDER. We have not asked for that. We have said nothing whatever in relation to a duty on artificial silk yarn. We do not manufacture it and we are not interested in it. We have only asked to have the duty retained on braids and trimmings, which are manufactured from the artificial silk yarn.

Mr. PALMER. The duty is 45 cents a pound and 60 per cent ad valorem?

Mr. WAITZFELDER. Yes, sir; 45 cents a pound is the compensatory duty, equal to the duty on the articles of silk yarn.

Mr. PALMER. To what equivalent ad valorem does the 40 cents amount to on artificial silk?

Mr. WAITZFELDER. It amounts to about 35 per cent ad valorem at the present market price.

Mr. PALMER. So that your total protection on the artificial silk braids, etc., is about 95 per cent against the foreigner?

Mr. WAITZFELDER. It would be 68.4 per cent if we obtained our artificial silk yarns free of duty, but inasmuch as we are forced to pay about the equivalent to 35 per cent on the yarn we calculate that the differential or protective duty on artificial silk braids amounts to about 60 per cent, the same as it is on real silk braids, on which the material is duty free.

Mr. PALMER. Do you mean to say that you do not need all of this 45 cents compensatory duty?

Mr. WAITZFELDER. No, sir; I do not mean to say anything of the kind. On the contrary, I do mean to say that we do need all of it, so as to give us a 60 per cent differential on artificial silk braids the same as we have on real silk braids.

Mr. PALMER. Could you not buy artificial silk in this country cheaper than you can abroad with the duty added?

Mr. WAITZFELDER. No, sir; we can not.

Mr. PALMER. Why is that?

Mr. WAITZFELDER. Because the manufacturers of artificial silk yarns in this country are able to market their product at a price which is about equivalent to the price of the foreign yarns, with the duty added, and are compelled to obtain approximately that price to make a profit on account of labor being higher here than abroad and on account of other conditions.

Mr. PALMER. Then, there really is no real competition on the artificial silk business over here, or between this country and foreign countries?

Mr. WAITZFELDER. Do you refer to manufactured artificial silk yarns or braids?

Mr. PALMER. To yarns.

PARAGRAPH 402—BRAIDS AND TRIMMINGS.

Mr. WAITZFELDER. So far there has been no competition, but I understand recently several companies have been incorporated and are starting in to manufacture silk yarns. That will result in competition.

The CHAIRMAN. Are there any further questions?

Mr. HARRISON. Have you considered the effect on your industry of the possibility of imposing a duty upon the raw silk?

Mr. WAITZFELDER. No, sir; I have not given that any consideration.

Mr. HARRISON. You use natural silk as well as artificial silk, do you not?

Mr. WAITZFELDER. We do.

Mr. HARRISON. What would be the effect upon the cost to the consumer of silk braids of the placing of a duty upon raw silk?

Mr. WAITZFELDER. It would increase the cost of silk braids to the consumer the amount of the duty.

Mr. HARRISON. By the full amount of the duty?

Mr. WAITZFELDER. I believe so.

Mr. HARRISON. Would it render it more difficult for you to obtain your raw material?

Mr. WAITZFELDER. It would not make it any more difficult to obtain it; it would simply increase the cost of it.

Mr. KITCHIN. The consumer would not feel the cost of it unless at the same time you increased the tariff on the finished products, would he?

Mr. WAITZFELDER. Naturally, if the material costs more the finished product would cost more.

Mr. KITCHIN. There is competition between the silk manufacturers of other countries and this country now, is there not?

Mr. WAITZFELDER. Yes, sir.

Mr. KITCHIN. If we kept the tariff on the manufactured silk, say, at 50 per cent, and put a duty of 5 or 10 per cent on the raw silk, how would the consumer have to pay more if we allow the tariff on the finished product to remain the same?

Mr. WAITZFELDER. It would result also in his paying more for the domestic product; or, if the protection on the domestic manufactured silk was not sufficient, the foreign product would come in possibly at a lower price than the domestic.

Mr. KITCHIN. If we put a 5 or 10 per cent duty on the raw silk, there would probably be more importations of the finished product?

Mr. WAITZFELDER. Unless the same amount of protection was added to the finished product there naturally would be increased importations.

Mr. KITCHIN. Do the manufacturers of silk in this country add the total 50 per cent tariff onto the foreign price; that is, do the home manufacturers first take the foreign price and then add 50 per cent to it, which makes their home price?

Mr. WAITZFELDER. Certainly not.

Mr. KITCHIN. They do not take advantage of the whole 50 per cent, do they?

Mr. WAITZFELDER. Certainly not. The competition among the very large number of domestic silk manufacturers would take care of that.

PARAGRAPH 402—BRAIDS AND TRIMMINGS.

Mr. KITCHIN. So really, if we wanted to, we could reduce the tariff on the finished product considerably under 50 per cent and it still would not affect the home price at all, would it?

Mr. WAITZFELDER. If you reduce the tariff on the finished product, it would naturally mean increased importations and a decrease of the domestic manufacturing to that extent.

Mr. KITCHIN. If that be true, the home manufacturer is getting the full benefit of the tariff; that is, he adds that to the price?

Mr. WAITZFELDER. Are you speaking of woven piece goods or braids and trimmings?

Mr. KITCHIN. I am speaking about what we call the manufactured goods, the finished goods.

Mr. WAITZFELDER. I appeared before this committee as a manufacturer—

Mr. KITCHIN (interrupting). I was not talking about your business; I just want your opinion.

Mr. WAITZFELDER. There are other gentlemen here who manufacture woven silk piece goods, whom I would prefer to have answer you on that.

Mr. KITCHIN. They would be interested witnesses. I thought you would be a disinterested witness, as you are not in the business of manufacturing the finished silk. That is the reason I was asking you that question.

Mr. WAITZFELDER. I am an outsider and haven't any practical knowledge of the manufacture of silk goods, other than braids and trimmings.

I have already appeared here on two schedules that we are interested in. Other schedules in which we are interested will come up later, and in order to save the time of the committee, I would like permission to file briefs of those other schedules, instead of appearing in person.

The CHAIRMAN. You have our permission to do that.

Mr. WAITZFELDER. For the purpose of the record, I would like to state that the other paragraphs in which we are interested are Schedule J, paragraph 349; Schedule K, paragraph 383; Schedule N, paragraphs 421, 422, and 426.

The CHAIRMAN. You may file your briefs, and they will be given consideration.

BRIEF OF THE BRAID MANUFACTURERS' ASSOCIATION OF THE UNITED STATES, 251
FOURTH AVENUE, NEW YORK, N. Y.

JANUARY 13, 1913.

In relation to Schedule L, paragraph 402, covering braids, trimmings, etc., made of silk; paragraph 405, covering braids, trimmings, etc., made of artificial silk.

The duty assessed on these goods under paragraph 402 is 60 per cent ad valorem, and the duty assessed on these goods under paragraph 405 is 45 cents per pound and, in addition thereto, 60 per cent ad valorem.

We advocate the retention of these rates, especially from the standpoint of revenue, as well as of protection.

For the information of the committee we annex statement showing the duty collected on these goods for each year during the Wilson tariff of 1894, also as for each year during the Dingley tariff of 1897, as well as for each year during the existing Payne tariff of 1909.

PARAGRAPH 402—BRAIDS AND TRIMMINGS.

Duties collected under the Wilson tariff of 1894, in which a portion of these goods were assessed under paragraph 300 at 45 per cent ad valorem and a portion under paragraph 301 at 50 per cent.

1895:			
	Paragraph 300.....	\$185, 177	
	Paragraph 301.....	1, 941, 142	
			\$2, 126, 319
1896:			
	Paragraph 300.....	144, 027	
	Paragraph 301.....	1, 002, 700	
			1, 546, 727
1897:			
	Paragraph 300.....	186, 732	
	Paragraph 301.....	1, 087, 581	
			1, 274, 313
			4, 947, 359
Average duty collected per annum under above tariff.....			1, 649, 120

Duties collected under the Dingley tariff of 1897, in which a portion of these goods were assessed under paragraph 390 at 60 per cent ad valorem.

1899.....	\$1, 741, 052
1900.....	1, 996, 387
1901.....	1, 868, 975
1902.....	2, 732, 636
1903.....	3, 043, 200
1904.....	3, 028, 036
1905.....	2, 802, 366
1906.....	2, 951, 025
1907.....	4, 229, 911
1908.....	3, 544, 624
1909.....	3, 362, 490
	31, 300, 702
Average duty collected per annum under above tariff.....	2, 845, 518

Duties collected under the Payne tariff of 1909, in which a portion of these goods were assessed under paragraph 402 at 60 per cent ad valorem and a portion under paragraph 405 at 45 cents per pound and in addition thereto 60 per cent ad valorem.

1910.....	\$3, 951, 155
1911.....	3, 077, 172
1912.....	2, 643, 421
	9, 671, 748
Average duty collected per annum under above tariff.....	3, 223, 916

The above shows that the existing rates of duty on these articles are the rates which produce the largest amount of revenue without being either prohibitive or excessive. They are barely sufficient to enable the domestic manufacturer to compete and to obtain a reasonable proportion of the business done in this class of goods. As these goods are distinctly luxuries and do not enter into the cost of living, the consumer would not be injured by maintaining same. For above reasons we respectfully ask for the maintenance of the existing rates in these paragraphs.

Respectfully submitted.

BRAID MANUFACTURERS ASSOCIATION OF THE UNITED STATES,
Per ALBERT S. WAITZFELDER,
HENRY W. SCHLOSS,
Committee.

PARAGRAPH 402—BRAIDS AND TRIMMINGS.

SILK AND SILK GOODS.

The following table, which presents statistics for the manufacture of silk and silk goods, includes data for establishments that make a specialty of throwing and winding silk:

PARAGRAPH 403.

All manufactures of silk, or of which silk is the component material of chief value, including such as have India rubber as a component material, not specially provided for in this section, fifty per centum ad valorem: Provided, That all manufactures of silk enumerated under any paragraph of this schedule, if composed in any part of wool, shall be classified and assessed for duty as manufactures of wool.

See Samuel Kridel, page 4590; C. A. Streuli, page 4615; French Chamber of Commerce, page 4621.

PARAGRAPH 404.

In ascertaining the weight of silk under the provisions of this schedule, either in the threads, yarns, or fabrics, the weight shall be taken in the condition in which found in the goods, without deductions therefrom for any dye, coloring matter, or other foreign substance or material. The number of single threads to the inch in the warp provided for in this schedule shall be determined by the number of spun or reeled singles of which single such or two or more ply threads are composed.

See Samuel Kridel, page 4590; C. A. Streuli, page 4615; French Chamber of Commerce, page 4621.

WEIGHTING OF SILK.

STATEMENT OF BELDING BROS. & CO. IN RELATION TO THE WEIGHTING OF SILK.

That the weighting of silk has been carried to such an extent as to become an actual fraud upon the consumer and that it bids fair to result in lasting injury to the entire silk business of this country can not be doubted.

The temptation to "weight" silk is brought about by the great value of the natural product and the comparative cheapness of the adulteration. The object of this process is to give to the manufactured merchandise an apparent value which it does not possess.

There are two general methods: One, the use of vegetable or organic matter, and the other the use of metallic salts, and particularly tin. The first increases the weight, but does not materially injure the fiber; the second injures the fiber, no matter how lightly used, and practically destroys it when used to excess. The chemicals are of such a violent nature that this process has sometimes been called "dynamiting."

PARAGRAPH 404—WEIGHTING OF SILK.

Silk in its natural state contains about 25 per cent of gum. When a pound of silk (16 ounces) is ungunmed it is reduced in weight to 12 ounces as an average. The silk used in the filling or back of the fabric is frequently dyed in the gum, and in many fabrics this is a real advantage. In any process of dyeing a sufficient amount of dyestuff must be added to secure luster and permanence of dye. This amount will vary with different lots of silk and with different colors. Strictly speaking, no silk is "pure dye" which contains any matter beyond that necessary to secure the proper color. As this is a variable factor it would be necessary to fix certain limits in considering regulations. It should not be the object of legislation to prevent the "weighting" of silk within the limits that are not harmful. To allow such fabrics to be sold as "pure silk," however, would be most unfair to the consumer, because it is almost impossible without proper chemical tests to detect this deception.

The object of legislation should be to define "pure silk" and "weighted silk," and require that each be so marked or branded; to prevent the manufacture and sale of silk adulterated beyond certain limits; to provide appropriate penalties for the infraction of such regulations as might be required by law. We, therefore, recommend legislation by Congress regulating the "weighting" of silks based upon the following principles:

First. That silk shall be classified as "pure dye" when it does not contain more than 25 per cent of foreign matter when dyed black and not more than 15 per cent of foreign matter when dyed in colors other than black. Silk shall be classified as "weighted" when it contains more than 25 per cent of foreign matter when dyed black and more than 15 per cent of foreign matter when dyed in colors other than black.

Second. That all silk or articles made wholly or partially of silk shall be properly branded, showing whether the silk thereof is "pure dye" or "weighted."

Third. That articles made partially of silk and partially of cotton, wool, linen, or other fiber shall be branded in accordance with the foregoing, covering the silk contained therein, and, furthermore, showing the kind of fiber other than silk.

Fourth. That all manufactured articles in which fabrics made wholly or partially of silk are used, the fabric shall be branded or marked in such a way as to be observable to the purchaser and in accordance with the foregoing principles.

Fifth. That no material, any component part of which being colored silk, containing more than 8 ounces above original gum weight, or any component part of which being black silk containing more than 16 ounces above original gum weight shall be manufactured, imported, or sold.

Sixth. That provision be made for inspecting or testing articles manufactured wholly or in part of silk to determine whether they are properly branded.

Seventh. That provision be made for the prosecution and punishment of violations of such regulations as the law may require.

We suggest the advisability of applying the above regulations entirely to what is known in commerce as "broad silks," which might be defined as fabrics exceeding 12 inches in width. It might be desirable to require the degree of "weighting" to be shown in branding silks.

This is objected to by some manufacturers on account of the difficulty of determining the exact degree of "weighting." If, however, a proper method could be devised for such branding it would be desirable. If this can not be done, certainly all silk fabrics should be branded "weighted" if they are not "pure dye."

A very good plan for branding "broad silk" is to weave in the selvage the required words, for instance—"pure dye," "weighted," "cotton back," etc. In garments manufactured wholly or in part of silk and in linings some portion of the selvage could be exposed to view or an appropriate label could be used.

Respectfully submitted,

BELDING BROS. & CO.,
By EDWARD C. YOUNG, *Vice President.*

PARAGRAPH 405—ARTIFICIAL SILKS.

STATEMENT OF R. L. FERNBACH RE WEIGHTING SILK.

THE FERNBACH LABORATORY (INC.),
PATERSON, N. J., *January 21, 1913.*

HON. OSCAR W. UNDERWOOD,
*Chairman Ways and Means Committee,
House of Representatives,
Washington, D. C.*

DEAR SIR: Anent the proposed legislation against the weighting of silk I take the liberty of offering one or two suggestions, as coming from one interested in silk, but who is neither a manufacturer nor a dyer thereof.

To eliminate the process of weighting silk would undoubtedly work considerable hardship to the industry, inasmuch as it would preclude the production of silk fabrics within reach of the masses. Within certain limits the weighting of silk can not be construed as adulteration; carried beyond these limits the process works considerable harm, in that it enables the manufacturer to deceive the purchasing public.

The writer does not believe that equitable enforcement of legislation against weighting is possible. On the other hand there is no reason why manufacturers should not be compelled to stamp upon the selvage of silk goods the true amounts of weighting in the warp and filler of such goods. The enforcement of such a provision is practicable. It corresponds with that part of the pure food and drugs act as deals with misbranding. Imported goods should be similarly branded.

Any reduction of the protective tariff on silk is bound to work hardship to the industry, as it will be impossible for the American manufacturer to compete with the foreign product save in isolated instances. The process of weighting is carried on to a much greater extent abroad than it is here, and if it is to be stopped here it is but just that no weighted foreign goods should be permitted to enter. The representations of the various manufacturers who have appeared before your committee are well founded. Nevertheless, the American consumer should be protected as well, and to this end some legislation compelling the adequate labeling of weighted silks will be timely and beneficial, in that it will enable the consumer to discriminate as to quality.

Respectfully, yours,

R. L. FERNBACH.

PARAGRAPH 405.

Yarns, threads, filaments of artificial or imitation silk, or of artificial or imitation horsehair, by whatever name known, and by whatever process made, if in the form of singles, forty-five cents per pound; if in the form of tram, fifty cents per pound; if in the form of organzine, sixty cents per pound: **Provided,** That in no case shall any yarns, threads, or filaments of artificial or imitation silk or imitation horsehair, or any yarns, threads, or filaments made from waste of such materials, pay a less rate of duty than thirty per centum ad valorem; braids, laces, embroideries, galloons, neck ruffings, ruchings, fringes, trimmings, beltings, cords, tassels, ribbons, or other articles or fabrics composed wholly or in chief value of yarns, threads, filaments, or fibers of artificial or imitation silk or of artificial or imitation horsehair, by whatever name known, and by whatever process made, forty-five cents per pound, and in addition thereto, sixty per centum ad valorem.

ARTIFICIAL SILKS.

BRIEF OF JULIUS LOEWENTHAL & CO., NEW YORK, REPRESENTING IMPORTERS OF DRESS TRIMMINGS.

HON. OSCAR W. UNDERWOOD,
*Chairman Committee on Ways and Means,
House of Representatives, Washington, D. C.*

DEAR SIR: The undersigned, engaged in the business of importing dress trimmings, of various kinds, beg leave to submit the following brief with reference to trimmings

PARAGRAPH 405—ARTIFICIAL SILKS.

covered by paragraph 405 of Schedule L. We shall also refer to the proviso in paragraph 421 of Schedule N only in so far as it directly affects articles covered by paragraph 405.

CHANGES RECOMMENDED.

The object of this brief is primarily not to secure a reduction or increase in present duties, but to recommend changes in the present law, which would result in the substitution of straight ad valorem for the present compound duties, and the elimination of conflicting and ambiguous provisions in the present tariff act.

STATEMENT OF THE CASE.

Paragraph 405 provides for duty on trimmings consisting wholly or chiefly of artificial silk, in the following language:

" * * * braids, laces, embroideries, galloons, neck ruffings, ruchings, fringes, trimmings, beltings, cords, tassels, ribbons, or other articles or fabrics composed wholly or in chief value of yarns, threads, filaments, or fibers of artificial or imitation silk or of artificial or imitation horsehair, by whatever name known, and by whatever process made, forty-five cents per pound, and in addition thereto sixty per centum ad valorem."

The provision of the law just quoted is so clearly stated as to apparently lend itself to but one interpretation, viz, that the compound duty provided therein is to apply only to articles in which artificial silk or artificial horsehair form the component material of chief value, from which the necessary corollary follows, that in case such artificial silk or horsehair is not present to a sufficient extent to form the component material of chief value, such articles are not dutiable under the provision above quoted.

Notwithstanding the clear provision of the law we have been obliged to pay duty on dress trimmings containing artificial silk to an insignificant extent, as will appear from sample No. 10421, attached hereto, under paragraph 405, at the rate of 45 cents per pound on the entire weight of the trimmings, in addition to 60 per cent ad valorem. We respectfully urge the Committee on Ways and Means to examine sample 10421. It is a fringe consisting almost entirely of glass beads strung on cotton threads, and attached to a narrow heading or braid of artificial silk, which is there merely to hold the fringe together. As will be seen from the figures given in the attached exhibit, the artificial silk constitutes less than 3 per cent of the total weight of the article, and its value is negligible, being only a fraction of 1 per cent of the total value of the trimming. And yet the collector has classed this article under paragraph 405, imposing a duty of 45 cents a pound, not on artificial silk but on the entire article, 97 per cent of which in weight represents glass beads.

The same is true of samples No. 09792 and No. 80730, attached herewith, together with all data given in detail in the exhibit at the end of this brief.

The ruling of the collector of the port of New York is not only in conflict with the language of paragraph 405 just quoted but also of paragraph 421 relating to trimmings composed of beads such as the attached samples. Paragraph 421 reads as follows on this point:

" * * * fabrics, net or nettings, laces, embroideries, galloons, wearing apparel, ornaments, trimmings, curtains, fringes, and other articles not specially provided for in this section, composed wholly or in chief value of beads or spangles made of glass, or paste, gelatin, metal, or other material, but not in part of wool, sixty per centum ad valorem."

The ground upon which the collector justifies his ruling which flies in the face of paragraphs 405 and 421 is the proviso in paragraph 421, which reads as follows:

" Provided, That no article composed wholly or in chief value of beads or spangles made of glass, paste, gelatin, metal, or other material shall pay duty at a less rate than is imposed in any paragraph of this section upon such articles without such beads or spangles."

The unsatisfactory state of affairs created by this proviso forms the subject of our brief submitted on Schedule N, in which we call the attention of your committee to the conflicting decisions rendered by the collectors of customs, the Board of General Appraisers, and the United States Court of Customs Appeals, in interpreting the pro-

PARAGRAPH 405—ARTIFICIAL SILKS.

viso, and in which we submit our suggestions for amending that paragraph. In this brief we shall confine our suggestions to rates falling under Schedule L.

PROPOSED AMENDMENT OF PARAGRAPH 405.

As already stated, the compound duty on trimmings containing artificial silk or artificial horsehair consists of a specific duty of 45 cents per pound and an ad valorem duty of 60 per cent. The specific duty is supposed to compensate the domestic manufacturer of trimmings for the 45 cents duty per pound on yarns of artificial silk or horsehair under the same paragraph.

If the duty of 45 cents were imposed only on the weight of the artificial silk contained in the trimming, it would be no more than compensatory. But as it is impracticable to ascertain in each case the exact weight of the artificial silk, without damaging considerable quantities of imported merchandise, the law provides for the imposition of the duty of 45 cents per pound on the entire weight of the article. Thus it happens that on a trimming like sample 10421, the weight of which is 97 per cent glass and only 3 per cent artificial silk, the duty of 45 cents per pound, instead of being compensatory on the artificial silk becomes a protective duty on glass in addition to the duty of 60 per cent ad valorem.

But apart from the relative weight of the artificial silk contained in trimmings and similar articles, there can hardly be any justification for a compensatory duty even from a protective point of view, when no such duty is provided for under paragraph 402 on trimmings of real silk. If there is no compensatory duty on articles containing silk thread dutiable at \$1.50 per pound, what justification can there be for one on the same article containing thread of artificial silk dutiable at only 45 cents? Since no complaint has been heard from manufacturers on account of the straight ad valorem duty of 60 per cent on trimmings made wholly or in chief value of silk thread, it is reasonable to expect that they should be satisfied with a duty no greater when the trimmings are made wholly or chiefly of artificial silk.

As will be seen from the exhibit, the compound duty on the samples of trimmings containing artificial silk attached herewith is equivalent to an ad valorem duty of from 72 to 86 per cent. Is there any justification either from a protective or a tariff for revenue standpoint for a duty of 60 per cent on an article of luxury, such as silk, and 86 per cent on a cheap substitute thereof?

Silk is not the only material on account of which no compensatory duty is allowed on trimmings. Paragraph 399 provides a straight ad valorem duty on trimmings, etc., of cotton, flax, and other vegetable fibers, and no compensatory duty is allowed on account of the thread of cotton and flax, although each of them is dutiable under the tariff. No compensatory duty is provided for in paragraph 421 on account of beads and spangles of glass, paste or metal, although each of these materials bears a duty and although these materials add a great deal more weight to the article into which they enter than thread of artificial silk. As all of these paragraphs are parts of an avowedly protective tariff, what justification can be urged for a compensatory duty on artificial silk which is less of a luxury and less expensive than some of these materials?

THE EFFECT OF THE PROPOSED CHANGE ON REVENUE.

In the fiscal year 1912, the value of imported trimmings and similar articles dutiable at 45 cents a pound and 60 per cent ad valorem was \$972,062, which paid a duty of \$665,699. The weight of this merchandise was 183,243 pounds. If the specific duty of 45 cents a pound were abolished, and the imports remained the same, the loss in revenue would amount to \$82,459. But it is more than likely that the reduction in duty accompanied by a reduction in price would result in an increase of importation sufficient to offset this comparatively small loss, if it did not indeed result in an increased revenue, especially since there is practically no production of goods of this character in this country.

PROPOSED AMENDMENTS SUMMED UP.

In conclusion, we beg leave to submit the suggestion smade in this brief in the form of a proposed amendment to the law, in the hope that it may commend itself to your approval in the light of the indisputable facts set forth in its support.

PARAGRAPH 405—ARTIFICIAL SILKS.

Paragraph 405.—Strike out words "forty-five cents per pound, and in addition thereto" at the end of paragraph 405, so as to make that part of the paragraph relating to trimmings and similar articles read as follows:

" * * * braids, laces, embroideries, galloons, neck ruffings, ruchings, fringes, trimmings, beltings, cords, tassels, ribbons, or other articles or fabrics composed wholly or in chief value of yarns, threads, filaments, or fibers of artificial or imitation silk or of artificial or imitation horsehair, by whatever name known, and by whatever process made, sixty per cent ad valorem."

Respectfully,

JULIUS LOEWENTHAL & Co.

Also representing C. Willenborg & Co., Kern Loewi & Mendie, Ewing & Clancey, L. Mane & Co., Sundheimer Bros., Royal Embroidery Works, S. Katz & Co., B. Blumenthal & Co., Case & Co., Mills & Gibb, Max Mandel, G. Hirsch & Sons.

EXHIBIT A.

Sample No. 10421. Bead fringe with artificial silk heading:
 Weight of beads, 13 $\frac{3}{4}$ ounces; weight of artificial silk, $\frac{1}{2}$ ounce, or less than 3 per cent of total weight.
 Value all in beads; heading of artificial silk has no value.
 Foreign price per meter, marks 6.50, or, at 23.8 cents, \$1.55.
 Duty, 45 cents per pound and 60 per cent ad valorem; 14 $\frac{1}{2}$ ounces at 45 cents per pound, \$0.40; 60 per cent ad valorem, \$0.93; total duty, \$1.33, equal 86 per cent ad valorem.

EXHIBIT B.

Sample No. 30730. Bead trimming with artificial silk and tinsel:
 Weight of beads, 2 ounces; weight of artificial silk, $\frac{5}{16}$ ounce, or 12 $\frac{1}{2}$ per cent of total weight; weight of tinsel, $\frac{3}{8}$ ounce.
 Foreign price of trimming per meter, francs 3.00, at 19.3 cents.
 Duty, 45 cents per pound and 60 per cent ad valorem, 2 $\frac{1}{2}$ ounces at 45 cents a pound, 7 cents; 60 per cent ad valorem, 34.7 cents; total duty, 41.7 cents, equal to 72 per cent ad valorem.

EXHIBIT C.

Sample No. 09792. Bead trimming with artificial silk and tinsel:
 Weight of beads, 2 $\frac{3}{4}$ ounces; weight of artificial silk, $\frac{3}{8}$ ounce, or 12 $\frac{1}{2}$ per cent of total weight; weight of tinsel, $\frac{1}{8}$ ounce.
 Value of beads, 97 per cent of total value of the trimming; value of artificial silk, 2 $\frac{1}{2}$ per cent of the trimming; value of tinsel, $\frac{1}{2}$ per cent of the trimming.
 Foreign price of 1 yard trimming, mark 2.69, or at 23.8 cents, 64 cents.
 Duty, 45 cents per pound and 60 per cent ad valorem; 3 ounces at 45 cents per pound, 8.4 cents; 60 per cent ad valorem, 38.4 cents; total duty, 46.8 cents, equal to 73 per cent ad valorem.

**BRIEF SUBMITTED BY JOHN DONAT & CO., DEARBERG BROS.,
 AND ISLER & GUYE.**

[Braids composed of artificial or imitation horsehair, or artificial or imitation silk under paragraph No. 405.]

To the Honorable Ways and Means Committee, Washington, D. C.

SIRS: Braids composed of artificial or imitation silk or artificial or imitation horsehair are now dutiable under paragraph 405 of the act of 1909 at 45 cents per pound, and in addition thereto 60 per cent ad valorem, or an equivalent ad valorem of from 75 to 90 per cent. This is a prohibitive rate, and the undersigned importers of silk braids respectfully request a reduction.

Paragraph 405 enumerates many articles besides braids composed of artificial horsehair, etc. Braids composed of artificial silk or artificial horsehair are used exclusively in the manufacture of ladies' hats. The artificial silk hat braids are used as a substitute for real silk or real horsehair, and are a great deal less expensive and enters into the manufacture of hats worn by the poorer and middle classes. The duty now placed on this braid has resulted in its practical exclusion, and the entire domestic

PARAGRAPH 405—ARTIFICIAL SILKS.

consumption is the product of domestic manufacturers. The Department of Commerce and Labor for the year 1912 reports the total importations of all kinds of manufactured imitation silk or horsehair articles enumerated in paragraph 405 to be but \$183,242. No distinction is made between braids, laces, embroideries, galloons, etc., and we emphatically state that no hat braids, except an importation now and then for experimental purposes, come into the United States.

We file herewith two exhibits for comparison: Exhibit A, a sample of artificial horsehair braid, manufactured by George Meyer & Co., Wohlen, Switzerland, and known as No. 1795, Star, 13/2, colored, which braid was quoted at 3.10 francs per piece, and in order to show the net cost of 100 pieces landed in New York City at this quotation we draw the following accurate result:

This sample cutting (Exhibit A) is pattern No. 1795, Star, 13/2, colored, manufactured by George Meyer & Co., Wohlen, Switzerland. The following is the net cost of importation at the present rates of duty assessed under paragraph 405, tariff law of 1909, 60 per cent ad valorem and 45 cents per pound:	
Cost, f. o. b. Wohlen, per 100 pieces of 75 meters (82 yards), at 3.10 francs each.....	francs..... 310.00
Cash discount, 5 per cent.....	do..... 15.50
	<hr/>
	294.50
Packing and casing.....	do..... 2.50
	<hr/>
Total.....	do..... 297.00
	<hr/>
297 francs, at \$0.193.....	\$57.32
Duty at 60 per cent.....	34.38
Duty on 20 pounds, at 45 cents.....	9.00
Freight and expense from Wohlen to New York.....	1.30
	<hr/>
Net cost per 100 pieces.....	102.00
	<hr/>
Net cost per piece of 75 meters (82 yards).....	1.02
Add 57 per cent to equal 144 yards.....	.58
	<hr/>
Net cost for 144 yards.....	1.60

A piece of 75 meters weighs about 3½ ounces.

We have based the result on 144 yards in order to establish the comparison with the domestic selling price on 144 yards, the American standard.

Against the foregoing result, which shows that a purchase in the open market of pieces containing 144 yards can not be landed in New York City for less than \$1.60, we file herewith Exhibit B, a sample piece of similar braid, or pattern No. 510, colored, manufactured by Barthels Manufacturing Co., Glendale Station, Brooklyn, N. Y.

Exhibit B is sold in the open market of pieces containing 144 yards at \$1.15, less 7 per cent discount, or \$1.07. In other words, the American production can be purchased for 53 cents a piece cheaper than the same quality of Switzerland braid can be landed in New York City. The firms of Georges Meyer & Co., of Switzerland, and the Barthels Manufacturing Co., of Brooklyn, N. Y., are representative firms in their respective countries, and the prices heretofore given are direct transactions and illustrate comparisons between the landing price of foreign braids and the equivalent price of domestic braids. These comparative illustrations are actual transactions and are only representations of dozens of similar transactions. Original invoices will be submitted, if desired.

Under the Dingley bill there was no distinct provision for braids composed of artificial silk or artificial horsehair, and they were classified under the similitude provision as being comparable with silk braid and held dutiable at 60 per cent. The protection under the Dingley Act of 60 per cent gave the market to the domestic producers. The domestic braid manufacturers were not satisfied with the 60 per cent protection, but procured the increase provided for in paragraph 405. The Braid Manufacturers Association of the United States, in their brief and statement filed with your honorable committee, and which appears on pages 1493-1500 of the advance sheets of the printed hearings, show the result of the increase in duty by the Payne bill. As shown by their statement, notwithstanding a very large increase

PARAGRAPH 405—ARTIFICIAL SILKS.

in consumption of the articles included in paragraphs 402 and 405, there was a decrease in importations during the year 1912 as compared to 1910 of nearly \$1,400,000, or about 37 per cent. This braid association ingeniously grouped paragraphs 402 and 405 together, so as to avoid the insignificant importations under paragraph 405, as shown on page 42 of the report of the Department of Commerce and Labor, amounting to but \$183,242. We are unable to get any accurate estimate of what the total production of manufactures of artificial silk and artificial horsehair amounted to. These two articles are exceptionally popular as a cheaper substitute for real silk, and the total domestic production runs up into millions of dollars.

An examination of the entire group of articles enumerated in paragraph 405 will indicate to the committee how wide a scope is included in the different articles therein mentioned. We have not gone into the comparative labor costs of the domestic and foreign braids because the insignificant importation and the illustrative comparison of selling prices must clearly show that the present rate forecloses all opportunity for even the slightest competition and, further, for the reason that the labor in the production of the goods mentioned is an insignificant part of the cost, because the same are all made by machine.

In conclusion, we wish respectfully to state:

(1) Braids composed of artificial silk or horsehair are not a luxury, but a cheaper substitute for braids composed of silk and real horsehair, and are used in hats worn by the middle and poorer classes.

(2) That the present tariff rate is prohibitive and results in the total exclusion of these braids.

(3) If the duty were reduced to about 30 per cent ad valorem, we believe it would put the business upon a competitive basis and result in some importations and a cheaper article to the consumer.

(4) That the only artificial horsehair braids that are now made, either here or abroad, are used in the manufacture of hats, and that a special provision should be inserted covering this article.

We therefore respectfully suggest that the word "braids" be eliminated from paragraph 405, and that at the end of the said paragraph the following language be added: "Hat braids composed of artificial or imitation silk or artificial or imitation horsehair, thirty per centum ad valorem."

Respectfully submitted,

JOHN DONAT & CO.
DEARBERG BROS.
ISLER & GUYE.

BRIEF OF THE STEWART SILK CO., RELATING TO ARTIFICIAL SILK.

THE CHAIRMAN AND GENTLEMEN OF THE WAYS AND MEANS COMMITTEE,
Washington, D. C.

This brief relates to the abolishment of the duties on artificial silk, Schedule L, paragraph 405, and schappe and spun silks, Schedule L, paragraph 397. This brief is presented for your consideration at the request and by the written authority of a large number of manufacturers of broad silks, representing a capitalization of between \$8,000,000 and \$10,000,000, an annual output of at least \$30,000,000, in which about 15,000 looms are engaged, which give employment to nearly 14,000 operators, whose yearly wages amount to in round figures about \$6,000,000. They ask you that the duty on artificial silk under Schedule L, paragraph 405, be abolished, and for the following reasons:

First, that to the silk manufacturer this fiber is just as much raw material as is the raw silk reeled from the cocoon in China, Japan, or Italy, which comes in free of duty. The argument against a duty on raw silk in part is that none being produced in our country there is no need of a protective duty, and the same argument might well be raised against the duty of 45 cents a pound on artificial silk, as there is, according to the highest authority, only one concern in this country producing it in commercial quantities. This concern is owned by Samuel Cortauld & Co., of London, England, who have been manufacturing artificial silk successfully in that country for several years. Two or three years ago they began to manufacture here, and have made such a success that early last year they planned to double their domestic production.

PARAGRAPH 405—ARTIFICIAL SILKS.

According to their own statement, they produced for the last fiscal year 1,200,000 pounds, and the American people were compelled to pay \$540,000 to this one manufacturer for the use of his product over and above what they could have purchased the foreign product for had it come in duty free.

It is a well known fact in the trade that the English price of the parent concern for exactly the same quality produced in America is 5s. 6d. per pound, equal to \$1.32; yet if the English product is bought for this market the purchaser has to pay for it \$1.80 to \$1.85 per pound, according to the quantity purchased.

The statement that the American branch had paid but one dividend of 7½ per cent may be perfectly correct, but it is a matter of record that the parent concern paid a dividend last year of 40 per cent, and it is therefore fair to assume that their price of \$1.32 per pound was highly profitable. And as another evidence, we might say that their £1 shares are held at from £7 to £8.

While it is perhaps true that the abolition of duty on artificial silk might result in the closing of this one factory here, the English factory would only need to increase its output 1,200,000 pounds per year and export this additional quantity at 5s. 6d., or \$1.32 per pound, to American consumers, and as has been demonstrated they would still be making large profits, but not at the expense of the American manufacturers and consumers.

There is every probability also that at the very much lower price the demand for artificial silk would be very greatly increased, and they would therefore be enabled to sell far larger quantities in the future than the 2,651,440 pounds used last year in this country of domestic and foreign production combined.

We, of course, recognize this committee is charged with the task of raising revenue, and if in its judgment the duty received from this article, amounting to \$727,006 for the year ending June 30, 1912, is needed to provide funds for the support of this Government, we would respectfully suggest that the duty on artificial silk be reduced to a purely revenue basis, and if the increased use of this fiber continues, as seems most probable, the Government will be in receipt of a very handsome revenue from this source for years to come.

All of which is respectfully submitted.

STEWART SILK CO.,
By JNO. W. STEWART, *President*.
(AND OTHERS.)

STATEMENT SUBMITTED BY RICHARD JACOB ON ARTIFICIAL SILK.

DECEMBER 14, 1912.

CHAIRMAN WAYS AND MEANS COMMITTEE.

SIR: Inclosed find a few facts pertaining to the manufacture of artificial silk. These may be of interest when considering the tariff schedule covering this product.

Yours, truly,

RICHARD JACOB.

At present there is only one factory in the United States making artificial silk, and that is the American Viscose Co., of Marcus Hook, Pa. The entire stock of this company, however, is owned by an English company making silk under the same patent and process. The English company is perhaps the largest producer of artificial silk in the world, and ranking next is the Vereinigte Glanzstoff Fabriken, of Elberfeld and Oberbruch, Germany. It is interesting to note that about a year ago the English company and this German company made an agreement dividing the field between themselves, and in order to fully keep control of the situation, appointed the same agent in the United States. This agent is also the representative of the American company. Besides these, there are other concerns manufacturing artificial silk in Europe, but the two above-mentioned concerns were by far the largest producers.

About two years ago there was a movement on foot to start another concern in this country to manufacture artificial silk by another process, i. e., the cupra ammonia process, which is that of the Vereinigte Glanzstoff Fabriken, of Elberfeld. The flotation of this company was put into the hands of a promoter who issued a prospectus showing that the manufacture of this commodity was a very profitable one. A few quotations from the prospectus are as follows:

"The oldest artificial silk company is the Chardonnet Co., whose factories are located at Besancon, France, and who use a gun cotton process. The quoted price of stock in

PARAGRAPH 405—ARTIFICIAL SILKS.

the Chardonnet Co. has been 1,480 francs, a premium of 1,380 per cent. The stock pays regularly yearly dividends of 25 per cent to 60 per cent.

"The leading German company is the Vereinigte Glanzstoff Fabriken, of Elberfeld, operating the disadvantageous cupra ammonia cold process. The stock pays a regular annual dividend of 45 per cent, and its capitalization of several million marks has long since been returned to the stockholders from the profits.

"We believe the American Artificial Silk Manufacturing Co. (the company that was being promoted) has absolutely no competition in the quality of its product. We believe it has no competition in the cost of production. The American Artificial Silk Manufacturing Co. should have a practical monopoly of the American market aside from the present tariff benefits because its silk yarn is of superior quality.

"The actual trade in this country to-day is 2,000,000 pounds in raw material and estimated 6,000,000 pounds of manufactured goods. At a maximum cost of production and actual selling price of \$1.75 per pound, this means a present market for the American Artificial Silk Manufacturing Co.'s product of \$14,000,000, estimated, a margin of \$8,000,000, or 400 per cent, for goods costing \$6,000,000.

"In estimating the profits derived from the production and the dividends earned by the company's stock no guesswork is necessary. With an annual production of 500,000 pounds of artificial silk yarn at an average market price of \$1.75 per pound it is a matter of ordinary arithmetic to determine earnings and profits: Annual production, 500,000 pounds; Cost, at 75 cents per pound, \$375,000; annual earnings, \$875,000; annual net profit, \$500,000.

"The figures given are based on the average market price of \$1.75 per pound less trade discounts less the outside cost of manufacture at 75 cents per pound. These figures indicate the great profit of the business at the start. It is the intention of the company to increase its production until it rivals the Elberfeld output of 2,400,000 pounds per annum. The German company pays regular dividends of 45 per cent per annum despite its disadvantageous process of manufacture, lack of production by tariff, and high cost of raw materials."

The promoter of this company was R. W. Jones, jr., 55 Wall Street, from whom no doubt you will be able to obtain a pamphlet confirming the above. The present market price of the artificial silk of the American Viscose Co. varies between \$1.80 and \$1.90 per pound, and on a basis of the prospectus sighted above it no doubt is a very profitable venture.

[From September Textile World Record.]

The artificial silk market remains in a very firm condition with prices showing an upward tendency, owing to the great demand for that product.

Buyers are not buying large quantities, hoping that prices will drop to a lower level, but it is predicted that this will not be the case and that prices will be higher in the near future.

Below are prices current: 150 Den. first quality European, \$1.90; 150 Den. second quality European, \$1.85; 150 Den. Elberfeld raw, \$1.80; 150 Den. Chardonette natural, \$1.95.

BRIEF SUBMITTED BY AMERICAN VISCOSE CO.

This brief refers to artificial silk yarn, Schedule L, paragraph 405.

The attempts to establish an artificial silk industry in this country have, up to two years ago, resulted only in failures. Probably \$1,500,000 was spent in these various futile efforts. Even after the tariff bill of 1909 was passed nothing lasting could be accomplished until the cost of manufacture was further materially reduced, which results were first achieved in European factories.

About two years ago the most successful of these processes was introduced into the United States, and a factory was built on a large scale at Marcus Hook, Pa., for the production of this yarn in this country. There is now a cash investment in this factory of about \$900,000 in plant, machinery, and buildings, and over 1,000 people are employed.

The production of silk during the past year (Jan. 1 to Dec. 31, 1912) in this country was 1,200,000 pounds. The importations during the last fiscal year were 1,451,440 pounds; that is, the domestic makers produced 45.2 per cent of the total consumption. From July 1 to September 30, 1912, the imports were 415,000 pounds. Since then they have increased heavily. There is no exportation whatever of this yarn, and it is not conceivable that there will ever be any.

PARAGRAPH 405—ARTIFICIAL SILKS.

I believe that the importation for the present year (1913) will be not less than 2,500,000 pounds, which would, therefore, at the present rate of duty, give a revenue of \$1,125,000. This estimate is based on the increased importations during the last half of 1912, as compared with the first six months of the same year, and also as compared with the last six months of 1911, and is furthermore based on the rapid introduction of this yarn into new lines.

Artificial silk has now been so perfected that it is used for a great variety of purposes, either alone or in combination with other materials to produce special effects. Articles made of artificial silk can be regarded only as articles of luxury.

In view of the short time which this industry has been successfully established in this country, and in view of the fact that notwithstanding of an actual cash investment of about \$900,000, one dividend only of 7½ per cent on the capitalization of \$837,000 has been paid so far, I respectfully submit that the duty remain unchanged, namely: 45 cents per pound on singles; 50 cents per pound on organzine; 60 cents per pound on twists.

I especially recommend that a specific duty be maintained, as there is little difference in the price of the current sizes used; the conditions, therefore, are especially suited for levying a specific duty.

Respectfully submitted.

CHARLES A. ERNST,

For the American Viscose Co., Marcus Hook, Pa.

STATE OF PENNSYLVANIA,

County of Delaware, ss.

I, Charles A. Ernst, general manager of the American Viscose Co., Marcus Hook, Pa., being duly affirmed according to law doth depose and say that the facts in the attached statement are true and correct to the best of my knowledge and belief.

CHARLES A. ERNST.

Affirmed and subscribed before me this 11th day of January, A. D. 1913.

[SEAL.]

ANDREW A. CLARK,

Notary Public.

Commission expires March 10, 1913.

BRIEF SUBMITTED BY THE CLEVELAND ART SILK CO.

The COMMITTEE ON WAYS AND MEANS,

House of Representatives, Washington, D. C.

GENTLEMEN: We take the liberty of addressing you in reference to revision of the present tariff relating to artificial silk and horsehair, Schedule L, paragraph 401.

The manufacture of artificial silk and horsehair is still an infant industry in this country, because the present tariff does not give this industry enough protection to encourage the investment of enough capital, therefore the greatest amount of artificial silk and horsehair consumed in this country, which is over 1,000,000 pounds yearly, is made in Europe.

Nearly \$2,000,000 have been spent in this country in perfecting a number of processes for the manufacture of artificial silk and horsehair, but owing to the high cost of labor in this country to that compared in Europe, it has been a difficult matter to interest capital to a great extent, as it is principally hand labor entering into the manufacture of this product and labor being by far the largest item in the cost of production.

After spending a great deal of money in perfecting our process, we are making a better product than that made in Europe, our product being stronger and more elastic, therefore to encourage the investment of a greater amount of capital and giving employment to many more people and to be able to compete with the European manufacturers, we earnestly request to raise the present tariff on artificial horsehair to 50 cents per pound and artificial silk in the form of singles or tram to 60 cents per pound, and artificial silk in the form of organzine to 70 cents per pound, making an average increase of tariff of about 10 cents per pound.

If the increase of tariff asked for is granted, the tariff then would just about be equal to the difference of the amount paid for labor and overhead charges in this country to that paid in Europe.

Our present average cost and to market artificial silk is \$1.70 per pound, made up of the following items: Material 52 cents, labor 74 cents, overhead charges 20 cents, general expenses 14 cents, and selling expense 10 cents, and in order to make a fair

MISCELLANEOUS.

profit we should sell this product to the trade for \$2.12 per pound, but the foreign-made artificial silk is sold for about \$2 per pound, including the tariff, which compels us to sell for the same price.

We also recommend to change the expression of classification of Schedule L, paragraph 401, which is not specific enough, namely, if in the form of singles, to read, if in the form of horsehair; if in the form of tram, to read, if in the form of singles or tram; if in the form of organzine, to read the same as now.

The reason we recommend the above-mentioned changes is because there has been some trouble in the past to determine the difference between singles and tram artificial silk. The matter of fact is that artificial horsehair should not be classified as singles, because it is not artificial silk but it is artificial horsehair, and artificial silk singles and tram are one and the same; but to avoid future trouble it is good policy to use both words for said classification.

CLEVELAND ART SILK Co.,
HENRY HERTEL, *Manager*;
1920 West Seventy-seventh Street, Cleveland, Ohio.
